2-dimethylaminoethanol [ORG CHEM] $(CH_3)_2NCH_2CH_2OH$ A colorless liquid with a boiling point of 134.6°C; used for the synthesis of dyestuffs, pharmaceuticals, and corrosion inhibitors, in medicine, and as an emulsifier. Also known as deanol; dimethylethanolamine.

dimethylaminophenazone *See* aminopyrine.

dimet hylaminophenyldimethylpyrazolone *See* aminopyrine.

4-(dimethylamino)-*meta*-tolyl-methylcarbamate *See* aminocarb.

***N,N*-dimethylaniline** [ORG CHEM] $C_6H_5N(CH_3)_2$ A yellowish liquid slightly soluble in water; used in dyes and solvent and in the manufacture of vanillin. Also known as aniline *N,N*-dimethyl.

dimethylarsinic acid *See* cacodylic acid.

dimethylbenzene *See* xylene.

1,2-dimethylbenzene *See ortho*-xylene.

1,3-dimethylbenzene *See meta*-xylene.

1,4-dimethylbenzene *See para*-xylene.

2,2-dimethyl-1,3-benzodioxol-4-yl-*N*-methylcarbomate [ORG CHEM] $C_{10}H_{13}O_4N$ A white solid with a melting point of 129–130°C; solubility in water is 40 parts per million at 25°C; used as an insecticide for cockroaches. Also known as bendiocarb; ficam.

1,3-dimethyl-3-(2-benzothiazolyl)urea *See* methabenzthiazuron.

2,4-dimethylbenzyl 2,2-dimethyl-3(2-methylpropenyl)-cyclopropanecarboxylate *See* dimethrin.

dimethyl *cis*-bicyclo(2,2,1)-5-heptane-2,3-decarboxylate *See* dimethyl carbate.

2,3-dimethylbutane [ORG CHEM] $(CH_3)_2CHCH(CH_3)_2$ A colorless liquid with a boiling point of 57.9°C; used as a high-octane fuel. Also known as diisopropyl.

dimethyl carbate [ORG CHEM] $C_{11}H_{14}O_4$ A colorless liquid with a boiling point of 114–115°C; used as an insect repellent. Also known as dimethyl *cis*-bicyclo(2,2,1)-5-heptane-2,3-decarboxylate.

1,1-dimethyl-3,5-cyclohexanedione *See* 5,5-dimethyl-1,3-cyclohexanedione.

5,5-dimethyl-1,3-cyclohexanedione [ORG CHEM] $C_8H_{12}O_2$ Crystals that decompose at 148–150°C; soluble in water and inorganic solvents such as methanol and ethanol; used as a reagent for the identification of aldehydes. Also known as dimedone; 1,1-dimethyl-3,5-cyclohexanedione; dimethyldihydroresorcinol; 1,1-dimethyl-3,5-diketocyclohexane.

***N*-dimethylcyclohexaneethylamine** *See* propylhexedrine.

2,4-dimethylcyclotetramethylene sulfone *See* 2,4-dimethylsulfolane.

β,β-dimethylcysteine *See* penicillamine.

dimethyl diaminophenazine chloride *See* neutral red.

***O, O*-dimethyl-*O*-(2, 5-dichloro-4-iodophenyl)thiophosphate** *See* jodfenphos.

dimethyldihydroresorcinol *See* 5,5-dimethyl-1,3-cyclohexanedione.

1,1-dimethyl-3,5-diketocyclohexane *See* 5,5-dimethyl-1,3-cyclohexanedione.

***O, O*-dimethyl-*O*-[*para*-dimethylsulfamoyl)phenyl]phosphorothioate** *See* famphur.

2,2-dimethyl-1,3-dioxolane-4-methanol [ORG CHEM] $C_6H_{12}O_3$ The acetone ketal of glycerin; a liquid miscible with water and many organic solvents; used as a plasticizer and a solvent. Also known as acetone glycerol; glycerol dimethylketal; isopropylidene glycerol.

dimethylethanolamine *See* 2-dimethylaminoethanol.

dimethyl ether [ORG CHEM] CH_3OCH_3 A flammable, colorless liquid, boiling at −25°C; soluble in water and alcohol; used as a solvent, extractant, reaction medium, and refrigerant. Also known as methyl ether; wood ether.

***O,O*-dimethyl-*S*-(α-ethoxycarbonylbenzyl)phosphorodithioate** *See* phenthoate.

dimethylethylene *See* butylene.

***O,O*-dimethyl-*S*-[2(ethylthio)ethyl]phosphorothioate** *See* demeton-*S*-methyl.

***N,N*-dimethylformamide** [ORG CHEM] $HCON(CH_3)_2$ A liquid that boils at 152.8°C; extensively used as a solvent for organic compounds. Abbreviated DMF.

dimethylglyoxime [ORG CHEM] $(CH_3)_2C_2(NOH)_2$ White, crystalline or powdered solid, used in analytical chemistry as a reagent for nickel.

1,1-dimethylhydrazine *See uns*-dimethylhydrazine.

***uns*-dimethylhydrazine** [ORG CHEM] $(CH_3)_2NNH_2$ A flammable, highly toxic, colorless liquid; used as a component of rocket and jet fuels and as a stabilizer for organic peroxide fuel additives. Also known as 1,1-dimethylhydrazine; UDMH.

dimethyl hydroquinone *See* hydroquinone dimethyl ether.

dimethylhydroxybenzene *See* xylenol.

3,7-dimethyl-7-hydroxyoctanal *See* hydroxycitronellal.

dimethylisopropanolamine [ORG CHEM] $(CH_3)_2NCH_2CH(OH)CH_3$ A colorless liquid with a boiling point of 125.8°C; soluble in water; used in methadone synthesis.

1,6-dimethyl-4-isopropyl naphthalene *See* cadalene.

dimethylketol *See* acetoin.

dimethylmethane *See* propane.

***O,O*-dimethyl-*S*-{2-[(1-methylcarbamoylethyl)thio]ethyl}-phosphorodithioate** *See* vamidothion.

dimethyl S-(N-methylcarbamoylmethyl)phosphorothioate *See* folimat.

3,3-dimethyl-2-methylenenorcamphane *See* camphene.

***O,O*-dimethyl-*S*-(*N*-methyl-*N*-formylcarbamoylmethyl)-phosphorodithioate** [ORG CHEM] $(H_3CO)_2PS_2CH_2CONCH_3CHO$ A yellow oil or crystals with a melting point of 25–26°C; soluble in water; used as an insecticide and miticide for flies, mites, and aphids. Also known as formothion.

***O,O*-dimethyl *O*-[3-methyl-4(methylthio)phenyl]phosphorothioate** [ORG CHEM] $(H_3CO)_2PSOC_6H_4CH_3SCH_3$ An amber liquid with a boiling point of 87°C at 0.01 mmHg; solubility in water is 54–56 milligrams per liter; used as an insecticide for ornamentals. Also known as fenthion.

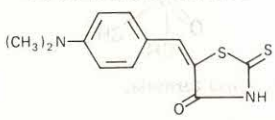
dimethylnitrobenzene *See* nitroxylene.

***O,O*-dimethyl-*O*-*para*-nitrophenyl phosphorothioate** *See* methyl parathion.

***O,O*-dimethyl-*O*-(4-nitro-*meta*-tolyl)phosphorothioate** *See* fenitrothion.

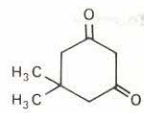
3,7-dimethyl-2,6-octadienal *See* citral.

PARA-DIMETHYLAMINO-BENZALRHODANINE



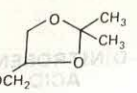
Structural formula.

5,5-DIMETHYL-1,3-CYCLOHEXANEDIONE



Structural formula.

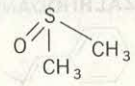
2,2-DIMETHYL-1,3-DIOXOLANE-4-METHANOL



Structural formula.

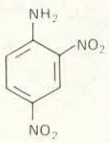
dimethyloctadiene-2,7-ol-6 *See* linalool.
3,7-dimethyl-3-octanol *See* tetrahydrolinalool.
3,7-dimethyl-6(or 7)octen-1-ol *See* citronellol.
dimethylolurea [ORG CHEM] $CO(NHCH_2OH)_2$ Colorless crystals melting at 126°C, soluble in water; used to increase fire resistance and hardness of wood, and in textiles to prevent wrinkles. Also known as 1,3-bis-hydroxymethylurea; DMU.
3-[2-(3,5-dimethyl-2-oxocyclohexyl)-2-hydroxyethyl]glutarimide *See* cycloheximide.
dimethylphenol *See* xylenol.
1,5-dimethyl-2-phenyl-4-aminopyrazolone *See* 4-aminoantipyrine.
3,4-dimethylphenyl-*N*-methyl carbamate [ORG CHEM] $C_{10}H_{13}NO_2$ A white, crystalline compound with a melting point of 79–80°C; insoluble in water; used as an insecticide for hoppers on rice and scales on fruit.
***O,S*-dimethylphosphoroamidothioate** *See* acephatemet.
dimethyl phthalate [ORG CHEM] $C_6H_4(COOCH_3)_2$ Odorless, colorless liquid, boiling at 282°C; soluble in organic solvents, slightly soluble in water; used as a plasticizer, in resins, lacquers, and perfumes, and as an insect repellent.
2,2-dimethylpropane *See* neopentane.
***N*-(1,1-dimethyl-2-propynyl)-3,5-dichlorobenzamide** *See* pronamide.
dimethyl sebacate [ORG CHEM] $[(CH_2)_4COOCH_3]_2$ Clear, colorless liquid, boiling at 294°C; used as a vinyl resin, nitrocellulose solvent, or plasticizer.
dimethyl sulfate [ORG CHEM] $(CH_3)_2SO_4$ Poisonous, corrosive, colorless liquid, boiling at 188°C; slightly soluble in water, soluble in ether and alcohol; used to methylate amines and phenols. Also known as methyl sulfate.
dimethyl sulfide *See* methyl sulfide.
2-4-dimethylsulfolane [ORG CHEM] $C_6H_{12}O_2S$ A yellow to colorless liquid miscible with lower aromatic hydrocarbons; used as a solvent in liquid-liquid and vapor-liquid extraction processes. Also known as 2,4-dimethylcyclotetramethylene sulfone; 2,4-dimethyltetramethylene sulfone; 2,4-dimethylthiacyclopentane-1,1-dioxide.
dimethyl sulfoxide [ORG CHEM] $(CH_3)_2SO$ A colorless liquid used as a local analgesic and anti-inflammatory agent, as a solvent in industry, and in laboratories as a medium for carrying out chemical reactions. Abbreviated DMSO.
dimethyl terephthalate [ORG CHEM] $C_6H_4(COOCH_3)_2$ Colorless crystals, melting at 140°C and subliming above 300°; slightly soluble in water, soluble in hot alcohol and ether; used to make polyester fibers and film. Abbreviated DMT.
3,7-dimethylxanthine *See* theobromine.
dimethyl-2,3,5,6-tetrachloroterephthalate [ORG CHEM] $C_{10}H_6Cl_4O_4$ A colorless, crystalline compound with a melting point of 156°C; used as an herbicide for turf, ornamental flowers, and certain vegetables and berries. Also known as DCPA.
2,4-dimethyltetramethylene sulfone *See* 2,4-dimethylsulfolane.
2,4-dimethylthiacyclopentane-1,1-dioxide *See* 2,4-dimethylsulfolane.
***N*-[5(1,1-dimethyl)-1,3,4-thiadiazol-2-yl]-*N,N'*-dimethylurea** *See* tebuthiuron.
***O,O*-dimethyl (2,2,2-trichloro-1-hydroxyethyl)phosphonate** *See* trichlorfon.
***O,O*-dimethyl-*O*-(2,4,5-trichlorophenyl)phosphorothioate** *See* ronnel.
1,1-dimethyl-3-(α,α,α-trifluoro-*meta*-tolyl)urea *See* fluometuron.
***meta*-(3,3-dimethylureido)phenyl-*tert*-butylcarbamate** *See* karbutilate.
dimetilan [ORG CHEM] A generic name for 1-(dimethylcarbamoyl)-5-methyl-3-pyrazolyl dimethylcarbamate, a synthetic carbamate insecticide.
dimictic lake [HYD] A lake which circulates twice a year.
diminution [BOT] Increasing simplification of inflorescences on successive branches.
dimity [TEXT] Sheer fabric with lengthwise cords or checks formed by bunching two, three, or more warp and filling threads together; usually made of combed cotton.
dimmer [ELEC] An electrical or electronic control for varying the intensity of a lamp or other light source.
dimmerfoehn [METEOROL] A rare form of foehn where, during a very strong upper wind from the south, a pressure difference of 12 millibars or more exists between the south and north sides of the Alps; a stormy foehn wind then overleaps the upper valleys in the northern slopes, reaches the ground in the lower parts of the valleys, and enters the foreground as a very strong wind; the foehn wall and the precipitation area extend beyond the crest across the almost calm surface area in the upper valleys.
dimorphism [CHEM] Having crystallization in two forms with the same chemical composition. [SCI TECH] Existing in two distinct forms, with reference to two members expected to be identical.
dimorphite [MINERAL] As_4S_3 An orange-yellow mineral consisting of arsenic sulfide.
dimpling [ENG] Forming a conical depression in a metal surface in order to countersink a rivet head.
dimuon event [PARTIC PHYS] An inelastic collision of a neutrino or antineutrino with a nucleus in which there are two muons among the products of the collision.
Dimylidae [PALEON] A family of extinct lipotyphlan mammals in the order Insectivora; a side branch in the ancestry of the hedgehogs.
dina [ELECTR] An airborne radar-jamming transmitter operating in the band from 92 to 210 megahertz with an output of 30 watts, radiating noise in one side band for spot or barrage jamming; the carrier and the other side band are suppressed.
Dinantian [GEOL] Lower Carboniferous geologic time. Also known as Avonian.
Dinarides [GEOGR] A mountain system, east of the Adriatic Sea, in Yugoslavia.
D indicator *See* D scope.
Dines anemometer [ENG] A pressure-tube anemometer in which the pressure head on a weather vane is kept facing into the wind, and the suction head, near the bearing which supports the vane, develops a suction independent of wind direction; the pressure difference between the heads is proportional to the square of the wind speed and is measured by a float manometer with a linear wind scale.
dineutron [NUC PHYS] **1.** A hypothetical bound state of two neutrons, which probably does not exist. **2.** A combination of two neutrons which has a transitory existence in certain nuclear reactions.
dinghy [NAV ARCH] A boat, less than 20 feet (6 meters) long, propelled by oars or sails, that may be used as a tender to a ship or yacht.
dingot [MET] A massive derby, usually a ton or more, produced in a bomb reaction.
Dings magnetic separator [MECH ENG] A device which is suspended above a belt conveyor to pull out and separate magnetic material from burden as thick as 40 inches (1 meter) and at belt speeds up to 750 feet (229 meters) per minute.
Dinidoridae [INV ZOO] A family of hemipteran insects in the superfamily Pentatomoidea.
dinitramine [ORG CHEM] $C_{11}H_{13}N_3O_4F_3$ A yellow solid with a melting point of 98–99°C; used as a preemergence herbicide for annual grass and broadleaf weeds in cotton and soybeans. Also known as N^3,N^3-diethyl-2,4-dinitro-6-trifluoromethyl-*meta*-phenylenediamine.
dinitrate [CHEM] A molecule that contains two nitrate groups.
dinitrite [CHEM] A molecule that has two nitrite groups.
4,6-dinitro-2-aminophenol *See* picramic acid.
2,4-dinitroaniline [ORG CHEM] $(NO_2)C_6H_3NH_2$ A compound which crystallizes as yellow needles or greenish-yellow plates, melting at 187.5–188°C; soluble in alcohol; used in the manufacture of azo dyes.
2,4-dinitrobenzaldehyde [ORG CHEM] $(NO_2)_2C_6H_3CHO$ Yellow to light brown crystals with a melting point of 72°C; soluble in alcohol, ether, and benzene; used to make Schiff bases.
dinitrobenzene [ORG CHEM] Any one of three isomeric substitution products of benzene having the empirical formula $C_6H_4(NO_2)_2$.
2,4-dinitrobenzenesulfenyl chloride [ORG CHEM] $(NO_2)_2C_6H_3SCl$ Crystals soluble in glacial acetic acid, with a melting point of 96°C; used as a reagent for separation and identification of naturally occurring indoles.
3,4-dinitrobenzoic acid [ORG CHEM] $C_7H_4N_2O_6$ Crystals with a bitter taste and a melting point of 166°C; used in quantitative sugar analysis.
4,6-dinitro-2-*sec*-butylphenylacetate [ORG CHEM] $C_{12}H_{13}O_6N_2$ A brownish liquid with a melting point of 170°C;

DIMETHYL SULFOXIDE



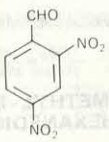
Structural formula.

2,4-DINITROANILINE



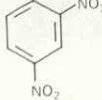
Structural formula.

2,4-DINITROBENZALDEHYDE



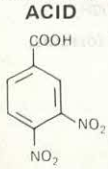
Structural formula.

2,4-DINITROBENZENESULFENYL CHLORIDE



Structural formula.

3,4-DINITROBENZOIC ACID



Structural formula.

used as an herbicide for annual broadleaf weeds in food crops such as peas, potatoes, and alfalfa.

2,4-dinitro-1-chlorobenzene *See* 1-chloro-2,4-dinitrobenzene.

3′,5′-dinitro-4′-(di-*N*-propyl)aminoacetophenone *See* bulab-37.

2,6-dinitro-*N*,*N*-dipropylcumidine *See* isopropaline.

3,5-dinitro-*N*,*N*-di(*N*-propyl)sulfanilamide *See* risalin.

2,4-dinitro-1-fluorobenzene *See* 1-fluoro-2,4-dinitrobenzene.

dinitrogen fixation *See* nitrogen fixation.

dinitrogen tetroxide *See* nitrogen dioxide.

dinitrophenol [ORG CHEM] Any one of six isomeric substituent products of benzene having the empirical formula $(NO_2)_2C_6H_3OH$.

2,4-dinitrophenyl-2-(*sec*-butyl)-4,6-dinitrophenyl carbonate *See* tribonate.

2,4-dinitrophenylhydrazine [ORG CHEM] $(NO_2)_2C_6H_3NHNH_2$ A red, crystalline powder with a melting point of approximately 200°C; soluble in dilute inorganic acids; used as a reagent for determination of ketones and aldehydes.

dinitrotoluene [ORG CHEM] Any one of six isomeric substitution products of benzene having the empirical formula $CH_3C_6H_3(NO_2)_2$; they are high explosives formed by nitration of toluene. Abbreviated DNT.

dinking [MECH ENG] Using a sharp, hollow punch for cutting light-gage soft metals or nonmetallic materials.

dinobuton [ORG CHEM] $C_{14}H_{18}N_2O_7$ A yellow solid with a melting point of 57–60°C; used as a fungicide and miticide for fruit and vegetable crops and for cotton. Also known as 2-*sec*-butyl-4,6-dinitrophenylisopropyl carbonate.

Dinocerata [PALEON] An extinct order of large, herbivorous mammals having semigraviportal limbs and hoofed, five-toed feet; often called uintatheres.

Dinoflagellata [INV ZOO] The equivalent name for Dinoflagellida.

Dinoflagellida [INV ZOO] An order of flagellate protozoans in the class Phytamastigophorea; most members have fixed shapes determined by thick covering plates.

Dinophilidae [INV ZOO] A family of annelid worms belonging to the Archiannelida.

Dinophyceae [BOT] The dinoflagellates, a class of thallophytes in the division Pyrrhophyta.

Dinornithiformes [PALEON] The moas, an order of extinct birds of New Zealand; all had strong legs with four-toed feet.

dinosaur [PALEON] The name, meaning terrible lizard, applied to the fossil bones of certain large, ancient bipedal and quadripedal reptiles placed in the orders Saurischia and Ornithischia.

dinoseb [ORG CHEM] $C_{10}H_{12}O_5N_2$ A reddish-brown liquid with a melting point of 32°C; used as an insecticide and herbicide for numerous crops and in fruit and nut orchards. Also known as 2-(sec-butyl)-4,6-dinitrophenol.

dinoterb acetate [ORG CHEM] $C_{12}H_{14}N_2O_6$ A yellow, crystalline compound with a melting point of 133–134°C; used as a preemergence herbicide for sugarbeets, legumes, and cereals, and as a postemergence herbicide for maize, sorghum, and alfalfa.

DIN system [GRAPHICS] A system in photography used to find the speed of photographic emulsions; it is stated in terms of the logarithm of the reciprocal of the exposure needed to obtain a density of 0.1 above fog density.

diocoel [EMBRYO] The cavity of the diencephalon, which becomes the third brain ventricle.

dioctahedral [CRYSTAL] Pertaining to a crystal structure in which only two of the three available octahedrally coordinated positions are occupied. [MATH] Having 16 faces.

Dioctophymatida [INV ZOO] An order of parasitic nematode worms in the subclass Enoplia.

Dioctophymoidea [INV ZOO] An order or superfamily of parasitic nematodes characterized by the peculiar structure of the copulatory bursa of the male.

dioctyl [ORG CHEM] A compound that has two octyl groups.

dioctylmethane *See* heptadecane.

dioctyl phthalate [ORG CHEM] $(C_8H_{17}OOC)_2C_6H_4$ Pale, viscous liquid, boiling at 384°C; insoluble in water; used as a plasticizer for acrylate, vinyl, and cellulosic resins, and as a miticide in orchards. Abbreviated DOP. Also known as di-(2-ethylhexyl)phthalate.

dioctyl phthalate test [ENG] A method used to evaluate air filters to be used in critical air-cleaning applications; a light-scattering technique counts the number of particles of controlled size (0.3 micrometer) entering and emerging from the test filter. Abbreviated DOP test.

dioctyl sebacate [ORG CHEM] $(CH_2)_8(COOC_8H_{17})_2$ Water-insoluble, straw-colored liquid, boiling at 248°C; used as a plasticizer for vinyl, cellulosic, and styrene resins.

diode [ELECTR] **1.** A two-electrode electron tube containing an anode and a cathode. **2.** *See* semiconductor diode.

diode alternating-current switch *See* trigger diode.

diode amplifier [ELECTR] A microwave amplifier using an IMPATT, TRAPATT, or transferred-electron diode in a cavity, with a microwave circulator providing the input/output isolation required for amplification; center frequencies are in the gigahertz range, from about 1 to 100 gigahertz, and power outputs are up to 20 watts continuous-wave or more than 200 watts pulsed, depending on the diode used.

diode bridge [ELECTR] A series-parallel configuration of four diodes, whose output polarity remains unchanged whatever the input polarity.

diode-capacitor transistor logic [ELECTR] A circuit that uses diodes, capacitors, and transistors to provide logic functions.

diode characteristic [ELECTR] The composite electrode characteristic of an electron tube when all electrodes except the cathode are connected together.

diode clamp *See* diode clamping circuit.

diode clamping circuit [ELECTR] A clamping circuit in which a diode provides a very low resistance whenever the potential at a certain point rises above a certain value in some circuits or falls below a certain value in others. Also known as diode clamp.

diode clipping circuit [ELECTR] A clipping circuit in which a diode is used as a switch to perform the clipping action.

diode-connected transistor [ELECTR] A bipolar transistor in which two terminals are shorted to give diode action.

diode demodulator [ELECTR] A demodulator using one or more crystal or electron tube diodes to provide a rectified output whose average value is proportional to the original modulation. Also known as diode detector.

diode detector *See* diode demodulator.

diode drop *See* diode forward voltage.

diode forward voltage [ELECTR] The voltage across a semiconductor diode that is carrying current in the forward direction; it is usually approximately constant over the range of currents commonly used. Also known as diode drop; diode voltage; forward voltage drop.

diode function generator [ELECTR] A function generator that uses the transfer characteristics of resistive networks containing biased diodes; the desired function is approximated by linear segments.

diode gate [ELECTR] An AND gate that uses diodes as switching elements.

diode laser *See* semiconductor laser.

diode limiter [ELECTR] A peak-limiting circuit employing a diode that becomes conductive when signal peaks exceed a predetermined value.

diode logic [ELECTR] An electronic circuit using current-steering diodes, such that the relations between input and output voltages correspond to AND or OR logic functions.

diode matrix [ELECTR] A two-dimensional array of diodes used for a variety of purposes such as decoding and read-only memory.

diode mixer [ELECTR] A mixer that uses a crystal or electron tube diode; it is generally small enough to fit directly into a radio-frequency transmission line.

diode modulator [ELECTR] A modulator using one or more diodes to combine a modulating signal with a carrier signal; used chiefly for low-level signaling because of inherently poor efficiency.

diode pack [ELECTR] Combination of two or more diodes integrated into one solid block.

diode peak detector [ELECTR] Diode used in a circuit to indicate when peaks exceed a predetermined value.

diode-pentode [ELECTR] Vacuum tube having a diode and a pentode in the same envelope.

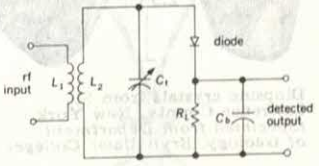
diode rectifier [ELECTR] A half-wave rectifier of two elements between which current flows in only one direction.

diode rectifier-amplifier meter [ELECTR] The most widely used vacuum tube voltmeter for measurement of alternating-current voltage; has separate tubes for rectification and direct-current amplification, permitting an optimum design for each.

DINOPHILIDAE

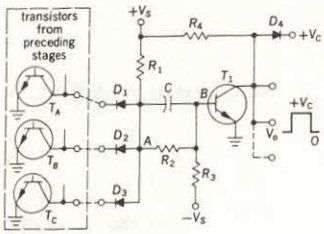
Dinophilus female, dorsal view. *(From Ruebush, Trans. Amer. Micr. Sci., vol. 59, Fig. 1, 1940)*

DIODE DEMODULATOR



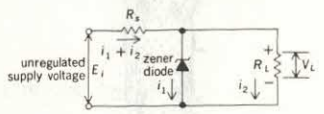
Circuit diagram of diode demodulator.

DIODE TRANSISTOR LOGIC



Circuit diagram of a diode transistor logic.

DIODE VOLTAGE REGULATOR

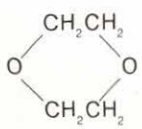


A Zener diode voltage regulator.

DIOPSIDE

Diopside crystals from St. Lawrence County, New York. *(Specimen from Department of Geology, Bryn Mawr College)*

1,4-DIOXANE



Structural formula of 1,4-dioxane.

diode-switch [ELECTR] Diode which is made to act as a switch by the successive application of positive and negative biasing voltages to the anode (relative to the cathode), thereby allowing or preventing, respectively, the passage of other applied waveforms within certain limits of voltage.

diode theory [ELEC] The theory that in a semiconductor, when the barrier thickness is comparable to or smaller than the mean free path of the carriers, then the carriers cross the barrier without being scattered, much as in a vacuum tube diode.

diode transistor logic [ELECTR] A circuit that uses diodes, transistors, and resistors to provide logic functions. Abbreviated DTL.

diode-triode [ELECTR] Vacuum tube having a diode and a triode in the same envelope.

diode voltage *See* diode forward voltage.

diode voltage regulator [ELECTR] A voltage regulator with a Zener diode, making use of its almost constant voltage over a range of currents. Also known as Zener diode voltage regulator.

diodide [CHEM] A molecule that contains two iodine atoms bonded to an element or radical.

dioecious [BIOL] Having the male and female reproductive organs on different individuals. Also known as dioic.

d-i offset system *See* direct-image offset system.

diogenite [MINERAL] An achondritic stony meteorite composed essentially of iron-rich pyroxene minerals. Also known as rodite.

dioic *See* dioecious.

diolefin *See* diene.

diolefin hydrogenation [CHEM ENG] A fixed-bed catalytic process used to hydrogenate diolefins in C_4 and C_5 fractions to mono-olefin in alkylation feedstocks.

Diomedeidae [VERT ZOO] The albatrosses, a family of birds in the order Procellariiformes.

-dione [ORG CHEM] Suffix indicating the presence of two keto groups.

Dione [ASTRON] A satellite of Saturn that orbits at a mean distance of 377×10^2 kilometers and has a diameter of about 800 kilometers.

diophantine analysis [MATH] A means of determining integer solutions for certain algebraic equations.

diophantine equations [MATH] Equations with more than one independent variable and with integer coefficients for which integer solutions are desired.

Diopsidae [INV ZOO] The stalk-eyed flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

diopside [MINERAL] $CaMg(SiO_3)_2$ A white to green monoclinic pyroxene mineral which forms gray to white, short, stubby, prismatic, often equidimensional crystals. Also known as malacolite.

dioptase [MINERAL] $CuSiO_2(OH)_2$ A rare emerald-green mineral that forms hexagonal, hydrous crystals.

diopter [OPTICS] A measure of the power of a lens or a prism, equal to the reciprocal of its focal length in meters. Abbreviated D.

dioptometer [OPTICS] An instrument for determining ocular refraction.

dioptric [OPTICS] **1.** Serving in or effecting refraction. **2.** Produced by means of refraction.

dioptrics [OPTICS] The branch of optics that treats of the refraction of light, especially by the transparent medium of the eye, and by lenses.

diorchism [ANAT] Having two testes.

diorite [PETR] A phaneritic plutonic rock with granular texture composed largely of plagioclase feldspar with smaller amounts of dark-colored minerals; used occasionally as ornamental and building stone. Also known as black granite.

Dioscoreaceae [BOT] A family of monocotyledonous, leafy-stemmed, mostly twining plants in the order Liliales, having an inferior ovary and septal nectaries and lacking tendrils.

dioxacarb [ORG CHEM] $C_{11}H_{13}NO_4$ A white, crystalline compound with a melting point of 114–115°C; used as an insecticide for potato and cocoa crops and in restaurants. Also known as 2-(1,3-dioxolan-2-yl)phenyl-*N*-methylcarbamate.

1,4-dioxane [ORG CHEM] $C_4H_8O_2$ The cyclic ether of ethylene glycol; it is soluble in water in all proportions and is used as a solvent. Also known as diethylene dioxide; *para*-dioxane; glycol ethylene ether.

***para*-dioxane** *See* 1,4-dioxane.

2,3-*para*-dioxanedithiol-*S,S*-bis(*O,O*-diethyl phosphorodithioate) *See* dioxathion.

dioxathion [ORG CHEM] $C_{12}H_{26}O_6P_2S_4$ A brown liquid, used as a miticide on cotton and fruit and ornamental crops, and as an insecticide on ticks, lice, and flies on cattle. Also known as 2,3-*para*-dioxanedithiol-*S,S*-bis(*O,O*-diethyl phosphorodithioate).

dioxide [CHEM] A compound containing two atoms of oxygen.

2,4-dioxo-5-fluoropyrimidine *See* fluorouracil.

dioxolane [ORG CHEM] $C_3H_6O_2$ A cyclic acetal that is a liquid; used as a solvent and extractant.

2-(1,3-dioxolan-2-yl)phenyl-*N*-methylcarbamate *See* dioxacarb.

dioxopurine *See* xanthine.

dioxygenase [BIOCHEM] Any of a group of enzymes which catalyze the insertion of both atoms of an oxygen molecule into an organic substrate according to the generalized formula $AH_2 + O_2 \rightarrow A(OH)_2$.

dip [ENG] The vertical angle between the sensible horizon and a line to the visible horizon at sea, due to the elevation of the observer and to the convexity of the earth's surface. Also known as dip of horizon. [GEOL] **1.** The angle that a stratum or fault plane makes with the horizontal. Also known as angle of dip; true dip. **2.** A pronounced depression in the land surface.

DIP *See* dual in-line package.

DIPA *See* diisopropanolamine.

dip brazing [MET] Soldering by dipping the work into a hot, molten salt or metal bath and by using a nonferrous metal with a melting point above 800°F (427°C).

dip coating [ENG] A coating applied to ceramic ware or metal by immersion into a tank of melted nonmetallic material, such as resin or plastic, then chilling the adhering melt.

dip correction *See* height-of-eye correction.

dip-dye [TEXT] To dye after knitting.

dipentene [ORG CHEM] The racemic mixture of dextro and levo isomers of limonene.

dipentene glycol *See* terpin hydrate.

dipentene hydrochloride *See* terpene hydrochloride.

dipeptidase [BIOCHEM] An enzyme that hydrolyzes a dipeptide.

dip fault [GEOL] A type of fault that strikes parallel with the dip of the strata involved.

diphacinone [ORG CHEM] $C_{23}H_{16}O_3$ A yellow powder with a melting point of 145–147°C; used to control rats, mice, and other rodents; acts as an anticoagulant. Also known as 2-diphenylacetyl-1,3-indandione.

diphase cleaning [MET] Removing soilage from metal surfaces in a cleaning tank incorporating a solvent phase and an aqueous phase.

diphead [MIN ENG] A passage that follows the inclination of a coal seam.

diphenamid [ORG CHEM] $C_{16}H_{17}ON$ An off-white, crystalline compound with a melting point of 134–135°C; used as a preemergence herbicide for food crops, fruits, and ornamentals. Also known as *N,N*-dimethyl-2,2-diphenylacetamide.

diphenatrile [ORG CHEM] $C_{14}H_{11}N$ A yellow, crystalline compound with a melting point of 73–73.5°C; used as a preemergence herbicide for turf. Also known as diphenylacetonitrile.

diphenol [ORG CHEM] A compound that has two phenol groups, for example, resorcinol.

diphenyl *See* biphenyl.

diphenylacetonitrile *See* diphenatrile.

2-diphenylacetyl-1,3-indandione *See* diphacenone.

diphenylamine [ORG CHEM] $(C_6H_5)_2NH$ Colorless leaflets, sparingly soluble in water; melting point 54°C; used as an additive in propellants to increase the storage life by neutralizing the acid products formed upon decomposition of the nitrocellulose. Also known as phenylaniline.

diphenylamine-2-carboxylic acid *See* *N*-phenylanthranilic acid.

diphenylaminechloroarsine *See* adamsite.

1,4-diphenylbenzene *See* *para*-terphenyl.

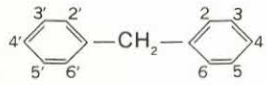
1,3-diphenyl-3-butene-1-one *See* dipnone.

diphenylcarbazide [ORG CHEM] $CO(NHNHC_6H_5)_2$ White powder, melting point 170°C; used as an indicator, pink for alkalies, colorless for acids.

diphenylcarbinol *See* benzhydrol.

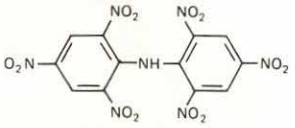
diphenyl carbonate [ORG CHEM] $(C_6H_5O)_2CO$ Easily hydrolyzed, white crystals, melting at 78°C; soluble in organic solvents, insoluble in water; used as a solvent, plasticizer, and chemical intermediate.
diphenylchloroarsine [ORG CHEM] $(C_6H_5)_2AsCl$ Colorless crystals used during World WarI as an antipersonnel device to generate a smoke causing sneezing and vomiting.
diphenyldiazene *See* azobenzene.
diphenyldihydroxyethane *See* hydrobenzoin.
diphenylenedianilinohydrotriazole *See* nitron.
diphenylene oxide [ORG CHEM] $C_{12}H_8O$ A crystalline solid derived from coal tar; melting point is 87°C; used as an insecticide. Also known as dibenzofuran.
diphenyl ether *See* diphenyl oxide.
diphenylethylene *See* stilbene.
diphenylglyoxal *See* benzil.
diphenylguanidine [ORG CHEM] $HNC(NHC_6H_5)_2$ A white powder, melting at 147°C; used as a rubber accelerator. Also known as DPG; melaniline.
diphenylhydantoin *See* phenytoin.
***N,N'*-diphenylhydrazine** *See* hydrazobenzene.
diphenyl ketone *See* benzophenone.
diphenylmethane [ORG CHEM] $(C_6H_5)_2CH_2$ Combustible, colorless crystals melting at 26.5°C; used in perfumery, dyes, and organic synthesis. Also known as benzylbenzene.
di(phenylmethyl)disulfide *See* dibenzyl disulfide.
diphenyl oxide [ORG CHEM] $(C_6H_5)_2O$ A colorless liquid or crystals with a melting point of 27°C and a boiling point of 259°C; soluble in alcohol and ether; used in perfumery, soaps, and resins for laminated electrical insulation. Also known as diphenyl ether; phenyl ether.
4,7-diphenyl-1,10-phenanthroline *See* phenanthroline indicator.
diphenyl phthalate [ORG CHEM] $C_6H_4(COOC_6H_5)_2$ White powder, melting at 80°C; soluble in chlorinated hydrocarbons, esters, and ketones, insoluble in water; used as a plasticizer for cellulosic and other resins.
***N,N'*-diphenylthiourea** *See* thiocarbanilide.
1,3-diphenyltriazine *See* diazoaminobenzene.
diphenylurea *See* carbanilide.
diphosgene *See* trichloromethyl chloroformate.
diphosphate [CHEM] A salt that has two phosphate groups.
diphosphatidyl glycerol *See* cardiolipin.
diphosphoglyceric acid [ORG CHEM] $C_3H_8O_9P_2$ An ester of glyceric acid, with two molecules of phosphoric acid, characterized by a high-energy phosphate bond.
diphosphopyridine nucleotide [BIOCHEM] $C_{21}H_{27}O_{14}N_7P_2$ An organic coenzyme that functions in enzymatic systems concerned with oxidation-reduction reactions. Abbreviated DPN. Also known as codehydrogenase 1; coenzyme 1; nicotinamide adenine dinucleotide (NAD).
diphtheria [MED] A communicable bacterial disease of man caused by the growth of *Corynebacterium diphtheriae* on any mucous membrane, especially of the throat.
diphtheritic myocarditis [MED] Inflammation of the cardiac muscle arising from local or generalized diphtheria.
diphycercal [VERT ZOO] Pertaining to a tail fin, having symmetrical upper and lower parts, and with the vertebral column extending to the tip without upturning.
diphyletic [EVOL] Originating from two lines of descent.
Diphyllidea [INV ZOO] A monogeneric order of tapeworms in the subclass Cestoda; all species live in the intestine of elasmobranch fishes.
Diphyllobothrium [INV ZOO] A genus of tapeworms; including parasites of man, dogs, and cats. Formerly known as *Dibothriocephalus*.
Diphyllobothrium latum [INV ZOO] A large tapeworm that infects man, dogs, and cats; causes anemia and disorders of the nervous and digestive systems in man.
diphyllous [BOT] Having two leaves.
diphyodont [ANAT] Having two successive sets of teeth, deciduous followed by permanent, as in man.
dipicolinic acid [BIOCHEM] $C_7H_5O_4N \cdot 1\frac{1}{2}H_2O$ A chelating agent composing 5–15% of the dry weight of bacterial spores.
dipicrylamine [ORG CHEM] $[(NO_2)_3C_6H_2]_2NH$ Yellow, prismlike crystals used in the gravimetric determination of potassium.
dip inductor *See* earth inductor.
dip joint [GEOL] A joint that strikes approximately at right angles to the cleavage or bedding of the constituent rock.
Diplacanthidae [PALEON] A family of extinct acanthodian fishes in the suborder Diplacanthoidei.
Diplacanthoidei [PALEON] A suborder of extinct acanthodian fishes in the order Climatiiformes.
diplacusis [MED] A difference in the pitch perceptions of the two ears when stimulated by the same sound frequency.
Diplasiocoela [VERT ZOO] A suborder of amphibians in the order Anura typically having the eighth vertebra biconcave.
diplegia [MED] Paralysis of similar parts on the two sides of the body.
dipleurula [INV ZOO] **1.** A hypothetical bilaterally symmetrical larva postulated to be an ancestral form of echinoderms and chordates. **2.** Any bilaterally symmetrical, ciliated echinoderm larva.
diplexer [ELECTR] A coupling system that allows two different transmitters to operate simultaneously or separately from the same antenna.
diplex operation [COMMUN] Simultaneous transmission or reception of two signals using a specified common feature, such as a single antenna or a single carrier.
diplex radio transmission [COMMUN] The simultaneous transmission of two signals by using a common carrier wave.
diplex reception [ELEC] Simultaneous reception of two signals which have some features in common, such as a single receiving antenna or a single carrier frequency.
Diplobathrida [PALEON] An order of extinct, camerate crinoids having two circles of plates beneath the radials.
diplobiont [BIOL] An organism characterized by alternating, morphologically dissimilar haploid and diploid generations.
diploblastic [ZOO] Having two germ layers, referring to embryos and certain lower invertebrates.
diploblastula [INV ZOO] A two-layered, flagellated larva of certain ceractinomorph sponges. Also known as parenchymella.
diplococci [MICROBIO] A pair of micrococci.
dip log [GEOL] A log of the dips of formations traversed by boreholes.
diploglossate [VERT ZOO] Pertaining to certain lizards, having the ability to retract the end of the tongue into the basal portion.
diplohaplont [BIOL] An organism characterized by alternating, morphologically similar haploid and diploid generations.
diploid [CRYSTAL] A crystal form in the isometric system having 24 similar quadrilateral faces arranged in pairs.
diploidization [GEN] The process of attaining the diploid state.
diploid merogony [EMBRYO] Development of a part of an egg in which the nucleus is the normal diploid fusion product of egg and sperm nuclei.
diploid state [GEN] A condition in which a chromosome set is present in duplicate in a nucleus (2N).
diplolepidious [BOT] Double-scaled, specifically referring to the peristome of mosses with two rows of scales on the outside and one row on the inner.
Diplomonadida [INV ZOO] An order of small, colorless protozoans in the class Zoomastigophorea, having a bilaterally symmetrical body with four flagella on each side.
Diplomystidae [VERT ZOO] A family of catfishes in the suborder Siluroidei confined to the waters of Chile and Argentina.
diplont [BIOL] An organism with diploid somatic cells and haploid gametes.
diplopia [MED] A disorder characterized by double vision.
Diplopoda [INV ZOO] The millipeds, a class of terrestrial tracheate, oviparous arthropods; each body segment except the first few bears two pairs of walking legs.
Diploporita [PALEON] An extinct order of echinoderms in the class Cystoidea in which the thecal canals were associated in pairs.
Diplorhina [VERT ZOO] The subclass of the class Agnatha that includes the jawless vertebrates with paired nostrils.
diplosome [CYTOL] A double centriole.
diplospondyly [ANAT] Having two centra in one vertebra.
diplotene [CYTOL] The stage of meiotic prophase during which pairs of nonsister chromatids of each bivalent repel each other and are kept from falling apart by the chiasmata.
Diplura [INV ZOO] An order of small, primarily wingless insects of worldwide distribution.

DIPHENYLMETHANE



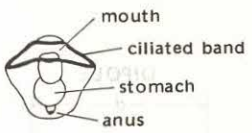
Structural formula of diphenylmethane showing numbered carbons.

DIPICRYLAMINE



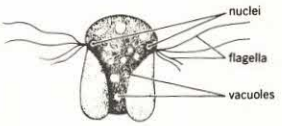
Structural formula.

DIPLEURULA



Dipleurula larva.

DIPLOMONADIDA



A diplomonad, *Trepomonas rotans*. *(After McCracken)*

DIPLURA

Campodea folsomi Silvestri (Campodeidae). *(From E. O. Essig, College Entomology, Macmillan, 1942)*

dipmeter [ENG] **1.** An instrument used to measure the direction and angle of dip of geologic formations. **2.** An absorption wavemeter in which bipolar or field-effect transistors replace the electron tubes used in older grid-dip meters.

dipmeter log [GEOL] A dip log produced by reading of the direction and angle of formation dip as analyzed from impulses from a dipmeter consisting of three electrodes 120° apart in a plane perpendicular to the borehole.

dip mold [ENG] A one-piece glassmaking mold with an open top; used to mold patterns.

dip needle [ENG] An obsolete type of magnetometer consisting of a magnetized needle that rotates freely in the vertical plane, with an adjustable weight on one side of the pivot.

Dipneumonomorphae [INV ZOO] A suborder of the order Araneida comprising the spiders common in the United States, including grass spiders, hunting spiders, and black widows.

Dipneusti [VERT ZOO] The equivalent name for Dipnoi.

Dipnoi [VERT ZOO] The lungfishes, a subclass of the Osteichthyes having lungs that arise from a ventral connection in the gut.

dipnone [ORG CHEM] $C_{16}H_{14}O$ A liquid ketone, formed by condensation of two acetophenone molecules; used as a plasticizer. Also known as 1,3-diphenyl-3-butene-1-one; β-methylchalcone.

Dipodidae [VERT ZOO] The Old World jerboas, a family of mammals in the order Rodentia.

dip of horizon *See* dip.

dip oil [MATER] Oil containing about 25% tar acids; used as dip for animals to kill insect parasites.

dipolar ion [CHEM] An ion carrying both a positive and a negative charge. Also known as zwitterion.

dipole [ELECTROMAG] Any object or system that is oppositely charged at two points, or poles, such as a magnet or a polar molecule; more precisely, the limit as either charge goes to infinity, the separation distance to zero, while the product remains constant. Also known as doublet; electric doublet.

dipole anisotropy [ASTRON] A deviation of the equivalent blackbody temperature of the cosmic microwave radiation from its average value which is proportional to the cosine of the angle with some given direction, thus resembling the form of radiation from a dipole antenna.

dipole antenna [ELECTROMAG] An antenna approximately one-half wavelength long, split at its electrical center for connection to a transmission line whose radiation pattern has a maximum at right angles to the antenna. Also known as doublet antenna; half-wave dipole.

dipole-dipole force *See* orientation force.

dipole disk feed [ELECTROMAG] Antenna, consisting of a dipole near a disk, used to reflect energy to the disk.

dipole moment *See* electric dipole moment; magnetic dipole moment.

dipole polarization *See* orientation polarization.

dipole radiation [ELECTROMAG] The electromagnetic radiation generated by an oscillating electric or magnetic dipole.

dipole relaxation [ELEC] The process, occupying a certain period of time after a change in the applied electric field, in which the orientation polarization of a substance reaches equilibrium.

dipole sound field [ACOUS] A sound field generated by an oscillating dipole source.

dipole transition [ATOM PHYS] A transition of an atom or nucleus from one energy state to another in which dipole radiation is emitted or absorbed.

diporpa larva [INV ZOO] A developmental stage of a monogenean trematode.

Dippel's oil *See* bone oil.

dipper dredge [MECH ENG] A power shovel resembling a grab crane mounted on a flat-bottom boat for dredging under water. Also known as dipper shovel.

dipper stick [MECH ENG] A straight shaft connecting the digging bucket of an excavating machine or power shovel with the boom.

dipper trip [MECH ENG] A device which releases the door of a shovel bucket.

dipping acid *See* sulfuric acid.

dipping refractometer *See* immersion refractometer.

dipping sonar [ENG] A sonar transducer that is lowered into the water from a hovering antisubmarine-warfare helicopter and recovered after the search is complete. Also known as dunking sonar.

dip plating *See* immersion plating.

dip pole *See* magnetic pole.

dip reversal *See* reversal of dip.

Diprionidae [INV ZOO] The conifer sawflies, a family of hymenopteran insects in the superfamily Tenthredinoidea.

dipropetryn [ORG CHEM] $C_{11}H_{21}N_5S$ A colorless solid with a melting point of 104–106°C; slight solubility in water; used to control weeds in cotton, corn, carrots, lima beans, okra, peas, and potatoes. Also known as 2-ethylthio-4,6-bis(isopropylamino)-*S*-triazine.

dipropyl [ORG CHEM] A compound containing two propyl groups.

dipropylene glycol [ORG CHEM] $(CH_3CHOHCH_2)_2O$ A colorless, slightly viscous liquid with a boiling point of 233°C; soluble in toluene and in water; used as a solvent and for lacquers and printing inks.

dipropyl ketone *See* 4-heptanone.

Diprotodonta [VERT ZOO] A proposed order of marsupial mammals to include the phalangers, wombats, koalas, and kangaroos.

Diprotodontidae [PALEON] A family of extinct marsupial mammals.

diproton [NUC PHYS] A hypothetical bound state of two protons, which probably does not exist.

Dipsacales [BOT] An order of dicotyledonous herbs and shrubs in the subclass Asteridae characterized by an inferior ovary and usually opposite leaves.

dip slip [GEOL] The component of a fault parallel to the dip of the fault. Also known as normal displacement.

dip slope [GEOL] A slope of the surface of the land determined by and conforming approximately to the dip of the underlying rocks. Also known as back slope; outface.

Dipsocoridae [INV ZOO] A family of hemipteran insects in the superfamily Dipsocoroidea; members are predators on small insects under bark or in rotten wood.

Dipsocoroidea [INV ZOO] A superfamily of minute, ground-inhabiting hemipteran insects belonging to the subdivision Geocorisae.

dip soldering [MET] A method similar to dip brazing but using a filler metal having a melting point below 800°F (427°C).

dipsophobia [PSYCH] An abnormal fear of drinking.

dipstick [ENG] A graduated rod which measures depth when dipped in a liquid, used, for example, to measure the oil in an automobile engine crankcase.

dip stream [HYD] A consequent stream that flows in the direction of the dip of the strata it traverses.

dip-strike symbol [GEOL] A geologic symbol used on maps to show the strike and dip of a planar feature.

Diptera [INV ZOO] The true flies, an order of the class Insecta characterized by possessing only two wings and a pair of balancers.

Dipteriformes [VERT ZOO] The single order of the subclass Dipnoi, the lungfishes.

Dipterocarpaceae [BOT] A family of dicotyledonous plants in the order Theales having mostly stipulate, alternate leaves, a prominently exserted connective, and a calyx that is mostly winged in fruit.

dipterous [BIOL] **1.** Of, related to, or characteristic of Diptera. **2.** Having two wings or winglike structures.

dipulse [COMMUN] Transmission of a binary code in which the presence of one cycle of a sine-wave tone represents a binary "1" and the absence of one cycle represents a binary "0."

dipyramid [CRYSTAL] A crystal having the form of two pyramids that melt at a plane of symmetry.

dipyre *See* mizzonite.

2,2′-dipyridyl [ORG CHEM] $C_{10}H_8N_2$ A crystalline substance soluble in organic solvents; melting point is 69.7°C; used as a reagent for the determination of iron. Also known as 2,2′-bipyridine.

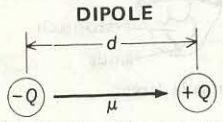
dipyrine *See* aminopyrine.

Dirac covariants [QUANT MECH] Quantities which behave as a scalar, a pseudoscalar, a vector, an axial vector, or a second-rank tensor under Lorentz transformations, and whose elements consist of basis elements of the Dirac gamma algebra multiplied by the Dirac wave function on the right and its adjoint on the left.

Dirac delta function *See* delta function.

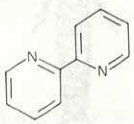
Dirac electron theory *See* Dirac theory.

Dirac equation [QUANT MECH] A relativistic wave equation for an electron in an electromagnetic field, in which the wave



Electric dipole with moment $\mu = Qd$.

African lungfish *(Protopterus annectens)*, length to 32 inches (81 centimeters). *(After G. A. Boulenger, Catalogue of the Fresh Water Fishes of Africa in the British Museum, vol. 1, 1909)*



Structural formula.

function has four components corresponding to four internal states specified by a two-valued spin coordinate and an energy coordinate which can have a positive or negative value.

Dirac fields [QUANT MECH] Operators, arising in the second quantization of the Dirac theory, which correspond to the Dirac wave functions in the original theory.

Dirac gamma algebra [QUANT MECH] An algebra whose basis consists of 16 linearly independent 4×4 matrices constructed from products of the four basic Dirac matrices.

Dirac h *See* *h*-bar.

Dirac matrix [QUANT MECH] Any one of four matrices, designated γ_μ ($\mu = 1, 2, 3, 4$), each having four rows and four columns and satisfying $\gamma_\mu\gamma_\nu + \gamma_\nu\gamma_\mu = \delta_{\mu\nu}$, where $\delta_{\mu\nu}$ is the Kronecker delta function, which matrices operate on the four-component wave function in the Dirac equation. Also known as gamma matrix.

Dirac moment [QUANT MECH] Magnetic moment of the electron according to the Dirac theory, equal to $e\hbar/2mc$, where e and m are the charge and mass of the positron respectively, $\hbar$ is Planck's constant divided by 2π, and c is the speed of light.

Dirac monopole [QUANT MECH] A magnetic monopole whose magnetic charge is an integral multiple of $\hbar c/2e$, where $\hbar$ is Planck's constant divided by 2π, c is the speed of light, and e is the charge of the electron.

Dirac particle [PARTIC PHYS] A particle behaving according to the Dirac theory, which describes the behavior of electrons and muons except for radiative corrections, and is envisaged as describing a central core of a hadron of spin $\frac{1}{2}\hbar$ which remains when the effects of nuclear forces are removed.

Dirac quantization [QUANT MECH] The condition, arising from conservation of angular momentum, that for any electric charge q and magnetic monopole with magnetic charge m, one has $2qm = n\hbar c$, where n is an integer, $\hbar$ is Planck's constant divided by 2π, and c is the speed of light (gaussian units).

Dirac spinor *See* spinor.

Dirac theory [QUANT MECH] Theory of the electron based on the Dirac equation, which accounts for its spin angular momentum and gives its magnetic moment and its behavior in an electromagnetic field (except for higher-order corrections). Also known as Dirac electron theory.

Dirac wave function [QUANT MECH] A function appropriate for describing a spin $\frac{1}{2}$ particle and antiparticle; it is a column matrix with four entries, each of which is a function of the space and time coordinates; the four-components form two first-rank Lorentz spinors.

direct access *See* random access.

direct-access library [COMPUT SCI] A disk-stored set of programs, each of which is directly accessible without sequential search.

direct-access memory *See* random-access memory.

direct-access storage *See* random-access memory.

direct-acting pump [MECH ENG] A displacement reciprocating pump in which the steam or power piston is connected to the pump piston by means of a rod, without crank motion or flywheel.

direct-acting recorder [ENG] A recorder in which the marking device is mechanically connected to or directly operated by the primary detector.

direct address [COMPUT SCI] Any address specifying the location of an operand.

direct-address processing [COMPUT SCI] Any computer operation during which data are accessed by means of addresses rather than contents.

direct air cycle [AERO ENG] A thermodynamic propulsion cycle involving a nuclear reactor and gas turbine or ramjet engine, in which air is the working fluid. Also known as direct cycle.

direct allocation [COMPUT SCI] A system in which the storage locations and peripheral units to be assigned to use by a computer program are specified when the program is written, in contrast to dynamic allocation.

direct-aperture antenna [ELECTROMAG] An antenna whose conductor or dielectric is a surface or solid, such as a horn, mirror, or lens.

direct-arc furnace [ENG] A furnace in which a material in a refractory-lined shell is rapidly heated to pour temperature by an electric arc which goes directly from electrodes to the material.

direct bearing [CIV ENG] A direct vertical support in a structure.

direct cell [METEOROL] A closed thermal circulation in a vertical plane in which the rising motion occurs at higher potential temperature than the sinking motion.

direct-chill casting [MET] A continuous ingot- or billet-casting process in which metal is poured into short molds on a platform and then cooled when the platform is lowered into a water bath. Abbreviated dc casting. Also known as semicontinuous casting.

direct code [COMPUT SCI] A code in which instructions are written in the basic machine language.

direct command guidance [ENG] Control of a missile or drone entirely from the launching site by radio or by signals sent over a wire.

direct-connected [MECH ENG] The connection between a driver and a driven part, as a turbine and an electric generator, without intervening speed-changing devices, such as gears.

direct-contact condenser *See* contact condenser.

direct control [COMPUT SCI] The control of one machine in a data-processing system by another, without human intervention.

direct control function *See* regulatory control function.

direct cost [IND ENG] The cost in goods and labor to produce a product which would not be spent if the product were not made.

direct-coupled [MECH ENG] Joined without intermediate connections.

direct-coupled amplifier [ELECTR] A direct-current amplifier in which a resistor or a direct connection provides the coupling between stages, so small changes in direct currents can be amplified.

direct-coupled transistor logic [ELECTR] Integrated-circuit logic using only resistors and transistors, with direct conductive coupling between the transistors; speed can be up to 1 megahertz. Abbreviated DCTL.

direct coupling [ELEC] Coupling of two circuits by means of a non-frequency-sensitive device, such as a wire, resistor, or battery, so both direct and alternating current can flow through the coupling path. [MECH ENG] The direct connection of the shaft of a prime mover (such as a motor) to the shaft of a rotating mechanism (such as a pump or compressor).

direct current [ELEC] Electric current which flows in one direction only, as opposed to alternating current. Abbreviated dc.

direct-current amplifier [ELECTR] An amplifier that is capable of amplifying dc voltages and slowly varying voltages.

direct-current circuit [ELEC] Any combination of dc voltage or current sources, such as generators and batteries, in conjunction with transmission lines, resistors, and power converters such as motors.

direct-current circuit theory [ELEC] An analysis of relationships within a dc circuit.

direct-current component [COMMUN] The average value of a signal; in television, it represents the average luminance of the picture being transmitted; in radar, the level from which the transmitted and received pulses rise.

direct-current continuity [ELEC] Property of a circuit in which there is an established pathway for conduction of current from a direct-current source.

direct-current coupling [ELECTR] That type of coupling in which the zero-frequency term of the Fourier series representing the input signal is transmitted.

direct-current discharge [ELECTR] The passage of a direct current through a gas.

direct-current dump [ELECTR] Removal of all direct-current power from a computer system or component intentionally, accidentally, or conditionally; in some types of storage, this results in loss of stored information.

direct-current electrode negative [MET] In direct-current arc welding, the arrangement of leads where the surface to be welded is the positive and the electrode is the negative relative to the welding arc.

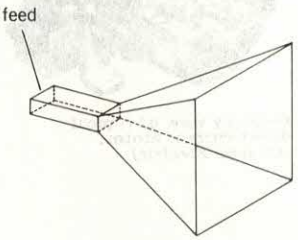
direct-current electrode positive [MET] In direct-current arc welding, the arrangement of leads where the surface to be welded is the negative and the electrode is the positive relative to the welding arc.

direct-current erase [ELECTR] Use of direct current to energize an erasing head of a tape recorder.

direct-current generator [ELEC] A rotating electric machine that converts mechanical power into dc power.

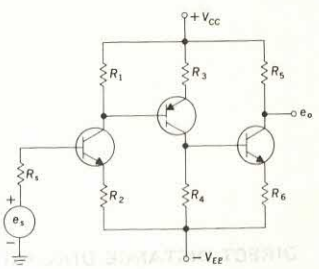
direct-current inserter [ELECTR] A television transmitter

DIRECT-APERTURE ANTENNA



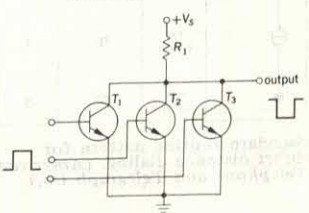
Pyramidal horn, a type of direct-aperture antenna.

DIRECT-COUPLED AMPLIFIER



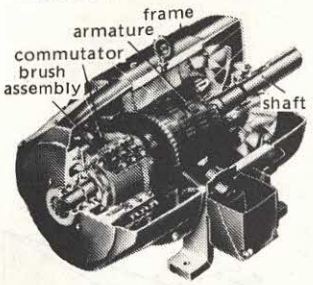
Direct-coupled direct-current amplifier of the type which uses *npn* and *pnp* transistors.

DIRECT-COUPLED TRANSISTOR LOGIC



Direct-coupled transistor logic circuit.

DIRECT-CURRENT MOTOR



Cutaway view of typical direct-current motor. *(General Electric)*

DIRECT DISTANCE DIALING

symbols	names	abbreviation	class number
to other regional centers	regional center	RC	1
	sectional center	SC	2
	primary center	PC	3
	toll center	TC	4
	end office	EO	5

Standard routing pattern for direct distance dialing. *(American Telephone and Telegraph Co.)*

stage that adds to the video signal a dc component known as the pedestal level.

direct-current motor [ELEC] An electric rotating machine energized by direct current and used to convert electric energy to mechanical energy.

direct-current motor control *See* electronic motor control.

direct-current offset [ELECTR] A direct-current level that may be added to the input signal of an amplifier or other circuit.

direct-current picture transmission [COMMUN] Television transmission in which the signal contains a dc component that represents the average illumination of the entire scene. Also known as direct-current transmission.

direct-current plate resistance [ELECTR] Value or characteristic used in vacuum-tube computations; it is equal to the direct-current plate voltage divided by the direct-current plate current.

direct-current power [ELEC] The power delivered by a dc power system, equal to the line voltage times the load current.

direct-current power supply [ELEC] A power supply that provides one or more dc output voltages, such as a dc generator, rectifier-type power supply, converter, or dynamotor.

direct-current quadruplex system [COMMUN] Direct-current telegraph system which affords simultaneous transmission of two messages in each direction over the same line, achieved by superimposing neutral telegraph upon polar telegraph.

direct-current receiver [ELECTR] A radio receiver designed to operate directly from a 115-volt dc power line.

direct-current reinsertion *See* clamping.

direct-current restoration *See* clamping.

direct-current restorer [ELECTR] A clamp circuit used to establish a dc reference level in a signal without modifying to any important degree the waveform of the signal itself. Also known as clamper; reinserter.

direct-current signaling [ELEC] A transmission method that uses direct current.

direct-current SQUID [ELECTR] A type of superconducting quantum interference device (SQUID) which contains two Josephson junctions in a superconducting loop; its state is determined from direct-current measurements.

direct-current tachometer [ELEC] A dc generator operating with negligible load current and with constant field flux provided by a permanent magnet, so its dc output voltage is proportional to speed.

direct-current telegraphy [COMMUN] Telegraphy in which direct current controlled by the transmitting apparatus is supplied to the line to form the transmitted signal.

direct-current transducer [ELECTR] A transducer that requires dc excitation and provides a dc output that varies with the parameter being sensed.

direct-current transmission *See* direct-current picture transmission.

direct-current vacuum-tube voltmeter [ELECTR] The amplifying and indicating portions of the diode rectifier-amplifier meter, which are usually designed so that the diode rectifier can be disconnected for dc measurements.

direct-current voltage *See* direct voltage.

direct-current working volts [ELEC] The maximum continuously applied dc voltage for which a capacitor is rated. Abbreviated dcwV.

direct cycle *See* direct air cycle.

direct-cycle reactor [NUCLEO] A nuclear power plant in which the heat-transfer fluid circulates through the reactor and then passes directly to the turbine in a continuous cycle.

direct digital control [CONT SYS] The use of a digital computer generally on a time-sharing or multiplexing basis, for process control in petroleum, chemical, and other industries.

direct distance dialing [COMMUN] A telephone exchange service that allows a telephone user to dial subscribers outside the local area using a standard routing pattern from the local or end office.

direct drive [MECH ENG] A drive in which the driving part is directly connected to the driven part.

direct-drive vibration machine [MECH ENG] A vibration machine in which the vibration table is forced to undergo a displacement by a positive linkage driven by a direct attachment to eccentrics or camshafts.

direct dye [MATER] A group of coal tar dyes that act without mordants, for example, benzidine dyes. Also known as substantive dye.

directed angle [MATH] An angle for which one side is designated as initial, the other as terminal.

directed graph [MATH] A graph in which a direction is shown for every arc. Also known as digraph.

directed line [MATH] A line on which a positive direction has been specified.

directed number [MATH] A number together with a sign.

directed set [MATH] A partially ordered set with the property that for every pair of elements a,b in the set, there is a third element which is larger than both a and b.

direct effect [PHYS CHEM] A chemical effect caused by the direct transfer of energy from ionizing radiation to an atom or molecule in a medium.

direct electromotive force [ELEC] Unidirectional electromotive force in which the changes in values are either zero or so small that they may be neglected.

direct energy conversion [ENG] Conversion of thermal or chemical energy into electric power by means of direct-power generators.

direct-entry terminal [COMPUT SCI] A device from which data are received into a computer immediately, and which edits data at the time of receipt, allowing computer files to be accessed to validate the information entered, and allowing the terminal operator to be notified immediately of any errors.

direct-expansion coil [MECH ENG] A finned coil, used in air cooling, inside of which circulates a cold fluid or evaporating refrigerant. Abbreviated DX coil.

direct extrusion [ENG] Extrusion by movement of ram and product in the same direction against a die orifice.

direct feedback system [CONT SYS] A system in which electrical feedback is used directly, as in a tachometer.

direct fire [ORD] Fire delivered on a target in which the weapon sights are brought directly on the target.

direct-fire [ENG] To fire a furnace without preheating the air or gas.

direct-fired evaporator [CHEM ENG] An evaporator in which the flame and combustion gases are separated from the boiling liquid by a metal wall, or other heating surface.

direct-gap semiconductor [SOLID STATE] A semiconductor in which the minimum of the conduction band occurs at the same wave vector as the maximum of the valence band, and recombination radiation consequently occurs with relatively large intensity.

direct-geared [MECH ENG] Joined by a gear on the shaft of one machine meshing with a gear on the shaft of another machine.

direct grid bias *See* grid bias.

direct hierarchy control [COMPUT SCI] A method of manipulating data in a computer storage hierarchy in which data transfer is completely under the control of built-in algorithms and the user or programmer is not concerned with the various storage subsystems.

direct-image offset system [GRAPHICS] A system for converting letterpress color plates to offset that involves pulling a proof of the letterpress form directly onto a special paper-backed aluminum foil plate, which then receives a slight treatment. Also known as d-i offset system.

direct-imaging mass analyzer [ENG] A type of secondary ion mass spectrometer in which secondary ions pass through an electrostatic immersion lens which forms an image that bears a point-to-point relation to the ion's place of origin on the sample surface, and then traverse magnetic sectors which effect mass separation. Also known as Castaing-Slodzian mass analyzer.

direct immunofluorescence [IMMUNOL] The use of labeled reactant to reveal the presence of an unlabeled one.

direct indicating compass [NAV] A compass in which the dial, scale, or index is carried on the sensing element.

direct-insert subroutine [COMPUT SCI] A body of coding or a group of instructions inserted directly into the logic of a program, often in multiple copies, whenever required.

direct instruction [COMPUT SCI] An instruction containing the address of the operand on which the operation specified in the instruction is to be performed.

direct interelectrode capacitance *See* interelectrode capacitance.

direct inward dialing [COMMUN] The capability for dialing individual telephone extensions in a large organization directly from outside, without going through a central switchboard.

direction [ENG] The position of one point in space relative to another without reference to the distance between them; may be

either three-dimensional or two-dimensional, the horizontal being the usual plane of the latter; usually indicated in terms of its angular distance from a reference direction. [GEOL] *See* trend.

directional antenna [ELECTROMAG] An antenna that radiates or receives radio waves more effectively in some directions than others.

directional beacon *See* direction-giving beacon.

directional beam [ELECTROMAG] A radio or radar wave that is concentrated in a given direction.

directional control [ENG] Control of motion about the vertical axis; in an aircraft, usually by the rudder.

directional control valve [ENG] A control valve serving primarily to direct hydraulic fluid to the point of application.

directional counter [NUCLEO] A counter that is more sensitive to nuclear radiation from some directions than from others.

directional coupler [ELECTR] A device that couples a secondary system only to a wave traveling in a particular direction in a primary transmission system, while completely ignoring a wave traveling in the opposite direction. Also known as directive feed.

directional derivative [MATH] The rate of change of a function in a given direction; more precisely, if f maps an n-dimensional euclidean space into the real numbers, and $\mathbf{x} = (x_1, \ldots, x_n)$ is a vector in this space, and $\mathbf{u} = (u_1, \ldots, u_n)$ is a unit vector in the space (that is, $u_1^2 + \ldots + u_n^2 = 1$), then the directional derivative of f at $\mathbf{x}$ in the direction of $\mathbf{u}$ is the limit as h approaches zero of $[f(\mathbf{x} + h\mathbf{u}) - f(\mathbf{x})]/h$.

directional drilling [ENG] A method of drilling in which the direction of the hole is planned before.

directional filter [ELECTR] A low-pass, band-pass, or high-pass filter that separates the bands of frequencies used for transmission in opposite directions in a carrier system. Also known as directional separation filter.

directional gain *See* directivity index.

directional gyro [AERO ENG] A flight instrument incorporating a gyro that holds its position in azimuth and thus can be used as a directional reference. Also known as direction indicator. [MECH] A two-degrees-of-freedom gyro with a provision for maintaining its spin axis approximately horizontal.

directional homing [NAV] Homing in which the bearing is the parameter which is maintained constant.

directional hydrophone [ENG ACOUS] A hydrophone whose response varies significantly with the direction of sound incidence.

directional log [PETRO ENG] A record of the wellhole drift, from the vertical, and the direction of that drift.

directional microphone [ENG ACOUS] A microphone whose response varies significantly with the direction of sound incidence.

directional pattern *See* radiation pattern.

directional phase shifter [ELEC] Passive phase shifter in which the phase change for transmission in one direction differs from that for transmission in the opposite direction.

directional property [MET] Any property of a metal whose magnitude varies with the orientation of the test axis to a specific direction within the metal.

directional relay [ELEC] Relay which functions in conformance with the direction of power, voltage, current, pulse, rotation, and so on.

directional response pattern *See* directivity pattern.

directional separation filter *See* directional filter.

directional solidification [MET] Controlled solidification of molten metal in a casting so as to provide feed metal to the solidifying front of the casting.

directional stability [AERO ENG] The property of an aircraft, rocket, or such, enabling it to restore itself from a yawing or side-slipping condition. Also known as weathercock stability.

directional structure [GEOL] Any sedimentary structure having directional significance; examples are cross-bedding and ripple marks. Also known as vectorial structure.

directional well [PETRO ENG] A well drilled at an angle up to 70° from the vertical to avoid obstacles over the reservoir, such as towns, beaches, or bodies of water.

direction angles [MATH] The three angles which a line in space makes with the positive x, y, and z axes.

direction cosine [ENG] In tracking, the cosine of the angle between a baseline and the line connecting the center of the baseline with the target. [MATH] The cosine of one of the direction angles of a line in space.

direction finder *See* radio direction finder.

direction-finder-bearing indicator [NAV] That portion of a direction finder on which the bearing (relative, magnetic, true bearing or reciprocal) of the received transmission is indicated.

direction finder deviation [NAV] The angular difference between a bearing observed by a radio direction finder and the correct bearing, caused by disturbances due to the characteristics of the receiving craft or the station site.

direction-finding net [NAV] Two or more direction-finding facilities furnishing coordinated information to a designated control-evaluation agency facility for the purpose of providing position or course information to a pilot.

direction-giving beacon [NAV] A beacon (light or radio) which, when observed or received by suitable equipment on the craft or vehicle, gives the observer the bearing (usually magnetic) from the beacon; although it operates in a different mode from that of a direction-finding station, the information produced by both types of stations is identical; however, a direction-giving station (which is shore- or ground-based) produces navigational parameters that differ from those of a craft or vehicle-borne direction finder. Also known as directional beacon.

direction-independent radar [ENG] Doppler radar used in sentry applications.

direction indicator *See* directional gyro.

direct ionization *See* extrinsic photoemission.

direction of propagation [PHYS] **1.** The normal to a surface of constant phase, in a propagating wave. **2.** The direction of the group velocity. **3.** The direction of time-average energy flow. (In a homogeneous isotropic medium, these three directions coincide.)

direction of relative movement [NAV] The direction of motion relative to a reference point, itself usually in motion.

direction rectifier [ELECTR] A rectifier that supplies a direct-current voltage whose magnitude and polarity vary with the magnitude and relative polarity of an alternating-current synchro error voltage.

directive [COMPUT SCI] An instruction in a source program that guides the compiler in making the translation to machine language, and is usually not translated into instructions in the object program. [INV ZOO] Any of the dorsal and ventral paired mesenteries of certain anthozoan coelenterates.

directive feed *See* directional coupler.

directive gain [ELECTROMAG] Of an antenna in a given direction, 4π times the ratio of the radiation intensity in that direction to the total power radiated by the antenna.

directive therapy [PSYCH] A method of psychiatric treatment by which the therapist, assuming complete understanding of the patient's needs, endeavors to change the patient's attitudes, behavior, or mode of living.

directivity [ELECTR] The ability of a logic circuit to ensure that the input signal is not affected by the output signal. [ELECTROMAG] **1.** The value of the directive gain of an antenna in the direction of its maximum value. **2.** The ratio of the power measured at the forward-wave sampling terminals of a directional coupler, with only a forward wave present in the transmission line, to the power measured at the same terminals when the direction of the forward wave in the line is reversed; the ratio is usually expressed in decibels.

directivity factor [ENG ACOUS] **1.** The ratio of radiated sound intensity at a remote point on the principal axis of a loudspeaker or other transducer, to the average intensity of the sound transmitted through a sphere passing through the remote point and concentric with the transducer; the frequency must be stated. **2.** The ratio of the square of the voltage produced by sound waves arriving parallel to the principal axis of a microphone or other receiving transducer, to the mean square of the voltage that would be produced if sound waves having the same frequency and mean-square pressure were arriving simultaneously from all directions with random phase; the frequency must be stated.

directivity index [ENG ACOUS] The directivity factor expressed in decibels; it is 10 times the logarithm to the base 10 of the directivity factor. Also known as directional gain.

directivity pattern [ENG ACOUS] A graphical or other description of the response of a transducer used for sound emission or reception as a function of the direction of the transmitted or incident sound waves in a specified plane and at a specified

frequency. Also known as beam pattern; directional response pattern.

direct keying device [COMPUT SCI] A computer input device which enables direct entry of information by means of a keyboard.

direct labor [IND ENG] The labor or effort actually producing goods or services.

direct labor standard *See* standard time.

direct-line drive [PETRO ENG] Waterflood operation involving a network of wells in a direct (straight) line.

directly heated cathode *See* filament.

direct material [IND ENG] Any raw or semifinished material which will be incorporated into the product.

direct memory access [COMPUT SCI] The use of special hardware for direct transfer of data to or from memory to minimize the interruptions caused by program-confrolled data transfers. Abbreviated dma.

direct motion [ASTRON] Eastward, or counterclockwise, motion of a planet or other object as seen from the North Pole (motion in the direction of increasing right ascension).

direct nuclear reaction [NUC PHYS] A nuclear reaction which is completed in the time required for the incident particle to transverse the target nucleus, so that it does not combine with the nucleus as a whole but interacts only with the surface or with some individual constituent.

direct numerical control [COMPUT SCI] The use of a computer to program, service, and log a process such as a machine-tool cutting operation.

director [ELECTR] Telephone switch which translates the digits dialed into the directing digits actually used to switch the call. [ELECTROMAG] A parasitic element placed a fraction of a wavelength ahead of a dipole receiving antenna to increase the gain of the array in the direction of the major lobe. [ORD] Electromechanical equipment which is used to track a moving target in azimuth and angular height and which, with the addition of other necessary information from an outside source, such as a radar set or a range finder, continuously computes firing data and transmits them to the guns.

direct organization [COMPUT SCI] A type of processing in which records within data sets stored on direct-access devices may be fetched directly if their physical locations are known.

director-sight system [ORD] A sighting system used on airborne flexible guns in which the gunner has direct control of the tracking line (line of aim) and indirect control of the gun or guns.

director-type computer [COMPUT SCI] A gunsight computer used in the director-sight system which, in response to the gunner's action of tracking, computes the angle at which a gun must be fired in order to hit a target.

director-type fire control [ORD] The control of gun fire by use of a director-type computer.

directory [COMPUT SCI] The listing and description of all the fields of the records making up a file.

direct outward dialing [COMMUN] A private automatic branch telephone exchange that permits all local stations to dial outside numbers. Abbreviated DOD.

direct pickup [COMMUN] The transmission of television images without intermediate photographic or magnetic recording.

direct piezoelectricity [SOLID STATE] Name sometimes given to the piezoelectric effect in which an electric charge is developed on a crystal by the application of mechanical stress.

direct plate exposure [GRAPHICS] A method of printing in which printing plates are directly exposed from copy in special cameras, without the use of an intermediate negative.

direct pointing [ORD] Pointing a piece either in a direction or in a range and direction by means of a sight directed at the target.

direct point repeater [ELECTR] Telegraph repeater in which the receiving relay controlled by the signals received over a line repeats corresponding signals directly into another line or lines without the interposition of any other repeating or transmitting apparatus.

direct positive [GRAPHICS] A photographic positive made by exposure to light and developed without a negative.

direct-power generator [ENG] Any device which converts thermal or chemical energy into electric power by methods more direct than the conventional thermal cycle.

direct printing [TEXT] Printing by passing the textile through a series of rollers, each printing a different color or different part of the pattern.

direct process [MET] A process in which the metal is produced from the ore in a single step (for example, steel without intermediate pig iron).

direct product of a finite family of sets [MATH] Given sets $A_1, \ldots, A_n$, the direct product is the set of all n-tuples $(a_1, \ldots, a_n)$, where a_i belongs to A_i for $i = 1, \ldots, n$.

direct proportion [MATH] A statement that the ratio of two variable quantities is equal to a constant.

direct quenching [MET] Rapid cooling of carburized parts directly from the carburizing process.

direct-radiator speaker [ENG ACOUS] A loudspeaker in which the radiating element acts directly on the air, without a horn.

direct reading [GRAPHICS] In microfilm technology, that image which is legible in a normal reading position.

direct-reading gage [ENG] Gage that records directly (instead of inferentially) measured values, for example, a liquid-level gage pointer actuated by direct linkage with a float.

direct recording [ENG ACOUS] Recording in which a record is produced immediately, without subsequent processing, in response to received signals.

direct-reduction process [MET] Any of several methods for extracting iron ore below the melting point of iron, to produce solid reduced iron that may be converted to steel with little further refining.

direct reflection *See* specular reflection.

direct resistance-coupled amplifier [ELECTR] Amplifier in which the plate of one stage is connected either directly or through a resistor to the control grid of the next stage, with the plate-load resistor being common to both stages; used to amplify small changes in direct current.

directrix [MATH] A fixed line used in one method of defining a conic; the distance from this line divided by the distance from a fixed point (called the focus) is the same for all points on the conic.

direct route [ELEC] In wire communications, the trunks that connect a pair of switching centers, regardless of the geographical direction the actual trunk facilities may follow. [NAV] The shortest navigational distance between two points on the earth's surface, for example, the great circle.

direct scanning [COMMUN] A scanning method in which the subject is illuminated at all times and only one elemental area of the subject is viewed at a time by the television camera.

direct screen halftone [GRAPHICS] In color separation, a halftone negative that is produced by direct exposure on an enlarger or by contact through a halftone screen.

direct solar radiation [ASTROPHYS] That portion of the radiant energy received at the actinometer direct from the sun, as distinguished from diffuse sky radiation, effective terrestrial radiation, or radiation from any other source.

direct stratification *See* primary stratification.

direct stroke [ELEC] A lightning stroke that actually strikes some part of a power or communication system.

direct sum [MATH] If each of the sets in a finite direct product of sets has a group structure, this structure may be imposed on the direct product by defining the composition "componentwise"; the resulting group is called the direct sum.

direct support artillery [ORD] Artillery assigned the mission of providing the fire requested by the supported unit.

direct symbol recognition [COMPUT SCI] Recognition by sensing the unique geometrical properties of symbols.

direct tide [GEOPHYS] A gravitational solar or lunar tide in the ocean or atmosphere which is in phase with the apparent motions of the attracting body, and consequently has its local maxima directly under the tide-producing body, and on the opposite side of the earth.

direct viewfinder [OPTICS] A viewfinder in which the user views the subject directly through a lens or sight.

direct-view storage tube [ELECTR] A cathode-ray tube in which secondary emission of electrons from a storage grid is used to provide an intensely bright display for long and controllable periods of time. Also known as display storage tube; viewing storage tube.

direct-vision nephoscope [OPTICS] A type of nephoscope in which the cloud motion is observed by looking directly into the instrument.

direct-vision prism *See* Amici prism.

direct-vision spectroscope [SPECT] A spectroscope that

allows the observer to look in the direction of the light source by means of an Amici prism.

direct voltage [ELEC] A voltage that forces electrons to move through a circuit in the same direction continuously, thereby producing a direct current. Also known as direct-current voltage.

direct wave [COMMUN] A radio wave that is propagated directly through space from transmitter to receiver without being refracted by the ionosphere.

direct-wire circuit [ELEC] Supervised protective signaling circuit usually consisting of one metallic conductor and a ground return and having signal-receiving equipment responsive to either an increase or a decrease in current.

direct-writing galvanometer [ENG] A direct-writing recorder in which the stylus or pen is attached to a moving coil positioned in the field of the permanent magnet of a galvanometer.

direct-writing recorder [ENG] A recorder in which the permanent record of varying electrical quantities or signals is made on paper, directly by a pen attached to the moving coil of a galvanometer or indirectly by a pen moved by some form of motor under control of the galvanometer. Also known as mechanical oscillograph.

Dirichlet conditions [MATH] The requirement that a function be bounded, and have finitely many maxima, minima, and discontinuities on the closed interval $[-\pi, \pi]$.

Dirichlet problem [MATH] To determine a solution to Laplace's equation which satisfies certain conditions in a region and on its boundary.

Dirichlet series [MATH] A series whose nth term is a complex number divided by n to the zth power.

Dirichlet test for convergence [MATH] If Σb_n is a series whose sequence of partial sums is bounded, and if $\{a_n\}$ is a monotone decreasing null sequence, then the series

$$\sum_{n=1}^{\infty} a_n b_n$$

converges.

Dirichlet transform [MATH] For a function $f(x)$, this is the integral of $f(x) \cdot \sin(kx)/x$; its convergence determines the convergence of the Fourier series of $f(x)$.

dirigible [AERO ENG] A lighter-than-air craft equipped with means of propelling and steering for controlled flight.

dirt band [GEOL] A dark layer in a glacier representing a former surface, usually a summer surface, where silt and debris accumulated.

dirt bed [GEOL] A buried soil containing partially decayed organic material; sometimes occurs in glacial drift.

dirt slip *See* clay vein.

dirty bomb [ORD] An explosive based on nuclear fission that emits many long-lived radioactive isotopes.

dirty ship [NAV ARCH] Tanker carrying oil or heavy petroleum products.

dirty snowball model [ASTRON] A model of comet structure in which the nucleus of the comet resembles a large dirty snowball.

disability glare *See* glare.

disaccharide [BIOCHEM] Any of the class of compound sugars which yield two monosaccharide units upon hydrolysis.

disappearing carriage [ORD] A movable part for raising a heavy gun above a parapet and lowering it automatically after firing.

disappearing filament pyrometer *See* optical pyrometer.

disappearing stair [BUILD] A stair that can be swung up into a ceiling space.

disappearing target [ORD] Target that is exposed to the firer's view for a short time; for example, bobbing targets or targets raised from target pits for short periods of time.

disarm [ORD] To remove the detonating device or fuse of a bomb, mine, or other piece of explosive ordnance, or otherwise render it incapable of exploding in its usual manner.

disassemble [ENG] To take apart into constituent parts.

Disasteridae [PALEON] A family of extinct burrowing, exocyclic Euechinoidea in the order Holasteroida comprising mainly small, ovoid forms without fascioles or a plastron.

disc *See* disk.

DISC *See* differential scatter.

discarding petal [ORD] A part of a discarding sabot that is composed of a base and attached pieces, or petals, which surround the core, and are peeled back under centrifugal and aerodynamic forces and discarded just in front of the gun muzzle.

Discellaceae [MYCOL] A family of fungi of the order Sphaeropsidales, including saprophytes and some plant pathogens.

discharge [ELEC] To remove a charge from a battery, capacitor, or other electric-energy storage device. [ELECTR] The passage of electricity through a gas, usually accompanied by a glow, arc, spark, or corona. Also known as electric discharge. [FL MECH] The flow rate of a fluid at a given instant expressed as volume per unit of time.

discharge channel [MECH ENG] The passage in a pressure-relief device through which the fluid is released to the outside of the device.

discharge coefficient [FL MECH] In a nozzle or other constriction, the ratio of the mass flow rate at the discharge end of the nozzle to that of an ideal nozzle which expands an identical working fluid from the same initial conditions to the same exit pressure. Also known as coefficient of discharge.

discharged solids *See* residue.

discharge head [MECH ENG] Vertical distance between the intake level of a water pump and the level at which it discharges water freely to the atmosphere.

discharge hydrograph [CIV ENG] A graph showing the discharge or flow of a stream or conduit with respect to time.

discharge key [ELEC] Device for switching a capacitor suddenly from a charging circuit to a load through which it can discharge.

discharge lamp [ELECTR] A lamp in which light is produced by an electric discharge between electrodes in a gas (or vapor) at low or high pressure. Also known as electric-discharge lamp; gas-discharge lamp; vapor lamp.

discharge liquor [CHEM ENG] Liquid that has passed through a processing operation. Also known as effluent; product.

discharge printing [GRAPHICS] A method of printing in which an electric discharge is shaped to produce characters. [TEXT] Using bleaching chemicals on a previously dyed fabric to remove the dye and thus imprint a pattern.

discharger [ELEC] A silver-impregnated cotton wick encased in a flexible plastic tube with an aluminum mounting lug, used on aircraft to reduce precipitation static.

discharge tube [ELECTR] An evacuated enclosure containing a gas at low pressure, through which current can flow when sufficient voltage is applied between metal electrodes in the tube. Also known as electric-discharge tube. [MECH ENG] A tube through which steam and water are released into a boiler drum.

discharge-tube leak indicator [ENG] A device which detects the presence of a tracer gas by using a glass tube attached to a high-voltage source; the presence of leaked gas is indicated by the color of the electric discharge.

discharging agent [TEXT] A stripping agent such as sodium hyposulfite which is used to remove dyes from fabric that has been vat-dyed or printed.

discharging arch [CIV ENG] A support built over, and not touching, a weak structural member, such as a wooden lintel, to carry the main load. Also known as relieving arch.

discifloral [BOT] Having flowers with enlarged, disklike receptacles.

disciform [BIOL] Disk-shaped.

Discinacea [INV ZOO] A family of inarticulate brachiopods in the suborder Acrotretidina.

disclimax [ECOL] A climax community that includes foreign species following a disturbance of the natural climax by man or domestic animals. Also known as disturbance climax.

discoaster [BOT] A star-shaped coccolith.

discoblastula [EMBRYO] A blastula formed by cleavage of a meroblastic egg; the blastoderm is disk-shaped.

discocephalous [INV ZOO] Having a sucker on the head.

discoctaster [INV ZOO] A type of spicule with eight rays terminating in discs in hexactinellid sponges.

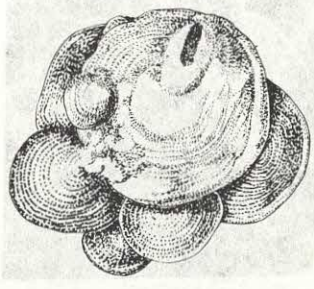
discodactylous [VERT ZOO] Having sucking disks on the toes.

discogastrula [EMBRYO] A gastrula formed from a blastoderm.

Discoglossidae [VERT ZOO] A family of anuran amphibians in and typical of the suborder Opisthocoela.

discoid [BIOL] **1.** Being flat and circular in form. **2.** Any structure shaped like a disc.

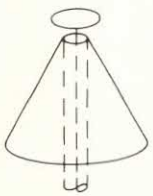
DISCINACEA



A cluster of *Discinisca*. *(From R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. H, Geological Society of America, Inc., and University of Kansas Press, 1965)*

discoidal cleavage [EMBRYO] A type of cleavage producing a disc of cells at the animal pole.
Discoidiidae [PALEON] A family of extinct conical or globular, exocyclic Euechinoidea in the order Holectypoida distinguished by the rudiments of internal skeletal partitions.
Discolichenes [BOT] The equivalent name for Lecanorales.
Discolomidae [INV ZOO] The tropical log beetles, a family of coleopteran insects in the superfamily Cucujoidea.
discomfort glare *See* glare.
discomfort index *See* temperature-humidity index.
discomposition [NUCLEO] The process in which an atom is knocked out of its position in a crystal lattice by direct nuclear impact, as by fast neutrons or by fast ions that have been previously knocked out of their lattice positions.
discomposition effect [NUCLEO] Changes in physical or chemical properties of a substance caused by discomposition. Also known as Wigner effect.
Discomycetes [MYCOL] A group of fungi in the class Ascomycetes in which the surface of the fruiting body is exposed during maturation of the spores.

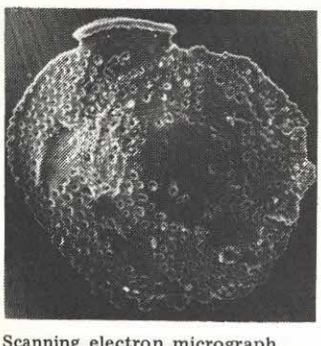
DISCONE ANTENNA



A high-frequency discone antenna.

discone antenna [ELECTROMAG] A biconical antenna in which one of the cones is spread out to 180° to form a disk; the center conductor of the coaxial line terminates at the center of the disk, and the cable shield terminates at the vertex of the cone.
disconformity [GEOL] Unconformity between parallel beds or strata.
disconnect [ELEC] To open a circuit by removing wires or connections, as distinguished from opening a switch to stop current flow. [ENG] To sever a connection.
disconnect fitting [ELEC] An electrical connection that can be disconnected without tools.
disconnecting switch [ELEC] A switch that isolates a circuit or piece of electrical apparatus after interruption of the current. Also known as disconnector.
disconnector *See* disconnecting switch.
disconnector release [ELEC] Device which disengages the apparatus used in a telephone connection to restore it to its original condition when not in use.
discontinuity [ELECTROMAG] An abrupt change in the shape of a waveguide. [GEOL] **1.** An interruption in sedimentation. **2.** A surface that separates unrelated groups of rocks. [GEOPHYS] A boundary at which the velocity of seismic waves changes abruptly. [MATH] A point at which a function is not continuous. [MET] The place where the structural nature of a weldment is interfered with because of the materials involved or where the mechanical, physical, or metallurgical aspects are not homogeneous. [PHYS] A break in the continuity of a medium or material at which a reflection of wave energy can occur.
discontinuous amplifier [ELECTR] Amplifier in which the input waveform is reproduced on some type of averaging basis.
discontinuous phase *See* disperse phase.
discontinuous precipitation [MET] Precipitation principally at and away from the grain boundaries in a supersaturated solid solution; diffraction patterns show two lattice parameters, the solute in solution and the precipitate.
discontinuous reaction series [GEOL] The branch of Bowen's reaction series that include olivine, pyroxene, amphibole, and biotite; each change in the series represents an abrupt change in phase.
discontinuous yielding [MET] The nonuniform plastic deformation of a metal along the length strained in tension.
discopodous [INV ZOO] Having a disk-shaped foot.
Discorbacea [INV ZOO] A superfamily of foraminiferan protozoans in the suborder Rotaliina characterized by a radial, perforate, calcite test and a monolamellar septa.

DISCORBACEA

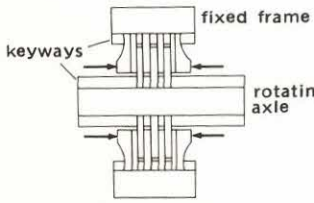


Scanning electron micrograph of a spiral view of coarsely perforate, trochospiral test with terminal aperture and everted lip of *Siphonina* from upper Eocene of Mississippi. *(R. B. MacAdam, Chevron Oil Field Research Co.)*

discord *See* dissonance.
discordance [GEOL] An unconformity characterized by lack of parallelism between strata which touch without fusion.
discordant pluton [GEOL] An intrusive igneous body that cuts across the bedding or foliation of the intruded formations.
DISCOS *See* disturbance compensation system.
discount [IND ENG] A reduction from the gross amount, price, or value.
discount factor [PETRO ENG] The ratio of the present worth of one or a series of future payments to the total undiscounted amount of such future payments. Also known as average discount factor; deferment factor; present-worth factor.
discovery [MIN ENG] Finding of a valuable mineral deposit.
discovery claim [MIN ENG] The first claim for the finding of a mineral deposit.
discovery vein [MIN ENG] The vein on which a mining claim is based.
discovery well [PETRO ENG] A successful exploration well.
discrete [SCI TECH] **1.** Composed of separate and distinct parts. **2.** Having an individually distinct identity.
discrete comparator *See* digital comparator.
discrete-film zone *See* belt of soil water.
discrete radio source [ASTROPHYS] A source of radio waves coming from a small area of the sky.
discrete sampling [ELECTR] Sampling in which the individual samples are of such long duration that the frequency response of the channel is not deteriorated by the sampling process.
discrete set [MATH] A set with no cluster points.
discrete sound system [ENG ACOUS] A quadraphonic sound system in which the four input channels are preserved as four discrete channels during recording and playback processes; sometimes referred to as a 4-4-4 system.
discrete spectrum [SPECT] A spectrum in which the component wavelengths constitute a discrete sequence of values rather than a continuum of values.
discrete system [CONT SYS] A control system in which signals at one or more points may change only at discrete values of time. Also known as discrete-time system.
discrete-time system *See* discrete system.
discrete transfer function *See* pulsed transfer function.
discrete variable [MATH] A variable for which the possible values form a discrete set.
discrete-word intelligibility [COMMUN] The percent of intelligibility obtained when the speech units under consideration are words, usually presented so as to minimize the contextual relation between them.
discretization error [MATH] The error in the numerical calculation of an integral that results from using an approximate expression for the true mathematical function to be integrated.
discriminant [MATH] The quantity $b^2 - 4ac$ where a,b,c are coefficients of a given quadratic polynomial: $ax^2 + bx + c$.
discrimination [COMMUN] **1.** In frequency-modulated systems, the detection or demodulation of the imposed variations in the frequency of the carriers. **2.** In a tuned circuit, the degree of rejection of unwanted signals. **3.** Of any system or transducer, the difference between the losses at specified frequencies with the system or transducer terminated in specified impedances. [COMPUT SCI] *See* conditional jump.
discrimination learning [PSYCH] A learning procedure in which a response is reinforced in the presence of one stimulus but not in the presence of others, enabling the experimental animal to discriminate between the one stimulus and the others.
discriminator [ELECTR] A circuit in which magnitude and polarity of the output voltage depend on how an input signal differs from a standard or from another signal.
discriminator transformer [ELECTR] A transformer designed to be used in a stage where frequency-modulated signals are converted directly to audio-frequency signals or in a stage where frequency changes are converted to corresponding voltage changes.
disdrometer [ENG] Equipment designed to measure and record the size distribution of raindrops as they occur in the atmosphere.
disease [MED] An alteration of the dynamic interaction between an individual and his environment which is sufficient to be deleterious to the well-being of the individual and produces signs and symptoms.
disengage [ENG] To break the contact between two objects.
dish *See* parabolic reflector.
disharmonic fold [GEOL] A fold in which changes in form or magnitude occur with depth.
dishing [MET] Producing a shallow, concave surface in metal-forming operations.
dishpan experiment [METEOROL] A model experiment carried out by differential heating of fluid in a flat, rotating pan; it establishes similarity with the atmosphere and is used to reproduce many important features of the general circulation and, on a smaller scale, atmospheric motion.
disilane [INORG CHEM] Si_2H_6 A spontaneously flammable compound of silicon and hydrogen; it exists as a liquid at room temperature.

disilicate [CHEM] A silicate compound that has two silicon atoms in the molecule.
disilicide [CHEM] A compound that has two silicon atoms joined to a radical or another element.
disilver salt *See* silver methylarsonate.
disinclination [CRYSTAL] A type of crystal imperfection in which one part of the crystal is rotated and therefore displaced relative to the rest of the crystal; observed in liquid crystals and protein coats of viruses.
disinfectant [MATER] A chemical agent that destroys microorganisms but not bacterial spores.
disintegration [NUC PHYS] Any transformation of a nucleus, whether spontaneous or induced by irradiation, in which particles or photons are emitted.
disintegration chain *See* radioactive series.
disintegration constant *See* decay constant.
disintegration energy [NUC PHYS] The energy released, or the negative of the energy absorbed, during a nuclear or particle reaction. Designated Q. Also known as Q value; reaction energy.
disintegration family *See* radioactive series.
disintegration of measure [MATH] The representation of a measure as an integral of a family of positive measures.
disintegration rate [NUCLEO] **1.** The absolute rate of decay of a radioactive substance, usually expressed in terms of disintegrations per unit of time. **2.** The absolute rate of transformation of a nuclide under bombardment.
disintegration series *See* radioactive series.
disintegration voltage [ELECTR] The lowest anode voltage at which destructive positive-ion bombardment of the cathode occurs in a hot-cathode gas tube.
disintegrator [MECH ENG] An apparatus used for pulverizing or grinding substances, consisting of two steel cages which rotate in opposite directions.
disjoint sets [MATH] Sets with no elements in common.
disjunct endemism [PALEON] A type of regionally restricted distribution of a fossil taxon in which two or more component parts are separated by a major physical barrier and hence not readily explicable in terms of present-day geography.
disjunction [CYTOL] Separation of chromatids or homologous chromosomes during anaphase.
disjunctive search [COMPUT SCI] A search to find items that have at least one of a given set of characteristics.
disjunctor [MYCOL] A small cellulose body between the conidia of certain fungi, which eventually breaks down and thus frees the conidia.
disk Also spelled disc. [BIOL] Any of various rounded and flattened animal and plant structures. [COMPUT SCI] A rotating circular plate having a magnetizable surface on which information may be stored as a pattern of polarized spots on concentric recording tracks. [ENG ACOUS] *See* phonograph record. [MATH] The region in the plane consisting of all points with norm less than 1 (sometimes less than or equal to 1).
disk-and-doughnut [CHEM ENG] A type of fractionating tower construction of alternating disks and plates that are doughnut-shaped, to provide mixing.
disk armature [ELEC] The armature in a motor that has a disk winding or is made up of a metal disk.
disk attrition mill *See* disk mill.
disk brake [MECH ENG] A type of brake in which disks attached to a fixed frame are pressed against disks attached to a rotating axle or against the inner surfaces of a rotating housing.
disk cam [MECH ENG] A disk with a contoured edge which rotates about an axis perpendicular to the disk, communicating motion to the cam follower which remains in contact with the edge of the disk.
disk canvas wheel [DES ENG] A polishing wheel made of disks of canvas sewn together with heavy twine or copper wire, and reinforced by steel side plates and side rings with bolts or screws.
disk cartridge [COMPUT SCI] A removable module that contains a single magnetic disk platter which remains attached to the housing when placed into the disk drive.
disk centrifuge [MECH ENG] A centrifuge with a large bowl having a set of disks that separate the liquid into thin layers to create shallow settling chambers.
disk clutch [MECH ENG] A clutch in which torque is transmitted by friction between friction disks with specially prepared friction material riveted to both sides and contact plates keyed to the inner surface of an external hub.
disk colorimeter [ANALY CHEM] A device for comparing standard and sample colors by means of rotating color disks.
disk coupling [MECH ENG] A flexible coupling in which the connecting member is a flexible disk.
disk cultivator [AGR] A cultivator consisting of pairs of oppositely inclined disks.
disk drive [COMPUT SCI] The physical unit that holds, spins, reads, and writes the magnetic disks. Also known as disk unit.
disk engine [MECH ENG] A rotating engine in which the piston is a disk.
diskette *See* floppy disk.
disk file [COMPUT SCI] An organized collection of records held on a magnetic disk.
disk filter [ENG] A filter in which the substance to be filtered is drawn through membranes stretched on segments of revolving disks by a vacuum inside each disk; the solids left on the membrane are lifted from the tank and discharged. Also known as American filter.
disk flower [BOT] One of the flowers on the disk of a composite plant.
disk furrower [AGR] A furrower in which concave disks, at an angle to the direction of motion, are used to cut the soil.
disk grinder [MECH ENG] A grinding machine that employs abrasive disks.
disk grinding [MECH ENG] Grinding with the flat side of a rigid, bonded abrasive disk or segmental wheel.
disk harrow [AGR] A harrow which has two or more opposed gangs of 3–12 disks for cutting clods and trash, destroying weeds, cutting in cover crops, and smoothing and preparing the surface for various farming operations.
disk leather wheel [DES ENG] A polishing wheel made of leather disks glued together.
disk loading [AERO ENG] A measure which expresses the design gross weight of a helicopter as a function of the swept areas of the lifting rotor.
disk memory *See* disk storage.
disk meter [ENG] A positive displacement meter to measure flow rate of a fluid; consists of a disk that wobbles or nutates within a chamber so that each time the disk nutates a known volume of fluid passes through the meter.
disk mill [MECH ENG] Size-reduction apparatus in which grinding of feed solids takes place between two disks, either or both of which rotate. Also known as disk attrition mill.
disk operating system [COMPUT SCI] An operating system which uses magnetic disks as its primary on-line storage.
disk pack [COMPUT SCI] A set of magnetic disks that can be removed from a disk drive as a unit.
disk plow [AGR] A plow consisting of a number of disk blades attached to one axle or gang bolt; used for rapid, shallow plowing.
disk recording [ENG ACOUS] **1.** The process of inscribing suitably transformed acoustical or electrical signals on a phonograph record. **2.** *See* phonograph record.
disk sander [MECH ENG] A machine that uses a circular disk coated with abrasive to smooth or shape surfaces.
disk-seal tube [ELECTR] An electron tube having disk-shaped electrodes arranged in closely spaced parallel layers, to give low interelectrode capacitance along with high power output, up to 2500 megahertz. Also known as lighthouse tube; megatron.
disk signal [CIV ENG] Automatic block signal with colored disks that indicate train movements.
disk spring [MECH ENG] A mechanical spring that consists of a disk or washer supported by one force (distributed by a suitable chuck or holder) at the periphery and by an opposing force on the center or hub of the disk.
disk storage [ELECTR] An external computer storage device consisting of one or more disks spaced on a common shaft, and magnetic heads mounted on arms that reach between the disks to read and record information on them. Also known as disk memory; magnetic disk storage.
disk telescope [OPTICS] A telescope designed for observations of the brilliant solar disk; examples are the tower telescope and the horizontal fixed telescope.
disk thermistor [ELECTR] A thermistor which is produced by pressing and sintering an oxide binder mixture into a disk, 0.2–0.6 inch (5–15 millimeters) in diameter and 0.04–0.5 inch (1.0–13 millimeters) thick, coating the major surfaces with conducting material, and attaching leads.
disk unit *See* disk drive.

DISK BRAKE



Forces in direction of arrows press disks keyed to axle against disks keyed to frame.

DISK CAM

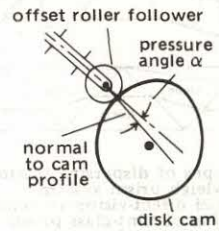


Diagram of disk cam.

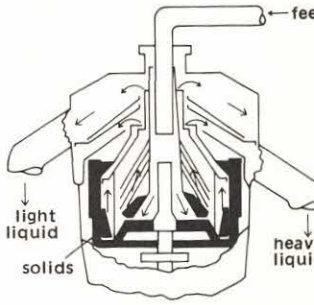
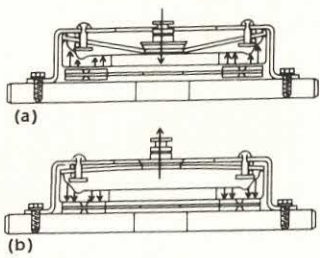
DISK CENTRIFUGE



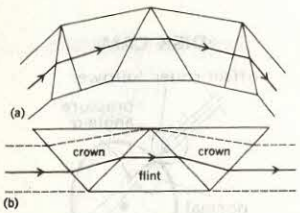
Cutaway view of disk centrifuge bowl.

DISK CLUTCH



Disk clutch *(a)* in disengaged position, *(b)* in engaged position.

DISPERSING PRISM



Two types of dispersing prisms. *(a)* Rayleigh prism system. *(b)* Amici direct-vision system consisting of flint-glass prism and two crown-glass prisms.

disk-wall packer [PETRO ENG] A disklike seal between the outside of the well tubing and the inside of the well casing; used to prevent fluid movement from the pressure differential above and below the sealing point.

disk wheel [DES ENG] A wheel in which a solid metal disk, rather than separate spokes, joins the hub to the rim.

dislocation [CRYSTAL] A defect occurring along certain lines in the crystal structure and present as a closed ring or a line anchored at its ends to other dislocations, grain boundaries, the surface, or other structural feature. Also known as line defect. [GEOL] Relative movement of rock on opposite sides of a fault. Also known as displacement. [MED] Displacement of one or more bones of a joint.

dislocation breccia *See* fault breccia.

dismicrite [GEOL] Fine-grained limestone of obscure origin, resembling micrite but containing sparry calcite bodies.

dismount [ORD] To remove a weapon or piece of equipment from its setting, mount, or carriage.

disodium aurothiomalate *See* gold sodium thiomalate.

disodium ethylene-bis-dithiocarbamate *See* nabam.

disodium hydrogen phosphate *See* disodium phosphate.

disodium 5,5′-indigotin disulfonate *See* indigo carmine.

disodium methanearsonate *See* disodium methylarsonate.

disodium methylarsonate [ORG CHEM] $CH_3AsO(ONa)_2$ A colorless, hygroscopic, crystalline solid; soluble in water and methanol; used in pharmaceuticals and as an herbicide. Abbreviated DMA. Also known as disodium methanearsonate.

disodium phenoltetrabromophthalein sulfonate *See* sulfobromophthalein sodium.

disodium phosphate [INORG CHEM] Na_2HPO_4 Transparent crystals, soluble in water; used in the textile processing and other industries to control pH in the range 4–9, as an additive in processed cheese to maintain spreadability, and as a laxative and antacid. Also known as disodium hydrogen phosphate.

disodium tartrate *See* sodium tartrate.

disomaty [CYTOL] Duplication of chromosomes unaccompanied by nuclear division.

Disomidae [INV ZOO] A family of spioniform annelid worms belonging to the Sedentaria.

disophenol [PHARM] $I_2C_6H_2(NO_2)OH$ Light yellow, feathery crystals with a melting point of 157°C; soluble in alcohol; used as an antihelminthic drug in animals. Also known as 2,6-diiodo-4-nitrophenol.

disorder [CRYSTAL] Departures from regularity in the occupation of lattice sites in a crystal containing more than one element.

disordered crystalline alloy [SOLID STATE] A mixture of two elements in which the atoms of the mixture are found at more or less random positions on a crystal lattice.

disorientation [MED] Mental confusion as to one's normal relationship to his environment, especially time, place, and people; associated with organic brain disorders.

dispatching [COMPUT SCI] The control of priorities in a queue of requests in a multiprogramming or multitasking environment.

dispatching priority [COMPUT SCI] In a multiprogramming or multitasking environment, the priority assigned to an active (non–real time, nonforeground) task.

dispenser [ENG] Device that automatically dispenses radar chaff from an aircraft.

dispenser cathode [ELECTR] An electron tube cathode having provisions for continuously replacing evaporated electron-emitting material.

dispermy [PHYSIO] Entrance of two spermatozoa into an ovum.

dispersal [CIV ENG] The practice of building or establishing industrial plants, government offices, or the like, in separated areas, to reduce vulnerability to enemy attack. [ORD] The spreading out of equipment, supplies, or personnel, especially for protection against enemy action.

dispersal pattern [GEOCHEM] Distribution pattern of metals in soil, rock, water, or vegetation.

disperse [COMPUT SCI] A data-processing operation in which grouped input items are distributed among a larger number of groups in the output.

dispersed elements [GEOCHEM] Elements which form few or no independent minerals but are present as minor ingredients in minerals of abundant elements.

dispersed gas injection [PETRO ENG] Gas-injection pressure maintenance of an oil reservoir in which the injection wells are arranged geometrically to distribute the gas uniformly throughout the oil-productive portions of the reservoir.

disperse dye [MATER] A very slightly water-soluble, colored material for use on cellulose acetate and other synthetic fibers; color is transferred to the fiber as extremely finely divided particles, resulting in a solution of the dye in the solid fiber.

disperse phase [CHEM] The phase of a disperse system consisting of particles or droplets of one substance distributed through another system. Also known as discontinuous phase; internal phase.

disperser [MATER] Material added to solid-in-liquid or liquid-in-liquid suspensions to separate the individual suspended particles; used in pigment grinding and dye dispersion. Also known as dispersing agent; emulsifier; emulsifying agent.

disperse system [CHEM] A two-phase system consisting of a dispersion medium and a disperse phase.

dispersing agent *See* disperser.

dispersing prism [OPTICS] An optical prism which deviates light of different wavelengths by different amounts and can therefore be used to separate white light into its monochromatic parts.

dispersion [AERO ENG] Deviation from a prescribed flight path; specifically, circular dispersion especially as applied to missiles. [CHEM] A distribution of finely divided particles in a medium. [COMMUN] The entropy of the output of a communications channel when the input is known. [ELECTROMAG] Scattering of microwave radiation by an obstruction. [MINERAL] In optical mineralogy, the constant optical values at different positions on the spectrum. [PHYS] **1.** The separation of a complex of electromagnetic or sound waves into its various frequency components. **2.** Quantitatively, the rate of change of refractive index with wavelength or frequency at a given wavelength or frequency. **3.** The rate of change of deviation with wavelength or frequency. **4.** In general, any process separating radiation into components having different frequencies, energies, velocities, or other characteristics, such as the sorting of electrons according to velocity in a magnetic field.

dispersion equation *See* dispersion formula.

dispersion error [ORD] Chance variation in a series of shots even though firing conditions are kept as constant as possible.

dispersion force [PHYS CHEM] The force of attraction that exists between molecules that have no permanent dipole.

dispersion formula [PHYS] Any formula which gives the refractive index as a function of wavelength of electromagnetic radiation. Also known as dispersion equation.

dispersion ladder [ORD] Table showing the probable distribution of a succession of shots made with the same firing data; specifically, a diagram made up of eight zones, showing the percentage of shots which may be expected to fall within each zone, based on direction (deflection) or range.

dispersion mill [MECH ENG] Size-reduction apparatus that disrupts clusters or agglomerates of solids, rather than breaking down individual particles; used for paint pigments, food products, and cosmetics.

dispersion of a random variable [STAT] The spread of a random variable's distribution about its mean.

dispersion pattern [ORD] The distribution of a series of shots by using coordinate settings as nearly identical as possible.

dispersion relation [NUC PHYS] A relation between the cross section for a given effect and the de Broglie wavelength of the incident particle, which is similar to a classical dispersion formula. [PHYS] An integral formula relating the real and imaginary parts of some function of frequency or energy, such as a refractive index or scattering amplitude, based on the causality principle and the Cauchy integral formula. [PL PHYS] A relation between the radian frequency and the wave vector of a wave motion or instability in a plasma.

dispersion zone [ORD] The area over which shots scatter when fired with the same sight setting.

dispersive line [ELECTROMAG] A delay line that delays each frequency a different length of time.

dispersive medium [ELECTROMAG] A medium in which the phase velocity of an electromagnetic wave is a function of frequency.

dispersive power [OPTICS] A measure of the power of a medium to separate different colors of light, equal to $(n_2 - n_1)/(n - 1)$, where n_1 and n_2 are the indices of refraction at two

specified widely differing wavelengths, and n is the index of refraction for the average of these wavelengths, or for the D line of sodium.

dispersoid [CHEM] Matter in a form produced by a disperse system.

disphenoid [CRYSTAL] **1.** A crystal form with four similar triangular faces combined in a wedge shape; can be tetragonal or orthorhombic. **2.** A crystal form with eight scalene triangles combined in pairs.

displaced ore body [GEOL] An ore body which has been subjected to displacement or disruption after its initial deposition.

displacement [CHEM] A chemical reaction in which an atom, radical, or molecule displaces and sets free an element of a compound. [ELEC] *See* electric displacement. [FL MECH] **1.** The weight of fluid which is displaced by a floating body, equal to the weight of the body and its contents; the displacement of a ship is generally measured in long tons (1 long ton = 2240 pounds). **2.** The volume of fluid which is displaced by a floating body. [GEOL] *See* dislocation. [MECH] **1.** The linear distance from the initial to the final position of an object moved from one place to another, regardless of the length of path followed. **2.** The distance of an oscillating particle from its equilibrium position. [MECH ENG] The volume swept out in one stroke by a piston moving in a cylinder as for an engine, pump, or compressor.

displacement angle [ELEC] The change in the phase of an alternator's terminal voltage when a load is applied.

displacement boat [NAV ARCH] Any ship or boat which travels immersed and operates at relatively lower speeds than craft, such as hydroplanes, which plane on the surface of the water at high speed.

displacement chromatography [ANALY CHEM] Variation of column-development or elution chromatography in which the solvent is sorbed more strongly than the sample components; the freed sample migrates down the column, pushed by the solvent.

displacement compressor [MECH ENG] A type of compressor that depends on displacement of a volume of air by a piston moving in a cylinder.

displacement current [ELECTROMAG] The rate of change of the electric displacement vector, which must be added to the current density to extend Ampère's law to the case of time-varying fields (meter-kilogram-second units). Also known as Maxwell's displacement current.

displacement curve [NAV ARCH] A graph of the displacement of a vessel versus its draft; it is a curve of form.

displacement efficiency [PETRO ENG] In a gas condensate reservoir, the proportion (by volume) of wet hydrocarbons swept out of pores during dry-gas cycling.

displacement engine *See* piston engine.

displacement gyroscope [ENG] A gyroscope that senses, measures, and transmits angular displacement data.

displacement law *See* radioactive displacement law; Wien's displacement law.

displacement length coefficient [NAV ARCH] The displacement, in tons of sea water, of a ship divided by the length over 100 cubed.

displacement manometer [ENG] A differential manometer which indicates the pressure difference across a solid or liquid partition which can be displaced against a restoring force.

displacement meter [ENG] A water meter that measures water flow quantitatively by recording the number of times a vessel of known capacity is filled and emptied.

displacement pump [MECH ENG] A pump that develops its action through the alternate filling and emptying of an enclosed volume as in a piston-cylinder construction.

displacement series [CHEM] The elements in decreasing order of their negative potentials. Also known as constant series; electromotive series; Volta series.

displacer-type meter [ENG] Apparatus to detect liquid level or gas density by measuring the effect of the fluid (gas or liquid) on the buoyancy of a displacer unit immersed within the fluid.

display [ELECTR] **1.** A visible representation of information, in words, numbers, or drawings, as on the cathode-ray tube screen of a radar set, navigation system, or computer console. **2.** The device on which the information is projected. Also known as display device. **3.** The image of the information.

display console [COMPUT SCI] A cathode-ray tube or other display unit on which data being processed or stored in a computer can be presented in graphical or character form; sometimes equipped with a light pen with which the user can alter the information displayed.

display control [COMPUT SCI] A unit in a computer system consisting of channels and associated control circuitry that connect a number of visual display units with a central processor.

display device *See* display.

display information processor [COMPUT SCI] Computer used to generate situation displays in a combat operations center.

display loss *See* visibility factor.

display packing [COMPUT SCI] An efficient means of transmitting the x and y coordinates of a point packed in a single word to halve the time required to freshen the spot on a cathode-ray tube display.

display primary [COMMUN] One of the primary colors produced in a television receiver that, when mixed in proper proportions, serve to produce the other desired colors. Also known as receiver primary.

display processor [COMPUT SCI] A section of a computer, or a minicomputer which handles the routines required to display an output on a cathode-ray tube.

display storage tube *See* direct-view storage tube.

display system [COMPUT SCI] The total system, combining hardware and software, needed to achieve a visible representation of information in a data-processing system.

display terminal [COMPUT SCI] A computer output device in which characters, and sometimes graphic information, appear on the screen of a cathode-ray tube. Also known as display unit; video display terminal (VDT).

display tube [ELECTR] A cathode-ray tube used to provide a visual display. Also known as visual display unit.

display type [GRAPHICS] In composition, type which is larger in size than the regular text type.

display unit *See* display terminal.

display window [COMMUN] Width of the portion of the frequency spectrum presented on panoramic presentation; expressed in frequency units, usually megahertz.

disposable [ENG] Within a manufacturing system, designed to be discarded after use and replaced by an identical item, such as a filter element.

disposal area [NAV] On U.S. Coast and Geodetic Survey charts, an area established or approved by the Corps of Engineers for depositing dredged material where existing depths indicate that the intent is not to cause sufficient shoaling to create a danger to surface navigation; soundings and curves are retained.

disposal field *See* absorption field.

disproportionation [CHEM] The changing of a substance, usually by simultaneous oxidation and reduction, into two or more dissimilar substances.

disruptive discharge [ELEC] A sudden and large increase in current through an insulating medium due to complete failure of the medium under electrostatic stress.

disruptive strength [MET] Failure stress caused by hydrostatic tension.

dissect [BIOL] To divide, cut, and separate into different parts.

dissected topography [GEOGR] Physical features marked by erosive cutting.

dissecting microscope [OPTICS] Either of two types of optical microscope used to magnify materials undergoing dissection.

dissection [GEOL] Destruction of the continuity of the land surface by erosive cutting of valleys or ravines into a relatively even surface.

dissector tube [ELECTR] Camera tube having a continuous photo cathode on which is formed a photoelectric emission pattern which is scanned by moving its electron-optical image over an aperture.

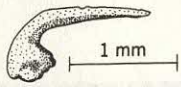
disseminated necrotizing periarteritis *See* polyarteritis nodosa.

disseminule [BIOL] An individual organism or part of an individual adapted for the dispersal of a population of the same organisms.

dissepiment [BOT] A partition which divides a fruit or an ovary into chambers. [PALEON] One of the vertically positioned thin plates situated between the septa in extinct corals of the order Rugosa.

dissipation [PHYS] Any loss of energy, generally by con-

DISTACODIDAE



Multioistodus, a typical conodont of the family Distacodidae. *(After illustration in R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, McGraw-Hill, 2d ed., 1953)*

version into heat; quantitatively, the rate at which this loss occurs. Also known as energy dissipation.

dissipation coefficient *See* scattering coefficient.

dissipation constant [GEOPHYS] In atmospheric electricity, a measure of the rate at which a given electrically charged object loses its charge to the surrounding air.

dissipation factor [ELEC] The inverse of Q, the storage factor.

dissipation function *See* Rayleigh's dissipation function; viscous dissipation function.

dissipation line [ELECTROMAG] A length of stainless steel or Nichrome wire used as a noninductive terminating impedance for a rhombic transmitting antenna when several kilowatts of power must be dissipated.

dissipation loss [ELEC] A measure of the power loss of a transducer in transmitting signals, expressed as the ratio of its input power to its output power.

dissipation trail [FL MECH] A clear rift left behind an aircraft as it flies in a thin cloud layer; the opposite of a condensation trail. Also known as distrail.

dissipative muffler [ENG] A device which absorbs sound energy as the gas passes through it; a duct lined with sound-absorbing material is the most common type.

dissipative tunneling [SOLID STATE] Quantum-mechanical tunneling of individual electrons, rather than pairs, across a thin insulating layer separating two superconducting metals when there is a voltage across this layer, resulting in partial disruption of cooperative motion.

dissipator *See* heat sink.

dissociation [MED] Independent, uncoordinated functioning of the atria and ventricles. [MICROBIO] The appearance of a novel colony type on solid media after one or more subcultures of the microorganism in liquid media. [PHYS CHEM] Separation of a molecule into two or more fragments (atoms, ions, radicals) by collision with a second body or by the absorption of electromagnetic radiation. [PSYCH] The segregation of ideas from their affects or feelings, resulting in independent functioning of these components of a person's mental processes.

dissociation constant [PHYS CHEM] A constant whose numerical value depends on the equilibrium between the undissociated and dissociated forms of a molecule; a higher value indicates greater dissociation.

dissociation energy [PHYS CHEM] The energy required for complete separation of the atoms of a molecule.

dissociation pressure [PHYS CHEM] The pressure, for a given temperature, at which a chemical compound dissociates.

dissociative reaction [PSYCH] A neurotic disorder leading to gross disorganization of the personality.

dissociative recombination [ATOM PHYS] The combination of an electron with a positive molecular ion in a gas followed by dissociation of the molecule in which the resulting atoms carry off the excess energy.

dissogeny [ZOO] Having two sexually mature stages, larva and adult, in the life of an individual.

dissolution [CHEM] Dissolving of a material.

dissolve [CHEM] **1.** To cause to disperse. **2.** To cause to pass into solution. [GRAPHICS] A superimposing of one television or motion picture shot upon another, the emergent shot gradually brightening and the overlapped shot gradually darkening, so that as one scene disappears, another gradually appears. Also known as lap dissolve.

dissolved air floatation [CHEM ENG] A liquid-solid separation process wherein the main mechanism of suspended-solids removal is the change of apparent specific gravity of those suspended solids in relation to that of the suspending liquid by the attachment of small gas bubbles formed by the release of dissolved gas to the solids.

dissolved gas *See* solution gas.

dissolved-gas drive *See* internal gas drive.

dissolved-gas-drive reservoir [PETRO ENG] Oil reservoir in which the temperature of the liquid phase is below critical, and the liquid is driven from the reservoir by the expansion of dissolved gas. Also known as a bubble-point reservoir.

dissolved-gas reservoir *See* solution-gas reservoir.

dissonance [ACOUS] An unpleasant combination of harmonics heard when certain musical tones are played simultaneously. Also known as discord.

dissymmetrical network *See* dissymmetrical transducer.

dissymmetrical transducer [ELECTR] A transducer whose input and output image impedances are not equal. Also known as dissymmetrical network.

dissymmetry [SCI TECH] Lack of symmetry.

dissymmetry coefficient [ANALY CHEM] Ratio of the intensities of scattered light at 45 and 135°, used to correct for destructive interference encountered in light-scattering–photometric analyses of liquid samples.

dissymmetry factor [OPTICS] A quantity which expresses the strength of circular dichroism, equal to the difference in the absorption indices for left and right circularly polarized light divided by the absorption index for ordinary light of the same wavelength. Also known as anisotropy factor.

Distacodidae [PALEON] A family of conodonts in the suborder Conodontiformes characterized as simple curved cones with deeply excavated attachment scars.

distal [BIOL] Located away from the point of origin or attachment.

distal convoluted tubule [ANAT] The portion of the nephron in the vertebrate kidney lying between the loop of Henle and the collecting tubules.

distance [MATH] A nonnegative number associated with pairs of geometric objects. [MECH] The spatial separation of two points, measured by the length of a hypothetical line joining them.

distance finding station [NAV] A radio beacon equipped with a synchronized sound signal to provide the pilot or marine with a means of determining distance from the source of the sound, by measuring the difference in the time of reception of the two signals; the sound may be transmitted through air or water and from the same location as the radio signal or a location remote from it.

distance-luminosity relation [ASTRON] The relation in which the light intensity from a star is inversely proportional to the square of its distance.

distance mark [ELECTR] A movable point produced on a radar display by a special signal generator, so that when the mark is moved to a target position on the screen the range to the target can be read on the calibrated dial of the signal generator; usually used for gun laying where highly accurate distance is important.

distance marker [ENG] One of a series of concentric circles, painted or otherwise fixed on the screen of a plan position indicator, from which the distance of a target from the radar antenna can be read directly; used for surveillance and navigation where the relative distances between a number of targets are required simultaneously. Also known as radar range marker; range marker.

distance marking light [NAV] An approach light indicating distance from the end of a runway, landing strip, or channel.

distance-measuring equipment [NAV] A radio aid to navigation that provides distance information by measuring total round-trip time of transmission from an airborne interrogator to a ground-based transponder and return. Abbreviated DME.

distance modulus *See* modulus of distance.

distance protection [ELEC] Effect of a device operative within a predetermined electrical distance on the protected circuit to cause and maintain an interruption of power in a faulty circuit.

distance reception [COMMUN] Reception of messages from, or communication with, distant radio stations. Abbreviated DX.

distance relay [ELEC] Protective relay, the operation of which is a function of the distance between the relay and the point of fault.

distance resolution [ENG] The minimum radial distance by which targets must be separated to be separately distinguishable by a particular radar. Also known as range discrimination; range resolution.

distance/velocity lag [CONT SYS] The delay caused by the amount of time required to transport material or propagate a signal or condition from one point to another. Also known as transportation lag; transport lag.

distannoxane *See* fenbutatin oxide.

distant early warning line [ORD] Defense line of radar stations at about the 70th parallel on the North American continent.

distant field [ELECTROMAG] The electromagnetic field at a distance of five wavelengths or more from a transmitter, where the radial electric field becomes negligible.

distant signal [CIV ENG] A signal placed at a distance from a block of track to give advance warning when the block is closed.

distemper [VET MED] Any of several contagious virus diseases of mammals, especially the form occurring in dogs, marked by fever, respiratory inflammation, and destruction of myelinated nerve tissue.

disthene *See* kyanite.

distichous [BIOL] Occurring in two vertical rows.

distillate [CHEM] The products of distillation formed by condensing vapors.

distillate fuel [MATER] Any one of the wide variety of fuels obtained from fractions boiling above the temperature at which gasoline comes off in the distillation of petroleum.

distillate fuel oil [MATER] A classification for one of the overhead fractions produced from crude oil in conventional distillation operations.

distillation [CHEM] The process of producing a gas or vapor from a liquid by heating the liquid in a vessel and collecting and condensing the vapors into liquids.

distillation column [CHEM] A still for fractional distillation.

distillation curve [CHEM] The graphical plot of temperature versus overhead product (distillate) volume or weight for a distillation operation.

distillation loss [CHEM] In a laboratory distillation, the difference between the volume of liquid introduced into the distilling flask and the sum of the residue and condensate received.

distillation range [CHEM] The difference between the temperature at the initial boiling point and at the end point of a distillation test.

distillation test [CHEM ENG] A standardized procedure for finding the initial, intermediate, and final boiling points in the boiling range of petroleum products.

distilled liquor [FOOD ENG] Alcoholic beverages obtained by distilling an alcohol-containing liquid such as wine or fermented fruit juice and then further treating the distillate to obtain a beverage of specific character. Also known as hard liquor.

distilled mustard gas [ORG CHEM] A delayed-action casualty gas (mustard gas) that has been distilled, or purified, to greatly reduce the odor and thereby increase its difficulty of detection.

distilled water [CHEM] Water that has been freed of dissolved or suspended solids and organisms by distillation.

distillery [FOOD ENG] The building where distillation of alcoholic beverages occurs.

distilling flask [CHEM] A round-bottomed glass flask that is capable of holding a liquid to be distilled.

distoclusion [MED] Malocclusion of the teeth in which those of the lower jaw are in distal relation to the upper teeth.

distome [INV ZOO] A digenetic trematode characterized by possession of an oral and a ventral sucker.

distorted water [METEOROL] A multimolecular layer of water, at the boundary between a mass of liquid water and the surrounding vapor, whose structure is not identical with that of bulk water.

distortion [ELECTR] Any undesired change in the waveform of an electric signal passing through a circuit or other transmission medium. [OPTICS] A defect of an optical system in which the magnification varies with angular distance from the axis, causing straight lines to appear curved.

distortional wave *See* S wave.

distortion factor [COMMUN] Ratio of the effective value of the residue of a wave after elimination of the fundamental to the effective value of the original wave.

distortion meter [ENG] An instrument that provides a visual indication of the harmonic content of an audio-frequency wave.

distrail *See* dissipation trail.

distress frequency [COMMUN] A frequency allotted to distress calls, generally by international agreement; for ships at sea and aircraft over the sea, it is 500 kilohertz.

distress signal [COMMUN] An international signal used when a ship, aircraft, or other vehicle is threatened by grave and imminent danger and requests immediate assistance; examples are special radiotelegraph and radiotelephone signals or special signal flags or flares.

distributary [HYD] An irregular branch flowing out from a main stream and not returning to it, as in a delta. Also known as distributary channel.

distributary channel *See* distributary.

distributed amplifier [ELECTR] A wide-band amplifier in which tubes are distributed along artificial delay lines made up of coils acting with the input and output capacitances of the tubes.

distributed capacitance [ELEC] Capacitance that exists between the turns in a coil or choke, or between adjacent conductors or circuits, as distinguished from the capacitance concentrated in a capacitor.

distributed circuit [ELECTR] A film circuit whose effective components cannot be easily recognized as discrete.

distributed communications [COMMUN] Information transfer beyond the local level that may involve the originating source to transmit information to all communications centers on any one network, and may also cause an interchange of communications among several whole networks.

distributed constant [ELECTROMAG] A circuit parameter that exists along the entire length of a transmission line. Also known as distributed paramater.

distributed control system [CONT SYS] A collection of modules, each with its own specific function, interconnected tightly to carry out an integrated data acquisition and control application.

distributed-emission photodiode [ELECTR] A broadband photodiode proposed for detection of modulated laser beams at millimeter wavelengths; incident light falls on a photocathode strip that generates a traveling wave of photocurrent having the same wave velocity as the transmission line which the photodiode feeds.

distributed fault *See* fault zone.

distributed free space [COMPUT SCI] Empty spaces in a data layout to allow new data to be inserted at a future time.

distributed inductance [ELECTROMAG] The inductance that exists along the entire length of a conductor, as distinguished from inductance concentrated in a coil.

distributed intelligence [COMPUT SCI] The existence of processing capability in terminals and other peripheral devices of a computer system.

distributed network [COMMUN] A communications network in which there exist alternative routings between the various nodes.

distributed parameter *See* distributed constant.

distributed-parameter system *See* distributed system.

distributed paramp [ELECTR] Paramagnetic amplifier that consists essentially of a transmission line shunted by uniformly spaced, identical varactors; the applied pumping wave excites the varactors in sequence to give the desired traveling-wave effect.

distributed processing system [COMPUT SCI] An information processing system consisting of two or more programmable devices, connected so that information can be exchanged.

distributed system [SYS ENG] A system whose behavior is governed by partial differential equations, and not merely ordinary differential equations. Also known as distributed-parameter system.

distributing frame [ELECTR] Structure for terminating permanent wires of a central office, private branch exchange, or private exchange, and for permitting the easy change of connections between them by means of cross-connecting wires.

distributing point [ORD] Point at which supplies, obtained from the supply point by a division or other unit, are broken down for immediate distribution to subordinate units.

distributing roller [GRAPHICS] A rubber-covered roller whose function is to deliver ink from the supply reservoir to the ink drum of the printing press.

distributing terminal assembly [ELECTR] Frame situated between each pair of selector bays to provide terminal facilities for the selector bank wiring and facilities for cross-connection to trunks running to succeeding switches.

distribution [MATH] An abstract object which generalizes the idea of function; used in applied mathematics, quantum theory, and probability theory; the delta function is an example. Also known as generalized function.

distribution amplifier [ELECTR] A radio-frequency power amplifier used to feed television or radio signals to a number of receivers, as in an apartment house or a hotel. [ENG ACOUS] An audio-frequency power amplifier used to feed a speech or music distribution system and having sufficiently low output impedance so changes in load do not appreciably affect the output voltage.

distribution box [CIV ENG] In sanitary engineering, a box in

which the flow of effluent from a septic tank is distributed equally into the lines that lead to the absorption field.

distribution cable [ELEC] Cable extending from a feeder cable into a specific area for the purpose of providing service to that area.

distribution center [ELEC] In an alternating-current power system, the point at which control and routing equipment is installed.

distribution coefficient [OPTICS] One of the tristimulus values of monochromatic radiations having equal power, usually denoted by $\bar{x}, \bar{y}, \bar{z}$. [PHYS CHEM] The ratio of the amounts of solute dissolved in two immiscible liquids at equilibrium.

distribution control *See* linearity control.

distribution curve [STAT] The graph of the distribution function of a random variable.

distribution deck [COMPUT SCI] A card file which duplicates all or part of a master card file and used for disseminating or decentralizing.

distribution factor [NUCLEO] A term used to express the modification of the effect of radiation in a biological system attributable to the nonuniform distribution of an internally deposited isotope, such as radium's being concentrated in bones.

distribution function *See* distribution of a random variable.

distribution graph [HYD] A statistically derived hydrograph for a storm of specified duration, graphically representing the percent of total direct runoff passing a point on a stream, as a function of time; usually presented as a histogram or table of percent runoff within each of successive short time intervals.

distribution law [ANALY CHEM] The law stating that if a substance is dissolved in two immiscible liquids, the ratio of its concentration in each is constant. [STAT MECH] A law which gives a density function specifying the probability of finding a particle in a unit volume of phase space, or the number of particles in each of the states which a particle may occupy, or the number of particles per unit volume of phase space.

distribution of a random variable [STAT] For a discrete random variable, a function (or table) which assigns to each possible value of the random variable the probability that this value will occur; for a continuous random variable x, the monotone nondecreasing function which assigns to each real t the probability that x is less than or equal to t. Also known as distribution function; probability distribution; statistical distribution.

distribution photometer *See* light-distribution photometer.

distribution reservoir [CIV ENG] A service reservoir connected with the conduits of a primary water supply; used to supply water to consumers according to fluctuations in demand over short time periods and serves for local storage in case of emergency.

distribution substation [ELEC] An electric power substation associated with the distribution system and the primary feeders for supply to residential, commercial, and industrial loads.

distribution switchboard [ELEC] Power switchboard used for the distribution of electrical energy at the voltage common for each distribution within a building.

distribution system [ELEC] Circuitry involving high-voltage switchgear, step-down transformers, voltage dividers, and related equipment used to receive high-voltage electricity from a primary source and redistribute it at lower voltages. Also known as electric distribution system.

distribution transformer [ELEC] An element of an electric distribution system located near consumers which changes primary distribution voltage to secondary distribution voltage.

distributive fault *See* step fault.

distributive lattice [MATH] A lattice in which "greatest lower bound" obeys a distributive law with respect to "least upper bound," and vice versa.

distributive law [MATH] A rule which stipulates how two binary operations on a set shall behave with respect to one another; in particular, if $+$, $\cdot$ are two such operations then $\cdot$ distributes over $+$ means $a \cdot (b + c) = (a \cdot b) + (a \cdot c)$ for all a,b,c in the set.

distributor [ELEC] **1.** Any device which allocates a telegraph line to each of a number of channels, or to each row of holes on a punched tape, in succession. **2.** A rotary switch that directs the high-voltage ignition current in the proper firing sequence to the various cylinders of an internal combustion engine. [ELECTR] The electronic circuitry which acts as an intermediate link between the accumulator and drum storage.

distributor gear [MECH ENG] A gear which meshes with the camshaft gear to rotate the distributor shaft.

distributor points [ELEC] Cam-operated contacts, the opening of which triggers the ignition pulse in an internal combustion engine.

district forecast [METEOROL] In U.S. Weather Bureau usage, a general weather forecast for conditions over an established geographical "forecast district."

district heating [MECH ENG] The supply of heat, either in the form of steam or hot water, from a central source to a group of buildings.

disturbance [COMMUN] An undesired interference or noise signal affecting radio, television, or facsimile reception. [CONT SYS] An undesired command signal in a control system. [GEOL] Folding or faulting of rock or a stratum from its original position. [METEOROL] **1.** Any low or cyclone, but usually one that is relatively small in size and effect. **2.** An area where weather, wind, pressure, and so on show signs of the development of cyclonic circulation. **3.** Any deviation in flow or pressure that is associated with a disturbed state of the weather, such as cloudiness and precipitation. **4.** Any individual circulatory system within the primary circulation of the atmosphere.

disturbance climax *See* disclimax.

disturbance compensation system [AERO ENG] A system applied to navigational satellites to remove the along-the-track component of drag and radiation forces. Abbreviated DISCOS.

disturbed-one output [ELECTR] One output of a magnetic cell to which partial-read pulses have been applied since that cell was last selected for writing.

disturbed sun noise [ASTROPHYS] Noise at times of sunspot or solar flare activity.

disulfate [CHEM] A compound that has two sulfate radicals.

disulfide [CHEM] **1.** A compound that has two sulfur atoms bonded to a radical or element. **2.** One of a group of organosulfur compounds RSSR′ that may be symmetrical (R = R′) or unsymmetrical (R and R′, different).

disulfide oil [MATER] One of the oils obtained by oxidizing to disulfides the mercaptans extracted from light petroleum distillates; the disulfides separate from the extract as an oily layer.

disulfonate [CHEM] A molecule that has two sulfonate groups.

disulfonic acid [CHEM] A molecule that has two sulfonic acid groups.

disulfoton [ORG CHEM] $C_8H_{19}O_2PS_3$ A pale yellow liquid, used as an insecticide and miticide on foliage, cotton, beets, potatoes, and ornamental flowers. Also known as *O*,*O*-diethyl-*S*-[(2-ethylthio)-ethyl]phosphorodithioate.

disulfram *See* tetraethylthiuram disulfide.

ditch [CIV ENG] A small artificial channel cut through earth or rock to carry water for irrigation or drainage.

ditch check [CIV ENG] A small dam positioned at intervals in a road ditch to prevent erosion.

ditcher *See* trench excavator.

ditching [AERO ENG] A forced landing on water, or the process of making such a landing. [ENG] The digging of ditches, as around storage tanks or process areas to hold liquids in the event of a spill or along the sides of a roadway for drainage.

diterpene [ORG CHEM] $C_{20}H_{32}$ **1.** A group of terpenes that have twice as many atoms in the molecule as monoterpenes. **2.** Any derivative of diterpene.

ditetrazolium chloride *See* blue tetrazolium chloride.

dither [COMMUN] A technique for representing the entire gray scale of a picture by picture elements with only one of two levels ("white" and "black"), in which a multilevel input image signal is compared with a position-dependent set of thresholds, and picture elements are set to "white" only when the image input signal exceeds the threshold. [CONT SYS] A force having a controlled amplitude and frequency, applied continuously to a device driven by a servomotor so that the device is constantly in small-amplitude motion and cannot stick at its null position. Also known as buzz.

dither matrix [COMMUN] A square matrix of threshold values that is repeated as a regular array to provide a threshold pattern for an entire image in the dither method of image representation.

dithiocarbamate [ORG CHEM] **1.** A salt of dithiocarbamic acid. **2.** Any other derivative of dithiocarbamic acid.

dithiocarbamic acid [ORG CHEM] NH_2CS_2H A colorless, unstable powder; various metal salts are readily obtained, and used as strong accelerators for rubber. Also known as aminodithioformic acid.

dithioethyleneglycol *See* 1,2-ethanedithiol.

dithioic acid [ORG CHEM] An organic acid in which sulfur atoms have replaced both oxygen atoms of the carboxy group.

dithiol *See* dimercaprol.

dithionate [CHEM] Any salt formed from dithionic acid.

dithionic acid [INORG CHEM] $H_2S_2O_6$ A strong acid formed by the oxidation of sulfurous acid, and known only by its salts and in solution.

dithiooxamide [ORG CHEM] $NH_2CSCSNH_2$ Red crystals soluble in alcohol; used as a reagent for copper, cobalt, and nickel, and for the determination of osmium. Also known as ethanedithioamide; rubeanic acid.

1,4-dithiothreitol [ORG CHEM] $C_4H_{10}O_2S_2$ Needlelike crystals soluble in water, ethanol acetone, ethylacetate; used as a protective agent for thiol (SH) groups.

ditokous [VERT ZOO] Producing two eggs or giving birth to two young at one time.

Dittus-Boelter equation [FL MECH] An equation used to calculate the surface coefficient of heat transfer for fluids in turbulent flow inside clean, round pipes.

ditty box [NAV ARCH] A small box with a hinged lid and lock used by the crew for personal belongings.

ditungsten carbide [INORG CHEM] W_2C A gray powder having hardness approaching that of diamond; forms hexagonal crystals with specific gravity 17.2; melting point 2850°C.

diuresis [MED] Increased excretion of urine.

diuretic [PHARM] Any agent that increases the volume and flow of urine.

diuretic hormone [BIOCHEM] A neurohormone that promotes water loss in insects by increasing the volume of fluid secreted into the Malpighian tubules.

diurnal [BIOL] Active during daylight hours. [METEOROL] Pertaining to meteorological actions which are completed within 24 hours and which recur every 24 hours.

diurnal aberration [ASTRON] Aberration caused by the rotation of the earth; its value varies with the latitude of the observer and ranges from zero at the poles to 0.31 second of arc. Also known as daily aberration.

diurnal age *See* age of diurnal inequality.

diurnal arc [ASTRON] That part of a celestial body's diurnal circle which lies above the horizon of the observer.

diurnal circle [ASTRON] The apparent daily path of a celestial body, approximating a parallel of declination.

diurnal inequality [OCEANOGR] The difference between the heights of the two high waters or the two low waters of a lunar day.

diurnal migration [BIOL] The daily rhythmic movements of organisms in the sea from deeper water to the surface at the approach of darkness and their return to deeper water before dawn.

diurnal motion [ASTRON] The apparent daily motion of a celestial body as observed from a rotating body.

diurnal parallax *See* geocentric parallax.

diurnal range *See* great diurnal range.

diurnal tide [OCEANOGR] A tide in which there is only one high water and one low water each lunar day.

diurnal variation [GEOPHYS] Daily variations of the earth's magnetic field at a given point on the surface, with both solar and lunar periods having their source in the horizontal movements of air in the ionosphere.

diuron [ORG CHEM] $C_9H_{10}Cl_2N_2O$ A white solid with a melting point of 158–159°C; used as an herbicide for weeds and grass in numerous crops, including cotton, sugarcane, and pineapple. Also known as 3-(3,4-dichlorophenyl)-1,1-dimethylurea.

divalent carbon [ORG CHEM] A charged or uncharged carbon atom that has formed only two covalent bonds. Also known as dicovalent carbon.

divalent metal [CHEM] A metal whose atoms are each capable of chemically combining with two atoms of hydrogen.

divanadyl tetrachloride *See* vanadyl chloride.

divaricate [BIOL] Broadly divergent and spread apart.

divaricator [ZOO] A muscle that causes separation of parts, as of brachipod shells.

dive [AERO ENG] A rapid descent by an aircraft or missile, nose downward, with or without power or thrust. [ENG] To submerge into an underwater environment so that it may be studied or utilized; includes the use of specialized equipment such as scuba, diving helmets, diving suits, diving bells, and underwater research vessels. [NAV] To submerge a submarine under power.

dive bomber [AERO ENG] An aircraft designed to release bombs during a steep dive.

dive brake [AERO ENG] An air brake designed for operation in a dive; flaps at the following edge of one wing that can be extended into the airstream to increase drag and hold the aircraft to its "never exceed" dive speed in a vertical dive; used on dive bombers and sailplanes.

divergence [ELECTR] The spreading of a cathode-ray stream because of the repulsion of like charges (electrons). [FL MECH] The ratio of the area of any section of fluid emerging from a nozzle to the area of the throat of the nozzle. [METEOROL] The two-dimensional horizontal divergence of the velocity field. [NUCLEO] In a nuclear reactor, the condition wherein the number of neutrons produced increases in each succeeding generation. [OCEANOGR] A horizontal flow of water, in different directions, from a common center or zone.

divergence loss [GEOPHYS] During geophysical prospecting, the portion of the power lost in transmitting signals that is caused by the spreading of seismic or sound rays by the geometry of the geologic features.

divergence of a vector-valued function [MATH] The sum of the diagonal entries of the Jacobian matrix; it is the scalar product of the del operator and the vector.

divergence speed [AERO ENG] The speed of an aircraft above which no statically stable equilibrium condition exists and the deformation will increase to a point of structural failure.

divergence theorem *See* Gauss' theorem.

divergent adaptation [EVOL] Adaptation to different kinds of environment that results in divergence from a common ancestral form. Also known as branching adaptation; cladogenic adaptation.

divergent die [ENG] A die with the internal channels that lead to the orifice diverging, such as the dies used for manufacture of hollow-body plastic items.

divergent integral [MATH] An improper integral which does not have a finite value.

divergent nozzle [DES ENG] A nozzle whose cross section becomes larger in the direction of flow.

divergent sequence [MATH] A sequence which does not converge.

divergent series [MATH] An infinite series whose sequence of partial sums does not converge.

diverging duct [DES ENG] Fluid-flow conduit whose internal cross-sectional area increases in the direction of flow.

diverging lens [OPTICS] A lens whose focal length is negative, so that light incident parallel to its axis diverges after passing through it. Also known as negative lens.

diverging meniscus lens *See* negative meniscus lens.

diverging yaw [AERO ENG] In the flight of a projectile, an angle of yaw increasing from the initial yaw, so that the projectile is unstable.

diver method [PHYS CHEM] Measure of the size of suspended solid particles; small glass divers of known density sink to the level where the liquid-suspension density is equal to that of the diver, allowing calculation of particle size. Also known as Berg's diver method.

diverse vector [NAV] In air operations, an instruction issued by a radar controller to fly a specific course which is not a part of the predetermined radar pattern. Also known as random vector.

diversion canal [CIV ENG] An artificial channel for diverting water from one place to another.

diversion chamber [ENG] A chamber designed to direct a stream into a channel or channels.

diversion dam [CIV ENG] A fixed dam for diverting stream water away from its course.

diversion gate [CIV ENG] A gate which may be closed to divert water from the main conduit or canal to a lateral or some other channel.

diversion tunnel [CIV ENG] An underground passageway used to divert flowing water around a construction site.

diversity [COMMUN] Method of signal extraction by which an optimum resultant signal is derived from a combination of, or selection from, a plurality of transmission paths, channels, techniques, or physical arrangements; the system may employ

space diversity, polarization diversity, frequency diversity, or any other arrangement by which a choice can be made between signals.

diversity factor [ELEC] Ratio of the sum of the individual maximum demands to total maximum demand, as applied to an electrical distribution system.

diversity gain [COMMUN] Gain in reception as a result of the use of two or more receiving antennas.

diversity radar [ENG] A radar that uses two or more transmitters and receivers, each pair operating at a slightly different frequency but sharing a common antenna and video display, to obtain greater effective range and reduce susceptibility to jamming.

diversity receiver [ELECTR] A radio receiver designed for space or frequency diversity reception.

diversity reception [COMMUN] Radio reception in which the effects of fading are minimized by combining two or more sources of signal energy carrying the same modulation.

diverter [ELEC] A low resistance which is connected in parallel with the series or compole winding of a direct-current machine and diverts current from it, causing the magnetomotive force produced by the winding to vary.

diverter-pole generator [ELEC] Compound wound direct-current generator with the series winding of the diverter pole opposing the flux generated by the shunt wound main pole; provides a close voltage regulation.

diverticulitis [MED] Inflammation of a diverticulum.

diverticulosis [MED] Presence of many diverticula in the intestine.

diverticulum [MED] An abnormal outpocketing or sac on the wall of a hollow organ.

diverting agent [PETRO ENG] A viscous gel or suspension of graded solids used during acidizing of an oil reservoir to temporarily block off the most permeable sections of the pay zone to force the acid into less permeable sections.

Divesian *See* Oxfordian.

divide [GEOGR] A ridge or section of high ground between drainage systems. [MATH] One object (integer, polynomial) divides another if their quotient is an object of the same type. [SCI TECH] A point or line of division.

divide check [COMPUT SCI] An error signal indicating that an illegal division (such as dividing by zero) was attempted.

divided lane [CIV ENG] A highway divided into lanes by a median strip.

divided pitch [DES ENG] In a screw with multiple threads, the distance between corresponding points on two adjacent threads measured parallel to the axis.

divided slit scan [COMPUT SCI] In optical character recognition, a device consisting of a narrow column of photoelectric cells which scans an input character at given intervals for the purpose of obtaining its horizontal and vertical components.

dividend [MATH] A quantity which is divided by another quantity in the operation of division.

divider [DES ENG] A tool like a compass, used in metalworking to lay out circles or arcs and to space holes or other dimensions.

dividing head *See* indexing head.

dividing network *See* crossover network.

diving bell [ENG] An early diving apparatus constructed in the shape of a box or cylinder without a bottom and connected to a compressed-air hose.

diving bird [VERT ZOO] Any bird adapted for diving and swimming, including loons, grebes, and divers.

diving plane *See* diving rudder.

diving rudder [NAV ARCH] One of the movable plane surfaces attached to the hull of a submarine that control the vertical motion of a submarine. Also known as diving plane; hydroplane.

diving suit [ENG] A waterproof outfit designed for diving, especially one with a helmet connected to a compressed-air hose.

divining [MIN ENG] An unscientific method for searching for subsurface water or minerals by means of a divining rod. Also known as dowsing.

divining rod [MIN ENG] An unscientific device in the form of a forked rod or tree branch that is supposed to dip when held over water or minerals, depending on the specialty of the operator, or dowser. Also known as dowsing rod; wiggle stick.

divinyl [ORG CHEM] **1.** A molecule that has two vinyl groups. **2.** *See* 1,3-butadiene.

DIVING BIRD

The common loon *(Gavia immer)* with characteristic bold black and white plumage during the summer.

divinyl acetylene [ORG CHEM] C_6H_6 A linear trimer of acetylene, made by passing acetylene into a hydrochloric acid solution that has metallic catalysts; used as an intermediate in neoprene manufacture.

divinylbenzene [ORG CHEM] $C_6H_4(CHCH_2)_2$ Polymerizable, water-white liquid used to make rubbers, drying oils, and ion-exchange resins and other polymers; forms include ortho, meta, and para isomers. Also known as vinylstyrene.

divinyl ether *See* vinyl ether.

divinyl oxide *See* vinyl ether.

division [MATH] The inverse operation of multiplication; the number a divided by the number b is the number c such that b multiplied by c is equal to a.

division algebra [MATH] A hypercomplex system that is also a skew field.

division circle [ASTRON] A large circular structure attached to the horizontal axis of a transit circle with accurately calibrated markings; used to determine the inclination of the instrument.

division modulo p [MATH] Division in the finite field with p elements, where p is a prime number.

division plate [MECH ENG] A diaphragm which surrounds the piston rod of a crosshead-type engine and separates the crankcase from the lower portion of the cylinder.

division subroutine [COMPUT SCI] A built-in program which achieves division by methods such as repetitive subtraction.

division wall [BUILD] A wall used to create major subdivisions in a building.

divisor [MATH] The quantity by which another quantity is divided in the operation of division.

dixenite [MINERAL] $Mn_9(SiO_3)(AsO_3)(OH)_2$ A black hexagonal mineral consisting of a manganese arsenite and silicate, occurring in scales.

Dixidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Nematocera.

dizygotic twins [BIOL] Twins derived from two eggs. Also known as fraternal twins.

djalmaite *See* microlite.

djave butter *See* adjab butter.

djerfisherite [MINERAL] $K_3CuFe_{12}S_{14}$ A sulfide mineral found only in meteorites.

Djulfian [GEOL] Upper upper Permian geologic time.

D layer [GEOL] The lower mantle of the earth, between a depth of 1000 and 2900 km. [GEOPHYS] The lowest layer of ionized air above the earth, occurring in the D region only in the daytime hemisphere; reflects frequencies below about 50 kilohertz and partially absorbs higher-frequency waves.

D line [SPECT] The yellow line that is the first line of the major series of the sodium spectrum; the doublet in the Fraunhofer lines whose almost equal components have wavelengths of 5895.93 and 5889.96 angstroms respectively.

DM *See* adamsite.

dma *See* direct memory access.

DMA *See* disodium methylarsonate.

DMB *See* hydroquinone dimethyl ether.

DMC *See* *p,p'*-dichlorodiphenylmethyl carbinol; penicillamine.

DMDT *See* methoxychlor.

DME *See* distance-measuring equipment.

D meson [PARTIC PHYS] **1.** A neutral pseudovector meson resonance having a mass of 1285 ± 4 MeV, width of about 30 MeV, and positive charge conjugation parity; the only singlet state consistent with the $(1^+)^+$ nonet. **2.** Collective name for three charmed mesons that form an isotopic spin triplet, have masses of approximately 1865 MeV, and are pseudoscalar particles.

DMF *See* *N,N*-dimethylformamide.

DMSO *See* dimethyl sulfoxide.

DMT *See* dimethyl terephthalate.

DMU *See* dimethylolurea.

DNA *See* deoxyribonucleic acid.

dneprovskite *See* wood tin.

D nickel [MET] A nickel-manganese (4.75%) alloy of medium strength that resists spark erosion and hence is used for spark-plug electrodes and for some electronic applications.

Dobbin's reagent [ANALY CHEM] A mercuric chloride–potassium iodide reagent used to test for caustic alkalies in soap.

dobby loom [TEXT] A weaving loom on which small all-over designs, dots, and stripes can be made in raised woven or self-color effects by means of special attachments.

Dobrowolsky generator [ELEC] Three-wire, direct-current generator with a balance coil connected across the armature; the coil's midpoint produces the midpoint voltage for the system.

Dobson prop [MIN ENG] A hydraulic supporting post used in mine tunnel construction.

Dobson spectrophotometer [SPECT] A photoelectric spectrophotometer used in the determination of the ozone content of the atmosphere; compares the solar energy at two wavelengths in the absorption band of ozone by permitting the radiation of each to fall alternately upon a photocell.

Dobson support system [MIN ENG] A self-advancing unit consisting of three Dobson props used to support longwall faces.

DOC *See* delayed-opening chaff.

dock [CIV ENG] **1.** The slip or waterway that is between two piers or cut into the land for the berthing of ships. **2.** A basin or enclosure for reception of vessels, provided with means for controlling the water level.

docking [AERO ENG] The mechanical coupling of two or more man-made orbiting objects.

docking block [CIV ENG] A timber used to support a ship in dry dock.

docking bridge [NAV ARCH] A platform that rises above the deck of a large ship at the stern.

docking keel [NAV ARCH] A keel placed on some ships parallel to and between the bilge keels and the main keel to support the vessel while in dry dock.

dock landing ship [NAV ARCH] An amphibious warfare ship which transports and supports landing craft and can quickly unload troops and equipment onto a beach. Designated LSD.

dockyard [CIV ENG] A yard utilized for ship construction and repair.

Docodonta [PALEON] A primitive order of Jurassic mammals of North America and England.

docosane [ORG CHEM] $C_{22}H_{46}$ A paraffin hydrocarbon, especially the normal isomer $CH_3(CH_2)_{20}CH_3$.

docosanoic acid [ORG CHEM] $CH_3(CH_2)_{20}CO_2H$ A crystalline fatty acid, melting at 80°C, slightly soluble in water and alcohol, and found in the fats and oils of some seeds such as peanuts. Also known as behenic acid.

1-docosanol *See* behenyl alcohol.

docosapentanoic acid [ORG CHEM] $C_{21}H_{33}CO_2H$ A pale-yellow liquid, boils at 236°C (5 mm Hg), insoluble in water, soluble in ether, and found in fish blubber. Also known as clupanodonic acid.

cis-**13-docosenoic acid** *See* erucic acid.

doctor [METEOROL] A cooling sea breeze in the tropics.

doctor blade [ENG] A device for regulating the amount of liquid material on the rollers of a spreader. Also known as doctor knife.

doctor knife *See* doctor blade.

doctor roll [CHEM ENG] Roller device used to remove accumulated filter cake from rotary filter drums.

doctor solution [CHEM ENG] Sodium plumbite solution used to remove mercaptan sulfur from gasoline and other light petroleum distillates; used in doctor treatment.

doctor test [CHEM ENG] A procedure using doctor solution (sodium plumbite) to detect sulfur compounds in light petroleum distillates which react with the sodium plumbite.

doctor treatment [CHEM ENG] Refining process to sweeten (reduce the odor) of gasoline, solvents, and kerosine; sodium plumbite and sulfur convert the odoriferous mercaptans into disulfides.

document [COMPUT SCI] **1.** Any record, printed or otherwise, that can be read by man or machine. **2.** To prepare a written text and charts describing the purpose, nature, usage, and operation of a program or a system of programs.

document alignment [COMPUT SCI] The phase of the reading process in which a transverse force is applied to a document to line up its reference edge with that of the reading station.

documentation [COMPUT SCI] The collection, organized and stored, of records that describe the purpose, use, structure, details, and operational requirements of a program, for the purpose of making this information easily accessible to the user.

document flow [COMPUT SCI] The path taken by documents as they are processed through a record handling system.

document handling [COMPUT SCI] In character recognition, the process of loading, feeding, transporting, and unloading a cut-form document that has been submitted for character recognition.

document leading edge [COMPUT SCI] In character recognition, that edge which is the foremost one encountered during the reading process and whose relative position defines the document's direction of travel.

document misregistration [COMPUT SCI] In character recognition, the improper state of appearance of a document, on site in a character reader, with respect to real or imaginary horizontal baselines.

document number [COMPUT SCI] The number given to a document by its originators to be used as a means for retrieval; this number will follow any one of various systems, such as chronological, subject area, or accession.

document plane [GRAPHICS] In microfilm technology, that surface or area in space at which the document is positioned during exposure.

document platen [GRAPHICS] A device for positioning a document in the document plane.

document reader [COMPUT SCI] An optical character reader which reads a limited amount of information (one to five lines) and generally operates from a predetermined format.

document reference edge [COMPUT SCI] In character recognition, that edge of a source document which provides the basis of all subsequent reading processes, insofar as it indicates the relative position of registration marks, and the impending text.

docuterm [COMPUT SCI] A word or phrase descriptive of the subject matter or concept of an item of information and considered important for later retrieval of information.

DOD *See* direct outward dialing.

dodecagon [MATH] A 12-sided polygon.

dodecahedron [MATH] A polyhedron with 12 faces.

dodecahydrate [CHEM] A hydrated compound that has a total of 12 water molecules associated with it.

dodecamerous [BOT] Having the whorls of floral parts in multiples of 12.

dodecane [ORG CHEM] $CH_3(CH_2)_{10}CH_3C_{12}H_{26}$ An oily paraffin compound, a colorless liquid, boiling at 214.5°C, insoluble in water; used as a solvent and in jet fuel research. Also known as dihexy; propylene tetramer; tetrapropylene.

dodecanoic acid *See* lauric acid.

n-**dodecanol** *See* lauryl alcohol.

1-dodecene [ORG CHEM] $CH_2CH(CH_2)_9CH_3$ A colorless liquid, boiling at 213°C, insoluble in water; used in flavors, dyes, perfumes, and medicines. Also known as decylethylene; dodecylene.

dodecyl [ORG CHEM] $C_{12}H_{25}$ A radical derived from dodecane by removing one hydrogen atom; in particular, the normal radical, $CH_3(CH_2)_{10}CH_2$—.

dodecyl alcohol *See* lauryl alcohol.

dodecylbenzene [ORG CHEM] Blend of isomeric (mostly monoalkyl) benzenes with saturated side chains averaging 12 carbon atoms; used in the alkyl amyl sulfonate type of detergents. Also known as detergent alkylate.

dodecylene *See* 1-dodecene.

dodecyl sodium sulfate *See* sodium lauryl sulfate.

dodge chain [DES ENG] A chain with detachable bearing blocks between the links.

Dodge crusher [MIN ENG] A type of jaw crusher with the movable jaw hinged at the bottom, allowing a highly uniform product to be discharged.

Dodge pulverizer [MIN ENG] A hexagonal drum-shaped pulverizer that rotates on a horizontal axis and contains steel balls for reducing rock and ore.

Dodge-Romig tables [IND ENG] Tabular data for acceptance sampling, including lot tolerance and AOQL tables.

dodging [GRAPHICS] A technique of shading a portion of the photographic paper during exposure so that the tone of certain portions of the print is modified.

dodo [ENG] A rectangular groove cut across the grain of a board. [VERT ZOO] *Raphus calcullatus*. A large, flightless, extinct bird of the family Raphidae.

doe [VERT ZOO] The adult female deer, antelope, goat, rabbit, or any other mammal of which the male is referred to as buck.

Doebner-Miller synthesis [CHEM ENG] Synthesis of methylquinoline by heating aniline with paraldehyde in the presence of hydrochloric acid.

doffer [TEXT] **1.** A device that strips material from another

part on a textile machine. **2.** A worker who replaces full bobbins or cones with empty ones.

doffing [TEXT] Removing fibers from a cotton carding machine by means of a toothed bar or cylinder.

dog [DES ENG] **1.** Any of various simple devices for holding, gripping, or fastening, such as a hook, rod, or spike with a ring, claw, or lug at the end. **2.** An iron for supporting logs in a fireplace. **3.** A drag for the wheel of a vehicle. [VERT ZOO] Any of various wild and domestic animals identified as *Canis familiaris* in the family Canidae; all are carnivorous and digitigrade, are adapted to running, and have four toes with nonretractable claws on each foot.

dog clutch [DES ENG] A clutch in which projections on one part fit into recesses on the other part.

dog days [CLIMATOL] The period of greatest heat in summer.

dogfish *See* bowfin.

dogfish oil *See* shark liver oil.

dogger [GEOL] Concretionary masses of calcareous sandstone or ironstone.

doghole [MIN ENG] A small opening in a mine.

doghole mine [MIN ENG] A small coal mine employing 15 or less miners.

doghouse [ELECTR] Small enclosure placed at the base of a transmitting antenna tower to house antenna tuning equipment.

dog iron [DES ENG] **1.** A short iron bar with ends bent at right angles. **2.** An iron pin that can be inserted in stone or timber in order to lift it.

dogleg [NAV] That portion of a flight which does not lead directly to the destination or way point, followed to comply with established flight procedures, avoid possible dangers or bad weather areas, or delay time of arrival. [PETRO ENG] Bend or sudden direction change in a wellhole that can cause tubing wear and failure.

dogs *See* folding boards.

dog screw [DES ENG] A screw with an eccentric head; used to mount a watch in its case.

Dog Star *See* Sirius.

dog's tooth [CIV ENG] A masonry string course in which the brick corner projects.

Doherty amplifier [ELECTR] A linear radio-frequency power amplifier that is divided into two sections whose inputs and outputs are connected by quarter-wave networks; for all values of input signal voltage up to one-half maximum amplitude, section no. 1 delivers all the power to the load; above this level, section no. 2 comes into operation.

doister [METEOROL] In Scotland, a severe storm from the sea. Also known as deaister; dyster.

Doisy unit [BIOL] A unit for standardization of vitamin K.

dolabriform [BIOL] Shaped like an ax head.

Dolan equation [PETRO ENG] Empirical equation for reservoir-permeability damage factor by the invasion of drilling mud or other foreign materials.

doldrums [METEOROL] A nautical term for the equatorial trough, with special reference to the light and variable nature of the winds. Also known as equatorial calms.

dolerophanite [MINERAL] $Cu_2(SO_4)O$ A brown, monoclinic mineral consisting of a basic copper sulfate, occurring in crystals.

dolichol [BIOCHEM] Any of a group of long-chain unsaturated isoprenoid alcohols containing up to 84 carbon atoms; found free or phosphorylated in membranes of the endoplasmic reticulum and Golgi apparatus.

Dolichopodidae [INV ZOO] The long-legged flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

Dolichothoraci [PALEON] A group of joint-necked fishes assigned to the Arctolepiformes in which the pectoral appendages are represented solely by large fixed spines.

doline [GEOL] A general term for a closed depression in an area of karst topography that is formed either by solution of the surficial limestone or by collapse of underlying caves.

dolioform [BIOL] Barrel-shaped.

doliolaria larva [INV ZOO] A free-swimming larval stage of crinoids and holothurians having an apical tuft and four or five bands of cilia.

Doliolida [INV ZOO] An order of pelagic tunicates in the class Thaliacea; transparent forms, partly or wholly ringed by muscular bands.

dollar [NUCLEO] A unit of reactivity, equal to the difference between the reactivities for delayed critical and prompt critical conditions in a given nuclear reactor.

dollar spot [PL PATH] A fungus disease of lawn grasses caused by *Sclerotinia homeocarpa* and characterized by small, round, brownish areas which gradually coalesce.

dolly [ENG] Any of several types of industrial hand trucks consisting of a low platform or specially shaped carrier mounted on rollers or combinations of fixed and swivel casters; used to carry such things as furniture, milk cans, paper rolls, machinery weighing up to 80 tons, and television cameras short distances.

dolocast [GEOL] The cast or impression of a dolomite crystal.

dolomite [MINERAL] $CaMg(CO_3)_2$ The carbonate mineral; white or colorless with hexagonal symmetry and a structure similar to that of calcite, but with alternate layers of calcium ions being completely replaced by magnesium.

dolomite rock *See* dolomitic limestone.

dolomitic limestone [PETR] A limestone whose carbonate fraction contains more than 50% dolomite. Also known as dolomite rock; dolostone.

dolomitization [GEOL] Conversion of limestone to dolomite rock by replacing a portion of the calcium carbonate with magnesium carbonate.

dolomol *See* magnesium stearate.

do loop [COMPUT SCI] A FORTRAN iterative technique which enables any number of instructions to be executed repeatedly.

dolostone *See* dolomitic limestone.

dolphin [CIV ENG] **1.** A group of piles driven close and tied together to provide a fixed mooring in the open sea or a guide for ships coming into a narrow harbor entrance. **2.** A mooring post on a wharf. [VERT ZOO] The common name for about 33 species of cetacean mammals included in the family Delphinidae and characterized by the pronounced beak-shaped mouth.

Dolphin *See* Delphinus.

domain [MATH] **1.** A nonempty open connected set in euclidean space. Also known as region. **2.** *See* Abelian field. [SOLID STATE] A region in a solid within which elementary atomic or molecular magnetic or electric moments are uniformly arrayed.

domain growth [SOLID STATE] A stage in the process of magnetization in which there is a growth of those magnetic domains in a ferromagnet oriented most nearly in the direction of an applied magnetic field.

domain of a function [MATH] The set of values of the independent variable.

domain rotation [SOLID STATE] The stage in the magnetization process in which there is rotation of the direction of magnetization of magnetic domains in a ferromagnet toward the direction of a magnetic applied field and against anisotropy forces.

domain theory [SOLID STATE] A theory of the behavior of ferromagnetic and ferroelectric crystals according to which changes in the bulk magnetization and polarization arise from changes in size and orientation of domains that are each polarized to saturation but which point in different directions.

domain-tip memory [COMPUT SCI] A computer memory in which the presence or absence of a magnetic domain in a localized region of a thin magnetic film designates a 1 or 0. Abbreviated DOT memory. Also known as magnetic domain memory.

domain wall *See* Bloch wall.

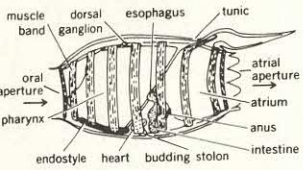
domatic class *See* clinohedral class.

domatophobia [PSYCH] An abnormal fear of being in a house.

dome [ARCH] A hemispherical roof. [ASTRON] A shallow raised structure on the moon's surface with a smooth convex cross section and a diameter anywhere from a few kilometers up to about 80 kilometers. [CRYSTAL] An open crystal form consisting of two faces astride a symmetry plane. [ENG ACOUS] An enclosure for a sonar transducer, projector, or hydrophone and associated equipment; designed to have minimum effect on sound waves traveling underwater. [GEOL] **1.** A circular or elliptical, almost symmetrical upfold or anticlinal type of structural deformation. **2.** A large igneous intrusion whose surface is convex upward. [ORD] The mound of water spray created in air when the shock wave from an underwater detonation of an atomic weapon reaches the surface.

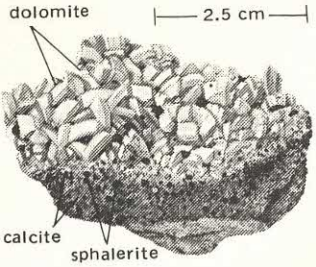
Domerian [GEOL] Upper Charmouthian geologic time.

DOLIOLIDA



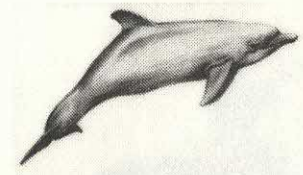
Doliolum, a doliolid, solitary asexual form. *(After Uljanin)*

DOLOMITE



Crystals of dolomite with calcite and sphalerite on limestone, found in Joplin, Missouri. *(Specimen from Department of Geology, Bryn Mawr College)*

DOLPHIN



The common dolphin *(Delphinus delphis)*, found in many seas throughout the world.

domestication [BIOL] The adaptation of an animal or plant through breeding in captivity to a life intimately associated with and advantageous to humans.

domestic coke [MATER] Coke for residential heating, which must have as low an ash content and as high a softening temperature (preferably above 2300°F, or 1260°C) for the ash as possible.

domestic induction heater [ENG] A cooking utensil heated by current (usually of commercial power line frequency) induced in it by a primary inductor.

domestic public-frequency bands [COMMUN] Radio-frequency bands reserved for public service within the United States.

domestic refrigerator [MECH ENG] A refrigeration system for household use which typically has a compression machine designed for continuous automatic operation and for conservation of the charges of refrigerant and oil, and is usually motor-driven and air-cooled. Also known as refrigerator.

domestic satellite [AERO ENG] A satellite in stationary orbit 22,300 miles (35,680 kilometers) above the equator for handling up to 12 separate color television programs, up to 14,000 private-line telephone calls, or an equivalent number of channels for other communication services within the United States. Abbreviated DOMSAT.

dome theory [MIN ENG] The theory that the movements of strata resulting from underground excavations are limited by a dome whose base is the area of excavation, and that the movements decrease in intensity as they extend upward from the center of the base.

domeykite [MINERAL] Cu_3As A tin-white or steel-gray mineral consisting of copper arsenide; specific gravity is 7.2–7.75.

dominance [ECOL] The influence that a controlling organism has on numerical composition or internal energy dynamics in a community. [GEN] The expression of a heritable trait in the heterozygote such as to make it phenotypically indistinguishable from the homozygote.

dominant allele [GEN] The member of a pair of alleles which is phenotypically indistinguishable in both the homozygous and heterozygous condition.

dominant hemisphere [PHYSIO] The cerebral hemisphere which controls certain motor activities; usually the left hemisphere in right-handed individuals.

dominant mode *See* fundamental mode.

dominant species [ECOL] A species of plant or animal that is particularly abundant or controls a major portion of the energy flow in a community.

dominant wave [ELECTROMAG] The electromagnetic wave that has the lowest cutoff frequency in a given uniconductor waveguide.

dominant wavelength [OPTICS] The single wavelength of light that, when combined in suitable proportions with a reference standard light, matches the color of a given sample.

dominated convergence theorem [MATH] If a sequence $\{f_n\}$ of Lebesgue measurable functions converges almost everywhere to f and if the absolute value of each f_n is dominated by the same integrable function, then f is integrable and $\lim \int f_n dm = \int f dm$.

dominating integral [MATH] An improper integral whose nonnegative, nonincreasing integrand function has the property that its value for all sufficiently large positive integers n is no smaller than the nth term of a given series of positive terms; used in the integral test for convergence.

dominating series [MATH] A series, each term of which is larger than the respective term in some other given series; used in the comparison test for convergence of series.

doming [MIN ENG] Setting up a domelike region above the open space created by stope excavation.

DOMSAT *See* domestic satellite.

Donau glaciation [GEOL] A Pleistocene glacial time unit in the Alps region in Europe.

Donders reduced eye [OPTICS] An optical model used to simplify calculations of the size and position of images produced by the human eye, consisting of a convex refracting surface that separates air in front from water, with a refractive index of 4/3, behind, and having an anterior focal distance of 15 millimeters and a posterior focal distance of 20 millimeters.

donkey [MIN ENG] *See* barney. [VERT ZOO] A domestic ass (*Equus asinus*); a perissodactyl mammal in the family Equidae.

donkey boiler [NAV ARCH] A steam boiler on a ship deck used to supply steam to deck machinery when main boilers are shut down.

donkey engine [MECH ENG] A small auxiliary engine which is usually portable or semiportable and powered by steam, compressed air, or other means, particularly one used to power a windlass to lift cargo on shipboard or to haul logs.

donkey power [PHYS] A unit of power equal to 250 watts; it is approximately ⅓ horsepower.

Donnan equilibrium [PHYS CHEM] The particular equilibrium set up when two coexisting phases are subject to the restriction that one or more of the ionic components cannot pass from one phase into the other; commonly, this restriction is caused by a membrane which is permeable to the solvent and small ions but impermeable to colloidal ions or charged particles of colloidal size. Also known as Gibbs-Donnan equilibrium.

Donohue equation [THERMO] Equation used to determine the heat-transfer film coefficient for a fluid on the outside of a baffled shell-and-tube heat exchanger.

donor [SOLID STATE] An impurity that is added to a pure semiconductor material to increase the number of free electrons. Also known as donor impurity; electron donor.

donor impurity *See* donor.

donor level [SOLID STATE] An intermediate energy level close to the conduction band in the energy diagram of an extrinsic semiconductor.

Donovan body [MED] The causative microorganism of granuloma inguinale, demonstrated in stained mononuclear cells and characterized by one or two opposite polar chromatin masses.

donut *See* doughnut.

doodlebug [GEOL] Also known as douser. **1.** Any unscientific device or apparatus, such as a divining rod, used to locate subsurface water, minerals, gas, or oil. **2.** A scientific instrument used for locating minerals. [INV ZOO] The larva of an ant lion. [MECH ENG] **1.** A small tractor. **2.** A motor-driven railcar used for maintenance and repair work. [MIN ENG] The treatment plant or washing unit of a dredge which is mounted on a pontoon and can be floated in an excavation dug by a dragline. [ORD] **1.** A small military tank or utility truck. **2.** An airborne, magnetic submarine-detecting device.

door [ENG] A piece of wood, metal, or other firm material pivoted or hinged on one side, sliding along grooves, rolling up and down, revolving, or folding, by means of which an opening into or out of a building, room, or other enclosure is open or closed to passage.

door check *See* door closer.

door closer [DES ENG] **1.** A device that makes use of a spring for closing, and a compression chamber from which liquid or air escapes slowly, to close a door at a controlled speed. Also known as door check. **2.** In elevators, a device or assembly of devices which closes an open car or hoistway door by the use of gravity or springs.

doorknob capacitor [ELEC] A high-voltage, plastic-encased capacitor resembling a doorknob in size and shape.

doorstop [BUILD] A strip positioned on the doorjamb for the door to close against.

DOP *See* dioctyl phthalate.

dopa *See* dihydroxyphenylalanine.

L-dopa *See* levodopa.

dopamine [BIOCHEM] $C_8H_{11}O_2N$ An intermediate in epinephrine and norepinephrine biosynthesis; the decarboxylation product of dopa.

dopant *See* doping agent.

doped solder [MET] Solder having an element added to it to ensure retention of a quality of the base metal on which it is used.

dopa oxidase [BIOCHEM] An enzyme that catalyzes the oxidation of dihydroxyphenylalanine to melanin; occurs in the skin.

dope [ELECTR] *See* doping agent. [MATER] A cellulose ester lacquer used as an adhesive or a coating.

doped junction [ELECTR] A junction produced by adding an impurity to the melt during growing of a semiconductor crystal.

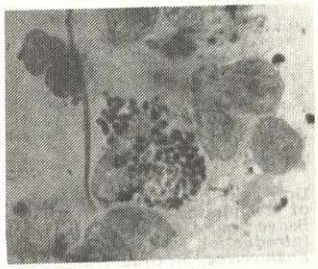
doped solder [MET] Solder having an element added to it to ensure retention of a quality of the base metal on which it is used.

dope dyeing *See* solution dyeing.

DONKEY

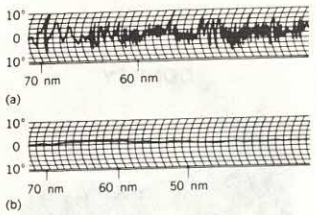
The donkey, sometimes referred to as the burro.

DONOVAN BODY



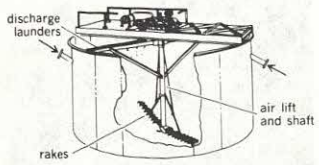
Mononuclear cell, with intramonocytic Donovan body.

DOPPLER VOR



Comparison of radial flight recordings *(a)* from VOR installation, *(b)* from Doppler VOR installation. Radial flight recording revealed for conventional VOR course some fluctuations which exceed International Civil Aviation Organization limits; maximum deviation of Doppler VOR was about 0.5°.

DORR AGITATOR



Dorr agitator for batch washing of precipitates. *(From W. L. Badger and J. T. Banchero, Introduction to Chemical Engineering, McGraw-Hill, 1955)*

DORR CLASSIFIER

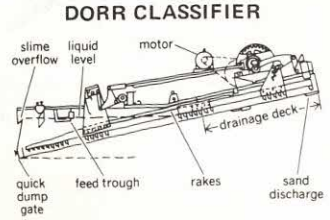


Diagram of Dorr classifier. *(From J. H. Perry, ed., Chemical Engineers' Handbook, 4th ed., McGraw-Hill, 1963)*

doping [ELECTR] The addition of impurities to a semiconductor to achieve a desired characteristic, as in producing an *n*-type or *p*-type material. Also known as semiconductor doping. [ENG] Coating the mold or mandrel with a substance which will prevent the molded plywood part from sticking to it and will facilitate removal.

doping agent [ELECTR] An impurity element added to semiconductor materials used in crystal diodes and transistors. Also known as dopant; dope.

doping compensation [ELECTR] The addition of donor impurities to a *p*-type semiconductor or of acceptor impurities to an *n*-type semiconductor.

Doppler broadening [SPECT] Frequency spreading that occurs in single-frequency radiation when the radiating atoms, molecules, or nuclei do not all have the same velocity and may each give rise to a different Doppler shift.

Doppler current meter [ENG] An acoustic current meter in which a collimated ultrasonic signal of known frequency is projected into the water and the reverberation frequency is measured; the difference in frequencies (Doppler shift) is proportional to the speed of water traveling past the meter.

Doppler effect [PHYS] The change in the observed frequency of an acoustic or electromagnetic wave due to relative motion of source and observer.

Doppler-free spectroscopy [SPECT] Any of several techniques which make use of the intensity and monochromatic nature of a laser beam to overcome the Doppler broadening of spectral lines and measure their wavelengths with extremely high accuracy.

Doppler-free two-photon spectroscopy [SPECT] A version of Doppler free spectroscopy in which the wavelength of a transition induced by the simultaneous absorption of two photons is measured by placing a sample in the path of a laser beam reflected on itself, so that the Doppler shifts of the incident and reflected beams cancel.

Doppler frequency *See* Doppler shift.

Doppler-inertial navigation equipment [NAV] Navigation equipment utilizing an inertial navigator and a Doppler navigator in combination so that inherent weaknesses of both systems will be bolstered to increase the reliability of the resultant navigational information.

dopplerite [GEOL] A naturally occurring gel of humic acids found in peat bags or where an aqueous extract from a low-rank coal can collect.

Doppler navigation [NAV] Dead reckoning performed automatically by a device which gives a continuous indication of position by integrating the speed and the crab angle of the aircraft as derived from measurement of the Doppler effect of echoes from directed beams of radiant energy transmitted from the craft.

Doppler radar [ENG] A radar that makes use of the Doppler shift of an echo due to relative motion of target and radar to differentiate between fixed and moving targets and measure target velocities.

Doppler range *See* doran.

Doppler shift [PHYS] The amount of the change in the observed frequency of a wave due to Doppler effect, usually expressed in hertz. Also known as Doppler frequency.

Doppler sonar [ENG] Sonar based on Doppler shift measurement technique. Abbreviated DS.

Doppler tracking [ENG] Tracking of a target by using Doppler radar.

Doppler ultrasonic flowmeter [ENG] An instrument for determining the velocity of fluid flow from the Doppler shift of high-frequency sound waves reflected from particles or discontinuities in the flowing fluid.

Doppler velocity and position [NAV] A continuous-wave trajectory-measuring system using the Doppler effect caused by a target moving relative to a ground transmitter and receiving station. Abbreviated Dovap.

Doppler VOR [NAV] A ground-based navigational aid operating at very high frequency and using a wide-aperture radiation system to reduce azimuth errors caused by reflection from terrain and other obstacles; makes use of the Doppler principle to solve the problem of ambiguity that arises from the use of a radiation system with apertures that exceed one-half wavelength; the system is so designed that its signals may be received on the equipment used for the narrow-aperture VOR (very-high-frequency omnidirectional radio range).

DOP test *See* dioctyl phthalate test.

Doradidae [VERT ZOO] A family of South American catfishes in the suborder Siluroidei.

Dorado [ASTRON] A constellation of the southern hemisphere, right ascension 5 hours, declination 65° south. Also known as Swordfish.

30 Doradus *See* Loop Nebula.

doran [ENG] A Doppler ranging system that uses phase comparison of three different modulation frequencies on the carrier wave, such as 0.01, 0.1, and 1 megahertz, to obtain missile range data with high accuracy. Derived from Doppler range.

doraphobia [PSYCH] An abnormal fear of touching animal skin or fur.

dore [MET] Gold and silver bullion remaining in a cupeling furnace after removal of the oxidized lead.

Dorilaidae [INV ZOO] The big-headed flies, a family of cyclorrhaphous dipteran insects in the series Aschiza.

Dorippidae [INV ZOO] The mask crabs, a family of brachyuran decapods in the subsection Oxystomata.

dormancy [BOT] A state of quiescence during the development of many plants characterized by their inability to grow, though continuing their morphological and physiological activities.

dormant bud *See* latent bud.

dormer window [BUILD] An extension of an attic room through a sloping roof to accommodate a vertical window.

dormouse [VERT ZOO] The common name applied to members of the family Gliridae; they are Old World arboreal rodents intermediate between squirrels and rats.

Dorn effect [PHYS CHEM] A difference in a potential resulting from the motions of particles through water; the potential exists between the particles and the water.

Dorngeholz *See* thornbush.

Dorngestrauch *See* thornbush.

dornveld *See* thornbush.

doroid [ELECTROMAG] A coil resembling half a toroid, using a removable core segment to simplify the winding process.

Dorr agitator [MECH ENG] A tank used for batch washing of precipitates which cannot be leached satisfactorily in a tank; equipped with a slowly rotating rake at the bottom, which moves settled solids to the center, and an air lift that lifts slurry to the launders. Also known as Dorr thickener.

Dorr classifier [MECH ENG] A horizontal flow classifier consisting of a rectangular tank with a sloping bottom, a rake mechanism for moving sands uphill along the bottom, an inlet for feed, and outlets for sand and slime.

Dorr thickener *See* Dorr agitator.

dorsal [ANAT] Located near or on the back of an animal or one of its parts.

dorsal aorta [ANAT] The portion of the aorta extending from the left ventricle to the first branch. [INV ZOO] The large, dorsal blood vessel in many invertebrates.

dorsal column [ANAT] A column situated dorsally in each lateral half of the spinal cord which receives the terminals of some afferent fibers from the dorsal roots of the spinal nerves.

dorsal fin [VERT ZOO] A median longitudinal vertical fin on the dorsal aspect of a fish or other aquatic vertebrate.

dorsal lip [EMBRYO] In an amphibian embryo, the margin or lip of the fold of blastula wall marking the dorsal limit of the blastopore during gastrulation and constituting the primary organizer, is necessary to the development of neural tissue, and forms the originating point of chordamesoderm.

dorsiferous [BOT] Of ferns, bearing sori on the back of the frond. [ZOO] Bearing the eggs or young on the back.

dorsiflex [ZOO] To flex or cause to flex in a dorsal direction.

dorsiflexion sign *See* Homan's sign.

dorsigrade [VERT ZOO] Walking on the back of the toes.

dorsocaudad [ANAT] To or toward the dorsal surface and caudal end of the body.

dorsomedial [ANAT] Located on the back, toward the midline.

dorsoposteriad [ANAT] To or toward the dorsal surface and posterior end of the body.

dorsum [ANAT] **1.** The entire dorsal surface of the animal body. **2.** The upper part of the tongue, opposite the velum.

Dorvilleidae [INV ZOO] A family of minute errantian annelids in the superfamily Eunicea.

Dorylaimoidea [INV ZOO] An order or superfamily of nematodes inhabiting soil and fresh water.

Dorylinae [INV ZOO] A subfamily of predacious ants in the family Formicidae, including the army ant (*Eciton hamatum*).

Dorypteridae [PALEON] A family of Permian palaeonisciform fishes sometimes included in the suborder Platysomoidei.

dosage [GEN] The number of genes with a similar action that control a given character. [MED] The prescribed or correct amount of medicine or other therapeutic agent administered to treat a given illness. Also known as dose. [NUCLEO] *See* absorbed dose.

dosage compensation [GEN] A mechanism that equalizes the phenotypic effects of genes located on the X chromosome, which genes therefore exist in two doses in the homogametic sex and one dose in the heterogametic sex.

Dosco miner [MIN ENG] A large crawler-tracked cutter-loader that is designed for longwall faces in seams over 4½ feet (1.4 meters) thick and takes a buttock 0.5 foot (0.15 meter) wide; rated at 200 horsepower (1.49×10^5 watts); has seven cutter chains mounted on the cutterhead, with a capacity of over 400 tons per machine.

dose [MED] **1.** The measure, expressed in number of roentgens, of a property of x-rays at a particular place; used in radiology. **2.** *See* dosage. [NUCLEO] *See* absorbed dose.

dose equivalent [NUCLEO] The product of absorbed dose, in rads, and a number of modifying factors due to nonuniform distribution of internally deposited isotopes in radiobiology; the unit is the rem.

dosemeter *See* dosimeter.

dose rate [NUCLEO] The rate at which nuclear radiation is delivered.

dose-rate meter [NUCLEO] An instrument that measures radiation dose rate.

dosimeter [NUCLEO] An instrument that measures the total dose of nuclear radiation received in a given period. Also spelled dosemeter.

dosimetry [NUCLEO] The measurement of radiation doses. Also known as radiation dosimetry.

dosing tank [CIV ENG] A holding tank that discharges sewage at a rate required by treatment processes.

dot [ELECTR] *See* button. [GRAPHICS] A subdivision of the printing surface into minute units, formed by a halftone screen and separated by the etching process.

dot angel [ELECTROMAG] An angel that appears on the screens of vertically pointing radars, often on clear cloudless days, as a bright dot; believed to be produced by a vertical column of rising air passing through air layers having different indices of refraction.

dot character printer [COMPUT SCI] A computer printer that uses the dot matrix technique to generate characters.

dot cycle [COMMUN] In teletypewriter systems, refers to an on-off or mark-space cycle in which both mark and space have the same length as the unit pulse.

dot etching [GRAPHICS] A technique in correcting the color of a positive or halftone negative employing the chemical reduction of halftone dots.

dot generator [ELECTR] A signal generator that produces a dot pattern on the screen of a three-gun color television picture tube, for use in convergence adjustments.

dot matrix [ELECTR] A method of generating characters with a matrix of dots.

dot product *See* inner product.

dotriacontane [ORG CHEM] $C_{32}H_{66}$ A paraffin hydrocarbon, in particular, the normal isomer $CH_3(CH_2)_{30}CH_3$, which is crystalline.

dot-sequential color television [ELECTR] A color television system in which the red, blue, and green primary-color dots are formed in rapid succession along each scanning line.

dot system [ELECTR] Manufacturing technique for producing microelectronic circuitry.

dotted swiss [TEXT] A sheer fabric ornamented with slightly raised woven-in dots.

dotter [OPTICS] A worker who uses a centering machine to locate the optical center and optical axis of a lens, for the guidance of workers who will cut, edge, trim, and mount the lens. Also known as spotter.

double-acting [MECH ENG] Acting in two directions, as with a reciprocating piston in a cylinder with a working chamber at each end.

double-acting compressor [MECH ENG] A reciprocating compressor in which both ends of the piston act in working chambers to compress the fluid.

double-acting hammer [MET] A forging hammer in which the ram is raised and forced down by a charge of air or steam.

double-acting pawl [MECH ENG] A double pawl which can drive in either direction.

double action [ORD] Method of fire in a revolver and in old-style rifles and shotguns in which a single pull of the trigger both cocks and fires the weapon.

double-action die [MET] A die designed to perform more than one operation with each stroke of the press.

double-action forming [MET] Forming in which more than one shape is imparted by each stroke of the press.

double-action mechanical press [MECH ENG] A press having two slides which move one within the other in parallel movements.

double aging [MET] Introduction of a primary (stabilizing) and a secondary aging treatment to control the precipitate formed from a supersaturated alloy and to achieve specific properties in the material.

double altitudes *See* equal altitudes.

double-amplitude-modulation multiplier [ELECTR] A multiplier in which one variable is amplitude-modulated by a carrier, and the modulated signal is again amplitude-modulated by the other variable; the resulting double-modulated signal is applied to a balanced demodulator to obtain the product of the two variables.

double arcing [MET] An occurrence in plasma arc welding and cutting where a secondary electric arc displaces the main arc at the outlet of a welding nozzle.

double-base diode *See* unijunction transistor.

double-base junction diode *See* unijunction transistor.

double-base junction transistor [ELECTR] A tetrode transistor that is essentially a junction triode transistor having two base connections on opposite sides of the central region of the transistor. Also known as tetrode junction transistor.

double-base rocket propellant [MATER] A solid rocket propellant using two unstable compounds, such as nitrocellulose and nitroglycerine.

double-beam cathode-ray tube [ELECTR] A cathode-ray tube having two beams and capable of producing two independent traces that may overlap; the beams may be produced by splitting the beam of one gun or by using two guns.

double-beam spectrophotometer [SPECT] An instrument that uses a photoelectric circuit to measure the difference in absorption when two closely related wavelengths of light are passed through the same medium.

double beta decay [NUC PHYS] A nuclear transformation in which the atomic number changes by 2 and the mass number does not change; either two electrons are emitted or two orbital electrons are captured.

double-bevel groove weld [MET] A type of groove weld in which one member has a joint edge beveled on both sides. Also known as double-V groove weld.

double-block brake [MECH ENG] Two single-block brakes in symmetrical opposition, where the operating force on one lever is the reaction on the other.

double blossom [PL PATH] A fungus disease of dewberry and blackberry caused by *Fusarium rubi* and characterized by witches'-brooms and enlargement and malformation of the flowers.

double board [PETRO ENG] The platform from which the derrick operator works, located at a height on the derrick equal to two joined pipe lengths.

double bond [PHYS CHEM] A type of linkage between atoms in which two pair of electrons are shared equally.

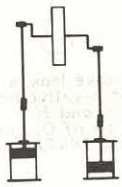
double-bond isomerism [PHYS CHEM] Isomerism in which two or more substances possess the same elementary composition but differ in having double bonds in different positions.

double-bond shift [ORG CHEM] In an organic molecular structure, the occurrence when a pair of valence bonds that join a pair of carbons (or other atoms) shifts, via chemical reaction, to a new position, for example, $H_2C{=}C{-}C{-}CH_2$ (butene-1) to $H_2C{-}C{=}C{-}CH_2$ (butene-2).

double bottom [NAV ARCH] A ship bottom with space between the inner and outer plating.

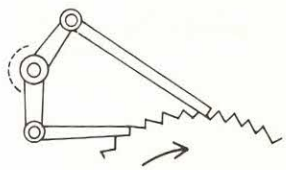
double-bottom cellular [NAV ARCH] Pertaining to division of the double bottom of a ship into numerous rectangular compartments by transverse and longitudinal framing.

DOUBLE-ACTING COMPRESSOR



Frame arrangement of double-acting piston compressor.

DOUBLE-ACTING PAWL

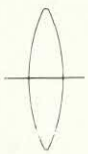


Elements of a double-acting pawl.

DOUBLE-CONCAVE LENS

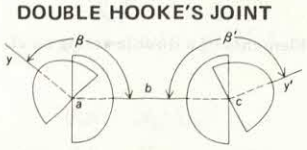
Double-concave lens, a type of diverging or negative lens. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

DOUBLE-CONVEX LENS



A double-convex lens, a type of collecting or positive lens. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

DOUBLE HOOKE'S JOINT



The arrangement in a double Hooke's joint; axes y and y' of the two yokes attached to intermediate shaft b lie respectively in planes containing axes of adjoining shafts (a, y, b in the same plane; b, y', c in the same plane) and the angle β between the driving and intermediate shafts equal angle β' between the intermediate and driven shafts. *(From C. W. Ham, E. J. Crane, and W. L. Rogers, Mechanics of Machinery, McGraw-Hill, 1958)*

double-bounce calibration [ELECTR] Method of radar calibration which is used to determine the zero set error by using round-trip echoes; the correct range is the difference between the first and second echoes.

double-break switch [ELEC] Switch which opens the connected circuit at two points.

double bridge *See* Kelvin bridge.

double brilliant [LAP] A brilliant cut with 40 facets above the girdle and 32 below.

double-buffered data transfer [COMPUT SCI] The transmission of data into the buffer register and from there into the device register proper.

double bus-double breaker [ELEC] A substation switching arrangement having two common buses and two breakers per connection.

double bus-single breaker [ELEC] A substation switching arrangement that involves two common buses and only one breaker per connection.

double-button microphone [ENG ACOUS] A carbon microphone having two carbon-filled buttonlike containers, one on each side of the diaphragm, to give twice the resistance change obtainable with a single button. Also known as differential microphone.

double-channel duplex [COMMUN] A method that provides for simultaneous communication between two stations through use of two radio-frequency channels, one in each direction.

double-channel simplex [COMMUN] A method that provides for nonsimultaneous communication between two stations through use of two radio-frequency channels, one in each direction.

double circulation [PHYSIO] A circulatory system in which blood flows through two separate circuits, as pulmonary and systemic.

double cluster [ASTRON] A pair of globular clusters that are physically close to each other, near the northern boundary of the constellation Perseus.

double-concave lens [OPTICS] A lens having surfaces that are adjacent portions of nonintersecting spheres whose centers lie on opposite sides of the plane of the lens. Also known as biconcave lens.

double-cone bit [DES ENG] A type of roller bit having only two cone-shaped cutting members.

double-convex lens [OPTICS] A lens having surfaces that are adjacent portions of intersecting spheres whose centers lie on opposite sides of the plane of the lens. Also known as biconvex lens.

double-core barrel drill [DES ENG] A core drill consisting of an inner and an outer tube; the inner member can remain stationary while the outer one revolves.

double-coursed [BUILD] Covered with a material such as shingles in such a way that no area is covered with less than two thicknesses.

double-crank press [MECH ENG] A mechanical press with a single wide slide operated by a crankshaft having two crank pins.

double cropping [AGR] A form of multiple cropping in which two crops are grown on a field at different times of the year.

double crossover *See* scissors crossover.

double-current cable code [COMMUN] A cable code in which characters are determined by bipolar characters of equal length.

double-current generator [ELEC] Machine which supplies both direct and alternating current from the same armature winding.

double-current signaling [COMMUN] A system of telegraph signaling that uses both positive and negative currents.

double-cut file [DES ENG] A file covered with two series of parallel ridges crossing at angles to each other.

double-cut planer [MECH ENG] A planer designed to cut in both the forward and reverse strokes of the table.

double-cut saw [DES ENG] A saw with teeth that cut during the forward and return strokes.

double decomposition [CHEM] The simple exchange of elements of two substances to form two new substances; for example, $CaSO_4 + 2NaCl \rightarrow CaCl_2 + Na_2SO_4$.

double-diffused transistor [ELECTR] A transistor in which two *pn* junctions are formed in the semiconductor wafer by gaseous diffusion of both *p*-type and *n*-type impurities; an intrinsic region can also be formed.

double diode *See* binode; duodiode.

double-diode limiter [ELECTR] Type of limiter which is used to remove all positive signals from a combination of positive and negative pulses, or to remove all the negative signals from such a combination of positive and negative pulses.

double distribution [CHEM ENG] The product distribution resulting from counter double-current extraction, a scheme in which each of the two liquid phases is transferred simultaneously and continuously in opposite directions through an interconnected train of contact vessels.

double-doped transistor [ELECTR] The original grown-junction transistor, formed by successively adding *p*-type and *n*-type impurities to the melt during growing of the crystal.

double dot halftone [GRAPHICS] A halftone in which two halftone negatives have been combined into one printing plate, resulting in a greater tonal range than in a conventional halftone.

double-doublet antenna [ELECTROMAG] Two half-wave doublet antennas criss-crossed at their center, one being shorter than the other to give broader frequency coverage.

double drift [NAV] A method of determining the speed and direction of the wind by observing the drift angle on two aircraft headings and deriving the wind information therefrom.

double drill column [MIN ENG] Two drill columns connected by a horizontal bar on which a drill machine can be mounted. Also known as double jack.

double-drum hoist [MECH ENG] A hoisting device consisting of two cable drums which rotate in opposite directions and can be operated separately or together.

double ebb [OCEANOGR] An ebb current comprising two maxima of velocity that are separated by a smaller ebb velocity.

double-entry method [MIN ENG] A mining arrangement involving twin entries in flat or gently dipping coal, so that rooms can be extended from both entryways.

double exposure [GRAPHICS] The act of recording two images on top of each other completely or in part.

double-exposure holographic interferometry [OPTICS] The study of the interference fringes generated by the superposition of two holograms of the same object, one with the object in an undeformed state and the second after a small deformation.

double-face satin [TEXT] Satin cloth made with two warps and one filling to obtain satin effects on both the face and reverse sides.

double fertilization [BOT] In most seed plants, fertilization involving fusion between the egg nucleus and one sperm nucleus, and fusion between the other sperm nucleus and the polar nuclei.

double floor [BUILD] A floor in which binding joists support the ceiling joists below as well as the floor joists above.

double frequency shift keying [COMMUN] Multiplex system in which two telegraph signals are combined and transmitted simultaneously by a method of frequency shifting between four radio frequencies.

double group [QUANT MECH] A type of group useful in studying systems of half-integral spin; it is formed by modifying a finite point group by introducing an element which is a rotation through an angle of 2π about an arbitrary axis and which is not the unit element but gives the unit element when applied twice.

doublehand drilling [ENG] A rock-drilling method performed by two men, one striking the rock with a long-handled sledge hammer while a second holds the drill and twists it between strokes. Also known as double jacking.

double headings [MIN ENG] A pair of coal headings driven parallel to each other and positioned side by side about 10–20 yards (9–18 meters) apart.

double Hooke's joint [MECH ENG] A universal joint which eliminates the variation in angular displacement and angular velocity between driving and driven shafts, consisting of two Hooke's joints with an intermediate shaft.

double-housing planer [MECH ENG] A planer having two housings to support the cross rail, with two heads on the cross rail and one sidehead on each housing.

double-hump fission barrier [NUC PHYS] Two separated maxima in a plot of potential energy against nuclear deformation of an actinide nucleus, which inhibit spontaneous fission of

the nucleus and give rise to isomeric states in the valley between the two maxima.

double-hung [BUILD] Of a window, having top and bottom sashes which are counterweighted or equipped with a spring on each side for easier raising and lowering.

double image [ELECTR] A television picture consisting of two overlapping images due to reception of the signal over two paths of different length so that signals arrive at slightly different times.

double impeller breaker *See* impact breaker.

double integral [MATH] The Riemann integral of functions of two variables.

double-integrating gyro [MECH] A single-degree-of-freedom gyro having essentially no restraint of its spin axis about the output axis.

double jack [DES ENG] A heavy hammer, weighing about 10 pounds (4.5 kilograms), requiring the use of both hands. [MIN ENG] *See* double drill column.

double jacking *See* doublehand drilling.

double-J groove weld [MET] A groove weld in which one member has a joint edge in the form of a double J or two half U's, one from each side. Also known as double-U groove weld.

double knit [TEXT] Firm, often reversible knitted fabric made by using a double set of needles to produce a single two-layer fabric; weave may be plain or fancy patterns or textures.

double layer *See* electric double-layer.

double-length number [COMPUT SCI] A number having twice as many digits as are ordinarily used in a given computer. Also known as double-precision number.

double limiter *See* cascade limiter.

double-list sorting [COMPUT SCI] A method of internal sorting in which the entire unsorted list is first placed in one portion of main memory and sorting action then takes place, creating a sorted list, generally in another area of memory.

double load [ENG] A charge separated by inert material in a borehole.

double-loop pattern [ANAT] A whorl type of fingerprint pattern consisting of two separate loop formations and two deltas.

double mast *See* A frame.

double mirror [OPTICS] Two plane mirrors inclined at an angle to each other.

double moding [ELECTR] Undesirable shifting of a magnetron from one frequency to another at irregular intervals.

double modulation [COMMUN] A method of modulation in which a subcarrier is first modulated with the desired intelligence, and the modulated subcarrier is then used to modulate a second carrier having a higher frequency.

double nickel salt *See* nickel ammonium sulfate.

double pendulum [MECH] Two masses, one suspended from a fixed point by a weightless string or rod of fixed length, and the other similarly suspended from the first; often the system is constrained to remain in a vertical plane.

double-pipe exchanger [CHEM ENG] Fluid-fluid heat exchanger made of two concentric pipe sections; one fluid (such as a coolant) flows in the annular space between pipes, and the other fluid (such as hot process stream) flows through the inner pipe.

double point [MATH] A point on a curve at which a curve crosses or touches itself, or has a cusp; that is, a point at which the curve has two tangents (which may be coincident).

double-polarity pulse-amplitude modulation [COMMUN] Pulse-amplitude modulation employing pulses of positive and negative polarity, the average value being equal to zero. Also known as bidirectional pulse-amplitude modulation.

double-pole double-throw switch [ELEC] A six-terminal switch or relay contact arrangement that simultaneously connects one pair of terminals to either of two other pairs of terminals. Abbreviated dpdt switch.

double-pole single-throw switch [ELEC] A four-terminal switch or relay contact arrangement that simultaneously opens or closes two separate circuits or both sides of the same circuit. Abbreviated dpst switch.

double-pole switch [ELEC] A switch that operates simultaneously in two separate electric circuits or in both lines of a single circuit.

double precision [COMPUT SCI] The use of two computer words to represent a double-length number.

double-precision hardware [COMPUT SCI] Special arithmetic units in a computer designed to handle double-length numbers, employed in operations in which greater accuracy than normal is desired.

double-precision number *See* double-length number.

double-pulse recording [COMPUT SCI] A technique for recording binary digits in magnetic cells in which each cell consists of two regions that can be magnetized in opposite directions and the value of each bit (0 or 1) is determined by the order in which the regions occur.

double pulsing [NAV] The transmitting of loran signals of two rates by a single station.

double-pulsing station [NAV] A master loran station that controls two slaves and therefore emits pulses at two different rates.

double-quantum stimulated-emission device [OPTICS] A laser in which the crystal contains two species of fluorescent ions whose fluorescence frequencies are so related that, when the flash lamp coils produce pumping action, the ions of one species contribute photons to the fluorescence of the other species, which is the active ion.

double-quirked bead *See* quirk bead.

doubler *See* frequency doubler; voltage doubler.

double-recoil system [ORD] A system in which the gun recoils on the top carriage and the top carriage recoils on the bottom carriage or trail.

double refraction *See* birefringence.

double-rivet [ENG] To rivet a lap joint with two rows of rivets or a butt joint with four rows.

double roll [GRAPHICS] A technique in which the ink rollers cover the form twice for each printing impression.

double-roll crusher [MECH ENG] A machine which crushes materials between teeth on two roll surfaces; used mainly for coal.

double root [MATH] A number a such that $(x-a)^2p(x) = 0$ where $p(x)$ is a polynomial of which a is not a root.

double rose [LAP] A gem cut to resemble two roses base to base, with 48 facets.

double salt [INORG CHEM] **1.** A salt that upon hydrolysis forms two different anions and cations. **2.** A salt that is a molecular combination of two other salts.

double sampling [IND ENG] Inspecting one sample and then deciding whether to accept or reject the lot or to defer action until a second sample is inspected.

double screen [ELECTR] Three-layer cathode-ray tube screen consisting of a two-layer screen with the addition of a second long-persistence coating having a different color and different persistence from the first.

double sextant [NAV] A sextant designed to enable the observer to measure simultaneously the left and right horizontal sextant angles of a three-point problem; this sextant differs from a standard sextant in that it comprises a circle with two indices inscribed and two coaxial index mirrors; the horizon glass is silvered top and bottom but is clear in the middle to permit direct observation of the center object ashore.

double-shield enclosure [ELEC] Type of shielded enclosure or room in which the inner wall is partially isolated electrically from the outer wall.

double-shot molding [ENG] A means of turning out two-color parts in thermoplastic materials by successive molding operations.

double-sideband modulation [COMMUN] Amplitude modulation in which the modulated wave is composed of a carrier, an upper sideband whose frequency is the sum of the carrier and modulation frequencies, and a lower sideband whose frequency is the difference between the carrier and modulation frequencies. Abbreviated DSB.

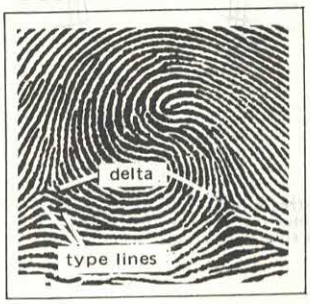
double-sideband transmission [COMMUN] The transmission of a modulated carrier wave accompanied by both of the sidebands resulting from modulation; the upper sideband corresponds to the sum of the carrier and modulation frequencies, whereas the lower sideband corresponds to the difference between the carrier and modulation frequencies.

double-slider coupling *See* slider coupling.

double-solvent refining [CHEM ENG] Petroleum-refining process using two solvents to simultaneously deasphalt and solvent-treat lubricating-oil stocks.

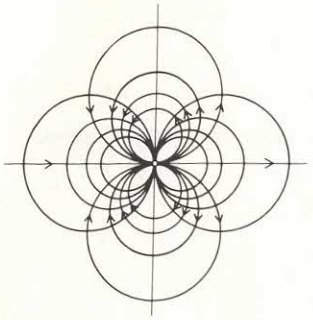
double-spot tuning [COMMUN] Superheterodyne reception of a given station at two different local oscillator frequency values with the local oscillator adjusted above the incoming

DOUBLE-LOOP PATTERN



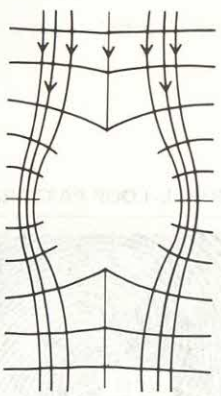
Double-loop pattern in a fingerprint. *(Federal Bureau of Investigation)*

DOUBLET



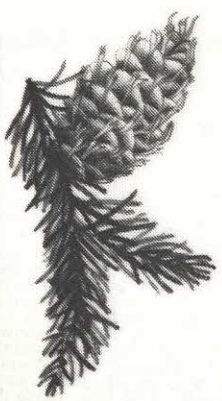
Equipotential lines and streamlines for the two-dimensional doublet, as used in fluid mechanics.

DOUBLET FLOW



Streamlines and equipotential lines for uniform flow about a sphere at rest.

DOUGLAS FIR



Cone on a branch of Douglas fir *(Pseudotsuga menziesii)*.

signal frequency by the intermediate-frequency value or, with the local oscillator adjusted below the incoming signal frequency by the intermediate-frequency value. Also known as repeat point.

double square *See* adjustable square.

double star [ASTRON] A star which appears as a single point of light to the eye but which can be resolved into two points by a telescope.

double-stream amplifier [ELECTR] Microwave traveling-wave amplifier in which amplification occurs through interaction of two electron beams having different average velocities.

double-stub tuner [ELECTROMAG] Impedance-matching device, consisting of two stubs, usually fixed three-eighths of a wavelength apart, in parallel with the main transmission lines.

double-superheterodyne reception [COMMUN] Method of reception in which two frequency converters are employed before final detection. Also known as triple detection.

doublet [ATOM PHYS] Two stationary states which have the same orbital and spin angular momentum but which have different total angular momenta, and therefore have slightly different energies due to spin-orbit coupling. [ELECTROMAG] *See* dipole. [FL MECH] A source and a sink separated by an infinitesimal distance, each having an infinitely large strength so that the product of this strength and the separation is finite. [OPTICS] A lens made up of two components, especially an achromat. [PARTIC PHYS] Two elementary particles which have slightly differing masses and the same baryon number, spin, parity, and charge conjugation parity (if self-conjugate), but have different charges. [PHYS CHEM] Two electrons which are shared between two atoms and give rise to a nonpolar valence bond. [SPECT] Two closely separated spectral lines arising from a transition between a single state and a pair of states forming a doublet as described in the atomic physics definition.

doublet antenna *See* dipole antenna.

double tempering [MET] A technique for ensuring the stability of the microstructure of a quench-hardened steel by subjecting it to two tempering cycles at approximately the same temperature.

doublet flow [FL MECH] The motion of a fluid in the vicinity of a doublet; can be superposed with uniform flow to yield flow around a cylinder or a sphere.

double-theodolite observation [ENG] A technique for making winds-aloft observations in which two theodolites located at either end of a base line follow the ascent of a pilot balloon; synchronous measurements of the elevation and azimuth angles of the balloon, taken at periodic intervals, permit computation of the wind vector as a function of height.

double-throw circuit breaker [ELEC] Circuit breaker by means of which a change in the circuit connections can be obtained by closing either of two sets of contacts.

double-throw switch [ELEC] A switch that connects one set of two or more terminals to either of two other similar sets of terminals.

double tide [OCEANOGR] A high tide comprising two maxima of nearly identical height separated by a relatively small depression, or low tide comprising two minima separated by a relatively small elevation.

double-track tape recorder [ENG ACOUS] A tape recorder with a recording head that covers half the tape width, so two parallel tracks can be recorded on one tape. Also known as dual-track tape recorder; half-track tape recorder.

double triode [ELECTR] An electron tube having two triodes in the same envelope. Also known as duotriode.

doublet trigger [ELECTR] A trigger signal consisting of two pulses spaced a predetermined amount for coding purposes.

double-tuned amplifier [ELECTR] Amplifier of one or more stages in which each stage uses coupled circuits having two frequencies of resonance, to obtain wider bands than those obtainable with single tuning.

double-tuned circuit [ELECTR] A circuit that is resonant to two adjacent frequencies, so that there are two approximately equal values of peak response, with a dip between.

double-tuned detector [ELECTR] A type of frequency-modulation discriminator in which the limiter output transformer has two secondaries, one tuned above the resting frequency and the other tuned an equal amount below.

double-U groove weld *See* double-J groove weld.

double valves [PETRO ENG] Two valves in series used as subsurface traveling or standing valves in wells, the dual arrangement being more reliable than a single valve.

double-V groove weld *See* double-bevel groove weld.

double-wall cofferdam [CIV ENG] A cofferdam consisting of two lines of steel piles tied to each other, and having the space between filled with sand.

double-wedge cut [MIN ENG] A drill-hole pattern composed of a shallow wedge within a larger, outer wedge.

double-welded joint [MET] Any joint that has been welded from both sides.

double-winding synchronous generator [ELEC] Synchronous generator which has two similar windings, in phase with one another, mounted on the same magnetic structure but not connected electrically, designed to supply power to two independent external circuits.

double word [COMPUT SCI] A unit containing twice as many bits as a word.

double-word addressing [COMPUT SCI] An addressing mode in computers with short words (less than 16 bits) in which the second of two consecutive instruction words contains the address of a location.

double-work [BOT] In plant propagation, to graft or bud a scion to an intermediate variety that is itself grafted on a stock of still another variety.

doubling the angle on the bow [NAV] A method of obtaining a running fix by measuring the distance a craft travels while the relative bearing (right or left) of a fixed object doubles; the distance from the object at the time of the second bearing is equal to the run between bearings, neglecting drift.

doubling time [NUCLEO] The time required for a breeding reactor to double its fuel inventory.

doubly linked ring [COMPUT SCI] A cycle arrangement of data elements in which searches are possible in both directions.

doubly plunging fold [GEOL] A fold that plunges in opposite directions, either away from or toward a central point.

doughnut [NUCLEO] Also spelled donut. **1.** The toroidal vacuum chamber in which electrons are accelerated in a betatron or synchrotron. Also known as toroid. **2.** An assembly of enriched fissionable material, often doughnut-shaped, used in a thermal reactor to provide a local increase in fast neutron flux for experimental purposes. [PETRO ENG] A ring of wedges or a threaded, tapered ring that supports a pipe string.

Douglas fir [BOT] *Pseudotsuga menziesii*. A large coniferous tree in the order Pinales; cones are characterized by bracts extending beyond the scales. Also known as red fir.

Douglas fir oil *See* pine needle oil.

douglasite [MINERAL] $K_2FeCl_4 \cdot 2H_2O$ Ore from Stassfurt, Germany; a member of the erythrosiderite group; orthorhombic, in the isomorphous series.

Dounce homogenizer [BIOL] An apparatus consisting of a glass tube with a tight-fitting glass pestle used manually to disrupt tissue suspensions to obtain single cells or subcellular fractions.

douse [MET] To thrust a hot piece of metal into a liquid during the hardening process. [MIN ENG] To locate and delineate subsurface resources such as water, oil, gas, or minerals.

douser *See* doodlebug.

Dovap *See* Doppler velocity and position.

dove [VERT ZOO] The common name for a number of small birds of the family Columbidae.

Dove *See* Columba.

Dove prism *See* Delaborne prism.

dovetailing [MET] In thermal spraying, roughening the surface by angular cutting prior to the deposit of sprayed material.

dovetail joint [DES ENG] A joint consisting of a flaring tenon in a fitting mortise.

dovetail molding [ARCH] A molding in a zig-zag pattern resembling a series of dovetails.

dovetail saw [DES ENG] A short stiff saw with a thin blade and fine teeth; used for accurate woodwork.

dowel [DES ENG] **1.** A headless, cylindrical pin which is sunk into corresponding holes in adjoining parts, to locate the parts relative to each other or to join them together. **2.** A round wooden stick from which dowel pins are cut.

dowel screw [DES ENG] A dowel with threads at both ends.

down [GEOL] **1.** Hillock of sand thrown up along the coast by the sea or the wind. **2.** A flat eminence on the top of a hill or mountain.

down by the head [NAV ARCH] Having greater draft at the bow than at the stern. Also known as by the head.

down by the stern [NAV ARCH] Having a greater draft at the stern than at the bow. Also known as by the stern.

downcast [MIN ENG] Intake shaft for air in a mine.

downcomer [CHEM ENG] A method of conveying liquid from one tray to the one below in a bubble-tray column. [MECH ENG] A tube in a boiler waterwall system wherein the fluid flows downward.

down cutting *See* climb cutting.

downcutting [GEOL] Stream erosion in which the cutting is directed in a downward direction.

downdip [GEOL] Pertaining to a position parallel to or in the direction of the dip of a stratum or bed.

down-Doppler [ACOUS] The sonar situation wherein the target is moving away from the transducer, so that the frequency of the echo is less than the frequency of the reverberations received immediately after the end of the outgoing ping; opposite of up-Doppler.

downdraft [PHYS] A current of air or other gas that travels downward, as during a thunderstorm or in a mine shaft.

downdraft carburetor [MECH ENG] A carburetor in which the fuel is fed into a downward current of air.

downflow [CHEM] In an ion-exchange system, the direction of the flow of the solution being processed.

downhand welding *See* flat-position welding.

downhole drill [MIN ENG] A hammer or percussive drill in which a reciprocating pneumatic piston is located immediately behind the drill bit and can follow and enter the bit down the hole, for minimizing energy losses.

downhole equipment *See* drill fittings.

down-lead *See* lead-in.

downlink [COMMUN] The ratio or optical transmission path downward from a communications satellite to the earth or an aircraft, or from an aircraft to the earth.

down-load [COMPUT SCI] To transfer a program or data file from a central computer to a remote computer or to the memory of an intelligent terminal.

down lock [AERO ENG] An airplane mechanism that locks the landing gear in a down position after the gear is lowered.

down milling *See* climb cutting.

down quark [PARTIC PHYS] A quark with an electric charge of $-\frac{1}{3}$, baryon number of $\frac{1}{3}$, and 0 strangeness and charm.

downrange [AERO ENG] Any area along the flight course of a rocket or missile test range.

downrush [METEOROL] A term sometimes applied to the strong downward-flowing air current that marks the dissipating stages of a thunderstorm.

Downs cell [CHEM ENG] A brick-lined steel vessel with four graphite anodes projecting upward from the bottom, with cathodes in the form of steel cylinders concentric with the anodes, containing an electrolyte which is 40% NaCl and 60% $CaCl_2$ at 590°C; used to make sodium.

downslope time [MET] Time necessary for current decrease when using slope control in resistance welding.

Down's process [CHEM ENG] A method for producing sodium and chlorine from sodium chloride; potassium chloride and fluoride are added to the sodium chloride to reduce the melting point; the fused mixture is electrolyzed, with sodium forming at the cathode and chlorine at the anode.

Down's syndrome [MED] A syndrome of congenital defects, especially mental retardation, typical facies responsible for the term mongoloid idiocy, or mongolism, and cytogenetic abnormality consisting of trisomy 21 or its equivalent in the form of an unbalanced translocation. Also known as mongolism; trisomy 21 syndrome.

downstream [CHEM ENG] Portion of a product stream that has already passed through the system; that portion located after a specific process unit. [HYD] In the direction of flow, as a current or waterway.

downthrow [GEOL] The side of a fault whose relative movement appears to have been downward.

downtime [IND ENG] The lost production time during which a piece of equipment is not operating correctly due to a breakdown, maintenance, necessities, or power failure.

downward compatibility [COMPUT SCI] The ability of an older or smaller computer to accept programs from a newer or larger one.

downward modulation [COMMUN] Modulation in which the instantaneous amplitude of the modulated wave is never greater than the amplitude of the unmodulated carrier.

downwarp [GEOL] A segment of the earth's crust that is broadly bent downward.

downwash [FL MECH] The downward deflection of air, relative to the direction of motion of an airfoil.

downwelling *See* sinking.

downwind [NAV] In the direction toward which the wind is blowing; applies particularly to moving downwind, whether desired or not.

downy mildew [PL PATH] A fungus disease of higher plants caused by members of the family Peronosporaceae and characterized by a white, downy growth on the diseased plant parts.

Dow oscillator *See* electron-coupled oscillator.

Dow process [CHEM ENG] A process to produce magnesium by electrolysis of its fused chloride.

dowsing *See* divining.

dowsing rod *See* divining rod.

Dowtonian [GEOL] Uppermost Silurian or lowermost Devonian geologic time.

Dowty prop [MIN ENG] A self-contained hydraulic supporting post consisting of two telescoping tubes; the upper (inner) tube contains the oil, pump, yield valve, and other accessories.

doz *See* dozen.

dozen [SCI TECH] A group of 12 items. Abbreviated doz.

dozer *See* bulldozer.

D.P. *See* degree of polymerization.

2,4-DP *See* dichlorprop.

DPCM *See* differential pulse-code modulation.

dpdt switch *See* double-pole double-throw switch.

DPE *See* direct plate exposure.

DPG *See* diphenylguanidine.

DPN *See* diphosphopyridine nucleotide.

dpst switch *See* double-pole single-throw switch.

dr *See* dram.

Dra *See* Draco.

Drac *See* Draco.

drachm *See* dram.

Draco [ASTRON] A long, serpentine constellation that surrounds half of the Little Dipper in the north. Abbreviated Dra; Drac. Also known as Dragon.

Draconids [ASTRON] Several meteor showers whose radiants lie in the constellation Draco.

draconitic month *See* nodical month.

Dracunculoidea [INV ZOO] An order or superfamily of parasitic nematodes characterized by their habitat in host tissues and by the way larvae leave the host through a skin lesion.

D2 radio source [ASTRON] A radio source consisting of a small, variable nuclear component sometimes coincident with an optical object, and a second, larger component with a much steeper radio spectrum.

Draeger breathing apparatus [MIN ENG] A long-service, self-contained oxygen-breathing apparatus with the oxygen feed governed by the lungs; allows the user to do hard work for up to 5 hours and normal work for 7 hours, and can sustain a resting individual for 18 hours.

Draeger escape apparatus [MIN ENG] A portable, self-contained oxygen-breathing apparatus that is carried on the back of the user; protects against poisonous gases or oxygen shortages for 1 hour.

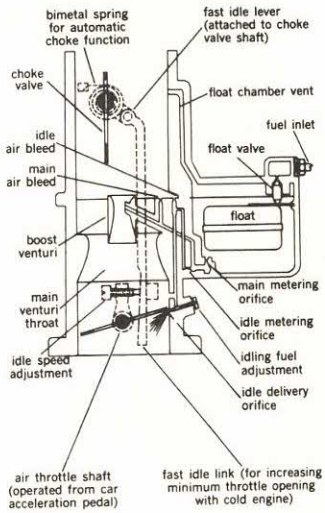
draft Also spelled draught. [CIV ENG] A line of a traverse survey. [ENG] **1.** In molds, the degree of taper on a side wall or the angle of clearance present to facilitate removal of cured or hardened parts from a mold. **2.** The area of a water discharge opening. [FL MECH] **1.** An air current in a confined space, such as that in a cooling tower or chimney. **2.** The difference between atmospheric pressure and some lower pressure in a confined space that causes air to flow, such as exists in the furnace or gas passages of a steam-generating unit or in a chimney. [MET] **1.** The act or process of drawing, with dies. **2.** The work or quantity of work drawn. [NAV ARCH] The vertical distance from the top of the keel plate or bar keel to the load waterline.

draft differential [FL MECH] The difference in static pressure between two locations of gas flow.

draft gage [ENG] **1.** A modified U-tube manometer used to measure draft of low gas heads, such as draft pressure in a furnace, or small differential pressures, for example, less than 2 inches (5 centimeters) of water. **2.** A hydrostatic depth indicator, installed in the side of a vessel below the light load line, to indicate amount of submergence.

drafting [GRAPHICS] The making of drawings of objects,

DOWNDRAFT CARBURETOR



Idling fuel circuit and choke device for starting and warm-up in typical downdraft carburetor.

structures, or systems that have been visualized by engineers, scientists, and others. [TEXT] **1.** The process of lengthening raw fibers, in the form of slubbing, sliver, or roving, to make the stock look more like yarn. **2.** Plotting directions for weaving on cross-section paper, showing the movement of the threads.

drafting machine [GRAPHICS] A mechanical device to aid in drafting, having two straight edges fixed perpendicularly to each other.

drafting machine *See* parallel motion protractor.

drafting paper [MATER] A fine white or cream-colored paper that is hard-surfaced and has good erasing characteristics.

draft loss [MECH ENG] A decrease in the static pressure of a gas in a furnace or boiler due to flow resistance.

draft marks [NAV ARCH] Numbers at the bow and stern of a ship to indicate the height from the bottom of keel or lowest projection.

draftsman [ENG] An individual skilled in drafting, especially of machinery and structures.

draft tube [MECH ENG] The piping system for a reaction-type hydraulic turbine that allows the turbine to be set safely above tail water and yet utilize the full head of the site from head race to tail race.

drag [FL MECH] Resistance caused by friction in the direction opposite to that of the motion of the center of gravity of a moving body in a fluid. [MET] **1.** The bottom part of a flask used in casting. **2.** In thermal cutting, the distance deviating from the theoretical vertical line of cutting measured along the bottom surface of the material. [MIN ENG] Movement of the hanging wall with respect to the foot wall due to the weight of the arch block in an inclined slope.

drag bit *See* bit drag.

drag-body flowmeter [ENG] Device to meter liquid flow; measures the net force parallel to the direction of flow; the resulting pressure difference is used to solve flow equations.

drag chain [ENG] **1.** A chain dragged along the ground from a motor vehicle chassis to prevent the accumulation of static electricity. **2.** A chain for coupling rail cars.

drag-chain conveyor [MECH ENG] A conveyor in which the open links of a chain drag material along the bottom of a hard-faced concrete or cast iron trough. Also known as dragline conveyor.

drag chute *See* drag parachute.

drag classifier [MECH ENG] A continuous belt containing transverse rakes, used to separate coarse sand from fine; the belt moves up through an inclined trough, and fast-settling sands are dragged along by the rakes.

drag coefficient [FL MECH] A characteristic of a body in a flowing inviscous fluid, equal to the ratio of twice the force on the body in the direction of flow to the product of the density of the fluid, the square of the flow velocity, and the effective cross-sectional area of the body.

drag conveyor *See* flight conveyor.

drag-cup generator [ENG] A type of tachometer which uses eddy currents and functions in control systems; it consists of two stationary windings, positioned so as to have zero coupling, and a nonmagnetic metal cup, which is revolved by the source whose speed is to be measured; one of the windings is used for excitation, inducing eddy currents in the rotating cup. Also known as drag-cup tachometer.

DRAG-CUP GENERATOR

Schematic circuit and components of a drag-cup generator.

drag-cup motor [ELEC] An induction motor having a cup-shaped rotor or conducting material, inside of which is a stationary magnetic core.

drag-cup tachometer *See* drag-cup generator.

drag cut [ENG] A drill hole pattern for breaking out rock, in which angled holes are drilled along a floor toward a parting, or on a free face and then broken by other holes drilled into them.

drag direction [AERO ENG] In stress analysis of a given airfoil, the direction of the relative wind.

drag factor [CHEM ENG] Ratio of hindered diffusion rate to unhindered rate through a swollen dialysis membrane. Also known as Faxen drag factor; hindrance factor.

drag fold [GEOL] A minor fold formed in an incompetent bed by movement of a competent bed so as to subject it to couple; the axis is at right angles to the direction in which the beds slip.

drag force [PL PHYS] A force on an electrically conducting fluid arising from inelastic collisions of electrons and ions and proportional to the fluid velocity.

dragging of inertial frames [RELAT] A relativistic effect whereby, loosely speaking, a spinning body drags space around with it; this causes a gyroscope in orbit about the earth to display a precession distinct from the geodetic precession. Also known as Lense-Thirring effect.

drag-in [MET] Solution carried by the work and handling equipment to another solution.

dragline [MECH ENG] An excavator operated by pulling a bucket on ropes towards the jib from which it is suspended. Also known as dragline excavator.

dragline conveyor *See* drag-chain conveyor.

dragline excavator *See* dragline.

dragline scraper [MECH ENG] A machine with a flat, plowlike blade or partially open bucket pulled on rope for withdrawing piled material, such as stone or coal, from a stockyard to the loading platform; the empty bucket is subsequently returned to the pile of material by means of a return rope.

drag link [MECH ENG] A four-bar linkage in which both cranks traverse full circles; the fixed member must be the shortest link.

drag mark [GEOL] Long, even mark usually having longitudinal striations produced by current drag of an object across a sedimentary surface.

Dragon *See* Draco.

dragonfly [INV ZOO] Any of the insects composing six families of the suborder Anisoptera and having four large, membranous wings and compound eyes that provide keen vision.

drag-out [MET] Solution taken from a bath by the work or handling equipment.

drag parachute [AERO ENG] Any of various types of parachutes that can be deployed from the rear of an aircraft, especially during landings, to decrease speed and also, under certain flight conditions, to control and stabilize the aircraft. Also known as drag chute.

drag rope [AERO ENG] A long, heavy rope carried in the basket of a balloon and permitted to hang over the side and drag on the ground in order to lighten the basket.

dragsaw [DES ENG] A saw that cuts on the pulling stroke; used in power saws for cutting felled trees.

drag-stone mill [MIN ENG] A mill in which a heavy stone is dragged over ore to grind it.

drag technique [MET] An arc-welding method in which the electrode is in contact with the joint being welded without being in short circuit.

drag truss [AERO ENG] A truss that is positioned horizontally between the wing spars; used to stiffen the wing structure and as a resistance for drag forces acting on the airplane wing.

drag-type tachometer *See* eddy-current tachometer.

drag-weight ratio [AERO ENG] The ratio of the drag of a missile to its total weight.

drag wire [AERO ENG] A part of the truss in an airplane wing and also in the wing support; used to sustain the backward reaction due to the wing's drag.

drain [CIV ENG] **1.** A channel which carries off surface water. **2.** A pipe which carries off liquid sewage. [ELEC] *See* current drain. [ELECTR] One of the electrodes in a thin-film transistor.

drainage [CIV ENG] Removal of groundwater or surface water, or of water from structures, by gravity or pumping.

drainage basin [HYD] An area in which surface runoff collects and from which it is carried by a drainage system, as a river and its tributaries. Also known as catchment area; drainage area; feeding ground; gathering ground; hydrographic basin.

drainage canal [CIV ENG] An artificial canal built to drain water from an area having no natural outlet for precipitation accumulation.

drainage density [HYD] Ratio of the total length of all channels in a drainage basin and the basin area.

drainage divide [GEOL] **1.** The border of a drainage basin. **2.** The boundary separating adjacent drainage basins.

drainage gallery [CIV ENG] A gallery in a masonry dam parallel to the top of the dam, to intercept seepage from the upstream face and conduct it away from the downstream face.

drainage lake [HYD] An open lake which loses water via a surface outlet or whose level is essentially controlled by effluent discharge.

drainage pattern [HYD] The configuration of a natural or artificial drainage system; stream patterns reflect the topography and rock patterns of the area.

drainage ratio [HYD] The ratio expressing runoff compared with precipitation in a specific area for a given time period.

DRAGONFLY

Winged adult dragonfly.

drainage system [HYD] A surface stream or a body of impounded surface water, together with all other such streams and bodies that are tributary, by which a geographical area is drained.

drainage well [CIV ENG] A vertical shaft in a masonry dam to intercept seepage before it reaches the downstream side.

drainage wind *See* gravity wind.

drain tile [BUILD] A cylindrical tile with holes in the walls used at the base of a building foundation to carry away groundwater.

drain valve [CHEM ENG] A valve used to drain off material that has separated from a fluid or gas stream, or one used to empty a process line, vessel, or storage tank.

drain wire [ELEC] Metallic conductor frequently used in contact with foil-type signal-cable shielding to provide a low-resistance ground return at any point along the shield.

dram [MECH] **1.** A unit of mass, used in the apothecaries' system of mass units, equal to ⅛ apothecaries' ounce or 60 grains or 3.8879346 grams. Also known as apothecaries' dram (dram ap); drachm (British). **2.** A unit of mass, formerly used in the United Kingdom, equal to 1/16 ounce (avoirdupois) or approximately 1.77185 grams. Abbreviated dr.

dram ap *See* dram.

drape forming [ENG] A method of forming thermoplastic sheet in which the sheet is clamped into a movable frame, heated, and draped over high points of a male mold; vacuum is then applied to complete the forming operation.

Draper catalog [ASTRON] A nine-volume catalog of stars completed in 1924; it gives positions, magnitudes, and spectral classes of 225,300 stars.

Draper effect [CHEM ENG] The increase in volume at constant pressure at the start of the reaction of hydrogen and chlorine to form hydrogen chloride; the volume increase is caused by an increase in temperature of the reactants, due to heat released in the reaction.

draping [GEOL] Structural concordance of the strata overlying a limestone reef or other hard core to the surface of the reef or core.

draught *See* draft.

draught stop *See* fire stop.

draw [ENG] To haul a load. [MET] **1.** A fissure or pocket in a casting formed when the supply of molten metal is inadequate during solidification. **2.** To remove a pattern from a foundry flask. [MIN ENG] **1.** To remove timber supports, allowing overhanging coal to fall down for collection. **2.** To allow ore to run down chutes from stopes, chambers, or ore bins. **3.** To collect broken coal in trucks. **4.** To hoist coal, rock, ore, or other materials to the surface. **5.** The horizontal distance to which creep extends on the surface beyond the stopes.

drawability [MET] The ability of a metal to be deep-drawn.

drawbar [ENG] **1.** A bar used to connect a tender to a steam locomotive. **2.** A beam across the rear of a tractor for coupling machines or other loads. **3.** A clay block submerged in a glass-making furnace to define the point at which sheet glass is drawn.

drawbar horsepower [MECH ENG] The horsepower available at the drawbar in the rear of a locomotive or tractor to pull the vehicles behind it.

drawbar pull [MECH ENG] The force with which a locomotive or tractor pulls vehicles on a drawbar behind it.

draw bead [MET] A projection on the surface of a metal sheet to control its flow during drawing.

drawbench [MET] A stand on which metal is drawn through dies; used in wire-making, or for drawing of rods and tubing.

drawbridge [CIV ENG] Any bridge that can be raised, lowered, or drawn aside to provide clear passage for ships.

drawdown [GRAPHICS] In inkmaking, a procedure for obtaining a rough estimation of a color shade in which a small sample of ink is placed on a piece of paper and spread with a spatula to yield a thin film of ink. [HYD] The magnitude of the change in water surface level in a well, reservoir, or natural body of water resulting from the withdrawal of water. [PETRO ENG] The difference between the static and the flowing bottom-hole pressure.

drawdown ratio [ENG] The ratio of die opening thickness to product thickness.

drawer [ENG] A box or receptacle that slides or rolls on tracks within a cabinet.

draw-filing [ENG] Filing by pushing and pulling a file sideways across the work.

drawhead [MET] A group of rollers through which strip tubing or solid stock is drawn to form angled sections.

drawhole [MIN ENG] The aperture in a battery through which coal or ore is drawn.

drawing [CHEM ENG] Removing ceramic ware from a kiln after it has been fired. [GRAPHICS] A surface portrayal of a form or figure in line. [MET] **1.** Pulling a wire or tube through a die to reduce the cross section. **2.** Forcing plastic deformation of metal in a die to form recessed parts.

drawing back [MET] Reheating hardened steel to a temperature below the critical temperature in order to change its hardness.

drawing bristol [MATER] A cardboard made of 100% cotton in the higher grades; has good characteristics of permanence, strength, and erasability.

drawing cloth [MATER] A linen cloth that is specially treated to be smooth and translucent so that it may be used for ink tracings.

drawing compound [MET] A material applied to the work during drawing or pressing operations to eliminate draw marks by preventing direct contact between the work and die.

drawing die [MET] A die that forms sheet metal into cuplike, wrinkle-free shapes.

drawing in [TEXT] The process of running the warp threads through the loom harness in order to set up the loom for weaving.

drawing of temper [MET] The process of heating steel to red heat and then letting it cool slowly; opposite of hardening or tempering.

drawing out [MET] Lengthening of a piece of metal through a heating and hammering process, resulting in a proportional reduction in section area. [TEXT] The action of pulling staple textile fibers lengthwise over each other, producing longer and thinner slivers.

drawing paper [MATER] One of a wide variety of papers used for pen-and-pencil drawing by artists and architects.

drawing timber [MIN ENG] The act of withdrawing timber and other supports from abandoned or worked-out mines.

drawknife [DES ENG] A woodcutting tool with a long, narrow blade and two handles mounted at right angles to the blade.

draw mark [MET] An impairment of the die or metal surface caused during drawing due to friction or a defect in the die; examples are scoring and die lines.

drawn glass [MATER] Glass made automatically by drawing the molten material through rollers.

draw piece [MET] Any part made by drawing.

drawplate [MET] A circular plate having a central hole through which wire is drawn by a punch. Also known as draw ring.

drawpoint [ENG] A steel point used to scratch lines or to pierce holes.

draw radius [MET] A measure of cutting edge of a die or punch over which the metal is drawn.

draw ring *See* drawplate.

drawsheet [GRAPHICS] On a platen press, the uppermost sheet of a tympan to which the guides and fenders are attached.

draw works [PETRO ENG] An oil-well drilling mechanism used to supply driving power and to lift heavy objects; consists of a countershaft and drum.

drazoxolon [ORG CHEM] $C_{10}H_8ClN_3O_2$ A yellow, crystalline compound with a melting point of 167°C; used as a fungicide for diseases of coffee and tea. Also known as 4-(2-chlorophenylhydrazono)-3-methyl-5-isoxazolone.

dream [PSYCH] An involuntary series of visual, auditory, or kinesthetic imagery, emotions, and thoughts occurring in the mind during sleep or a sleeplike state, which take the form of a sequence of events or of a story, having a feeling of reality but totally lacking a feeling of free will.

dredge [ENG] A cylindrical or rectangular device for collecting samples of bottom sediment and benthic fauna. [MECH ENG] A floating excavator used for widening or deepening channels, building canals, constructing levees, raising material from stream or harbor bottoms to be used elsewhere as fill, or mining.

dredge ship [NAV ARCH] A watercraft used as a dredge.

dredging [ENG] Removing solid matter from the bottom of a water area.

dredging buoy [NAV] A buoy marking the limit of an area where dredging is being performed.

D region [GEOPHYS] The region of ionosphere up to about 60

miles (97 kilometers) above the earth, below the E and F regions, in which the D layer forms.

dreikanter [GEOL] A pebble shaped with three facets by sandblasting.

Drepanellacea [PALEON] A monomorphic superfamily of extinct paleocopan ostracods in the suborder Beyrichicopina having a subquadrate carapace, many with a marginal rim.

Drepanellidae [PALEON] A monomorphic family of extinct ostracods in the superfamily Drepanellacea.

Drepanidae [INV ZOO] The hooktips, a small family of lepidopteran insects in the suborder Heteroneura.

Dresbachian [GEOL] Lower Croixan geologic time.

dress [ELECTR] The arrangement of connecting wires in a circuit to prevent undesirable coupling and feedback. [MECH ENG] **1.** To shape a tool. **2.** To restore a tool to its original shape and sharpness. [MIN ENG] To sort, grind, clean, and concentrate ore.

dresser [ENG] Any tool or apparatus used for dressing something.

Dresser coupling [ENG] A type of coupling for unthreaded pipe.

dressing [AGR] Manure or compost used as a fertilizer. [ENG] The sharpening, repairing, and replacing of parts, notably drilling bits and tool joints, to ready equipment for reuse. [MED] **1.** Application of various materials for protecting a wound and encouraging healing. **2.** Material so applied.

Dressler kiln [MECH ENG] The first successful muffle-type tunnel kiln.

Drew number [PHYS CHEM] A dimensionless group used in the study of diffusion of a solid material A into a stream of vapor initially composed of substance B, equal to

$$\frac{Z_A(M_A-M_B)+M_B}{(Z_A-Y_{AW})(M_B-M_A)}\cdot \ln\frac{M_V}{M_W}$$

where M_A and M_B are the molecular weights of components A and B, M_V and M_W are the molecular weights of the mixture in the vapor and at the wall, and Y_{AW} and Z_A are the mole fractions of A at the wall and in the diffusing stream, respectively. Symbolized N_D.

drewite [GEOL] Calcareous ooze composed of impalpable calcareous material.

drex [TEXT] A unit of yarn density (mass per unit length), equal to 1 gram per 10 kilometers of yarn fiber.

dribbling [MIN ENG] Fall of debris from the roof of an excavation, usually preceding a heavy fall or cave-in.

drier [ENG] A device to remove water. [MATER] **1.** A substance that absorbs water. **2.** A substance that is used to hasten solidification. **3.** Material, such as salts of lead, manganese, and cobalt, which facilitates the oxidation of oils; used in paints and varnishes to speed drying.

drift [ENG] **1.** A gradual deviation from a set adjustment, such as frequency or balance current, or from a direction. **2.** The deviation, or the angle of deviation, of a borehole from the vertical or from its intended course. [GEOL] **1.** Rock material picked up and transported by a glacier and deposited elsewhere. **2.** Detrital material moved and deposited on a beach by waves and currents. [MECH ENG] The water lost in a cooling tower as mist or droplets entrained by the circulating air, not including the evaporative loss. [MIN ENG] A horizontal mine opening which follows a vein or lies within the trend of an ore body. [NAV] **1.** The movement of a craft caused by the action of wind or current. **2.** To move gradually from a set position without control. [OCEANOGR] *See* drift current. [SOLID STATE] The movement of current carriers in a semiconductor under the influence of an applied voltage.

Drift I [ASTRON] A group of stars that tend to move in a stream, traveling in the direction of the constellation Orion; it comprises 60° of the stars whose proper motions are known.

Drift II [ASTRON] A group of stars that tend to move in a stream, traveling in the direction of the constellation Scutum; it comprises 40% of the brighter stars.

drift angle [NAV] **1.** The horizontal angle between the axis of a ship and the tangent to its path. Also known as drift correction angle. **2.** The angle between the longitudinal axis of an aircraft and its path relative to the ground.

drift axis [NAV] Of a gyroscope, the axis about which drift occurs; for example, in a directional gyro with the spin axis mounted horizontally, the drift axis is the vertical axis.

drift bolt [ENG] **1.** A bolt used to force out other bolts or pins. **2.** A metal rod used to secure timbers.

drift bottle [OCEANOGR] A bottle which is released into the sea for studying currents; contains a card, identifying the date and place of release, to be returned by the finder with date and place of recovery. Also known as floater.

drift card [OCEANOGR] A card, such as is used in a drift bottle, encased in a buoyant, waterproof envelope and released in the same manner as a drift bottle.

drift-corrected amplifier [ELECTR] A type of amplifier that includes circuits designed to reduce gradual changes in output, used in analog computers.

drift correction angle *See* drift angle.

drift current [OCEANOGR] **1.** A wide, slow-moving ocean current principally caused by winds. Also known as drift; wind drift; wind-driven current. **2.** Current determined from the differences between dead reckoning and a navigational fix. [PL PHYS] A current of free charged particles in perpendicular electric and magnetic fields that results from an average motion of the particles in a direction perpendicular to both fields.

drift dam [GEOL] A dam formed by glacial drift in a stream valley.

drifter [MECH ENG] A rock drill, similar to but usually larger than a jack hammer, mounted for drilling holes up to 4½ inches (11.4 centimeters) in diameter. [MIN ENG] **1.** A person who excavates mine drifts. **2.** An air-driven rock drill used for excavating mine drifts and crosscuts.

drift error [COMPUT SCI] An error arising in the use of an analog computer due to gradual changes in the output of circuits (such as amplifiers) in the computer.

drift glacier *See* snowdrift glacier.

drift ice [OCEANOGR] Sea ice that has drifted from its place of formation.

drift ice foot *See* ramp.

drift indicator [ENG] Device used to record directional logs; records only the amount of drift (deviation from the vertical), and not the direction. [NAV] *See* drift meter.

drifting [MIN ENG] Tunneling along the strike of a lode.

drifting mine [ORD] An underwater mine adjusted to float unanchored on or just below the surface of the water.

drifting snow [METEOROL] Wind-driven snow raised from the surface of the earth to a height of less than 6 feet (1.8 meters).

drift lead [NAV] A lead placed on the bottom to indicate movement of a vessel; at anchor the lead line is usually secured to the rail with a little slack and if the ship drags anchor, the line tends forward; also used to indicate when a vessel coming to anchor is dead in the water or when it is moving astern, or to indicate current if a ship is dead in the water.

drift meter [NAV] An instrument for measuring drift angle. Also known as drift indicator; drift sight.

drift mining [MIN ENG] Working of shallow veins or beds through drifts or shafts from the surface.

drift mobility [SOLID STATE] The average drift velocity of carriers per unit electric field in a homogeneous semiconductor. Also known as mobility.

drift observation [NAV] Also known as drift sight. **1.** The process of observing drift or leeway. **2.** The value obtained by such an observation.

driftpin [DES ENG] A round, tapered metal rod that is driven into matching rivet holes of two metal parts for stretching the parts and bringing them into alignment.

drift plug [ENG] A plug that can be driven into a pipe to straighten it or to flare its opening.

drift sight *See* drift meter; drift sight.

drift space [ELECTR] A space in an electron tube which is substantially free of externally applied alternating fields and in which repositioning of electrons takes place.

drift speed [ELEC] Average speed at which electrons or ions progress through a medium.

drift station [OCEANOGR] **1.** A scientific station established on the ice of the Arctic Ocean, generally based on an ice flow. **2.** A set of observations made over a period of time from a drifting vessel.

drift terrace *See* alluvial terrace.

drift transistor [ELECTR] **1.** A transistor having two plane parallel junctions, with a resistivity gradient in the base region between the junctions to improve the high-frequency response. **2.** *See* diffused-alloy transistor.

drift tube [NUCLEO] A tubular electrode placed in the vac-

uum chamber of a circular accelerator, to which radio-frequency voltage is applied to accelerate the particles.

drift ultrasonic flowmeter *See* deflection ultrasonic flowmeter.

drift velocity [SOLID STATE] The average velocity of a carrier that is moving under the influence of an electric field in a semiconductor, conductor, or electron tube.

drift wave [PL PHYS] An oscillation in a magnetically confined plasma which arises in the presence of density gradients, for example, at the plasma's surface, and which resembles the waves that propagate at the interface of two fluids of different density in a gravity field.

Drilidae [INV ZOO] The false firefly beetles, a family of coleopteran insects in the superfamily Cantharoidea.

drill [ENG] A rotating-end cutting tool for creating or enlarging holes in a solid material. Also known as drill bit. [TEXT] Strong twilled carded cotton cloth.

drillability [ENG] Fitness for being drilled, denoting ease of penetration.

drill angle gage *See* drill grinding gage.

drill bit *See* drill.

drill cable [ENG] A cable used to pull up drill rods, casing, and other drilling equipment used in making a borehole.

drill capacity [MECH ENG] The length of drill rod of specified size that the hoist on a diamond or rotary drill can lift or that the brake can hold on a single line.

drill carriage [MECH ENG] A platform or frame on which several rock drills are mounted and which moves along a track, for heavy drilling in large tunnels. Also known as jumbo.

drill chuck [DES ENG] A chuck for holding a drill or other cutting tool on a spindle.

drill circuit [COMMUN] A telegraph circuit used only to practice sending and receiving.

drill collar [DES ENG] A ring which holds a drill bit and gives it radial location with respect to a bearing.

drill column [MIN ENG] A steel pipe that can be wedged across an underground opening in a vertical or horizontal position to serve as a base on which to mount a diamond or rock drill.

drill cuttings [ENG] Cuttings of rock and other subterranean materials brought to the surface during the drilling of wellholes.

drill doctor [MIN ENG] **1.** A person who services drill bits, tools, and steels. **2.** A shop where the mechanic works.

drill drift [ENG] A steel wedge used to remove tapered shank tools from spindles, sockets, and sleeves.

drilled caisson [CIV ENG] A drilled hole filled with concrete and lined with a cylindrical steel casing if needed.

drilled extrusion ingot [MET] A hollow extrusion ingot made from a solid cast extrusion ingot by drilling.

driller [ENG] A person who operates a drilling machine. [MECH ENG] *See* drilling machine.

drill extractor [ENG] A tool for recovering broken drill pieces or a detached drill from a borehole.

drill feed [MECH ENG] The mechanism by which the drill bit is fed into the borehole during drilling.

drill fittings [ENG] All equipment used in a borehole during drilling. Also known as downhole equipment.

drill floor [ENG] A work area covered with planks around the collar of a borehole at the base of a drill tripod or derrick.

drill footage [ENG] The lineal feet of borehole drilled.

drill gage [DES ENG] A thin, flat steel plate that has accurate holes for many sizes of drills; each hole, identified as to drill size, enables the diameter of a drill to be checked. [ENG] Diameter of a borehole.

drill grinding gage [DES ENG] A tool that checks the angle and length of a twist drill while grinding it. Also known as drill angle gage; drill point gage.

drill hole [ENG] A hole created or enlarged by a drill or auger.

drillhole pattern [ENG] The number, position, angle, and depth of the shot holes forming the round in the face of a tunnel or sinking pit.

drillhole survey *See* borehole survey.

drill-in [MIN ENG] The act or process of setting casting through overburden by using a drill machine.

drilling [ENG] The creation or enlarging of a hole in a solid material with a drill.

drilling column [ENG] The column of drill rods, with the drill bit attached to the end.

drilling fluid *See* drilling mud.

drilling machine [MECH ENG] A device, usually motor-driven, fitted with an end cutting tool that is rotated with sufficient power either to create a hole or to enlarge an existing hole in a solid material. Also known as driller.

drilling mud [MATER] A suspension of finely divided heavy material, such as bentonite and barite, pumped through the drill pipe during rotary drilling to seal off porous zones and flush out chippings, and to lubricate and cool the bit. Also known as drilling fluid.

drilling platform [ENG] The structural base upon which the drill rig and associated equipment is mounted during the drilling operation.

drilling rate [MECH ENG] The number of lineal feet drilled per unit of time.

drilling time [ENG] **1.** The time required in rotary drilling for the bit to penetrate a specified thickness (usually 1 foot) of rock. **2.** The actual time the drill is operating.

drilling time log [ENG] Foot-by-foot record of how fast a formation is drilled.

drill jig [MECH ENG] A device fastened to the work in repetition drilling to position and guide the drill.

drill log [ENG] **1.** A record of the events and features of the formations penetrated during boring. Also known as boring log. **2.** A record of all occurrences during drilling that might help in a complete logging of the hole or in determining the cost of the drilling.

drill out [ENG] **1.** To complete one or more boreholes. **2.** To penetrate or remove a borehole obstruction. **3.** To locate and delineate the area of a subsurface ore body or of petroleum by a series of boreholes.

drill-over [ENG] The act or process of drilling around a casing lodged in a borehole.

drill pipe [MIN ENG] A pipe used for driving a revolving drill bit, used especially in drilling wells; consists of a casing within which tubing is run to conduct oil or gas to ground level; drilling mud flows in the annular space between casing and tubing during the drilling operation.

drill point gage *See* drill grinding gage.

drill press [MECH ENG] A drilling machine in which a vertical drill moves into the work, which is stationary.

drill rod [ENG] The long rod that drives the drill bit in drilling boreholes.

drill runner [MIN ENG] A tunnel miner who operates rock drills.

drill sleeve [ENG] A tapered, hollow steel shaft designed to fit the tapered shank of a cutting tool to adapt it to the drill press spindle.

drill socket [ENG] An adapter to fit a tapered shank drill to a taper hole that is larger than that in the drill press spindle.

drill steel [MET] Steel with at least 0.85% carbon content made by the electric furnace process. Formerly known as crucible steel, when made by the crucible process.

drill stem *See* drill string.

drill-stem test [PETRO ENG] Bottom-hole pressure information obtained and used to determine formation productivity.

drill string [MECH ENG] The assemblage of drill rods, core barrel, and bit, or of drill rods, drill collars, and bit in a borehole, which is connected to and rotated by the drill collar of the borehole. Also known as drill stem.

drill weave [TEXT] Special fabric sometimes used in filtration; a three-harness, warp-face twill weave, having the two-up and one-down twill effect.

drip [HYD] Condensed or otherwise collected moisture falling from leaves, twigs, and so forth. [MATER] **1.** Oil which comes through the cloth of a paraffin wax press. **2.** Filter drainings too dark to be included in filter stock. [PETRO ENG] A discharge mechanism installed at a low point in a gas transmission line to collect and remove liquid accumulations.

drip cap [BUILD] A molding on top of the head casing of a window frame to direct water away from the window.

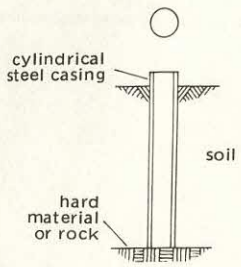
drip-dry [TEXT] Of a fabric, shedding water or moisture rapidly without squeezing, spinning, or wringing.

drip edge [BUILD] A metal strip that extends beyond the other parts of the roof and is used to direct rainwater off.

dripping drop atomization [HYD] A type of natural gravitational atomization process in which there is periodic emission of drops from the bottom side of a surface to which a liquid is fed continuously, as in dripping of water from leaves.

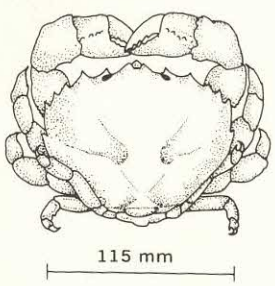
drive [ELECTR] *See* excitation. [MECH ENG] The means by which a machine is given motion or power (as in steam drive, diesel-electric drive), or by which power is transferred from one

DRIVEN CAISSON



Driven caisson, top view and cross-section from the side.

DROMIACEA



Dromia erythropus, a dromiid crab. *(Smithsonian Institution)*

DRONE

Drone, about 3/16 inch (0.5 centimeter).

part of a machine to another (as in gear drive, belt drive). [MIN ENG] **1.** To excavate in a horizontal or inclined plane. **2.** A horizontal underground tunnel along or parallel to a lode, vein, or ore body. [PSYCH] A strong impetus to behavior or active striving.

drive chuck [MECH ENG] A mechanism at the lower end of a diamond-drill drive rod on the swivel head by means of which the motion of the drive rod can be transmitted to the drill string.

drive control *See* horizontal drive control.

drive fit [DES ENG] A fit in which the larger (male) part is pressed into a smaller (female) part; the assembly must be effected through the application of an external force.

drivehead [ENG] A cap fitted over the end of a mechanical part to protect it while it is being driven.

driven array [ELECTROMAG] An antenna array consisting of a number of driven elements, usually half-wave dipoles, fed in phase or out of phase from a common source.

driven blocking oscillator *See* monostable blocking oscillator.

driven caisson [CIV ENG] A caisson formed by driving a cylindrical steel shell into the ground with a pile-driving hammer and then placing concrete inside; the shell may be removed when concrete sets.

driven element [ELECTROMAG] An antenna element that is directly connected to the transmission line.

driven gear [MECH ENG] The member of a pair of gears to which motion and power are transmitted by the other.

driven snow [METEOROL] Snow which has been moved by wind and collected into snowdrifts.

drive pattern [COMMUN] In a facsimile system, undesired pattern of density variations caused by periodic errors in the position of the recording spot.

drivepipe [ENG] A thick-walled casing pipe that is driven through overburden or into a deep drill hole to prevent caving.

drive pulley [MECH ENG] The pulley that drives a conveyor belt.

drive pulse [ELECTR] An electrical pulse which induces a magnetizing force in an element of a magnetic core storage, reversing the polarity of the core.

driver [ELECTR] The amplifier stage preceding the output stage in a receiver or transmitter. [ENG ACOUS] The portion of a horn loudspeaker that converts electrical energy into acoustical energy and feeds the acoustical energy to the small end of the horn.

driver element [ELECTROMAG] Antenna array element that receives power directly from the transmitter.

drive rod [ENG] Hollow shaft in the swivel head of a diamond-drill machine through which energy is transmitted from the drill motor to the drill string. Also known as drive spindle.

driver sweep [ELECTR] Sweep triggered only by an incoming signal or trigger.

driver transformer [ELECTR] A transformer in the input circuit of an amplifier, especially in the transmitter.

drive sampling [ENG] The act or process of driving a tubular device into soft rock material for obtaining dry samples.

drivescrew [DES ENG] A screw that is driven all the way in, or nearly all the way in, with a hammer.

drive shaft [MECH ENG] A shaft which transmits power from a motor or engine to the rest of a machine.

drive shoe [DES ENG] A sharp-edged steel sleeve attached to the bottom of a drivepipe or casing to act as a cutting edge and protector.

drive spindle *See* drive rod.

drive winding [ELECTR] A coil of wire that is inductively coupled to an element of a magnetic memory. Also known as drive wire.

drive wire *See* drive winding.

driving clock [ENG] A mechanism for driving an instrument at a required rate.

driving pinion [MECH ENG] The input gear in the differential of an automobile.

driving point function [CONT SYS] A special type of transfer function in which the input and output variables are voltages or currents measured between the same pair of terminals in an electrical network.

driving point impedance [ELECTR] The complex ratio of applied alternating voltage to the resulting alternating current in an electron tube, network, or other transducer.

driving resistance [MECH] The force exerted by soil on a pile being driven into it.

driving signal [ELECTR] Television signal that times the scanning at the pickup point.

driving wheel [MECH ENG] A wheel that supplies driving power.

drizzle [METEOROL] Very small, numerous, and uniformly dispersed water drops that may appear to float while following air currents; unlike fog droplets, drizzle falls to the ground; it usually falls from low stratus clouds and is frequently accompanied by low visibility and fog.

drizzle drop [METEOROL] A drop of water of diameter 0.2 to 0.5 millimeter falling through the atmosphere; however, all water drops of diameter greater than 0.2 millimeter are frequently termed raindrops, as opposed to cloud drops.

DRM *See* detrital remanent magnetization.

drogue [AERO ENG] **1.** A small parachute attached to a body for stabilization and deceleration. Also known as deceleration parachute. **2.** A funnel-shaped device at the end of the hose of a tanker aircraft in flight, to receive the probe of another aircraft that will take on fuel. [ENG] **1.** A device, such as a sea anchor, usually shaped like a funnel or cone and dragged or towed behind a boat or seaplane for deceleration, stabilization, or speed control. **2.** A current-measuring assembly consisting of a weighted current cross, sail, or parachute and an attached surface buoy. Also known as drag anchor; sea anchor.

Dromadidae [VERT ZOO] A family of the avian order Charadriiformes containing a single species, the crab plover (*Dromas ardeola*).

dromedary [VERT ZOO] *Camelus dromedarius* The Arabian camel, distinguished by a single hump.

Dromiacea [INV ZOO] The dromiid crabs, a subsection of the Brachyura in the crustacean order Decapoda.

Dromiceidae [VERT ZOO] The emus, a monospecific family of flightless birds in the order Casuariiformes.

dromophobia [PSYCH] An abnormal fear of walking about.

drone [AERO ENG] A pilotless aircraft usually subordinated to the controlling influences of a remotely located command station, but occasionally preprogrammed. [INV ZOO] A haploid male bee or ant; one of the three castes in a colony.

drooped ailerons [AERO ENG] Ailerons that are of the hinged trailing-edge type and are so arranged that both the right and left one have a 10 to 15° positive downward deflection with the control column in a neutral position.

droop governor [MECH ENG] A governor whose equilibrium speed decreases as the load on the machinery controlled by the governor increases.

drop [FL MECH] The quantity of liquid that coalesces into a single globule; sizes vary according to physical conditions and the properties of the fluid itself. [HYD] The difference in water-surface elevations that is measured up-and downstream from a narrowing in the stream. [MET] A casting defect due to the falling of a portion of sand from an overhanging section of the mold. [MINERAL] A funnel-shaped downward intrusion of sedimentary rock into the roof of a coal seam. [PL PATH] A fungus disease of various vegetables caused by *Sclerotinia sclerotiorum* and characterized by wilt and stem rot.

drop ball [ENG] A ball, weighing 3000–4000 pounds (1400–1800 kilograms), dropped from a crane through about 20–33 feet (6–10 meters) onto oversize quarry stones left after blasting; this method is used to avoid secondary blasting.

drop bar [ELEC] Protective device used to ground a high-voltage capacitor when opening a door. [MECH ENG] A bar that guides sheets of paper into a printing or folding machine.

drop black [MATER] Black pigment shaped into droplets.

drop-bottom car [MIN ENG] A mine car designed so that flaps drop open in the bottom to allow the coal to fall out as the car passes over the dump; flaps close as the car leaves.

drop bracket transposition [ELEC] Reversal of the relative positions of two parallel wire conductors while depressing one, so that the crossover is in a vertical plane.

drop-dead halt [COMPUT SCI] A machine halt from which there is no recovery; such a halt may occur through a logical error in programming; examples in which a drop-dead halt could occur are division by zero and transfer to a nonexistent instruction word. Also known as dead halt.

dropfoot [MED] A condition in which the foot drags along the ground and gives the person a characteristic shuffling gait, caused by the failure of the muscle responsible for raising the foot during walking as the leg is swung forward.

drop forging [MET] Plastic deformation of hot metal under a falling weight, such as a drop hammer.

drop hammer [MECH ENG] *See* pile hammer. [MET] A hammer used in forging that is raised and then dropped on the metal resting on an anvil or on a die.

drop-in [COMPUT SCI] The accidental appearance of an unwanted bit, digit, or character on a magnetic recording surface or during reading from or writing to a magnetic storage device.

drop indicator [COMMUN] Indicator for signaling, consisting of a hinged flap normally held up by a catch; the catch is released by an electromagnet, allowing the flap to drop when a signal is received.

droplet [MED] A tiny drop of matter consisting of water, mucus, and bacterial products, released through the nasal passages or expectorated. [METEOROL] A water droplet in the atmosphere; there is no defined size limit separating droplets from drops of water, but sometimes a maximum diameter of 0.2 millimeter is the limit for droplets.

droplet infection [MED] Infection by contact with airborne droplets of sputum carrying infectious agents.

drop log [MIN ENG] A timber which can be dropped across a mine track by remote control to derail cars.

drop model of nucleus *See* liquid-drop model of nucleus.

dropout [ELEC] Of a relay, the maximum current, voltage, power, or such, at which it will release from its energized position. [ELECTR] A reduction in output signal level during reproduction of recorded data, sufficient to cause a processing error. [GRAPHICS] A halftone negative, print, or plate on which some of the original image has been removed by masking or opaquing.

dropout current [ELEC] The maximum current at which a relay or other magnetically operated device will release to its deenergized position.

dropout error [ELECTR] Loss of a recorded bit or any other error occurring in recorded magnetic tape due to foreign particles on or in the magnetic coating or to defects in the backing.

dropout fuse [ELEC] A fuse used on utility line poles which springs open when the fuse metal melts to provide rapid arc extinction, and which drops to an open-circuit position readily distinguishable from the ground. Also known as flip-open cutout fuse.

dropout voltage [ELEC] The maximum voltage at which a relay or other magnetically operated device will release to its deenergized position.

dropping angle *See* range angle.

dropping fraction [COMPUT SCI] In punched cards, the chance that a given sorting operation will cause a card taken at random to be selected.

dropping-mercury electrode [PHYS CHEM] An electrode consisting of a fine-bore capillary tube above which a constant head of mercury is maintained; the mercury emerges from the tip of the capillary at the rate of a few milligrams per second and forms a spherical drop which falls into the solution at the rate of one every 2–10 seconds.

dropping point [CHEM] The temperature at which grease changes from a semisolid to a liquid state under standardized conditions.

dropping resistor [ELEC] A resistor used in series with a load to decrease the voltage applied to the load.

dropping test [MET] A chemical method for determining thickness of zinc and cadmium plated coatings on metal in which a reagent is dropped on the surface until the basis metal is exposed.

drop press *See* punch press.

drop relay [ELEC] Relay activated by incoming ringing current to call an operator's attention to a subscriber's line.

drop repeater [ELECTR] Microwave repeater that is provided with the necessary equipment for local termination of one or more circuits.

drop siding [BUILD] Building siding with a shiplap joint.

drop-size distribution [METEOROL] The frequency distribution of drop sizes (diameters, volumes) that is characteristic of a given cloud or rainfall.

dropsonde [ENG] A radiosonde dropped by parachute from a high-flying aircraft to measure weather conditions and report them back to the aircraft.

dropsonde dispenser [ENG] A chamber from which dropsonde instruments are released from weather reconnaissance aircraft; used only for some models of equipment, ejection chambers being used for others.

dropsonde observation [METEOROL] An evaluation of the significant radio signals received from a descending dropsonde, and usually presented in terms of height, temperature, and dew point at the mandatory and significant pressure levels; it is comparable to a radiosonde observation.

drop spillway [CIV ENG] A spillway usually less than 20 feet (6 meters) high having a vertical downstream face, and water drops over the face without touching the face.

dropsy *See* edema.

drop tank [AERO ENG] A fuel tank on an airplane that may be jettisoned.

drop theory *See* barrier theory of cyclones.

drop weight [FL MECH] The weight of the largest drop that can hang from the end of a tube of given radius.

drop-weight method [FL MECH] A method of measuring surface tension by measuring the weight of a slowly increasing drop of the liquid hanging from the end of a tube, just before it is detached from the tube.

drop wire [ELEC] Wire suitable for extending an open wire or cable pair from a pole or cable terminal to a building.

Droseraceae [BOT] A family of dicotyledonous plants in the order Sarraceniales, distinguished by leaves that do not form pitchers, parietal placentation, and several styles.

drosometer [ENG] An instrument used to measure the amount of dew deposited on a given surface.

Drosophilidae [INV ZOO] The vinegar flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae, including the fruit fly (*Drosophila melanogaster*).

dross [MET] An impurity, usually an oxide, formed on the surface of a molten metal.

drossing [MET] A process used in nonferrous pyrometallurgy for removing solid oxide deposits on the surface of a molten metal.

drought [CLIMATOL] A period of abnormally dry weather sufficiently prolonged so that the lack of water causes a serious hydrologic imbalance (such as crop damage, water supply shortage, and so on) in the affected area; in general, the term should be reserved for relatively extensive time periods and areas.

drowned atoll [GEOL] An atoll which has not reached the water surface.

drowned coast [GEOL] A shoreline transformed from a hilly land surface to an archipelago of small islands by inundation by the sea.

drowned river mouth *See* estuary.

drowned stream [HYD] A stream that has been flooded over by the ocean. Also known as flooded stream.

drowned valley [GEOL] A valley whose lower part has been inundated by the sea due to submergence of the land margin.

droxtal [HYD] An ice particle measuring 10–20 micrometers in diameter, formed by direct freezing of supercooled water droplets at temperatures below −30°C.

DR track line *See* dead-reckoning track.

Drude equation [OPTICS] An equation which states that the rotation of the plane of polarization of plane-polarized light passing through an optically active substance is inversely proportional to the difference between the square of the wavelength of the light and the square of a constant wavelength.

Drude's theory of conduction [SOLID STATE] A theory which treats the electrons in a metal as a gas of classical particles.

drug [PHARM] **1.** Any substance used internally or externally as a medicine for the treatment, cure, or prevention of a disease. **2.** A narcotic preparation.

drug idiosyncrasy [MED] A peculiarity of constitution that makes an individual respond differently to a drug or treatment than do most people.

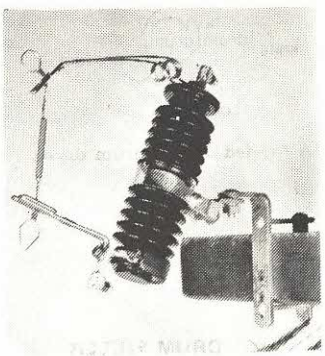
drug pacemaker [PHARM] A pharmaceutical agent capable of increasing the ventricular rate in a diseased heart.

drug resistance [MICROBIO] A decreased reactivity of living organisms to the injurious actions of certain drugs and chemicals.

drug tolerance [MED] Condition that may follow repeated ingestion of a drug in so that the effect produced by the original dose no longer occurs.

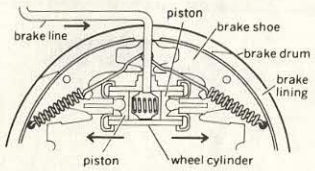
drum [CHEM ENG] Tower or vessel in a refinery into which heated products are conducted so that volatile portions can separate. [DES ENG] **1.** A hollow, cylindrical container. **2.** A metal cylindrical shipping container for liquids having a capacity of 12–110 gallons (45–416 liters). [ELECTR] A computer storage device consisting of a rapidly rotating cylinder

DROPOUT FUSE



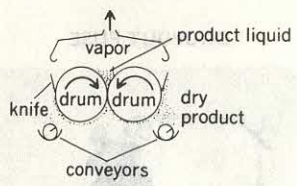
A dropout fuse rated 50 amperes at 7.8 kilovolts used on utility-line poles. *(General Electric Co.)*

DRUM BRAKE



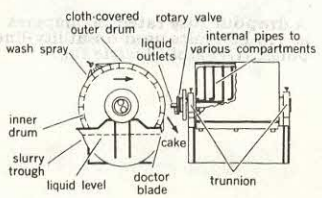
Schematic view of part of hydraulic braking system showing the brake line leading into the brakes which are shown applied. *(Pontiac Motor Division, General Motors Corp.)*

DRUM DRYER



A top-fed double drum dryer.

DRUM FILTER



Continuous vacuum drum filter. *(From W. L. McCabe and J. C. Smith, Unit Operations of Chemical Engineering, McGraw-Hill, 2d ed., 1967)*

with a magnetizable external surface on which data can be read or written by many read/write heads floating a few millionths of an inch off the surface. Also known as drum memory; drum storage; magnetic drum; magnetic drum storage. [MECH ENG] A horizontal cylinder about which rope or wire rope is wound in a hoisting mechanism. Also known as hoisting drum.

drum armature [ELEC] An armature that has a drum winding.

drum brake [MECH ENG] A brake in which two curved shoes fitted with heat- and wear-resistant linings are forced against the surface of a rotating drum.

drum cam [MECH ENG] A device consisting of a drum with a contoured surface which communicates motion to a cam follower as the drum rotates around an axis.

drum controller [ELEC] An electric device that has a drum switch for its main switching element; used to govern the way electric power is delivered to a motor.

drum disk rectifier [ELEC] A mechanical rectifier using synchronous contacts and a copper oxide dry disk.

drum dryer [MECH ENG] A machine for removing water from substances such as milk, in which a thin film of the product is moved over a turning steam-heated drum and a knife scrapes it from the drum after moisture has been removed.

drum feeder [MECH ENG] A rotating drum with vanes or buckets to lift and carry parts and drop them into various orienting or chute arrangements. Also known as tumbler feeder.

drum filter [MECH ENG] A cylindrical drum that rotates through thickened ore pulp, extracts liquid by a vacuum, and leaves solids, in the form of a cake, on a permeable membrane on the drum end. Also known as rotary filter; rotary vacuum filter.

drum gate [CIV ENG] A movable crest gate in the form of an arc hinged at the apex and operated by reservoir pressure to open and close a spillway.

drumlin [GEOL] A hill of glacial drift or bedrock having a half-ellipsoidal streamline form like the inverted bowl of a spoon, with its long axis paralleling the direction of movement of the glacier that fashioned it.

drumlinoid *See* rock drumlin.

drum mark [COMPUT SCI] A character indicating the termination of a record on a magnetic drum.

drum memory *See* drum.

drum meter *See* liquid-sealed meter.

drummy [MIN ENG] Loose rock or coal, especially in a mine roof, that produces a hollow, weak sound when tapped with a bar.

drum parity error [COMPUT SCI] Parity error occurring during transfer of information onto or from drums.

drum plotter [ENG] A graphics output device that draws lines with a continuously moving pen on a sheet of paper rolled around a rotating drum that moves the paper in a direction perpendicular to the motion of the pen.

drum printer [COMPUT SCI] An impact printer in which a complete set of characters for each print position on a line is on a continuously rotating drum behind an inked ribbon, with paper in front of the ribbon; identical characters are printed simultaneously at all required positions on a line, on the fly, by signal-controlled hammers.

drum printing [TEXT] Dyeing yarn by winding it on a drum and applying color in bands of various widths.

drum recorder [ELECTR] A facsimile recorder in which the record sheet is mounted on a rotating drum or cylinder.

drum separator [MIN ENG] A cylindrical vessel which rotates slowly and separates run-of-mine coal into clean coal, middlings, and refuse, can be adjusted for different specific gravities.

drum storage *See* drum.

drum switch [ELEC] A switch in which the electrical contacts are made on pins, segments, or surfaces on the periphery of a rotating cylinder or sector, or by the operation of a rotating cam.

drum transmitter [ELECTR] A facsimile transmitter in which the subject copy is mounted on a rotating drum or cylinder.

drum-type boiler *See* bent-tube boiler.

drum winding [ELEC] A type of winding in electric machines in which coils are housed in long, narrow gaps either in the outer surface of a cylindrical core or in the inner surface of a core with a cylindrical bore.

drupaceous [BOT] Of, pertaining to, or characteristic of a drupe.

drupe [BOT] A fruit, such as a cherry, having a thin or leathery exocarp, a fleshy mesocarp, and a single seed with a stony endocarp. Also known as stone fruit.

drupelet [BOT] An individual drupe of an aggregate fruit. Also known as grain.

druse [GEOL] A small cavity in a rock or vein encrusted with aggregates of crystals of the same minerals which commonly constitute the enclosing rock.

drusy [GEOL] Of or pertaining to rocks containing numerous druses.

dry [SCI TECH] Free from or deficient in moisture.

dry abrasive cutting [MECH ENG] Frictional cutting using a rotary abrasive wheel without the use of a liquid coolant.

dry acid [CHEM] Nonaqueous acetic acid used for oil-well reservoir acidizing treatment.

dry adiabat [METEOROL] A line of constant potential temperature on a thermodynamic diagram.

dry-adiabatic lapse rate [METEOROL] A special process lapse rate of temperature, defined as the rate of decrease of temperature with height of a parcel of dry air lifted adiabatically through an atmosphere in hydrostatic equilibrium. Also known as adiabatic lapse rate; adiabatic rate.

dry-adiabatic process [METEOROL] An adiabatic process in a system of dry air.

dry air [METEOROL] Air that contains no water vapor.

dry ashing [ORG CHEM] The conversion of an organic compound into ash (decomposition) by a burner or in a muffle furnace.

dry assay [MET] Determination of the amount of a desired constituent in ores, metallurgical residues, and alloys by methods other than those involving liquid means of separation.

dry-back boiler *See* scotch boiler.

dry battery [ELEC] A battery made up of a series, parallel, or series-parallel arrangement of dry cells in a single housing to provide desired voltage and current values.

dry blast cleaning [ENG] Cleaning of metallic surfaces by blasting with abrasive material traveling at a high velocity; abrasive may be accelerated by an air nozzle or a centrifugal wheel.

dry-bone ore *See* smithsonite.

dry box [CHEM] A container or chamber filled with argon, or sometimes dry air or air with no CO_2, to provide an inert atmosphere in which manipulation of very reactive chemicals is carried out in the laboratory.

dry-box process [CHEM ENG] The passing of coke-oven or other industrial gases through boxes containing trays of iron oxide coated on wood shavings or other supporting material in order to remove hydrogen sulfide.

dry-bulb temperature [PHYS] The actual air temperature as measured by a dry-bulb thermometer.

dry-bulb thermometer [ENG] An ordinary thermometer, especially one with an unmoistened bulb; not dependent upon atmospheric humidity.

dry cargo [IND ENG] Nonliquid cargo, including minerals, grain, boxes, and drums.

dry-cargo ship [NAV ARCH] A ship which carries miscellaneous dry cargo, such as boxes, bales, bags, or lumber, which is normally hand-stowed.

dry cell [ELEC] A voltage-generating cell having an immobilized electrolyte.

dry-cell cap light [MIN ENG] A headlamp with a focusing lens lamp and a dry-cell battery unit clipped to the belt; to prevent explosion in a mine, the bulb is ejected automatically in case of its breakage.

dry-charged battery [ELEC] A storage battery in which the electrolyte is drained from the battery for storage, and which is filled with electrolyte and charged for a few minutes to prepare for use.

dry-chemical fire extinguisher [CHEM ENG] A dry powder, consisting principally of sodium bicarbonate, which is used for extinguishing small fires, especially electrical fires.

dry circuit [ELEC] A relay circuit in which open-circuit voltages are very low and closed-circuit currents extremely small, so there is no arcing to roughen the contacts.

dry cleaning [ENG] To utilize dry-cleaning fluid to remove stains from textile.

dry-cleaning fluid [MATER] An organic solvent such as

chlorinated hydrocarbons or petroleum naphtha with narrow, carefully selected boiling points; used in dry cleaning.

dry climate [CLIMATOL] **1.** In W. Köppen's climatic classification, the major category which includes steppe climate and desert climate, defined strictly by the amount of annual precipitation as a function of seasonal distribution and of annual temperature. **2.** In C. W. Thornwaite's climatic classification, any climate type in which the seasonal water surplus does not counteract seasonal water deficiency, and having a moisture index of less than zero; included are the dry subhumid, semiarid, and arid climates.

dry coloring [CHEM ENG] A plastics coloring method in which uncolored particles of the plastic material are tumble-blended with selected dyes and pigments. [ENG] A method to color plastics by tumbleblending colorless plastic particles with dyes and pigments. [MATER] A powdered form of pigment.

dry contact [ELEC] A contact that does not break or make current.

dry cooling tower [MECH ENG] A structure in which water is cooled by circulation through finned tubes, transferring heat to air passing over the fins; there is no loss of water by evaporation because the air does not directly contact the water.

dry corrosion [MET] Destruction of a metal or alloy by chemical processes resulting from attack by gases in the atmosphere above the dew point.

dry course [BUILD] An initial roofing course of felt or paper not bedded in tar or asphalt.

dry criticality [NUCLEO] Reactor criticality achieved without a coolant.

dry delta *See* alluvial fan.

dry-desiccant dehydration [CHEM ENG] Use of silica gel or other solid absorbent to remove liquids from gases, such as water from air, or liquid hydrocarbons from natural gas.

dry-disk rectifier *See* metallic rectifier.

dry distillation [CHEM] Distillation of materials that are dry.

dry dock [CIV ENG] A dock providing support for a vessel and a means for removing the water so that the bottom of the vessel can be exposed.

dry-dock caisson [CIV ENG] The floating gate to a dry dock. Also known as caisson.

drydock iceberg *See* valley iceberg.

dry drilling [MIN ENG] Drilling in which chippings and cuttings are lifted out of a borehole by a current of air or gas.

dry electrolytic capacitor [ELEC] An electrolytic capacitor in which the electrolyte is a paste rather than a liquid; the dielectric is a thin film of gas formed on one of the plates by chemical action.

dry firn *See* polar firn.

dry flashover voltage [ELECTR] Voltage at which the air surrounding a clean dry insulator or shell completely breaks down between electrodes.

dry fog [METEOROL] A fog that does not moisten exposed surfaces.

dry freeze [HYD] The freezing of the soil and terrestrial objects caused by a reduction of temperature when the adjacent air does not contain sufficient moisture for the formation of hoarfrost on exposed surfaces.

dry friction [MECH] Resistance between two dry solid surfaces, that is, surfaces free from contaminating films or fluids.

dry gangrene [MED] Local death of a part caused by arterial obstruction without associated venous obstruction or infection.

dry gas [MATER] A gas that does not contain fractions which may easily condense under normal atmospheric conditions, for example, natural gas with methane and ethane.

dry grinding [ENG] Reducing particle sizes without a liquid medium.

dry haze [METEOROL] Fine dust or salt particles in the air, too small to be individually apparent but in sufficient number to reduce horizontal visibility, and to give the atmosphere a characteristic hazy appearance.

dry hole [ENG] A hole driven without the use of water. [PETRO ENG] A well in which no oil or gas is found.

dry-hot-rock geothermal system [GEOL] A water-deficient hydrothermal reservoir dominated by the presence of rocks at depths in which large quantities of heat are stored.

dry ice [INORG CHEM] Carbon dioxide in the solid form, usually made in blocks to be used as a coolant; changes directly to a gas at $-78.5°C$ as heat is absorbed.

drying [CHEM] **1.** An operation in which a liquid, usually water, is removed from a wet solid in equipment termed a dryer. **2.** A process of oxidation whereby a liquid such as linseed oil changes into a solid film.

drying agent [CHEM] Soluble or insoluble chemical substance that has such a great affinity for water that it will abstract water from a great many fluid materials; soluble chemicals are calcium chloride and glycerol, and insoluble chemicals are bauxite and silica gel. Also known as desiccant.

drying oil [MATER] Relatively highly unsaturated oil, such as cottonseed, soybean, and linseed oil, that is easily oxidized and polymerized to form a hard, dry film on exposure to air; used in paints and varnish.

drying oven [ENG] A closed chamber for drying an object by heating at relatively low temperatures.

Dryinidae [INV ZOO] A family of hymenopteran insects in the superfamily Bethyloidea.

dry kiln [ENG] A heated room or chamber used to dry and season cut lumber.

dry measure [MECH] A measure of volume for commodities that are dry.

dry mill [FOOD ENG] A machine for processing corn consisting of a horizontal, revolving conical drum covered with metal projections, in a housing also studded with metal projections and having small perforations through which pass fine particles of hull and germ. [MECH ENG] Grinding device used to powder or pulverize solid materials without an associated liquid.

dry mining [MIN ENG] Mining operation in which there is no moisture in the ventilating air.

dry mounting [GRAPHICS] A method for mounting photographs and other paper materials on cardboard without paste or rubber cement; a light, thin tissue (mounting tissue) is placed over the photograph and heat is applied with slight pressure so that the photo will adhere to the cardboard.

dry offset *See* letterset.

Dryomyzidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

Dryopidae [INV ZOO] The long-toed water beetles, a family of coleopteran insects in the superfamily Dryopoidea.

Dryopoidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga, including the nonpredatory aquatic beetles.

dry ore [MIN ENG] An ore of gold or silver which requires added lead and fluxes for treatment.

dry permafrost [GEOL] A loose and crumbly permafrost which contains little or no ice.

dry permeability [ENG] A property of dried bonded sand to permit passage of gases while molten material is poured into a mold.

dry pint *See* pint.

dry pipe [MECH ENG] A perforated metal pipe above the normal water level in the steam space of a boiler which prevents moisture or extraneous matter from entering steam outlet lines.

dry-pipe system [ENG] A sprinkler system that admits water only when the air it normally contains has been vented; used for systems subjected to freezing temperatures.

dry-pit pump [MECH ENG] A pump operated with the liquid conducted to and from the unit by piping.

dry placer [MIN ENG] A gold-bearing alluvial deposit found in arid regions; it cannot be mined due to lack of water.

dry plate [GRAPHICS] A photographic plate that has a sensitized coating of an emulsion of silver halide in gelatin which is dried before exposure to light in the photographic process.

dry-plate rectifier *See* metallic rectifier.

dry point [ANALY CHEM] The temperature at which the last drop of liquid evaporates from the bottom of the flask.

drypoint etching [GRAPHICS] Etching in which a sharp tool (an etching needle) scratches through only the etching ground that is placed on the surface of the copper plate; the plate is then placed in an acid bath, and the chemical action produces a line deep enough to hold ink.

dry pressing [ENG] Molding clayware by compressing moist clay powder in metal dies.

dry pt *See* pint.

dry quicksand [GEOL] An accumulation of alternate layers of firmly compacted sand and loose sand that cannot support heavy loads.

dry-reed relay [ELEC] Reed-type relay which does not use mercury at the relay contacts.

dry reed switch [ELEC] A switch having contacts mounted

on magnetic reeds in a vacuum enclosure, designed for reliable operation in dry circuits.

dry-relief offset [GRAPHICS] Referring to plates made for use on offset-lithographic presses, but printed without the use of dampeners and water; the plates are made photomechanically, and nonprinting areas are etched from 0.008 to 0.015 inch (0.2 to 0.4 millimeter) below the surface. Also known as high etch.

dry rot [MICROBIO] A rapid decay of seasoned timber caused by certain fungi which cause the wood to be reduced to a dry, friable texture. [PL PATH] Any of various rot diseases of plants characterized by drying of affected tissues.

dry run [COMPUT SCI] A check of the logic and coding of a computer program in which the program's operations are followed from a flow chart and written instructions, and the results of each step are written down, before the program is run on a computer. Also known as desk check. [ENG] Any practice test or session. [ORD] Any simulated firing practice, particularly a dive-bombing approach made without the release of a bomb.

dry sample [MIN ENG] A sample of ore obtained by dry drilling.

dry sand [GEOL] **1.** A formation, underlying the production sand, into which oil has leaked due to careless drilling practices. **2.** A nonproductive oil sand.

dry sand mold [MET] A mold made of greensand and then dried in an oven to increase its strength.

Drysdale ac polar potentiometer [ENG] A potentiometer for measuring alternating-current voltages in which the voltage is applied across a slide-wire supplied with current by a phase-shifting transformer; this current is measured by an ammeter and brought into phase with the unknown voltage by adjustment of the transformer rotor, and the unknown voltage is measured by observation of the slide-wire setting for a null indication of a vibration galvanometer.

dry season [CLIMATOL] In certain types of climate, an annually recurring period of one or more months during which precipitation is at a minimum for the region.

dry sieving [ENG] Particle-size distribution analysis of powdered solids; the sample is placed on the top sieve screen of a nest (stack), with mesh openings decreasing in size from the top to the bottom of the nest.

dry sleeve [MECH ENG] A cylinder liner which is not in contact with the coolant.

dry socket [MED] Inflammation of the dental alveolus, especially the inflamed condition following the removal of a tooth. Also known as alveolitis.

dry spell [CLIMATOL] A period of abnormally dry weather, generally reserved for a less extensive, and therefore less severe, condition than a drought; in the United States, describes a period lasting not less than 2 weeks, during which no measurable precipitation was recorded.

dry spot [CHEM ENG] **1.** An open area of an incomplete surface film on laminated plastic. **2.** A section of laminated glass where the interlayer and glass are not bonded.

dry steam drum [MECH ENG] **1.** Pressurized chamber into which steam flows from the steam space of a boiler drum. **2.** That portion of a two-stage furnace that extends forward of the main combustion chamber; fuel is dried and gasified therein, with combustion of gaseous products accomplished in the main chamber; the refractory walls of the Dutch oven are sometimes water-cooled.

drystone [GEOL] A stalagmite or stalactite formed by dropping water.

dry storage [MECH ENG] Cold storage in which refrigeration is provided by chilled air.

dry strength [ENG] The strength of an adhesive joint determined immediately after drying under specified conditions or after a period of conditioning in the standard laboratory atmosphere.

dry tabling [MIN ENG] A process similar to wet tabling, but without the water; used to separate two or more minerals based on specific gravity differences.

dry-tape fuel cell [ELEC] A fuel cell in which the fuel is in the form of a dry tape, coated with fuel, oxidant, and electrolyte, which is fed into the cell at a rate corresponding to the demand for electric energy.

dry test meter [ENG] Gas-flow rate meter with two compartments separated by a movable diaphragm which is connected to a series of gears that actuate a dial; when one chamber is full, a valve switches to the other, empty chamber; used to measure household gas-flow rates and to calibrate flow-measurement instruments.

dry ticket [IND ENG] Tank inspection form signed by shore and ship inspectors before loading and after discharging the ship.

dry tongue [METEOROL] In synoptic meteorology, a pronounced protrusion of relatively dry air into a region of higher moisture content.

dry wall [BUILD] A wall covered with wallboard, in contrast to plaster. [ENG] A wall constructed of rock without cementing material.

dry wash [GEOL] A wash, arroyo, or coulee whose bed lacks water.

dry washer [MIN ENG] A machine for extracting gold mined from dry placers.

dry well [CIV ENG] **1.** A well that has been completely drained. **2.** An excavated well filled with broken stone and used to receive drainage when the water percolates into the soil. **3.** Compartment of a pumping station in which the pumps are housed. [NUCLEO] The first containment tank surrounding a water-cooled nuclear reactor that uses the pressure-suppressing containment system.

dry wire drawing [MET] The drawing of dry steel process wire, pretreated by acid cleaning, lime coating, and baking, through a lubricant and wire drawing frame.

Drzwiecki theory [MECH ENG] In theoretical investigations of windmill performance, a theory concerning the air forces produced on an element of the blade.

DS *See* Doppler sonar.

DSB *See* double-sideband modulation.

D scan *See* D scope.

D scope [ELECTR] A cathode-ray scope which combines the features of B and C scopes, the signal appearing as a spot with bearing angle as the horizontal coordinate and elevation angle as the vertical coordinate, but with each spot expanded slightly in a vertical direction to give a rough range indication. Also known as D indicator; D scan.

DSN *See* Deep Space Network.

D sounding *See* D value.

DSRV *See* deep-submergence rescue vehicle.

DSS *See* decision support system.

Dst [GEOPHYS] The "storm-time" component of variation of the terrestrial magnetic field, that is, the component which correlates with the interval of time since the onset of a magnetic storm; used as an index of intensity of the ring current.

8D technique [METEOROL] A technique for using the radiosonde observation to determine the presence of liquid water-droplets in supercooled clouds in saturated or nearly saturated layers of air; for each reported level in the sounding, the negative value of eight times the dew-point spread ($-8D$) is plotted on the pseudoadiabatic chart (or equivalent chart); where the temperature sounding lies to the left of the $-8D$ curve, liquid droplet clouds are considered to be present, and icing is possible on aircraft flying in the cloud layer. Also known as frost-point technique.

DTL *See* diode transistor logic.

D_1 trisomy [MED] A syndrome resulting from the presence in triplicate of chromosomes 13–15; manifested in severe congenital anomalies and usually resulting in death in infancy. Also known as trisomy 13–15.

Dualayer distillate process [CHEM ENG] A process for the removal of mercaptan and oxygenated compounds from distillate fuel oils; treatment is with concentrated caustic Dualayer solution and electrical precipitation of the impurities.

Dualayer solution [CHEM ENG] A concentrated potassium or sodium hydroxide solution containing a solubilizer; used in the Dualayer distillate process.

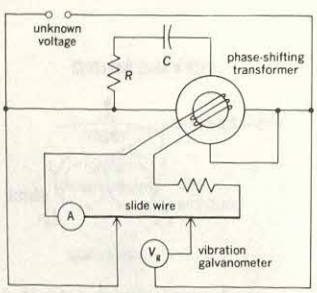
dual-bed dehumidifier [MECH ENG] A sorbent dehumidifier with two beds, one bed dehumidifying while the other bed is reactivating, thus providing a continuous flow of air.

dual-channel amplifier [ENG ACOUS] An audio-frequency amplifier having two separate amplifiers for the two channels of a stereophonic sound system, usually operating from a common power supply mounted on the same chassis.

dual completion well [PETRO ENG] Single well casing containing two production tubing strings, each in a different zone of the reservoir (one higher, one lower) and each separately controlled.

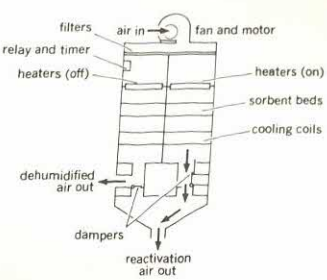
dual control [CONT SYS] An optimal control law for a

DRYSDALE AC POLAR POTENTIOMETER



Drysdale ac potentiometer circuit. *(General Electric Co.)*

DUAL-BED DEHUMIDIFIER



Dual-bed solid-sorbent dehumidifier. Air is being dehumidified through the left bed at the same time that the right bed is being reactivated.

stochastic adaptive control system that gives a balance between keeping the control errors and the estimation errors small.

dual coordinates [MATH] Point coordinates and plane coordinates are dual in geometry since an equation about one determines an equation about the other.

dual-cycle boiling-water reactor [NUCLEO] A boiling-water reactor in which part of the steam used to run the steam turbine is generated in the reactor core and part is generated in an external heat exchanger. Also known as dual-cycle reactor system.

dual-cycle reactor system *See* dual-cycle boiling-water reactor.

dual diversity receiver [ELECTR] A diversity radio receiver in which the two antennas feed separate radio-frequency systems, with mixing occurring after the converter.

dual-emitter transistor [ELECTR] A passivated *pnp* silicon planar epitaxial transistor having two emitters, for use in low-level choppers.

dual-flow oil burner [MECH ENG] An oil burner with two sets of tangential slots in its atomizer for use at different capacity levels.

dual-fuel engine [MECH ENG] Internal combustion engine that can operate on either of two fuels, such as natural gas or gasoline.

dual graph [MATH] A planar graph corresponding to a planar map obtained by replacing each country with its capital and each common boundary by an arc joining the two countries.

dual-gravity valve [CHEM ENG] A float-operated valve that operates on the interface between two immiscible liquids of different specific gravities.

dual group [MATH] The group of all homomorphisms of an Abelian group G into the cyclic group of order n, where n is the smallest integer such that g^n is the identity element of G.

dual-gun cathode-ray tube [ELECTR] A dual-trace oscilloscope in which beams from two electron guns are controlled by separate balanced vertical-deflection plates and also have separate brightness and focus controls.

dual in-line package [ELECTR] Microcircuit package with two rows of seven vertical leads that are easily inserted into an etched circuit board. Abbreviated DIP.

duality principle Also known as principle of duality. [ELEC] The principle that for any theorem in electrical circuit analysis there is a dual theorem in which one replaces quantities with dual quantities; current and voltage, impedance and admittance, and meshes and nodes are examples of dual quantities. [ELECTR] The principle that analogies may be drawn between a transistor circuit and the corresponding vacuum tube circuit. [ELECTROMAG] The principle that one can obtain new solutions of Maxwell's equations from known solutions by replacing **E** with **H**, **H** with $-\mathbf{E}$, ϵ with μ, and μ with ϵ. [MATH] A principle that if a theorem is true, it remains true if each object and operation is replaced by its dual; important in projective geometry and Boolean algebra. [QUANT MECH] *See* wave-particle duality.

duality theorem [MATH] **1.** A theorem which asserts that for a given space, the $(n - p)$ dimensional homology group is isomorphic to a p-dimensional cohomology group for each $p = 0, \ldots, n$, provided certain conditions are met. **2.** Let G be either a compact group or a discrete group, let X be its character group, and let G' be the character group of X; then there is an isomorphism of G onto G' so that the groups G and G' may be identified.

dual laser [OPTICS] A gas laser having Brewster windows and concave mirrors at opposite ends, the mirrors having different reflectivities so as to produce two different visible or infrared wavelengths from a helium-neon laser beam.

dual linear programming [MATH] Linear programming in which the maximum and minimum number are the same number.

dual meter [ENG] Meter constructed so that two aspects of an electric circuit may be read simultaneously.

dual-mode control [CONT SYS] A type of control law which consists of two distinct types of operation; in linear systems, these modes usually consist of a linear feedback mode and a bang-bang-type mode.

dual modulation [COMMUN] The process of modulating a common carrier wave or subcarrier with two different types of modulation, each conveying separate information.

dual network [ELEC] A network which has the same number of terminal pairs as a given network, and whose open-circuit impedance network is the same as the short-circuit admittance matrix of the given network, and vice versa.

dual-purpose gun [ORD] Gun so designed and constructed that effective fire may be delivered against either aerial or surface targets.

dual-purpose reactor [NUCLEO] Any nuclear reactor which both acts as a source of heat energy for a power plant and produces fissionable material.

dual radioactive decay [NUC PHYS] Property exhibited by a nucleus which has two or more independent and alternative modes of decay.

dual-seal tubing joint [PETRO ENG] Tubing connection joint with two sealing surfaces to assure a leak-free connection between sections.

dual space [MATH] The vector space consisting of all linear transformations from a given vector space into its scalar field.

dual tensor [MATH] The product of a given tensor, covariant in all its indices, with the contravariant form of the determinant tensor, contracting over the indices of the given tensor.

dual thrust [AERO ENG] A rocket thrust derived from two propellant grains and using the same propulsion section of a missile.

dual-thrust motor [AERO ENG] A solid-propellant rocket engine built to obtain dual thrust.

dual-tone multifrequency [COMMUN] Signaling method employing set combinations of two specific frequencies used by subscribers and telephone private branch exchange attendants, if their switchboard positions are so equipped, to indicate telephone address digits, precedence ranks, and end of signaling.

dual-trace amplifier [ELECTR] An oscilloscope amplifier that switches electronically between two signals under observation in the interval between sweeps, so that waveforms of both signals are displayed on the screen.

dual-trace oscilloscope [ELECTR] An oscilloscope which can compare two waveforms on the face of a single cathode-ray tube, using any one of several methods.

dual-track tape recorder *See* double-track tape recorder.

dual-use line [COMMUN] Communications link normally used for more than one mode of transmission, such as voice and data.

dual variables [MATH] Mutually dependent variables.

Duane-Hunt law [QUANT MECH] The law that the frequency of x-rays resulting from electrons striking a target cannot exceed eV/h, where e is the charge of the electron, V is the exciting voltage, and h is Planck's constant.

Duane-Hunt limit [QUANT MECH] The upper limit on the frequency of radiation from an x-ray tube given by the Duane-Hunt law.

dub [ENG ACOUS] **1.** To transfer recorded material from one recording to another, with or without the addition of new sounds, background music, or sound effects. **2.** To combine two or more sources of sound into one record. **3.** To add a new sound track or new sounds to a motion picture film, or to a recorded radio or television production.

Dubbs cracking [CHEM ENG] A continuous, liquid-phase, thermal cracking process.

Duchemin's formula [PHYS] An expression for normal wind pressure per square foot on an inclined surface, $N = F[(2 \sin a)/(1 + \sin^2 a)]$, where F = normal wind force in pounds per square foot on a vertical surface, and a = angle of inclination of inclined surface.

Duchenne's dystrophy [MED] A sex-linked or autosomal recessive form of muscular dystrophy, which is progressive with pseudohypertrophy.

duck [ORD] *See* DUKW. [TEXT] Close-woven, heavy fabric made of cotton and used for liquid filtration in the process industries, as well as for making sails, tents, and clothing. [VERT ZOO] The common name for a number of small waterfowl in the family Anatidae, having short legs, a broad, flat bill, and a dorsoventrally flattened body.

duckbill [MECH ENG] A shaking type of combination loader and conveyor whose loading end is generally shaped like a duck's bill.

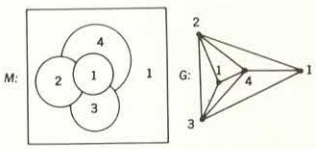
duck-billed dinosaur [PALEON] Any of several herbivorous, bipedal ornithopods having the front of the mouth widened to form a ducklike beak.

duckbill platypus *See* platypus.

duck wheat *See* tartary buckwheat.

ducod punched card [COMPUT SCI] A punched card that has 12 rows of punching positions in each column, designated 0

DUAL GRAPH



A map requiring four colors, indicated by numbers, and its planar graph.

DUCK-BILLED DINOSAUR

Restoration of the duck-billed dinosaur *Anatosaurus (Trachodon)* from the Late Cretaceous of North America; this dinosaur was 30–40 feet (9–12 meters) long.

through 9 and X and Y, and in which numbers from 0 through 99 are punched as two holes in positions 0 through 9, while digit order or digit duplication is indicated by punching or not punching in positions X and Y.

Ducrey bacillus *See* Hemophilus ducreyi.

Ducrey test [IMMUNOL] A skin test to determine past or present infection with *Hemophilus ducreyi*.

duct [ANAT] An enclosed tubular channel for conducting a glandular secretion or other body fluid. [COMMUN] An enclosed runway for cables. [GEOPHYS] The space between two air layers, or between an air layer and the earth's surface, in which microwave beams are trapped in ducting. Also known as radio duct; tropospheric duct. [MECH ENG] A fluid flow passage which may range from a few inches in diameter to many feet in rectangular cross section, usually constructed of galvanized steel, aluminum, or copper, through which air flows in a ventilation system or to a compressor, supercharger, or other equipment at speeds ranging to thousands of feet per minute.

ducted fan [MECH ENG] A propeller or multibladed fan inside a coaxial duct or cowling. Also known as ducted propeller; shrouded propeller.

ducted-fan engine [AERO ENG] An aircraft engine incorporating a fan or propeller enclosed in a duct; especially, a jet engine in which an enclosed fan or propeller is used to ingest ambient air to augment the gases of combustion in the jetstream.

ducted propeller *See* ducted fan.

ducted rocket *See* rocket ramjet.

ductile fracture *See* fibrous fracture.

ductile iron *See* nodular cast iron.

ductility [MATER] The ability of a material to be plastically deformed by elongation, without fracture.

ducting [GEOPHYS] An atmospheric condition in the troposphere in which temperature inversions cause microwave beams to refract up and down between two air layers, so that microwave signals travel 10 or more times farther than the normal line-of-sight limit. Also known as superrefraction; tropospheric ducting.

ductless gland *See* endocrine gland.

duct of Cuvier [EMBRYO] Either of the paired common cardinal veins in a vertebrate embryo.

duct of Santorini [ANAT] The dorsal pancreatic duct in a vertebrate embryo; persists in adult life in some species and serves as the pancreatic duct in the adult elasmobranch, pig, and ox.

ductor roller [GRAPHICS] In a lithographic process, a roller for inking and dampening mechanisms on a press which has alternate contacts to a fountain roller and vibrating drum roller.

duct propulsion [AERO ENG] A means of propelling a vehicle by ducting a surrounding fluid through an engine, adding momentum by mechanical or thermal means, and ejecting the fluid to obtain a reactive force.

ductus arteriosus [EMBRYO] Blood shunt between the pulmonary artery and the aorta of the mammalian embryo.

ductus deferens *See* vas deferens.

ductus venosus [EMBRYO] Blood shunt between the left umbilical vein and the right sinus venosus of the heart in the mammalian embryo.

dud [ORD] An explosive munition that has failed to explode, although such was intended.

Duddell oscillograph [ELECTROMAG] A moving-coil oscillograph; the current to be observed passes through a coil in a magnetic field and a mirror attached to the coil reveals its movement.

Duffy blood group [IMMUNOL] A genetically determined, immunologically distinct group of human erythrocyte antigens defined by their reaction with anti-Fy^a serum.

Dufour effect [THERMO] Energy flux due to a mass gradient occurring as a coupled effect of irreversible processes.

Dufour number [THERMO] A dimensionless number used in studying thermodiffusion, equal to the increase in enthalpy of a unit mass during isothermal mass transfer divided by the enthalpy of a unit mass of mixture. Symbol Du_2.

dufrenite [MINERAL] A blackish-green, fibrous ferric phosphate mineral; commonly massive or in nodules.

dufrenoysite [MINERAL] $Pb_2As_2S_5$ A lead gray to steel gray, monoclinic mineral consisting of lead arsenic sulfide.

duftite [MINERAL] $PbCu(AsO_4)(OH)$ Orthorhombic mineral that is composed of a basic arsenate of lead and copper.

Dugongidae [VERT ZOO] A family of aquatic mammals in the order Sirenia comprising two species, the dugong and the sea cow.

Dugonginae [VERT ZOO] The dugongs, a subfamily of sirenian mammals in the family Dugongidae characterized by enlarged, sharply deflected premaxillae and the absence of nasal bones.

dugout [ORD] Underground shelter built to protect troops, ammunition, and material from gunfire.

Duhamel's theorem [MATH] If f and g are continuous functions, then

$$\lim_{|\Delta x| \to 0} \sum_{i=1}^{n} f(x_i')g(x_i'')\Delta x_i = \int_a^b f(x)g(x)\,dx,$$

where x_i' and x_i'' are between x_{i-1} and x_i, $i = 1, \ldots, n$, and $|\Delta x| = \max\{x_i - x_{i-1}\}$ for a partition $a = x_0 < x_1 < \ldots < x_n = b$.

Duhem-Margules equation [THERMO] An equation showing the relationship between the two constituents of a liquid-vapor system and their partial vapor pressures:

$$\frac{d\ln p_A}{d\ln x_A} = \frac{d\ln p_B}{d\ln x_B}$$

where x_A and x_B are the mole fractions of the two constituents, and p_A and p_B are the partial vapor pressures.

Duhem's equation *See* Gibbs-Duhem equation.

Dühring's rule [PHYS CHEM] The rule that a plot of the temperature at which a liquid exerts a particular vapor pressure against the temperature at which a similar reference liquid exerts the same vapor pressure produces a straight or nearly straight line.

Dukler theory [CHEM ENG] Relationship of velocity and temperature distribution in thin films on vertical walls; used to calculate eddy viscosity and thermal conductivity near the solid boundary.

DUKW [ORD] A 2½-ton amphibious truck used by the U.S. Army to transport cargo on land or water; 36 feet (11 meters) long, with a cargo capacity of 5175 pounds (2347 kilograms). Also known as duck.

dulcin *See* dulcitol.

dulcite *See* dulcitol.

dulcitol [ORG CHEM] $C_6H_8(OH)_6$ A sugar with a slightly sweet taste; white, crystalline powder with a melting point of 188.5°C; soluble in hot water; used in medicine and bacteriology. Also known as dulcin; dulcite; dulcose; euonymit; galactitol; melampyrit.

dulcose *See* dulcitol.

dull coal [GEOL] A component of banded coal with a grayish color and dull appearance, consisting of small anthraxylon constituents in addition to cuticles and barklike constituents embedded in the attritus.

dull emitter [ELECTR] An electron tube whose cathode is a filament that does not glow brightly.

Dulong number *See* Eckert number.

Dulong-Petit law [THERMO] The law that the product of the specific heat per gram and the atomic weight of many solid elements at room temperature has almost the same value, about 6.3 calories (264 joules) per degree Celsius.

Dulong's formula [ENG] A formula giving the gross heating value of coal in terms of the weight fractions of carbon, hydrogen, oxygen, and sulfur from the ultimate analysis.

dulse [BOT] Any of several species of red algae of the genus *Rhodymenia* found below the intertidal zone in northern latitudes; an important food plant.

Dultgen process [GRAPHICS] A halftone intaglio process for color work which makes it possible to vary the size as well as the depth of the dots.

DUMAND *See* deep underwater muon and neutrino detector.

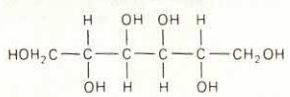
Dumas method [ANALY CHEM] A procedure for the determination of nitrogen in organic substances by combustion of the substance.

dumb iron [ENG] **1.** A rod for opening seams prior to caulking. **2.** A rigid connector between the frame of a motor vehicle and the spring shackle.

dumb terminal [COMPUT SCI] A computer input/output device that lacks the capability to process or formate data, and is thus entirely dependent on the main computer for these activities.

dumbwaiter [MECH ENG] An industrial elevator which carries small objects but is not permitted to carry people.

DULCITOL



Structural formula.

dumdum [ORD] A bullet that flattens excessively on contact, or one especially designed to flatten excessively.

Dumet wire [MET] An iron-nickel alloy wire containing 42% nickel, and covered with copper; used to replace platinum as the seal-in wire in incandescent lamps and vacuum tubes; the copper prevents gassing at the seal.

dummy [COMMUN] Telegraphy network simulating a customer's loop for adjusting a telegraph repeater; the dummy side of the repeater is that toward the customer. [COMPUT SCI] An artificial address, instruction, or other unit of information inserted in a digital computer solely to fulfill prescribed conditions (such as word length or block length) without affecting operations. [ENG] Simulating device with no operating features, as a dummy heat coil. [GRAPHICS] A preliminary layout which shows the placement of illustrations and text as they will appear in the final printing. [MET] A cathode that undergoes electroplating at low current densities. [ORD] **1.** A nonexplosive bomb, projectile, or the like, or an object made to appear as one of these. **2.** An object made to appear as an airplane, gun emplacement, or the like from the air.

dummy antenna [ELECTR] A device that has the impedance characteristic and power-handling capacity of an antenna but does not radiate or receive radio waves; used chiefly for testing a transmitter. Also known as artificial antenna.

dummy argument [COMPUT SCI] The variable appearing in the definition of a macro or function which will be replaced by an address at call time.

dummy block [MET] A thick disk positioned between the ram and billet in extrusion working to prevent the ram from overheating.

dummy deck [COMPUT SCI] Complete set of tabulating cards containing only punched, coded information (nonaperture); used as machine-handling set for sorting, reproducing, and interpreting in conjunction with an aperture card system.

dummy instruction [COMPUT SCI] An artificial instruction or address inserted in a list to serve a purpose other than the execution as an instruction.

dummy joint [ENG] A groove cut into the top half of a concrete slab, sometimes packed with filler, to form a line where the slab can crack with only minimum damage.

dummy load [ELECTR] A dissipative device used at the end of a transmission line or waveguide to convert transmitted energy into heat, so that essentially no energy is radiated outward or reflected back to its source.

dummy message [COMMUN] A message sent for some purpose other than its content, which may consist of dummy groups or may have a meaningless text.

dumontite [MINERAL] $Pb_2(UO_2)_3(PO_4)_2(OH)_4 \cdot 3H_2O$ Yellow orthorhombic mineral consisting of a hydrated phosphate of uranium and lead, occurring in crystals.

dumortierite [MINERAL] $Al_8BSi_3O_{19}(OH)$ A pink, green, blue, or violet mineral that crystallizes in the orthorhombic system but commonly occurs in parallel or radiating fibrous aggregates; mined for the manufacture of high-grade porcelain.

dump [COMPUT SCI] To copy the contents of all or part of a storage, usually from an internal storage device into an external storage device. [ELECTR] To withdraw all power from a system or component accidentally or intentionally. [ORD] A temporary storage area, usually in the open, for bombs, ammunition, equipment, or supplies.

dump bailer [ENG] A cylindrical vessel designed to deliver cement or water into a well which otherwise might cave in if fluid was poured from the top.

dump bucket [MECH ENG] A large bucket with movable discharge gates at the bottom; used to move soil or other construction materials by a crane or cable.

dump car [MECH ENG] Any of several types of narrow-gage rail cars with bodies which can easily be tipped to dump material.

dump check [COMPUT SCI] A computer check that usually consists of adding all the digits during dumping, and verifying the sum when retransferring.

dumping syndrome [MED] An imperfectly understood symptom complex of disagreeable or painful epigastric fullness, nausea, weakness, giddiness, sweating, palpitations, and diarrhea, occurring after meals in patients who have gastric surgery which interferes with the function of the pylorus.

dump power [ELEC] Electric power, generated by any source, which is in excess of the needs of the electric system and which cannot be stored or conserved.

dump scow [NAV ARCH] A craft used for transporting rubbish, normally equipped with doors in the bottom for dumping.

dump truck [ENG] A motor or hand-propelled truck for hauling and dumping loose materials, equipped with a body that discharges its contents by gravity.

dump valve [ENG] A large valve located at the bottom of a tank or container used in emergency situations to empty the tank quickly; for example, to jettison fuel from an airplane fuel tank.

dumpy level [ENG] A surveyor's level which has the telescope with its level tube rigidly attached to a vertical spindle and is capable only of horizontal rotary movement.

dundasite [MINERAL] $PbAl_2(CO_3)_2(OH)_4 \cdot 2H_2O$ A white mineral consisting of a basic lead aluminum carbonate, occurring in spherical aggregates.

dune [GEOL] A mound or ridge of unconsolidated granular material, usually of sand size and of durable composition (such as quartz), capable of movement by transfer of individual grains entrained by a moving fluid.

dune complex [GEOGR] The totality of topographic forms, especially dunes, which comprise the moving landscape.

dunite [PETR] An ultrabasic rock consisting almost solely of a magnesium-rich olivine with some chromite and picotite; an important source of chromium.

dunking sonar *See* dipping sonar.

dunnage [IND ENG] **1.** Padding material placed in a container to protect shipped goods from damage. **2.** Loose wood or waste material placed in the ship's hold to protect the cargo from shifting and damage.

dunnite *See* ammonium picrate.

duo [GRAPHICS] Recording of images on one-half of the film width during one passage of the film, then turning the film end for end and rerunning it to utilize the unused half of the film width.

duodecimal number system [MATH] A representation system for real numbers using 12 as the base.

duodenal glands *See* Brunner's glands.

duodenal ulcer [MED] A peptic ulcer occurring in the wall of the duodenum, the first portion of the small intestine.

duodenum [ANAT] The first section of the small intestine of mammals, extending from the pylorus to the jejunum.

duodiode [ELECTR] An electron tube having two diodes in the same envelope, with either a common cathode or separate cathodes. Also known as double diode.

duodiode-pentode [ELECTR] An electron tube having two diodes and a pentode in the same envelope, generally with a common cathode.

duodiode-triode [ELECTR] An electron tube having two diodes and a triode in the same envelope, generally with a common cathode.

duolateral coil *See* honeycomb coil.

duoplasmatron [ELECTR] An ion-beam source in which electrons from a hot filament are accelerated sufficiently to ionize a gas by impact; the resulting positive ions are drawn out by high-voltage electrons and focused into a beam by electrostatic lens action.

duoprimed word [COMPUT SCI] A computer word containing a representation of the sixth, seventh, eighth, and ninth rows of information from an 80-column card.

duotone [GRAPHICS] A process in which two halftone cuts, one with a screen angle 30° different from the other, are made from the same black-and-white photograph, and the picture is printed in two tones, usually black and a color such as blue or green.

duotriode *See* double triode.

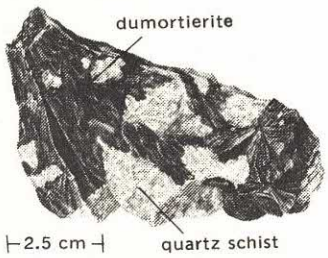
duotype [GRAPHICS] A process in which two halftone plates, for letterpress, are produced from a black-and-white original, each plate being etched differently; one plate is etched for detail and printed in a dark color, and the other is etched for a flat effect and printed in a light color.

Duovac method [MET] Technique for testing for defects in magnetic parts; a moving magnetic field magnetizes the part in many directions, and the part is then sprayed with fluorescent magnetic particles and examined under ultraviolet light so that defects become apparent.

dupion [TEXT] A thick, irregular, double silk fiber obtained from two cocoons nested together.

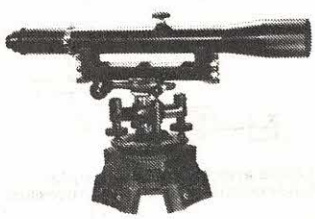
duplet lens system [OPTICS] A system of lenses in which there are two groups of lenses separated by a space, and successive lens in each group are in contact.

DUMORTIERITE



Dumortierite in quartz schist, Dehesa, Calif. *(Specimen courtesy of Department of Geology, Bryn Mawr College)*

DUMPY LEVEL



Engineer's dumpy level. *(W. and L. E. Gurley Co.)*

DUNE

Seif dune or linear ridge, located in the Algodones dunes, Imperial County, California.

duplex [ENG] Consisting of two parts working together or in a similar fashion.

duplex artificial line [ELEC] A balancing network, simulating the impedance of the real line and distant terminal apparatus, which is employed in a duplex circuit for the purpose of making the receiving device unresponsive to outgoing signal currents.

duplex cable [ELEC] Two insulated stranded conductors twisted together; they may have a common insulating covering.

duplex channel [COMMUN] A communication channel providing simultaneous transmission in both directions.

duplex computer [COMPUT SCI] Two identical computers, either one of which can ensure continuous operation of the system when the other is shut down.

duplexed system [ENG] A system with two distinct and separate sets of facilities, each of which is capable of assuming the system function while the other assumes a standby status. Also known as redundant system.

duplexer [ELECTR] A switching device used in radar to permit alternate use of the same antenna for both transmitting and receiving; other forms of duplexers serve for two-way radio communication using a single antenna at lower frequencies. Also known as duplexing assembly.

duplexing *See* duplex operation; duplex process.

duplexing assembly *See* duplexer.

duplex iron [MET] Cast iron heated in an electric furnace after it has been melted in a cupola.

duplexite [MINERAL] $Ca_4BeAl_2Si_9O_{24}(OH)_2$ A white fibrous mineral consisting of hydrous beryllium calcium aluminosilicate. Also known as bavenite.

duplex lock [DES ENG] A lock with two independent pin-tumbler cylinders on the same bolt.

duplex operation [COMMUN] The operation of associated transmitting and receiving apparatus concurrently, as in ordinary telephones, without manual switching between talking and listening periods. Also known as duplexing; duplex transmission. [ENG] In radar, a condition of operation when two identical and interchangeable equipments are provided, one in an active state and the other immediately available for operation.

duplex paper [GRAPHICS] Photosensitized paper with emulsion on both sides, one side having a smooth finish and the other a rough finish, or having sides of different color.

duplex practice *See* duplex process.

duplex prints [TEXT] Designs printed on both face and back of fabrics in two distinct operations, usually to get a woven effect.

duplex process [MET] A two-step procedure in which steel is refined by one process (usually the Bessemer process) and finished by another process (usually open-hearth or electric-furnace). Also known as duplexing; duplex practice.

duplex pump [MECH ENG] A reciprocating pump with two parallel pumping cylinders.

duplex tandem compressor [MECH ENG] A compressor having cylinders on two parallel frames connected through a common crakshaft.

duplex transmission *See* duplex operation.

duplex tube [ELECTR] Combination of two vacuum tubes in one evelope.

duplex uterus [ANAT] A condition in certain primitive mammals, such as rodents and bats, that have two distinct uteri opening separately into the vagina.

duplicate cavity plate [ENG] In plastics molds, the removable plate in which the molding cavities are retained; used in operating where two plates are necessary for insert loading.

duplicate field [COMPUT SCI] A series of 12 punches in a program card.

duplicate film [GRAPHICS] Film generated in a camera containing a dual supply of film.

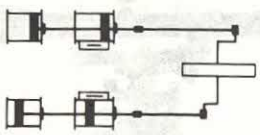
duplicate key [COMPUT SCI] A key on the card punch which, when depressed, will copy a card in the reading station onto a card in the write station.

duplicate record [COMPUT SCI] An unwanted record that has the same key as another record in the same file.

duplicating film [GRAPHICS] A special color film used for making copies of color transparencies to size so that they can be stripped together and color-separated as a single unit.

duplication check [COMPUT SCI] A check based on the identity in results of two independent performances of the same task.

DUPLEX TANDEM COMPRESSOR



Frame arrangement of duplex tandem piston steam compressor.

DUPLEX UTERUS

Duplex uterus of the rat. *(From C. K. Weichert, Elements of Chordate Anatomy, 3d ed., McGraw-Hill, 1967)*

duplicatus [METEOROL] A cloud variety composed of superposed layers, sheets, or patches, at slightly different levels and sometimes partly merged.

Dupont process [MIN ENG] A method for separation of minerals in which organic liquids of high specific gravity and low viscosity are used.

Dupré equation [THERMO] The work W_{LS} done by adhesion at a gas-solid-liquid interface, expressed in terms of the surface tensions γ of the three phases, is $W_{LS} = \gamma_{GS} + \gamma_{GL} - \gamma_{LS}$.

durability [ENG] The quality of equipment, structures, or goods of continuing to be useful after an extended period of time and usage.

durable press [TEXT] A finish, given to textiles by applying synthetic resins and then curing, that imparts lasting crease resistance. Also known as permanent press.

durable-press resin *See* permanent-press resin.

durain [GEOL] A hard, granular ingredient of banded coal which occurs in lenticels and shows a close, firm texture. Also known as durite.

dura mater [ANAT] The fibrous membrane forming the outermost covering of the brain and spinal cord. Also known as endocranium.

durangite [MINERAL] $NaAlF(AsO_4)$ An orange-red, monoclinic mineral consisting of a fluoarsenate of sodium and aluminum; occurs in crystals.

Durargid [GEOL] A great soil group constituting a subdivision of the Argids, indicating those soils with a hardpan cemented by silica and called a duripan.

duration [MECH] A basic concept of kinetics which is expressed quantitatively by time measured by a clock or comparable mechanism. [OCEANOGR] The interval of time of the rising or falling tide, or the length of time of flood or ebb tidal currents.

duration control [ELECTR] Control for adjusting the time duration of reduced gain in a sensitivity-time control circuit.

durene [ORG CHEM] $C_6H_2(CH_3)_4$ Colorless crystals with camphor aroma; boiling point 190°C; soluble in organic solvents, insoluble in water; used as a chemical intermediate. Also known as durol.

Durham fermentation tube [MICROBIO] A test tube containing lactose or lauryl tryptose and an inverted vial for gas collection; used to test for the presence of coliform bacteria.

duricrust [GEOL] The case-hardened soil crust formed in semiarid climates by precipitation of salts; contains aluminous, ferruginous, siliceous, and calcareous material.

durinite [GEOL] The principal maceral of durain; a heterogeneous material, semiopaque in section (including all parts of plants); micrinite, exinite, cutinite, resinite, collinite, xylinite, suberinite, and fusinite may be present.

duripan [GEOL] A horizon in mineral soil characterized by cementation by silica.

durite *See* durain.

durol *See* durene.

durometer [ENG] An instrument consisting of a small drill or blunt indenter point under pressure; used to measure hardness of metals and other materials.

durometer hardness [ENG] The hardness of a material as measured by a durometer.

Durville process [MET] A casting process involving the attachment of an inverted mold to the top of a crucible; the metal is melted in the bottom of the crucible, and then the molten metal is decanted into the mold by inverting the entire apparatus.

düsenwind [METEOROL] The mountain-gap wind of the Dardanelles; a strong east-northeast wind which blows out of the Dardanelles into the Aegean Sea, penetrating as far as the island of Lemnos, and caused by a ridge of high pressure over the Black Sea.

Dushman equation *See* Richardson-Dushman equation.

dusk [ASTRON] That part of either morning or evening twilight between complete darkness and civil twilight.

dusk side [ASTRON] The side of a planet or other celestial body pointing away from its orbital movement direction.

dussertite [MINERAL] $BaFe_3(AsO_4)_2(OH)_5$ A mineral consisting of a hydrous basic arsenate of barium and iron.

dust [GEOL] Dry solid matter of silt and clay size (less than 1/16 millimeter). [PHYS] A loose term applied to solid particles predominantly larger than colloidal size and capable of temporary gas suspension.

dust and fume monitor [MIN ENG] An instrument designed

to measure and record concentrations of dust, fume, and gas in mine environments over an extended period of time.

dust avalanche [GEOL] An avalanche of dry, loose snow.

dust bowl [CLIMATOL] A name given, early in 1935, to the region in the south-central United States afflicted by drought and dust storms, including parts of Colorado, Kansas, New Mexico, Texas, and Oklahoma, and resulting from a long period of deficient rainfall combined with loosening of the soil by destruction of the natural vegetation; dust bowl describes similar regions in other parts of the world.

dust chamber [ENG] A chamber through which gases pass to permit deposition of solid particles for collection. Also known as ash collector; dust collector.

dust collector *See* dust chamber.

dust control system [ENG] System to capture, settle, or inert dusts produced during handling, drying, or other process operations; considered important for safety and health.

dust core *See* ferrite core.

dust counter [ENG] A photoelectric apparatus which measures the size and number of dust particles per unit volume of air. Also known as Kern counter.

dust-counting microscope [ENG] A microscope equipped for quantitative dust sample analysis; magnification is usually 100X.

dust devil [METEOROL] A small but vigorous whirlwind, usually of short duration, rendered visible by dust, sand, and debris picked up from the ground; diameters range from about 10–100 feet (3–30 meters), and average height is about 600 feet (180 meters).

dust-devil effect [GEOPHYS] In atmospheric electricity, rather sudden and short-lived change (positive or negative) of the vertical component of the atmospheric electric field that accompanies passage of a dust devil near an instrument sensitive to the vertical gradient.

dust explosion [ENG] An explosion following the ignition of flammable dust suspended in the air.

dust extinction [OPTICS] The contribution to total extinction of light made by scattering and absorption by dust particles in the path of a light beam.

dust filter [ENG] A gas-cleaning device using a dry or viscous-coated fiber or fabric for separation of particulate matter.

dust horizon [METEOROL] The top of a dust layer which is confined by a low-level temperature inversion and has the appearance of the horizon when viewed from above, against the sky; the true horizon is usually obscured by the dust layer.

dusting [MET] Spontaneous disintegration of a material on cooling due to expansion or inversion.

dusting clay [MATER] Finely pulverized clay used as an extender or carrier in insecticide dust formulations.

dust separator [ENG] Device or system to remove dust from a flowing stream of gas; includes electrostatic precipitators, wet scrubbers, bag filters, screens, and cyclones.

dust storm [METEOROL] A strong, turbulent wind carrying large clouds of dust.

dust tail [ASTRON] A comet tail that consists of particles, typically 1 micrometer in diameter and primarily silicate in composition, and is usually curved with a length in the range from 10^6 to 10^7 kilometers.

dust well [HYD] A pit in an ice surface produced when small, dark particles on the ice are heated by sunshine and sink down into the ice.

dust whirl [METEOROL] A rapidly rotating column of air over a dry and dusty or sandy area, carrying dust, leaves, and other light material picked up from the ground; when well developed, it is known as a dust devil. Also known as dancing dervish; dancing devil; desert devil; sand auger; sand devil.

Dutch door [BUILD] A door with upper and lower parts that can be opened and closed independently.

Dutch elm disease [PL PATH] A lethal fungus disease of elm trees caused by *Graphium ulmi*, which releases a toxic substance that destroys vascular tissue; transmitted by a bark beetle.

Dutch liquid *See* ethylene chloride.

dutchman [ENG] A filler piece for closing a gap between two pipes or between a pipe or fitting and a piece of equipment, if the pipe is too short to achieve closure or if the pipe and equipment are not aligned.

Dutchman's log [ENG] A buoyant object thrown overboard to determine the speed of a vessel; the time required for a known length of the vessel to pass the object is measured, and the speed can then be computed.

Dutch metal [MET] An alloy of 80% copper and 20% zinc that is ductile, is easily drawn, and takes a high polish; used for low-priced jewelry.

Dutch process [CHEM ENG] A process for making white lead; metallic lead is placed in vessels containing a dilute acetic acid, and the vessels are stacked in bark or manure. [FOOD ENG] A chocolate manufacturing process in which cocoa nibs are treated with alkali to neutralize the natural acids present and to enhance color.

duty classification of a relay [ELEC] Expression of the frequency with which the relay may be required to operate without exceeding prescribed limitations.

duty cycle [COMMUN] The product of the pulse duration and pulse frequency of a pulse carrier, equal to the time per second that pulse power is applied. Also known as duty factor. [ELECTR] *See* duty ratio. [ENG] **1.** The time intervals devoted to starting, running, stopping, and idling when a device is used for intermittent duty. **2.** The ratio of working time to total time for an intermittently operating device, usually expressed as a percent. Also known as duty factor. [MET] The percentage of time that current flows in equipment over a specific period during electric resistance welding. [NUCLEO] The fraction of time during which a pulsed accelerator beam is on target, usually expressed as a percent. Also known as duty factor.

duty cyclometer [ENG] Test meter which gives direct reading of duty cycle.

duty factor *See* duty cycle.

duty of water [HYD] The total volume of irrigation water required to mature a particular type of crop, including consumptive use, evaporation and seepage from ditches and canals, and the water eventually returned to streams by percolation and surface runoff.

duty ratio [ELECTR] In a pulse radar or similar system, the ratio of average to peak pulse power. Also known as duty cycle.

DUV *See* data under voice.

duvetyn [TEXT] A twill fabric with a napped velvety surface which obscures the weave.

D value [NAV] The difference between pressure altitude and absolute altitude, as determined at a given time in flight, expressed algebraically; the absolute altitude is always minuend. Also known as D sounding.

D variometer *See* declination variometer.

dwarf [BIOL] Being an atypically small form or variety of something. [MED] An abnormally small individual; especially one whose bodily proportions are altered.

dwarf disease [PL PATH] A virus disease marked by the inhibition of fruit production; common in plum trees.

dwarfism [MED] Underdevelopment of the body due to surgical removal of the pituitary gland or hyposecretion of growth hormone.

dwarf mouse unit [BIOL] A unit for the standardization of somatotropin.

dwarf novae [ASTRON] A class of irregular variable stars which undergo rapid increases in brightness of several magnitudes at semiperiodic intervals, and then decrease more slowly to the normal minimum; they may be divided into U Geminorum stars and Z Camelopardalis stars.

dwarf star [ASTRON] A star that typically has surface temperature of 5730 K, radius of 690,000 kilometers, mass of 2×10^{33} g, and luminosity of 4×10^{33} ergs/sec. Also known as main sequence star.

dwell [DES ENG] That part of a cam that allows the cam follower to remain at maximum lift for a period of time. [ENG] A pause in the application of pressure to a mold.

dwey *See* dwigh.

dwigh [METEOROL] In Newfoundland, a sudden shower or snow storm. Also known as dwey; dwoy.

Dwight-Lloyd machine [MIN ENG] A continuous sintering machine in which the feed is moved on articulated plates pulled by chains in conveyor-belt fashion.

Dwight-Lloyd process [MIN ENG] Blast roasting, with air currents being drawn downward through the ore.

DWL *See* design waterline.

dwoy *See* dwigh.

dwt *See* deadweight tonnage; pennyweight.

Dwyka tillite [GEOL] A glacial Permian deposit that is widespread in South Africa.

DX *See* distance reception.
DX coil *See* direct-expansion coil.
Dy *See* dysprosium.
dyad [CYTOL] Either of the two pair of chromatids produced by separation of a tetrad during the first meiotic division. [MATH] An abstract object which is a pair of vectors **AB** in a given order on which certain operations are defined.
dyadic expansion [MATH] The representation of a number in the binary number system.
dyadic processor [COMPUT SCI] A type of multiprocessor that includes two processors which operate under control of the same copy of the operating system.
dyadic rational [MATH] A fraction whose denominator is a power of 2.
dye [CHEM] A colored substance which imparts more or less permanent color to other materials. Also known as dyestuff.
dyecrete process [ENG] A process of adding permanent color to concrete with organic dyes.
dyeing [CHEM ENG] The application of color-producing agents to material, usually fibrous or film, in order to impart a degree of color permanence demanded by the projected end use.
dyeing assistant [CHEM] Material such as sodium sulfate added to a dye bath to control or promote the action of a textile dye.
dye laser [OPTICS] A type of tunable laser in which the active material is a dye such as acridine red or esculin, with very large molecules, and laser action takes place between the first excited and ground electronic states, each of which comprises a broad vibrational-rotational continuum.
dye penetrant [MET] A dye-containing liquid used for detecting cracks or other surface defects in nonmagnetic materials.
dye-retarding agent [MATER] Materials that decrease the rate of dye absorption, preventing rapid exhaustion of dye baths.
dyestuff *See* dye.
dye toning [GRAPHICS] The process whereby the color of a developing image is altered by changing the color into a mordant and then placing the film in a suitable dye solution.
dynamic address translator [COMPUT SCI] A hardware device used in a virtual memory system to automatically identify a virtual address inquiry in terms of segment number, page number within the segment, and position of the record with reference to the beginning of the page.
dynamical friction [PHYS] **1.** The drag force between electrons and ions drifitng with respect to each other. **2.** Sliding friction, in contrast to static friction.
dynamic algorithm [COMPUT SCI] An algorithm whose operation is, to some extent, unpredictable in advance, generally because it contains logical decisions that are made on the basis of quantities computed during the course of the algorithm. Also known as heuristic algorithm.
dynamical parallax [ASTRON] A parallax of binary stars that is computed from the sum of the masses of the binary system.
dynamical similarity [MECH] Two flow fields are dynamically similar if one can be transformed into the other by a change of length and velocity scales. All dimensionless numbers of the flows must be the same.
dynamical system [MATH] An abstraction of the concept of a family of solutions to an ordinary differential equation; namely, an action of the real numbers on a topological space satisfying certain "flow" properties.
dynamical variable [MECH] One of the quantities used to describe a system in classical mechanics, such as the coordinates of a particle, the components of its velocity, the momentum, or functions of these quantities.
dynamic analogies [PHYS] Analogies that make it possible to convert the differential equations for mechanical and acoustical systems to equivalent electrical equations that can be represented by electric networks and solved by circuit theory.
dynamic augment [MECH ENG] Force produced by unbalanced reciprocating parts in a steam locomotive.
dynamic balance [MECH] The condition which exists in a rotating body when the axis about which it is forced to rotate, or to which reference is made, is parallel with a principal axis of inertia; no products of inertia about the center of gravity of the body exist in relation to the selected rotational axis.
dynamic behavior [ENG] A description of how a system or an individual unit functions with respect to time.
dynamic boundary condition [FL MECH] The condition that the pressure must be continuous across an internal boundary or free surface in a fluid.
dynamic braking [MECH] A technique of electric braking in which the retarding force is supplied by the same machine that originally was the driving motor.
dynamic breccia *See* tectonic breccia.
dynamic capillary pressure [PETRO ENG] Capillary-pressure saturation curves of a core sample determined by the simultaneous steady-state flow of two fluids through the sample; capillarity pressures are determined by the difference in the pressures of the two fluids.
dynamic characteristic *See* load characteristic.
dynamic check [ENG] Check used to ascertain the correct performance of some or all components of equipment or a system under dynamic or operating conditions.
dynamic circuit [ELECTR] An MOS circuit designed to make use of its high input impedance to store charge temporarily at certain nodes of the circuit and thereby increase the speed of the circuit.
dynamic climatology [CLIMATOL] The climatology of atmospheric dynamics and thermodynamics, that is, a climatological approach to the study and explanation of atmospheric circulation.
dynamic compressor [MECH ENG] A compressor which uses rotating vanes or impellers to impart velocity and pressure to the fluid.
dynamic condenser electrometer [ELEC] A sensitive voltage-measuring instrument in which an object carrying charge resulting from the voltage is moved back and forth in an electrostatic field and the resulting alternating-current signal is observed.
dynamic convergence [ELECTR] The process whereby the locus of the point of convergence of electron beams in a color-television or other multibeam cathode-ray tube is made to fall on a specified surface during scanning.
dynamic creep [MECH] Creep resulting from fluctuations in a load or temperature.
dynamic debugging routine [COMPUT SCI] A debugging routine which operates in conjunction with the program being checked and interacts with it while the program is running.
dynamic dump [COMPUT SCI] A dump performed during the execution of a program.
dynamic equilibrium Also known as kinetic equilibrium. [MECH] The condition of any mechanical system when the kinetic reaction is regarded as a force, so that the resultant force on the system is zero according to d'Alembert's principle. [PHYS] A condition in which several processes act simultaneously to maintain a system in an overall state that does not change with time.
dynamic error [ELECTR] Error in a time-varying signal resulting from inadequate dynamic response of a transducer.
dynamic factor [AERO ENG] A ratio formed from the load carried by any airplane part when the airplane is accelerating or subjected to abnormal conditions to the load carried in the conditions of normal flight.
dynamic fluidity [FL MECH] The reciprocal of the dynamic viscosity.
dynamic focusing [ELECTR] The process of varying the focusing electrode voltage for a color picture tube automatically so the electron-beam spots remain in focus as they sweep over the flat surface of the screen.
dynamic forecasting *See* numerical forecasting.
dynamic geomorphology [GEOL] The quantitative analysis of steady-state, self-regulatory geomorphic processes. Also known as analytical geomorphology.
dynamic height [GEOPHYS] As measured from sea level, the distance above the geoid of points on the same equipotential surface, in terms of linear units measured along a plumb line at a given latitude, generally 45°. [PHYS] The amount of work done when a water particle of unit mass is moved vertically from one level to another. Also known as geodynamic height.
dynamic-height anomaly [OCEANOGR] The excess of the actual geopotential difference, between two given isobaric surfaces, over the geopotential difference in a homogeneous water column of salinity 35 per mille and temperature 0°C. Also known as anomaly of geopotential difference.
dynamic holdup [CHEM ENG] Liquid held by a tank or process vessel, with constant introduction of fresh material and

counteracting withdrawal of held material to maintain a constant liquid level.

dynamic ileus *See* spastic ileus.

dynamic impedance [ELEC] The impedance of a circuit having an inductance and a capacitance in parallel at the frequency at which this impedance has a maximum value. Also known as rejector impedance.

dynamic instability *See* inertial instability.

dynamicizer [COMPUT SCI] A device that converts a collection of data represented by a spatial arrangement of bits in a computer storage device into a series of signals occurring in time.

dynamic leak test [ENG] A type of leak test in which the vessel to be tested is evacuated and an external tracer gas is applied; an internal leak detector will respond if gas is drawn through any leaks.

dynamic load [AERO ENG] With respect to aircraft, rockets, or spacecraft, a load due to an acceleration of craft, as imposed by gusts, by maneuvering, by landing, by firing rockets, and so on. [CIV ENG] A force exerted by a moving body on a resisting member, usually in a relatively short time interval. Also known as energy load.

dynamic loudspeaker [ENG ACOUS] A loudspeaker in which the moving diaphragm is attached to a current-carrying voice coil that interacts with a constant magnetic field to give the in-and-out motion required for the production of sound waves. Also known as dynamic speaker; moving-coil loudspeaker.

dynamic memory *See* dynamic storage.

dynamic memory allocation *See* dynamic storage allocation.

dynamic metamorphism [GEOL] Metamorphism resulting exclusively or largely from rock deformation, principally faulting and folding. Also known as dynamometamorphism.

dynamic meteorology [METEOROL] The study of atmospheric motions as solutions of the fundamental equations of hydrodynamics or other systems of equations appropriate to special situations, as in the statistical theory of turbulence.

dynamic meter [PHYS] The standard unit of dynamic height expressed as 10 square meters per second per second.

dynamic microphone [ENG ACOUS] A moving-conductor microphone in which the flexible diaphragm is attached to a coil positioned in the fixed magnetic field of a permanent magnet. Also known as moving-coil microphone.

dynamic model [ENG] A model of an aircraft or other object which has its linear dimensions and its weight and moments of inertia reproduced in scale in proportion to the original.

dynamic noise suppressor [ENG ACOUS] An audio-frequency filter circuit that automatically adjusts its band-pass limits according to signal level, generally by means of reactance tubes; at low signal levels, when noise becomes more noticeable, the circuit reduces the low-frequency response and sometimes also reduces the high-frequency response.

dynamic packing [ENG] Any packing that operates on moving surfaces; in functioning, to retain fluid under pressure, they carry the hydraulic load and therefore operate like bearings.

dynamic parallax [ASTRON] A value for the parallax of a binary star computed from the observations of the period and angular dimensions of the orbit by assuming a value for the mass of the binary system. Also known as hypothetical parallax.

dynamic pickup [ELECTR] A pickup in which the electric output is due to motion of a coil or conductor in a constant magnetic field. Also known as dynamic reproducer; moving-coil pickup.

dynamic plate impedance [ELECTR] Internal resistance to the flow of alternating current between the cathode and plate of a tube.

dynamic plate resistance [ELECTR] Opposition that the plate circuit of a vacuum tube offers to a small increment of plate voltage; it is the ratio of a small change in plate voltage to the resulting change in the plate current, other tube voltages remaining constant.

dynamic pressure [FL MECH] **1.** The pressure that a moving fluid would have if it were brought to rest by isentropic flow against a pressure gradient. Also known as impact pressure; stagnation pressure; total pressure. **2.** The difference between the quantity in the first definition and the static pressure.

dynamic printout [COMPUT SCI] A printout of data which occurs during the machine run as one of the sequential operations.

dynamic problem check [COMPUT SCI] Any dynamic check used to ascertain that the computer solution satisfies the given system of equations in an analog computer operation.

dynamic programming [MATH] A mathematical technique, more sophisticated than linear programming, for solving a multidimensional optimization problem, which transforms the problem into a sequence of single-stage problems having only one variable each.

dynamic program relocation [COMPUT SCI] The act of moving a partially executed program to another location in main memory, without hindering its ability to finish processing normally.

dynamic random-access memory [COMPUT SCI] A read-write random-access memory whose storage cells are based on transistor-capacitor combinations, in which the digital information is represented by charges that are stored on the capacitors and must be repeatedly replenished in order to retain the information.

dynamic range [ELECTR] The ratio of the specified maximum signal level capability of a system or component to its noise level; usually expressed in decibels.

dynamic regulator [ELECTR] Transmission regulator in which the adjusting mechanism is in self-equilibrium at only one or a few settings and requires control power to maintain it at any other setting.

dynamic relocation [COMPUT SCI] The ability to move computer programs or data from auxiliary memory into main memory at any convenient location.

dynamic reproducer *See* dynamic pickup.

dynamic resistance [ELEC] A device's electrical resistance when it is in operation.

dynamic roughness [OCEANOGR] A quantity, designated z_0, dependent on the shape and distribution of the roughness elements of the sea surface, and used in calculations of wind at the surface. Also known as roughness length.

dynamics [MECH] That branch of mechanics which deals with the motion of a system of material particles under the influence of forces, especially those which originate outside the system under consideration.

dynamic scattering device [OPTICS] A type of numerical display device in which a voltage is applied to a cell containing a nematic liquid crystal of negative dielectric anisotropy; opposing influences from the electric field and electrical conduction produce turbulence, causing the cell to become milk white.

dynamic sensitivity [ENG] The minimum leak rate which a leak detector is capable of sensing.

dynamic sequential control [COMPUT SCI] Method of operation of a digital computer through which it can alter instructions as the computation proceeds, or the sequence in which instructions are executed, or both.

dynamic shift register [COMPUT SCI] A shift register that stores information by using temporary charge storage techniques.

dynamic similarity [MECH ENG] A relation between two mechanical systems (often referred to as model and prototype) such that by proportional alterations of the units of length, mass, and time, measured quantities in the one system go identically (or with a constant multiple for each) into those in the other; in particular, this implies constant ratios of forces in the two systems.

dynamic speaker *See* dynamic loudspeaker.

dynamic stability [MECH] The characteristic of a body, such as an aircraft, rocket, or ship, that causes it, when disturbed from an original state of steady motion in an upright position, to damp the oscillations set up by restoring moments and gradually return to its original state. Also known as stability.

dynamic stop [COMPUT SCI] A loop in a computer program which is created by a branch instruction in the presence of an error condition, and which signifies the existence of this condition.

dynamic storage [COMPUT SCI] **1.** Computer storage in which information at a certain position is not always available instantly because it is moving, as in an acoustic delay line or magnetic drum. Also known as dynamic memory. **2.** Computer storage consisting of capacitively charged circuit elements which must be continually refreshed or recharged at regular intervals.

dynamic storage allocation [COMPUT SCI] A computer system in which memory capacity is made available to a pro-

gram on the basis of actual, momentary need during program execution, and areas of storage may be reassigned at any time. Also known as dynamic allocation; dynamic memory allocation.

dynamic subroutine [COMPUT SCI] Subroutine that involves parameters, such as decimal point position or item size, from which a relatively coded subroutine is derived by the computer itself.

dynamic symmetry [PHYS] A symmetry law related, not to the geometric structure of the constituents of matter, but to the laws which govern the dynamic behavior of these constituents.

dynamic test [ENG] A test conducted under active or simulated load.

dynamic thickness [OCEANOGR] The vertical separation between two isobaric surfaces in the ocean.

dynamic topography [MAP] A topographic map indicating the dynamic depth of an isobaric surface.

dynamic trough [METEOROL] A pressure trough formed on the lee side of a mountain range across which the wind is blowing almost at right angles. Also known as lee trough.

dynamic unbalance [MECH ENG] Failure of the rotation axis of a piece of rotating equipment to coincide with one of the principal axes of inertia due to forces in a single axial plane and on opposite sides of the rotation axis, or in different axial planes.

dynamic vertical *See* apparent vertical.

dynamic viscosity *See* absolute viscosity.

dynamite [MATER] A generic term covering a class of nitroglycerin-sensitized mixtures of carbonaceous materials (wood, flour, starch) and oxygen-supplying salts, used as explosives for blasting and mining.

dynamo *See* generator.

dynamo effect [GEOPHYS] A process in the ionosphere in which winds and the resultant movement of ionization in the geomagnetic field give rise to induced current.

dynamoelectric [PHYS] Pertaining to the conversion of mechanical energy to electric energy, or vice versa.

dynamoelectric amplifier generator [ELEC] A generator that serves as a power amplifier at low frequencies or direct current; the input signal is applied to the stationary field to change the excitation, and the amplified output is taken from the rotating armature.

dynamometamorphism *See* dynamic metamorphism.

dynamometer [ENG] **1.** An instrument in which current, voltage, or power is measured by the force between a fixed coil and a moving coil. **2.** A special type of electric rotating machine used to measure the output torque or driving torque of rotating machinery by the elastic deformation produced.

dynamometer multiplier [ELEC] A multiplier in which a fixed and a moving coil are arranged so that the deflection of the moving coil is proportional to the product of the currents flowing in the coils.

dynamostatic [ELEC] Pertaining to a machine that uses direct or alternating current to produce static electricity.

dynamo theory [GEOPHYS] The hypothesis which explains the regular daily variations in the earth's magnetic field in terms of electrical currents in the lower ionosphere, generated by tidal motions of the ionized air across the earth's magnetic field.

dynamotor [ELEC] A rotating electric machine having two or more windings on a single armature containing a commutator for direct-current operation and slip rings for alternating-current operation; when one type of power is fed in for motor operation, the other type is delivered by generator action. Also known as rotary converter; synchronous inverter.

dynatron [ELECTR] A screen-grid tube in which secondary emission of electrons from the anode causes the anode current to decrease as anode voltage increases, resulting in a negative resistance characteristic. Also known as negatron.

dynatron oscillator [ELECTR] An oscillator in which secondary emission of electrons from the anode of a screen-grid tube causes the anode current to decrease as anode voltage is increased, giving the negative resistance characteristic required for oscillation.

dyne [MECH] The unit of force in the centimeter-gram-second system of units, equal to the force which imparts an acceleration of 1 cm/sec^2 to a 1 gram mass.

dyne-centimeter *See* erg.

dyne-cm *See* erg.

dynode [ELECTR] An electrode whose primary function is secondary emission of electrons; used in multiplier phototubes and some types of television camera tubes. Also known as electron mirror.

dypnone [ORG CHEM] $C_6H_5COCHC(CH_3)C_6H_5$ A light-colored liquid with a boiling point of 246°C at 50 mmHg; used as a plasticizer and perfume base and in light-stable coatings.

dysanalyte [MINERAL] A variety of the mineral perovskite in which Nb^{5+} substitutes for Ti^{5+}, and Na^+ for Ca^{++} in the formula $Ca[TiO_3]$.

dysarthria [MED] Impairment of articulation caused by any disorder or lesion affecting the tongue or speech muscles.

dysarthrosis [MED] **1.** Deformity, dislocation, or disease of a joint. **2.** A false joint.

dyschondroplasia *See* enchondromatosis.

dyscrasia [MED] A n abnormal state of the body.

dyscrasite [MINERAL] Ag_2Sb A gray mineral that forms rhombic crystals.

dysentery [MED] Inflammation of the intestine characterized by pain, intense diarrhea, and the passage of mucus and blood.

dysgammaglobulinemia [MED] A quantitative or qualitative abnormality of serum globulins.

dysgerminoma [MED] An ovarian tumor composed of large polygonal cells of germ-cell origin, resembling seminoma of the testis, but less malignant. Also known as embryoma of the ovary.

dyshidrosis [MED] Any disturbance in sweat production or excretion.

Dysideidae [INV ZOO] A family of sponges in the order Dictyoceratida.

dyskaryosis [PATH] Any abnormality of the nuclei of exfoliated cells, without significant change in cell integrity.

dyskeratosis [MED] **1.** Imperfect keratinization of individual epidermal cells. **2.** Keratinization of corneal epithelium.

dyskinesia [MED] **1.** Disordered movements of voluntary or involuntary muscles, particularly those seen in disorders of the extrapyramidal system. **2.** Impaired voluntary movements.

dyslexia [MED] Impairment of the ability to read.

dyslogia [MED] **1.** Difficulty in the expression of ideas by speech. **2.** Impairment of reasoning or the faculty to think logically.

dysmenorrhea [MED] Difficult or painful menstruation.

dysmorphophobia [PSYCH] An abnormal fear of deformity.

Dysodonta [PALEON] An order of extinct bivalve mollusks with a nearly toothless hinge and a ligament in grooves or pits.

Dyson microscope [OPTICS] A type of interference microscope, now obsolete, in which a light ray is split into two parallel beams and then recombined by reflections from surfaces of parallel plates, and one of the beams passes through the object under observation.

Dyson notation [ORG CHEM] A notation system for representing organic chemicals developed by G. Malcolm Dyson; the compound is described on a single line, symbols are used for the chemical elements involved as well as for the functional groups and various ring systems; for example, methyl alcohol is C.Q and phenol is B6.Q.

dysostosis [MED] Defective formation of bone.

dyspepsia [MED] Disturbed digestion.

dysphagia [MED] Difficulty in swallowing, or inability to swallow, of organic or psychic causation.

dysphasia [MED] Partial aphasia due to a brain lesion.

dysphonia [MED] An impairment of the voice.

dysphoria [MED] **1.** The condition of not feeling well or of being ill at ease. **2.** Morbid impatience and restlessness, anxiety, or fidgetiness.

dysplasia [PATH] Abnormal development or growth, especially of cells.

dyspnea [MED] Difficult or labored breathing.

dysprosium [CHEM] A metallic rare-earth element, symbol Dy, atomic number 66, atomic weight 162.50.

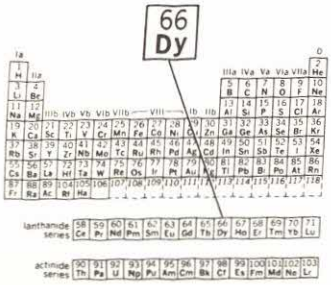
dysrhythmia [MED] Disordered rhythm of the brain waves.

dyssebacia [MED] Plugging of the sebaceous glands, es-

DYSODONTA

Dysodont hinge, *Ambonychinia*, Upper Ordovician, Sweden. *(After O. Isberg, 1934)*

DYSPROSIUM



Periodic table of the chemical elements showing the position of dysprosium.

pecially around the nose, mouth, and forehead, with a dry, yellowish material.

dyssocial behavior [PSYCH] A behavior pattern characteristic of persons who manifest disregard for social codes by following illegal pursuits such as gambling or selling narcotics.

dyster *See* doister.

dystetic mixture [PHYS CHEM] A mixture of two or more substances that has the highest possible melting point of all mixtures of these substances.

dysthymia [MED] Any childhood condition caused by malfunction of the thymus. [PSYCH] Any despondent mood or depressive tendency, often associated with hypochondriasis.

dystonia [PHYSIO] Disorder or lack of muscle tonicity.

dystophic [BIOL] Pertaining to an environment that does not supply adequate nutrition.

dystrophy [MED] **1.** Defective nutrition. **2.** Defective or abnormal development or degeneration.

dysuria [MED] Painful urination.

Dytiscidae [INV ZOO] The predacious diving beetles, a family of coleopteran insects in the suborder Adephaga.

DYTISCIDAE

A diving beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

DYTISCIDAE

A diving beetle (Dytiscus). From T. J. Storer and R. L. Usinger, *General Zoology*, 5th ed., McGraw-Hill, 1957.

E

e [MATH] The base of the natural logarithms; the number defined by the equation

$$\int_1^e \frac{1}{x}\,dx = 1.$$

E *See* electric field vector.

eager *See* bore.

eagle [VERT ZOO] Any of several large, strong diurnal birds of prey in the family Accipitridae.

Eagle's medium [MICROBIO] A tissue-culture medium, developed by H. Eagle, containing vitamins, amino acids, inorganic salts and serous enrichments, and dextrose.

EAM *See* electric accounting machine.

E and M lead signaling [COMMUN] Communications between a trunk circuit and a separate signaling unit over two leads: an M lead that transmits battery or ground signals to the signaling equipment, and an E lead which receives open or ground signals from the signaling unit.

ear [ANAT] The receptor organ that sends both auditory information and space orientation information to the brain in vertebrates.

eardrum *See* tympanic membrane.

ear implantation length [ANTHRO] A measure of the distance from the otobasion superior to the otobasion inferior.

earing [MET] Formation of scallops around the top edge of a deep-drawn product due to differences in the directional properties of the metal sheet.

earlandite [MINERAL] $Ca_3(C_6H_5O_7)_2 \cdot 4H_2O$ A mineral consisting of a hydrous citrate of calcium; found in sediments in the Weddell Sea.

ear length [ANTHRO] A measure of the maximum distance along the anterior-posterior axis of the ear.

earliest finish time [IND ENG] The earliest time for completion of an activity of a project; for the entire project, it equals the earliest start time of the final event included in the schedule.

earliest start time [IND ENG] The earliest time at which an activity may begin in the schedule of a project; it equals the earliest time that all predecessor activities can be completed.

earlobe [ANAT] The pendulous, fleshy lower portion of the auricle or external ear.

early-type star [ASTROPHYS] A star with relatively high surface temperature, in spectral class O or B.

early-warning/control and reporting post [ORD] Long-range supplementary radar surveillance data collection and reporting facility for a sector system and a long-range supplementary control facility for offensive, defensive, and return-to-base–type missions.

early-warning radar [ORD] A line of air defense radar units along the perimeter of a defended area to provide the earliest possible warning of approaching aircraft.

early-warning station *See* aircraft early-warning station.

Earnshaw's theorem [ELEC] The theorem that a charge cannot be held in stable equilibrium by an electrostatic field.

EAROM *See* electrically alterable read-only memory.

earphone [ENG ACOUS] **1.** An electroacoustical transducer, such as a telephone receiver or a headphone, actuated by an electrical system and supplying energy to an acoustical system of the ear, the waveform in the acoustical system being substantially the same as in the electrical system. **2.** A small, lightweight electroacoustic transducer that fits inside the ear, used chiefly with hearing aids.

earplug [ENG] A device made of a pliable substance which fits into the ear opening; used to protect the ear from excessive noise or from water.

ear protector [ENG] A device, such as a plug or ear muff, used to protect the human ear from loud noise that may be injurious to hearing, such as that of jet engines.

ear rot [PL PATH] Any of several fungus diseases of corn, occurring both in the field and in storage and marked by decay and molding of the ears.

ear shell *See* abalone.

earth [ASTRON] The third planet in the solar system, lying between Venus and Mars; sometimes capitalized. [ELEC] *See* ground. [GEOL] **1.** Solid component of the globe, distinct from air and water. **2.** Soil; loose material composed of disintegrated solid matter.

earth connection *See* ground.

earth core *See* core.

earth crust *See* crust.

earth current [ELEC] Return, fault, leakage, or stray current passing through the earth from electrical equipment. Also known as ground current. [GEOPHYS] A current flowing through the ground and due to natural causes, such as the earth's magnetic field or auroral activity. Also known as telluric current.

earth-current storm [GEOPHYS] Irregular fluctuations in an earth current in the earth's crust, often associated with electric field strengths as large as several volts per kilometer, and superimposed on the normal diurnal variation of the earth currents.

earth dam [CIV ENG] A dam having the main section built of earth, sand, or rock, and a core of impervious material such as clay or concrete.

earth detector *See* leakage indicator.

earthed system *See* grounded system.

earthenware [ENG] Ceramic products of natural clay, fired at 1742–2129°F (950–1165°C), that is slightly porous, opaque, and usually covered with a nonporous glaze.

earth figure [GEOD] The shape of the earth.

earthflow [GEOL] A variety of mass movement involving the downslope slippage of soil and weathered rock in a series of subparallel sheets.

earth hummock [GEOL] A small, dome-shaped uplift of soil caused by the pressure of groundwater. Also known as earth mound.

earth inductor [ENG] A type of inclinometer that has a coil which rotates in the earth's field and in which a voltage is induced when the rotation axis does not coincide with the field direction; used to measure the dip angle of the earth's magnetic field. Also known as dip inductor; earth inductor compass; induction inclinometer.

earth inductor compass *See* earth inductor.

earthing reactor *See* grounding reactor.

earth interior [GEOL] The portion of the earth beneath the crust.

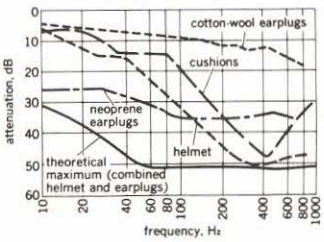
earth-layer propagation [GEOPHYS] **1.** Propagation of electromagnetic waves through layers of the earth's atmosphere. **2.** Electromagnetic wave propagation through layers below the earth's surface.

earthlight [ASTRON] The illumination of the dark part of the moon's disk, produced by sunlight reflected onto the moon from the earth's surface and atmosphere. Also known as earthshine.

earth mound *See* earth hummock.

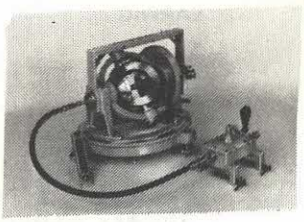
earth movements [GEOPHYS] Movements of the earth,

EAR PROTECTOR



Comparison of various ear protectors in the attenuation of sound. *(After C. M. Harris)*

EARTH INDUCTOR



Photograph of earth inductor. *(U.S. Coast and Geodetic Survey)*

comprising revolution about the sun, rotation on the axis, precession of equinoxes, and motion of the surface of the earth relative to the core and mantle.

earthmover [MECH ENG] A machine used to excavate, transport, or push earth.

earth-nut oil *See* peanut oil.

earth orbit [ASTRON] The elliptical motion of the earth about the sun (eccentricity 0.01675, average radius 1.496×10^8 km) in a little over a year.

earth oscillations [GEOPHYS] Any rhythmic deformations of the earth as an elastic body; for example, the gravitational attraction of the moon and sun excite the oscillations known as earth tides.

earth pig *See* aardvark.

earth pressure [CIV ENG] The pressure which exists between earth materials (such as soil or sediments) and a structure (such as a wall).

earthquake [GEOPHYS] A series of suddenly generated elastic waves in the earth occurring in shallow depths to about 700 kilometers.

earthquake-resistant [CIV ENG] Of a structure or building, able to withstand lateral seismic stresses at the base.

earthquake tremor *See* tremor.

earthquake zone [GEOL] An area of the earth's crust in which movements, sometimes with associated volcanism, occur. Also known as seismic area.

earth radiation *See* terrestrial radiation.

earth rate [ASTRON] The angular velocity or rate of the earth's rotation.

earth-rate correction [NAV] A rate applied to a gyroscope to compensate for the apparent precession of the spin axis caused by the rotation of the earth.

earth resources technology satellite [AERO ENG] One of a series of satellites designed primarily to measure the natural resources of the earth; functions include mapping, cataloging water resources, surveying crops and forests, tracing sources of water and air pollution, identifying soil and rock formations, and acquiring oceanographic data. Abbreviated ERTS.

earth rotation [ASTRON] Motion about the earth's axis that occurs 365.2422 times over a year's period.

earth satellite [AERO ENG] An artificial satellite placed into orbit about the earth. [ASTRON] A natural body that revolves about the earth, such as the moon.

earth science [SCI TECH] The science that deals with the earth or any part thereof; includes the disciplines of geology, geography, oceanography, and meteorology, among others.

earth shadow [METEOROL] Any shadow projecting into a hazy atmosphere from mountain peaks at times of sunrise or sunset.

earthshine *See* earthlight.

earth's shadow *See* dark segment.

earthstar [MYCOL] A fungus of the genus *Geastrum* that resembles a puffball with a double peridium, the outer layer of which splits into the shape of a star.

earth's way [ASTRON] The angle between the direction of the earth's motion and the apparent direction of a star.

earth thermometer *See* soil thermometer.

earth tide [GEOPHYS] The periodic movement of the earth's crust caused by forces of the moon and sun. Also known as bodily tide.

earth tremor *See* tremor.

earth wax *See* ozocerite.

earthwork [CIV ENG] **1.** Any operation involving the excavation or construction of earth embankments. **2.** Any construction made of earth. [ORD] A temporary or permanent fortification for attack or defense, made chiefly of earth.

earthworm [INV ZOO] The common name for certain terrestrial members of the class Oligochaeta, especially forms belonging to the family Lumbricidae.

earthy cobalt *See* asbolite.

earthy manganese *See* wad.

earwax *See* cerumen.

earwig [INV ZOO] The common name for members of the insect order Dermaptera.

easel [GRAPHICS] A standing frame, often adjustable, used to hold a painting in process, or to display a chart in meetings.

easement [CIV ENG] The right held by one person over another person's land for a specific use; rights of tenants are excluded.

easement curve [CIV ENG] A curve, as on a highway, whose degree of curvature is varied to provide a gradual transition between a tangent and a simple curve, or between two simple curves which it connects. Also known as transition curve.

easin [ORG CHEM] $C_{20}H_6O_5I_4Na_2$ The sodium salt of tetraiodofluorescein; a brown powder, insoluble in water; used as a dye and a pH indicator (hydrogen ion) at pH 2.0. Also known as iodoeasin; sodium tetrafluorescein.

east [GEOD] The direction 90° to the right of north.

East Africa Coast Current [OCEANOGR] A current that is influenced by the monsoon drifts of the Indian Ocean, flowing southwestward along the Somalia coast in the Northern Hemisphere winter and northeastward in the Northern Hemisphere summer. Also known as Somali Current.

East African sleeping sickness *See* Rhodesian trypanosomiasis.

East Australia Current [OCEANOGR] The current which is formed by part of the South Equatorial Current and flows southward along the eastern coast of Australia.

Easter-egging [ELECTR] An undirected procedure for checking electronic equipment, which derives its name from the children's activity of searching for hidden eggs at Eastertime.

eastern equine encephalitis [MED] A mosquito-borne virus infection of horses and mules in the eastern and southern United States caused by a member of arbovirus group A.

Eastern Hemisphere [GEOGR] The half of the earth lying mostly to the east of the Atlantic Ocean, including Europe, Africa, and Asia.

East Greenland Current [OCEANOGR] A current setting south along the eastern coast of Greenland and carrying water of low salinity and low temperature.

East Indian geranium oil *See* palmarosa oil.

East Indian sandalwood oil *See* sandalwood oil.

easting [NAV] The distance a craft makes good to the east.

eastonite [MINERAL] $K_2Mg_5AlSi_6Al_2O_{20}(OH_4)$ A mineral consisting of basic silicate of potassium, magnesium, and aluminum; it is an end member of the biotite system.

east point [GEOD] That intersection of the prime vertical with the horizon which lies to the right of the observer when facing north.

east-west effect [ASTRON] The phenomenon due to the fact that a greater number of cosmic-ray particles approach the earth from a westerly direction than from an easterly.

Eaton agent [MICROBIO] The name applied to *Mycoplasma pneumoniae* when it was regarded as a virus.

Eaton agent pneumonia [MED] Pneumonitis in humans, caused by *Mycoplasma pneumoniae*. Also known as primary atypical pneumonia.

eave [BUILD] The border of a roof overhanging a wall.

eaves board [BUILD] A strip nailed along the eaves of a building to raise the end of the bottom course of tile or slate on the roof.

eaves molding [BUILD] A cornicelike molding below the eaves of a building.

EBAM *See* electron-beam memory.

E beam [PHYS] An intense burst of fast electrons from a small particle accelerator, used to excite a pulsed gas laser in which the gas pressure is too high to permit an electric discharge.

ebb-and-flow structure [GEOL] Rock strata with alternating horizontal and cross-bedded layers, believed to have been produced by ebb and flow of tides.

ebb current [OCEANOGR] The tidal current associated with the decrease in the height of a tide.

ebb tide [OCEANOGR] The portion of the tide cycle between high water and the following low water. Also known as falling tide.

EBCDIC *See* extended binary-coded decimal interchange code.

Ebenaceae [BOT] A family of dicotyledonous plants in the order Ebenales, in which a latex system is absent and flowers are mostly unisexual with the styles separate, at least distally.

Ebenales [BOT] An order of woody, sympetalous dicotyledonous plants in the subclass Dilleniidae, having axile placentation and usually twice as many stamens as corolla lobes.

E bend [ELECTROMAG] A smooth change in the direction of the axis of a waveguide, throughout which the axis remains in a plane parallel to the direction of polarization. Also known as E-plane bend.

Eberhard effect [GRAPHICS] The phenomenon due to the

EARTHWORM

External features of earthworm (*Lumbricus terrestris*). (*From T. I. Storer, General Zoology, 3d ed., McGraw-Hill, 1957*)

EARWIG

Adult earwig with pincers.

fact that the density of a photographic plate, given a uniform exposure through a metal plate with an opening, varies with the size of the opening, when an organic developer is used.

Eberthella *See* Salmonella.

Eberthella typhosa *See* Salmonella typhosa.

Ebert ion counter [ENG] An ion counter of the aspiration condenser type, used for the measurement of the concentration and mobility of small ions in the atmosphere.

EBIS *See* electron-beam ion source.

EBM *See* electron-beam machining.

ebonite *See* hard rubber.

ebony [BOT] Any of several African and Asian trees of the genus *Diospyros*, providing a hard, durable wood.

ebracteate [BOT] Without bracts, or much reduced leaves.

ebracteolate [BOT] Without bracteoles.

Ebriida [INV ZOO] An order of flagellate protozoans in the class Phytamastigophorea characterized by a solid siliceous skeleton.

ebullating-bed reactor [CHEM ENG] A type of fluidized bed in which catalyst particles are held in suspension by the upward movement of the liquid reactant and gas flow. Also known as slurry-bed reactor.

ebulliometer [PHYS CHEM] The instrument used for ebulliometry. Also known as ebullioscope.

ebulliometry [PHYS CHEM] The precise measurement of the absolute or differential boiling points of solutions.

ebullioscope *See* ebulliometer.

ebullism [PHYSIO] The formation of bubbles, especially of water vapor bubbles in biological fluids, owing to reduced ambient pressure.

ebullition [PHYS] The process or state of a liquid bubbling up or boiling.

ecad [ECOL] A type of plant which is altered by its habitat and possesses nonheritable characteristics.

ECB *See* block encryption.

EC blank fire *See* EC smokeless powder.

EC blank powder *See* EC smokeless powder.

eccentric [SCI TECH] Situated to one side with reference to a center.

eccentric angle [MATH] For an ellipse having semimajor and semiminor angles of lengths a and b respectively, lying along the x and y axes of a coordinate system respectively, and for a point (x,y) on the ellipse, the angle arc cos (x/a) = arc sin (y/b).

eccentric anomaly [ASTRON] For a planet in an elliptical orbit, the eccentric angle corresponding to the planet's location.

eccentric bit [DES ENG] A modified chisel for drilling purposes having one end of the cutting edge extended further from the center of the bit than the other.

eccentric cam [DES ENG] A cylindrical cam with the shaft displaced from the geometric center.

eccentric gear [DES ENG] A gear whose axis deviates from the geometric center.

eccentricity [MATH] The ratio of the distance of a point on a conic from the focus to the distance from the directrix. [MECH] The distance of the geometric center of a revolving body from the axis of rotation.

eccentric load [ENG] A load imposed on a structural member at some point other than the centroid of the section.

eccentric orbit [ASTRON] An orbit of a celestial body that deviates markedly from a circle.

eccentric ring structure [ASTRON] A formation on the moon's surface consisting of two craters, one inside the other, with the inner crater touching the wall of the outer one at one point.

eccentric rotor engine [MECH ENG] A rotary engine, such as the Wankel engine, wherein motion is imparted to a shaft by a rotor eccentric to the shaft.

eccentric signal [ENG] A survey signal whose position is not in a vertical line with the station it is representing.

eccentric station [ENG] A survey point over which an instrument is centered and which is not positioned in a vertical line with the station it is representing.

eccentric valve [ENG] A rubber-lined slurry or fluid valve with an eccentric rotary cut-off body to reduce corrosion and wear on mechanical moving valve parts.

ecchymosis [MED] A subcutaneous hemorrhage marked by purple discoloration of the skin.

Eccles-Jordan circuit *See* bistable multivibrator.

Eccles-Jordan multivibrator *See* bistable multivibrator.

eccrine gland [PHYSIO] One of the small sweat glands distributed all over the human body surface; they are tubular coiled merocrine glands that secrete clear aqueous sweat.

ecdemite [MINERAL] $Pb_6As_2O_7Cl_4$ A greenish-yellow to yellow, tetragonal mineral consisting of an oxychloride of lead and arsenic; occurs as coatings of small tabular crystals and as coarsely foliated masses.

ecdysis [INV ZOO] Molting of the outer cuticular layer of the body, as in insects and crustaceans.

ecdysone [BIOCHEM] The molting hormone of insects.

E cell [ELEC] A timing device that converts the current-time integral of an electrical function into an equivalent mass integral (or the converse operation) up to a maximum of several thousand microampere-hours.

ecesis [ECOL] Successful naturalization of a plant or animal population in a new environment.

ECG *See* electrocardiogram.

ecgonine [ORG CHEM] $C_9H_{15}NO_3$ An alkaloid obtained in crystalline form by the hydrolysis of cocaine.

echelette grating [SPECT] A diffraction grating with coarse groove spacing, designed for the infrared region; has grooves with comparatively flat sides and concentrates most of the radiation by reflection into a small angular coverage.

echelle grating [SPECT] A diffraction grating designed for use in high orders and at angles of illumination greater than 45° to obtain high dispersion and resolving power by the use of high orders of interference.

echelon [ORD] **1.** A formation of troops; the units are parallel but unaligned, in a steplike manner. **2.** A similar arrangement of planes or ships, as planes flying in a V formation.

echelon faults [GEOL] Separate, parallel faults having steplike trends.

echelon grating [SPECT] A diffraction grating which consists of about 20 plane-parallel plates about 1 centimeter thick, cut from one sheet, each plate extending beyond the next by about 1 millimeter, and which has a resolving power on the order of 10^6.

Echeneidae [VERT ZOO] The remoras, a family of perciform fishes in the suborder Percoidei.

echidna [VERT ZOO] A spiny anteater; any member of the family Tachyglossidae.

Echinacea [INV ZOO] A suborder of echinoderms in the order Euechinoidea; individuals have a rigid test, keeled teeth, and branchial slits.

echinate [ZOO] Having a dense covering of spines or bristles.

Echinidae [INV ZOO] A family of echinacean echinoderms in the order Echinoida possessing trigeminate or polyporous plates with the pores in a narrow vertical zone.

Echiniscoidea [INV ZOO] A suborder of tardigrades in the order Heterotardigrada characterized by terminal claws on the legs.

echinococcosis [MED] Infestation by the larva (hydatid) of *Echinococcus granulosis* in man, and in some canines and herbivores. Also known as hydatid disease; hydatidosis.

Echinococcus [INV ZOO] A genus of tapeworms.

echinococcus cyst [INV ZOO] A cyst formed in host tissues by the larva of *Echinococcus granulosus*.

Echinocystitoida [PALEON] An order of extinct echinoderms in the subclass Perischoechinoidea.

Echinodera [INV ZOO] The equivalent name for Kinorhyncha.

Echinodermata [INV ZOO] A phylum of exclusively marine coelomate animals distinguished from all others by an internal skeleton composed of calcite plates, and a water-vascular system to serve the needs of locomotion, respiration, nutrition, or perception.

Echinoida [INV ZOO] An order of Echinacea with a camarodont lantern, smooth test, and imperforate noncrenulate tubercles.

Echinoidea [INV ZOO] The sea urchins, a class of Echinozoa having a compact body enclosed in a hard shell, or test, formed by regularly arranged plates which bear movable spines.

Echinometridae [INV ZOO] A family of echinoderms in the order Echinoida, including polyporous types with either an oblong or a spherical test.

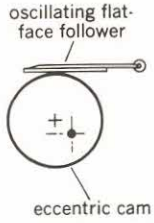
echinomycin [MICROBIO] $C_{50}H_{60}O_{12}N_{12}S_2$ A toxic polypeptide antibiotic produced by species of *Streptomyces*.

echinopluteus [INV ZOO] The bilaterally symmetrical larva of sea urchins.

EBONY

Twig, leaf, and bud of persimmon *(Diospyros virginiana)*.

ECCENTRIC CAM

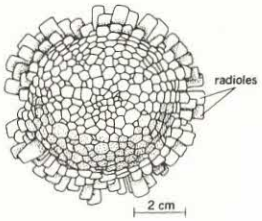


An eccentric cam with a flat-face follower.

ECHINISCOIDEA

Echiniscoides sigismundi.

ECHINOIDA



Colobocentrotus atratus, aboral aspect, a Pacific species adapted for life on wave-exposed coral reefs.

ECHINOSTOME CERCARIA

A drawing of an echinostome cercaria. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1958)*

echinopsine [ORG CHEM] $C_{10}H_9O$ An alkaloid obtained from *Echinops* species; crystallizes as needles from benzene solution, melts at 152°C; physiological action is similar to that of brucine and strychnine.

Echinosteliaceae [MYCOL] A family of slime molds in the order Echinosteliales.

Echinosteliales [MYCOL] An order of slime molds in the subclass Myxogastromycetidae.

echinostome cercaria [INV ZOO] A digenetic trematode larva characterized by the large anterior acetabulum and a collar with spines.

Echinothuriidae [INV ZOO] A family of deep-water echinoderms in the order Echinothurioida in which the large, flexible test collapses into a disk at atmospheric pressure.

Echinothurioida [INV ZOO] An order of echinoderms in the superorder Diadematacea with solid or hollow primary radioles, diademoid ambulacral plates, noncrenulate tubercles, and the anus within the apical system.

Echinozoa [INV ZOO] A subphylum of free-living echinoderms having the body essentially globoid with meridional symmetry and lacking appendages.

Echiurida [INV ZOO] A small group of wormlike organisms regarded as a separate phylum of the animal kingdom; members have a saclike or sausage-shaped body with an anterior, detachable prostomium.

Echiuridae [INV ZOO] A small family of the order Echiuroinea characterized by a flaplike prostomium.

Echiuroidea [INV ZOO] A phylum of schizocoelous animals.

Echiuroinea [INV ZOO] An order of the Echiurida.

echo [ELECTR] **1.** The signal reflected by a radar target, or the trace produced by this signal on the screen of the cathode-ray tube in a radar receiver. Also known as radar echo; return. **2.** *See* ghost signal. [PHYS] A wave packet that has been reflected or otherwise returned with sufficient delay and magnitude to be perceived as a signal distinct from that directly transmitted.

echo amplitude [ELECTR] In radar, an empirical measure of the strength of a target signal as determined from the appearance of the echo; the amplitude of the echo waveform usually is measured by the deflection of the electron beam from the base line of an amplitude-modulated indicator.

echo area [ELECTROMAG] In radar, the area of a fictitious perfect reflector of electromagnetic waves that would reflect the same amount of energy back to the radar as the actual target. Also known as radar cross section; target cross section.

echo attenuation [ELECTR] The power transmitted at an output terminal of a transmission line, divided by the power reflected back to the same output terminal.

echo box [ELECTR] A calibrated high-Q resonant cavity that stores part of the transmitted radar pulse power and gradually feeds this energy into the receiving system after completion of the pulse transmission; used to provide an artificial target signal for test and tuning purposes. Also known as phantom target.

echocardiography [MED] A diagnostic technique for the heart that uses a transducer held against the chest to send high-frequency sound waves which pass harmlessly into the heart; as they strike structures within the heart, they are reflected back to the transducer and recorded on an oscilloscope.

echo chamber [ACOUS] A reverberant room or enclosure used in a studio to add echo effects to sounds for radio or television programs.

echo check [COMPUT SCI] A method of ascertaining the accuracy of transmission of data in which the transmitted data are returned to the sending end for comparison with original data. Also known as read-back check.

echo contour [ELECTR] A trace of equal signal intensity of the radar echo displayed on a range height indicator or plan position indicator scope.

echoencephalograph [MED] An instrument that uses ultrasonic pulses and echo-ranging techniques to give a pictorial representation of intracranial structure. Also known as sonoencephalograph.

echo frequency [ELECTR] The number of fluctuations, per unit time, in the power or amplitude of a radar target signal.

echogram [ENG] The graphic presentation of echo soundings recorded as a continuous profile of the sea bottom. [MED] The pictorial display of anatomical structures using pulse-echo techniques.

echograph [ENG] An instrument used to record an echogram.

echo intensity [ELECTR] The brightness or brilliance of a radar echo as displayed on an intensity-modulated indicator; echo intensity is, within certain limits, proportional to the voltage of the target signal or to the square root of its power.

echolalia [MED] The purposeless, often seemingly involuntary repetition of words spoken by another person; a disorder seen in certain psychotic states and in certain organic brain syndromes. Also known as echophrasia.

echolic [MED] Producing abortion or accelerating labor.

echo location *See* echo ranging.

echo matching [ENG] Rotating an antenna to a position in which the pulse indications of an echo-splitting radar are equal.

echophrasia *See* echolalia.

echoplex technique [COMPUT SCI] A technique for detecting errors in a data communication system with full duplex lines, in which the signal generated when a character is typed on a keyboard is transmitted to a receiver and retransmitted to a display terminal, enabling the operator to check if the character displayed is the same as the character typed.

echo power [ELECTR] The electrical strength, or power, of a radar target signal, normally measured in watts or dBm (decibels referred to 1 milliwatt).

echo pulse [ELECTR] A pulse of radio energy received at the radar after reflection from a target; that is, the target signal of a pulse radar.

echo ranging [ENG] Active sonar, in which underwater sound equipment generates bursts of ultrasonic sound and picks up echoes reflected from submarines, fish, and other objects within range, to determine both direction and distance to each target. Also known as echo location. [VERT ZOO] An auditory feedback mechanism in bats, porpoises, seals, and certain other animals whereby reflected ultrasonic sounds are utilized in orientation.

echo-ranging sonar [ENG] Active sonar, in which underwater sound equipment generates bursts of ultrasonic sound and picks up echoes reflected from submarines, fish, and other objects within range, to determine both direction and distance to each target.

echo recognition [ENG] Identification of a sonar reflection from a target, as distinct from energy returned by other reflectors.

echo repeater [ENG ACOUS] In sonar calibration and training, an artificial target that returns a synthetic echo by receiving a signal and retransmitting it.

Echo satellite [AERO ENG] An aluminized-surface, Mylar balloon about 100 feet (30 meters) in diameter, placed in orbit as a passive communications satellite for reflecting microwave signals from a transmitter to receivers beyond the horizon.

echo signal *See* target signal.

echosonogram [ENG] A graphic display obtained with ultrasound pulse-reflection techniques; for example, an echocardiogram.

echo sounder *See* sonic depth finder.

echo sounding [ENG] Determination of the depth of water by measuring the time interval between emission of a sonic or ultrasonic signal and the return of its echo from the sea bottom.

echo-splitting radar [ENG] Radar in which the echo is split by special circuits associated with the antenna lobe-switching mechanism, to give two echo indications on the radarscope screen; when the two echo indications are equal in height, the target bearing is read from a calibrated scale.

echo suppressor [ELECTR] **1.** A circuit that desensitizes radar navigation equipment for a fixed period after the reception of one pulse, for the purpose of rejecting delayed pulses arriving from longer, indirect reflection paths. **2.** A relay or other device used on a transmission line to prevent a reflected wave from returning to the sending end of the line.

echo talker [COMPUT SCI] The interference created by the retransmission of a message back to its source while the source is still transmitting.

echouterograph [MED] An instrument that uses ultrasonic pulses and echo-ranging techniques to give a pictorial representation of the uterus.

echovirus [VIROL] A division of enteroviruses in the picornavirus group; the name is derived from the group designation enteric cytopathogenic human orphan virus.

eckermannite [MINERAL] $Na_3(Mg,Li)_4(Al,Fe)Si_8O_{22}$

$(OH,F)_2$. Mineral of the amphibole group containing magnesium, lithium, iron, and fluorine.

Eckert number [PHYS] A dimensionless group used in the study of compressible flow around a body, equal to the square of the fluid velocity far from the body divided by the product of the specific heat of the fluid at constant temperature and the difference between the temperatures of the fluid and the body. Symbolized N_E. Also known as Dulong number.

Eckert projection [MAP] One of a group of six map projections of the whole earth, each showing the geographic poles represented by parallel straight lines that are one-half the length of the equator.

ECL *See* emitter-coupled logic.

eclampsia [MED] A disorder occurring during the latter half of pregnancy, characterized by elevated blood pressure, edema, proteinuria, and convulsions or coma.

eclipse [ASTRON] **1.** The reduction in visibility or disappearance of a body by passing into the shadow cast by another body. **2.** The apparent cutting off, wholly or partially, of the light from a luminous body by a dark body coming between it and the observer. Also known as astronomical eclipse.

eclipsed conformation [PHYS CHEM] A particular arrangement of constituent atoms that may rotate about a single bond in a molecule; for ethane it is such that when viewed along the axis of the carbon-carbon bond the hydrogen atoms of one methyl group are exactly in line with those of the other methyl group.

eclipse period [VIROL] A phase in the proliferation of viral particles during which the virus cannot be detected in the host cell.

eclipse seasons [ASTRON] The two times when the sun is near enough to one of the nodes of the moon's orbit for eclipses to occur; this positioning occurs at nearly opposite times of the year, and the eclipse seasons vary yearly because of westward regression of the nodes.

eclipse year [ASTRON] The interval between two successive conjunctions of the sun with the same node of the moon's orbit, equal to 346.62 sidereal days.

eclipsing binary *See* eclipsing variable star.

eclipsing variable star [ASTRON] A binary star whose orbit is such that every time one star passes between the observer and its companion an eclipse results. Also known as eclipsing binary.

ecliptic [ASTRON] The apparent annual path of the sun among the stars; the intersection of the plane of the earth's orbit with the celestial sphere.

ecliptic coordinate system [ASTRON] A celestial coordinate system in which the ecliptic is taken as the primary and the great circles perpendicular to it are then taken as secondaries.

ecliptic diagram [ASTRON] A diagram of the zodiac indicating positions of certain celestial bodies in the ecliptic region.

ecliptic latitude *See* celestial latitude.

ecliptic limits [ASTRON] The distance of the sun from a node of the moon's orbit such that a solar eclipse cannot occur, or the greatest distance of the moon from a node such that an eclipse of the moon cannot occur.

ecliptic longitude *See* celestial longitude.

ecliptic pole [ASTRON] On the celestial sphere, either of two points 90° from the ecliptic.

eclogite [PETR] A class of metamorphic rocks distinguished by their composition, consisting essentially of omphacite and pyrope with small amounts of diopside, enstatite, olivine, kyanite, rutile, and rarely, diamond.

eclogite facies [PETR] A type of facies composed of eclogite and formed by regional metamorphism at extremely high temperature and pressure.

eclosion [INV ZOO] The process of an insect hatching from its egg.

ECM *See* electrochemical machining.

ecmnesia [MED] A lapse in memory of recent events, with normal memory for earlier events.

ecnephias [METEOROL] A squall or thunderstorm in the Mediterranean.

eco *See* electron-coupled oscillator.

ecocline [ECOL] A genetic gradient of adaptability to an environmental gradient; formed by the merger of ecotypes.

ecofallow [AGR] A system for destroying weeds and conserving soil moisture in crop rotation with minimum disturbance of crop residue and soil.

ecological association [ECOL] A complex of communities, such as an elm-hackberry association, which develops in accord with variations in physiography, soil, and successional history within the major subdivision of a biotic realm.

ecological climatology [BIOL] A branch of bioclimatology, including the physiological adaptation of plants and animals to their climate, and the geographical distribution of plants and animals in relation to climate.

ecological community *See* community.

ecological interaction [ECOL] The relation between species that live together in a community; specifically, the effect an individual of one species may exert on an individual of another species.

ecological pyramid [ECOL] A pyramid-shaped diagram representing quantitatively the numbers of organisms, energy relationships, and biomass of an ecosystem; numbers are high for the lowest trophic levels (plants) and low for the highest trophic level (carnivores).

ecological succession [ECOL] A gradual process incurred by the change in the number of individuals of each species of a community and by establishment of new species populations that may gradually replace the original inhabitants.

ecological system *See* ecosystem.

ecology [BIOL] A study of the interrelationships which exist between organisms and their environment. Also known as environmental biology.

ecomania [PSYCH] A symptom complex characterized by a domineering, haughty, and irritable attitude toward members of one's own family, but an attitude of humility toward those in authority.

econometrics [IND ENG] The application of mathematical and statistical techniques to the estimation of mathematical relationships for testing of economic theories and the solution of economic problems.

economic entomology [BIOL] A branch of entomology concerned with the study of economic losses of commercially important animals and plants due to insect predation.

economic geography [GEOGR] A branch of geography concerned with the relations of physical environment and economic conditions to the manufacture and distribution of commodities.

economic geology [GEOL] **1.** Application of geologic knowledge to materials usage and principles of engineering. **2.** The study of metallic ore deposits.

economic life [IND ENG] The number of years after which a capital good should be replaced in order to minimize the long-run annual cost of operation, repair, depreciation, and capital.

economic lot size [IND ENG] The number of units of a product or item to be manufactured at each setup or purchased on each order so as to minimize the cost of purchasing or setup, and the cost of holding the average inventory over a given period, usually annual.

economic mineral [MINERAL] Mineral of commercial value.

economic mobilization [ORD] The process of preparing for and carrying out such changes in the organization and functioning of the national economy as are necessary to provide the most effective use of resources in a national emergency.

economic order quantity [IND ENG] The number of orders required to fulfill the economic lot size.

economic purchase quantity [IND ENG] The economic lot size for a purchased quantity.

economics [IND ENG] A social science that deals with production, distribution, and consumption of commodities, or wealth.

economic warfare [ORD] The defensive use in peacetime, as well as during a war, of any means by military and civilian agencies to maintain or expand the economic potential for war of a nation and its (probable) allies; and, conversely, the offensive use of any measure in peace or war to diminish or neutralize the economic potential for war of the (likely) enemy nation and its accomplices.

economic war potential [ORD] The segment of the economic capacity of a nation which can be used for purposes of conducting war.

economizer [ENG] A reservoir in a continuous-flow oxygen system in which oxygen exhaled by the user is collected for recirculation in the system. [MECH ENG] A forced-flow, once-through, convection-heat-transfer tube bank in which feedwater is raised in temperature on its way to the evaporating section of a steam boiler, thus lowering flue gas temperature, improving boiler efficiency, and saving fuel.

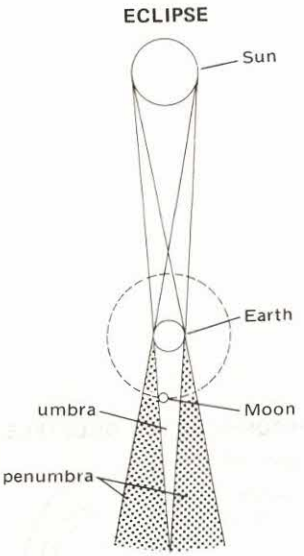


Diagram of a lunar eclipse.

economy [COMPUT SCI] The ratio of the number of characters to be coded to the maximum number available with the code; for example, binary-coded decimal using 4 bits provides 16 possible characters but uses only 10 of them.

E core [ELECTROMAG] A transformer core made from E-shaped laminations and used in conjunction with I-shaped laminations.

écossais [TEXT] Satin-striped fabric using two colors—one color in lengthwise satin stripes standing out on the face, the other in the underlying plain weave, which may be barred or checked.

ecosystem [ECOL] A functional system which includes the organisms of a natural community together with their environment. Derived from ecological system.

ecosystem mapping [ECOL] The drawing of maps that locate different ecosystems in a geographic area.

ecotone [ECOL] A zone of intergradation between ecological communities.

ecotype [ECOL] A subunit, race, or variety of a plant ecospecies that is restricted to one habitat; equivalent to a taxonomic subspecies.

ECR *See* electronic cash register.

ECR source *See* electron cyclotron resonance source.

EC smokeless powder [MATER] An explosive powder used chiefly in blank cartridges, but also in some .22-caliber and shotgun ammunition, and formerly in fragmentation grenades. Also known as EC blank fire; EC blank powder.

ecstasy [MED] A trancelike state with loss of sensory perception and voluntary control.

ECSW *See* extended channel status word.

ectasia [MED] Dilation, especially of a hollow organ.

Ecterocoelia [INV ZOO] The equivalent name for Protostomia.

ectethmoid [ANAT] Either one of the lateral cellular masses of the ethmoid bone.

ecthyma [MED] An inflammatory skin disease characterized by large flat pustules that ulcerate and become crusted, and are surrounded by a distinct inflammatory areola.

ectinites [PETR] One of two major groups of metamorphic rocks comprising those formed with no accession or introduction of feldspathic material.

ectocardia [MED] An abnormal position of the heart; it may be outside the thoracic cavity or misplaced within the thorax.

ectocommensal [ECOL] An organism living on the outer surface of the body of another organism, without affecting its host.

ectocornea [ANAT] The outer layer of the cornea.

ectocyst [INV ZOO] **1.** The outer layer of the wall of a zooecium. **2.** *See* epicyst.

ectoderm [EMBRYO] The outer germ layer of an animal embryo. Also known as epiblast. [INV ZOO] The outer layer of a diploblastic animal.

ectoenzyme [BIOCHEM] An enzyme which is located on the external surface of a cell.

ectogenesis [EMBRYO] Development of an embryo or of embryonic tissue outside the body in an artificial environment.

ectogony [BOT] The influence of pollination and fertilization on structures outside the embryo and endosperm; effect may be on color, chemical composition, ripening, or abscission.

ectohumus [GEOL] An accumulation of organic matter on the soil surface with little or no mixing with mineral material. Also known as mor; raw humus.

ectomere [EMBRYO] A blastomere that will differentiate into ectoderm.

ectomesoblast [EMBRYO] An undifferentiated layer of embryonic cells from which arises the epiblast and mesoblast.

ectomesoderm [EMBRYO] Mesoderm which is derived from ectoderm and is always mesenchymal; a type of primitive connective tissue.

ectomorph [PSYCH] A somatotype suggested by W.H. Sheldon to describe a person with a thin physique.

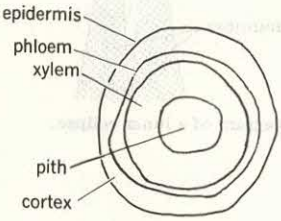
ectoparasite [ECOL] A parasite that lives on the exterior of its host.

ectophagous [INV ZOO] The larval stage of a parasitic insect which is in the process of development externally on a host.

ectophloic siphonostele [BOT] A type of stele with pith that has the phloem only on the outside of the xylem.

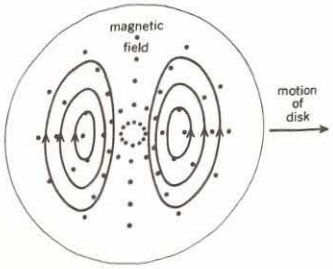
ectophyte [ECOL] A plant which lives externally on another organism.

ECTOPHLOIC SIPHONOSTELE



Cross section of ectophloic siphonostele.

EDDY CURRENT



Eddy currents which are induced in a disk moving through a nonuniform magnetic field.

ectopia [MED] A congenital or acquired positional abnormality of an organ or other part of the body.

ectopic pairing [CYTOL] Pairing between nonhomologous segments of the salivary gland chromosomes in *Drosophila*, presumably involving mainly heterochromatic regions.

ectoplasm [CYTOL] The outer, gelled zone of the cytoplasmic ground substance in many cells. Also known as ectosarc.

Ectoprocta [INV ZOO] A subphylum of colonial bryozoans having eucoelomate visceral cavities and the anus opening outside the circlet of tentacles.

ectopterygoid [VERT ZOO] A membrane bone located ventrally on the skull, situated behind the palate and extending to the quadrate; found in some fishes and reptiles.

ectosarc *See* ectoplasm.

ectosome [INV ZOO] The outer, cortical layer of a sponge.

ectostosis [PHYSIO] Formation of bone immediately beneath the perichondrium and surrounding and replacing underlying cartilage.

ectosymbiont [ECOL] A symbiont that lives on the surface of or is physically separated from its host.

ectotherm [PHYSIO] An animal that obtains most of its heat from the environment and therefore has a body temperature very close to that of its environment.

Ectothiorhodospira [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spiral to slightly bent rods, are motile, contain bacteriochlorophyll *a* on lamellar stock membranes, and produce and deposit sulfur as globules outside the cells.

ectotrophic [BIOL] Obtaining nourishment from outside; applied to certain parasitic fungi that live on and surround the roots of the host plant.

ectozoa [ECOL] Animals which live externally on other organisms.

Ectrephidae [INV ZOO] An equivalent name for Ptinidae.

ectrodactylia [MED] Congenital absence of any of the fingers or toes or parts of them.

ectromelia [MED] A congenital absence or an anomaly of one or more limbs.

ectromelia virus [VIROL] A member of subgroup I of the poxvirus group; causes mousepox.

eczema [MED] Any skin disorder characterized by redness, thickening, oozing from blisters or papules, and occasional formation of fissures and crusts.

eczematoid reaction [MED] A dermal and epidermal inflammatory response characterized by erythema, edema, vesiculation, and exudation in the acute stage, and by erythema, edema, thickening of the epidermis, and scaling in the chronic stage.

ED *See* electronic dummy.

ED_{50} *See* effective dose 50.

edaphic community [ECOL] A plant community that results from or is influenced by soil factors such as salinity and drainage.

edaphon [BIOL] Flora and fauna in soils.

Edaphosuria [PALEON] A suborder of extinct, lowland, terrestrial, herbivorous reptiles in the order Pelycosauria.

eddy [FL MECH] A vortexlike motion of a fluid running contrary to the main current.

eddy coefficient *See* exchange coefficient.

eddy conduction *See* eddy heat conduction.

eddy conductivity [THERMO] The exchange coefficient for eddy heat conduction.

eddy correlation [METEOROL] A method of studying the effects of sea surface on the air above it by measuring simultaneous fluctuations of the horizontal and vertical components of the airflow from the mean.

eddy current [ELECTROMAG] An electric current induced within the body of a conductor when that conductor either moves through a nonuniform magnetic field or is in a region where there is a change in magnetic flux. Also known as Foucault current.

eddy-current brake [MECH ENG] A control device or dynamometer for regulating rotational speed, as of flywheels, in which energy is converted by eddy currents into heat.

eddy-current clutch [MECH ENG] A type of electromagnetic clutch in which torque is transmitted by means of eddy currents induced by a magnetic field set up by a coil carrying direct current in one rotating member.

eddy-current damper [AERO ENG] A device used to damp nutation and other unwanted vibration in spacecraft, based on

the principle that eddy currents induced in conducting material by motion relative to magnets tend to counteract that motion.

eddy-current heating *See* induction heating.

eddy-current loss [ELECTROMAG] Energy loss due to undesired eddy currents circulating in a magnetic core.

eddy-current tachometer [ENG] A type of tachometer in which a rotating permanent magnet induces currents in a spring-mounted metal cylinder; the resulting torque rotates the cylinder and moves its attached pointer in proportion to the speed of the rotating shaft. Also known as drag-type tachometer.

eddy-current test [ELECTROMAG] A nondestructive test in which the change of impedance of a test coil brought close to a conducting specimen indicates the eddy currents induced by the coil, and thereby indicates certain properties or defects of the specimen.

eddy diffusion [FL MECH] Diffusion which occurs in turbulent flow, by the rapid process of mixing of the swirling eddies of fluid. Also known as turbulent diffusion.

eddy diffusion coefficient *See* eddy diffusivity.

eddy diffusivity [FL MECH] The exchange coefficient for the diffusion of a conservative property by eddies in a turbulent flow. Also known as coefficient of eddy diffusion; eddy diffusion coefficient.

eddy flux [FL MECH] The rate of transport (or flux) of fluid properties such as momentum, mass heat, or suspended matter by means of eddies in a turbulent motion; the rate of turbulent exchange. Also known as moisture flux; turbulent flux.

eddy heat conduction [THERMO] The transfer of heat by means of eddies in turbulent flow, treated analogously to molecular conduction. Also known as eddy heat flux; eddy conduction.

eddy heat flux *See* eddy heat conduction.

eddy kinetic energy [FL MECH] The kinetic energy of that component of fluid flow which represents a departure from the average kinetic energy of the fluid, the mode of averaging depending on the particular problem. Also known as turbulence energy.

eddy mill *See* pothole.

eddy resistance [FL MECH] Resistance or drag of a ship resulting from eddies that are shed from the hull or appendages of the ship and carry away energy.

eddy spectrum [FL MECH] **1.** The distribution of frequencies of rotation of eddies in a turbulent flow, or of those eddies having some range of sizes. **2.** The distribution of kinetic energy among eddies with various frequencies or sizes.

eddy stress *See* Reynolds stress.

eddy velocity [FL MECH] The difference between the mean velocity of fluid flow and the instantaneous velocity at a point. Also known as fluctuation velocity.

eddy viscosity [FL MECH] The turbulent transfer of momentum by eddies giving rise to an internal fluid friction, in a manner analogous to the action of molecular viscosity in laminar flow, but taking place on a much larger scale.

Edeleanu process [CHEM ENG] A process for removal of compounds of sulfur from petroleum fractions by an extraction procedure utilizing liquid sulfur dioxide, or liquid sulfur dioxide and benzene.

edema [MED] An excessive accumulation of fluid in the cells, tissue spaces, or body cavities due to a disturbance in the fluid exchange mechanism. Also known as dropsy.

Edenian [GEOL] Lower Cincinnatian geologic stage in North America, above the Mohawkian and below Maysvillian.

Edentata [VERT ZOO] An order of mammals characterized by the absence of teeth or the presence of simple prismatic, unspecialized teeth with no enamel.

edentate [VERT ZOO] **1.** Lacking teeth. **2.** Any member of the Edentata.

edentulous [VERT ZOO] Having no teeth; especially, having lost teeth that were present.

edge [MATH] **1.** A line along which two plane faces of a solid intersect. **2.** A line segment connecting nodes or vertices in a graph (a geometric representation of the relation among situations). Also known as arc.

edgeboard connector *See* card-edge connector.

edge-bridging ligand [ORG CHEM] A ligand that forms a bridge over one edge of the polyhedron of a metal cluster structure.

edge dislocation [CRYSTAL] A dislocation which may be regarded as the result of inserting an extra plane of atoms, terminating along the line of the dislocation. Also known as Taylor-Orowan dislocation.

edge effect [ECOL] The influence of adjacent plant communities on the number of animal species present in the direct vicinity. [ELEC] An outward-curving distortion of lines of force near the edges of two parallel metal plates that form a capacitor.

edge focusing [ELECTROMAG] Axial focusing of a stream of ions which occurs when it crosses a fringe magnetic field obliquely; used in mass spectrometers and cyclotrons.

edge fog [GRAPHICS] The light fog which appears along the edge of roll film, generally from exposure during loading or unloading.

edge grain [MATER] The grain pattern produced when soft wood is cut so that the tree's annular rings form an angle of more than 45° with the board's surface.

edge joint [MET] A joint between the edges of welded members which are essentially parallel to each other.

edge line [MAP] In cartography, a heavy line on a relief map that indicates a sharp change of slope.

edge-notched card [COMPUT SCI] A card with a series of holes along one or more edges, and notches which open one or more holes, so that long needles inserted in specific holes in a deck of such cards let fall only cards with a desired type of data.

edge printing [GRAPHICS] A preprinted identification along the edge of film.

edge-punched card [COMPUT SCI] A card with one or more rows of holes, representing binary data, punched along the edges.

edger [MET] The part of a forging die which portions out the quantity of metal needed for shaping.

edge runner *See* Chile mill.

edge water [GEOL] In reservoir structures, the subsurface water that surrounds the gas or oil.

edge wave [OCEANOGR] An ocean wave moving parallel to the coast, with crests normal to the coastline; maximum amplitude is at shore, with amplitude falling off exponentially farther from shore.

edging [MET] Controlling the plate width or the edge shape during rolling operations.

Ediacaran fauna [PALEON] The oldest known assemblage of fossil remains of soft-bodied marine animals; first discovered in the Ediacara Hills, Australia.

edible oil [FOOD ENG] A liquid fat that is capable of being eaten as a food or food accessory.

edifenphos [ORG CHEM] $C_{14}H_{15}O_2PS_2$ A clear, yellow liquid, insoluble in water; used as a fungicide on rice. Also known as *O*-ethyl-*S*,*S*-diphenyldithiophosphate.

edingtonite [MINERAL] $BaAl_2Si_3O_{10}\cdot 4H_2O$ Gray zeolite mineral that forms rhombic crystals; sometimes contains large amounts of calcium.

Edison battery [ELEC] A storage battery composed of cells having nickel and iron in an alkaline solution. Also known as nickel-iron battery.

Edison distribution system [ELEC] Three-wire direct-current distribution system, usually 120 to 240 volts, for combined light and power service from a single set of mains.

Edison effect *See* thermionic emission.

E display [ELECTR] A rectangular radar display in which targets appear as blips with distance indicated by the horizontal coordinate, and elevation by the vertical coordinate.

edit [COMPUT SCI] **1.** To modify the form or format of an output or input by inserting or deleting characters such as page numbers or decimal points. **2.** A computer instruction directing that this step be performed.

edit capability [COMPUT SCI] The degree of sophistication available to the programmer to modify his statements while in the time-sharing mode.

edit mask [COMPUT SCI] The receiving word through which a source word is filtered, allowing for the suppression of leading zeroes, the insertion of floating dollar signs and decimal points, and other such formatting.

editor program [COMPUT SCI] A special program by means of which a user can easily perform corrections, insertions, modifications, or deletions in an existing program or data file.

EDM *See* electron discharge machining.

Edman degradation technique [BIOCHEM] In protein analysis, an approach to amino-end-group determination involving the use of a reagent, phenylisothiocyanate, that can be applied to the liberation of a derivative of the amino-terminal

EDENTATA

The giant anteater (*Myrmecophaga tridactyla*), the largest of all the edentates and a native of the tropical grasslands of central South America.

residue without hydrolysis of the remainder of the peptide chain.

EDP *See* electronic data processing.

EDP center *See* electronic data-processing center.

Edrioasteroidea [PALEON] A class of extinct Echinozoa having ambulacral radial areas bordered by tube feet, and the mouth and anus located on the upper side of the theca.

Edser and Butler's bands [OPTICS] Dark bands at intervals of equal frequency in a spectrum of light which has passed through a thin plate of transparent material with parallel sides.

EDTA *See* ethylenediaminetetraacetic acid.

EDTC *See* *S*-ethyl-*N*,*N*-dipropylthiocarbamate.

educational age [PSYCH] The average achievement of a pupil or student in school subjects based on average performance for a given chronological age as measured by standard educational tests.

educational psychology [PSYCH] A field of psychology that deals with the psychological aspects of teaching and formal learning processes.

eductor [ENG] **1.** An ejectorlike device for mixing two fluids. **2.** *See* ejector.

eductor pump [MIN ENG] A pump which removes slurried material from a hydraulically disseminated subsurface ore matrix.

eduIcorate [COMPUT SCI] To eliminate irrelevant data from a data file.

EDVAC [COMPUT SCI] The first stored program computer, built in 1952. Derived from electron discrete variable automatic compiler.

Edwardsiella [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile rods that produce hydrogen sulfide from TSI agar.

Edwards' syndrome *See* trisomy 18 syndrome.

EEG *See* electroencephalogram.

eel [VERT ZOO] The common name for a number of unrelated fishes included in the orders Anguilliformes and Cypriniformes; all have an elongate, serpentine body.

eel grass *See* tape grass.

EEP *See* electroencephalophone.

eff *See* efficiency.

effective address [COMPUT SCI] The address that is obtained by applying any specified indexing or indirect addressing rules to the specified address; the effective address is then used to identify the current operand.

effective air path [NAV] A straight line on a navigation chart connecting two air positions, commonly used between the air positions of two pressure soundings in order to determine effective true airspeed between the two soundings.

effective ampere [ELEC] The amount of alternating current flowing through a resistance that produces heat at the same average rate as 1 ampere of direct current flowing in the same resistance.

effective angle of attack [AERO ENG] That part of a given angle of attack that lies between the chord of an airfoil and a line representing the resultant velocity of the disturbed airflow.

effective antenna length [ELECTROMAG] Electrical length of an antenna, as distinguished from its physical length.

effective aperture [OPTICS] The diameter of the image of the aperture stop of an optical system, as viewed from the object.

effective area [CHEM ENG] Absolute or cross-sectional area of process media involved in the process, such as the actual area of filter media through which a fluid passes, or the available surface area of absorbent contacted by a gas or liquid. [ELECTROMAG] Of an antenna in any specified direction, the square of the wavelength multiplied by the power gain (or directive gain) in that direction and divided by 4π (12.57).

effective atmosphere *See* optically effective atmosphere.

effective bandwidth [ELECTR] The bandwidth of an assumed rectangular band-pass having the same transfer ratio at a reference frequency as a given actual band-pass filter, and passing the same mean-square value of a hypothetical current having even distribution of energy throughout that bandwidth.

effective capacitance [ELEC] Total capacitance existing between any two given points of an electric circuit.

effective center [ENG ACOUS] In a sonar projector, the point where lines coincident with the direction of propagation, as observed at different points some distance from the projector, apparently intersect. Also known as apparent source.

effective confusion area [ENG] Amount of chaff whose radar cross-sectional area equals the radar cross-sectional area of the particular aircraft at a particular frequency.

effective current [ELEC] The value of alternating current that will give the same heating effect as the corresponding value of direct current. Also known as root-mean-square current.

effective decline rate [PETRO ENG] The drop in oil or gas production rate over a period of time; equal to unity (1 month or 1 year) divided by the production rate at the beginning of the period.

effective discharge area [DES ENG] A nominal or calculated area of flow through a pressure relief valve for use in flow formulas to determine valve capacity.

effective dose 50 [PHARM] The amount of a drug required to produce a response in 50% of the subjects to whom the drug is given. Abbreviated ED_{50}. Also known as median effective dose.

effective earth radius [COMMUN] A radius value used in place of the geometric radius to correct for atmospheric refraction in estimating ranges of antennas when the index of refraction in the atmosphere changes linearly with height; under conditions of standard refraction it is 4/3 the geometric radius. Also known as effective radius of the earth.

effective exhaust velocity [AERO ENG] A fictitious exhaust velocity that yields the observed value of jet thrust in calculations.

effective facsimile band [COMMUN] Frequency band of a facsimile signal wave equal in width to that between zero frequency and maximum keying frequency.

effective field intensity [ELECTROMAG] Root-mean-square value of the inverse distance fields at a distance of 1 mile (1.6 kilometers) from the transmitting antenna in all directions in the horizontal plane.

effective firing time [ORD] The period of time during which an aircraft can deliver effective fire at a moving or stationary target.

effective force *See* inertial force.

effective fragment [ORD] In terminal ballistics, a fragment whose mass, velocity, and form, upon impact with the target are such as to enable the fragment to accomplish the desired effect.

effective gun bore line [MECH] The line which a projectile should follow when the muzzle velocity of the antiaircraft gun is vectorially added to the aircraft velocity.

effective gust velocity [METEOROL] The vertical component of the velocity of a sharp-edged gust that would produce a given acceleration on a particular airplane flown in level flight at the design cruising speed of the aircraft and at a given air density.

effective half-life [NUCLEO] The half-life of a radioisotope in a biological organism, resulting from a combination of radioactive decay and biological elimination.

effective height [ELECTROMAG] The height of the center of radiation of a transmitting antenna above the effective ground level.

effective horizon [COMMUN] A horizon whose distance at a given height above sea level is the distance to the horizon of a fictitious earth, having a radius 4/3 times the earth's true radius; used to estimate ranges of antennas, taking atmospheric refraction into account.

effective horsepower [NAV ARCH] The power necessary to overcome the resistance of water to motion of a ship towed at a given speed, measured in horsepower. Abbreviated ehp. Also known as towrope horsepower.

effective instruction [COMPUT SCI] The computer instruction that results from changing a basic instruction during program modification. Also known as actual instruction.

effective launcher line [MECH] The line along which the aircraft rocket would go if it were not affected by gravity.

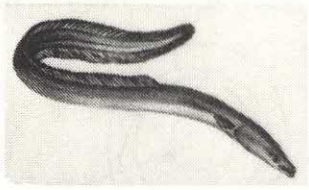
effective length [NAV ARCH] Mean length of that portion of the ship's hull below the waterline.

effectively grounded [ELEC] Grounded through a connection of sufficiently low impedances (inherent or intentionally added) so that fault grounds which may occur cannot build up voltages dangerous to connected personnel or other equipment.

effective mass [SOLID STATE] A parameter with the dimensions of mass that is assigned to electrons in a solid; in the presence of an external electromagnetic field the electrons behave in many respects as if they were free, but with a mass equal to this parameter rather than the true mass.

effective molecular diameter [PHYS CHEM] The general

EEL



American eel, showing typical fin structure.

extent of the electron cloud surrounding a gas molecule as calculated in any of several ways.

effective molecular weight [PETRO ENG] Empirical relationship of oil graphed against API gravity to give the effective (pseudoaverage) molecular weight of the oil for reservoir calculations.

effective multiplication factor [NUCLEO] The multiplication factor of an actual reactor, in which there is leakage of neutrons.

effectiveness level [COMPUT SCI] A measure of the effectiveness of data-processing equipment, equal to the ratio of the operational use time to the total performace period, expressed as a percentage. Also known as average effectiveness level.

effective percentage modulation [COMMUN] For a single sinusoidal input component, the ratio of the peak value of the fundamental component of the envelope to the average amplitude of the modulated wave expressed in percent.

effective permeability [PHYS CHEM] The observed permeability exhibited by a porous medium to one fluid phase when there is physical interaction between this phase and other fluid phases present.

effective pitch [AERO ENG] The distance traveled by an airplane along its flight path for one complete turn of the propeller.

effective porosity [GEOL] A property of earth containing interconnecting interstices, expressed as a percent of bulk volume occupied by the interstices.

effective precipitable water [METEOROL] That part of the precipitable water which, in theory, can actually fall as precipitation.

effective precipitation [HYD] **1.** The part of precipitation that reaches stream channels as runoff. Also known as effective rainfall. **2.** In irrigation, the portion of the precipitation which remains in the soil and is available for consumptive use.

effective pressure *See* effective stress.

effective radiated power [ELECTROMAG] The product of antenna input power and antenna power gain, expressed in kilowatts. Abbreviated ERP.

effective radiation *See* effective terrestrial radiation.

effective radius [ORD] The radius of a circle having its center at the center of impact of a nuclear weapon, and within which a specified dosage of radiation is equaled or exceeded within a given period of time.

effective radius of the earth *See* effective earth radius.

effective rainfall *See* effective precipitation.

effective rake [MECH ENG] The angular relationship between the plane of the tooth face of the cutter and the line through the tooth point measured in the direction of chip flow.

effective range [ORD] Distance at which a weapon may be expected to fire accurately to inflict damage or casualties.

effective resistance *See* high-frequency resistance.

effective snowmelt [HYD] The part of snowmelt that reaches stream channels as runoff.

effective sound pressure [ACOUS] The root-mean-square value of the instantaneous sound pressure at a point during a complete cycle, expressed in dynes per square centimeter. Also known as root-mean-square sound pressure; sound pressure.

effective stress [GEOL] The average normal force per unit area transmitted directly from particle to particle of a rock or soil mass. Also known as effective pressure; intergranular pressure.

effective temperature [ASTROPHYS] A measure of the temperature of a star, deduced by means of the Stefan-Boltzmann law, from the total energy that is emitted per unit area. [METEOROL] The temperature at which motionless, saturated air would induce, in a sedentary worker wearing ordinary indoor clothing, the same sensation of comfort as that induced by the actual conditions of temperature, humidity, and air movement.

effective terrestrial radiation [GEOPHYS] The amount by which outgoing infrared terrestrial radiation of the earth's surface exceeds downcoming infrared counterradiation from the sky. Also known as effective radiation; nocturnal radiation.

effective thermal resistance [ELECTR] Of a semiconductor device, the effective temperature rise per unit power dissipation of a designated junction above the temperature of a stated external reference point under conditions of thermal equilibrium. Also known as thermal resistance.

effective thrust [AERO ENG] In a rocket motor or engine, the theoretical thrust less the effects of incomplete combustion and friction flow in the nozzle.

effective time [COMPUT SCI] The time during which computer equipment is in actual use and produces useful results.

effective transformation group [MATH] A transformation group in which the identity element is the only element to leave all points fixed.

effective true airspeed [NAV] The effective air distance divided by the elapsed time between two pressure soundings.

effective value *See* root-mean-square value.

effector [BIOCHEM] An activator of an allosteric enzyme. [CONT SYS] A motor, solenoid, or hydraulic piston that turns commands to a teleoperator into specific manipulatory actions. [PHYSIO] A structure that is sensitive to a stimulus and causes an organism or part of an organism to react to the stimulus, either positively or negatively.

effector organ [PHYSIO] Any muscle or gland that mediates overt behavior, that is, movement or secretion.

effector system [PHYSIO] A system of effector organs in the animal body.

efferent [PHYSIO] Carrying or conducting away, as the duct of an exocrine gland or a nerve.

effervescence [CHEM] The bubbling of a solution of an element or chemical compound as the result of the emission of gas without the application of heat; for example, the escape of carbon dioxide from carbonated water.

efficiency Abbreviated eff. [CHEM] In an ion-exchange system, a measurement of the effectiveness of a system expressed as the amount of regenerant required to remove a given unit of adsorbed material. [ENG] **1.** Measure of the degree of heat output per unit of fuel when all available oxidizable materials in the fuel have been burned. **2.** Ratio of useful energy provided by a dynamic system to the energy supplied to it during a specific period of operation. [NUCLEO] The probability that a count will be produced in a counter tube by a specified particle or quantum incident. [PHYS] The ratio, usually expressed as a percentage, of the useful power output to the power input of a device. [THERMO] The ratio of the work done by a heat engine to the heat energy absorbed by it. Also known as thermal efficiency.

efficiency expert [IND ENG] An individual who analyzes procedures, productivity, and jobs in order to recommend methods for achieving maximum utilization of resources and equipment.

efficient estimator [STAT] A statistical estimator that has minimum variance.

efflorescence [BOT] The period or process of flowering. [CHEM] The property of hydrated crystals to lose water of hydration and crumble when exposed to air. [MINERAL] A whitish powder, consisting of one or several minerals produced as an encrustation on the surface of a rock in an arid region. Also known as bloom.

effluent [CHEM ENG] *See* discharge liquor. [CIV ENG] The liquid waste of sewage and industrial processing. [HYD] **1.** Flowing outward or away from. **2.** Liquid which flows away from a containing space or a main waterway.

effluent refrigeration alkylation *See* Stratco alkylation.

effluent stream [HYD] A stream that is fed by seeping groundwater.

effluent weir [CIV ENG] A dam at the outflow end of a watercourse.

effluvium [IND ENG] By-products of food and chemical processes, in the form of wastes.

effort-controlled cycle [IND ENG] A work cycle which is performed entirely by hand or in which the hand time controls the place. Also known as manually controlled work.

effort rating [IND ENG] Assessing the level of manual effort expended by the operator, based on the observer's concept of normal effort, in order to adjust time-study data. Also known as pace rating; performance rating.

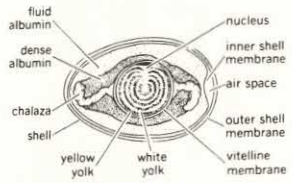
effuse [BOT] Expanded; spread out in a definite form.

effusion [MED] A pouring out of any fluid into a body cavity or tissue. [PHYS CHEM] The movement of a gas through an opening which is small as compared with the average distance which the gas molecules travel between collisions. [SCI TECH] **1.** The act or process of leaking or pouring out. **2.** Any material that is effused.

effusive stage [GEOL] The second cooling stage for volcanic rocks.

EFL *See* error frequency limit.

EGG

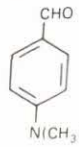


The egg of a bird. *(After Schimkewitsch, from L. P. Sayles, ed., Biology of the Vertebrates, 3d ed., copyright 1949 by Macmillan Publishing Co., Inc., renewed 1977 by Leonard P. Sayles; reprinted with permission)*

EGGPLANT

Eggplant *(Solanum melongena)*, cultivar Black Magic. *(Joseph Harris Co., Rochester, N.Y.)*

EHRLICH'S REAGENT



Structural formula.

e format [COMPUT SCI] A decimal, normalized form of a floating point number in FORTRAN in which a number such as 18.756 appears as .18756E+02, which stands for .18756 × 10^2.

Egeria [ASTRON] An asteroid with a diameter of about 230 kilometers, mean distance from the sun of 2.576 astronomical units, and C-type surface composition.

Egerov's therorem [MATH] If a sequence of measurable functions converges almost everywhere on a set of finite measure to a real-valued function, then given any $\epsilon > 0$ there is a set of measure smaller than ϵ on whose complement the sequence converges uniformly.

egest [PHYSIO] **1.** To discharge indigestible matter from the digestive tract. **2.** To rid the body of waste.

egg [CYTOL] **1.** A large, female sex cell enclosed in a porous, calcareous or leathery shell, produced by birds and reptiles. **2.** *See* ovum.

egg apparatus [BOT] A group of three cells, consisting of the egg and two synergid cells, in the micropylar end of the embryo sac in seed plants.

egg capsule *See* egg case.

egg case [INV ZOO] **1.** A protective capsule containing the eggs of certain insects and mollusks. Also known as egg capsule. **2.** A silk pouch in which certain spiders carry their eggs. Also known as egg sac. [VERT ZOO] A soft, gelatinous (amphibians) or strong, horny (skates) envelope containing the egg of certain vertebrates.

Eggertz's method [MET] A colorimetric estimation of the carbon content of steel by dissolving the metal in nitric acid and comparing the color with that produced by a similar metal of known carbon content.

eggplant [BOT] *Solanum melongena*. A plant of the order Polemoniales grown for its edible egg-shaped, fleshy fruit.

egg raft [ZOO] A floating mass of eggs; produced by a variety of aquatic organisms.

egg sac [INV ZOO] **1.** The structure containing the eggs of certain microcrustaceans. **2.** *See* egg case.

eggstone *See* oolite.

egg tempera [GRAPHICS] A painting process in which the color is bound with egg instead of oil.

egg tooth [VERT ZOO] A toothlike prominence on the tip of the beak of a bird embryo and the tip of the nose of an oviparous reptile, which is used to break the eggshell.

eglandular [BIOL] Without glands.

eglestonite [MINERAL] Hg_4Cl_2O Rare mercuric oxide mineral; forms yellow-brown isometric crystals upon exposure to air.

Egnell's law [METEOROL] The rule stating that above any fixed place the velocity of straight or nearly straight winds in the upper half of the troposphere increases with height at roughly the same rate that the density of the air decreases.

ego [PSYCH] **1.** The self. **2.** The conscious part of the personality that is in contact with reality.

egress [ASTRON] The departure of the moon from the shadow of the earth in an eclipse, or of a planet from the disk of the sun, or of a satellite (or its shadow) from the disk of the parent planet.

EGT *See* ethylene glycol bis(trichloroacetate).

eguëite [MINERAL] $CaFe_{14}(PO_4)_{10}(OH)_{14} \cdot 21H_2O$ A brownish-yellow mineral consisting of a hydrated basic phosphate of calcium and iron; occurs as small nodules.

Egyptian asphalt [GEOL] A glance pitch (bituminous mixture similar to asphalt) found in the Arabian Desert.

Egyptian cotton [BOT] Long-staple, high-quality cotton grown in Egypt.

Egyptian henna *See* henna.

EHF *See* extremely high frequency.

ehp *See* effective horsepower.

Ehrenfest's adiabatic law [QUANT MECH] The law that, if the Hamiltonian of a system undergoes an infinitely slow change, and if the system is initially in an eigenstate of the Hamiltonian, then at the end of the change it will be in the eigenstate of the new Hamiltonian that derives from the original state by continuity, provided certain conditions are met. Also known as Ehrenfest's theorem.

Ehrenfest's equations [THERMO] Equations which state that for the phase curve $P(T)$ of a second-order phase transition the derivative of pressure P with respect to temperature T is equal to $(C_p^f - C_p^i)/TV(\gamma^f - \gamma^i) = (\gamma^f - \gamma^i)/(K^f - K^i)$, where i and f refer to the two phases, γ is the coefficient of volume expansion, K is the compressibility, C_p is the specific heat at constant pressure, and V is the volume.

Ehrenfest's theorem [QUANT MECH] **1.** The theorem that a quantum-mechanical wave packet obeys the equations of motion of the corresponding classical particle when the position, momentum, and force acting on the particle are replaced by the expectation values of these quantities. **2.** *See* Ehrenfest's adiabatic law.

Ehrenhaft effect [ELECTROMAG] A helical motion of fine particles along the lines of force of a magnetic field during exposure to light, resulting from radiometer effects.

Ehrlichia [MICROBIO] A genus of the tribe Ehrlichieae; coccoid to ellipsoidal or pleomorphic cells; intracellular parasites in cytoplasm of host leukocytes.

Ehrlichieae [MICROBIO] A tribe of the family Rickettsiaceae; spherical and occasionally pleomorphic cells; pathogenic for some mammals, not including humans.

Ehrlich's 606 *See* arsphenamine.

Ehrlich's reagent [ORG CHEM] $(CH_3)_2NC_6H_4CHO$ Granular or leafletlike crystals that are soluble in many organic solvents; melting point is 74°C; used in the preparation of dyes, as a reagent for arsphenamine, anthranilic acid, antipyrine, indole, and skatole, and as a differentiating agent between true scarlet fever and serum eruptions. Also known as *para*-dimethylaminobenzaldehyde; 4-dimethylaminobenzenecarbonal.

eht *See* extra-high tension.

E-H T junction [ELECTROMAG] In microwave waveguides, a combination of E- and H-plane T junctions forming a junction at a common point of intersection with the main waveguide.

E-H tuner [ELECTROMAG] Tunable E-H T junction having two arms terminated in adjustable plungers used for impedance transformation.

ehv *See* extra-high voltage.

eicosane [MATER] A mixture of saturated hydrocarbons mostly straight-chained and averaging 20 carbons in the chain; for this reason, the formula $C_{20}H_{42}$ is given to the technical mixture; used in lubricants and plasticizers.

eicosanoic acid [ORG CHEM] $CH_3(CH_2)_{18}COOH$ A white, crystalline, saturated fatty acid, melting at 75.4°C; a constituent of butter. Also known as arachic acid; arachidic acid.

eidetic imagery [PSYCH] Imagery in extreme detail; a sort of projection of an image on a mental screen.

eigenfrequency [PHYS] One of the frequencies at which an oscillatory system can vibrate.

eigenfunction [MATH] Also known as characteristic function. **1.** An eigenvector for a linear operator on a vector space whose vectors are functions. Also known as proper function. **2.** A solution to the Sturm-Liouville partial differential equation.

eigenfunction expansion [MATH] By using spectral theory for linear operators defined on spaces composed of functions, in certain cases the operator equals an integral or series involving its eigenvectors; this is known as its eigenfunction expansion and is particularly useful in studying linear partial differential equations.

eigenmatrix [MATH] Corresponding to a diagonalizable matrix or linear transformation, this is the matrix all of whose entries are 0 save those on the principal diagonal where appear the eigenvalues.

eigenstate [QUANT MECH] **1.** A dynamical state whose state vector (or wave function) is an eigenvector (or eigenfunction) of an operator corresponding to a specified physical quantity. **2.** *See* energy state.

eigenvalue [MATH] That one of the scalars λ such that $T(v) = \lambda v$, where T is a linear operator on a vector space, and v is an eigenvector. Also known as characteristic number; characteristic root; characteristic value; latent root; proper value.

eigenvalue equation *See* characteristic equation.

eigenvalue problem *See* Sturm-Liouville problem.

eigenvector [MATH] A nonzero vector v whose direction is not changed by a given linear transformation T; that is, $T(v) = \lambda v$ for some scalar λ. Also known as characteristic vector.

eight-D technique *See* 8D technique (in the D's).

eight-level code [COMMUN] A teletypewriter code that uses eight impulses, in addition to the start and stop impulses, to define a character.

eighty-column card [COMPUT SCI] A card with 80 columns of punch positions, and 12 punch positions in each column.

eikonal equation [PHYS] An equation for propagation of electromagnetic or acoustic waves in a nonhomogeneous medium; it is valid only when the variation of the properties of the medium is small over the distance of a wavelength.

eikonometer [OPTICS] A scale used to measure sizes of objects viewed through a microscope, usually attached to the eyepiece so that it is seen superimposed on the image.

Eimeriina [INV ZOO] A suborder of coccidian protozoans in the order Eucoccida in which there is no syzygy and the microgametocytes produce a large number of microgametes.

Einchluss thermometer [ANALY CHEM] All-glass, liquid-filled thermometer, temperature range -201 to $+360°C$, used for laboratory test work.

E indicator *See* E scope.

einkanter [GEOL] A stone shaped by windblown sand only upon one facet.

einstein [PHYS] A unit of light energy used in photochemistry, equal to Avogadro's number times the energy of one photon of light of the frequency in question.

Einstein-Bohr equation [QUANT MECH] In a system undergoing a transition between two states so that it emits or absorbs radiation, that equation indicating that the radiation frequency equals the difference in energy between the two states divided by Planck's constant.

Einstein-Bose statistics *See* Bose-Einstein statistics.

Einstein condensation *See* Bose-Einstein condensation.

Einstein–de Haas effect [ELECTROMAG] A freely suspended body consisting of a ferromagnetic material acquires a rotation when its magnetization changes.

Einstein–de Haas method [ELECTROMAG] Method of measuring the gyromagnetic ratio of a ferromagnetic substance; one measures the angular displacement induced in a ferromagnetic cylinder suspended from a torsion fiber when magnetization of the object is reversed, and the magnetization change is measured with a magnetometer.

Einstein–de Sitter model [RELAT] A model of the universe in which ordinary euclidean geometry holds good, the distribution of matter extends infinitely at all times, and the universe expands from an infinitely condensed state at such a rate that the density is inversely proportional to the square of the time elapsed since the beginning of the expansion.

Einstein diffusion equation [STAT MECH] An equation which gives the mean square displacement caused by Brownian movement of spherical, colloidal particles in a gas or liquid.

Einstein displacement *See* Einstein shift.

Einstein elevator [RELAT] A windowless elevator freely falling in its shaft, inside of which conditions resemble interstellar space; used to elucidate the principle of equivalence.

Einstein equations [STAT MECH] Equations for the density and pressure of a Bose-Einstein gas in terms of power series in a parameter which appears in the Bose-Einstein distribution law.

Einstein frequency [SOLID STATE] Single frequency with which each atom vibrates independently of other atoms, in a model of lattice vibrations; equal to the frequency observed in infrared absorption studies.

Einstein frequency condition [SOLID STATE] The assumption that all vibrations of a crystal lattice are harmonic with the same characteristic frequency.

einsteinium [CHEM] Synthetic radioactive element, symbol Es, atomic number 99; discovered in debris of 1952 hydrogen bomb explosion; now made in cyclotrons.

Einstein mass-energy relation [RELAT] The relation in which the energy of a system is equivalent to its mass times the square of the speed of light.

Einstein number [PL PHYS] A dimensionless number used in magnetofluid dynamics, equal to the ratio of the velocity of a fluid to the speed of light.

Einstein partition function [STAT MECH] The partition function for a solid, based on the Einstein frequency condition.

Einstein photochemical equivalence law [PHYS CHEM] The law that each molecule taking part in a chemical reaction caused by electromagnetic radiation absorbs one photon of the radiation. Also known as Stark-Einstein law.

Einstein photoelectric law [QUANT MECH] The law that the energy of an electron emitted from a system in the photoelectric effect is $h\nu - W$, where h is Planck's constant, ν is the frequency of the incident radiation, and W is the energy needed to remove the electron from the system; if $h\nu$ is less than W, no electrons are emitted.

Einstein-Planck law [QUANT MECH] The law that the energy of a photon is given by Planck's constant times the frequency. [RELAT] The equation of motion of a charged particle in an electromagnetic field, according to which its rate of change of momentum is equal to the Lorentz force, where the magnitude of the momentum is $mv/(1 - v^2/c^2)^{1/2}$, where m and v are the particle's mass and velocity, and c is the speed of light.

Einstein relation [PHYS] The relation in which the mobility of charges in an ionic solution or semiconductor is equal to the magnitude of the charge times the diffusion coefficient divided by the product of the Boltzmann constant and the absolute temperature.

Einstein-Rosen waves [RELAT] Gravitational waves produced by oscillating ponderable matter, along an infinitely long cylindrical axis, in an exact solution of Einstein's field equations.

Einstein's absorption coefficient [ATOM PHYS] The proportionality constant governing the absorption of electromagnetic radiation by atoms, equal to the number of quanta absorbed per second divided by the product of the energy of radiation per unit volume per unit wave number and the number of atoms in the ground state.

Einstein's equation for specific heat [SOLID STATE] The earliest equation based on quantum mechanics for the specific heat of a solid; uses the assumption that each atom oscillates with the same frequency.

Einstein's equivalency principle *See* equivalence principle.

Einstein's field equations [RELAT] Those equations relevant to the relationship in which the Einstein tensor equals -8π times the energy momentum tensor times the gravitational constant divided by the square of the speed of light. Also known as Einstein's law of gravitation.

Einstein shift [RELAT] A shift toward longer wavelengths of spectral lines emitted by atoms in strong gravitational fields. Also known as Einstein displacement.

Einstein's law of gravitation *See* Einstein's field equations.

Einstein's principle of relativity [RELAT] The principle that all the laws of physics must assume the same mathematical form in any inertial frame of reference; thus, it is impossible to determine the absolute motion of a system by any means.

Einstein's summation convention [MATH] A notational convenience used in tensor analysis whereupon it is agreed that any term in which an index appears twice will stand for the sum of all such terms as the index assumes all of a preassigned range of values.

Einstein static universe [RELAT] A nonvacuum, globally static solution to Einstein's equations of general relativity with cosmological term.

Einstein's unified field theories [RELAT] A series of theories attempting to express a general unifying principle underlying electromagnetism and gravity.

Einstein tensor [RELAT] The tensor expressed as $E_{\mu\nu} = R_{\mu\nu} - \frac{1}{2}(g_{\mu\nu}R - 2\Lambda)$, where $R_{\mu\nu}$ is the contracted curvature tensor, R is the curvature of space-time, $g_{\mu\nu}$ is the metric tensor, and Λ is the cosmological constant.

Einstein universe [RELAT] A model of the universe which is a four-dimensional cylindrical surface in a five-dimensional space.

Einstein viscosity equation [PHYS CHEM] An equation which gives the viscosity of a sol in terms of the volume of dissolved particles divided by the total volume.

Einthoven galvanometer *See* string galvanometer.

ejaculation [PHYSIO] The act or process of suddenly discharging a fluid from the body; specifically, the ejection of semen during orgasm.

ejaculatory duct [ANAT] The terminal part of the ductus deferens after junction with the duct of a seminal vesicle, embedded in the prostate gland and opening into the urethra.

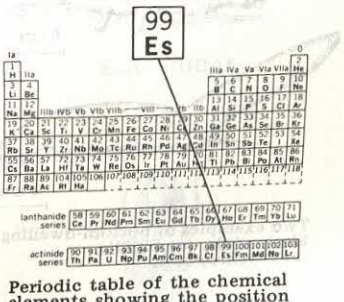
ejecta [GEOL] Material which is discharged by a volcano. [PHYSIO] Excrement. [SCI TECH] Material which is cast out.

ejection [ENG] The process of removing a molding from a mold impression by mechanical means, by hand, or by compressed air. [ORD] The expelling, by the ejector, of the empty cartridge case from small arms and rapid-fire guns.

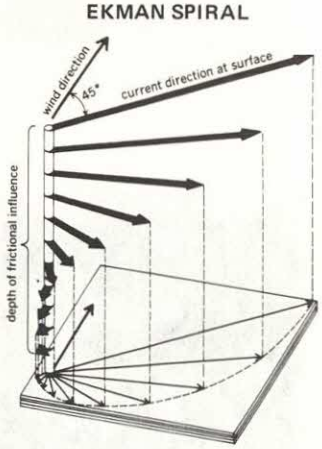
ejection capsule [AERO ENG] In an aircraft or spacecraft, a detachable compartment (serving as a cockpit or cabin) or a payload capsule which may be ejected as a unit and parachuted to the ground.

ejection port [ORD] The opening in the receiver portion of a

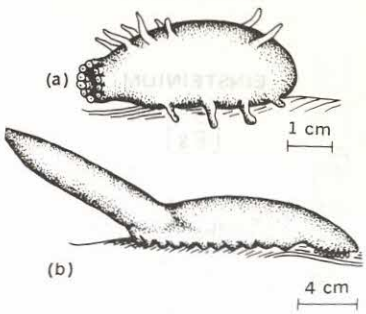
EINSTEINIUM



Periodic table of the chemical elements showing the position of einsteinium.



Schematic of pure wind current in deep water, showing decrease in velocity and change of direction at regular intervals of depth (the Ekman spiral).



Two examples of bottom-dwelling Elasipodida. *(a) Elpidia. (b) Psychropotes.*

firearm through which the empty shell cases are thrown from the firearm after firing.

ejection seat [AERO ENG] Emergency device which expels the pilot safely from a high-speed airplane.

ejector [ENG] **1.** Any of various types of jet pumps used to withdraw fluid materials from a space. Also known as eductor. **2.** A device that ejects the finished casting from a mold. [ORD] A device in the breech mechanism of a gun, rifle, or other firearm which automatically throws out an empty cartridge case, or unfired cartridge, from the breech or receiver.

ejector condenser [MECH ENG] A type of direct-contact condenser in which vacuum is maintained by high-velocity injection water; condenses steam and discharges water, condensate, and noncondensables to the atmosphere.

ejector half [MET] The movable half of a casting die.

ejector pin [ENG] A pin driven into the rear of a mold cavity to force the finished piece out. Also known as knockout pin.

ejector plate [ENG] The plate backing up the ejector pins and holding the ejector assembly together.

ejector rod [ENG] A rod that activates the ejector assembly of a mold when it is opened.

EKG *See* electrocardiogram.

Ekman convergence [OCEANOGR] A zone of convergence of warm surface water caused by Ekman transport, creating a marked depression of the ocean's thermocline in the affected area.

Ekman current meter [ENG] A mechanical device for measuring ocean current velocity which incorporates a propeller and a magnetic compass and can be suspended from a moored ship.

Ekman layer [METEOROL] The layer of transition between the surface boundary layer of the atmosphere, where the shearing stress is constant, and the free atmosphere, which is treated as an ideal fluid in approximate geostrophic equilibrium. Also known as spiral layer.

Ekman spiral [METEOROL] A theoretical representation that a wind blowing steadily over an ocean of unlimited depth and extent and uniform viscosity would cause, in the Northern Hemisphere, the immediate surface water to drift at an angle of 45° to the right of the wind direction, and the water beneath to drift further to the right, and with slower and slower speeds, as one goes to greater depths.

Ekman sucking [FL MECH] A boundary-layer phenomenon in which fluid near the bottom of a spinning vessel is drawn toward the edge of the vessel along the bottom.

Ekman transport [OCEANOGR] The movement of ocean water caused by wind blowing steadily over the surface; occurs at right angles to the wind direction.

Ekman water bottle [ENG] A cylindrical tube fitted with plates at both ends and used for deep-water samplings; when hit by a messenger it turns 180°, closing the plates and capturing the water sample.

Elaeagnaceae [BOT] A family of dicotyledonous plants in the order Proteales, noted for peltate leaf scales which often give the leaves a silvery-gray appearance.

elaidic acid [ORG CHEM] $CH_3(CH_2)_7CH{:}CH(CH_2)_7COOH$ A transisomer of an unsaturated fatty acid, oleic acid; crystallizes as colorless leaflets, melts at 44°C, boils at 288°C (100 mm Hg), insoluble in water, soluble in alcohol and ether; used in chromatography as a reference standard. Also known as *trans*-9-octadecenoic acid.

elaidinization [ORG CHEM] The process of changing the geometric cis form of an unsaturated fatty acid or a compound related to it into the trans form, resulting in an acid that is more resistant to oxidation.

elaidin reaction [ANALY CHEM] A test that differentiates nondrying oils such as olein from semidrying oils and drying oils; nitrous acid converts olein into its solid isomer, while semidrying oils in contact with nitrous acid thicken slowly, and drying oils such as tung oil become hard and resinous.

elaioplast [HISTOL] An oil-secreting leucoplast.

Elaphomycetaceae [MYCOL] A family of underground, saprophytic or mycorrhiza-forming fungi in the order Eurotiales characterized by ascocarps with thick, usually woody walls.

Elapidae [VERT ZOO] A family of poisonous reptiles, including cobras, kraits, mambas, and coral snakes; all have a pteroglyph fang arrangement.

Elara [ASTRON] A small satellite of Jupiter with a diameter of about 20 miles (32 kilometers), orbiting at a mean distance of 7.29×10^6 miles (11.73×10^6 kilometers). Also known as Jupiter VII.

Elasipodida [INV ZOO] An order of deep-sea aspidochirotacean holothurians in which there are no respiratory trees and bilateral symmetry is often quite conspicuous.

Elasmidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

Elasmobranchii [VERT ZOO] The sharks and rays, a subclass of the class Chondrichthyes distinguished by separate gill openings, amphistylic or hyostylic jaw suspension, and ampullae of Lorenzini in the head region.

Elassomatidae [VERT ZOO] The pygmy sunfishes, a family of the order Perciformes.

elastance [ELEC] The reciprocal of capacitance.

elastase [BIOCHEM] An enzyme which acts on elastin to change it chemically and render it soluble.

elastic [MECH] Capable of sustaining deformation without permanent loss of size or shape.

elastica [MECH] The elastic curve formed by a uniform rod that is originally straight, then is bent in a principal plane by applying forces, and couples only at its ends.

elastic aftereffect [MECH] The delay of certain substances in regaining their original shape after being deformed within their elastic limits. Also known as elastic lag.

elastic axis [MECH] The lengthwise line of a beam along which transverse loads must be applied in order to produce bending only, with no torsion of the beam at any section.

elastic bitumen *See* elaterite.

elastic body [MECH] A solid body for which the additional deformation produced by an increment of stress completely disappears when the increment is removed. Also known as elastic solid.

elastic buckling [MECH] An abrupt increase in the lateral deflection of a column at a critical load while the stresses acting on the column are wholly elastic.

elastic cartilage [HISTOL] A type of cartilage containing elastic fibers in the matrix.

elastic center [MECH] That point of a beam in the plane of the section lying midway between the flexural center and the center of twist in that section.

elastic collision [MECH] A collision in which the sum of the kinetic energies of translation of the participating systems is the same after the collision as before.

elastic constant *See* compliance constant; stiffness constant.

elastic cross section [PHYS] The cross section for an elastic collision between two particles or systems.

elastic curve [MECH] The curved shape of the longitudinal centroidal surface of a beam when the transverse loads acting on it produced wholly elastic stresses.

elastic deformation [MECH] Reversible alteration of the form or dimensions of a solid body under stress or strain.

elastic failure [MECH] Failure of a body to recover its original size and shape after a stress is removed.

elastic fiber [HISTOL] A homogeneous, fibrillar connective tissue component that is highly refractile and appears yellowish when arranged in bundles.

elastic flow [MECH] Return of a material to its original shape following deformation.

elastic force [MECH] A force arising from the deformation of a solid body which depends only on the body's instantaneous deformation and not on its previous history, and which is conservative.

elastic hysteresis [MECH] Phenomenon exhibited by some solids in which the deformation of the solid depends not only on the stress applied to the solid but also on the previous history of this stress; analogous to magnetic hysteresis, with magnetic field strength and magnetic induction replaced by stress and strain respectively.

elasticity [MECH] **1.** The property whereby a solid material changes its shape and size under action of opposing forces, but recovers its original configuration when the forces are removed. **2.** The existence of forces which tend to restore to its original position any part of a medium (solid or fluid) which has been displaced.

elasticity modulus *See* modulus of elasticity.

elasticity number 1 [FL MECH] A dimensionless number which is a measure of the ratio of elastic forces to inertial forces on a viscoelastic fluid flowing in a pipe, and is equal to the product of the fluid's relaxation time and its dynamic viscosity,

divided by the product of the fluid's density and the square of the radius of the pipe. Symbolized N_{El}.

elasticity number 2 [FL MECH] A dimensionless number used in studying the effect of elasticity on a flow process, equal to the fluid's density times its specific heat at constant pressure, divided by the product of its coefficient of bulk expansion and its bulk modulus. Symbolized K_E.

elastic lag *See* elastic aftereffect.

elastic limit [MECH] The maximum stress a solid can sustain without undergoing permanent deformation.

elastic modulus *See* modulus of elasticity.

elasticoviscosity [FL MECH] That property of a fluid whose rate of deformation under stress is the sum of a part corresponding to a viscous Newtonian fluid and a part obeying Hooke's law.

elastic potential energy [MECH] Capacity that a body has to do work by virtue of its deformation.

elastic ratio [MECH] The ratio of the elastic limit to the ultimate strength of a solid.

elastic rebound theory [GEOL] A theory which attributes faulting to stresses (in the form of potential energy) which are being built up in the earth and which, at discrete intervals, are suddenly released as elastic energy; at the time of rupture the rocks on either side of the fault spring back to a position of little or no strain.

elastic recovery [MECH] That fraction of a given deformation of a solid which behaves elastically.

elastic scattering [MECH] Scattering due to an elastic collision.

elastic solid *See* elastic body.

elastic strain energy [MECH] The work done in deforming a solid within its elastic limit.

elastic theory [MECH] Theory of the relations between the forces acting on a body and the resulting changes in dimensions.

elastic tissue [HISTOL] A type of connective tissue having a predominance of elastic fibers, bands, or lamellae.

elastic vibration [MECH] Oscillatory motion of a solid body which is sustained by elastic forces and the inertia of the body.

elastic wave [ACOUS] *See* acoustic wave. [PHYS] A wave propagated by a medium having inertia and elasticity (the existence of forces which tend to restore any part of a medium to its original position), in which displaced particles transfer momentum to adjoining particles, and are themselves restored to their original position.

elastin [BIOCHEM] An elastic protein composing the principal component of elastic fibers.

elastodynamics [MECH] The study of the mechanical properties of elastic waves.

elastomer [MATER] A material, such as a synthetic rubber or plastic, which at room temperature can be stretched under low stress to at least twice its original length and, upon immediate release of the stress, will return with force to its approximate original length.

elastoplasticity [MECH] State of a substance subjected to a stress greater than its elastic limit but not so great as to cause it to rupture, in which it exhibits both elastic and plastic properties.

elastoresistance [ELEC] The change in a material's electrical resistance as it undergoes a stress within its elastic limit.

elastosis [MED] **1.** Retrogressive change in elastic tissue. **2.** Retrogressive change in cutaneous connective tissue resulting in excessive amounts of material which give the staining reactions for elastin.

elater [BOT] A spiral, filamentous structure that functions in the dispersion of spores in certain plants, such as liverworts and slime molds.

Elateridae [INV ZOO] The click beetles, a large family of coleopteran insects in the superfamily Elateroidea; many have light-producing organs.

elaterite [GEOL] A light-brown to black asphaltic pyrobitumen that is moderately soft and elastic. Also known as elastic bitumen; mineral caoutchouc.

Elateroidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

elaterophore [BOT] A tissue bearing elaters, found in some liverworts.

E layer [GEOPHYS] A layer of ionized air occurring at altitudes between 100 and 120 kilometers in the E region of the ionosphere, capable of bending radio waves back to earth. Also known as Heaviside layer; Kennelly-Heaviside layer.

elbow [ANAT] The arm joint formed at the junction of the humerus, radius, and ulna. [DES ENG] **1.** A fitting that connects two pipes at an angle, often of 90°. **2.** A sharp corner in a pipe. [ELECTROMAG] In a waveguide, a bend of comparatively short radius, normally 90°, and sometimes for acute angles down to 15°. [GEOGR] A sharp change in direction of a coast line, channel, bank, or so on.

elbow meter [ENG] Pipe elbow used as a liquids flowmeter; flow rate is measured by determining the differential pressure developed between the inner and outer radii of the bend by means of two pressure taps located midway on the bend.

Elbs reaction [ORG CHEM] The formation of anthracene derivatives by dehydration and cyclization of diaryl ketone compounds which have a methyl group or methylene group; heating to an elevated temperature is usually required.

elective culture [MICROBIO] A type of microorganism grown selectively from a mixed culture by culturing in a medium and under conditions selective for only one type of organism.

electra [NAV] A continuous-wave radio navigation aid that uses special radio beacons to provide a number (usually 24) of equisignal zones.

Electra complex [PSYCH] The female analog of the Oedipus complex, that is, the attraction and attachment of a female child to the father.

electret [ELEC] A solid dielectric possessing persistent electric polarization, by virtue of a long time constant for decay of a charge instability.

electret headphone [ENG ACOUS] A headphone consisting of an electret transducer, usually in the form of a push-pull transducer.

electret microphone [ENG ACOUS] A microphone consisting of an electret transducer in which the foil electret diaphragm is placed next to a perforated, ridged, metal or metal-coated backplate, and output voltage, taken between diaphragm and backplate, is proportional to the displacement of the diaphragm.

electret transducer [ELECTR] An electroacoustic or electromechanical transducer in which a foil electret, stretched out to form a diaphragm, is placed next to a metal or metal-coated plate, and motion of the diaphragm is converted to voltage between diaphragm and plate, or vice versa.

electric [ELEC] Containing, producing, arising from, or actuated by electricity; often used interchangeably with electrical.

electric accounting machine [COMPUT SCI] Data-processing equipment that is predominantly electromechanical in nature, such as sorters, collectors, and tabulators. Abbreviated EAM.

electrical [ELEC] Related to or associated with electricity, but not containing it or having its properties or characteristics; often used interchangeably with electric.

electrical analog [PHYS] An electric circuit whose behavior may be described by the same mathematical equations as some physical system under study.

electrical angle [ELEC] An angle that specifies a particular instant in an alternating-current cycle or expresses the phase difference between two alternating quantities; usually expressed in electrical degrees.

electrical axis [SOLID STATE] The x axis in a quartz crystal; there are three such axes in a crystal, each parallel to one pair of opposite sides of the hexagon; all pass through and are perpendicular to the optical, or z, axis.

electrical blasting cap [ENG] A blasting cap ignited by electric current and not by a spark.

electrical breakdown *See* breakdown.

electrical calorimeter [ANALY CHEM] Device to measure heat evolved (from fusion or vaporization, for example); measured quantities of heat are added electrically to the sample, and the temperature rise is noted.

electrical center [ELEC] Point approximately midway between the ends of an inductor or resistor that divides the inductor or resistor into two equal electrical values.

electrical circuit theory *See* circuit theory.

electrical code [ELEC] A systematic body of rules governing the practical application and installation of electrically operated equipment and devices and electric wiring systems.

electrical condenser *See* capacitor.

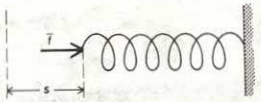
electrical conductance *See* conductance.

electrical conduction *See* conduction.

electrical conductivity *See* conductivity.

electrical conductivity analyzer [ELEC] Alternating-cur-

ELASTIC POTENTIAL ENERGY



A compressed spring possesses potential energy. Here s is the distance that the spring has been compressed from its normal length, and $\bar{f}$ is the average force of compression. It can be shown from Hooke's law that $\bar{f} = \frac{1}{2}ks$, where k is a constant known as the stiffness coefficient of the spring. It follows that the elastic potential energy of the compressed spring is $\frac{1}{2}ks^2$.

ELATERIDAE

External features of the click beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

rent, resistance-bridge device used to measure the electrical conductivity of solutions, slurries, or wet solids.

electrical degree [ELEC] A unit equal to $\frac{1}{360}$ cycle of an alternating quantity.

electrical discharge machining *See* electron discharge machining.

electrical disintegration [MET] Removing excess metal by using an electric spark in air.

electrical distance [ELECTROMAG] The distance between two points, expressed in terms of the duration of travel of an electromagnetic wave in free space between the two points.

electrical drainage [ELEC] Diversion of electric currents from subterranean pipes to prevent electrolytic corrosion.

electrical engineer [ENG] An engineer whose training includes a degree in electrical engineering from an accredited college or university (or who has comparable knowledge and experience), to prepare him for dealing with the generation, transmission, and utilization of electric energy.

electrical engineering [ENG] Engineering that deals with practical applications of electricity; generally restricted to applications involving current flow through conductors, as in motors and generators.

electrical equipment [ELEC] Apparatus, appliances, devices, wiring, fixtures, fittings, and material used as a part of or in connection with an electrical installation.

electrical equivalent [ANALY CHEM] In conductometric analyses of electrolyte solutions, an outside, calibrated current source as compared to (equivalent to) the current passing through the sample under analysis; for example, a Wheatstone-bridge balanced reading.

electrical fault *See* fault.

electrical impedance Also known as impedance. [ELEC] **1.** The total opposition that a circuit presents to an alternating current, equal to the complex ratio of the voltage to the current in complex notation. Also known as complex impedance. **2.** The ratio of the maximum voltage in an alternating-current circuit to the maximum current; equal to the magnitude of the quantity in the first definition.

electrical impedance meter [ELEC] An instrument which measures the complex ratio of voltage to current in a given circuit at a given frequency. Also known as impedance meter.

electrical instability [ELEC] A persistent condition of unwanted self-oscillation in an amplifier or other electric circuit.

electrical insulating paper *See* insulating paper.

electrical insulation *See* insulation.

electrical insulator *See* insulator.

electrical interference *See* interference.

electrical length [ELECTROMAG] The length of a conductor expressed in wavelengths, radians, or degrees.

electrical loading *See* loading.

electrical log [ENG] Recorded measurement of the conductivities and resistivities down the length of an uncased borehole; gives a complete record of the formations penetrated.

electrical logging [ENG] The recording in uncased sections of a borehole of the conductivities and resistivities of the penetrated formations; used for geological correlation of the strata and evaluation of possibly productive horizons. Also known as electrical well logging.

electrically alterable read-only memory [COMPUT SCI] A read-only memory that can be reprogrammed electrically in the field a limited number of times, after the entire memory is erased by applying an appropriate electric field. Abbreviated EAROM.

electrically connected [ELEC] Connected by means of a conducting path, or through a capacitor, as distinguished from connection merely through electromagnetic induction.

electrically suspended gyro [ENG] A gyroscope in which the main rotating element is suspended by an electromagnetic or an electrostatic field.

electrical measurement [ELEC] The measurement of any one of the many quantities by which electricity is characterized.

electrical noise [ELEC] Noise generated by electrical devices, for example, motors, engine ignition, power lines, and so on, and propagated to the receiving antenna direct from the noise source.

electrical oil *See* insulating oil.

electrical porcelain *See* insulation porcelain.

electrical potential energy [ELEC] Energy possessed by electric charges by virtue of their position in an electrostatic field.

electrical pressure transducer *See* pressure transducer.

electrical properties [ELEC] Properties of a substance which determine its response to an electric field, such as its dielectric constant or conductivity.

electrical prospecting [ENG] The use of downhole electrical logs to obtain subsurface information for geological analysis.

electrical resistance *See* resistance.

electrical resistance meter *See* resistance meter.

electrical-resistance strain gage [ENG] A vibration-measuring device consisting of a grid of fine wire cemented to the vibrating object to measure fluctuating strains.

electrical resistance thermometer *See* resistance thermometer.

electrical resistivity [ELEC] The electrical resistance offered by a material to the flow of current, times the cross-sectional area of current flow and per unit length of current path; the reciprocal of the conductivity. Also known as resistivity; specific resistance.

electrical resistor *See* resistor.

electrical resonator *See* tank circuit.

electrical steel [MET] Low carbon–iron alloy containing 0.5–5% silicon, produced in an electric-arc furnace and used for the cores of transformers, alternators, and other iron-core electric machines.

electrical storm [METEOROL] A popular term for a thunderstorm.

electrical symbol [ELEC] A simple geometrical symbol used to represent a component of a circuit in a schematic circuit diagram.

electrical system [ELEC] System of wiring, switches, relays, and other equipment associated with receiving and distributing electricity.

electrical tape *See* insulating tape.

electrical thickness [OCEANOGR] The vertical measure between the surface of an ocean current and an isokinetic point having a value of about one-tenth the surface speed.

electrical transcription *See* transcription.

electrical unit [ELEC] A standard in terms of which some electrical quantity is evaluated.

electrical weighing system [ENG] An instrument which weighs an object by measuring the change in resistance caused by the elastic deformation of a mechanical element loaded with the object.

electrical well logging *See* electrical logging.

electrical zero [ELEC] A standard reference position from which rotor angles are measured in synchros and other rotating devices.

electric anesthesia [MED] Anesthesia produced by electrical means, as with interrupted direct current.

electric arc [ELEC] A discharge of electricity through a gas, normally characterized by a voltage drop approximately equal to the ionization potential of the gas. Also known as arc.

electric-arc furnace *See* arc furnace.

electric-arc heating *See* arc heating.

electric-arc lamp *See* arc lamp.

electric-arc spraying [MET] A thermal spraying process with an electric arc as a heat source and with compressed gas to propel the material.

electric-arc welding [MET] Welding in which the joint is heated to fusion by an electric arc or by a large electric current. Also known as arc welding.

electric battery *See* battery.

electric boiler [MECH ENG] A steam generator using electric energy, in immersion, resistor, or electrode elements, as the source of heat.

electric brake [MECH ENG] An actuator in which the actuating force is supplied by current flowing through a solenoid, or through an electromagnet which is thereby attracted to disks on the rotating member, actuating the brake shoes; this force is counteracted by the force of a compression spring. Also known as electromagnetic brake.

electric bridge *See* bridge.

electric burn [MED] A burn caused by electric current.

electric calamine *See* hemimorphite.

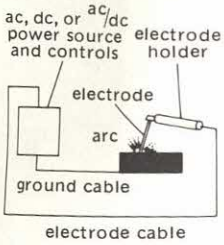
electric cell [ELEC] **1.** A single unit of a primary or secondary battery that converts chemical energy into electric energy. **2.** A single unit of a device that converts radiant energy into electric energy, such as a nuclear, solar, or photovoltaic cell.

electric charge *See* charge.

ELECTRICAL IMPEDANCE METER

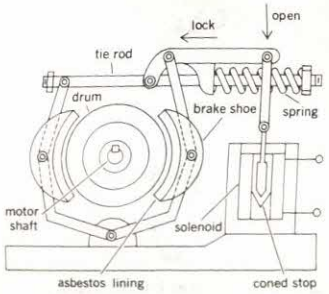
The Madsen impedance meter uses an acoustic bridge as the basic component for testing deafness.

ELECTRIC-ARC WELDING



Fundamental connections of electric equipment and workpiece for arc welding.

ELECTRIC BRAKE



Actuating force applied to a double-block electric brake.

electric chopper [ELECTROMAG] A chopper in which an electromagnet driven by a source of alternating current sets into vibration a reed carrying a moving contact that alternately touches two fixed contacts in a signal circuit, thus periodically interrupting the signal.

electric circuit [ELEC] Also known as circuit. **1.** A path or group of interconnected paths capable of carrying electric currents. **2.** An arrangement of one or more complete, closed paths for electron flow.

electric circuit theory *See* circuit theory.

electric clock [HOROL] **1.** Any clock that is operated by electric power. **2.** Specifically, a clock driven by an alternating-current motor whose current has a definite frequency, controlled at the generator.

electric coil *See* coil.

electric comparator [ELEC] A comparator in which movement results in a change in some electrical quantity, which is then amplified by electrical means.

electric condenser *See* capacitor.

electric conductor *See* conductor.

electric connection [ELEC] A direct wire path for current between two points in a circuit.

electric connector [ELEC] A device that joins electric conductors mechanically and electrically to other conductors and to the terminals of apparatus and equipment.

electric constant [ELEC] The permittivity of empty space, equal to 1 in centimeter-gram-second electrostatic units and to $10^7/4\pi c^2$ farads per meter or, numerically, to 8.854×10^{-12} farads per meter in International System units, where c is the speed of light in meters per second. Symbolized ϵ_0.

electric contact [ELEC] A physical contact that permits current flow between conducting parts. Also known as contact.

electric contactor *See* contactor.

electric control [ELEC] The control of a machine or device by switches, relays, or rheostats, as contrasted with electronic control by electron tubes or by devices that do the work of electron tubes.

electric controller [ELEC] A device that governs in some predetermined manner the electric power delivered to apparatus.

electric converter *See* synchronous converter.

electric corona *See* corona discharge.

electric coupling [MECH ENG] Magnetic-field coupling between the shafts of a driver and a driven machine.

electric current *See* current.

electric current density *See* current density.

electric current meter *See* ammeter.

electric cutout *See* cutout.

electric delay line [ELECTR] A delay line using properties of lumped or distributed capacitive and inductive elements; can be used for signal storage by recirculating information-carrying wave patterns.

electric desalting [CHEM ENG] A process to remove impurities such as inorganic salts from crude oil by settling out in an electrostatic field.

electric detonator [ENG] A detonator ignited by a fuse wire which serves to touch off the primer.

electric dipole [ELEC] A localized distribution of positive and negative electricity, without net charge, whose mean positions of positive and negative charges do not coincide.

electric dipole moment [ELEC] A quantity characteristic of a charge distribution, equal to the vector sum over the electric charges of the product of the charge and the position vector of the charge.

electric dipole transition [ATOM PHYS] A transition of an atom or nucleus from one energy state to another, in which electric dipole radiation is emitted or absorbed.

electric discharge *See* discharge.

electric-discharge lamp *See* discharge lamp.

electric-discharge tube *See* discharge tube.

electric displacement [ELEC] The electric field intensity multiplied by the permittivity. Symbolized D. Also known as dielectric displacement; dielectric flux density; displacement; electric displacement density; electric flux density; electric induction.

electric displacement density *See* electric displacement.

electric distribution system *See* distribution system.

electric double layer [PHYS CHEM] A phenomenon found at a solid-liquid interface; it is made up of ions of one charge type which are fixed to the surface of the solid and an equal number of mobile ions of the opposite charge which are distributed through the neighboring region of the liquid; in such a system the movement of liquid causes a displacement of the mobile counterions with respect to the fixed charges on the solid surface. Also known as double layer.

electric doublet *See* dipole.

electric drive [MECH ENG] A mechanism which transmits motion from one shaft to another and controls the velocity ratio of the shafts by electrical means.

electric eel [VERT ZOO] *Electrophorus electricus*. An eellike cypriniform electric fish of the family Gymnotidae.

electric energy [ELECTROMAG] **1.** Energy of electric charges by virtue of their position in an electric field. **2.** Energy of electric currents by virtue of their position in a magnetic field.

electric energy measurement [ELEC] The measurement of the integral, with respect to time, of the power in an electric circuit.

electric energy meter [ELEC] A device which measures the integral, with respect to time, of the power in an electric circuit.

electric engine [AERO ENG] A rocket engine in which the propellant is accelerated by some electric device. Also known as electric propulsion system; electric rocket.

electric eye *See* cathode-ray tuning indicator; photocell; phototube.

electric fence [ENG] A fence consisting of one or more lengths of wire energized with high-voltage, low-current pulses, and giving a warning shock when touched.

electric field [ELEC] **1.** One of the fundamental fields in nature, causing a charged body to be attracted to or repelled by other charged bodies; associated with an electromagnetic wave or a changing magnetic field. **2.** Specifically, the electric force per unit test charge.

electric field effect *See* Stark effect.

electric field intensity *See* electric field vector.

electric field strength *See* electric field vector.

electric field vector [ELEC] The force on a stationary positive charge per unit charge at a point in an electric field. Designated **E**. Also known as electric field intensity; electric field strength; electric vector.

electric filter [ELECTR] **1.** A network that transmits alternating currents of desired frequencies while substantially attenuating all other frequencies. Also known as frequency-selective device. **2.** *See* filter.

electric firing mechanism [ORD] Firing mechanism using a firing magneto, battery, or alternating-current power in circuit with an electric primer; one side of the line is connected by an insulated wire to the primer, and the other side is grounded to the frame of the weapon.

electric fish [VERT ZOO] Any of several fishes capable of producing electric discharges from an electric organ.

electric flowmeter [ELEC] Fluid-flow measurement device relying on an inductance or impedance bridge or on electrical-resistance rod elements to sense flow-rate variations.

electric flux [ELEC] **1.** The integral over a surface of the component of the electric displacement perpendicular to the surface; equal to the number of electric lines of force crossing the surface. **2.** The electric lines of force in a region.

electric flux density *See* electric displacement.

electric flux line *See* electric line of force.

electric forming [ELECTR] The process of applying electric energy to a semiconductor or other device to modify permanently its electrical characteristics.

electric furnace [ENG] A furnace which uses electricity as a source of heat.

electric-furnace steel [MET] Steel produced in an electric furnace.

electric fuse *See* fuse.

electric gathering locomotive *See* gathering motor.

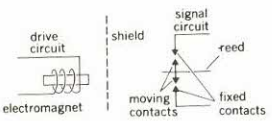
electric generator *See* generator.

electric guitar [ENG ACOUS] A guitar in which a contact microphone placed under the strings picks up the acoustic vibrations for amplification and for reproduction by a loudspeaker.

electric hammer [MECH ENG] An electric-powered hammer; often used for riveting or caulking.

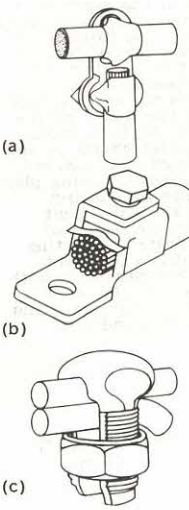
electric heating [ENG] Any method of converting electric

ELECTRIC CHOPPER



Basic chopper structure.

ELECTRIC CONNECTOR



Types of electric connectors. *(a)* T connector. *(b)* Terminal connector. *(c)* Split-bolt connector.

energy to heat energy by resisting the free flow of electric current.

electric hygrometer [ENG] An instrument for indicating by electrical means the humidity of the ambient atmosphere; usually based on the relation between the electric conductance of a film of hygroscopic material and its moisture content.

electric hysteresis *See* ferroelectric hysteresis.

electrician [ENG] A skilled worker who installs, repairs, maintains, or operates electric equipment.

electric ignition [MECH ENG] Ignition of a charge of fuel vapor and air in an internal combustion engine by passing a high-voltage electric current between two electrodes in the combustion chamber.

electric image [ELEC] A fictitious charge used in finding the electric field set up by fixed electric charges in the neighborhood of a conductor; the conductor, with its distribution of induced surface charges, is replaced by one or more of these fictitious charges. Also known as image.

electric induction *See* electric displacement.

electric instrument [ENG] An electricity-measuring device that indicates, such as an ammeter or voltmeter, in contrast to an electric meter that totalizes or records.

electricity [PHYS] Physical phenomenon involving electric charges and their effects when at rest and when in motion.

electric lamp [ELEC] A lamp in which light is produced by electricity, as the incandescent lamp, arc lamp, glow lamp, mercury-vapor lamp, and fluorescent lamp.

electric line of force [ELEC] An imaginary line drawn so that each segment of the line is parallel to the direction of the electric field or of the electric displacement at that point, and the density of the set of lines is proportional to the electric field or electrical displacement. Also known as electric flux line.

electric locomotive [MECH ENG] A locomotive operated by electric power picked up from a system of continuous overhead wires, or, sometimes, from a third rail mounted alongside the track.

electric main *See* power transmission line.

electric meter [ENG] An electricity-measuring device that totalizes with time, such as a watthour meter or ampere-hour meter, in contrast to an electric instrument.

electric moment [ELEC] One of a series of quantities characterizing an electric charge distribution; an l-th moment is given by integrating the product of the charge density, the l-th power of the distance from the origin, and a spherical harmonic Y^*_{lm} over the charge distribution.

electric monopole [ELEC] A distribution of electric charge which is concentrated at a point or is spherically symmetric.

electric motor *See* motor.

electric multipole [ELECTROMAG] One of a series of types of static or oscillating charge distributions; the multipole of order l is a point charge or a spherically symmetric distribution, and the electric and magnetic fields produced by an electric multipole of order 2^n are equivalent to those of two electric multipoles of order 2^{n-1} of equal strengths, but opposite sign, separated from each other by a short distance.

electric multipole field [ELECTROMAG] The electric and magnetic fields generated by a static or oscillating electric multipole.

electric network *See* network.

electric octupole moment [ELEC] A quantity characterizing an electric charge distribution; obtained by integrating the product of the charge density, the third power of the distance from the origin, and a spherical harmonic Y^*_{3m} over the charge distribution.

electric organ [VERT ZOO] An organ consisting of rows of electroplaques which produce an electric discharge.

electric outlet *See* outlet.

electric polarizability [ELEC] Induced dipole moment of an atom or molecule in a unit electric field.

electric polarization *See* polarization.

electric potential [ELEC] The work which must be done against electric forces to bring a unit charge from a reference point to the point in question; the reference point is located at an infinite distance, or, for practical purposes, at the surface of the earth or some other large conductor. Also known as electrostatic potential; potential.

electric power [ELEC] The rate at which electric energy is converted to other forms of energy, equal to the product of the current and the voltage drop.

electric power generation [MECH ENG] The large-scale production of electric power for industrial, residential, and rural use, generally in stationary plants designed for that purpose.

electric power line *See* power line.

electric power meter [ENG] A device that measures electric power consumed, either at an instant, as in a wattmeter, or averaged over a time interval, as in a demand meter. Also known as power meter.

electric power plant [MECH ENG] A power plant that converts a form of raw energy into electricity, for example, a hydro, steam, diesel, or nuclear generating station for stationary or transportation service.

electric power station [ELEC] A generating station or an electric power substation.

electric power substation [ELEC] An assembly of equipment in an electric power system through which electric energy is passed for transmission, transformation, distribution, or switching. Also known as substation.

electric power system [MECH ENG] A complex assemblage of equipment and circuits for generating, transmitting, transforming, and distributing electric energy.

electric power transmission [ELEC] Process of transferring electric energy from one point to another in an electric power system.

electric precipitation [CHEM ENG] A process that utilizes an electric field to improve the separation of hydrocarbon reagent dispersions.

electric pressure transducer *See* pressure transducer.

electric probe [PL PHYS] A device used to measure electron temperatures, electron and ion densities, space and wall potentials, and random electron currents in a plasma; consists substantially of one or two small collecting electrodes to which various potentials are applied, with the corresponding collection currents being measured. Also known as electrostatic probe.

electric propulsion [AERO ENG] A general term encompassing all the various types of propulsion in which the propellant consists of electrically charged particles which are accelerated by electric or magnetic fields, or both.

electric propulsion system *See* electric engine.

electric protective device [ELEC] A particular type of equipment used in electric power systems to detect abnormal conditions and to initiate appropriate corrective action. Also known as protective device.

electric quadrupole [ELEC] A charge distribution that produces an electric field equivalent to that produced by two electric dipoles whose dipole moments have the same magnitude but point in opposite directions and which are separated from each other by a small distance.

electric quadrupole lens [ELECTR] A device for focusing beams of charged particles which has four electrodes with alternately positive and negative polarity; used in electron microscopes and particle accelerators.

electric quadrupole moment [ELEC] A quantity characterizing an electric charge distribution, obtained by integrating the product of the charge density, the second power of the distance from the origin, and a spherical harmonic Y^*_{2m} over the charge distribution.

electric quadrupole transition [ATOM PHYS] A transition of an atom or molecule from one energy state to another, in which electric quadrupole radiation is emitted or absorbed.

electric raceway *See* raceway.

electric railroad [MECH ENG] A railroad which has a system of continuous overhead wires or a third rail mounted alongside the track to supply electric power to the locomotive and cars.

electric reactor *See* reactor.

electric relay *See* relay.

electric resistance *See* resistance.

electric resistance furnace *See* resistance furnace.

electric rocket *See* electric engine.

electric rotating machinery [ELEC] Any form of apparatus which has a rotating member and generates, converts, transforms, or modifies electric power, such as a motor, generator, or synchronous converter.

electric scanning [ELECTR] Scanning in which the required changes in radar beam direction are produced by variations in phase or amplitude of the currents fed to the various elements of the antenna array.

electric shielding [ELECTROMAG] Any means of avoiding pickup of undesired signals or noise, suppressing radiation of undesired signals, or confining wanted signals to desired paths

ELECTRIC IMAGE

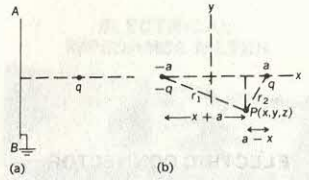


Illustration of the method of electric images. *(a)* Point charge q at distance a in front of an infinite grounded conducting plane AB. The problem is to find the potential function and equation for electric field intensity in the region to the right of AB, the field being caused by point charge q, and its equal distributed induced charge on the conducting plane. *(b)* Physically simpler but mathematically equivalent situation for the region of interest. Infinite conducting plane is replaced by point charge $-q$. Potential at P with coordinates (x,y,z) is that resulting from charges $-q$ and q at distances r_1 and r_2 respectively.

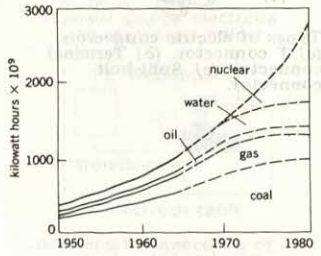
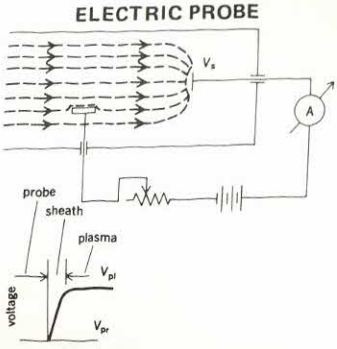
ELECTRIC POWER GENERATION



Energy sources for electric power generation in the United States. *(USAEC)*

ELECTRIC PROBE



Schematic diagram of a single electric probe.

or regions, such as electrostatic shielding or electromagnetic shielding. Also known as screening; shielding.

electric shock [PHYSIO] The sudden pain, convulsion, unconsciousness, or death produced by the passage of electric current through the body.

electric shock tube [PL PHYS] A gas-filled tube used in plasma physics to ionize a gas suddenly; a capacitor bank charged to a high voltage is discharged into the gas at one tube end to ionize and heat the gas, producing a shock wave that may be studied as it travels down the tube.

electric shunt *See* shunt.

electric solenoid *See* solenoid.

electric spark *See* spark.

electric spark machining *See* electron discharge machining.

electric stacker [MECH ENG] A stacker whose carriage is raised and lowered by a winch powered by electric storage batteries.

electric steel [MET] Steel melted in an electric furnace which permits close control and the addition of alloying elements directly into the furnace.

electric strength *See* dielectric strength.

electric surface-recording thermometer [PETRO ENG] Device to measure temperatures during oil-well temperature surveying; has a thermocouple, resistance wire, or thermistor as the temperature-sensitive element.

electric susceptibility [ELEC] A dimensionless parameter measuring the ease of polarization of a dielectric, equal (in meter-kilogram-second units) to the ratio of the polarization to the product of the electric field strength and the vacuum permittivity. Also known as dielectric susceptibility.

electric switch *See* switch.

electric switchboard *See* switchboard.

electric tachometer [ENG] An instrument for measuring rotational speed by measuring the output voltage of a generator driven by the rotating unit.

electric tank *See* electrolytic tank.

electric telemetering [COMMUN] System to transmit electric impulses from the primary detector to a remote receiving station, with or without wire interconnections.

electric terminal *See* terminal.

electric thermometer [ENG] An instrument that utilizes electrical means to measure temperature, such as a thermocouple or resistance thermometer.

electric transducer [ELECTR] A transducer in which all of the waves are electric.

electric transient [ELEC] A temporary component of current and voltage in an electric circuit which has been disturbed.

electric tuning [ELECTR] Tuning a receiver to a desired station by switching a set of preadjusted trimmer capacitors or coils into the tuning circuits.

electric twinning [SOLID STATE] A defect occurring in natural quartz crystals, in which adjacent regions of quartz have their electric axes oppositely poled.

electric typewriter [MECH ENG] A typewriter having an electric motor that provides power for all operations initiated by the touching of the keys.

electric vector *See* electric field vector.

electric vehicle [MECH ENG] Any ground vehicle whose original source of energy is electric power, such as an electric car or electric locomotive.

electric wave [ELECTROMAG] An electromagnetic wave, especially one whose wavelength is at least a few centimeters. Also known as Hertzian wave.

electric-wave filter *See* filter.

electric wind *See* convective discharge.

electric wire *See* wire.

electric wiring *See* wiring.

electride [INORG CHEM] A member of a class of ionic compounds in which the anion is believed to be an electron.

electrification [ELEC] **1.** The process of establishing a charge in an object. **2.** The generation, distribution, and utilization of electricity.

electrification ice nucleus [METEOROL] An ice nucleus that is formed by the fragmentation of dendritic crystals exposed to an electric field strength of several hundred volts per centimeter; it is a type of fragmentation nucleus.

electrization [ELEC] The electric polarization divided by the permittivity of empty space.

electroacoustic effect *See* acoustoelectric effect.

electroacoustics [ENG ACOUS] The conversion of acoustic energy and waves into electric energy and waves, or vice versa.

electroacoustic transducer [ENG ACOUS] A transducer that receives waves from an electric system and delivers waves to an acoustic system, or vice versa. Also known as sound transducer.

electrobalance [ANALY CHEM] Analytical microbalance utilizing electromagnetic weighing; the sample weight is balanced by the torque produced by current in a coil in a magnetic field, with torque proportional to the current.

electrocapillarity [PHYS] A change in the surface tension of a liquid caused by an electric field at the surface.

electrocardiogram [MED] A graphic recording of the electrical manifestations of the heart action as obtained from the body surfaces. Abbreviated ECG; EKG.

electrocardiograph [MED] The instrument used to obtain an electrocardiogram.

electrocardiography [MED] The medical specialty concerned with the production and interpretation of electrocardiograms.

electrocardiophonograph [MED] An instrument that records graphic traces of heart sounds to fix precisely the times at which valve action occurs and to reveal valvular defects which affect blood flow.

electrocatalysis [CHEM] Any one of the mechanisms which produce a speeding up of half-cell reactions at electrode surfaces.

electrocauterization [MED] The application of a direct galvanic current to tissues to cause destruction or coagulation.

electroceramics [MATER] Ceramic materials having electrical and other properties which make them suitable for use as insulators for power lines and in electrical components.

electrochemical cell [PHYS CHEM] A combination of two electrodes arranged so that an overall oxidation-reduction reaction produces an electromotive force; includes dry cells, wet cells, standard cells, fuel cells, solid-electrolyte cells, and reserve cells.

electrochemical cleaning [MET] Removing soil by the chemical action caused or sustained by a current of electricity in an electrolyte. Also known as electrolytic cleaning.

electrochemical coating [MET] A coating formed by chemical action on the metal surface and effected by a current of electricity through an electrolyte.

electrochemical corrosion [MET] Corrosion of a metal associated with the flow of electric current in an electrolyte. Also known as electrolytic corrosion.

electrochemical effect [PHYS CHEM] Conversion of chemical to electric energy, as in electrochemical cells; or the reverse process, used to produce elemental aluminum, magnesium, and bromine from compounds of these elements.

electrochemical emf [PHYS CHEM] Electrical force generated by means of chemical action, in manufactured cells (such as dry batteries) or by natural means (galvanic reaction).

electrochemical equivalent [PHYS CHEM] The weight in grams of a substance produced or consumed by electrolysis with 100% current efficiency during the flow of a quantity of electricity equal to 1 faraday (96,487.0±1.6 coulombs).

electrochemical machining [MET] Removing excess metal by electrolytic dissolution, effected by the tool acting as the cathode against the workpiece acting as the anode. Abbreviated ECM. Also known as electrolytic machining.

electrochemical potential [PHYS CHEM] The difference in potential that exists when two dissimilar electrodes are connected through an external conducting circuit and the two electrodes are placed in a conducting solution so that electrochemical reactions occur.

electrochemical power generation [ENG] The direct conversion of chemical energy to electric energy, as in a battery or fuel cell.

electrochemical process [PHYS CHEM] **1.** A chemical change accompanying the passage of an electric current, especially as used in the preparation of commercially important quantities of certain chemical substances. **2.** The reverse change, in which a chemical reaction is used as the source of energy to produce an electric current, as in a battery.

electrochemical recording [ELECTR] Recording by means of a chemical reaction brought about by the passage of signal-controlled current through the sensitized portion of the record sheet.

electrochemical reduction cell [PHYS CHEM] The cathode

component of an electrochemical cell, at which chemical reduction occurs (while at the anode, chemical oxidation occurs).

electrochemical series [PHYS CHEM] A series in which the metals and other substances are listed in the order of their chemical reactivity or electrode potentials, the most reactive at the top and the less reactive at the bottom. Also known as electromotive series.

electrochemical techniques [PHYS CHEM] The experimental methods developed to study the physical and chemical phenomena associated with electron transfer at the interface of an electrode and solution.

electrochemical thermodynamics [THERMO] The application of the laws of thermodynamics to electrochemical systems.

electrochemical transducer [ENG] A device which uses a chemical change to measure the input parameter; the output is a varying electrical signal proportional to the measurand.

electrochemical valve [ELEC] Electric valve consisting of a metal in contact with a solution or compound, across the boundary of which current flows more readily in one direction than in the other direction, and in which the valve action is accompanied by chemical changes.

electrochemistry [PHYS CHEM] A branch of chemistry dealing with chemical changes accompanying the passage of an electric current; or with the reverse process, in which a chemical reaction is used to produce an electric current.

electrochromatography [ANALY CHEM] Type of chromatography that utilizes application of an electric potential to produce an electric differential. Also known as electropherography.

electrochromic display [ELECTR] A solid-state passive display that uses organic or inorganic insulating solids which change color when injected with positive or negative charges.

electrocoagulation [MED] The coagulation of tissue by means of a high-frequency electric current.

electroconvulsive shock [MED] The technique of eliciting convulsions by applying an electric current through the brain for a brief period.

electrocratic [CHEM] Referring to the repulsion exhibited by soap films and other colloids in solutions; such repulsion involves a strong osmotic contribution but is largely controlled by electrical forces.

electrocyclic reaction [PHYS CHEM] The interconversion of a linear π-system containing n π-electrons and a cyclic molecule containing $n-2$ π-electrons which is formed by joining the ends of the linear molecule.

electrode [ELEC] **1.** An electric conductor through which an electric current enters or leaves a medium, whether it be an electrolytic solution, solid, molten mass, gas, or vacuum. **2.** One of the terminals used in dielectric heating or diathermy for applying the high-frequency electric field to the material being heated.

electrode admittance [ELECTR] Quotient of dividing the alternating component of the electrode current by the alternating component of the electrode voltage, all other electrode voltages being maintained constant.

electrodecantation [PHYS CHEM] A modification of electrodialysis in which a cell is divided into three sections by two membranes and electrodes are placed in the end sections; colloidal matter is concentrated at the sides and bottom of the middle section, and the liquid that floats to the top is drawn off.

electrode capacitance [ELECTR] Capacitance between one electrode and all the other electrodes connected together.

electrode characteristic [ELECTR] Relation between the electrode voltage and the current to an electrode, all other electrode voltages being maintained constant.

electrode conductance [ELECTR] Quotient of the inphase component of the electrode alternating current by the electrode alternating voltage, all other electrode voltage being maintained constant; this is a variational and not a total conductance. Also known as grid conductance.

electrode couple [ELEC] The pair of electrodes in an electric cell, between which there is a potential difference.

electrode current [ELECTR] Current passing to or from an electrode, through the interelectrode space within a vacuum tube.

electrode dark current [ELECTR] The electrode current that flows when there is no radiant flux incident on the photocathode in a phototube or camera tube. Also known as dark current.

electrode dissipation [ELECTR] Power dissipated in the form of heat by an electrode as a result of electron or ion bombardment.

electrode drop [ELECTR] Voltage drop in the electrode due to its resistance.

electrode force [MET] The force that occurs between electrodes during seam, spot, and projection welding. Also known as welding force.

electrode impedance [ELECTR] Reciprocal of the electrode admittance.

electrode inverse current [ELECTR] Current flowing through an electrode in the direction opposite to that for which the tube is designed.

electrodeposition [MET] Electrolytic process in which a metal is deposited at the cathode from a solution of its ions; includes electroplating and electroforming. Also known as electrolytic deposition.

electrodeposition analysis [ANALY CHEM] An electroanalytical technique in which an element is quantitatively deposited on an electrode.

electrode potential Also known as electrode voltage. [ELECTR] The instantaneous voltage of an electrode with respect to the cathode of an electron tube. [PHYS CHEM] The voltage existing between an electrode and the solution or electrolyte in which it is immersed; usually, electrode potentials are referred to a standard electrode, such as the hydrogen electrode.

electrode resistance [ELECTR] Reciprocal of the electrode conductance; this is the effective parallel resistance and is not the real component of the electrode impedance.

electrodermography [MED] The recording of the electrical resistance of the skin.

electrode skid [MET] Sliding of an electrode over the work surface in spot, seam, or projection welding.

electrode-type liquid-level meter [ENG] Device that senses liquid level by the effect of the liquid-gas interface on the conductance of an electrode or probe.

electrode voltage *See* electrode potential.

electrodiagnosis [MED] Diagnosis of disease states by recording the spontaneous electrical activity of tissue or organs, or by the response to stimulation of electrically excitable tissue.

electrodialysis [PHYS CHEM] Dialysis that is conducted with the aid of an electromotive force applied to electrodes adjacent to both sides of the membrane.

electrodialyzer [PHYS CHEM] An instrument used to conduct electrodialysis.

electrodisintegration [NUC PHYS] The breakup of a nucleus into two or more fragments as a result of bombardment by electrons.

electrodrill [MECH ENG] A drilling machine driven by electric power.

electrodynamic ammeter [ENG] Instrument which measures the current passing through a fixed coil and a movable coil connected in series by balancing the torque on the movable coil (resulting from the magnetic field of the fixed coil) against that of a spiral spring.

electrodynamic drift [GEOPHYS] Motion of charged particles in the upper atmosphere due to the combined effect of electric and magnetic fields; in the ionospheric F region and above, the drift velocity is perpendicular to both the electric and magnetic fields.

electrodynamic instrument [ENG] An instrument that depends for its operation on the reaction between the current in one or more movable coils and the current in one or more fixed coils. Also known as electrodynamometer.

electrodynamic loudspeaker [ENG ACOUS] Dynamic loudspeaker in which the magnetic field is produced by an electromagnet, called the field coil, to which a direct current must be furnished.

electrodynamic machine [ELEC] An electric generator or motor in which the output load current is produced by magnetomotive currents generated in a rotating armature.

electrodynamics [ELECTROMAG] The study of the relations between electrical, magnetic, and mechanical phenomena.

electrodynamic shaker *See* shaker.

electrodynamic wattmeter [ENG] An electrodynamic instrument connected as a wattmeter, with the main current flowing through the fixed coil, and a small current proportional to the voltage flowing through the movable coil. Also known as moving-coil wattmeter.

electrodynamometer *See* electrodynamic instrument.

electroencephalogram [MED] A graphic recording of the

ELECTRODEPOSITION ANALYSIS

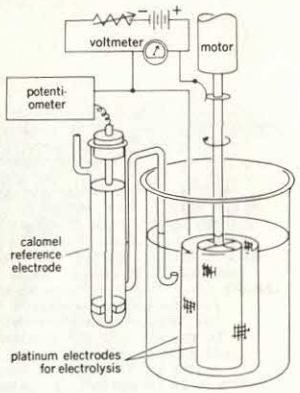


Diagram of the electrodeposition apparatus. *(From G. W. Ewing, Instrumental Methods of Chemical Analysis, 2d ed., McGraw-Hill, 1960)*

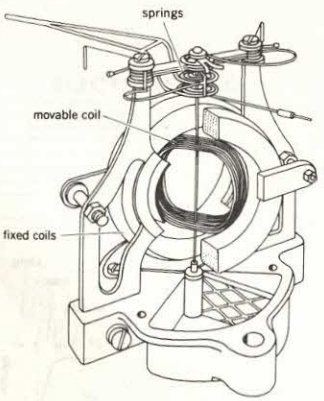
ELECTRODYNAMIC INSTRUMENT



Electrodynamic instrument mechanism. *(Weston Instruments, Division of Sangamo Weston, Inc.)*

electric discharges of the cerebral cortex as detected by electrodes on the surface of the scalp. Abbreviated EEG.

electroencephalograph [MED] An instrument used to make electroencephalograms.

electroencephalography [MED] The medical specialty concerned with the production and interpretation of electroencephalograms.

electroencephalophone [MED] An instrument that provides an audible presentation of brain waves. Abbreviated EEP.

electroencephaloscope [MED] An instrument for displaying on a cathode-ray screen the waveforms of voltages generated by various sections of the brain.

electroendosmosis [PHYS] The production of an endosmosis effect by an electrical potential; that is, the use of electricity to cause diffusion of a liquid through an organic membrane.

electroerosive machining *See* electron discharge machining.

electroexplosive [ENG] An initiator or a system in which an electric impulse initiates detonation or deflagration of an explosive. [MATER] The explosive substance so detonated or deflagrated.

electrofiltration [GEOL] Counterprocess during electrical logging of well boreholes, in which mud filtrate forced through the mud cake produces an emf in the mud cake opposite a permeable bed, positive in the direction of filtrate flow.

electrofluid [FL MECH] Newtonian (or shear-thinning) fluid whose rheological or flow properties are changed into those of a viscoplastic type by the addition of electric-field modulation.

electrofocusing *See* isoelectric focusing

electroformed mold [MET] A mold made by electroplating metal on the reverse pattern on the cavity; molten steel may be then sprayed on the back of the mold to increase its strength.

electroforming [MET] Shaping components by electrodeposition of the metal on a pattern.

electrogalvanizing [MET] Coating of a metal, especially iron or steel, with zinc by electroplating.

electrogasdynamics [PHYS] Conversion of the kinetic energy of a moving gas to electricity, for such applications as high-voltage electric power generation, air-pollution control, and paint spraying.

electrogas flux-cored welding [MET] A modification of the flux-cored welding process in which there is an externally supplied source of gas or gas mixture.

electrogram [ELECTR] A record of an image of an object made by sparking, usually on paper. [METEOROL] A record, usually automatically produced, which shows the time variations of the atmospheric electric field at a given point. [PHYSIO] The graphic representation of electric events in living tissues; commonly, an electrocardiogram or electroencephalogram.

electrograph [COMMUN] Facsimile transmission equipment. [ENG] Any plot, graph, or tracing produced by the action of an electric current on prepared sensitized paper (or other chart material) or by means of an electrically controlled stylus or pen.

electrographic pencil [ELECTR] A pencil used to make a conductive mark on paper, for detection by a conductive-mark sensing device.

electrographic recording [GRAPHICS] Type of electrography in which the electrostatic image is formed by one or more rows of closely spaced parallel wires to which voltages are applied at appropriate instants to form the desired image charge pattern.

electrography [GRAPHICS] The branch of electrostatography in which electrostatic images are formed on an insulating medium without the aid of electromagnetic radiation.

electrogravimetry [ANALY CHEM] Electrodeposition analysis in which the quantities of metals deposited may be determined by weighing a suitable electrode before and after deposition.

electrohydrodynamic ionization mass spectroscopy [SPECT] A technique for analysis of nonvolatile molecules in which the nonvolatile material is dissolved in a volatile solvent with a high dielectric constant such as glycerol, and high electric-field gradients at the surface of droplets of the liquid solution induce ion emission.

electrojet [GEOPHYS] A stream of intense electric current moving in the upper atmosphere around the equator and in polar regions.

electrokinetic phenomena [PHYS CHEM] The phenomena associated with movement of charged particles through a continuous medium or with the movement of a continuous medium over a charged surface.

electrokinetic potential *See* zeta potential.

electrokinetics [ELECTROMAG] The study of the motion of electric charges, especially of steady currents in electric circuits, and of the motion of electrified particles in electric or magnetic fields.

electrokinetic transducer [ELEC] An instrument which converts dynamic physical forces, such as vibration and sound, into corresponding electric signals by measuring the streaming potential generated by passage of a polar fluid through a permeable refractory-ceramic or fritted-glass member between two chambers.

electrokinetograph [ENG] An instrument used to measure ocean current velocities based on their electrical effects in the magnetic field of the earth.

electrokymograph [MED] An instrument that provides a continuous recording of the movements of an internal organ such as the heart, generally by recording the movements or the changes in density of the shadow of the organ as presented on a fluoroscope.

electroless plating [MET] Deposition of a metal coating by immersion of a metal or nonmetal in a suitable bath containing a chemical reducing agent.

electroluminescence [ELECTR] The emission of light, not due to heating effects alone, resulting from application of an electric field to a material, usually solid.

electroluminescent cell *See* electroluminescent panel.

electroluminescent display [ELECTR] A display in which various combinations of electroluminescent segments may be activated by applying voltages to produce any desired numeral or other character.

electroluminescent lamp *See* electroluminescent panel.

electroluminescent panel [ELECTR] A surface-area light source employing the principle of electroluminescence; consists of a suitable phosphor placed between sheet-metal electrodes, one of which is essentially transparent, with an alternating current applied between the electrodes. Also known as electroluminescent cell; electroluminescent lamp; light panel; luminescent cell.

electroluminescent phosphor [MATER] Zinc sulfide powder, with small additions of copper or manganese, which emits light when suspended in an insulator in an intense alternating electric field. Also known as electroluminor.

electroluminor *See* electroluminescent phosphor.

electrolysis [PHYS CHEM] A method by which chemical reactions are carried out by passage of electric current through a solution of an electrolyte or through a molten salt.

electrolyte [PHYS CHEM] A chemical compound which when molten or dissolved in certain solvents, usually water, will conduct an electric current.

electrolyte acid *See* sulfuric acid.

electrolyte-activated battery [ELEC] A reserve battery in which an aqueous electrolyte is stored in a separate chamber, and a mechanism, which may be operated from a remote location, drives the electrolyte out of the reservoir and into the cells of the battery for activation.

electrolytic analysis [ANALY CHEM] Basic electrochemical technique for quantitative analysis of conducting solutions containing oxidizable or reducible material; measurement is based on the weight of material plated out onto the electrode.

electrolytic arrester *See* aluminum-cell arrester.

electrolytic brightening *See* electropolishing.

electrolytic capacitor [ELEC] A capacitor consisting of two electrodes separated by an electrolyte; a dielectric film, usually a thin layer of gas, is formed on the surface of one electrode. Also known as electrolytic condenser.

electrolytic cell [PHYS CHEM] A cell consisting of electrodes immersed in an electrolyte solution, for carrying out electrolysis.

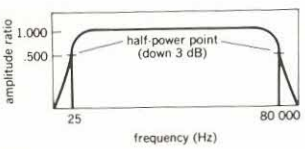
electrolytic cleaning *See* electrochemical cleaning.

electrolytic condenser *See* electrolytic capacitor.

electrolytic conductance [PHYS CHEM] The transport of electric charges, under electric potential differences, by charged particles (called ions) of atomic or larger size.

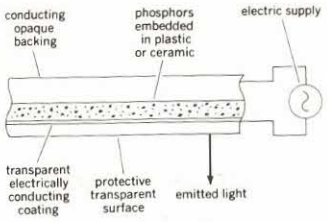
electrolytic conductivity [PHYS CHEM] The conductivity of a medium in which the transport of electric charges, under electric potential differences, is by particles of atomic or larger size.

ELECTROKINETIC TRANSDUCER



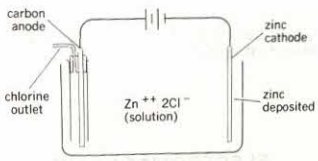
Typical response curve of unit-cell transducer.

ELECTROLUMINESCENT PANEL



Simplified diagram of electroluminescent panel, not drawn to scale.

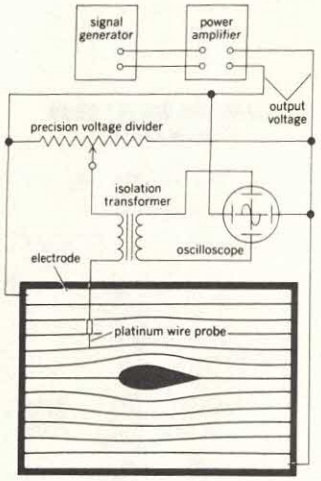
ELECTROLYSIS



Electrolysis of zinc chloride solution.

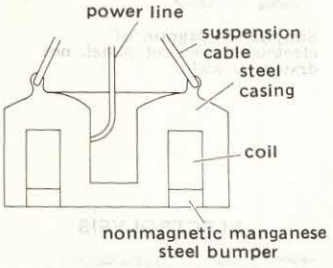
electrolytic copper [MET] Metallic copper produced by electrochemical deposition from a copper ion-containing electrolyte.
electrolytic corrosion *See* electrochemical corrosion.
electrolytic deposition *See* electrodeposition.
electrolytic dissociation [CHEM] The ionization of a compound in a solution.
electrolytic etching [MET] Engraving the surface of a metal by electrolysis.
electrolytic grinding [MECH ENG] A combined grinding and machining operation in which the abrasive, cathodic grinding wheel is in contact with the anodic workpiece beneath the surface of an electrolyte.
electrolytic interrupter [ELEC] An interrupter that consists of two electrodes in an electrolytic solution; bubbles formed in the solution continually interrupt the passage of current between the electrodes.
electrolytic mercaptan process [CHEM ENG] A process in which an aqueous caustic solution is used to extract mercaptans from refinery streams.
electrolytic model [PETRO ENG] Laboratory simulation of steady-state fluid flow through porous reservoir mediums; depends on the mobility of ions in absorbent mediums (gelatin or blotter), or through a liquid (potentiometric technique). Also known as gelatin model; oil-field model; potentiometric model.
electrolytic photocopying [GRAPHICS] A photocopying process in which an image is projected on a sheet consisting of a paper support, a thin aluminum laminate, and a coating of a white photoconductive substance in contact with an electrolyte, and electrolysis takes place in the exposed areas when a direct current is applied across the electrolyte and the aluminum underlayer.
electrolytic pickling [MET] Removal of metal by electrolysis using the metal as an electrode in a suitable electrolyte.
electrolytic polishing *See* electropolishing.
electrolytic potential [PHYS CHEM] Difference in potential between an electrode and the immediately adjacent electrolyte, expressed in terms of some standard electrode difference.
electrolytic powder [MET] Metal powder produced directly or indirectly by electrodeposition.
electrolytic process [PHYS CHEM] An electrochemical process involving the principles of electrolysis, especially as relating to the separation and deposition of metals.
electrolytic protection *See* cathodic protection.
electrolytic recording [ELECTR] Electrochemical recording in which the chemical change is made possible by the presence of an electrolyte.
electrolytic rectifier [ELEC] A rectifier consisting of metal electrodes in an electrolyte, in which rectification of alternating current is accompanied by electrolytic action; polarizing film formed on one electrode permits current flow in one direction but not the other.
electrolytic refining *See* electrorefining.
electrolytic rheostat [ELEC] A rheostat that consists of a tank of conducting liquid in which electrodes are placed, and resistance is varied by changing the distance between the electrodes, the depth of immersion of the electrodes, or the resistivity of the solution. Also known as water rheostat.
electrolytic separation [PHYS CHEM] Separation of isotopes by electrolysis, based on differing rates of discharge at the electrode of ions of different isotopes.
electrolytic solution [PHYS CHEM] A solution made up of a solvent and an ionically dissociated solute; it will conduct electricity, and ions can be separated from the solution by deposition on an electrically charged electrode.
electrolytic strip *See* humidity strip.
electrolytic switch [ELEC] A switch having two electrodes projecting into a chamber partly filled with electrolyte, leaving an air bubble of predetermined width; the bubble shifts position and changes the amount of electrolyte in contact with the electrodes when the switch is tilted from true horizontal.
electrolytic tank [ENG] A tank in which voltages are applied to an enlarged scale model of an electron-tube system or a reduced scale model of an aerodynamic system immersed in a poorly conducting liquid, and equipotential lines between electrodes are traced; used as an aid to electron-tube design or in computing ideal fluid flow; the latter application is based on the fact that the velocity potential in ideal flow and the stream function in planar flow satisfy the same equation, Laplace's equation, as an electrostatic potential. Also known as electric tank; potential flow analyzer.
electrolytic tough pitch [MET] Copper which has been refined electrolytically, containing mostly oxygen as an impurity.
electromachining [MECH ENG] The application of electric or ultrasonic energy to a workpiece to effect removal of material.
electromagnet [ELECTROMAG] A magnet consisting of a coil wound around a soft iron or steel core; the core is strongly magnetized when current flows through the coil, and is almost completely demagnetized when the current is interrupted.
electromagnetic [PHYS] Pertaining to phenomena in which electricity and magnetism are related.
electromagnetic amplifying lens [ELECTROMAG] Large numbers of waveguides symmetrically arranged with respect to an excitation medium in order to become excited with equal amplitude and phase to provide a net gain in energy.
electromagnetic brake *See* electric brake.
electromagnetic cathode-ray tube [ELECTR] A cathode-ray tube in which electromagnetic deflection is used on the electron beam.
electromagnetic clutch [MECH ENG] A clutch based on magnetic coupling between conductors, such as a magnetic fluid and powder clutch, an eddy-current clutch, or a hysteresis clutch.
electromagnetic compatibility [ELECTR] The capability of electronic equipment or systems to be operated in the intended electromagnetic environment at design levels of efficiency.
electromagnetic complex [ELECTROMAG] Electromagnetic configuration of an installation, including all significant radiators of energy.
electromagnetic constant *See* speed of light.
electromagnetic coupling [ELECTROMAG] Coupling that exists between circuits when they are mutually affected by the same electromagnetic field.
electromagnetic crack detector [MET] An instrument that detects cracks in iron or steel objects by applying a strong magnetizing force and measuring the resulting magnetic flux through the object.
electromagnetic current [ELECTR] Motion of charged particles (for example, in the ionosphere) giving rise to electric and magnetic fields.
electromagnetic damping [ELEC] Retardation of motion that results from the reaction between eddy currents in a moving conductor and the magnetic field in which it is moving.
electromagnetic deflection [ELECTR] Deflection of an electron stream by means of a magnetic field.
electromagnetic energy [ELECTROMAG] The energy associated with electric or magnetic fields.
electromagnetic environment [COMMUN] Radio-frequency fields existing in a given area.
electromagnetic field [ELECTROMAG] An electric or magnetic field, or a combination of the two, as in an electromagnetic wave.
electromagnetic field equations *See* Maxwell field equations.
electromagnetic field tensor [ELECTROMAG] An antisymmetric, second-rank Lorentz tensor, whose elements are proportional to the electric and magnetic fields; the Maxwell field equations can be expressed in a simple form in terms of this tensor.
electromagnetic flowmeter [ENG] A flowmeter that offers no obstruction to liquid flow; two coils produce an electromagnetic field in the conductive moving fluid; the current induced in the liquid, detected by two electrodes, is directly proportional to the rate of flow. Also known as electromagnetic meter.
electromagnetic focusing [ELECTR] Focusing the electron beam in a telelvision picture tube by means of a magnetic field parallel to the beam; the field is produced by sending an adjustable value of direct current through a focusing coil mounted on the neck of the tube.
electromagnetic horn *See* horn antenna.
electromagnetic induction [ELECTROMAG] The production of an electromotive force either by motion of a conductor through a magnetic field so as to cut across the magnetic flux or by a change in the magnetic flux that threads a conductor. Also known as induction.
electromagnetic inertia [ELECTROMAG] **1.** Characteristic delay of a current in an electric circuit in reaching its maximum value, or in returning to zero, after the source voltage has been removed or applied. **2.** The property of a circuit whereby

ELECTROLYTIC TANK



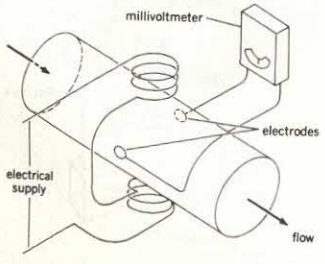
Setup to trace streamlines of nonlift airfoil with an electrolytic tank.

ELECTROMAGNET



Cross section of circular lifting electromagnet.

ELECTROMAGNETIC FLOWMETER



Drawing of electromagnetic flowmeter showing sensing electrodes and other components.

variation of the current in the circuit gives rise to a voltage in the circuit.

electromagnetic interaction [PARTIC PHYS] The interaction of elementary particles that results from the coupling of charge to the electromagnetic field.

electromagnetic interference [ELEC] Interference, generally at radio frequencies, that is generated inside systems, as contrasted to radio-frequency interference coming from sources outside a system. Abbreviated emi.

electromagnetic lens [ELECTR] An electron lens in which electron beams are focused by an electromagnetic field.

electromagnetic log [ENG] A log containing an electromagnetic sensing element extended below the hull of the vessel; this device produces a voltage directly proportional to speed through the water.

electromagnetic logging [ENG] A method of well logging in which a transmitting coil sets up an alternating electromagnetic field, and a receiver coil, placed in the drill hole above the transmitter coil, measures the secondary electromagnetic field induced by the resulting eddy currents within the formation. Also known as electromagnetic well logging.

electromagnetic mass [ELECTROMAG] The contribution to the mass of an object from its electric and magnetic field energy.

electromagnetic meter *See* electromagnetic flowmeter.

electromagnetic mirror [ELECTROMAG] Surface or region capable of reflecting radio waves, such as one of the ionized layers in the upper atmosphere.

electromagnetic mixing [MET] Mixing of molten alloys by exposing the melt to a strong magnetic field while passing direct current between electrodes at opposite ends of the crucible; stirring action results from interaction of the magnetic field of the current-carrying molten alloy with the external transverse magnetic field.

electromagnetic momentum [ELECTROMAG] The momentum transported by electromagnetic radiation; its volume density equals the Poynting vector divided by the square of the speed of light.

electromagnetic noise [ELEC] Noise in a communications system resulting from undesired electromagnetic radiation. Also known as radiation noise.

electromagnetic oscillograph [ELECTROMAG] An oscillograph in which the recording mechanism is controlled by a moving-coil galvanometer, such as a direct-writing recorder or a light-beam oscillograph.

electromagnetic potential [ELECTROMAG] Collective name for a scalar potential, which reduces to the electrostatic potential in a time-independent system, and the vector potential for the magnetic field; the electric and magnetic fields can be written in terms of these potentials.

electromagnetic properties [ELECTROMAG] The response of materials or equipment to electromagnetic fields, and their ability to produce such fields.

electromagnetic propulsion [AERO ENG] Motive power for flight vehicles produced by electromagnetic acceleration of a plasma fluid.

electromagnetic prospecting *See* electromagnetic surveying.

electromagnetic pulse [ELECTROMAG] The pulse of electromagnetic radiation generated by a large thermonuclear explosion.

electromagnetic pump [ELEC] A pump in which a conductive liquid is made to move through a pipe by sending a large current transversely through the liquid; this current reacts with a magnetic field that is at right angles to the pipe and to current flow, to move the current-carrying liquid conductor.

electromagnetic radiation [ELECTROMAG] Electromagnetic waves and, especially, the associated electromagnetic energy.

electromagnetic reconnaissance [ELECTR] Reconnaissance for the purpose of locating and identifying potentially hostile transmitters of electromagnetic radiation, including radar, communication, missile-guidance, and navigation-aid equipment.

electromagnetic relay [ELECTROMAG] A relay in which current flow through a coil produces a magnetic field that results in contact actuation.

electromagnetic scattering [PHYS] The process in which energy is removed from a beam of electromagnetic radiation and reemitted without appreciable changes in wavelength.

electromagnetic separator [ELECTROMAG] Device in which ions of varying mass are separated by a combination of electric and magnetic fields.

electromagnetic shielding [ELECTROMAG] Means, similar to electrostatic or magnetostatic shielding, for suppressing changing magnetic fields or electromagnetic radiation at a device.

electromagnetic shock wave [ELECTROMAG] Electromagnetic wave of great intensity which results when waves with different intensities propagate with different velocities in a nonlinear optical medium, and faster-traveling waves from a pulse of light catch up with preceding, slower traveling waves.

electromagnetic spectrum [ELECTROMAG] The total range of wavelengths or frequencies of electromagnetic radiation, extending from the longest radio waves to the shortest known cosmic rays.

electromagnetic surveying [ENG] Underground surveying carried out by generating electromagnetic waves at the surface of the earth; the waves penetrate the earth and induce currents in conducting ore bodies, thereby generating new waves that are detected by instruments at the surface or by a receiving coil lowered into a borehole. Also known as electromagnetic prospecting.

electromagnetic susceptibility [ELECTR] The tolerance of circuits and components to all sources of interfering electromagnetic energy.

electromagnetic system of units [ELECTROMAG] A centimeter-gram-second system of electric and magnetic units in which the unit of current is defined as the current which, if maintained in two straight parallel wires having infinite length and being 1 centimeter apart in vacuum, would produce between these conductors a force of 2 dynes per centimeter of length; other units are derived from this definition by assigning unit coefficients in equations relating electric and magnetic quantities. Also known as electromagnetic units (emu).

electromagnetic theory of light [ELECTROMAG] Theory according to which light is an electromagnetic wave whose electric and magnetic fields obey Maxwell's equations.

electromagnetic transducer *See* electromechanical transducer.

electromagnetic units *See* electromagnetic system of units.

electromagnetic wave [ELECTROMAG] A disturbance which propagates outward from any electric charge which oscillates or is accelerated; far from the charge it consists of vibrating electric and magnetic fields which move at the speed of light and are at right angles to each other and to the direction of motion.

electromagnetic-wave filter [ELECTROMAG] Any device to transmit electromagnetic waves of desired frequencies while substantially attenuating all other frequencies.

electromagnetic well logging *See* electromagnetic logging.

electromagnetism [PHYS] **1.** Branch of physics relating electricity to magnetism. **2.** Magnetism produced by an electric current rather than by a permanent magnet.

electromanometer [ENG] An electronic instrument used for measuring pressure of gases or liquids.

electromechanical [MECH ENG] Pertaining to a mechanical device, system, or process which is electrostatically or electromagnetically actuated or controlled.

electromechanical circuit [ELEC] A circuit containing both electrical and mechanical parameters of consequence in its analysis.

electromechanical dialer [ELECTR] Telephone dialer which activates one of a set of desired numbers, precoded into it, when the user selects and presses a start button.

electromechanical plotter [COMPUT SCI] An automatic device used in conjunction with a digital computer to produce a graphic or pictorial representation of computer data on hard copy.

electromechanical recording [ELECTR] Recording by means of a signal-actuated mechanical device, such as a pen arm or mirror attached to the moving coil of a galvanometer.

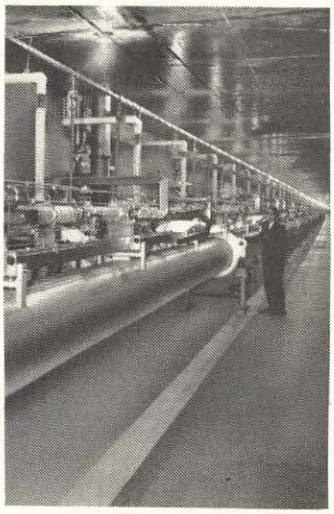
electromechanical relay [ELECTROMAG] A protective relay operating on the principle of electromagnetic attraction, as a plunger relay, or of electromagnetic induction.

electromechanical transducer [ELECTR] A transducer for receiving waves from an electric system and delivering waves to a mechanical system, or vice versa. Also known as electromagnetic transducer.

electromechanics [MECH ENG] The technology of mechanical devices, systems, or processes which are electrostatically or electromagnetically actuated or controlled.

electrometallurgy [MET] Industrial recovery and processing of metals by electrical and electrolytic procedures.
electrometer [ENG] An instrument for measuring voltage without drawing appreciable current.
electrometer amplifier [ELECTR] A low-noise amplifier having sufficiently low current drift and other characteristics required for measuring currents smaller than 10^{-12} ampere.
electrometer tube [ELECTR] A high-vacuum electron tube having a high input impedance (low control-electrode conductance) to facilitate measurement of extremely small direct currents or voltages.
electromigration [ANALY CHEM] A process used to separate isotopes or ionic species by the differences in their ionic mobilities in an electric field.
electromodulation [SPECT] Modulation spectroscopy in which changes in transmission or reflection spectra induced by a perturbing electric field are measured.
electromotance *See* electromotive force.
electromotive force [PHYS CHEM] **1.** The difference in electric potential that exists between two dissimilar electrodes immersed in the same electrolyte or otherwise connected by ionic conductors. **2.** The resultant of the relative electrode potential of the two dissimilar electrodes at which electrochemical reactions occur. Abbreviated emf. Also known as electromotance.
electromotive series *See* electrochemical series.
electromyogram [MED] **1.** A graphic recording of the electrical response of a muscle to electrical stimulation. **2.** A graphic recording of eye movements during reading.
electromyograph [MED] An instrument used for making electromyograms.
electromyography [MED] A medical specialty concerned with the production and study of electromyograms.
electron [PHYS] **1.** A stable elementary particle which is the negatively charged constituent of ordinary matter, having a mass of about 9.11×10^{-28}g (equivalent to 0.511 MeV), a charge of about -1.602×10^{-19} coulomb, and a spin of ½. Also known as negative electron; negatron. **2.** Collective name for the electron, as in the first definition, and the positron.
electron accelerator [NUCLEO] A device which accelerates electrons to high energies.
electron acceptor [PHYS CHEM] An atom or part of a molecule joined by a covalent bond to an electron donor. [SOLID STATE] *See* acceptor.
electron-acoustic microscopy [PHYS] A technique for producing images that show variations in an object's thermal and elastic properties; an electron beam generates ultrasonic waves in the specimen which are detected by a piezoelectric transducer whose output controls the brightness of a spot sweeping a cathode-ray tube in synchronism with the electron beam.
electron affinity [ATOM PHYS] The work needed in removing an electron from a negative ion, thus restoring the neutrality of an atom or molecule.
electronarcosis [MED] Profound stupor or unconsciousness produced by passing an electric current through the brain.
electron attachment *See* electron capture.
electron avalanche *See* avalanche.
electron beam [ELECTR] A narrow stream of electrons moving in the same direction, all having about the same velocity.
electron-beam-accessed memory *See* electron-beam memory.
electron-beam channeling [ELECTR] The technique of transporting high-energy, high-current electron beams from an accelerator to a target through a region of high-pressure gas by creating a path through the gas where the gas density may be temporarily reduced; the gas may be ionized; or a current may flow whose magnetic field focuses the electron beam on the target.
electron-beam cutting [MET] A process which uses high-velocity electrons to heat the workpieces to be cut.
electron-beam drilling [ELECTR] Drilling of tiny holes in a ferrite, semiconductor, or other material by using a sharply focused electron beam to melt and evaporate or sublimate the material in a vacuum.
electron-beam fusion [NUCLEO] The use of intense beams of electrons to implode small pellets of deuterium and tritium so that they reach the temperature and density required for initiating a fusion reaction.
electron-beam generator [ELECTR] Velocity-modulated generator, such as a klystron tube, used to generate extremely high frequencies.

ELECTRON ACCELERATOR



A type of electron accelerator, the Stanford Linear Accelerator, installed in underground housing.

electron-beam ion source [ELECTR] A source of multiply charged heavy ions which uses an intense electron beam with energies of 5 to 10 kiloelectronvolts to successively ionize injected gas. Abbreviated EBIS.
electron-beam laser [OPTICS] A semiconductor laser in which the electron beam that provides pumping action in a thin plate of cadmium sulfide or other material is swept electrically in two dimensions by a deflection yoke, much as in a cathode-ray tube.
electron-beam lithography [GRAPHICS] Lithography in which the radiation-sensitive film or resist is placed in the vacuum chamber of a scanning-beam electron microscope and exposed by an electron beam under digital computer control; after exposure, the film is removed from the vacuum chamber for conventional development and other production processes.
electron-beam machining [MET] A machining process in which heat is produced by a focused electron beam at a sufficiently high temperature to volatilize and thereby remove metal in a desired manner; takes place in a vacuum. Abbreviated EBM.
electron-beam magnetometer [ENG] A magnetometer that depends on the change in intensity or direction of an electron beam that passes through the magnetic field to be measured.
electron-beam melting [MET] A melting process in which an electron beam provides the necessary heat.
electron-beam memory [COMPUT SCI] A memory that uses a high-resolution electron beam to store information on a target in a vacuum tube. Also known as electron-beam-accessed memory (EBAM).
electron-beam parametric amplifier [ELECTR] A parametric amplifier in which energy is pumped from an electrostatic field into a beam of electrons traveling down the length of the tube, and electron couplers impress the input signal at one end of the tube and translate spiraling electron motion into electric output at the other.
electron-beam pumping [ELECTR] The use of an electron beam to produce excitation for population inversion and lasing action in a semiconductor laser.
electron-beam recorder [ELECTR] A recorder in which a moving electron beam is used to record signals or data on photographic or thermoplastic film in a vacuum chamber.
electron-beam tube [ELECTR] An electron tube whose performance depends on the formation and control of one or more electron beams.
electron-beam welding [MET] A technique for joining materials in which highly collimated electron beams are used at a pressure below 10^{3}ms3 mmHg (0.1333 pascal) to produce a highly concentrated heat source; used in outer space.
electron-bombardment-induced conductivity [ELECTR] In a multimode display-storage tube, a process using an electron gun to erase the image on the cathode-ray tube interface.
electron bunching *See* bunching.
electron capture [ATOM PHYS] The process in which an atom or ion passing through a material medium either loses or gains one or more orbital electrons. [NUC PHYS] A radioactive transformation of nuclide in which a bound electron merges with its nucleus. Also known as electron attachment.
electron capture detector [ANALY CHEM] Extremely sensitive gas chromatography detector that is a modification of the argon ionization detector, with conditions adjusted to favor the formation of negative ions.
electron charge [PHYS] The charge carried by an electron, equal to about -1.602×10^{-19} coulomb, or -4.803×10^{-10} statcoulomb.
electron cloud [ATOM PHYS] Picture of an electron state in which the charge is thought of as being smeared out, with the resulting charge density distribution corresponding to the probability distribution function associated with the Schrödinger wave function.
electron collector *See* collector.
electron compound [MET] Alloy of two metals in which a progressive change in composition is accompanied by a progression of phases, differing in crystal structure. Also known as Hume-Rothery compound; intermetallic compound.
electron conduction [ELEC] Conduction of electricity resulting from motion of electrons, rather than from ions in a gas or solution, or holes in a solid.
electron configuration [ATOM PHYS] The orbital and spin

arrangement of an atom's electrons, specifying the quantum numbers of the atom's electrons in a given state.

electron-coupled oscillator [ELECTR] An oscillator employing a multigrid tube in which the cathode and two grids operate as an oscillator; the anode-circuit load is coupled to the oscillator through the electron stream. Abbreviated eco. Also known as Dow oscillator.

electron coupler [ELECTR] A microwave amplifier tube in which electron bunching is produced by an electron beam projected parallel to a magnetic field and, at the same time, subjected to a transverse electric field produced by a signal generator. Also known as Cuccia coupler.

electron coupling [ELECTR] A method of coupling two circuits inside an electron tube, used principally with multigrid tubes; the electron stream passing between electrodes in one circuit transfers energy to electrodes in the other circuit. Also known as electronic coupling.

electron cyclotron resonance source [ELECTR] A source of multiply charged heavy ions that uses microwave power to heat electrons to energies of tens of kilovolts in two magnetic mirror confinement chambers in series; ions formed in the first chamber drift into the second chamber, where they become highly charged. Abbreviated ECR source.

electron cyclotron wave [PL PHYS] A wave in a plasma which propagates parallel to the magnetic field produced by currents outside the plasma at frequencies less than that of the electron cyclotron resonance, and which is circularly polarized, rotating in the same sense as electrons in the plasma; responsible for whistlers. Also known as whistler wave.

electron density [PHYS] **1.** The number of electrons in a unit volume. **2.** When quantum-mechanical effects are significant, the total probability of finding an electron in a unit volume.

electron device [ELECTR] A device in which conduction is principally by electrons moving through a vacuum, gas, or semiconductor, as in a crystal diode, electron tube, transistor, or selenium rectifier.

electron diffraction [PHYS] The phenomenon associated with the interference processes which occur when electrons are scattered by atoms in crystals to form diffraction patterns.

electron diffraction analysis [PHYS] Examination of solid surfaces by observing the diffraction of a stream of electrons by the surface.

electron diffraction camera [OPTICS] A camera used to obtain a photographic record of the position and intensity of the diffracted beams produced when a specimen is irradiated by a beam of electrons.

electron diffractograph [PHYS] A device, allied to the electron microscope, in which a beam of electrons strikes the sample, showing crystal pattern and other physical attributes on the resulting diffraction pattern; used for chemical analysis, atomic structure determination, and so on.

electron dipole moment *See* electron magnetic moment.

electron discharge machining [MET] A process by which materials that conduct electricity can be removed from a metal by an electric spark; used to form holes of varied shapes in materials of poor machinability. Abbreviated EDM. Also known as electrical discharge machining; electric spark machining; electroerosive machining; electrospark machining.

electron distribution [PHYS] A function which gives the number of electrons per unit volume of phase space.

electron distribution curve [PHYS CHEM] A curve indicating the electron distribution among the different available energy levels of a solid substance.

electron donor [PHYS CHEM] An atom or part of a molecule which supplies both electrons of a duplet forming a covalent bond. [SOLID STATE] *See* donor.

electron efficiency [ELECTR] The power which an electron stream delivers to the circuit of an oscillator or amplifier at a given frequency, divided by the direct power supplied to the stream. Also known as electronic efficiency.

electronegative [ELEC] **1.** Carrying a negative electric charge. **2.** Capable of acting as the negative electrode in an electric cell. [PHYS CHEM] Pertaining to an atom or group of atoms that has a relatively great tendency to attract electrons to itself.

electronegative potential [PHYS CHEM] Potential of an electrode expressed as negative with respect to the hydrogen electrode.

electron emission [ELECTR] The liberation of electrons from an electrode into the surrounding space, usually under the influence of heat, light, or a high electric field.

electron emitter [ELECTR] The electrode from which electrons are emitted.

electron energy level [ATOM PHYS] A quantum-mechanical concept for energy levels of electrons about the nucleus; electron energies are functions of each particular atomic species.

electron energy loss spectroscopy [SPECT] A technique for studying atoms, molecules, or solids in which a substance is bombarded with monochromatic electrons, and the energies of scattered electrons are measured to determine the distribution of energy loss.

electroneutrality principle [PHYS CHEM] The principle that in an electrolytic solution the concentrations of all the ionic species are such that the solution as a whole is neutral.

electron flow [ELEC] A current produced by the movement of free electrons toward a positive terminal; the direction of electron flow is opposite to that of current.

electron gas [PHYS] A concentration of electrons whose behavior, is, in first approximation, not governed by forces.

electron gun [ELECTR] An electrode structure that produces and may control, focus, deflect, and converge one or more electron beams in an electron tube.

electron-gun density multiplication [ELECTR] Ratio of the average current density at any specified aperture through which the electron stream passes to the average current density at the cathode surface.

electron hole *See* hole.

electron hole droplets [SOLID STATE] A form of electronic excitation observed in germanium and silicon at sufficiently low cryogenic temperatures; it is associated with a liquid-gas phase transition of the charge carriers, and consists of regions of conducting electron-hole Fermi liquid coexisting with regions of insulating exciton gas.

electronic [ELECTR] Pertaining to electron devices or to circuits or systems utilizing electron devices, including electron tubes, magnetic amplifiers, transistors, and other devices that do the work of electron tubes.

electronic absorption spectrum [SPECT] Spectrum resulting from absorption of electromagnetic radiation by atoms, ions, and molecules due to excitations of their electrons.

electronically agile radar [ENG] An airborne radar that uses a phased-array antenna which changes radar beam shapes and beam positions at electronic speeds.

electronic alternating-current voltmeter [ELECTR] A voltmeter consisting of a direct-current milliammeter calibrated in volts and connected to an amplifier-rectifier circuit.

electronic altimeter *See* radio altimeter.

electronic angular momentum [ATOM PHYS] The total angular momentum associated with the orbital motion of the spins of all the electrons of an atom.

electronic azimuth marker [ELECTR] On an airborne radar plan position indicator (PPI) a bright rotatable radial line used for bearing determination. Also known as azimuth marker.

electronic band spectrum [SPECT] Bands of spectral lines associated with a change of electronic state of a molecule; each band corresponds to certain vibrational energies in the initial and final states and consists of numerous rotational lines.

electronic bearing cursor [ELECTR] Of a marine radar set, the bright rotatable radial line on the plan position indicator used for bearing determination. Also known as electronic bearing marker.

electronic bearing marker *See* electronic bearing cursor.

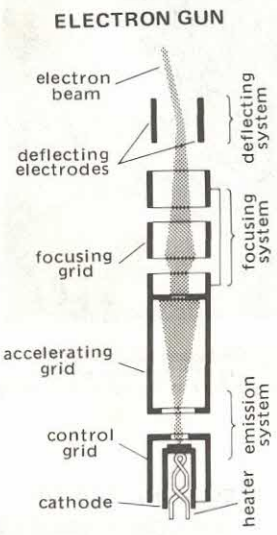
electronic calculating punch [COMPUT SCI] A card-handling machine that reads a punched card, performs a number of sequential operations, and punches the result on the card.

electronic calculator [ELECTR] A calculator in which integrated circuits perform calculations and show results on a digital display; the displays usually use either seven-segment light-emitting diodes or liquid crystals.

electronic camouflage [ELECTR] Use of electronic means, or exploitation of electronic characteristics to reduce, submerge, or eliminate the radar echoing properties of a target.

electronic cash register [ENG] A system for automatically checking out goods from retail food stores, consisting of a device that scans packages and reads symbols imprinted on the label, and a computer that converts the symbol information to tell a cash register the price of the item; the computer can also keep records of sales and inventories. Abbreviated ECR.

electronic chart reader [COMPUT SCI] A device which



Simplified electron gun employing electrostatic focus and deflection.

scans curves by a graphical recorder on a continuous paper form and converts them into digital form.

electronic circuit [ELECTR] An electric circuit in which the equilibrium of electrons in some of the components (such as electron tubes, transistors, or magnetic amplifiers) is upset by means other than an applied voltage.

electronic clock [HOROL] A clock that uses a ferrite rod and coil to pick up the electromagnetic field of 60-hertz power line wiring in a house; this 60-hertz voltage is amplified by a transistor amplifier and used to control a transistor oscillator that drives a tiny permanent-magnet synchronous clock motor; two mercury cells provide power for the transistors.

electronic codebook mode *See* block encryption.

electronic commutator [ELECTR] An electron-tube or transistor circuit that switches one circuit connection rapidly and successively to many other circuits, without the wear and noise of mechanical switches.

electronic component [ELECTR] A component which is able to amplify or control voltages or currents without mechanical or other nonelectrical command, or to switch currents or voltages without mechanical switches; examples include electron tubes, transistors, and other solid-state devices.

electronic composition [GRAPHICS] Typesetting in which characters are generated by electron or laser beams at speeds above about 6000 words per minute.

electronic computing units [ELECTR] The sensing sections of tabulating equipment which enable the machine to handle the contents of punched cards in a prescribed manner.

electronic confusion area [ELECTROMAG] Amount of space that a target appears to occupy in a radar resolution cell, as it appears to that radar beam.

electronic control [ELECTR] The control of a machine or process by circuits using electron tubes, transistors, magnetic amplifiers, or other devices having comparable functions.

electronic controller [ELECTR] Electronic device incorporating vacuum tubes or solid-state devices and used to control the action or position of equipment; for example, a valve operator.

electronic counter [ELECTR] A circuit using electron tubes or equivalent devices for counting electric pulses. Also known as electronic tachometer.

electronic countermeasure [ELECTR] An offensive or defensive tactic or device using electronic and reflecting apparatus to reduce the military effectiveness of enemy equipment involving electromagnetic radiation, such as radar, communication, guidance, or other radio-wave devices. Abbreviated ECM. Also known as electromagnetic countermeasure.

electronic coupling *See* electron coupling.

electronic data processing [COMPUT SCI] Processing data by using equipment that is predominantly electronic in nature, such as an electronic digital computer. Abbreviated EDP.

electronic data-processing center [COMPUT SCI] The complex formed by the computer, its peripheral equipment, the personnel related to the operation of the center and control functions, and, usually, the office space housing hardware and personnel. Abbreviated EDP center. Also known as computer center.

electronic data-processing management science [COMPUT SCI] The field consisting of a class of management problems capable of being handled by computer programs.

electronic data-processing system [COMPUT SCI] A system for data processing by means of machines using electronic circuitry at electronic speed, as opposed to electromechanical equipment.

electronic deception [ORD] Radiation or reradiation of electromagnetic waves in a manner intended to mislead the enemy in the interpretation of data received by the enemy's electronic equipment.

electronic defense evaluation [ELECTR] A mutual evaluation of radar and aircraft, with the aircraft trying to penetrate the radar's area of coverage in an electronic countermeasure environment.

electronic differential analyzer [COMPUT SCI] A form of analog computer using interconnected electronic integrators to solve differential equations.

electronic distance-measuring equipment [NAV] A navigation system consisting of airborne devices that transmit microsecond pulses to special ground beacons, which retransmit the signals to the aircraft; the length of expired time between transmission and reception is measured, converted to kilometers or miles, and presented to the pilot.

electronic driftmeter [NAV] An electronic instrument for measuring drift angle; may be an attachment to an airborne radar; is an integral part of a Doppler navigator.

electronic dummy [ENG ACOUS] A vocal simulator which is a replica of the head and torso of a person, covered with plastisol flesh that simulates the acoustical and mechanical properties of real flesh, and possessing an artificial voice and two artificial ears. Abbreviated ED.

electronic efficiency [ELECTR] Ratio of the power at the desired frequency, delivered by the electron stream to the circuit in an oscillator or amplifier, to the average power supplied to the stream.

electronic emission spectrum [SPECT] Spectrum resulting from emission of electromagnetic radiation by atoms, ions, and molecules following excitations of their electrons.

electronic energy curve [PHYS CHEM] A graph of the energy of a diatomic molecule in a given electronic state as a function of the distance between the nuclei of the atoms.

electronic engineering [ENG] Engineering that deals with practical applications of electronics.

electronic fix [NAV] A position fix established by means of electronic equipment.

electronic flame safeguard [MECH ENG] An electrode used in a burner system which detects the main burner flame and interrupts fuel flow if the flame is not detected.

electronic fuse [ENG] A fuse, such as the radio proximity fuse, set off by an electronic device incorporated in it.

electronic heating [ENG] Heating by means of radio-frequency current produced by an electron-tube oscillator or an equivalent radio-frequency power source. Also known as high-frequency heating; radio-frequency heating.

electronic humidistat [ENG] A humidistat in which a change in the relative humidity causes a change in the electrical resistance between two sets of alternate metal conductors mounted on a small flat plate with plastic coating, and this change in resistance is measured by a relay amplifier.

electronic intelligence [ORD] Electronic systems, apparatus, and operations for obtaining information concerning an enemy's capabilities, intentions, plans, and order of battle. Abbreviated elint.

electronic interference [ELECTR] Any electrical or electromagnetic disturbance that causes undesirable response in electronic equipment.

electronic jammer *See* jammer.

electronic jamming *See* jamming.

electronic line scanning [ELECTR] Method which provides motion of the scanning spot along the scanning line by electronic means.

electronic listening device [ELECTR] A device used to capture the sound waves of conversation originating in an ostensibly private setting in a form, usually as a magnetic tape recording, which can be used against the target by adverse interests.

electronic locator *See* metal detector.

electronic locking [ELECTR] A technique for preventing the operation of a switch until a specific electrical signal (the unlocking signal) is introduced into circuitry associated with the switch; usually, but not necessarily, the unlocking signal is a binary sequence.

electronic logger *See* Geiger-Müller probe.

electronic magnetic moment [ATOM PHYS] The total magnetic dipole moment associated with the orbital motion of all the electrons of an atom and the electron spins; opposed to nuclear magnetic moment.

electronic mail [COMMUN] The electronic transmission of letters, messages, and memos through a communications network.

electronic microradiography [ELECTR] Microradiography of very thin specimens in which the emission of electrons from an irradiated object, either the specimen or a lead screen behind it, is used to produce a photographic image of the specimen, which is then enlarged.

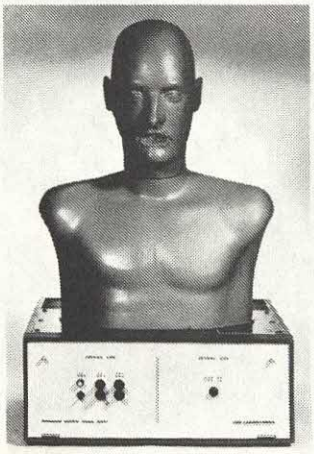
electronic motor control [ELECTR] A control circuit used to vary the speed of a direct-current motor operated from an alternating-current power line. Also known as direct-current motor control; motor control.

electronic multimeter [ELECTR] A multimeter that uses semiconductor or electron-tube circuits to drive a conventional multiscale meter.

ELECTRONIC COUNTERMEASURE

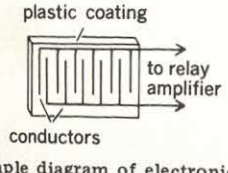
Metallized glass chaff which returns spurious radar echoes. *(Lundy Electronics and Systems)*

ELECTRONIC DUMMY



Electronic dummy which is used for acoustical testing. *(CBS Laboratories)*

ELECTRONIC HUMIDISTAT



Simple diagram of electronic humidistat. *(Honeywell Inc.)*

electronic music [ENG ACOUS] Music consisting of tones originating in electronic sound and noise generators used alone or in conjunction with electroacoustic shaping means and sound-recording equipment.

electronic musical instrument [ENG ACOUS] A musical instrument in which an audio signal is produced by a pickup or audio oscillator and amplified electronically to feed a loudspeaker, as in an electric guitar, electronic carillon, electronic organ, or electronic piano.

electronic navigation [NAV] Navigation by means of any electronic device or instrument.

electronic noise jammer [ELECTR] An electronic jammer which emits a radio-frequency carrier modulated with a white noise signal usually derived from a gas tube; used against enemy radar.

Electronic Numerical Integrator and Calculator *See* ENIAC.

electronic organ [ELECTR] A musical instrument which uses electronic circuits to produce music similar to that of a pipe organ.

electronic packaging [ENG] The technology of packaging electronic equipment; in current usage it refers to inserting discrete components, integrated circuits, and MSI and LSI chips (usually attached to a lead frame by beam leads) into plates through holes on multilayer circuit boards (also called cards), where they are soldered in place.

electronic phase-angle meter [ELECTR] A phasemeter that makes use of electronic devices, such as amplifiers and limiters, that convert the alternating-current voltages being measured to square waves whose spacings are proportional to phase.

electronic photometer *See* photoelectric photometer.

electronic piano [ELECTR] A piano without a sounding board, in which vibrations of each string affect the capacitance of a capacitor microphone and thereby produce audio-frequency signals that are amplified and reproduced by a loudspeaker.

electronic polarization [ELEC] Polarization arising from the displacement of electrons with respect to the nuclei with which they are associated, upon application of an external electric field.

electronic position indicator [NAV] A radio navigation system used in hydrographic surveying which provides circular lines of position. Abbreviated EPI.

electronic power supply *See* power supply.

electronic pumping *See* pumping.

electronic radiography [ELECTR] Radiography in which the image is detached by direct image converter tubes or by the use of television pickup or electronic scanning, and the resulant signals are amplified and presented for viewing on a kinescope.

electronic-raster scanning *See* electronic scanning.

electronic reconnaissance [ELECTR] The detection, identification, evaluation, and location of foreign, electromagnetic radiations emanating from other than nuclear detonations or radioactive sources.

electronic recording [ELECTR] The process of making a graphical record of a varying quantity or signal (or the result of such a process) by electronic means, involving control of an electron beam by electric or magnetic fields, as in a cathode-ray oscillograph, in contrast to light-beam recording.

electronics [PHYS] Study, control, and application of the conduction of electricity through gases or vacuum or through semiconducting or conducting materials.

electronic scanning [ELECTR] Scanning in which an electron beam, controlled by electric or magnetic fields, is swept over the area under examination, in contrast to mechanical or electromechanical scanning. Also known as electronic-raster scanning.

electronic sculpturing [COMPUT SCI] Procedure for constructing a model of a system by using an analog computer, in which the model is devised at the console by interconnecting components on the basis of analogous configuration with real system elements; then, by adjusting circuit gains and reference voltages, dynamic behavior can be generated that corresponds to the desired response, or is recognizable in the real system.

electronic security [ELECTR] Protection resulting from all measures designed to deny to unauthorized persons information of value which might be derived from the possession and study of electromagnetic radiations.

electronic sky screen equipment [ELECTR] Electronic device that indicates the departure of a missile from a predetermined trajectory.

electronic specific heat [SOLID STATE] Contribution to the specific heat of a metal from the motion of conduction electrons.

electronic spectrum [SPECT] Spectrum resulting from emission or absorption of electromagnetic radiation during changes in the electron configuration of atoms, ions, or molecules, as opposed to vibrational, rotational, fine-structure, or hyperfine spectra.

electronic speedometer [ENG] A speedometer in which a transducer sends speed and distance pulses over wires to the speed and mileage indicators, eliminating the need for a mechanical link involving a flexible shaft.

electronic state [QUANT MECH] The physical state of electrons of a system, as specified, for example, by a Schrödinger-Pauli wave function of the positions and spin orientations of all the electrons.

electronic structure [PHYS] The arrangement of electrons in an atom, molecule, or solid, specified by their wave functions, energy levels, or quantum numbers.

electronic surge arrester [ELECTR] Device used to switch to ground high-energy surges, thereby reducing transient energy to a level safe for secondary protectors, for example, Zener diodes, silicon rectifiers and so on.

electronic switch [ELECTR] **1.** Vacuum tube, crystal diodes, or transistors used as an on and off switching device. **2.** Test instrument used to present two wave shapes on a single gun cathode-ray tube.

electronic switching [COMMUN] Telephone switching using a computer with a storage containing program switching logic, whose output actuates reed switches that set up telephone connections automatically. [ELECTR] The use of electronic circuits to perform the functions of a high-speed switch.

electronic tablet [COMPUT SCI] A data-entry device consisting of stylus, writing surface, and circuitry that produces a pair of digital coordinate values corresponding continuously to the position of the stylus upon the surface. Also known as data tablet.

electronic tachometer *See* electronic counter.

electronic thermometer [ENG] A thermometer in which a sensor, usually a thermistor, is placed on or near the object being measured.

electronic tonometer *See* tonometer.

electronic tuning [ELECTR] Tuning of a transmitter, receiver, or other tuned equipment by changing a control voltage rather than by adjusting or switching components by hand.

electronic video recording [ELECTR] The recording of black and white or color television visual signals on a reel of photographic film as coded black and white images. Abbreviated EVR.

electronic voltage regulator [ELECTR] A device which maintains the direct-current power supply voltage for electronic equipment nearly constant in spite of input alternating-current line voltage variations and output load variations.

electronic voltmeter [ENG] Voltmeter which uses the rectifying and amplifying properties of electron devices and their associated circuits to secure desired characteristics, such as high-input impedance, wide-frequency range, crest indications, and so on.

electronic warfare [ELECTR] Military action involving the use of electromagnetic energy to determine, exploit, reduce, or prevent hostile use of the electromagnetic spectrum, and action which retains friendly use of electromagnetic spectrum.

electronic warfare support measures [ELECTR] That division of electronic warfare involving actions taken to search for, intercept, locate, record, and analyze radiated electromagnetic energy for the purpose of exploiting such radiations in support of military operations.

electronic work function [SOLID STATE] The energy required to raise an electron with the Fermi energy in a solid to the energy level of an electron at rest in vacuum outside the solid.

electronic writing [ELECTR] The use of electronic circuits and electron devices to reproduce symbols, such as an alphabet, in a prescribed order on an electronic display device for the purpose of transferring information from a source to a viewer of the display device.

electron image tube *See* image tube.

electron injection [ELECTR] **1.** The emission of electrons from one solid into another. **2.** The process of injecting a beam of electrons with an electron gun into the vacuum chamber of a mass spectrometer, betatron, or other large electron accelerator.

electron lens [ELECTR] An electric or magnetic field, or a

combination thereof, which acts upon an electron beam in a manner analogous to that in which an optical lens acts upon a light beam. Also known as lens.

electron lepton number [PARTIC PHYS] The number of electrons and electron-associated neutrinos minus the number of positrons and electron-associated antineutrinos; believed to be an exactly conserved quantity.

electron linear accelerator [NUCLEO] A linear accelerator used to accelerate electrons in a straight line, usually by means of radio-frequency fields which are produced in a loaded waveguide and travel with the electrons.

electron magnetic moment [ATOM PHYS] The magnetic dipole moment which an electron possesses by virtue of its spin. Also known as electron dipole moment.

electron mass [PHYS] The mass of an electron, equal to about 9.11×10^{-28}g, equivalent to 0.511 MeV. Also known as electron rest mass.

electron metallography [MET] The study of the microscopic structure of metals employing an electron microscope.

electron micrograph [GRAPHICS] Photograph of a sample taken with an electron microscope.

electron microprobe [PHYS] An x-ray machine in which electrons emitted from a hot-filament source are accelerated electrostatically, then focused to an extremely small point on the surface of a specimen by an electromagnetic lens; nondestructive analysis of the specimen can then be made by measuring the backscattered electrons, the specimen current, the resulting x-radiation, or any other resulting phenomenon. Also known as electron probe.

electron microscope [ELECTR] A device for forming greatly magnified images of objects by means of electrons, usually focused by electron lenses.

electron mirror *See* dynode.

electron mobility [SOLID STATE] The drift mobility of electrons in a semiconductor, being the electron velocity divided by the applied electric field.

electron multiplicity [ATOM PHYS] In an atom with Russell-Saunders coupling, the quantity $2S + 1$, where S is the total spin quantum number.

electron multiplier [ELECTR] An electron-tube structure which produces current amplification; an electron beam containing the desired signal is reflected in turn from the surfaces of each of a series of dynodes, and at each reflection an impinging electron releases two or more secondary electrons, so that the beam builds up in strength. Also known as multiplier.

electron-multiplier phototube *See* multiplier phototube.

electron nuclear double resonance [SPECT] A type of electron paramagnetic resonance (EPR) spectroscopy permitting greatly enhanced resolution, in which a material is simultaneously irradiated at one of its EPR frequencies and by a second oscillatory field whose frequency is swept over the range of nuclear frequencies. Abbreviated ENDOR.

electron number [ATOM PHYS] The number of electrons in an ion or atom.

electronographic tube [ELECTR] An image tube used in astronomy in which the electron image formed by the tube is recorded directly upon film or plates.

electronography [ELECTR] The use of image tubes to form intensified electron images of astronomical objects and record them directly on film or plates.

electronoluminescence *See* cathodoluminescence.

electron optics [ELECTR] The study of the motion of free electrons under the influence of electric and magnetic fields.

electron orbit [PHYS] The path described by an electron.

electron pair [PHYS CHEM] A pair of valence electrons which form a nonpolar bond between two neighboring atoms.

electron pair bond *See* covalent bond.

electron paramagnetic resonance [PHYS] Magnetic resonance arising from the magnetic moment of unpaired electrons in a paramagnetic substance or in a paramagnetic center in a diamagnetic substance. Abbreviated EPR. Also known as electron spin resonance (ESR); paramagnetic resonance.

electron paramagnetism [PHYS] Paramagnetism in a substance whose atoms or molecules possess a net electronic magnetic moment; arises because of the tendency of a magnetic field to orient the electronic magnetic moments parallel to itself.

electron-positron storage ring [NUCLEO] An annular vacuum chamber, enclosed by bending and focusing magnets, in which counterrotating beams of electrons and positrons are stored for several hours and can be made to collide with each other.

electron probe *See* electron microprobe.

electron probe microanalysis [ANALY CHEM] A technique in analytical chemistry in which a finely focused beam of electrons is used to excite an x-ray spectrum characteristic of the elements in the sample; can be used with samples as small as 10^{-11} cubic centimeter.

electron radius [PHYS] The classical value r of 2.81777×10^{-13} centimeter for the radius of an electron; obtained by equating mc^2 for the electron to e^2/r, where e and m are the charge and mass of the electron respectively; any classical model for an electron will have approximately this radius.

electron-ray indicator *See* cathode-ray tuning indicator.

electron-ray tube *See* cathode-ray tube.

electron rest mass *See* electron mass.

electron ring accelerator [NUCLEO] Proposed particle accelerator in which protons to be accelerated are trapped by the space charge of a ring of relativisitic electrons which is then accelerated. Abbreviated ERA.

electron shell [ATOM PHYS] **1.** The collection of all the electron states in an atom which have a given principal quantum number. **2.** The collection of all the electron states in an atom which have a given principal quantum number and a given orbital angular momentum quantum number.

electron spectroscopy [SPECT] The study of the energy spectra of photoelectrons or Auger electrons emitted from a substance upon bombardment by electromagnetic radiation, electrons, or ions; used to investigate atomic, molecular, or solid-state structure, and in chemical analysis.

electron spectroscopy for chemical analysis *See* x-ray photoelectron spectroscopy.

electron spectrum [SPECT] Visual display, photograph, or graphical plot of the intensity of electrons emitted from a substance bombarded by x-rays or other radiation as a function of the kinetic energy of the electrons.

electron spin [QUANT MECH] That property of an electron which gives rise to its angular momentum about an axis within the electron.

electron spin density [PHYS] The vector sum of the spin angular momenta of electrons at each point in a substance per unit volume.

electron spin resonance *See* electron paramagnetic resonance.

electron stain [MATER] A substance such as phosphotungstic acid or osmic acid which scatters large numbers of electrons and can therefore be used to stain objects to be examined by an electron microscope.

electron-stream potential [ELECTR] At any point in an electron stream, the time average of the potential difference between that point and the electron-emitting surface.

electron-stream transmission efficiency [ELECTR] At an electrode through which the electron stream (beam) passes, the ratio of the average stream current through the electrode to the stream current approaching the electrode.

electron synchrotron [NUCLEO] A circular electron accelerator in which the frequency of the accelerating system is constant, the strength of the magnetic guide field increases, and the electrons move in orbits of nearly constant radius.

electron telescope [ELECTR] A telescope in which an infrared image of a distant object is focused on the photosensitive cathode of an image converter tube; the resulting electron image is enlarged by electron lenses and made visible by a fluorescent screen.

electron temperature [PL PHYS] The temperature at which ideal gas molecules would have an average kinetic energy equal to that of electrons in a plasma under consideration.

electron transfer [PHYS] The passage of an electron from one constituent of a system to another.

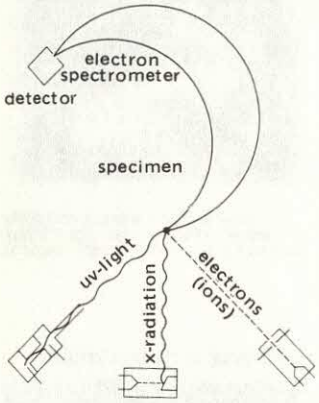
electron transition [QUANT MECH] Change of an electron from one state to another, accompanied by emission or absorption of electromagnetic radiation.

electron transport system [BIOCHEM] The components of the final sequence of reactions in biological oxidations; composed of a series of oxidizing agents arranged in order of increasing strength and terminating in oxygen.

electron trap [SOLID STATE] A defect or chemical impurity in a semiconductor or insulator which captures mobile electrons in a special way.

electron tube [ELECTR] An electron device in which con-

ELECTRON SPECTROSCOPY



Excitation of electron spectra recorded in high-resolution instruments.

duction of electricity is provided by electrons moving through a vacuum or gaseous medium within a gastight envelope. Also known as radio tube; tube; valve (British usage).

electron-tube amplifier [ELECTR] An amplifier in which electron tubes provide the required increase in signal strength.

electron-tube generator [ELECTR] A generator in which direct-current energy is converted to radio-frequency energy by an electron tube in an oscillator circuit.

electron-tube heater *See* heater.

electron tube static characteristic [ELECTR] Relation between a pair of variables such as electrode voltage and electrode current with all other voltages maintained constant.

electron tunneling [QUANT MECH] The passage of electrons through a potential barrier which they would not be able to cross according to classical mechanics, such as a thin insulating barrier between two superconductors.

electronuclear breeder *See* linear accelerator breeder.

electron vacuum gage [ENG] An instrument used to measure vacuum by the ionization effect that an electron flow (from an incandescent filament to a charged grid) has on gas molecules.

electronvolt [PHYS] A unit of energy which is equal to the energy acquired by an electron when it passes through a potential difference of 1 volt in a vacuum; it is equal to $(1.602192 \pm 0.000007) \times 10^{-19}$ volt. Abbreviated eV.

electron wave [QUANT MECH] The de Broglie wave or probability amplitude wave of an electron.

electron wave function [QUANT MECH] Function of the spin orientation and position of one or more electrons, specifying the dynamical state of the electrons; the square of the function's modulus gives the probability per unit volume of finding electrons at a given position.

electron wavelength [QUANT MECH] The de Broglie wavelength of an electron, given by Planck's constant divided by the momentum.

electrooptical birefringence *See* electrooptical Kerr effect.

electrooptical character recognition *See* optical character recognition.

electrooptical Kerr effect [OPTICS] Birefringence induced by an electric field. Also known as electrooptical birefringence; Kerr effect.

electrooptical modulator [COMMUN] An optical modulator in which a Kerr cell, an electrooptical crystal, or other signal-controlled electrooptical device is used to modulate the amplitude, phase, frequency, or direction of a light beam.

electrooptic material [OPTICS] A material in which the indices of refraction are changed by an applied electric field.

electrooptic radar [ENG] Radar system using electrooptic techniques and equipment instead of microwave to perform the acquisition and tracking operation.

electrooptics [OPTICS] The study of the influence of an electric field on optical phenomena, as in the electrooptical Kerr effect and the Stark effect. Also known as optoelectronics.

electroosmosis [PHYS CHEM] The movement in an electric field of liquid with respect to colloidal particles immobilized in a porous diaphragm or a single capillary tube.

electroosmotic driver [ELECTR] A type of solion for converting voltage into fluid pressure, which uses depolarizing electrodes sealed in an electrolyte and operates through the streaming potential effect. Also known as micropump.

electropainting [ENG] Electrolytic deposition of a thin layer of paint on a metal surface which is made an anode.

electropherography *See* electrochromatography.

electrophilic [PHYS CHEM] Any chemical process in which electrons are acquired from or shared with other molecules or ions.

electrophilic reagent [PHYS CHEM] A reactant which accepts an electron pair from a molecule, with which it forms a covalent bond.

electrophonic effect [BIOPHYS] The sensation of hearing produced when an alternating current of suitable frequency and magnitude is passed through a person.

electrophoresis [PHYS CHEM] An electrochemical process in which colloidal particles or macromolecules with a net electric charge migrate in a solution under the influence of an electric current. Also known as cataphoresis.

electrophoretic coating [MET] A surface coating on a metal deposited by electric discharge of particles from a colloidal solution.

electrophoretic display [OPTICS] A liquid crystal display in which a light-absorbing dye has been added to the liquid to improve both color and luminance contrast.

electrophoretic effect [PHYS CHEM] Retarding effect on the characteristic motion of an ion in an electrolytic solution subjected to a potential gradient, which results from motion in the opposite direction by the ion atmosphere.

electrophoretic mobility [BIOCHEM] A characteristic of living cells in suspension and biological compounds (proteins) in solution to travel in an electric field to the positive or negative electrode, because of the charge on these substances.

electrophoretic variants [BIOCHEM] Phenotypically different proteins that are separable into distinct electrophoretic components due to differences in mobilities; an example is erythrocyte acid phosphatase.

electrophorus [ELEC] A device used to produce electric charges; it consists of a hard-rubber disk, which is negatively charged by rubbing with fur, and a metal plate, held by an insulating handle, which is placed on the disk; the plate is then touched with a grounded conductor, so that negative charge is removed and the plate has net positive charge.

electrophotograph [GRAPHICS] An image formed by means of an electrostatic copying system.

electrophotography [GRAPHICS] An electrostatic image-forming process in which light, x-rays, or gamma rays form an electrostatic image on a photoconductive, insulating medium; the charged image areas attract and hold a fine powder called a toner, and the powder image is then transferred to paper or fused there by heat.

electrophotoluminescence [ELECTR] Emission of light resulting from application of an electric field to a phosphor which is concurrently, or has been previously, excited by other means.

electrophrenic respiration [MED] Artificial respiration in which the nerves that control breathing are stimulated electrically through appropriately placed electrodes.

electrophysiology [PHYSIO] The branch of physiology concerned with determining the basic mechanisms by which electric currents are generated within living organisms.

electroplating [MET] Electrodeposition of a metal or alloy from a suitable electrolyte solution; the article to be plated is connected as the cathode in the electrolyte solution; direct current is introduced through the anode which consists of the metal to be deposited.

electroplax [VERT ZOO] One of the structural units of an electric organ of some fishes, composed of thin, flattened plates of modified muscle that appear as two large, waferlike, roughly circular or rectangular surfaces.

electropolishing [MET] Smoothing and enhancing the appearance of a metal surface by making it an anode in a suitable electrolyte. Also known as electrolytic brightening; electrolytic polishing.

electropositive [ELEC] **1.** Carrying a positive electric charge. **2.** Capable of acting as the positive electrode in an electric cell. [PHYS CHEM] Pertaining to elements, ions, or radicals that tend to give up or lose electrons.

electropositive potential [PHYS CHEM] Potential of an electrode expressed as positive with respect to the hydrogen electrode.

electropulse engine [AERO ENG] An engine, for propelling a flight vehicle, that is based on the use of spark discharges through which intense electric and magnetic fields are established for periods ranging from microseconds to a few milliseconds; a resulting electromagnetic force drives the plasma along the leads and away from the spark gap.

electrorefining [CHEM ENG] Petroleum refinery process for light hydrocarbon streams in which an electrostatic field is used to assist in separation of chemical treating agents (acid, caustic, doctor) from the hydrocarbon phase. [MET] Purifying metals by electrolysis using an impure metal as anode from which the pure metal is dissolved and subsequently deposited at the cathode. Also known as electrolytic refining.

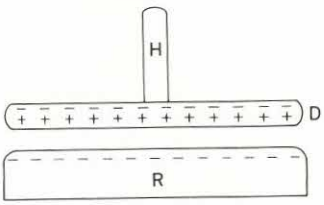
electroreflectance [SPECT] Electromodulation in which reflection spectra are studied. Abbreviated ER.

electroresistive effect [ELECTR] The change in the resistivity of certain materials with changes in applied voltage.

electroretinogram [MED] A graphic recording of the electric discharges of the retina. Abbreviated ERG.

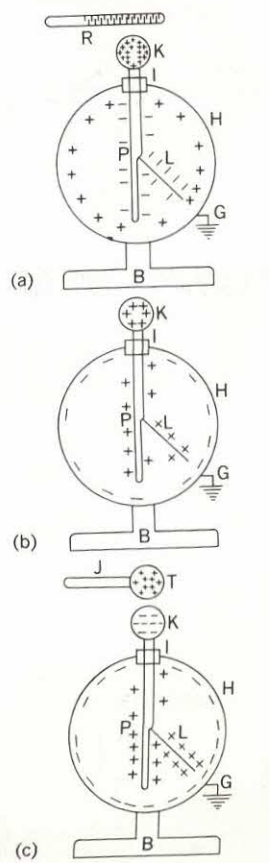
electroscope [ENG] An instrument for detecting an electric charge by means of the mechanical forces exerted between electrically charged bodies.

ELECTROPHORUS



An electrophorus; when the metal plate D with insulating handle H is placed on the rubber plate R, charge is induced as shown.

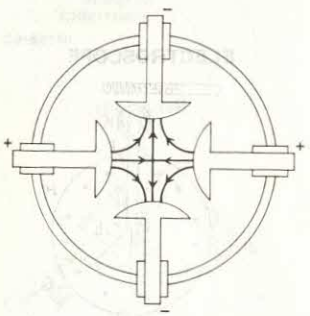
ELECTROSCOPE



Simple gold-leaf electroscope. *(a)* An electroscope being charged by induction by negative charge on hard-rubber rod R. *(b)* Positive charge left on its leaf after induction process is complete. *(c)* Testing the sign of an unknown charge on test ball T. L = gold leaf, P = metal post, I = insulator, K = metal knob, H = metal housing, B = base, R = rubber rod, J = insulating handle, and G = ground.

electrosensitive paper [MATER] A conductive paper that darkens when electric current is sent through it.
electrosensitive recording [ELECTR] Recording in which the image is produced by passing electric current through the record sheet.
electroshock therapy [MED] Treatment of mental patients by passing an electric current of 85–110 volts through the brain.
electroslag welding [MET] A welding process in which consumable electrodes are fed into a joint containing flux; the current melts the flux, and the flux in turn melts the faces of the joint and the electrodes, allowing the weld metal to form a continuously cast ingot between the joint faces.
electrospark machining *See* electron discharge machining.
electrostatic [ELEC] Pertaining to electricity at rest, such as an electric charge on an object.
electrostatic accelerator [ELECTR] Any instrument which uses an electrostatic field to accelerate charged particles to high velocities in a vacuum.
electrostatic actuator *See* actuator.
electrostatic analyzer [ELECTR] A device which filters an electron beam, permitting only electrons within a very narrow velocity range to pass through.
electrostatic atomization [MECH ENG] Atomization in which a liquid jet or film is exposed to an electric field, and forces leading to atomization arise from either free charges on the surface or liquid polarization.
electrostatic attraction *See* Coulomb attraction.
electrostatic bond [PHYS CHEM] A valence bond in which two atoms are kept together by electrostatic forces caused by transferring one or more electrons from one atom to the other.
electrostatic cathode-ray tube [ELECTR] A cathode-ray tube in which electrostatic deflection is used on the electron beam.
electrostatic coalescence [METEOROL] **1.** The coalescence of cloud drops induced by electrostatic attractions between drops of opposite charges. **2.** The coalescence of two cloud or rain drops induced by polarization effects resulting from an external electric field.
electrostatic copier [GRAPHICS] A copier that employs principles of electrostatography.
electrostatic copying *See* electrostatography.
electrostatic deflection [ELECTR] The deflection of an electron beam by means of an electrostatic field produced by electrodes on opposite sides of the beam; used chiefly in cathode-ray tubes for oscilloscopes.
electrostatic detection [ELECTR] The detection and location of any type of solid body, such as a mineral deposit or a mine, by measuring the associated electrostatic field which arises spontaneously or is induced by the detection equipment.
electrostatic energy [ELEC] The potential energy which a collection of electric charges possesses by virtue of their positions relative to each other.
electrostatic error *See* antenna effect.
electrostatic field [ELEC] A time-independent electric field, such as that produced by stationary charges.
electrostatic focus [ELECTR] Production of a focused electron beam in a cathode-ray tube by the application of an electric field.
electrostatic force [ELEC] Force on a charged particle due to an electrostatic field, equal to the electric field vector times the charge of the particle.
electrostatic generator [ELEC] Any machine which produces electric charges by friction or (more commonly) electrostatic induction.
electrostatic gyroscope [ENG] A gyroscope in which a small beryllium ball is electrostatically suspended within an array of six electrodes in a vacuum inside a ceramic envelope.
electrostatic induction [ELEC] The process of charging an object electrically by bringing it near another charged object, then touching it to ground. Also known as induction.
electrostatic instrument [ELEC] A meter that depends for its operation on the forces of attraction and repulsion between electrically charged bodies.
electrostatic interactions *See* Coulomb interactions.
electrostatic lens [ELECTR] An arrangement of electrostatic fields which acts upon beams of charged particles similar to the way a glass lens acts on light beams.
electrostatic loudspeaker [ENG ACOUS] A loudspeaker in which the mechanical forces are produced by the action of electrostatic fields; in one type the fields are produced between a thin metal diaphragm and a rigid metal plate. Also known as capacitor loudspeaker.
electrostatic memory *See* electrostatic storage.
electrostatic microphone *See* capacitor microphone.
electrostatic octupole lens [ELECTR] A device for controlling beams of electrons or other charged particles, consisting of eight electrodes arranged in a circular pattern with alternating polarities; commonly used to correct aberrations of quadrupole lens systems.
electrostatic painting [ENG] A painting process that uses the particle-attracting property of electrostatic charges; direct current of about 100,000 volts is applied to a grid of wires through which the paint is sprayed to charge each particle; the metal objects to be sprayed are connected to the opposite terminal of the high-voltage circuit, so that they attract the particles of paint.
electrostatic potential *See* electric potential.
electrostatic precipitator [ENG] A device which removes dust or other finely divided particles from a gas by charging the particles inductively with an electric field, then attracting them to highly charged collector plates. Also known as precipitator.
electrostatic printer [GRAPHICS] A line printer in which high-intensity lamps project images of characters onto a sensitized drum to form electrostatic patterns that attract ink powder; the images are then transferred to paper and fused.
electrostatic probe *See* electric probe.
electrostatic quadrupole lens [ELECTR] A device for focusing beams of electrons or other charged particles, consisting of four electrodes arranged in a circular pattern with alternating polarities.
electrostatic reprography [GRAPHICS] The replication of a document image as a pattern of electric charge on a metal plate; carbon particles attracted to the charge pattern are transferred to and bonded on an accepting surface; for example, multilith mats.
electrostatic repulsion *See* Coulomb repulsion.
electrostatics [ELEC] The study of electric charges at rest, their electric fields, and potentials.
electrostatic scanning [ELECTR] Scanning that involves electrostatic deflection of an electron beam.
electrostatic separation [ENG] Separation of finely pulverized materials by placing them in electrostatic separators. Also known as high-tension separation.
electrostatic separator [ENG] A separator in which a finely pulverized mixture falls through a powerful electric field between two electrodes; materials having different specific inductive capacitances are deflected by varying amounts and fall into different sorting chutes.
electrostatic shielding [ELEC] The placing of a grounded metal screen, sheet, or enclosure around a device or between two devices to prevent electric fields from interacting.
electrostatic storage [ELECTR] A storage in which information is retained as the presence or absence of electrostatic charges at specific spot locations, generally on the screen of a special type of cathode-ray tube known as a storage tube. Also known as electrostatic memory.
electrostatic storage tube *See* storage tube.
electrostatic stress [ELEC] An electrostatic field acting on an insulator, which produces polarization in the insulator and causes electrical breakdown if raised beyond a certain intensity.
electrostatic tape camera [OPTICS] A camera in which images are stored electrostatically on a plastic tape; designed for use in satellites, where the stored image is not damaged by Van Allen or other radiation.
electrostatic transducer [ENG ACOUS] A transducer consisting of a fixed electrode and a movable electrode, charged electrostatically in opposite polarity; motion of the movable electrode changes the capacitance between the electrodes and thereby makes the applied voltage change in proportion to the amplitude of the electrode's motion. Also known as condenser transducer.
electrostatic tweeter [ENG ACOUS] A tweeter loudspeaker in which a flat metal diaphragm is driven directly by a varying high voltage applied between the diaphragm and a fixed metal electrode.
electrostatic units [ELEC] A centimeter-gram-second system of electric and magnetic units in which the unit of charge is that charge which exerts a force of 1 dyne on another unit charge when separated from it by a distance of 1 centimeter in vacuum; other units are derived from this definition by assigning unit

ELECTROSTATIC QUADRUPOLE LENS



Electrostatic quadrupole lens showing the four electrodes.

coefficients in equations relating electric and magnetic quantities. Abbreviated esu.

electrostatic valence rule [PHYS CHEM] The postulate that in a stable ionic structure the valence of each anion, with changed sign, equals the sum of the strengths of its electrostatic bonds to the adjacent cations.

electrostatic voltmeter [ENG] A voltmeter in which the voltage to be measured is applied between fixed and movable metal vanes; the resulting electrostatic force deflects the movable vane against the tension of a spring.

electrostatic wattmeter [ENG] An adaptation of a quadrant electrometer for power measurements in which two quadrants are charged by the voltage drop across a noninductive shunt resistance through which the load current passes, and the line voltage is applied between one of the quadrants and a moving vane.

electrostatic wave [PL PHYS] Wave motion of a plasma whose restoring forces are primarily electrostatic.

electrostatography [GRAPHICS] A generic term covering all processes involving the forming and use of electrostatic charged patterns for recording and reproducing images; the field is divided into electrophotography and electrography. Also known as electrostatic copying.

electrostethophone [MED] A stethoscope consisting of a microphone and audio amplifier feeding headphones, used for detection and study of sounds arising within the body.

electrostriction [MECH] A form of elastic deformation of a dielectric induced by an electric field, associated with those components of strain which are independent of reversal of field direction, in contrast to the piezoelectric effect. Also known as electrostrictive strain.

electrostriction transducer [ENG ACOUS] A transducer which depends on the production of an elastic strain in certain symmetric crystals when an electric field is applied, or, conversely, which produces a voltage when the crystal is deformed. Also known as ceramic transducer.

electrostrictive strain *See* electrostriction.

electrosurgery [MED] The use of electricity to perform surgical procedures, as the use of electricity to simultaneously cut tissue and arrest bleeding.

electrosynthesis [CHEM] A reaction in which synthesis occurs as the result of an electric current.

electrotaxis [BIOL] Movement of an organism in response to stimulation by electric charges.

electrotherapy [MED] The therapeutic use of electricity.

electrothermal [PHYS] **1.** Pertaining to both heat and electricity. **2.** In particular, pertaining to conversion of electrical energy into heat energy.

electrothermal ammeter *See* thermoammeter.

electrothermal energy conversion [ENG] The direct conversion of electric energy into heat energy, as in an electric heater.

electrothermal process [ENG] Any process which uses an electric current to generate heat, utilizing resistance, arcs, or induction; used to achieve temperatures higher than can be obtained by combustion methods.

electrothermal propulsion [AERO ENG] Propulsion of spacecraft by using an electric arc or other electric heater to bring hydrogen gas or other propellant to the high temperature required for maximum thrust; an arc-jet engine is an example.

electrothermal recording [ELECTR] Type of electrochemical recording, used in facsimile equipment, wherein the chemical change is produced principally by signal-controlled thermal action.

electrothermal voltmeter [ENG] An electrothermal ammeter employing a series resistor as a multiplier, thus measuring voltage instead of current.

electrotinning [MET] Electroplating an object with tin.

electrotonus [PHYSIO] The change of condition in a nerve or a muscle during the passage of a current of electricity.

electrotropism [BIOL] Orientation response of a sessile organism to stimulation by electric charges.

electrotype [GRAPHICS] A duplicate printing surface prepared by making a mold of the type page or halftone plate, then suspending this mold in a bath of copper sulfate and sulfuric acid where, by electrolytic action, a thin shell of copper is deposited on it, and finally pouring molten type metal into this shell to strengthen it for use on the press.

electrotyping [GRAPHICS] The process of making an electrotype.

electrovalence [PHYS CHEM] The valence of an atom that has formed an ionic bond.

electrovalent bond *See* ionic bond.

electroviscous effect [FL MECH] Change in a liquid's viscosity induced by a strong electrostatic field.

electrowinning [MET] Extracting metal from solutions by electrochemical processes.

Elektra [ASTRON] An asteroid with a diameter of about 235 kilometers, mean distance from the sun of 3.117 astronomical units, and C-type surface composition.

Elektrion process [CHEM ENG] A process of condensation and polymerization in which a mixture of a relatively light mineral oil and a fatty oil is subjected to an electric discharge in an atmosphere of hydrogen; the product is a very viscous oil used for blending with lighter lubricating oils.

element [CHEM] A substance made up of atoms with the same atomic number; common examples are hydrogen, gold, and iron. Also known as chemical element. [COMPUT SCI] A circuit or device performing some specific elementary data-processing function. [ELEC] **1.** A part of an electron tube, semiconductor device, or antenna array that contributes directly to the electrical performance. **2.** *See* component. [ELECTROMAG] Radiator, active or parasitic, that is a part of an antenna. [IND ENG] A brief, relatively homogeneous part of a work cycle that can be described and identified. [MATH] **1.** In an array such as a matrix or determinant, a quantity identified by the intersection of a given row or column. **2.** In network topology, an edge.

element 104 [CHEM] The first element beyond the actinide series, and the twelfth transuranium element; the atoms of element 104, of mass number 260, were first produced by irradiating plutonium-242 with neon-22 ions in a heavy-ion cyclotron.

element 105 [CHEM] An artificial element whose isotope of mass number 260 was discovered by bombarding californium-249 with nitrogen-15 ions in a heavy-ion linear accelerator.

element 106 [CHEM] An artificial element whose isotope of mass number 263 was discovered by bombarding californium-249 with oxygen-18 ions in a heavy-ion linear accelerator, and whose isotope of mass number 259 was discovered by bombarding lead-207 and lead-208 with chromium-54 ions in a heavy-ion cyclotron.

element 107 [CHEM] An artificial element whose isotope of mass number 261 has been tentatively identified as a reaction product in the bombardment of bismuth-209 with chromium-54 ions and lead-208 with manganese-55 ions in a heavy-ion cyclotron.

elemental area *See* picture element.

elemental motion [IND ENG] In time-and-motion study, a fundamental subdivision of the hand movements in manipulating an object. Also known as basic element; fundamental motion; therblig.

elementary charge [PHYS] An electric charge such that the electric charge of any body is an integral multiple of it, equal to the electron charge.

elementary excitation [QUANT MECH] The quantum of energy of some vibration or wave, such as a photon, phonon, plasmon, magnon, polaron, or exciton.

elementary item [COMPUT SCI] An item considered to have no subordinate item in the COBOL language.

elementary particle [PARTIC PHYS] A particle which, in the present state of knowledge, cannot be described as compound, and is thus one of the fundamental constituents of all matter. Also known as fundamental particle; particle.

elementary process [PHYS CHEM] In chemical kinetics, the particular events at the atomic or molecular level which make up an overall reaction.

elementary reaction [ORG CHEM] A reaction which involves only a single transition state with no intermediates. Also known as step.

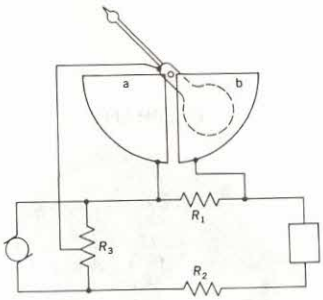
elementary ring structure [ASTRON] A formation on the moon's surface consisting of a simple wall of uniform cross section enclosing a circular area which has the same elevation as the surrounding surface. Also known as simple ring.

element breakdown [IND ENG] Separation of a work cycle into elemental motions.

elements of a fix [NAV] The specific values of the coordinates used to define a position.

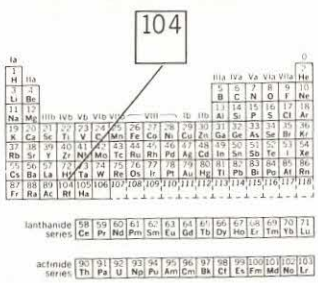
elements of an orbit [ASTRON] A set of quantities specify-

ELECTROSTATIC WATTMETER



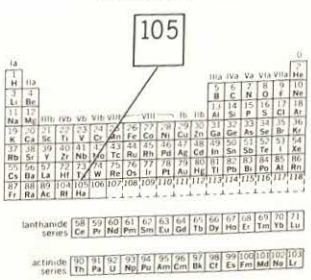
Electrostatic wattmeter circuit diagram showing two quadrants *a* and *b*.

ELEMENT 104



Periodic table of the chemical elements showing the position of element 104.

ELEMENT 105



Periodic table of the chemical elements showing the position of element 105.

ing the orbit of a member of the solar system or of a binary star system, used to calculate the body's position at any time.

elements of the trajectory [MECH] The various features of the trajectory such as the angle of departure, maximum ordinate, angle of fall, and so on.

element time [IND ENG] The time to complete a specific motion element.

elemi [MATER] A soft resin obtained from tropical trees of the family Burseraceae in the Philippines; used as a plasticizer, in cements and printing inks, and for perfumery and waterproofing.

eleolite *See* nepheline.

eleostearic acid [ORG CHEM] $CH_3(CH_2)_7(CH{:}CH)_3(CH_2)_3COOH$ A colorless, water-insoluble, crystalline, unsaturated fatty acid; the glycerol ester is a chief component of tung oil. Also known as octadeca-9,11,13-trienoic acid.

elephant [METEOROL] *See* elephanta. [VERT ZOO] The common name for two living species of proboscidean mammals in the family Elephantidae; distinguished by the elongation of the nostrils and upper lip into a sensitive, prehensile proboscis.

elephanta [METEOROL] A strong southeasterly wind on the Malabar coast of southwest India in September and October, at the end of the southwest monsoon, bringing thundersqualls and heavy rain. Also known as elephant; elephanter.

elephanter *See* elephanta.

elephant-hide pahoehoe [GEOL] A type of pahoehoe on whose surface are innumerable tummuli, broad swells, and pressure ridges which impart the appearance of elephant hide.

elephantiasis [MED] A parasitic disease of man caused by the filarial nematode *Wuchereria bancrofti;* characterized by cutaneous and subcutaneous tissue enlargement due to lymphatic obstruction.

Elephantidae [VERT ZOO] A family of mammals in the order Proboscidea containing the modern elephants and extinct mammoths.

elerwind [METEOROL] A wind of Sun Valley north of Kufstein, in the Tyrol.

elevate [ENG] To increase the angle of elevation of a gun, launcher, optical instrument, or the like.

elevated pole [ASTRON] The celestial pole that appears above the horizon.

elevating machine *See* elevator.

elevating mechanism [ORD] Mechanism on a gun carriage or launcher by which the weapon is elevated or depressed.

elevation [ENG] Vertical distance to a point or object from sea level or some other datum. [GRAPHICS] A graphic projection of a machine or structure on a vertical plane without perspective. [ORD] In antiaircraft artillery, a term sometimes applied to the angular height.

elevation angle [ELECTROMAG] The angle that a radio, radar, or other such beam makes with the horizontal. [ENG] *See* angle of elevation.

elevation-angle error [ELECTROMAG] In radar, the error in the measurement of the elevation angle of a target resulting from the vertical bending or refraction of radio energy in traveling through the atmosphere. Also known as elevation error.

elevation difference [ORD] The change in elevation which must be applied to a particular gun when firing data are being received from a base piece or other directing point.

elevation error *See* elevation-angle error.

elevation indicator [ORD] A component which presents visually the angle between a fixed reference point and a target in a vertical plane.

elevation meter [ENG] An instrument that measures the change of elevation of a vehicle.

elevation of ivory point *See* barometer elevation.

elevation prediction correction [ORD] In antiaircraft artillery terminology, the future elevation minus the present elevation.

elevation rate [ORD] Rate of change of present elevation of artillery; it is equal to minus the zenith distance rate of the present line, and may be expressed in mils per second or degrees per second.

elevation scale [ORD] Scale on a gun carriage that shows the quadrant elevation of the gun.

elevation stop [ENG] Structural unit in a gun or other equipment that prevents it from being elevated or depressed beyond certain fixed limits.

elevation table [ORD] Firing table giving a list of ranges, with the corresponding quadrant elevation settings to be applied to a gun.

elevation tints *See* gradient tints.

elevator [AERO ENG] The hinged rear portion of the longitudinal stabilizing surface or tail plane of an aircraft, used to obtain longitudinal or pitch-control moments. [MECH ENG] Also known as elevating machine. **1.** Vertical, continuous-belt, or chain device with closely spaced buckets, scoops, arms, or trays to lift or elevate powders, granules, or solid objects to a higher level. **2.** Pneumatic device in which air or gas is used to elevate finely powdered materials through a closed conduit. **3.** An enclosed platform or car that moves up and down in a shaft for transporting people or materials. Also known as lift. [PETRO ENG] A clamp gripping a stand or column of casing tubing, drill pipe, or sucker rods so that it can be moved up or down in a borehole being drilled.

elevator angle [AERO ENG] The angular displacement of the elevator from its neutral position; it is positive when the trailing edge of the elevator is below the neutral position, and negative when it is above.

elevator dredge [MECH ENG] A dredge which has a chain of buckets, usually flattened across the front and mounted on a nearly vertical ladder; used principally for excavation of sand and gravel beds under bodies of water.

elevator rod [PETRO ENG] A steel block fitted with an opening and latching device to permit insertion of a sucker rod, and provided with two long links to suspend from the elevator clamp when equipping a well with sucker rods for pumping.

eleven punch *See* X punch.

elevon [AERO ENG] The hinged rear portion of an aircraft wing, moved in the same direction on each side of the aircraft to obtain longitudinal control and differentially to obtain lateral control; elevon is a combination of the words elevator and aileron to denote that an elevon combines the functions of aircraft elevators and ailerons.

ELF *See* extremely low frequency.

elfinwood *See* krummholz.

Elgin extractor [CHEM ENG] Spray-tower, multistage, counterflow extractor in which the diameter of the base section is expanded to eliminate flow restriction at the light-liquid distribution location.

elimination [MATH] A process of deriving from a system of equations a new system with fewer variables, but with precisely the same solutions.

elimination factor [COMPUT SCI] In information retrieval, the ratio obtained in dividing the number of documents that have not been retrieved by the total number of documents in the file.

elimination reaction [ORG CHEM] A chemical reaction involving elimination of some portion of a reactant compound, with the production of a second compound.

eliminator [ELECTR] Device that takes the place of batteries, generally consisting of a rectifier operating from alternating current.

E lines [ELEC] Contour lines of constant electrostatic field strength referred to some reference base.

E link [NAV ARCH] A bracket attached to one of the arms of the stand that the compass is on (binnacle); it permits the mounting of a quadrantal error corrector.

elint *See* electronic intelligence.

elinvar [MET] A nickel-chromium steel alloy containing manganese and tungsten in varying amounts and having a low thermal expansion and almost invariable modulus of elasticity; used for chronometer balances and springs for gages and other instruments.

elixir [PHARM] A sweetened, aromatic solution, usually hydroalcoholic, sometimes containing soluble medicants; intended for use only as a flavor or vehicle.

elk [VERT ZOO] *Alces alces.* A mammal (family Cervidae) in Europe and Asia that resembles the North American moose but is smaller; it is the largest living deer.

ell [BUILD] A wing built perpendicular to the main section of a building.

ellagic acid [ORG CHEM] $C_{14}H_6O_8$ A compound isolated from tannins as yellow crystals that are minimally soluble in hot water. Also known as gallogen.

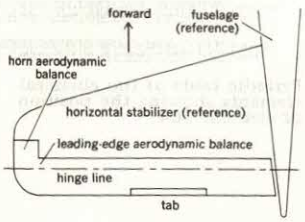
ellestadite [MINERAL] A pale rose, hexagonal mineral consisting of an apatite-like calcium sulfate-silicate; occurs in granular massive form.

ellipse [MATH] The locus of all points in the plane at which

ELEPHANT

The Indian elephant, recognized by its concave forehead, knobby head, and relatively small ears.

ELEVATOR



A typical elevator control surface on the left-hand tail plane of an airplane.

the sum of the distances from a fixed pair of points, the foci, is a given constant.

ellipsograph [GRAPHICS] A type of compass that draws ellipses.

ellipsoid [MATH] A surface whose intersection with every plane is an ellipse (or circle).

ellipsoidal coordinates [MATH] Coordinates in space determined by confocal quadrics.

ellipsoidal floodlight [ELEC] A lighting unit used in theatrical lighting consisting of an ellipsoidal reflector with fixed spacing and a lamp; power requirements are 250–5000 watts and the reflector diameter is 10–24 inches (25–61 centimeters). Also known as scoop.

ellipsoidal lava *See* pillow lava.

ellipsoidal of wave normals *See* index ellipsoid.

ellipsoidal reflector [OPTICS] A concave ellipsoidal surface from which light is specularly reflected; used in a light projector to focus rays from a light source at the near focal point onto the opposite focal point of the ellipse.

ellipsoidal spotlight [ELEC] A lighting unit consisting of a reflector, lamp, single or multiple lens system, and framing device; power requirements are 250–2000 watts.

ellipsoid of revolution [MATH] An ellipsoid generated by rotation of an ellipse about one of its axes. Also known as spheroid.

ellipsoid of wave normals *See* index ellipsoid.

ellipsometer [OPTICS] An instrument for determining the degree of ellipticity of polarized light; used to measure the thickness of very thin transparent films by observing light reflected from the film.

ellipsometry [OPTICS] Techniques for measuring the degree of ellipticity of polarized light.

elliptic [SCI TECH] Oval-shaped.

elliptical galaxy [ASTRON] A galaxy whose overall shape ranges from a spheroid to an ellipsoid, without any noticeable structural features. Also known as spheroidal galaxy.

elliptical orbit [MECH] The path of a body moving along an ellipse, such as that described by either of two bodies revolving under their mutual gravitational attraction but otherwise undisturbed.

elliptical polarization [ELECTROMAG] Polarization of an electromagnetic wave in which the electric field vector at any point in space describes an ellipse in a plane perpendicular to the propagation direction.

elliptical projection [MAP] A map of the surface of the earth formed on an ellipse's interior.

elliptical ring structure [ASTRON] A lunar crater enclosed by a wall that is elliptical in shape.

elliptical system [ENG] A tracking or navigation system where ellipsoids of position are determined from time or phase summation relative to two or more fixed stations which are the focuses for the ellipsoids.

elliptic arch [ARCH] An arch whose interior curve resembles an ellipse.

elliptic coordinates [MATH] The coordinates of a point in the plane determined by confocal ellipses and hyperbolas.

elliptic differential equation [MATH] A general type of second-order partial differential equation which includes Laplace's equation and has the form

$$\sum_{i,j=1}^{n} A_{ij}\,(\partial^2 u/\partial x_i\,\partial x_j) + \sum_{i=1}^{n} B_i\,(\partial u/\partial x_i) + Cu + F = 0$$

where A_{ij}, B_i, C, and F are suitably differentiable real functions of $x_1, x_2, \ldots, x_n$, and there exists at each point $(x_1, x_2, \ldots, x_n)$ a real linear elliptic partial differential equation transformation on the x_i which reduces the quadratic form

$$\sum_{i,j=1}^{n} A_{ij}\,x_i\,x_j$$

to a sum of n squares, all of the same sign. Also known as elliptic partial differential equation.

elliptic function [MATH] An inverse function of an elliptic integral; alternatively, a doubly periodic, meromorphic function of a complex variable.

elliptic gear [MECH ENG] A change gear composed of two elliptically shaped gears, each rotating about one of its focal points.

elliptic geometry [MATH] The geometry obtained from euclidean geometry by replacing the parallel line postulate with the postulate that infinitely many lines may be drawn through a given point, parallel to a given line. Also known as Riemannian geometry.

elliptic integral [MATH] An integral over x whose integrand is a rational function of x and the square root of $p(x)$, where $p(x)$ is a third- or fourth-degree polynomial without multiple roots.

ellipticity *See* axial ratio.

elliptic partial differential equation *See* elliptic differential equation.

elliptic point [MATH] A point on a surface at which the total curvature is strictly positive.

elliptic spring [DES ENG] A spring made of laminated steel plates, arched to resemble an ellipse.

elliptocytosis [MED] A rare hereditary disease of man characterized by the presence of large numbers of oval or elliptic erythrocytes in the circulating blood.

ellsworthite [MINERAL] $(Ca,Na,U)_2(Nb,Ta)_2O_6(O,OH)$ A yellow, brown, greenish or black mineral of the pyrochlore group occurring in isometric crystals and consisting of an oxide of niobium, titanium, and uranium. Also known as betafite; hatchettolite.

elm [BOT] The common name for hardwood trees composing the genus *Ulmus*, characterized by simple, serrate, deciduous leaves.

Elmidae [INV ZOO] The drive beetles, a small family of coleopteran insects in the superfamily Dryopoidea.

El Niño [OCEANOGR] A warm current setting south along the coast of Peru; generally develops during February and March concurrently with a southerly shift in the tropical rain belt.

elongation [ASTRON] The difference between the celestial longitude of the moon or a planet, as measured from the earth, and that of the sun. [COMMUN] The extension of the envelope of a signal due to delayed arrival of multipath components. [MECH] The fractional increase in a material's length due to stress in tension or to thermal expansion.

elongation factor [BIOCHEM] Any of several proteins required for elongation of growing polypeptide chains during protein synthesis.

Elopidae [VERT ZOO] A family of fishes in the order Elopiformes, including the tarpon, ladyfish, and machete.

Elopiformes [VERT ZOO] A primitive order of actinopterygian fishes characterized by a single dorsal fin composed of soft rays only, cycloid scales, and toothed maxillae.

elpasolite [MINERAL] K_2NaAlF_6 Mineral composed of sodium potassium aluminum fluoride.

elpidite [MINERAL] $Na_2ZrSi_6O_{15}\cdot 3H_2O$ A white to brick-red mineral composed of hydrated sodium zirconium silicate.

ELR scale *See* equal listener response scale.

Elsasser's radiation chart [METEOROL] A radiation chart developed by W. M. Elsasser for the graphical solution of the radiative transfer problems of importance in meteorology: given a radiosonde record of the vertical variation of temperature and water vapor content, one can find with this chart such quantities as the effective terrestrial radiation, net flux of infrared radiation at a cloud base or a cloud top, and radiative cooling rates.

ELSE instruction [COMPUT SCI] An instruction in a programming language which tells a program what actions to take if previously specified conditions are not met.

ELSE rule [COMPUT SCI] A convention in decision tables which spells out which action to take in the case specified conditions are not met.

Elster-Geitel effect [PHYS] The phenomenon in which a heated conductor acquires a positive or negative electric charge in the presence of a gas, while in a vacuum it always acquires a negative charge.

ELT *See* emergency locator transmitter.

El Tor vibrio [MICROBIO] Any of the rod-shaped paracholera vibrios; many strains can be agglutinated with anticholera serum.

eluant [CHEM] A liquid used to extract one material from another, as in chromatography.

eluate [CHEM] The solution that results from the elution process.

elusive ulcer *See* Hunner's ulcer.

elution [CHEM] The removal of adsorbed species from a porous bed or chromatographic column by means of a stream of liquid or gas.

elutriation [CHEM ENG] The process of removing substances

Twig, leaf, fruit, and terminal and lateral buds of American elm *(Ulmus americana)*.

from a mixture through washing and decanting. [ENG] In a mixture, the separation of finer lighter particles from coarser heavier particles through a slow stream of fluid moving upward so that the lighter particles are carried with it. [GEOL] The washing away of the lighter or finer particles in a soil, especially by the action of raindrops.

elutriator [ENG] An apparatus used to separate suspended solid particles according to size by the process of elutriation.

eluvial [GEOL] Of, composed of, or relating to eluvium.

eluvial placer [GEOL] A placer deposit that is concentrated near the decomposed outcrop of the source.

eluviation [HYD] The process of transporting dissolved or suspended materials in the soil by lateral or downward water flow when rainfall exceeds evaporation.

eluvium [GEOL] Disintegrated rock material formed and accumulated in situ or moved by the wind alone.

elvegust [METEOROL] A cold descending squall in the upper parts of Norwegian fjords. Also known as sno.

elytron [INV ZOO] **1.** One of the two sclerotized or leathery anterior wings of beetles which serve to cover and protect the membranous hindwings. **2.** A dorsal scale of certain Polychaeta.

em [GRAPHICS] A unit of linear measurement used in printing which is equal to the point size of the type; for example, an em in 6-point type is 6 points wide.

emaciation [MED] A wasted condition of the body; the process of losing flesh so as to become extremely lean.

emagram [THERMO] A graph of the logarithm of the pressure of a substance versus its temperature, when it is held at constant volume; in meteorological investigations, the potential temperature is often the parameter.

emanating power [NUCLEO] The fraction of radon atoms, formed in a solid or solution, which escape.

emanation *See* radioactive emanation.

emanation security [ELECTR] The protection resulting from all measures designed to deny unauthorized persons information of value which might be derived from unintentional emissions from other than telecommunications systems.

emanometer [ENG] An instrument for the measurement of the radon content of the atmosphere: radon is removed from a sample of air by condensation or adsorption on a surface, and is then placed in an ionization chamber and its activity determined.

emanometry [NUCLEO] The collective techniques for ionization-chamber determination of the amounts of radioactive gases escaping into the lower atmosphere from the earth's surface; in emanometric measurements, the objective is to count, by typical ionization-chamber methods, all of the ions produced by the alpha particles emitted by the one or more radioactive gases contained in the chamber.

emarginate [BIOL] Having a margin that is notched or slightly forked.

embacle [HYD] The piling up of ice in a stream after a refreeze, and the pile so formed.

EMB agar [MICROBIO] A culture medium containing sugar, eosin, and methylene blue, used in the confirming test for coliform bacteria.

Emballonuridae [VERT ZOO] The sheath-tailed bats, a family of mammals in the order Chiroptera.

embalm [MED] To treat a cadaver with antiseptics and preservatives to prevent decay, before burial or dissection.

embankment [CIV ENG] **1.** A ridge constructed of earth, stone, or other material to carry a roadway or railroad at a level above that of the surrounding terrain. **2.** A ridge of earth or stone to prevent water from passing beyond desirable limits. Also known as bank.

embarkation [ORD] The loading of troops with their supplies and equipment into ships or aircraft.

embata [METEOROL] A local onshore southwest wind caused by the reversal of the northeast trade winds in the lee of the Canary Islands.

embatholithic [GEOL] Pertaining to ore deposits associated with a batholith where exposure of the batholith and country rock is about equal.

embayed [GEOGR] Formed into a bay. [NAV] Pertaining to a vessel in a bay unable to put to sea or to put to sea safely because of wind, current, or sea.

embayed coastal plain [GEOL] A coastal plain that has been partly sunk beneath the sea, thereby forming a bay.

embayed mountain [GEOL] A mountain that has been depressed enough for sea water to enter the bordering valleys.

embayment [GEOGR] Indentation in a shoreline forming a bay. [GEOL] **1.** Act or process of forming a bay. **2.** A reentrant of sedimentary rock into a crystalline massif.

Embden-Meyerhof pathway *See* glycolytic pathway.

embed Also spelled imbed. [BIOL] To prepare a specimen for sectioning for microscopic examination by infiltrating with or enclosing in paraffin or other supporting material. [SCI TECH] **1.** To enclose in a matrix. **2.** To closely surround.

embedded pointer [COMPUT SCI] A pointer set in a data record instead of in a directory.

embedment anchor [NAV ARCH] An anchor that uses a charge of powder or hydrostatic or pneumatic pressure to drive the fluke into the sea floor.

Embiidina [INV ZOO] An equivalent name for Embioptera.

Embioptera [INV ZOO] An order of silk-spinning, orthopteroid insects resembling the grasshoppers; commonly called the embiids or web spinners.

Embiotocidae [VERT ZOO] The surfperches, a family of perciform fishes in the suborder Percoidei.

embolectomy [MED] Surgical removal of an embolus.

embolism [MED] The blocking of a blood vessel by an embolus.

embolite [MINERAL] Ag(Cl,Br) A yellow-green mineral resembling cerargyrite; composed of native silver chloride and silver bromide.

Embolomeri [PALEON] An extinct side branch of slender-bodied, fish-eating aquatic anthracosaurs in which intercentra as well as centra form complete rings.

embolus [MED] A clot or other mass of particulate matter foreign to the bloodstream which lodges in a blood vessel and causes obstruction.

emboly [EMBRYO] Formation of a gastrula by the process of invagination.

embossed plate printer [COMPUT SCI] In character recognition, a data preparation device which accomplishes printing by allowing a raised character behind the paper to push the paper against the printing ribbon in front of the paper.

embossing [GRAPHICS] Producing a raised pattern on the surface of paper or wood by means of a die.

embossing die [GRAPHICS] A die used for embossing.

embossing stylus [ENG ACOUS] A recording stylus with a rounded tip that forms a groove by displacing material in the recording medium.

embouchure [GEOL] **1.** The mouth of a river. **2.** A river valley widened into a plain.

embrasure [ARCH] **1.** Opening in a wall or parapet, especially one through which a gun is fired. **2.** An opening such as for a door or window with sloping or beveled sides.

embrechites [PETR] A type of migmatite in which structural features of crystalline shifts are preserved but often partially obliterated by metablastesis.

Embrithopoda [PALEON] An order established for the unique Oligocene mammal *Arsinoitherium*, a herbivorous animal that resembled the modern rhinoceros.

embrittlement [MECH] Reduction or loss of ductility or toughness in a metal or plastic with little change in other mechanical properties.

embryo [BOT] The young sporophyte of a seed plant. [EMBRYO] **1.** An early stage of development in multicellular organisms. **2.** The product of conception up to the third month of human pregnancy.

Embryobionta [BOT] The land plants, a subkingdom of the Plantae characterized by having specialized conducting tissue in the sporophyte (except bryophytes), having multicellular sex organs, and producing an embryo.

embryogenesis [EMBRYO] The formation and development of an embryo from an egg.

embryology [BIOL] The study of the development of the organism from the zygote, or fertilized egg.

embryoma of the ovary *See* dysgerminoma.

embryonal-cell lipoma *See* liposarcoma.

embryonate [EMBRYO] **1.** To differentiate into a zygote. **2.** Containing an embryo.

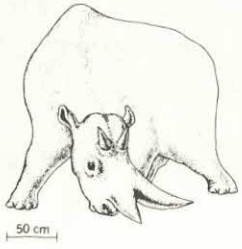
embryonated egg culture [VIROL] Embryonated hen's eggs inoculated with animal viruses for the purpose of identification, isolation, titration, or for quantity cultivation in the production of viral vaccines.

embryonic differentiation [EMBRYO] The process by

EMBIOPTERA

Body form of a typical embiid (*Pararhagadochir trachelia* Navas, female). *(From E. S. Ross, Insects Close Up; University of California Press, 1953)*

EMBRITHOPODA



Arsinoitherium, the early Oligocene embrithopod from Egypt. *(After C. R. Knight)*

which specialized and diversified structures arise during embryogenesis.

embryonic inducer [EMBRYO] The acting system in embryos, which contributes to the formation of specialized tissues by controlling the mode of development of the reacting system.

embryonic induction [EMBRYO] The influence of one cell group (inducer) over a neighboring cell group (induced) during embryogenesis. Also known as induction.

embryopathy [MED] Any abnormal development of an embryo, either morphological or biochemical.

Embryophyta [BOT] The equivalent name for Embryobionta.

embryo sac [BOT] The female gametophyte of a seed plant, containing the egg, synergids, and polar and antipodal nuclei; fusion of the antipodals and a pollen generative nucleus forms the endosperm.

embryotomy [MED] Any mutilation of the fetus in the uterus to aid in its removal when natural delivery is impossible.

Emden equation [ASTROPHYS] An equation for stellar structure which arises in a model based on the assumption that the star is a gaseous sphere in adiabatic equilibrium, in which the pressure is proportional to $\rho\gamma$, where ρ is the density and γ is a constant; the equation is $d^2y/dx^2 + (2/x)dy/dx + y^n = 0$, where $n = 1/(\gamma - 1)$, x is proportional to the distance from the center of the sphere, and y is proportional to $\rho^{1/n}$. Also known as Lane-Emden equation.

Emden function [ASTROPHYS] A solution of the Emden equation with the boundary conditions $y = 1$ and $dy/dx = 0$ at $x = 0$. Also known as Lane-Emden function.

emerald [MINERAL] $Al_2(Be_3Si_6O_{18})$ A brilliant-green to grass-green gem variety of beryl that crystallizes in the hexagonal system; green color is caused by varying amounts of chromium. Also known as smaragd.

emerald cut [LAP] A step cut in which the gem girdle outline is square or rectangular and the steps of elongated facets are parallel to the girdle, with sets on each of the four sides and at the corners.

emerged bog [ECOL] A bog which grows vertically above the water table by drawing water up through the mass of plants.

emerged shoreline *See* shoreline of emergence.

emergence [GEOL] **1.** Dry land which was part of the ocean floor. **2.** The act or process of becoming an emergent land mass. [HYD] *See* resurgence.

emergency anchorage [NAV] An anchorage, which may have a limited defense organization, for naval vessels, mobile support units, auxiliaries, or merchant ships.

emergency brake [MECH ENG] A brake that can be set by hand and, once set, continues to hold until released; used as a parking brake in an automobile.

emergency broadcast system [COMMUN] A system of broadcast stations and interconnecting facilities authorized by the U.S. Federal Communications Commission to operate in a controlled manner during a war, threat of war, state of public peril or disaster, or other national emergency.

emergency locator transmitter [NAV] A transmitter designed for use in locating downed aircraft or vessels in distress. Abbreviated ELT.

emergency position-indicating radio beacon [NAV] In the maritime community, a small hand-held battery-operated transmitter, actuated by water, for use in locating vessels in distress. Abbreviated EPIRB.

emergency power supply [ELEC] A source of power that becomes available, usually automatically, when normal power line service fails.

emergency radio channel [COMMUN] Any radio frequency reserved for emergency use, particularly for distress signals.

emergency receiver [COMMUN] Receiver immediately available in a station for emergency communications and capable of being energized solely by self-contained or emergency power supply.

emergency recorder plot [NAV] An emergency substitute for a tactical range recorder, consisting of a plastic sheet representing space and time coordinates on which speed and distance data are marked with a grease pencil as they are called off verbally. Abbreviated ERP.

emersion [ASTRON] The reappearance of a celestial body after an eclipse or occultation.

Emerson wage incentive plan [IND ENG] A plan comprising time wages to 66⅔% of standard performance, empiric bonuses from there to standard performance, ending at 120% time wages, and thereafter a straight-line earning which is 20% above and parallel to basic piece rate.

emery [MATER] An abrasive which is composed of pulverized, impure corundum; used in polishing and grinding. [MINERAL] A fine, granular, gray-black, impure variety of corundum containing iron oxides, either hematite or magnetite; occurs as masses in limestone and as segregations in igneous rock.

emery cake [MATER] Caked, powdered emery in a binding material.

Emery-Dietz gravity corer [ENG] A tube, with weights attached, which forces sediment samples into its interior as it is dropped on the ocean bottom.

emery paper [MATER] An abrasive paper or cloth with an adherent surface layer of emery powder; used for polishing and cleaning metal.

emery rock [PETR] A rock that contains corundum and iron ores.

emery stone [MATER] **1.** A sharpening stone. **2.** A mixture of powdered emery and a binder which can be molded into grinding devices.

emery wheel [DES ENG] A grinding wheel made of or having a surface of emery powder; used for grinding and polishing.

emesis [MED] The act of vomiting.

emetic [PHARM] Any agent that induces emesis.

emetine [PHARM] $C_{29}H_{40}N_2O_4$ Cephaeline methyl ether, the principal alkaloid of ipecac; a white powder, sparingly soluble in water; it is emetic, diaphoretic, and expectorant, but its chief utility is as an amebicide.

emf *See* electromotive force.

emi *See* electromagnetic interference.

emigration [ECOL] The movement of individuals or their disseminules out of a population or population area.

emiocytosis [CYTOL] Fusion of intracellular granules with the cell membrane, followed by discharge of the granules outside of the cell; applied chiefly to the mechanism of insulin secretion. Also known as reverse pinocytosis.

emissary sky [METEOROL] A sky of cirrus clouds which are either isolated or in small, separated groups; so called because this formation often is one of the first indications of the approach of a cyclonic storm.

emission [ELECTROMAG] Any radiation of energy by means of electromagnetic waves, as from a radio transmitter.

emission characteristics [ELECTR] Relation, usually shown by a graph, between the emission and a factor controlling the emission, such as temperature, voltage, or current of the filament or heater.

emission electron microscope [ELECTR] An electron microscope in which thermionic, photo, secondary, or field electrons emitted from a metal surface are projected on a fluorescent screen, with or without focusing.

emission flame photometry [ANALY CHEM] A form of flame photometry in which a sample solution to be analyzed is aspirated into a hydrogen-oxygen or acetylene-oxygen flame; the line emission spectrum is formed, and the line or band of interest is isolated with a monochromator and its intensity measured photoelectrically.

emission lines [SPECT] Spectral lines resulting from emission of electromagnetic radiation by atoms, ions, or molecules during changes from excited states to states of lower energy.

emission nebula [ASTRON] A type of bright diffuse nebula whose luminosity results from the excitation and ionization of its gas atoms by ultraviolet radiation from a nearby O- or B-type star.

emission security [ELECTR] That component of communications security which results from all measures taken to protect any unintentional emissions of a telecommunications system from any form of exploitation other than cryptanalysis.

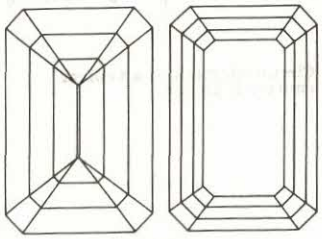
emission spectrometer [SPECT] A spectrometer that measures percent concentrations of preselected elements in samples of metals and other materials; when the sample is vaporized by an electric spark or arc, the characteristic wavelengths of light emitted by each element are measured with a diffraction grating and an array of photodetectors.

emission spectrum [SPECT] Electromagnetic spectrum produced when radiations from any emitting source, excited by any of various forms of energy, are dispersed.

emissive power *See* emittance.

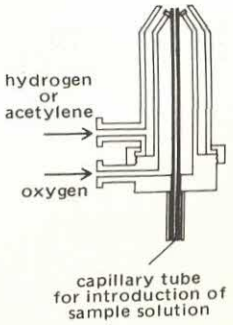
emissivity [THERMO] The ratio of the radiation emitted by a

EMERALD CUT



Emerald-cut gemstones. *(Gemological Institute of America)*

EMISSION FLAME PHOTOMETRY



Beckman aspirator-burner used in emission flame photometry.

surface to the radiation emitted by a perfect blackbody radiator at the same temperature. Also known as thermal emissivity.

emittance [THERMO] The power radiated per unit area of a radiating surface. Also known as emissive power; radiating power.

emitter [COMPUT SCI] A time pulse generator found in some equipment, such as a card punch. [ELECTR] A transistor region from which charge carriers that are minority carriers in the base are injected into the base, thus controlling the current flowing through the collector; corresponds to the cathode of an electron tube. Symbolized E. Also known as emitter region.

emitter barrier [ELECTR] One of the regions in which rectification takes place in a transistor, lying between the emitter region and the base region.

emitter bias [ELECTR] A bias voltage applied to the emitter electrode of a transistor.

emitter-coupled logic [ELECTR] A form of current-mode logic in which the emitters of two transistors are connected to a single current-carrying resistor in such a way that only one transistor conducts at a time. Abbreviated ECL.

emitter follower [ELECTR] A grounded-collector transistor amplifier which provides less than unity voltage gain but high input resistance and low output resistance, and which is similar to a cathode follower in its operations.

emitter junction [ELECTR] A transistor junction normally biased in the low-resistance direction to inject minority carriers into a base.

emitter pulse [COMPUT SCI] In a punch-card machine, one of a set of pulses associated with a particular row of punch positions on a punch card.

emitter region *See* emitter.

emitter resistance [ELECTR] The resistance in series with the emitter lead in an equivalent circuit representing a transistor.

emmetropia [MED] Normal vision.

emmonsite [MINERAL] $FE_2Te_3O_9 \cdot 2H_2O$ Yellow-green mineral composed of a hydrous oxide of iron and tellurium.

E mode *See* transverse magnetic mode.

emodin [ORG CHEM] $C_{14}H_4O_2(OH)_3CH_3$ Orange needles crystallizing from alcohol solution, melting point 256–257°C, practically insoluble in water, soluble in alcohol and aqueous alkali hydroxide solutions, occurs as the rhamnoside in plants such as rhubarb root and alder buckthorn; used as a laxative. Also known as archen; frangula emodin; frangulic acid; rheum emodin.

emollient [PHARM] A softening agent, especially for use on skin and mucous membranes; lanolin is widely used as a base.

emotion [PSYCH] A strong mental feeling or affect of the consciousness involving visceral and other physiologic changes.

empennage [AERO ENG] The assembly at the rear of an aircraft; it comprises the horizontal and vertical stabilizers. Also known as tail assembly.

emphasizer *See* preemphasis network.

emphysema [MED] A pulmonary disorder characterized by overdistention and destruction of the air spaces in the lungs.

emphysematous chest [MED] The altered contour of the chest seen in pulmonary emphysema, with increased anteroposterior diameter, flaring at the lower rib margins, low position of the diaphragm, and minimal respiratory motion. Also known as barrel chest.

Empididae [INV ZOO] The dance flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

empire cloth [MATER] Cotton cloth coated with oxidized oil; used as an electrical insulator.

empirical [SCI TECH] Based on actual measurement, observation, or experience, rather than on theory.

empirical curve [MATH] A smooth curve drawn through or close to points representing measured values of two variables on a graph.

empirical formula [CHEM] A chemical formula indicating the variety and relative proportions of the atoms in a molecule but not showing the manner in which they are linked together.

empirical probability [STAT] The ratio of the number of times an event has occurred to the total number of trials performed. Also known as a posteriori probability.

empirical rule [SCI TECH] A rule which is derived from measurements or observations, and is not based on any theory.

emplacement [GEOL] Intrusion of igneous rock or development of an ore body in older rocks. [ORD] **1.** Prepared position for one or more weapons or pieces of equipment, protecting against hostile fire or bombardment but permitting execution of the mission of the weapons. **2.** Act of fixing a gun in a prepared position from which it may be fired.

emplectite [MINERAL] $CuBiS_3$ A grayish or white mineral that crystallizes in the orthorhombic system; occurs in masses.

employment test [IND ENG] Any of a wide variety of tests to measure intelligence, personality traits, skills, interests, aptitudes, or other characteristics; used to supplement interviews, physical examinations, and background investigations before employment.

empodium [INV ZOO] A small peripheral part located between the claws of the tarsi of many insects and arachnids.

empressite [MINERAL] AgTe An opaque, pale-bronze mineral whose crystal system is unknown.

empty [ORD] In ammunition nomenclature, indicating that the munition does not contain a payload, but is designed to contain one at the time of final use.

empty-cell process [ENG] A wood treatment in which the preservative coats the cells without filling them.

empty medium [COMPUT SCI] A material which has been prepared to have data recorded on it by the entry of some preliminary data, such as feed holes punched in a paper tape or header labels written on a magnetic tape; in contrast to a virgin medium.

empty set [MATH] The set with no elements.

empyema [MED] The presence of pus in the body cavity, hollow organ, or tissue space; when the term is used without qualification, it generally refers to pus in the pleural space.

emu [ELECTROMAG] *See* electromagnetic system of units. [VERT ZOO] *Dromiceius novae-hollandiae*. An Australian ratite bird, the second largest living bird, characterized by rudimentary wings and a feathered head and neck without wattles.

emulation mode [COMPUT SCI] A method of operation in which a computer actually executes the instructions of a different (simpler) computer, in contrast to normal mode.

emulator [COMPUT SCI] The microprogram-assisted macroprogram which allows a computer to run programs written for another computer.

emulsification [CHEM] The process of dispersing one liquid in a second immiscible liquid; the largest group of emulsifying agents are soaps, detergents, and other compounds, whose basic structure is a paraffin chain terminating in a polar group.

emulsification test [CHEM ENG] Standard laboratory procedure for evaluating the resistance of insulating oils, turbine oils, and other lubricating oils to emulsification.

emulsified asphalt [MATER] An emulsion of asphalt cement and water with a small quantity of an emulsifying agent.

emulsifier *See* disperser.

emulsifying agent *See* disperser.

emulsifying oil *See* soluble oil.

emulsion [CHEM] A stable dispersion of one liquid in a second immiscible liquid, such as milk (oil dispersed in water). [GRAPHICS] In photography, the photosensitized material on film, plates, and various photographic papers.

emulsion breaking [CHEM] In an emulsion, the combined sedimentation and coalescence of emulsified drops of the dispersed phase so that they will settle out of the carrier liquid; can be accomplished mechanically (in settlers, cyclones, or centrifuges) with or without the aid of chemical additives to increase the surface tension of the droplets.

emulsion cleaner [CHEM ENG] A cleaner composed of organic solvents dispersed in an aqueous solution with the aid of an emulsifying agent.

emulsion paint [MATER] Paint whose vehicle is an emulsion of a binder (oil, resin, latex, and so on) in water.

emulsion polymerization [ORG CHEM] A polymerization reaction that occurs in one phase of an emulsion.

emulsion speed [GRAPHICS] Sensitivity of a photographic emulsion to light, under standard conditions of exposure and development.

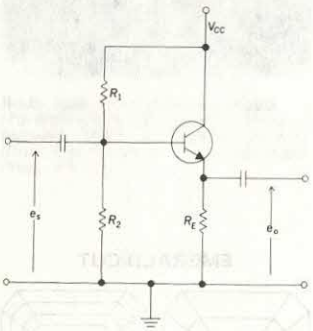
Emydidae [VERT ZOO] A family of aquatic and semiaquatic turtles in the suborder Cryptodira.

en [GRAPHICS] A unit of linear type measure; equal to one-half the point size of the type in question, that is, equal to one-half the width of an em.

enable [COMPUT SCI] To authorize an activity which would otherwise be suppressed, such as to write on a tape.

enabled instruction [COMPUT SCI] An instruction in a pro-

EMITTER FOLLOWER



Circuit diagram of a typical emitter follower.

gram in data flow language, all of whose input values are present, so that the instruction may be carried out.

enabling pulse [ELECTR] A pulse that prepares a circuit for some subsequent action.

Enaliornithidae [PALEON] A family of extinct birds assigned to the order Hesperornithiformes, having well-developed teeth found in grooves in the dentary and maxillary bones of the jaws.

enallachrome *See* esculin.

enamel [MATER] **1.** A finely ground, resin-containing oil paint that dries relatively harder, smoother, and glossier than ordinary paint. **2.** *See* glaze.

enamel clay [MATER] A ball clay able to float nonplastic enamel slips to make them spray or dip more evenly.

enameled brick [MATER] Brick with a smooth hard surface acquired from the application of a special wash before burning.

enameling [ENG] The application of a vitreous glaze to pottery or metal surfaces, followed by fusing in a kiln or furnace.

enamel kiln [ENG] A kiln in which enamel colors are fired.

enamel organ [EMBRYO] The epithelial ingrowth from the dental lamina which covers the dental papilla, furnishes a mold for the shape of a developing tooth, and forms the dental enamel.

enamel oxide [MATER] Any of the mixtures of calcined oxides used to color vitreous enamels used on sheet steel or cast iron.

enamel paper *See* coated paper.

enantiomer *See* enantiomorph.

enantiomorph [CHEM] One of an isomeric pair of crystalline forms or compounds whose molecules are nonsuperimposable mirror images. Also known as enantiomer; optical antipode; optical isomer.

enantiomorphism [CHEM] A phenomenon of mirror-image relationship exhibited by right-handed and left-handed crystals or by the molecular structures of two stereoisomers.

enantiotopic ligand [ORG CHEM] A ligand whose replacement or addition gives rise to enantiomers.

enantiotropy [CHEM] The relation of crystal forms of the same substance in which one form is stable above the transition-point temperature and the other stable below it, so that the forms can change reversibly one into the other.

Enantiozoa [INV ZOO] The equivalent name for Parazoa.

enargite [MINERAL] A lustrous, grayish-black mineral which is found in orthorhombic crystals but is more commonly columnar, bladed, or massive; hardness is 3 on Mohs scale, specific gravity is 4.44; in some places enargite is a valuable copper ore. Also known as clairite; luzonite.

enarthrosis [ANAT] A freely movable joint that allows a wide range of motion on all planes. Also known as ball-and-socket joint.

encapsulate [SCI TECH] To surround, encase, or enclose as if in a capsule; for example, the formation of a protective coating around a bacterium, or the enclosure of an item such as an electronic component in plastic.

encastré beam *See* fixed-end beam.

encaustic [GRAPHICS] A method of painting in which the pigment is carried in hot wax.

Enceladus [ASTRON] A satellite of Saturn orbiting at a mean distance of 238,000 kilometers.

encephalitis [MED] Inflammation of the brain.

encephalitis lethargica [MED] Epidemic encephalitis, probably of viral etiology, characterized by lethargy, ophthalmoplegia, hyperkinesia, and at times residual neurologic disability, particularly parkinsonism with oculogyric crisis. Also known as epidemic encephalitis; sleeping sickness; von Economo's disease.

encephalocele [MED] Hernia of the brain through a congenital or traumatic opening in the cranium.

encephalogram [MED] A roentgenogram of the brain made in encephalography.

encephalography [MED] Roentgenography of the brain following removal of cerebrospinal fluid, by lumbar or cisternal puncture, and its replacement by air or other gas.

encephaloid carcinoma *See* medullary carcinoma.

encephalomalacia [MED] **1.** Infarction of the brain. **2.** Any softening or fragmentation of the brain.

encephalomyelitis [MED] Inflammation of the brain and spinal cord.

encephalomyocarditis [MED] An acute febrile RNA virus disease accompanied by pharyngitis, stiff neck, and hyperactive deep reflexes; certain species of wild rats are the reservoir; human infections range from a mild febrile illness to a severe encephalomyelitis.

encephalopathy [MED] Any disease of the brain.

enchondroma [MED] A benign tumor composed of dysplastic cartilage cells, occurring in the metaphysis of cylindric bones, especially of the hands and feet.

enchondromatosis [MED] A rare disorder principally involving tubular bones, especially those of the feet and hands, characterized by hamartomatous proliferation of cartilage in the metaphysis, indistinguishable in single lesions from enchondromas. Also known as chondrodysplasia; dyschondroplasia; Ollier's disease.

enchymatous [PHYSIO] Of gland cells, distended with secreted material.

encipher [COMMUN] To convert a plain-text message into unintelligible language by means of a cryptosystem. Also known as encrypt.

enciphered facsimile communications [COMMUN] Communications in which security is accomplished by mixing pulses produced by a key generator with the output of the facsimile converter; plain text is recovered by subtracting the identical key at the receiving terminal; unauthorized listeners are unable to reconstruct the plain text unless they have an identical key generator and the daily key setting.

Encke division [ASTRON] A faint line that splits the outer ring of Saturn into two.

Encke roots [MATH] For any two numbers a_1 and a_2, the numbers $-x_1$ and $-x_2$, where x_1 and x_2 are the roots of the equation $x^2 + a_1x + a_2 = 0$, with $|x_1| < |x_2|$.

Encke's Comet [ASTRON] A very faint comet with the shortest period of any known comet, 3.3 years.

enclosed arc lamp [ELEC] An arc lamp in which the arc produced by carbon electrodes is protected from the atmosphere by a translucent enclosure.

encode [COMMUN] To express given information by means of a code. [COMPUT SCI] To prepare a routine in machine language for a specific computer.

encoded abstract [COMPUT SCI] An abstract prepared to be scanned by automatic electronic machines.

encoded question [COMPUT SCI] A question set up and encoded in the form appropriate for operating, programming, or conditioning a searching device.

encoder [COMPUT SCI] In character recognition, that class of printer which is usually designed for the specific purpose of printing a particular type font in predetermined positions on certain size forms. [ELECTR] **1.** In an electronic computer: a network or system in which only one input is excited at a time and each input produces a combination of outputs. **2.** *See* matrix.

encoding strip [COMPUT SCI] In character recognition, the area reserved for the inscription of magnetic-ink characters, as in bank checks.

encrinal limestone [GEOL] A limestone consisting of more than 10% but less than 50% of fossil crinoidal fragments.

encrinite [PALEON] One of certain fossil crinoids, especially of the genus *Encrinus*.

encrustation [ENG] The buildup of slag or other material inside furnaces and kilns.

encrypt *See* encipher.

encrypted message part [COMMUN] Portion of a long message which is sent as a separate complete message with its own date-time group, station serial number, and group count.

encryption [COMPUT SCI] The coding of a clear text message by a transmitting unit so as to prevent unauthorized eavesdropping along the transmission line; the receiving unit uses the same algorithm as the transmitting unit to decode the incoming message.

Encyrtidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

encystment [BIOL] The process of forming or becoming enclosed in a cyst or capsule.

end *See* warp.

Endamoeba [INV ZOO] The type genus of the Endamoebidae comprising insect parasites and, in some systems of classification, certain vertebrate parasites.

Endamoeba coli [INV ZOO] A nonpathogenic ameba that inhabits the human intestinal tract.

end-and-end [TEXT] Pertaining to a weave with a minuscule

ENARGITE

|-2.5 cm-|

Enargite crystals, Silver Bow County, Montana. *(Specimen from Department of Geology, Bryn Mawr College)*

check effect made by alternating white and colored warp yarns. Also known as end-to-end.

endarch [BOT] Formed outward from the center, referring to xylem or its development.

end-around carry [COMPUT SCI] A carry from the most significant digit place to the least significant digit place.

end-around shift *See* cyclic shift.

endarteritis [MED] Inflammation of the lining (tunica intima) of an artery.

endarteritis obliterans [MED] Endarteritis, particularly of small arteries, accompanied by degeneration of the intima, leading to occlusion of the blood vessel. Also known as obliterating endarteritis.

end-bearing pile [CIV ENG] A bearing pile that is driven down to hard ground so that it carries the full load at its point. Also known as a point-bearing pile.

end bulb *See* bouton.

end bulb of Krause *See* Krause's corpuscle.

end cell [ELEC] One of a group of cells in series with a storage battery, which can be switched in to maintain the output voltage of the battery when it is not being charged.

end-cell rectifier [ELECTR] Small trickle charge rectifier used to maintain voltage of the storage battery end cells.

end construction [CIV ENG] Structural blocks or tiles laid so that the hollow cells run vertically.

end-construction tile [MATER] A type of structural clay tile designed to receive its principal stress parallel to the axis of the cells.

end cut *See* heavy fraction.

end distortion [COMMUN] The displacement of trailing edges of marking pulses transmitted over a teletypewriter circuit relative to the leading edge of the start pulse.

end effect [ELECTROMAG] The effect of capacitance at the ends of an antenna; it requires that the actual length of a half-wave antenna be about 5% less than a half wavelength.

Endeidae [INV ZOO] A family of marine arthropods in the subphylum Pycnogonida.

endellite [MINERAL] $Al_2Si_2O_5(OH)_4 \cdot 4H_2O$ Term used in the United States for a clay mineral, the more hydrous form of halloysite. Also known as hydrated halloysite; hydrohalloysite; hydrokaolin.

endemic [MED] Peculiar to a certain region, specifically referring to a disease which occurs more or less constantly in any locality.

endemic goiter [MED] Goiter peculiar to areas that are iodine-poor in food, water, or soil.

endemic rural plague *See* sylvatic plague.

endemic typhus *See* murine typhus.

endemism [MED] The state or quality of being endemic.

endergonic [BIOCHEM] Of or pertaining to a biochemical reaction in which the final products possess more free energy than the starting materials; usually associated with anabolism.

endermic [MED] Acting through the skin by absorption, such as medication applied to the skin.

end-feed centerless grinding [MECH ENG] Centerless grinding in which the piece is fed through grinding and regulating wheels to an end stop.

end-fire antenna *See* end-fire array.

end-fire array [ELECTROMAG] A linear array whose direction of maximum radiation is along the axis of the array; it may be either unidirectional or bidirectional; the elements of the array are parallel and in the same plane, as in a fishbone antenna. Also known as end-fire antenna.

end instrument [ELECTR] A pickup used in telemetering to convert a physical quantity to an inductance, resistance, voltage, or other electrical quantity that can be transmitted over wires or by radio.

endite [INV ZOO] **1.** One of the appendages on the inner aspect of an arthropod limb. **2.** A ridgelike chewing surface on the inner part of the pedipalpus or maxilla of many arachnids.

end item [ENG] A final combination of end products, component parts, or materials which is ready for its intended use; for example, ship, tank, mobile machine shop, or aircraft.

end lap [DES ENG] A joint in which two joining members are made to overlap by removal of half the thickness of each.

endless loop [COMPUT SCI] A sequence of instructions in a computer program that is repeated over and over without end, due to a mistake in the programming.

endless tangent screw [NAV] That portion of the mechanism of a marine sextant which moves the index arm.

endless tangent screw sextant [NAV] A marine sextant having an endless tangent screw for controlling the position of the index arm and the vernier or micrometer drum; the index arm may be moved over the entire arc without resetting, by means of the endless tangent screw.

endlichite [MINERAL] A mineral similar to vanadinite, but with the vanadium replaced by arsenic.

end loader [MECH ENG] A platform elevator at the rear of a truck.

end loss [ELECTROMAG] The difference between the actual and the effective lengths of a radiating antenna element. [MET] That portion remaining after designated lengths of bar have been cut into multiples.

end mark [COMPUT SCI] A mark which signals the end of a unit of information.

end member [MINERAL] One of the two or more pure chemical compounds that enters into solid solution with other pure chemical compounds to make up a series of minerals of similar crystal structure (that is, an isomorphous, solid-solution series).

end mill [MECH ENG] A machine which has a rotating shank with cutting teeth at the end and spiral blades on the peripheral surface; used for shaping and cutting metal.

end-milled keyway *See* profiled keyway.

end moraine [GEOL] An accumulation of drift in the form of a ridge along the border of a valley glacier or ice sheet.

endo- [ORG CHEM] Prefix that denotes inward-directed valence bonds of a six-membered ring in its boat form. [SCI TECH] Prefix denoting within or inside.

endobasion [ANAT] The anteriormost point of the margin of the foramen magnum at the level of its smallest diameter.

endobatholithic [GEOL] Pertaining to ore deposits along projecting portions of a batholith.

endobiotic [ECOL] Referring to an organism living in the cells or tissues of a host.

endobranchiate [ZOO] Animal form with endodermal gills.

endocardial fibroelastosis [MED] Fibrous or fibroelastic thickening of the endocardium, of unknown cause.

endocarditis [MED] Inflammation of the endocardium.

endocardium [ANAT] The membrane lining the heart.

endocarp [BOT] The inner layer of the wall of a fruit or pericarp.

endocast *See* steinkern.

endocervicitis [MED] Inflammation of the mucous membrane of the uterine cervix.

endocervix [ANAT] The glandular mucous membrane of the cervix uteri.

endochondral ossification [PHYSIO] The conversion of cartilage into bone. Also known as intracartilaginous ossification.

endocommensal [ECOL] A commensal that lives within the body of its host.

endocorpuscular [CYTOL] Located within an erythrocyte.

endocranium [ANAT] **1.** The inner surface of the cranium. **2.** *See* dura mater. [INV ZOO] The processes on the inner surface of the head capsule of certain insects.

endocrine gland [PHYSIO] A ductless structure whose secretion (hormone) is passed into adjacent tissue and then to the bloodstream either directly or by way of the lymphatics. Also known as ductless gland.

endocrine system [PHYSIO] The chemical coordinating system in animals, that is, the endocrine glands that produce hormones.

endocrinology [PHYSIO] The study of the endocrine glands and the hormones that they synthesize and secrete.

endocuticle [INV ZOO] The inner, elastic layer of an insect cuticle.

endocyclic double bond [ORG CHEM] In a molecular structure, a double bond that is part of the ring system.

endocyst [INV ZOO] The soft layer consisting of ectoderm and mesoderm, lining the ectocyst of bryozoans.

endocytic vacuole [CYTOL] A membrane-bound cellular organelle containing extracellular particles engulfed by the mechanisms of endocytosis.

endocytosis [CYTOL] **1.** An active process in which extracellular materials are introduced into the cytoplasm of cells by either phagocytosis or pinocytosis. **2.** The process by which animal cells internalize large molecules and large collections of fluid.

endoderm [EMBRYO] The inner, primary germ layer of an

animal embryo; sometimes referred to as the hypoblast. Also known as entoderm; hypoblast.

endodermis [BOT] The innermost tissue of the cortex of most plant roots and certain stems consisting of a single layer of at least partly suberized or cutinized cells; functions to control the movement of water and other substances into and out of the stele.

endoenzyme [BIOCHEM] An intracellular enzyme, retained and utilized by the secreting cell.

endoergic *See* endothermic.

endoergic collision *See* collision of the first kind.

end-of-data-mark [COMPUT SCI] A character or word signaling the end of all data held in a particular storage unit.

end-of-field-mark [COMPUT SCI] A data item signaling the end of a field of data, generally a variable-length field.

end of file [COMPUT SCI] **1.** Termination or point of completion of a quantity of data; end of file marks are used to indicate this point. **2.** Automatic procedures to handle tapes when the end of an input or output tape is reached; a reflective spot, called a record mark, is placed on the physical end of the tape to signal the end.

end-of-file gap [COMPUT SCI] A gap of precise dimension to indicate the end of a file on tape. Abbreviated EOF gap.

end-of-file indicator [COMPUT SCI] **1.** A device that indicates the end of a file on tape. **2.** *See* end-of-file mark.

end-of-file mark [COMPUT SCI] A control character which signifies that the last record of a file has been read. Also known as end-of-file indicator.

end-of-file routine [COMPUT SCI] A program which checks that the contents of a file read into the computer were correctly read; may also start the rewind procedure.

end-of-file spot [COMPUT SCI] A reflective piece of tape indicating the end of the tape.

end-of-job control card [COMPUT SCI] The last card in a deck, normally punched with a distinctive code indicating that no additional cards are required for the job.

end-of-message [COMMUN] A character or series of characters signifying the end of a message or record, such as a message sent by teletypewriter.

end-of-record gap [COMPUT SCI] A gap of precise dimension (shorter than the end-of-file gap) which indicates the physical end of a record on a magnetic tape. Abbreviated EOR gap.

end-of-record word [COMPUT SCI] The last word in a record, usually written in a special format that enables identification of the end of the record.

end-of-run routine [COMPUT SCI] A routine that carries out various housekeeping operations such as rewinding tapes and printing control totals before a run is completed.

end-of-tape routine [COMPUT SCI] A program which is brought into play when the end of a tape is reached; may involve a series of validity checks and initiate the tape rewind.

end-of-transmission card [COMMUN] Last card of each message; used to signal the end of a transmission and contains the same information as the header card, plus additional data for traffic analysis.

end-of-transmission recognition [COMPUT SCI] The capability of a computer to recognize the end of transmission of a data string even if the buffer area is not filled.

endogamy [BIOL] Sexual reproduction between organisms which are closely related. [BOT] Pollination of a flower by another flower of the same plant.

endogenetic *See* endogenic.

endogenic [GEOL] Of or pertaining to a geologic process, or its resulting feature such as a rock, that originated within the earth. Also known as endogenetic; endogenous.

endogenote [MICROBIO] The genetic complement of the partial zygote formed as a result of gene transfer during the process of recombination in bacteria.

endogenous [BIOCHEM] Relating to the metabolism of nitrogenous tissue elements. [GEOL] *See* endogenic. [MED] Pertaining to diseases resulting from internal causes. [PSYCH] Pertaining to mental disorders caused by hereditary or constitutional factors.

endogenous pyrogen [BIOCHEM] A fever-inducing substance (protein) produced by cells of the host body, such as leukocytes and macrophages.

endogenous variables [MATH] In a mathematical model, the dependent variables; their values are to be determined by the solution of the model equations.

endognath [INV ZOO] The inner and main branch of a crustacean's oral appendage.

endolecithal [INV ZOO] A type of egg found in turbellarians with yolk granules in the cytoplasm of the egg. Also spelled entolecithal.

endolithic [ECOL] Living within rocks, as certain algae and coral.

endolymph [PHYSIO] The lymph fluid found in the membranous labyrinth of the ear.

endolymphatic stromomyosis *See* interstitial endometriosis.

endomeninx [EMBRYO] The internal part of the meninx primitiva that differentiates into the pia mater and arachnoid membrane.

endomere [EMBRYO] A blastomere that forms endoderm.

endometamorphism [GEOL] A phase of contact metamorphism involving changes in an igneous rock due to assimilation of portions of the rocks invaded by its magma.

endometrioma [MED] Endometriosis in which there is a discrete tumor mass.

endometriosis [MED] The presence of endometrial tissue in abnormal locations, including the uterine wall, ovaries, or extragenital sites.

endometritis [MED] Inflammation of the endometrium.

endometrium [ANAT] The mucous membrane lining the uterus.

endomitosis [CYTOL] Division of the chromosomes without dissolution of the nuclear membrane; results in polyploidy or polyteny.

endomixis [INV ZOO] Periodic division and reorganization of the nucleus in certain ciliated protozoans.

endomorph [PSYCH] A somatotype suggested by W.H. Sheldon to describe a person with a rounded physique; associated with viscerotonia.

endomorphism [MATH] A function from a set with some structure (such as a group, ring, vector space, or topological space) to itself which preserves this structure.

Endomycetales [MICROBIO] Former designation for Saccharomycetales.

Endomycetoideae [MICROBIO] A subfamily of ascosporogenous yeasts in the family Saccharomycetaceae.

Endomychidae [INV ZOO] The handsome fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

endomysium [HISTOL] The connective tissue layer surrounding an individual skeletal muscle fiber.

endoneural fibroma *See* neurofibroma.

endoneurium [HISTOL] Connective tissue fibers surrounding and joining the individual fibers of a nerve trunk.

endonuclease [BIOCHEM] Any of a group of enzymes which degrade deoxyribonucleic acid or ribonucleic acid molecules by attaching nucleotide linkages within the polynucleotide chain.

endoparasite [ECOL] A parasite that lives inside its host.

endopeptidase [BIOCHEM] An enzyme that acts upon the centrally located peptide bonds of a protein molecule.

endophagous [INV ZOO] Of an insect larva, living within and feeding upon the host tissues.

endophallus [INV ZOO] Inner wall of the phallus of insects.

endophyte [ECOL] A plant that lives within, but is not necessarily parasitic on, another plant.

endoplasm [CYTOL] The inner, semifluid portion of the cytoplasm.

endoplasmic reticulum [CYTOL] A vacuolar system of the cytoplasm in differentiated cells that functions in protein synthesis and sequestration. Abbreviated ER.

endopleurite [INV ZOO] **1.** The portion of a crustacean apodeme which develops from the interepimeral membrane. **2.** One of the laterally located parts on the thorax of an insect which fold inward, extending into the body cavity.

endopodite [INV ZOO] The inner branch of a biramous crustacean appendage.

Endoprocta [INV ZOO] The equivalent name for Entoprocta.

endoprosthesis [MED] A prosthesis that is used internally.

endopterygoid [VERT ZOO] A paired dermal bone of the roof of the mouth in fishes.

Endopterygota [INV ZOO] A division of the insects in the subclass Pterygota, including those orders which undergo a holometabolous metamorphosis.

ENDOR *See* electron nuclear double resonance.

endoradiosonde [ENG] A miniature battery-powered radio

transmitter encapsulated like a pill, designed to be swallowed for measuring and transmitting physiological data from the gastrointestinal tract.

endoreduplication [CYTOL] Appearance in mitotic cells of certain chromosomes or chromosome sets in the form of multiples.

end organ [ANAT] The expanded termination of a nerve fiber in muscle, skin, mucous membrane, or other structure.

β-endorphin [BIOCHEM] A 31–amino acid peptide fragment of pituitary β-lipotropic hormone having morphinelike activity.

endorser [COMPUT SCI] A special feature available on most magnetic-ink character-recognition readers that imprints a bank's endorsement on successful document reading.

endosalpingioma *See* serous cystadenoma.

endosalpinx [ANAT] The mucous membrane that lines the fallopian tube.

endosarc [INV ZOO] The inner, relatively fluid part of the protoplasm of certain unicellular organisms.

endoscope [MED] An instrument used to visualize the interior of a body cavity or hollow organ.

endosepsis [PL PATH] A fungus disease of figs caused by *Fusarium moniliforme fici*; fruits rot internally.

endoskeleton [ZOO] An internal skeleton or supporting framework in an animal.

endosmosis [PHYSIO] The passage of a liquid inward through a cell membrane.

endosome [CYTOL] A mass of chromatin near the center of a vesicular nucleus. [INV ZOO] The inner layer of certain sponges.

endosperm [BOT] **1.** The nutritive protein material within the embryo sac of seed plants. **2.** Storage tissue in the seeds of gymnosperms.

endosperm nucleus [BOT] The triploid nucleus formed within the embryo sac of most seed plants by fusion of the polar nuclei with one sperm nucleus.

endospore [BIOL] An asexual spore formed within a cell.

endostome [BOT] The opening in the inner integument of a bitegmic ovule.

endostyle [INV ZOO] A ciliated groove or pair of grooves in the pharynx of lower chordates.

endosulfan [ORG CHEM] $C_9H_6Cl_6O_3S$ A tan solid that melts between −10 and 100°C; used as an insecticide and miticide on vegetable and forage crops, on ornamental flowers, and in controlling termites and tsetse flies. Also known as 6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-6,9-methano-2,4,3,benzo(e)-dioxathiepin-3-oxide.

endosymbiont [ECOL] A symbiont that lives within the body of the host without deleterious effect on the host.

endotergite [INV ZOO] A dorsal plate to which muscles are attached in the insect skeleton.

endothecium [BOT] The middle of three layers that make up an immature anther; becomes the inner layer of a mature anther.

endothelial cell [HISTOL] A type of squamous epithelial cell composing the endothelium.

endotheliochorial placenta [EMBRYO] A type of placenta in which the maternal blood is separated from the chorion by the maternal capillary endothelium; occurs in dogs.

endothelioma [MED] Any tumor arising from, or resembling, endothelium; usually a benign growth, but occasionally a malignant tumor.

endothelium [HISTOL] The epithelial layer of cells lining the heart and vessels of the circulatory system.

Endotheriidae [PALEON] A family of Cretaceous insectivores from China belonging to the Proteutheria.

endotherm [PHYS CHEM] In differential thermal analysis, a graph of the temperature difference between a sample compound and a thermally inert reference compound (commonly aluminum oxide) as the substances are simultaneously heated to elevated temperatures at a predetermined rate, and the sample compound undergoes endothermal or exothermal processes. [PHYSIO] An animal that produces enough heat from its own metabolism and employs devices to retard heat loss so that it is able to keep its body temperature higher than that of its environment.

endothermic [PHYS CHEM] Pertaining to a reaction which absorbs heat. Also known as endoergic.

Endothyracea [PALEON] A superfamily of extinct benthic marine foraminiferans in the suborder Fusulinina, having a granular or fibrous wall.

endotoxin [MICROBIO] A toxin that is produced within a microorganism and can be isolated only after the cell is disintegrated.

endotracheal [ANAT] Within the trachea.

endotrophic [BIOL] Obtaining nourishment from within; applied to certain parasitic fungi that live in the root cortex of the host plant.

end play [MECH ENG] Axial movement in a shaft-and-bearing assembly resulting from clearances between the components.

end point [ANALY CHEM] That stage in the titration at which an effect, such as a color change, occurs, indicating that a desired point in the titration has been reached. [CHEM ENG] In the distillation analysis of crude petroleum and its products, the highest reading of a thermometer when a specified proportion of the liquid has boiled off. Also known as final boiling point.

end printing [COMPUT SCI] Printing across one end of a punched card the information punched on the card.

end product [PHYS] The final product of a chemical or nuclear reaction or process.

endrin [ORG CHEM] $C_{12}H_8OCl_6$ Poisonous, white crystals that are insoluble in water; it is used as a pesticide and is a stereoisomer of dieldrin, another pesticide.

end section [COMMUN] Additional portion of switchboard added to each end of a large multiple switchboard and used to extend some of the trunks or locals to these end positions to place all jacks within easy reach of the first and last operator. Also known as head section.

end stone [HOROL] A flat jewel in a timepiece which acts as a bearing for a pivot.

end turning *See* boxing.

endurance [ENG] The time that an aircraft, vehicle, or ship can continue operating under given conditions without refueling.

endurance limit *See* fatigue limit.

endurance ratio *See* fatigue ratio.

endurance strength *See* fatigue strength.

en echelon [GEOL] Referring to an overlapped or staggered arrangement of geologic features.

en echelon fault blocks [GEOL] A belt in which the individual fault blocks trend approximately 45° to the trend of the entire fault belt.

enema [MED] A rectal injection of liquid for therapeutic, diagnostic, or nutritive purposes.

energetics [PHYS] The study of energy and of its transformation from one form to another.

energetic solar particles [ASTROPHYS] Electrons and atomic nuclei produced in association with solar flares, with energies mostly in the range 1–100 MeV, but occasionally as high as 15 GeV. Also known as solar cosmic rays.

energized [ELEC] Electrically connected to a voltage source. Also known as alive; hot; live.

energy [PHYS] The capacity for doing work.

energy absorption [PHYS] Conversion of mechanical or radiant energy into the internal potential energy or heat energy of a system.

energy balance [PHYS] The arithmetic balancing of energy inputs versus outputs for an object, reactor, or other processing system; it is positive if energy is released, and negative if it is absorbed. [PHYSIO] The relation of the amount of utilizable energy taken into the body to that which is employed for internal work, external work, and the growth and repair of tissues.

energy band *See* band.

energy band theory of solids *See* band theory of solids.

energy beam [ENG] An intense beam of light, electrons, or other nuclear particles; used to cut, drill, form, weld, or otherwise process metals, ceramics, and other materials.

energy coefficient [OCEANOGR] The ratio between the energy transmitted forward in a wave per unit crest length at a point in shallow water, and the energy transmitted forward in a wave per unit crest length in deep water.

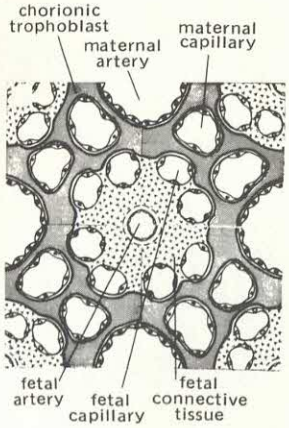
energy conservation *See* conservation of energy.

energy conversion [PHYS] The process of changing energy from one form to another.

energy conversion efficiency [MECH ENG] The efficiency with which the energy of the working substance is converted into kinetic energy.

energy density [PHYS] The energy per unit volume of a

ENDOTHELIOCHORIAL PLACENTA



Section through an endotheliochorial placenta.

ENDOTHYRACEA

Scanning electron micrograph of *Triticites* from the Pennsylvanian formation of Texas showing the exterior of the fusuline test. *(R. B. MacAdam, Chevron Oil Field Research Co.)*

medium; in the case of an electric or magnetic field, the energy needed to set up the field is thought of as residing in the field.

energy diagram *See* energy level diagram.

energy dissipation *See* dissipation.

energy efficiency ratio [ELEC] A value that represents the relative electrical efficiency of air conditioners; it is the quotient obtained by dividing Btu-per-hour output by electrical-watts input during cooling.

energy eigenstate *See* energy state.

energy flux [PHYS] A vector quantity whose component perpendicular to any surface equals the energy transported across that surface by some medium per unit area per unit time.

energy gap [SOLID STATE] A range of forbidden energies in the band theory of solids.

energy gradient [PHYS] Any change in energy over time or space.

energy head [FL MECH] The elevation of the hydraulic grade line at any section of a waterway plus the velocity head of the mean velocity of the water in that section.

energy integral [MECH] A constant of integration resulting from integration of Newton's second law of motion in the case of a conservative force; equal to the sum of the kinetic energy of the particle and the potential energy of the force acting on it.

energy level [GEOL] The kinetic energy supplied by waves or current action in an aqueous sedimentary environment either at the interface of deposition or several meters above. [QUANT MECH] An allowed energy of a physical system; there may be several allowed states at one level.

energy-level diagram [QUANT MECH] A diagram in which the energy levels of a quantized system are indicated by distances of horizontal lines from a zero energy level. Also known as energy diagram; level scheme.

energy load *See* dynamic load.

energy management [AERO ENG] In rocketry, the monitoring of the expenditure of fuel for flight control and navigation.

energy metabolism [BIOCHEM] The chemical reactions involved in energy transformations within cells.

energy momentum tensor [PHYS] A tensor whose 16 elements give the energy density, momentum density, and stresses in a distribution of matter or radiation.

energy of a charge [ELEC] Charge energy measured in ergs according to the equation $E = QV$, where Q is the charge and V is the potential in electrostatic units.

energy of activation *See* activation energy.

energy of rotation [PHYS] Kinetic energy of a mass with moment of inertia I rotating with angular velocity ω about the axis, expressed as $E = \frac{1}{2}I\omega^2$.

energy operator [QUANT MECH] The operator corresponding to the energy or Hamiltonian of a classical system. Also known as Hamiltonian operator.

energy product curve [ELECTROMAG] Curve obtained by plotting the product of the values of magnetic induction B and demagnetizing force H for each point on the demagnetization curve of a permanent magnet material; usually shown with the demagnetization curve.

energy pyramid [ECOL] An ecological pyramid illustrating the energy flow within an ecosystem.

energy spectrum [PHYS] Any plot, display, or photographic record of the intensity of some type of radiation as a function of its energy.

energy spread [QUANT MECH] The width in energy of a wave packet or metastable state.

energy state [QUANT MECH] An eigenstate of the energy (Hamiltonian) operator, so that the energy has a definite stationary value. Also known as eigenstate; energy eigenstate; quantum state; stationary state.

energy transfer [METEOROL] The transfer of energy of a given form among different scales of motion; for example, kinetic energy may be transferred between the zonal and meridional components of the wind, or between the mean and eddy components of the wind.

energy-variant sequential detection [COMMUN] Technique of sequential detection consisting of the transmission of a fixed number of pulses of varying energy, received with a single (upper) threshold device.

energy winds [PHYS] A group of winds which contain the bulk of recoverable kinetic energy for each month.

Enfield rifle [ORD] The popular name for the United States rifle, caliber .30, model 1917, a copy of the British Enfield rifle, a bolt-type, breech-loading magazine rifle; no longer standard for service use, it is used as a sporting weapon.

enfilade [ORD] To rake with gunfire; to fire down the length of a trench or line of troops.

enfleurage [CHEM ENG] Removal of the odoriferous components from flowers by placing them near an odorless mixture of lard and tallow; this mixture absorbs the perfume, which is subsequently extracted.

engaged column [CIV ENG] A column partially built into a wall, and not freestanding.

Engel-Recklinghausen disease *See* osteitis fibrosa cystica.

engine [MECH ENG] A machine in which power is applied to do work by the conversion of various forms of energy into mechanical force and motion.

engine balance [MECH ENG] Arrangement and construction of moving parts in reciprocating or rotating machines to reduce dynamic forces which may result in undesirable vibrations.

engine block *See* cylinder block.

engine cooling [MECH ENG] Controlling the temperature of internal combustion engine parts to prevent overheating and to maintain all operating dimensions, clearances, and alignment by a circulating coolant, oil, and a fan.

engine cycle [THERMO] Any series of thermodynamic phases constituting a cycle for the conversion of heat into work; examples are the Otto cycle, Stirling cycle, and Diesel cycle.

engine cylinder [MECH ENG] A cylindrical chamber in an engine in which the energy of the working fluid, in the form of pressure and heat, is converted to mechanical force by performing work on the piston. Also known as cylinder.

engine displacement [MECH ENG] Volume displaced by each piston moving from bottom dead center to top dead center multiplied by the number of cylinders.

engine distillate [MATER] A heavy naphtha-kerosine distillate fuel of low octane number. Also known as tractor fuel.

engine efficiency [MECH ENG] Ratio between the energy supplied to an engine to the energy output of the engine.

engineer [ENG] An individual who specializes in one of the branches of engineering.

engineering [SCI TECH] The science by which the properties of matter and the sources of power in nature are made useful to humans in structures, machines, and products.

engineering channel circuit [COMMUN] Auxiliary circuit or channel (radio or wire) for use by operating or maintenance personnel for communications incident to the establishment, operation, maintenance, and control of communications facilities.

engineering economy [IND ENG] **1.** Application of engineering or mathematical analysis and synthesis to decision making in economics. **2.** The knowledge and techniques concerned evaluating the worth of commodities and services relative to their cost. **3.** Analysis of the economics of engineering alternatives.

engineering geology [CIV ENG] The application of education and experience in geology and other geosciences to solve geological problems posed by civil engineering structures.

engineering plastics [MATER] Plastics that lend themselves to use for engineering design, such as gears and structural members.

engineering time [COMPUT SCI] The nonproductive time of a computer, reserved for maintenance and servicing.

engineer's chain [CIV ENG] A surveyor's measuring instrument consisting of 1-foot (30.48-centimeter) steel links joined together by rings, 100 (30.5 meters) or 50 feet long. Also known as chain.

engineer's scale [GRAPHICS] A rule having a triangular cross section and different measurement scales on the two edges of each face.

engineer's system of units *See* British gravitational system of units.

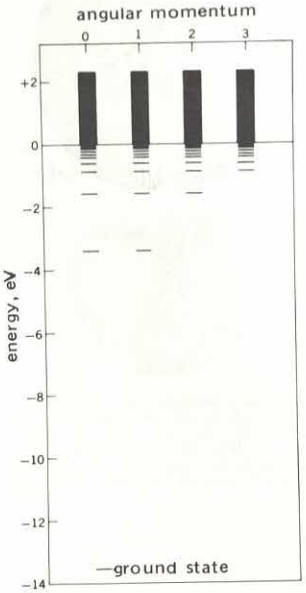
engine fuel [MATER] Any of various substances, usually fluid, which provide heat, chemical, or pressure energy for engine operation.

engine inlet [MECH ENG] A place of entrance for engine fuel.

engine knock [MECH ENG] In spark ignition engines, the sound and other effects associated with ignition and rapid combustion of the last part of the charge to burn, before the flame front reaches it. Also known as combustion knock.

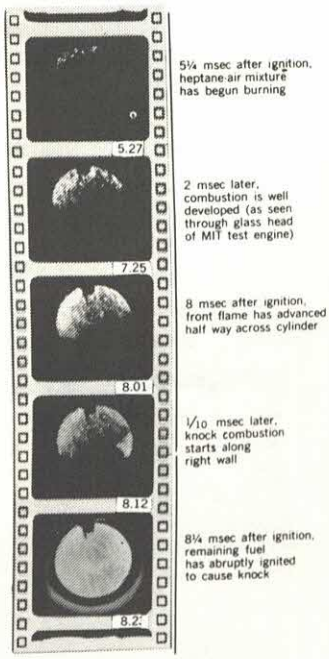
engine lathe [MECH ENG] A manually operated lathe

ENERGY-LEVEL DIAGRAM



Energy levels of the hydrogen atom, classified by the orbital angular momentum of the electron, expressed in units of $\hbar$.

ENGINE KNOCK



Photographic sequence showing (top to bottom) slow normal fuel burning ending in rapid knock combustion.

equipped with a headstock of the back-geared, cone-driven type or of the geared-head type.

engine oil [MATER] Oil used for the bearing lubrication of all types of engines, machines, and shafting and for cylinder lubrication in other than steam engines.

engine performance [MECH ENG] Relationship between power output, revolutions per minute, fuel or fluid consumption, and ambient conditions in which an engine operates.

engine revolution counter [NAV ARCH] An instrument for registering the number of revolutions of a propeller shaft of a vessel; this information is useful in estimating a vessel's speed through the water.

engine sludge [ENG] The insoluble products of degradation of lubricating oils and fuels formed during the operation of an internal combustion engine.

engine starter [ELEC] The electric motor in the electric system of an automobile that cranks the engine for starting. Also known as starter; starting motor.

englacial [HYD] Of or pertaining to the inside of a glacier.

Engler distillation test [CHEM ENG] A standard test for determination of the volatility characteristics of a gasoline by the measurement of the percent of gasoline distilled at various specific temperatures.

Engler flask [CHEM ENG] A standardized flask of 100-milliliter volume used in the Engler distillation test.

Engler viscometer [ENG] An instrument used in the measurement of the degree Engler, a measure of viscosity; the kinematic viscosity ν in stokes for this instrument is obtained from the equation $\nu = 0.00147t - 3.74/t$, where t is the efflux time in seconds.

English degree [CHEM] A unit of water hardness, equal to 1 part calcium carbonate to 70,000 parts water; equivalent to 1 grain of calcium carbonate per gallon of water. Also known as Clark degree.

English garden-wall bond [CIV ENG] A masonry bond in which there are three courses of stretchers to one of headers.

englishite [MINERAL] $K_2Ca_4Al_8(PO_4)_8(OH)_{10}\cdot 9H_2O$ A white mineral composed of hydrous basic phosphate of potassium, calcium, and aluminum.

English red [MATER] Pigment consisting mostly of red iron oxide.

English vermilion [INORG CHEM] Bright vermilion pigment of precipitated mercury sulfide; in paints, it tends to darken when exposed to light.

engobe [MATER] A thin layer of fluid clay applied to a piece of earthenware to support a glaze or enamel or to cover blemishes.

engram [PHYSIO] A memory imprint; the alteration that has occurred in nervous tissue as a result of an excitation from a stimulus, which hypothetically accounts for retention of that experience. Also known as memory trace.

Engraulidae [VERT ZOO] The anchovies, a family of herringlike fishes in the suborder Clupoidea.

engraved-roll coating [GRAPHICS] Pattern coating engraved on a surface by a webbed roll onto which the coating substance is carefully metered. Also known as gravure coating.

engraver [GRAPHICS] One who makes engravings, either manually or by machine.

engraving [GRAPHICS] A photomechanical process in which lines are scribed on line negatives by means of a needle that produces an even transparent printing line by removal of a thin layer of photographic emulsion.

engrossing [GRAPHICS] The production of decorative designs of letters and illuminations by an artist on citations and diplomas.

engysseismology [GEOPHYS] Seismology dealing with earthquake records made close to the disturbance.

enhanceable language [COMPUT SCI] A computer language that has a modest degree of semantic extensibility.

enhanced carrier demodulation [COMMUN] Amplitude demodulation system in which a synchronized local carrier of proper phase is fed into the demodulator to reduce demodulation distortion.

enhanced line *See* enhanced spectral line.

enhanced spectral line [SPECT] A spectral line of a very hot source, such as a spark, whose intensity is much greater than that of a line in a flame or arc spectrum. Also known as enhanced line.

enhancement [ELECTR] An increase in the density of charged carriers in a particular region of a semiconductor.

enhancement mode [ELECTR] Operation of a field-effect transistor in which no current flows when zero gate voltage is applied, and increasing the gate voltage increases the current.

enhancer gene [GEN] Any modifier gene that acts to enhance the action of a nonallelic gene.

ENIAC [COMPUT SCI] The first digital computer in the modern sense of the word, built 1942–1945. Derived from Electronic Numerical Integrator and Calculator.

Enicocephalidae [INV ZOO] The gnat bugs, a family of hemipteran insects in the superfamily Enicocephaloidea.

Enicocephaloidea [INV ZOO] A superfamily of the Hemiptera in the subdivision Geocorisae containing a single family.

enigmatite [MINERAL] $Na_2Fe_5TiSi_6O_{20}$ A black amphibole mineral occurring in triclinic crystals; specific gravity is 3.14–3.80. Also spelled aenigmatite.

enium ion [ORG CHEM] A cationic portion of an ionic species in which the valence shell of a positively charged nonmetallic atom has two electrons less than normal, and the charged entity has one covalent bond less than the corresponding uncharged speices; used as a suffix with the root name. Also known as ylium ion.

enkephalin [BIOCHEM] A mixture of two polypeptides isolated from the brain; central mode of action is an inhibition of neurotransmitter release.

enlargement [GRAPHICS] Photographic print made in an enlarger so that the print is bigger than the negative.

enlargement loss [FL MECH] Energy loss by friction in a flowing fluid when it moves into a cross-sectional area of sudden enlargement.

enlarger [OPTICS] An optical projector used to project an enlarged image of a photograph's negative onto photosensitized film or paper. Also known as photoenlarger.

enlarging [GRAPHICS] The process of reproducing an image from a smaller image through a projection process.

enol [ORG CHEM] An organic compound with a hydroxide group adjacent to a double bond; varies with a ketone form in the effect known as enol-keto tautomerism; an example is the compound $CH_3COH{=}CHCO_2C_2H_5$.

enolase [BIOCHEM] An enzyme that catalyzes the reversible dehydration of phosphoglyceric acid to phosphopyruvic acid.

enolate anion [ORG CHEM] The delocalized anion which is left after the removal of a proton from an enol, or of the carbonyl compound in equilibrium with the enol.

enol-keto tautomerism [ORG CHEM] The tautomeric migration of a hydrogen atom from an adjacent carbon atom to a carbonyl group of a keto compound to produce the enol form of the compound; the reverse process of hydrogen atom migration also occurs.

enophthalmos [MED] Recession of the eyeball into the orbital cavity.

Enopla [INV ZOO] A class or subclass of ribbonlike worms of the phylum Rhynchocoela.

Enoplia [INV ZOO] A subclass of nematodes in the class Adenophorea.

Enoplida [INV ZOO] An order of nematodes in the subclass Enoplia.

Enoplidae [INV ZOO] A family of free-living marine nematodes in the superfamily Enoploidea, characterized by a complex arrangement of teeth and mandibles.

Enoploidea [INV ZOO] A superfamily of small to very large free-living marine nematodes having pocketlike amphids opening to the exterior via slitlike apertures.

Enoploteuthidae [INV ZOO] A molluscan family of deep-sea squids in the class Cephalopoda.

enphytotic [PL PATH] **1.** A disease that occurs regularly among plants of a specific region. **2.** An outbreak of such a disease.

enriched gas [MATER] A motor gasoline containing additives to improve combustion characteristics, as by limiting knock.

enriched material [NUC ENG] Material in which the amount of one or more isotopes has been increased above that occurring in nature, such as uranium in which the abundance of ^{235}U is increased.

enriched reactor [NUCLEO] A nuclear reactor in which the fuel is an enriched material.

enriching column [CHEM ENG] The portion of a countercurrent contractor (liquid-liquid extraction or vapor-liquid dis-

tillation) above the feed point in which an upward-moving, product-rich stream from the stripping column is further purified by countercurrent contact with a downward-flowing reflux stream from the overhead product-recovery vessel.

enrichment [NUCLEO] A process that changes the isotopic ratio in a material; for uranium, for example, the ratio of ^{235}U to ^{238}U may be increased by gaseous diffusion of uranium hexafluoride.

enrichment culture [MICROBIO] A medium of known composition and specific conditions of incubation which favors the growth of a particular type or species of bacterium.

enrichment factor [NUCLEO] The ratio of the abundance of a particular isotope in an enriched material to its abundance in the original material.

enrockment [CIV ENG] A grouping of large stones dropped into water to form a base, such as for supporting a pier.

enroute chart [NAV] A chart of air routes in specific areas that shows the exact location of electronic aids to navigation, such as radio direction-finder stations, radio and radar beacons, and radio-range stations. Formerly known as radio facility chart.

enroute turning area [NAV] An area of specified dimensions used by an aircraft when a change of course is necessary; the area extends beyond the primary and secondary obstruction clearance areas and is provided with adequate protection; turning area criteria supplement the basic airways and route segment criteria to protect the aircraft. Also known as turning area.

ensemble [STAT MECH] A collection of systems of particles used to describe an individual system; time averages of quantities describing the individual system are found by averaging over the systems in the ensemble at a fixed time.

ensialic geosyncline [GEOL] A geosyncline whose geosynclinal prism accumulates on a sialic crust and contains clastics.

ensiform [BIOL] Sword-shaped.

ensiling [AGR] The anaerobic fermentation process used to preserve immature green corn, legumes, grasses, and grain plants; the crop is chopped and packed while at about 70–80% moisture and put into silos or other containers to exclude air.

ensimatic geosyncline [GEOL] A geosyncline whose geosynclinal prism accumulates on a simatic crust and is composed largely of volcanic rock or sediments of volcanic debris.

Enskog theory *See* Chapman-Enskog theory.

enstatite [MINERAL] $MgOSiO_2$ A member of the pyroxene mineral group that crystallizes in the orthorhombic system; usually yellowish gray but becomes green when a little iron is present.

entablature [ARCH] A unit consisting of the architrave, frieze, and cornice of a wall.

Entamoeba [INV ZOO] A genus of parasite amebas in the family Endamoebidae, including some species of the genus *Endamoeba* which are parasites of humans and other vertebrates.

Entamoeba histolytica [INV ZOO] A pathogenic ameba, causing amebic dysentery.

entanglement [ORD] An obstacle, such as barbed wire, that is utilized to stop or hamper the forward movement of troops.

entasis [ARCH] The slight swelling visible in the profile of a column, used to correct the visual distortion that makes a straight column seem to have a concave profile.

Enteletacea [PALEON] A group of extinct articulate brachiopods in the order Orthida.

Entelodontidae [PALEON] A family of extinct palaeodont artiodactyls in the superfamily Entelodontoidea.

Entelodontoidea [PALEON] A superfamily of extinct piglike mammals in the suborder Palaeodonta having huge skulls and enlarged incisors.

enteralgia [MED] Pain in the intestine.

enterectomy [MED] Excision of a part of the intestine.

enteric bacilli [MICROBIO] Microorganisms, especially the gram-negative rods, found in the intestinal tract of man and animals.

enteric cytopathogenic human orphan virus *See* echovirus.

entering angle [MECH ENG] The angle between the side-cutting edge of a tool and the machined surface of the work; angle is 90° for a tool with 0° side-cutting edge angle effective.

enteritis [MED] Inflammation of the intestinal tract.

Enterobacter [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile rods found in the intestine of humans and other animals; some strains are encapsulated.

Enterobacteriaceae [MICROBIO] A family of gram-negative, facultatively anaerobic rods; cells are nonsporeforming and may be nonmotile or motile with peritrichous flagella; includes important human and plant pathogens.

enterobiasis [MED] Infestation of the intestinal tract of humans with the nematode *Enterobius vermacularis* (pinworm); characterized by mild enteritis.

enterocoel [ZOO] A coelom that arises by mesodermal outpocketing of the archenteron.

Enterocoela [SYST] A section of the animal kingdom that includes the Echinodermata, Chaetognatha, Hemichordata, and Chordata.

enterocolitis [MED] Inflammation of the small intestine and colon.

enterohydrocoel [INV ZOO] In crinoids, an anterior cavity derived from the archenteron.

enterokinase [BIOCHEM] An enzyme which catalyzes the conversion of trypsinogen to trypsin.

enterolith [PATH] A concretion formed in the intestine.

enterolithic [GEOL] Of or pertaining to structures, such as small folds, formed in evaporites due to flowage or hydration.

enteron [ANAT] The alimentary canal.

Enteropneusta [INV ZOO] The acorn worms or tongue worms, a class of the Hemichordata; free-living solitary animals with no exoskeleton and with numerous gill slits and a straight gut.

enteroptosis *See* visceroptosis.

enterorrhagia [MED] Intestinal hemorrhage.

enterotoxin [MICROBIO] A toxin produced by *Micrococcus pyogenes* var. *aureus* (*Staphylococcus aureus*) which gives rise to symptoms of food poisoning in humans and monkeys.

enterovirus [VIROL] One of the two subgroups of human picornaviruses; includes the polioviruses, the coxsackieviruses, and the echoviruses.

Enterozoa [ZOO] Animals with a digestive tract or cavity; includes all animals except Protozoa, Mesozoa, and Parazoa.

enthalpimetric analysis [ANALY CHEM] Generic designation for a group of modern thermochemical methodologies such as thermometric enthalpy titrations which rely on monitoring the temperature changes produced in adiabatic calorimeters by heats of reaction occurring in solution; in contradistinction, classical methods of thermoanalysis such as thermogravimetry focus primarily on changes occurring in solid samples in response to externally imposed programmed alterations in temperature.

enthalpy [THERMO] The sum of the internal energy of a system plus the product of the system's volume multiplied by the pressure exerted on the system by its surroundings. Also known as heat content; sensible heat; total heat.

enthalpy-entropy chart [THERMO] A graph of the enthalpy of a substance versus its entropy at various values of temperature, pressure, or specific volume; useful in making calculations about a machine or process in which this substance is the working medium.

enthalpy of reaction [PHYS CHEM] The change in enthalpy accompanying a chemical reaction.

enthalpy of transition [PHYS CHEM] The change of enthalpy accompanying a phase transition.

enthalpy of vaporization *See* heat of vaporization.

enthalpy-pressure chart *See* pressure-enthalpy chart.

enthalpy titration *See* thermometric titration.

entire [BIOL] Having a continuous, unimpaired margin.

entire function [MATH] A function of a complex variable which is analytic throughout the entire complex plane. Also known as integral function.

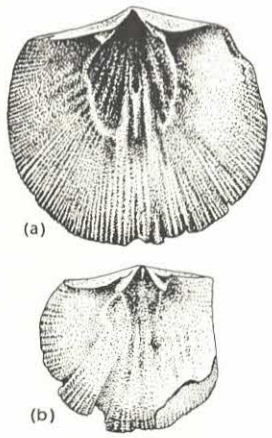
entire ring *See* integral domain.

entire series [MATH] A power series which converges for all values of its variable; a power series with an infinite radius of convergence.

Entisol [GEOL] An order of soil having few or faint horizons.

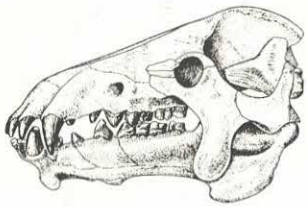
Entner-Doudoroff pathway [BIOCHEM] A sequence of reactions for glucose degradation, with the liberation of energy; the distinguishing feature is the formation of 2-keto-3-deoxy-6-phosphogluconate from 6-phosphogluconate and the cleaving of this compound to yield pyruvate and glyceraldehyde-3-phosphate.

ENTELETACEA



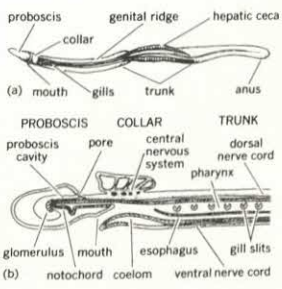
Pionodema, *(a)* pedicle and *(b)* brachial valve interiors. *(From R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. H, Geological Society of America and University of Kansas Press, 1965)*

ENTELODONTIDAE



Archaeothesium, Oligocene entelodont, skull length about 24 inches (61 centimeters). *(After Marsh, 1893)*

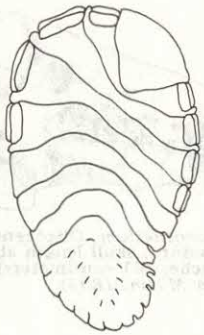
ENTEROPNEUSTA



Saccoglossus, the tongue worm or acorn worm. *(a)* Dorsal view. *(b)* Median section of anterior portion. *(From T. I. Storer and R. L. Usinger, General Zoology, 4th ed., McGraw-Hill, 1965)*

entoblast [EMBRYO] A blastomere that differentiates into endoderm.
entoderm *See* endoderm.
Entodiniomorphida [INV ZOO] An order of highly evolved ciliated protozoans in the subclass Spirotrichia, characterized by a smooth, firm pellicle and the lack of external ciliature.
entolecithal *See* endolecithal.
entombment [NUCLEO] A method of decommissioning a nuclear facility in which radioactive contamination is made inaccessible by demolition techniques and then the residue is covered with reinforced concrete.
Entomoconchacea [PALEON] A superfamily of extinct marine ostracods in the suborder Myodocopa that are without a rostrum above the permanent aperture.
entomogenous [BIOL] Growing on or in an insect body, as certain fungi.
entomology [INV ZOO] A branch of the biological sciences that deals with the study of insects.
entomophagous [ZOO] Feeding on insects.
entomophilic fungi [MYCOL] Species of fungi that are insect pathogens.
entomophilous [ECOL] Pollinated by insects.
entomophobia [PSYCH] An abnormal fear of insects.
Entomophthoraceae [MYCOL] The single family of the order Entomophthorales.
Entomophthorales [MYCOL] An order of mainly terrestrial fungi in the class Phycomycetes having a hyphal thallus and nonmotile sporangiospores, or conidia.
Entomostraca [INV ZOO] A group of Crustacea comprising the orders Cephalocarida, Branchiopoda, Ostracoda, Copepoda, Branchiura, and Cirripedia.
Entoniscidae [INV ZOO] A family of isopod crustaceans in the tribe Bopyrina that are parasitic in the visceral cavity of crabs and porcellanids.

ENTONISCIDAE



Female *Bopyrus squillarum* Latreille.

entoplastron [VERT ZOO] The anterior median bony plate of the plastron of chelonians.
Entoprocta [INV ZOO] A group of bryozoans, sometimes considered to be a subphylum, having a pseudocoelomate visceral cavity and the anus opening inside the circlet of tentacles.
entrail pahoehoe [GEOL] A type of pahoehoe having a surface that resembles an intertwined mass of entrails.
entrained fluid [FL MECH] Fluid in the form of mist, fog, or droplets that is carried out of a column or vessel by a rising gas or vapor stream.
entrainer [CHEM ENG] An additive that forms an azeotrope with one component of a liquid mixture to aid in otherwise difficult separations by distillation, as in azeotropic distillation.
entrainment [CHEM ENG] A process in which the liquid boils so violently that suspended droplets of liquid are carried in the escaping vapor. [HYD] The pickup and movement of sediment as bed load or in suspension by current flow. [METEOROL] The mixing of environmental air into a preexisting organized air current so that the environmental air becomes part of the current. [OCEANOGR] The transfer of fluid by friction from one water mass to another, usually occurring between currents moving in respect to each other.
entrance [CIV ENG] The seaward end of a channel, harbor, and so on. [COMPUT SCI] The location of a program or subroutine at which execution is to start. Also known as entry point. [ENG] A place of physical entering, such as a door or passage. [NAV ARCH] The part of a ship's underwater hull which is forward of the amidships.
entrance angle [ENG] In molding, the maximum angle, measured from the center line of the mandrel, at which molten material enters the land area of a die.
entrance cable [ELEC] Cable that brings power from an outside power line into a building.
entrance lock [CIV ENG] A lock between the tideway and an enclosed basin made necessary because the levels of the two bodies of water vary; by means of this lock, vessels can pass either way at all states of the tide. Also known as guard lock; tidal lock; tide lock.
entrance loss [FL MECH] Energy loss by friction in a flowing fluid when it moves into a cross-sectional area of sudden contraction, as at the entrance of a pipe or a suddenly reduced area of a duct.
entrance pupil [OPTICS] The image of the aperture stop of an optical system formed in the object space by rays emanating from a point on the optical axis in the image space.
entrance region [METEOROL] The region of confluence at the upwind extremity of a jet stream.
entrance slit [SPECT] Narrow slit through which passes the light entering a spectrometer.
entrapment [GEOL] The underground trapping of oil or gas reserves by folds, faults, domes, asphaltic seals, unconformities, and such.
entrenched meander [HYD] A deepened meander of a river which is carried downward further below the valley surface in which the meander originally formed. Also known as inherited meander.
entrenched stream [HYD] A stream that flows in a valley or narrow trench cut into a plain or relatively level upland. Also spelled intrenched stream.
entropy [COMMUN] A measure of the absence of information about a situation, or, equivalently, the uncertainty associated with the nature of a situation. [MATH] In a mathematical context, this concept is attached to dynamical systems, transformations between measure spaces, or systems of events with probabilities; it expresses the amount of disorder inherent or produced. [STAT MECH] Measure of the disorder of a system, equal to the Boltzmann constant times the natural logarithm of the number of microscopic states corresponding to the thermodynamic state of the system; this statistical-mechanical definition can be shown to be equivalent to the thermodynamic definition. [THERMO] Function of the state of a thermodynamic system whose change in any differential reversible process is equal to the heat absorbed by the system from its surroundings divided by the absolute temperature of the system. Also known as thermal charge.
entropy of activation [PHYS CHEM] The difference in entropy between the activated complex in a chemical reaction and the reactants.
entropy of a partition [MATH] If ξ is a finite partition of a probability space, the entropy of ξ is the negative of the sum of the products of the probabilities of elements in ξ with the logarithm of the probability of the element.
entropy of a transformation *See* Kolmogorov-Sinai invariant.
entropy of a transformation given a partition [MATH] If T is a measure preserving transformation on a probability space and ξ is a finite partition of the space, the entropy of T given ξ is the limit as $n \to \infty$ of $1/n$ times the entropy of the partition which is the common refinement of $\xi, T^{-1}\xi, \ldots, T^{-n+1}\xi$.
entropy of mixing [PHYS CHEM] After mixing substances, the difference between the entropy of the mixture and the sum of the entropies of the components of the mixture.
entropy of transition [PHYS CHEM] The heat absorbed or liberated in a phase change divided by the absolute temperature at which the change occurs.
entry [COMPUT SCI] Input data fed during the execution of a program by means of a terminal.
entry ballistics [MECH] That branch of ballistics which pertains to the entry of a missile, spacecraft, or other object from outer space into and through an atmosphere.
entry block [COMPUT SCI] The area of main memory reserved for the data which will be introduced at execution time.
entry condition [COMPUT SCI] A requirement that must be met before a program or routine can be entered by a computer program. Also known as initial condition.
entry corridor [AERO ENG] Depth of the region between two trajectories which define the design limits of a vehicle about to enter a planetary atmosphere, or define the desired landing area (footprint).
entry instruction [COMPUT SCI] The first instruction to be executed in a subroutine.
entry point *See* entrance.
entry portion [COMPUT SCI] The right-hand portion of a decision table, which comprises the condition entries and action entries, and whose columns are the decision rules.
entry sorting [COMPUT SCI] A method of internal sorting in which records or blocks of records are placed, one at a time, in a buffer area and then integrated into the sorted list before the next record is placed in the buffer.
entypy [EMBRYO] The formation of the amnion in certain mammals by the invagination of the embryonic knob into the yolk sac, without the formation of any amniotic folds.
enucleate [MED] To remove an organ or a tumor in its entirety, as an eye from its socket.
enumerable *See* countable.

enuresis [MED] Urinary incontinence, especially in the absence of organic cause.

envelope [COMMUN] A curve drawn to pass through the peaks of a graph, such as that of a moduated radio-frequency carrier signal. [ENG] The glass or metal housing of an electron tube or the glass housing of an incandescent lamp. Also known as bulb.

envelope delay [COMMUN] The time required for the envelope of a wave to travel between two points in a system.

envelope delay distortion *See* delay distortion.

envelope detector *See* detector.

envelope of a family of curves [MATH] A curve which is tangent to every member of the given family.

envenomation [MATER] The process by which the surface of a plastic close to or in contact with another surface is deteriorated.

environment [ECOL] The sum of all external conditions and influences affecting the development and life of organisms. [ENG] The aggregate of all natural, operational, or other conditions that affect the operation of equipment or components. [PHYS] The aggregate of all the conditions and the influences that determine the behavior of a physical system.

environmental biology *See* ecology.

environmental cab [ENG] Operator's compartment in earthmovers equipped with tinted safety glass, soundproofing, air conditioning, and cleaning units.

environmental control [ENG] Modification and control of soil, water, and air environments of man and other living organisms.

environmental control system [ENG] A system used in a closed area, especially a spacecraft or submarine, to permit life to be sustained; the system provides the occupants with a suitably controlled atmosphere to permit them to live and work in the area.

environmental engineering [ENG] The technology concerned with the reduction of pollution, contamination, and deterioration of the surroundings in which humans live.

environmental impact analysis [IND ENG] Predetermination of the extent of pollution or environmental degradation which will be involved in a mining or processing project.

environmental impact statement [ENG] A report of the potential effect of plans for land use in terms of the environmental, engineering, esthetic, and economic aspects of the proposed objective.

environmental lapse rate [METEOROL] The rate of decrease of temperature with elevation in the atmosphere. Also known as atmospheric lapse rate.

environmental protection [ENG] The protection of humans and equipment against stresses of climate and other elements of the environment.

environmental range [ENG] The range of environment throughout which a system or portion thereof is capable of operation at not less than the specified level of reliability.

environmental resistance [ECOL] All the limiting factors in the environment that act on a particular population.

environmental stress cracking [MECH] The susceptibility of a material to crack or craze in the presence of surface-active agents or other factors.

environmental survey satellite [AERO ENG] One of a series of meteorological satellites which completely photographs the earth each day. Abbreviated ESSA.

environmental test [ENG] A laboratory test conducted to determine the functional performance of a component or system under conditions that simulate the real environment in which the component or system is expected to operate.

environment division [COMPUT SCI] The section of a program written in COBOL which defines the hardware and files to be used by the program.

environment of sedimentation [GEOL] A more or less destructive geomorphologic setting in which sediments are deposited as beach environment.

environment pointer [COMPUT SCI] **1.** A component of a task descriptor that designates where the instructions and data code for the task are located. **2.** A control component element belonging to the stack model of block structure execution that points to the current environment.

environment simulator [ENG] Any machine or artificial device that simulates all or some of the attributes of an environment, such as the solar simulators with artificial suns used in testing spacecraft.

enzootic [VET MED] **1.** A disease affecting animals in a limited geographic region. **2.** Pertaining to such a disease.

enzyme [BIOCHEM] Any of a group of catalytic proteins that are produced by living cells and that mediate and promote the chemical processes of life without themselves being altered or destroyed.

enzyme induction [MICROBIO] The process by which a microbial cell synthesizes an enzyme in response to the presence of a substrate or of a substance closely related to a substrate in the medium.

enzyme inhibition [BIOCHEM] Prevention of an enzymic process as a result of the interaction of some substance with the enzyme so as to decrease the rate of reaction.

enzyme repression [BIOCHEM] The process by which the rate of synthesis of an enzyme is reduced in the presence of a metabolite, often the end product of a chain of reactions in which the enzyme in question operates near the beginning.

enzyme unit [BIOCHEM] The amount of an enzyme that will catalyze the transformation of 10^{-6} mole of substrate per minute or, when more than one bond of each substrate is attacked, 10^{-6} of 1 gram equivalent of the group concerned, under specified conditions of temperature, substrate concentration, and pH number.

enzymology [BIOCHEM] A branch of science dealing with the chemical nature, biological activity, and biological significance of enzymes.

Eocambrian [GEOL] Pertaining to the thick sequences of strata conformably underlying Lower Cambrian fossils. Also known as Infracambrian.

Eocanthocephala [INV ZOO] An order of the Acanthocephala characterized by the presence of a small number of giant subcuticular nuclei.

Eocene [GEOL] The next to the oldest of the five major epochs of the Tertiary period (in the Cenozoic era).

Eocrinoidea [PALEON] A class of extinct echinoderms in the subphylum Crinozoa that had biserial brachioles like those of cystoids combined with a theca like that of crinoids.

EOD *See* explosive ordnance disposal.

EOF gap *See* end-of-file gap.

Eogene *See* Paleogene.

Eohippus [PALEON] The earliest, primitive horse, included in the genus *Hyracotherium;* described as a small, four-toed species.

eolation [GEOL] Any action of wind on the land.

eolian [METEOROL] Pertaining to the action or the effect of the wind, as in eolian sounds or eolian deposits (of dust). Also spelled aeolian.

eolian anemometer [ENG] An anemometer which works on the principle that the pitch of the eolian tones made by air moving past an obstacle is a function of the speed of the air.

eolian dune [GEOL] A dune resulting from entrainment of grains by the flow of moving air.

eolian erosion [GEOL] Erosion due to the action of wind.

eolianite [GEOL] A sedimentary rock consisting of clastic material which has been deposited by wind.

eolian ripple mark [GEOL] A mark made in sand by the wind.

eolian sand [GEOL] Deposits of sand arranged by the wind.

eolian soil [GEOL] A type of soil ranging from sand dunes to loess deposits whose particles are predominantly of silt size.

eolian sounds [ACOUS] Sounds produced by eddying motions of air in the lee of obstacles, such as wires, twigs, and even the ear itself, when wind blows over those obstacles.

eolotropy *See* anisotropy.

Eomoropidae [PALEON] A family of extinct perissodactyl mammals in the superfamily Chalicotherioidea.

eon [MECH] A unit of time, equal to 10^9 years.

EOR *See* explosive ordnance reconnaissance.

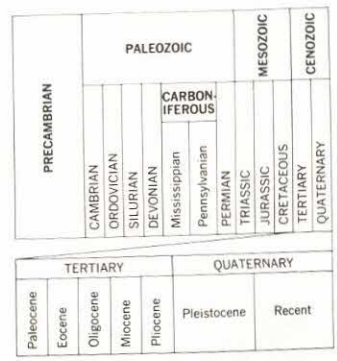
EORA *See* explosive ordnance reconnaissance agent.

EOR gap *See* end-of-record gap.

Eosentomidae [INV ZOO] A family of primitive wingless insects in the order Protura that possess spiracles and tracheae.

eosin [ORG CHEM] $C_{20}H_8O_5Br_4$ **1.** A red fluorescent dye in the form of triclinic crystals that are insoluble in water; used chiefly in cosmetics and as a toner. Also known as bromeosin; bromo acid; eosine; tetrabromofluorescein. **2.** The red to brown crystalline sodium or potassium salt of this dye; used in organic pigments, as a biological stain, and in pharmaceuticals. Also known as eosine; eosine G; eosine Y; eosine yellowish.

EOCENE



A chart showing the position of the Eocene epoch in geologic time.

EOSINOPHIL

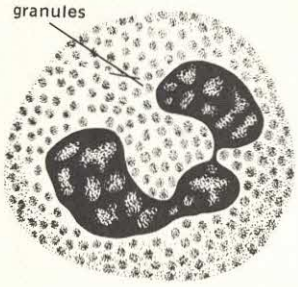


Diagram of an eosinophil showing the typical two-lobed nucleus.

EPHEDRA

A species of *Ephedra* growing in Utah. *(Courtesy of Tony Gauba, from National Audubon Society)*

eosine *See* eosin.
eosine G *See* eosin.
eosine Y *See* eosin.
eosine yellowish *See* eosin.
eosinophil [HISTOL] A granular leukocyte having cytoplasmic granules that stain with acid dyes and a nucleus with two lobes connected by a thin thread of chromatin.
eosinophilia [MED] A greater than average number of circulating eosinophils. Also known as acidophilia; oxyphilia.
eosinophilic erythroblast *See* normoblast.
eosinophilic granuloma [MED] A disease, principally of childhood, characterized by foci of bone inflammation and granulation containing lipids, mononuclear cells, and eosinophils.
eosinophilic pneumonitis *See* Loeffler's syndrome.
eosphorite [MINERAL] $(Mn,Fe)Al(PO_4)(OH)_2 \cdot H_2O$ A usually rose-pink mineral composed of hydrous aluminum manganese phosphate, found massive or in prismatic crystals.
Eosuchia [PALEON] The oldest, most primitive, and only extinct order of lepidosaurian reptiles.
eötvös [GEOPHYS] A unit of horizontal gradient of gravitational acceleration, equal to a change in gravitational acceleration of 10^{-9} galileo over a horizontal distance of 1 centimeter.
Eötvös constant [PHYS] A constant that appears in an expression for the behavior of the surface tension γ of a liquid as the temperature T drops to a critical temperature T_c at which the surface tension disappears, equal to $\gamma(M/\rho)^{2/3}/(T_c - T)$, where M is the molecular weight and ρ the density of the liquid.
Eötvös experiment [RELAT] An experiment which tests the equality of inertial mass and gravitational mass by balancing on a given body the earth's gravitational attraction against the kinetic reaction arising from the rotation of the earth.
Eötvös number *See* Bond number.
Eötvös rule [THERMO] The rule that the rate of change of molar surface energy with temperature is a constant for all liquids; deviations are encountered in practice.
Eötvös torsion balance [ENG] An instrument which records the change in the acceleration of gravity over the horizontal distance between the ends of a beam; used to measure density variations of subsurface rocks.
Epacridaceae [BOT] A family of dicotyledonous plants in the order Ericales, distinguished by palmately veined leaves, and stamens equal in number with the corolla lobes.
epaulette [INV ZOO] **1.** Any of the branched or knobbed processes on the oral arms of many Scyphozoa. **2.** The first haired scale at the base of the costal vein in Diptera.
epaxial [BIOL] Above or dorsal to an axis.
epaxial muscle [ANAT] Any of the dorsal trunk muscles of vertebrates.
EPDM *See* ethylene-propylene terpolymer.
epeiric sea *See* epicontinental sea.
epeirogeny [GEOL] Movements which affect large tracts of the earth's crust.
ependyma [HISTOL] The layer of epithelial cells lining the cavities of the brain and spinal cord. Also known as ependymal layer.
ependymal layer *See* ependyma.
ependymoma [MED] A tumor of the central nervous system whose essential portion consists of cells derived from and resembling ependymal cells. Also known as medulloepithelioma.
Eperythrozoon [MICROBIO] A genus of the family Anaplasmataceae; rings and coccoids occur on erythrocytes and in the plasma of various vertebrates.
ephapse [ANAT] A contact point between neurons.
ephaptic transmission [PHYSIO] Electrical transfer of activity to a postephaptic unit by the action current of a preephaptic cell.
Ephedra [BOT] A genus of low, leafless, green-stemmed shrubs belonging to the order Ephedrales; source of the drug ephedrine.
Ephedrales [BOT] A monogeneric order of gymnosperms in the subdivision Gneticae.
ephedrine [ORG CHEM] $C_{10}H_{15}NO$ A white, crystalline, water-soluble alkaloid present in several *Ephedra* species and also produced synthetically; a sympathomimetic amine, it is used for its action on the bronchi, blood pressure, blood vessels, and central nervous system.
ephemeral plant [BOT] An annual plant that completes its life cycle in one short moist season; desert plants are examples.
ephemeral stream [HYD] A stream channel which carries water only during and immediately after periods of rainfall or snowmelt.
Ephemerida [INV ZOO] An equivalent name for the Ephemeroptera.
ephemeris [ASTRON] A periodical publication tabulating the predicted positions of celestial bodies at regular intervals, such as daily, and containing other data of interest to astronomers. Also known as astronomical ephemeris.
ephemeris day [ASTRON] A unit of time equal to 86,400 ephemeris seconds (International System of Units).
ephemeris second [ASTRON] The fundamental unit of time of the International System of Units of 1960, equal to 1/31556925.9747 of the tropical year defined by the mean motion of the sun in longitude at the epoch 1900 January 0 day 12 hours.
ephemeris time [ASTRON] The uniform measure of time defined by the laws of dynamics and determined in principle from the orbital motions of the planets, specifically the orbital motion of the earth as represented by Newcomb's Tables of the Sun. Abbreviated E.T.
Ephemeroptera [INV ZOO] The mayflies, an order of exopterygote insects in the subclass Pterygota.
ephidrosis *See* hyperhidrosis.
Ephydridae [INV ZOO] The shore flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.
ephyra [INV ZOO] A larval, free-swimming medusoid stage of scyphozoans; arises from the scyphistoma by transverse fission. Also known as ephyrula.
ephyrula *See* ephrya.
epi- [ORG CHEM] A prefix used in naming compounds to indicate the presence of a bridge or intramolecular connection. [SCI TECH] Prefix denoting upon, beside, near to, over, outer, anterior, prior to, or after.
EPI *See* electronic position indicator.
epiandrum [INV ZOO] The genital orifice of a male arachnid.
epibasidium [MYCOL] A lengthening of the upper part of each cell of the basidium of various heterobasidiomycetes.
epibiotic [ECOL] Living, usually parasitically, on the surface of plants or animals; used especially of fungi.
epiblast *See* ectoderm.
epiblem [BOT] A tissue that replaces the epidermis in most roots and in stems of submerged aquatic plants.
epiboly [EMBRYO] The growing or extending of one part, such as the upper hemisphere of a blastula, over and around another part, such as the lower hemisphere, in embryogenesis.
epibranchial [ANAT] Of or pertaining to the segment below the pharyngobranchial region in a branchial arch.
epicadmium [NUCLEO] Energy above the greatest level at which cadmium shows a large neutron cross section, about 0.3 electronvolt.
epicalyx [BOT] A ring of fused bracts below the calyx forming a structure that resembles the calyx.
epicardium [ANAT] The inner, serous portion of the pericardium that is in contact with the heart. [INV ZOO] A tubular prolongation of the branchial sac in certain ascidians which takes part in the process of budding.
Epicaridea [INV ZOO] A suborder of the Isopoda whose members are parasitic on various marine crustaceans.
epicarp [BOT] The outer layer of the pericarp. Also known as exocarp.
epicenter [GEOL] A point on the surface of the earth which is directly above the seismic focus of an earthquake and where the earthquake vibrations reach first.
epichlorohydrin [ORG CHEM] C_3H_5OCl A colorless, unstable liquid, insoluble in water; used as a solvent for resins. Also known as 1-chloro-2,3-epoxypropane; chloropropylene oxide.
epichordal [VERT ZOO] Located upon or above the notochord.
epichordal brain [EMBRYO] The area of origin of the hindbrain or rhombencephalon, located on the dorsal side of the notochord. Also known as deutencephalon.
epiclastic [GEOL] Pertaining to the texture of mechanically deposited sediments consisting of detrital material from preexistent rocks.
epicnemial [ANAT] Of or pertaining to the anterior portion of the tibia.

epicondyle [ANAT] An eminence on the condyle of a bone.
epicone [INV ZOO] The part anterior to the equatorial groove in a dinoflagellate.
epicontinental [GEOL] Located upon a continental plateau or platform.
epicontinental sea [OCEANOGR] That portion of the sea lying upon the continental shelf, and the portions which extend into the interior of the continent with similar shallow depths. Also known as epeiric sea; inland sea.
epicotyl [BOT] The embryonic plant stem above the cotyledons.
epicranium [INV ZOO] The dorsal wall of an insect head. [VERT ZOO] The structures covering the cranium in vertebrates.
epicuticle [INV ZOO] The outer, waxy layer of an insect cuticle or exoskeleton.
epicycle [MATH] The circle which generates an epicycloid or hypocycloid.
epicyclic gear [MECH ENG] A system of gears in which one or more gears travel around the inside or the outside of another gear whose axis is fixed.
epicyclic train [MECH ENG] A combination of epicyclic gears, usually connected by an arm, in which some or all of the gears have a motion compounded of rotation about an axis and a translation or revolution of that axis.
epicycloid [MATH] The curve traced by a point on a circle as it rolls along the outside of a fixed circle.
epicyst [INV ZOO] The outer layer of a cyst wall in encysted protozoans. Also known as ectocyst.
epidemic [MED] A sudden increase in the incidence rate of a disease to a value above normal, affecting large numbers of people and spread over a wide area.
epidemic diarrhea of the newborn [MED] Contagious, fulminating diarrhea with high mortality, seen in newborns; caused by enteropathogenic strains of *Escherichia coli*, strains of *Staphylococcus*, other bacteria, and possibly viruses.
epidemic encephalitis *See* encephalitis lethargica.
epidemic gastroenteritis [MED] Inflammation of the stomach and intestine, of viral origin; considered to be epidemic when symptoms are manifested by a member of the patient's family within 10 days of the patient's recovery.
epidemic hepatitis *See* infectious hepatitis.
epidemic jaundice *See* infectious hepatitis.
epidemic keratoconjunctivitis [MED] Inflammation of the cornea and conjunctiva, caused by a virus; epidemic by nature.
epidemic neuromyasthenia [MED] A prolonged, debilitating disease of the nervous system of adults; characterized by fatigue, headache, muscle pain, paresis, and emotional and mental disturbances; no etiologic agent has been isolated. Also known as acute infective encephalomyelitis; Akureyri disease; benign myalgic encephalomyelitis; epidemic vegetative neuritis; Iceland disease.
epidemic pleurodynia [MED] An acute epidemic disease of man, caused by coxsackie B virus; characterized by severe pain in the lower thorax and upper abdomen, and associated with fever and malaise.
epidemic roseola *See* rubella.
epidemic typhus *See* classic epidemic typhus.
epidemic vegetative neuritis *See* epidemic neuromyasthenia.
epidemiology [MED] The study of the mass aspects of disease.
epidermal ridge [ANAT] Any of the minute corrugations of the skin on the palmar and plantar surfaces of humans and other primates.
epidermis [BOT] The outermost layer (sometimes several layers) of cells on the primary plant body. [HISTOL] The outer nonsensitive, nonvascular portion of the skin comprising two strata of cells, the stratum corneum and the stratum germinativum.
epidermoid carcinoma *See* squamous-cell carcinoma.
epidermoid cyst [MED] A cyst lined by stratified squamous epithelium without associated cutaneous glands.
epidermolysis [MED] The easy separation of various layers of skin, primarily of the epidermis from the corium, observed in certain pathological conditions.
epidermolysis bullosa [MED] A congenital skin disease characterized by the development of vesicles and bullae upon slight, or even without, trauma.
epidiascope [OPTICS] **1.** An optical projection system for forming an enlarged real image of a flat opaque object, in which light is reflected from the object and then from a mirror before being focused by a projection lens. Also known as episcope. **2.** An optical projection system which can easily be altered to project either transparent or opaque objects.
epididymis [ANAT] The convoluted efferent duct lying posterior to the testis and connected to it by the efferent ductules of the testis.
epididymitis [MED] Inflammation of the epididymis.
epidiorite [PETR] A dioritic rock formed by alteration of pyroxenic igneous rocks.
epidosite [PETR] A rare metamorphic rock composed of epidote and quartz.
epidote [MINERAL] A pistachio-green to blackish-green calcium aluminum sorosilicate mineral that crystallizes in the monoclinic system; the luster is vitreous, hardness is 6½ on Mohs scale, and specific gravity is 3.35–3.45.
epidote-amphibolite facies [PETR] Metamorphic rocks formed under pressures of 3000–7000 bars and temperatures of 250–450°C with conditions intermediate between those that formed greenschist and amphibolite, or with characteristics intermediate.
epidotization [GEOL] The introduction of epidote into, or the formation of epidote from, rocks.
epidural [ANAT] Located on or over the dura mater.
epieugeosyncline [GEOL] Deep troughs formed by subsidence which have limited volcanic power and overlie a eugeosyncline.
epigaster [EMBRYO] The portion of the intestine in vertebrate embryos which gives rise to the colon.
epigastric region [ANAT] The upper and middle part of the abdominal surface between the two hypochondriac regions. Also known as epigastrium.
epigastrium [ANAT] *See* epigastric region. [INV ZOO] The ventral side of mesothorax and metathorax in insects.
epigean [BOT] Pertaining to a plant or plant part that grows above the ground surface. [ZOO] Living near or on the ground surface, applied especially to insects.
epigene [GEOL] **1.** A geologic process originating at or near the earth's surface. **2.** A structure formed at or near the earth's surface.
epigenesis [EMBRYO] Development in gradual stages of differentiation. [GEOL] Alteration of the mineral content of rock due to outside influences.
epigenetic [GEOL] Produced or formed at or near the surface of the earth.
epigenetics [GEN] The study of those processes by which genetic information ultimately results in distinctive physical and behavioral characteristics.
epigenite [MINERAL] $(Cu,Fe)_5AsS_6$ A steel gray, orthorhombic mineral consisting of copper and iron arsenic sulfide.
epigenous [BOT] Developing or growing on a surface, especially of a plant or plant part.
epiglottis [ANAT] A flap of elastic cartilage covered by mucous membrane that protects the glottis during swallowing.
epigynous [BOT] Having the perianth and stamens attached near the top of the ovary; that is, the ovary is inferior.
epigynum [INV ZOO] **1.** The genital pore of female arachnids. **2.** The plate covering this opening.
epihydrin alcohol *See* glycidol.
epilation [MED] Removal of the hair by the roots by the use of forceps, chemical means, or roentgenotherapy.
epilemma [HISTOL] The perineurium of very small nerves.
epilepsy [MED] A condition characterized by the paroxysmal recurrence of transient, uncontrollable episodes of abnormal neurological or mental function, or both.
epilimnion [HYD] A fresh-water zone of relatively warm water in which mixing occurs as a result of wind action and convection currents.
epimagma [GEOL] A gas-free, vesicular to semisolid magmatic residue of pasty consistency formed by cooling and loss of gas from liquid lava in a lava lake.
epimagmatic *See* deuteric.
epimer [ORG CHEM] A type of isomer in which the difference between the two compounds is the relative position of the H (hydrogen) group and OH (hydroxyl) group on the last asymmetric C (carbon) atom of the chain, as in the sugars D-glucose and D-mannose.
epimerase [BIOCHEM] A type of enzyme that catalyzes the rearrangement of hydroxyl groups on a substrate.
epimere [ANAT] The dorsal muscle plate of the lining of a

EPIDIASCOPE

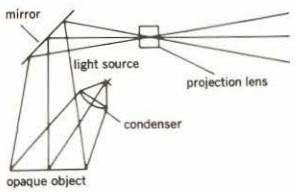

Diagram of an epidiascope (def. 1).

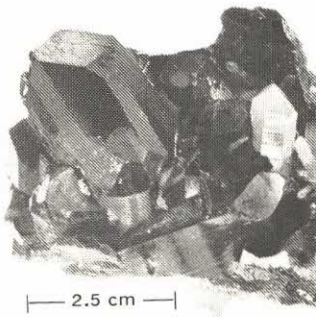
EPIDOTE



Crystals of epidote with quartz on the right side, from Ketchika Alaska. *(American Museum of Natural History Specimen)*

EPIGYNOUS

The arrangement of the sepals, petals, and stamens in an epigynous flower.

coelomic cavity. [EMBRYO] The dorsal part of a mesodermal segment in the embryo of chordates.

epimerization [ORG CHEM] A process in which in an optically active compound that contains two or more asymmetric centers, only one of these is altered by some reaction to form an epimer.

epimeron [INV ZOO] **1.** The posterior plate of the pleuron in insects. **2.** The portion of a somite between the tergum and the insertion of a limb in arthropods.

epimorphosis [PHYSIO] Regeneration in which cell proliferation precedes differentiation.

epimyocardium [EMBRYO] The layer of the embryonic heart from which both the myocardium and epicardium develop.

epimysium [ANAT] The connective-tissue sheath surrounding a skeletal muscle.

epinasty [BOT] Growth changes in which the upper surface of a leaf grows, thus bending the leaf downward.

epinephrine [BIOCHEM] $C_9H_{13}O_3N$ A hormone secreted by the adrenal medulla that acts to increase blood pressure due to stimulation of heart action and constriction of peripheral blood vessels. Also known as adrenaline.

epineural [ANAT] **1.** Arising from the neural arch. **2.** Any process arising from the neural arch. [INV ZOO] The nervous tissue dorsal to the ventral nerve cord in arthropods.

epineural canal [INV ZOO] A canal that runs between the radial nerve and the epithelium in echinoids and ophiuroids.

epineurium [ANAT] The connective-tissue sheath of a nerve trunk.

epipelagic [OCEANOGR] Of or pertaining to the portion of oceanic zone into which enough light penetrates to allow photosynthesis.

epipelagic zone [OCEANOGR] The region of an ocean extending from the surface to a depth of about 200 meters; light penetrates this zone, allowing photosynthesis.

epipetalous [BOT] Having stamens located on the corolla.

epiphallus [INV ZOO] A sclerite in some orthopterans in the floor of the genital chamber.

epipharynx [INV ZOO] An organ attached beneath the labrium of many insects.

epiphragm [BOT] A membrane covering the aperture of the capsule in certain mosses. [INV ZOO] A membranous or calcareous partition that covers the aperture of certain hibernating land snails.

epiphyll [ECOL] A plant that grows on the surface of leaves.

epiphyseal arch [EMBRYO] The arched structure in the third ventricle of the embryonic brain, which marks the site of development of the pineal body.

epiphyseal plate [ANAT] **1.** The broad, articular surface on each end of a vertebral centrum. **2.** The thin layer of cartilage between the epiphysis and the shaft of a long bone. Also known as metaphysis.

epiphysiolysis [MED] The separation of an epiphysis from the shaft of a bone.

epiphysis [ANAT] **1.** The end portion of a long bone in vertebrates. **2.** *See* pineal body.

epiphyte [ECOL] A plant which grows nonparasitically on another plant or on some nonliving structure, such as a building or telephone pole, deriving moisture and nutrients from the air. Also known as aerophyte.

epiphytotic [PL PATH] **1.** Any infectious plant disease that occurs sporadically in epidemic proportions. **2.** Of or pertaining to an epidemic plant disease.

epiplankton [BIOL] Plankton occurring in the sea from the surface to a depth of about 100 fathoms.

epipleural [ANAT] Arising from a rib. [VERT ZOO] An intramuscular bone arising from and extending between some of the ribs in certain fishes.

epiploic foramen [ANAT] An aperture of the peritoneal cavity, formed by folds of the peritoneum and located between the liver and the stomach. Also known as foramen of Winslow.

epipodite [INV ZOO] A branch of the basal joint of the protopodite of thoracic limbs of many arthropods.

epipodium [BOT] The apical portion of an embryonic phyllopodium. [INV ZOO] **1.** A ridge or fold on the lateral edges of each side of the foot of certain gastropod mollusks. **2.** The elevated ring on an ambulacral plate in Echinoidea.

Epipolasina [INV ZOO] A suborder of sponges in the order Clavaxinellida having radially arranged monactinal or diactinal megascleres.

epiproct [INV ZOO] A plate above the anus forming the dorsal part of the tenth or eleventh somite of certain insects.

epipubis [VERT ZOO] A single cartilage or bone located in front of the pubis in some vertebrates, particularly in some amphibians.

EPIRB *See* emergency position-indicating radio beacon.

episclera [ANAT] The loose connective tissue lying between the conjunctiva and the sclera.

episcope *See* epidiascope.

episcotister [OPTICS] A device for reducing the intensity of light by a known fraction, consisting of a rapidly rotating disk with transparent and opaque sectors.

episepalous [BOT] Having stamens growing on or adnate to the sepals.

episiotomy [MED] Medial or lateral incision of the vulva during childbirth, to avoid undue laceration.

episode [GEOL] A distinctive event or series of events in the geologic history of a region or feature.

episome [GEN] A circular genetic element in bacteria, presumably a deoxyribonucleic acid fragment, which is not necessary for survival of the organism and which can be integrated in the bacterial chromosome or remain free.

epispadias [MED] A congenital defect of the anterior urethra in which the canal terminates on the dorsum of the penis and posterior to its normal opening.

episperm *See* testa.

epistasis [GEN] The suppression of the effect of one gene by another. [MED] A checking or stoppage of a hemorrhage or other discharge. [PATH] A scum or film of substance floating on the surface of urine.

episternum [VERT ZOO] A dermal bone or pair of bones ventral to the sternum of certain fishes and reptiles.

epistilbite [MINERAL] $CaAl_2Si_6O_{16}\cdot 5H_2O$ A mineral of the zeolite family that contains calcium and aluminosilicate and crystallizes in the monoclinic system; occurs in white prismatic crystals or granular forms.

epistome [INV ZOO] **1.** The area between the mouth and the second antennae in crustaceans. **2.** The plate covering this region. **3.** The area between the labrum and the epicranium in many insects. **4.** A flap covering the mouth of certain bryozoans. **5.** The area just above the labrum in certain dipterans.

epitaxial diffused-junction transistor [ELECTR] A junction transistor produced by growing a thin, high-purity layer of semiconductor material on a heavily doped region of the same type.

epitaxial diffused-mesa transistor [ELECTR] A diffused-mesa transistor in which a thin, high-resistivity epitaxial layer is deposited on the substrate to serve as the collector.

epitaxial layer [SOLID STATE] A semiconductor layer having the same crystalline orientation as the substrate on which it is grown.

epitaxial transistor [ELECTR] Transistor with one or more epitaxial layers.

epitaxy [CRYSTAL] Growth of one crystal on the surface of another crystal in which the growth of the deposited crystal is oriented by the lattice structure of the substrate.

epithalamus [ANAT] A division of the vertebrate diencephalon including the habenula, the pineal body, and the posterior commissure.

epitheca [INV ZOO] **1.** An external, calcareous layer around the basal portion of the theca of many corals. **2.** A protective covering of the epicone. **3.** The outer portion of a diatom frustule.

epitheliochorial placenta [EMBRYO] A type of placenta in which the maternal epithelium and fetal epithelium are in contact. Also known as villous placenta.

epithelioid cell [HISTOL] A macrophage that resembles an epithelial cell. Also known as alveolated cell.

epithelioma [MED] A tumor derived from epithelium; usually a skin cancer, occasionally cancer of a mucous membrane.

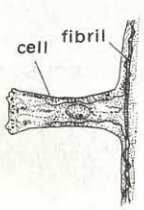
epitheliomuscular cell [INV ZOO] An epithelial cell with an elongate base that contains contractile fibrils; common among coelenterates.

epithelium [HISTOL] A primary animal tissue, distinguished by cells being close together with little intercellular substance; covers free surfaces and lines body cavities and ducts.

epithema [VERT ZOO] A horny outgrowth on the beak of certain birds.

epithermal [GEOL] Pertaining to mineral veins and ore de-

EPITHELIOMUSCULAR CELL



Microscopic view of an epitheliomuscular cell of *Hydra*. *(After L. H. Hyman)*

posits formed from warm waters at shallow depth, at temperatures ranging from 50–200°C, and generally at some distance from the magnetic source.

epithermal deposit [GEOL] Ore deposit formed in and along openings in rocks by deposition at shallow depths from ascending hot solutions.

epithermal neutron [NUCLEO] A neutron having an energy in the range immediately above the thermal range, roughly between 0.02 and 100 electron volts.

epithermal reactor [NUCLEO] A nuclear reactor in which a substantial fraction of fissions is induced by neutrons having more than thermal energy.

epithermal thorium reactor [NUCLEO] A sodium-cooled reactor based on operation with neutrons in the high epithermal energy range; a uranium-thorium fuel mixture is used, with graphite or beryllium as moderator.

epitoke [INV ZOO] The posterior portion of marine polychaetes; contains the gonads.

epitope [IMMUNOL] A single determinant of an antigen or immunogen which influences its specificity (immunology).

epitrichium [EMBRYO] The outer layer of the fetal epidermis of many mammals.

epitrochlear [ANAT] Of or pertaining to a lymph node that lies above the trochlea of the elbow joint.

epitrochoid [MATH] A curve traced by a point rigidly attached to a circle at a point other than the center when the circle rolls without slipping on the outside of a fixed circle.

epituberculosis [MED] A massive pulmonary shadow seen in x-ray films in active juvenile tuberculosis, probably caused by bronchial obstruction.

epitympanum [ANAT] The attic of the middle ear, or tympanic cavity.

epivalve [INV ZOO] **1.** The upper or apical shell of certain dinoflagellates. **2.** The upper shell of a diatom.

epixylous [ECOL] Growing on wood; used especially of fungi.

epizoic [BIOL] Living on the body of an animal.

epizone [GEOL] **1.** The zone of metamorphism characterized by moderate temperature, low hydrostatic pressure, and powerful stress. **2.** The outer depth zone of metamorphic rocks.

epizootic [VET MED] **1.** Affecting many animals of one kind in one region simultaneously; widely diffuse and rapidly spreading. **2.** An extensive outbreak of an epizootic disease.

epizootiology [VET MED] The study of epizootics.

E-plane antenna [ELECTROMAG] An antenna which lies in a plane parallel to the electric field vector of the radiation that it emits.

E-plane bend *See* E bend.

E-plane T junction [ELECTROMAG] Waveguide T junction in which the change in structure occurs in the plane of the electric field. Also known as series T junction.

EP lubricant [MATER] A lubricating oil or grease that contains additives to improve ability to adhere to the surfaces of metals under high bearing pressures. Derived from extreme-pressure lubricant.

EPN *See* *O*-ethyl-*O*-*para*-nitrophenyl phenylphosphonothioate.

epoch [ASTRON] A particular instant for which certain data are valid; for example, star positions in an astronomical catalog, epoch 1950.0. [GEOL] A major subdivision of a period of geologic time. [PHYS] *See* time.

eponychium [ANAT] The horny layer of the nail fold attached to the nail plate at its margin; represents the remnant of the embryonic condition. [EMBRYO] A horny condition of the epidermis from the second to the eighth month of fetal life, indicating the position of the future nail.

epoophoron [ANAT] A blind longitudinal duct and 10–15 transverse ductules in the mesosalpinx near the ovary which represent remnants of the reproductive part of the mesonephros in the female; homolog of the head of the epididymis in the male. Also known as parovarium; Rosenmueller's organ.

epoxidation [ORG CHEM] Reaction yielding an epoxy compound, such as the conversion of ethylene to ethylene oxide.

epoxide [ORG CHEM] A reactive group in which an oxygen atom is joined to each of two carbon atoms which are already bonded.

epoxy- [ORG CHEM] A prefix indicating presence of an epoxide group in a molecule.

epoxy adhesive [MATER] An adhesive material made of epoxy resin.

1,2-epoxybutane *See* 1,2-butylene oxide.

1,2-epoxyethane *See* ethylene oxide.

2,3-epoxy-1-propanol *See* glycidol.

epoxy resin [ORG CHEM] A polyether resin formed originally by the polymerization of bisphenol A and epichlorohydrin, having high strength, and low shrinkage during curing; used as a coating, adhesive, casting, or foam.

Eppley pyrheliometer [ENG] A pyrheliometer of the thermoelectric type; radiation is allowed to fall on two concentric silver rings, the outer covered with magnesium oxide and the inner covered with lampblack; a system of thermocouples (thermopile) is used to measure the temperature difference between the rings; attachments are provided so that measurements of direct and diffuse solar radiation may be obtained.

EPR *See* electron paramagnetic resonance.

EPROM *See* erasable programmable read-only memory.

epsilcapromin *See* ϵ-aminocaproic acid.

epsilon meson [PARTIC PHYS] Neutral, scalar, meson resonance having positive charge conjugation parity and G-parity, a mass of about 730 MeV, and a width of about 600 MeV; decays to two pions.

epsilon neighborhood [MATH] The set of all points in a metric space whose distance from a given point is less than some number; this number is designated ϵ.

epsilon structure [SOLID STATE] The hexagonal close-packed structure of the ϵ-phase of an electron compound.

epsomite [MINERAL] $MgSO_4 \cdot 7H_2O$ A mineral that occurs in clear, needlelike, orthorhombic crystals; commonly, it is massive or fibrous; luster varies from vitreous to milky, hardness is 2–2.5 on Mohs scale, and specific gravity is 1.68; it has a salty bitter taste and is soluble in water. Also known as epsom salt.

epsom salt *See* epsomite.

Epstein-Barr virus [VIROL] Herpeslike virus particles first identified in cultures of cells from Burkett's malignant lymphoma.

EPT *See* ethylene-propylene terpolymer.

epulis [MED] A benign tumorlike lesion of the gingiva.

equal [MATH] Being the same in some sense determined by context.

equal altitudes [NAV] In celestial navigation, two altitudes numerically the same; the expression applies particularly to the now obsolescent practice of determining the instant of local apparent noon by observing the altitude of the sun a short time before it reaches the meridian and again at the same altitude after transit; the time of local apparent noon is midway between the times of the two observations; however the second observation must be corrected for the run of the ship which took place between the times of the two readings. Also known as double altitudes.

equal-area latitude *See* authalic latitude.

equal-area map projection [MAP] A map projection having a constant area scale; it is not conformal and is not used for navigation. Also known as authalic map projection; equivalent map projection.

equal-arm balance [MECH] A simple balance in which the distances from the point of support of the balance-arm beam to the two pans at the end of the beam are equal.

equal-energy source [PHYS] Electromagnetic or sound source of energy which emits the same amount of energy for each frequency of the spectrum.

equaling file [DES ENG] A slightly bulging double-cut file used in fine toolmaking.

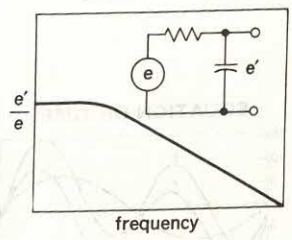
equality [MATH] The state of being equal.

equality gate *See* equivalence gate.

equalization [ELECTR] The effect of all frequency-discriminating means employed in transmitting, recording, amplifying, or other signal-handling systems to obtain a desired overall frequency response. Also known as frequency-response equalization.

equalizer [ELECTR] A network designed to compensate for an undesired amplitude-frequency or phase-frequency response of a system or component; usually a combination of coils, capacitors, and resistors. Also known as equalizing circuit. [MECH ENG] **1.** A bar to which one attaches a vehicle's whiffletrees to make the pull of draft animals equal. Also known as equalizing bar. **2.** A bar which joins a pair of axle springs on a railway locomotive or car for equalization of weight. Also known as equalizing bar. **3.** A device which distributes braking force among independent brakes of an automotive vehicle. Also known as equalizer brake. **4.** A machine

EQUALIZER



Circuit diagram and frequency response characteristics of a type of equalizer that employs a combination of resistance and capacitance; e' = output voltage, e = input voltage.

which saws wooden stock to equal lengths. [ORD] A device attached to the carriage of those artillery weapons that, when emplaced, rest on two wheels and two trail ends; it is a compensating mechanism to transmit equally the weapon weight and firing shock.

equalizer brake *See* equalizer.

equalizing bar *See* equalizer.

equalizing circuit *See* equalizer.

equalizing current [ELEC] Current that circulates between two parallel-connected compound generators to equalize their output.

equalizing line [CHEM ENG] A pipe or tubing interconnection between two closed vessels, containers, or process systems to allow pressure equalization.

equalizing pulses [ELECTR] In television, pulses at twice the line frequency, occurring just before and after the vertical synchronizing pulses, which minimize the effect of line frequency pulses on the interlace.

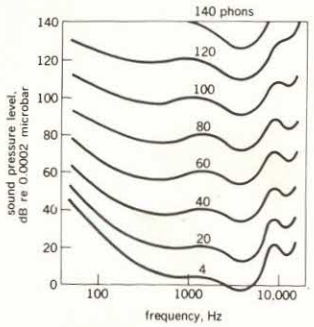
equalizing reservoir [CIV ENG] A reservoir located between a primary water supply and the consumer for the purpose of maintaining equilibrium between different portions of the distribution system.

equalizing support [ORD] The crossbeam support of an axle-support-type equalizer, on which is mounted the trails and upper carriage; it is connected to the axle by means of a horizontal pintle, which permits a vertical angular difference between the front and rear axis.

equal listener response scale [ACOUS] An arbitrary scale of noisiness which measures the average response of a listener to a noise when allowance is made for the apparent increase of intensity of a noise as its frequency increases. Abbreviated ELR scale.

equal loudness contour [ACOUS] A curve on a graph of sound intensity in decibels versus frequency at each point along which sound appears to be equally loud to a listener. Also known as Fletcher-Munson contour.

EQUAL LOUDNESS CONTOUR



Equal loudness level contours.

equally likely cases [STAT] All simple events in a trial have the same probability.

equally tempered scale [ACOUS] A musical scale formed by dividing the octave into 12 equal intervals and selecting from the resulting notes; thus, the frequency ratio between any two successive notes is exactly $2^{1/12}$ or $2^{1/6}$. Also known as equitempered scale.

equal ripple property [MATH] For any continuous function $f(x)$ on the interval $[-1,1]$, and for any positive integer n, a property of the polynomial $p_n(x)$, which is the best possible approximation to $f(x)$ in the sense that the maximum absolute value of $e_n(x) = f(x) - p_n(x)$ is as small as possible; namely, that $e_n(x)$ assumes its extreme values at least $n + 2$ times, with the consecutive extrema having opposite signs.

equal sets [MATH] Sets with precisely the same elements.

equal tails test [STAT] A technique for choosing two critical values for use in a two-sided test; it consists of selecting critical values c and d so that the probability of acceptance of the null hypothesis if the test statistic does not exceed c is the same as the probability of acceptance of the null hypothesis if the test statistic is not smaller than d.

equal-zero indicator [COMPUT SCI] A circuit component which is on when the result of an operation is zero.

equate [MATH] To state algebraically that two expressions are equal to one another.

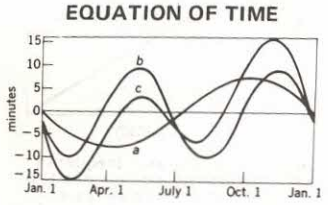
equation [CHEM] A symbolic expression that represents in an abbreviated form the laboratory observations of a chemical change; an equation (such as $2H_2 + O_2 \rightarrow 2H_2O$) indicates what reactants are consumed (H_2 and O_2) and what products are formed (H_2O), the correct formula of each reactant and product, and satisfies the law of conservation of atoms in that the symbols for the number of atoms reacting equals the number of atoms in the products. [MATH] A statement that each of two expressions is equal to the other.

equation clock [HOROL] A timepiece that indicates the difference between mean solar time and apparent time.

equation of continuity *See* continuity equation.

equation of motion [FL MECH] One of a set of hydrodynamical equations representing the application of Newton's second law of motion to a fluid system; the total acceleration on an individual fluid particle is equated to the sum of the forces acting on the particle within the fluid. [MECH] **1.** Equation which specifies the coordinates of particles as functions of time. **2.** A differential equation, or one of several such equations, from which the coordinates of particles as functions of time can be obtained if the initial positions and velocities of the particles are known. [QUANT MECH] A differential equation which enables one to predict the statistical distribution of the results of any measurement upon a system at any time if the initial dynamical state of the system is known.

EQUATION OF TIME



The equation of time; c is the sum of the elliptical motion effect a and the inclination effect b.

equation of piezotropy [THERMO] An equation obeyed by certain fluids which states that the time rate of change of the fluid's density equals the product of a function of the thermodynamic variables and the time rate of change of the pressure.

equation of state [PHYS CHEM] A mathematical expression which defines the physical state of a homogeneous substance (gas, liquid, or solid) by relating volume to pressure and absolute temperature for a given mass of the material.

equation of the center [ASTRON] The angle between the actual longitude of the moon and the longitude of an imaginary body that moves with constant angular velocity with the same period as the moon.

equation of time [ASTRON] The addition of a quantity to mean solar time to obtain apparent solar time; formerly, when apparent solar time was in common use, the opposite convention was used; apparent solar time has annual variation as a result of the sun's inclination in the ecliptic and the eccentricity of the earth's elliptical orbit.

equation solver [COMPUT SCI] A machine, usually analog, for solving systems of simultaneous equations, which may be linear, nonlinear, or differential, and for finding roots of polynomials.

equator [GEOD] The great circle around the earth, equally distant from the North and South poles, which divides the earth into the Northern and Southern hemispheres; the line from which latitudes are reckoned.

equatorial acceleration [ASTROPHYS] A state in which the equatorial atmosphere of a celestial body has a larger absolute angular velocity than the more poleward portions of the atmosphere; exhibited by the sun, Jupiter, and Saturn.

equatorial air [METEOROL] The air of the doldrums or the equatorial trough; distinguished somewhat vaguely from the tropical air of the trade-wind zones.

equatorial axis [GEOD] The diameter of the earth described between two points on the equator.

equatorial bulge [GEOD] The excess of the earth's equatorial diameter over the polar diameter.

equatorial calms *See* doldrums.

equatorial chart [MAP] A chart on an equatorial projection.

equatorial convergence zone *See* intertropical convergence zone.

Equatorial Countercurrent [OCEANOGR] An ocean current flowing eastward (counter to and between the westward-flowing North Equatorial Current and South Equatorial Current) through all the oceans.

Equatorial Current *See* North Equatorial Current; South Equatorial Current.

equatorial cylindrical orthomorphic chart *See* Mercator chart.

equatorial dry zone [CLIMATOL] An arid region existing in the equatorial trough; the most famous dry zone is situated a little south of the equator in the central Pacific. Also known as arid zone.

equatorial easterlies [METEOROL] The trade winds in the summer hemisphere when they are very deep, extending at least 8 to 10 kilometers in altitude, and generally not topped by upper westerlies; if upper westerlies are present, they are too weak and shallow to influence the weather. Also known as deep easterlies; deep trades.

equatorial electrojet [GEOPHYS] A concentration of electric current in the atmosphere found in the magnetic equator.

equatorial front *See* intertropical front.

equatorial horizontal parallax [ASTRON] The parallax of a member of the solar system measured from positional observations made at the same time at two stations on earth, whose distance apart is the earth's equatorial radius.

equatorial mounting [ENG] The mounting of an equatorial telescope; it has two perpendicular axes, the polar axis (parallel to the earth's axis) that turns on fixed bearings, and the declination axis, supported by the polar axis.

equatorial orbit [ASTRON] An orbit in the plane of the earth's equator.

equatorial plane [ASTRON] The plane passing through the

equator of the earth, or of another celestial body, perpendicular to its axis of rotation and equidistant from its poles. [CYTOL] The plane in a cell undergoing mitosis that is midway between the centrosomes and perpendicular to the spindle fibers. [MECH] A plane perpendicular to the axis of rotation of a rotating body and equidistant from the intersections of this axis with the body's surface, provided that the body is symmetric about the axis of rotation and is symmetric under reflection through this plane.

equatorial projection [MAP] A map projection centered on the equator.

equatorial radius [GEOD] The radius assigned to the great circle making up the terrestrial equator; approximately 6,378,099 ± 116 meters.

equatorial system [ASTRON] A set of celestial coordinates based on the celestial equator as the primary great circle; usually declination and hour angle or sidereal hour angle. Also known as celestial equator system of coordinates; equinoctial system of coordinates.

equatorial telescope [ENG] An astronomical telescope that revolves about an axis parallel to the earth's axis and automatically keeps a star on which it has been fixed in its field of view.

equatorial tide [OCEANOGR] **1.** A lunar fortnightly tide. **2.** A tidal component with a period of 328 hours.

equatorial trough [METEOROL] The quasicontinuous belt of low pressure lying between the subtropical high-pressure belts of the Northern and Southern hemispheres. Also known as meteorological equator.

Equatorial Undercurrent [OCEANOGR] **1.** A subsurface current flowing from west to east in the Indian Ocean near the 150-meter depth at the equator during the time of the Northeast Monsoon. **2.** A permanent subsurface current in the equatorial region of the Atlantic and Pacific oceans.

equatorial vortex [METEOROL] A closed cyclonic circulation with the equatorial trough.

equatorial wave [METEOROL] A wavelike disturbance of the equatorial easterlies that extends across the equatorial trough.

equatorial westerlies [METEOROL] The westerly winds occasionally found in the equatorial trough and separated from the mid-latitude westerlies by the broad belt of easterly trade winds.

equiangular polygon [MATH] A polygon all of whose interior angles are equal.

equiangular spiral *See* logarithmic spiral.

equiangular spiral antenna [ELECTROMAG] A frequency-independent broad-band antenna, cut from sheet metal, that radiates a very broad, circularly polarized beam on both sides of its surface; this bidirectional radiation pattern is its chief limitation.

equicontinuous family of functions [MATH] A family of functions with the property that given any $\epsilon > 0$ there is a $\delta > 0$ such that whenever $|x - y| < \delta$, $|f(x) - f(y)| < \epsilon$ for every function $f(x)$ in the family.

Equidae [VERT ZOO] A family of perissodactyl mammals in the superfamily Equoidea, including the horses, zebras, and donkeys.

equidensity technique [ANALY CHEM] Interference microscopy technique utilizing the Sabattier effect in photographic emulsions; the equidensities (lines of equal density in a photographic emulsion) are produced by exactly superimposing a positive and a negative of the same interferogram, and making a copy; used to measure photographic film emulsion density.

equidistant [MATH] Being the same distance from some given object.

equigeopotential surface *See* geopotential surface.

equigranular [PETR] Pertaining to the texture of rocks whose essential minerals are all of the same order of size.

equilateral arch [ARCH] An arch described by two circular curves intersecting at the peak of the arch, each curve having a chord equal to the span.

equilateral polygon [MATH] A polygon all of whose sides are the same length.

equilateral polyhedron [MATH] A polyhedron all of whose faces are identical.

equilibrator [ORD] Force-producing mechanism designed to provide a moment about the trunnions of a gun cradle or launcher which is equal and opposite to that caused by the unbalanced weight of the tipping parts, thus making it easier to elevate the weapon.

equilibristat [ENG] A device for measuring the deviation from equilibrium of a railroad car as it goes around a curve.

equilibrium [MECH] Condition in which a particle, or all the constituent particles of a body, are at rest or in unaccelerated motion in an inertial reference frame. Also known as static equilibrium. [PHYS] Condition in which no change occurs in the state of a system as long as its surroundings are unaltered. [STAT MECH] Condition in which the distribution function of a system is time-independent.

equilibrium brightness [ELECTR] Viewing screen brightness occurring when a display storage tube is in a fully written condition.

equilibrium constant [CHEM] A constant at a given temperature such that when a reversible chemical reaction $cC + bB = gG + hH$ has reached equilibrium, the value of this constant K^0 is equal to

$$\frac{a_G^g a_H^h}{a_C^c a_B^b}$$

where a_G, a_H, a_C, and a_B represent chemical activities of the species G, H, C, and B at equilibrium.

equilibrium diagram [PHYS CHEM] A phase diagram of the equilibrium relationship between temperature, pressure, and composition in any system.

equilibrium dialysis [ANALY CHEM] A technique used to determine the degree of ion bonding by protein; the protein solution, placed in a bag impermeable to protein but permeable to small ions, is immersed in a solution containing the diffusible ion whose binding is being studied; after equilibration of the ion across the membrane, the concentration of ion in the protein-free solution is determined; the concentration of ion in the protein solution is determined by subtraction; if binding has occurred, the concentration of ion in the protein solution must be greater.

equilibrium flash vaporization [CHEM ENG] Process in which a continuous liquid-mixture feed stream is partly vaporized in a column or vessel, with continuous withdrawal of vapor and liquid portions, the vapor and liquid in equilibrium. Also known as continuous equilibrium vaporization; simple continuous distillation.

equilibrium gas saturation [PETRO ENG] Condition of zero relative permeability of a nonwetting/wetting phase system in a reservoir; relation to the nonwetting phase (for example, oil) to the wetting phase (for example, water) when the nonwetting-phase saturation is so small that relatively few pores contain it. Also known as critical gas saturation.

equilibrium line [HYD] The level on a glacier where the net balance equals zero and accumulation equals ablation.

equilibrium moisture content [PHYS CHEM] The moisture content in a hydroscopic material that is being dried by contact with air at constant temperature and humidity when a definite, fixed (equilibrium) moisture content in the solid is reached.

equilibrium orbit [NUCLEO] A path, such as a circular path in a synchrotron, or a point moving through space, such as in a linear accelerator, about which the particles in a particle accelerator oscillate, experiencing an effective restoring force toward the path or point. Also known as stable orbit.

equilibrium potential [PHYS CHEM] A point in which forward and reverse reaction rates are equal in an electrolytic solution, thereby establishing the potential of an electrode.

equilibrium prism [PHYS CHEM] Three-dimensional (solid) diagram for multicomponent mixtures to show the effects of composition changes on some key property, such as freezing point.

equilibrium profile *See* profile of equilibrium.

equilibrium ratio [PHYS CHEM] **1.** In any system, relation of the proportions of the various components (gas, liquid) at equilibrium conditions. **2.** *See* equilibrium vaporization ratio.

equilibrium solar tide [GEOPHYS] The form of the atmosphere which is determined solely by gravitational forces in the absence of any rotation of the earth relative to the sun.

equilibrium solubility [PHYS CHEM] The maximum solubility of one material in another (for example, water in hydrocarbons) for specified conditions of temperature and pressure.

equilibrium spheroid [GEOPHYS] The shape that the earth would attain if it were entirely covered by a tideless ocean of constant depth.

equilibrium state [IND ENG] A state in which the numbers of customers or items waiting in a queue varies in such a way that the mean and distribution remain constant over a long period.

equilibrium still [ANALY CHEM] Recirculating distillation

apparatus (no product withdrawal) used to determine vapor-liquid equilibria data.

equilibrium theory [OCEANOGR] An ocean water model which assumes instantaneous response of water bodies to the tide-producing forces of the moon and sun to form an equilibrium surface, and disregards the effects due to friction, inertia, and irregular distribution of land masses.

equilibrium tide [OCEANOGR] The hypothetical tide due to the tide-producing forces of celestial bodies, particularly the sun and moon.

equilibrium vaporization ratio [PHYS CHEM] In a liquid-vapor equilibrium mixture, the ratio of the mole fraction of a component in the vapor phase (y) to the mole fraction of the same component in the liquid phase (x), or $y/x = K$ (the K factor). Also known as equilibrium ratio.

equilibrium vapor pressure [PHYS] The vapor pressure of a system in which two or more phases of water coexist in equilibrium.

equine [VERT ZOO] **1.** Resembling a horse. **2.** Of or related to the Equidae.

equine encephalitis [MED] A disease of equines and humans caused by one of three viral strains: eastern, western, and Venezuelan equine viruses. Also known as equine encephalomyelitis.

equine encephalomyelitis *See* equine encephalitis.

equinoctial *See* celestial equator.

equinoctial colure [ASTRON] The great circle of the celestial sphere through the celestial poles and the equinoxes; the hour circle of the vernal equinox.

equinoctial point *See* equinox.

equinoctial rains [METEOROL] Rainy seasons which occur regularly at or shortly after the equinoxes in many places within a few degrees of the equator.

equinoctial storm [METEOROL] In semipopular belief, a violent storm of wind and rain which is supposed, both in the United States and in Britain, to occur at or near the time of the equinox. Also known as line gale; line storm.

equinoctial system of coordinates *See* equatorial system.

equinoctial tide [OCEANOGR] A tide occurring near an equinox.

equinox [ASTRON] **1.** Either of the two points of intersection of the ecliptic and the celestial equator, occupied by the sun when its declination is 0°. Also known as equinoctial point. **2.** That instant when the sun occupies one of the equinoctial points.

equiparte [METEOROL] In Mexico, heavy cold rains during October to January, which last for several days. Also known as equipatos.

equipartition [CHEM] **1.** The condition in a gas where under equal pressure the molecules of the gas maintain the same average distance between each other. **2.** The equal distribution of a compound between two solvents. **3.** The distribution of the atoms in an orderly fashion, such as in a crystal.

equipartition law [STAT MECH] In a classical ideal gas, the average kinetic energy per molecule associated with any degree of freedom which occurs as a quadratic term in the expression for the mechanical energy, is equal to half of Boltzmann's constant times the absolute temperature.

equipatos *See* equiparte.

equiphase wave surface [PHYS] Any surface in a wave over which the field vectors at the same instant are in the same phase or 180° out of phase.

equiphase zone [GEOPHYS] That region in space where the difference in phase of two radio signals is indistinguishable.

equipment [ENG] One or more assemblies capable of performing a complete function.

equipment augmentation [COMPUT SCI] **1.** Procuring additional automatic data-processing equipment capability to accommodate increased work load within an established data system. **2.** Obtaining additional sites or locations.

equipment chain [ENG] Group of equipments that are functionally in series; the failure of one or more of the equipments results in loss of the function.

equipment characteristic distortion [COMMUN] Teletypewriter transmission repetitive display or disruption peculiar to specific portions of a signal, normally caused by maladjusted or dirty contacts of the sending or receiving equipment.

equipment compatibility [COMPUT SCI] The ability of a device to handle data prepared or handled by other equipment, without alteration of the code or of the form of the data.

equipment failure [COMPUT SCI] A fault in equipment that results in its improper behavior or prevents the execution of a job as scheduled.

equipment-misuse error [COMPUT SCI] An erroneous programming instruction, such as a read command addressed to a card punch.

equipment replacement study [IND ENG] A cost analysis based on estimates of operating costs over a stated time for the old facility compared with the new facility.

equipollent [MECH] Of two systems of forces, having the same vector sum and the same total torque about an arbitrary point.

equipotent [SCI TECH] Equal in capacity or effect.

equipotential cathode *See* indirectly heated cathode.

equipotential surface [ELEC] A surface on which the electric potential is the same at every point. [GEOPHYS] A surface characterized by the potential being constant everywhere on it for the attractive forces concerned. [MECH] A surface which is always normal to the lines of force of a field and on which the potential is everywhere the same.

equipressure contour [PETRO ENG] Within a reservoir, a plot or map of the equal isopressure flow network; used to locate sites for water-injection wells for flood coverage of an areal reservoir pattern.

Equisetales [BOT] The horsetails, a monogeneric order of the class Equisetopsida; the only living genus is *Equisetum*.

Equisetatae *See* Equisetopsida.

Equisetineae [BOT] The equivalent name for the Equisetophyta.

Equisetophyta [BOT] A division of the subkingdom Embryobionta represented by a single living genus, *Equisetum*.

Equisetopsida [BOT] A class of the division Equisetophyta whose members made up a major part of the flora, especially in moist or swampy places, during the Carboniferous Period.

equisignal [COMMUN] **1.** Pertaining to two signals of equal intensity, used particularly with reference to the signals of a radio range station. **2.** Referring to a radio system in which two identifiable separate radio signals are received with the same intensity.

equisignal localizer [NAV] An aircraft guidance localizer in which the localizer on-course line is centered in a zone of equal amplitude of two transmitted signals; deviations from this zone are detectable as unbalance in the levels of the two signals. Also known as equisignal radio-range beacon; tone localizer.

equisignal radio-range beacon *See* equisignal localizer.

equisignal surface [ELECTROMAG] Surface around an antenna formed by all points at which, for transmission, the field strength (usually measured in volts per meter) is constant.

equisignal zone [NAV] That region in space where the difference in amplitude of two radio signals (usually emitted by a signal station) is indistinguishable.

equitant [BOT] Of leaves, overlapping transversely at the base.

equitempered scale *See* equally tempered scale.

equity crude [PETRO ENG] Crude produced which belongs to an oil company that owns a concession jointly with a host government.

equivalence [MAP] In an equal-area map projection, the property of having the ratio between areas on the map the same as the ratio between corresponding areas on the earth's surface. [MATH] A logic operator having the property that if P, Q, R, etc., are statements, then the equivalence of P, Q, R, etc., is true if and only if all statements are true or all statements are false.

equivalence classes [MATH] The collection of pairwise disjoint subsets determined by an equivalence relation on a set; two elements are in the same equivalence class if and only if they are equivalent under the given relation.

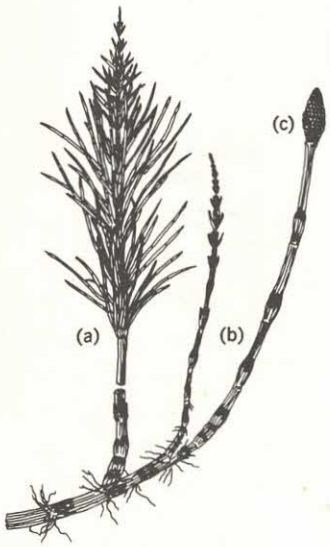
equivalence element *See* equivalence gate.

equivalence gate [COMPUT SCI] A logic circuit that produces a binary output signal of 1 if its two binary input signals are the same, and an output signal of 0 if the input signals differ. Also known as biconditional gate; equality gate; equivalence element; exclusive-NOR gate; match gate.

equivalence law of ordered sampling [STAT] If a random ordered sample of size s is drawn from a population of size N, then on any particular one of the s draws each of the N items has the same probability, $1/N$, of appearing.

equivalence point [CHEM] The point in a titration where the amounts of titrant and material being titrated are equivalent chemically.

EQUISETALES



Equisetum arvense, (a) sterile shoot, *(b)* fertile shoot growing from underground rootstock, *(c)* cone. *(From E. W. Sinnott and K. S. Wilson, Botany: Principles and Problems, 6th ed., McGraw-Hill, 1963)*

equivalence principle [RELAT] In general relativity, the principle that the observable local effects of a gravitational field are indistinguishable from those arising from acceleration of the frame of reference. Also known as Einstein's equivalency principle; principle of equivalence.

equivalence relation [MATH] A relation which is reflexive, symmetric, and transitive.

equivalence zone *See* zone of optimal proportion.

equivalent absorption area [ACOUS] Area of perfectly absorbing surface that will absorb sound energy at the same rate as the given object under the same conditions; the acoustic unit of equivalent absorption is the sabin.

equivalent airspeed [AERO ENG] The product of the true airspeed and the square root of the density ratio; used in structural design work to designate various design conditions.

equivalent annual rate [IND ENG] A measure used in setting up a monthly rate on a comparable basis for each of the months regardless of their variation in working days, or for making the rate comparable with an annual rate regardless of the variation in working days during each month.

equivalent-barotropic model [METEOROL] A model atmosphere characterized by frictionless and adiabatic flow and by hydrostatic quasigeostrophic equilibrium, and in which the vertical shear of the horizontal wind is assumed to be proportional to the horizontal wind itself.

equivalent bending moment [MECH] A bending moment which, acting alone, would produce in a circular shaft a normal stress of the same magnitude as the maximum normal stress produced by a given bending moment and a given twisting moment acting simultaneously.

equivalent binary digits [COMPUT SCI] The number of binary positions required to enumerate the elements of a given set.

equivalent blackbody temperature [THERMO] For a surface, the temperature of a blackbody which emits the same amount of radiation per unit area as does the surface.

equivalent circuit [ELEC] A circuit whose behavior is identical to that of a more complex circuit or device over a stated range of operating conditions.

equivalent conductance [PHYS CHEM] Property of an electrolyte, equal to the specific conductance divided by the number of gram equivalents of solute per cubic centimeter of solvent.

equivalent diameter *See* nominal diameter.

equivalent electrons [ATOM PHYS] Electrons in an atom which have the same principal and orbital quantum numbers, but not necessarily the same magnetic orbital and magnetic spin quantum numbers.

equivalent evaporation [FL MECH] The amount of water, usually in pounds per hour, evaporated from a temperature of 212°F (100°C) to saturated steam at the same temperature.

equivalent focal length [OPTICS] The focal length of a thin lens which forms images that most nearly duplicate those of a given compound lens, thick lens, or system of lenses.

equivalent footcandle *See* foot-lambert.

equivalent four-wire system [COMMUN] A transmission system in which multiplex techniques are used to carry on duplex operation over a single pair of wires.

equivalent head wind [NAV] A fictitious wind blowing along the track of an aircraft in the opposite direction to that of motion of the aircraft and of such speed that it would result in the same ground speed as that actually attained.

equivalent height *See* virtual height.

equivalent map projection *See* equal-area map projection.

equivalent nitrogen pressure [MECH] The pressure that would be indicated by a device if the gas inside it were replaced by nitrogen of equivalent molecular density.

equivalent noise conductance [ELECTR] Spectral density of a noise current generator measured in conductance units at a specified frequency.

equivalent noise pressure [ENG ACOUS] In an electroacoustic transducer or sound reception system, the root-mean-square sound pressure of a sinusoidal plane progressive wave, which when propagated parallel to the primary axis of the transducer, produces an open-circuit signal voltage equivalent to the root-mean-square of the inherent open-circuit noise voltage of the transducer in a transmission band with a bandwidth of 1 hertz and centered on the frequency of the plane sound wave. Also known as inherent noise pressure.

equivalent noise resistance [ELECTR] Spectral density of a noise voltage generator measured in ohms at a specified frequency.

equivalent noise temperature [ELECTR] Absolute temperature at which a perfect resistor, of equal resistance to the component, would generate the same noise as does the component at room temperature.

equivalent nuclei [PHYS CHEM] A set of nuclei in a molecule which are transformed into each other by rotations, reflections, or combinations of these operations, leaving the molecule invariant.

equivalent orifice [MECH ENG] An expression of fan performance as the theoretical sharp-edge orifice area which would offer the same resistance to flow as the system resistance itself.

equivalent periodic line [ELEC] Of a uniform line, a periodic line having the same electrical behavior, at a given frequency, as the uniform line when measured at its terminals or at corresponding section junctions.

equivalent potential temperature [METEOROL] The potential temperature corresponding to the adiabatic equivalent temperature.

equivalent resistance [ELEC] Concentrated or lumped resistance that would cause the same power loss as the actual small resistance values distributed throughout a circuit.

equivalent tail wind [NAV] A fictitious wind blowing along the track of an aircraft in the same direction as that of motion of the aircraft and of such speed that it would result in the same ground speed as that actually attained.

equivalent temperature [METEOROL] **1.** The temperature that an air parcel would have if all water vapor were condensed out at constant pressure, the latent heat released being used to heat the air. Also known as isobaric equivalent temperature. **2.** The temperature that an air parcel would have after undergoing the following theoretical process: dry-adiabatic expansion until saturated, pseudoadiabatic expansion until all moisture is precipitated out, and dry adiabatic compression to the initial pressure; this is the equivalent temperature as read from a thermodynamic chart and is always greater than the isobaric equivalent temperature. Also known as adiabatic equivalent temperature; pseudoequivalent temperature. [THERMO] A term used in British engineering for that temperature of a uniform enclosure in which, in still air, a sizable blackbody at 75°F (23.9°C) would lose heat at the same rate as in the environment.

equivalent twisting moment [MECH] A twisting moment which, if acting alone, would produce in a circular shaft a shear stress of the same magnitude as the shear stress produced by a given twisting moment and a given bending moment acting simultaneously.

equivalent vapor volume [PETRO ENG] The volume occupied by a barrel of oil if all the oil were to become a vapor; expressed as cubic foot per barrel at 60°F (15.6°C).

equivalent viscous damping [MECH] An assumed value of viscous damping used in analyzing a vibratory motion, such that the dissipation of energy per cycle at resonance is the same for the assumed or the actual damping force.

equivalent weight [CHEM] The number of parts by weight of an element or compound which will combine with or replace, directly or indirectly, 1.008 parts by weight of hydrogen, 8.00 parts of oxygen, or the equivalent weight of any other element or compound.

equivalent width [PHYS] A measure of the total absorption of radiant energy as indicated by an absorption line or absorption band.

equiviscous temperature [CHEM ENG] A measure of viscosity used in the tar industry, equal to the temperature in degrees Celsius at which the viscosity of tar is 50 seconds as measured in a standard tar efflux viscometer. Abbreviated EVT.

equivocation [COMMUN] The entropy of the input of a communications channel when the output is known.

equivoluminal wave *See* S wave.

Equl *See* Equuleus.

Equoidea [VERT ZOO] A superfamily of perissodactyl mammals in the suborder Hippomorpha comprising the living and extinct horses and their relatives.

Equuleus [ASTRON] A northern constellation near Aquarius, right ascension 21 hours, declination 10° north. Abbreviated Equl. Also known as Little Horse.

Equus [VERT ZOO] The genus comprising the large, one-toed modern horses, including donkeys and zebras.

Er *See* erbium.

ER *See* electroreflectance; endoplasmic reticulum.

era [GEOL] A division of geologic time of the highest order, comprising one or more periods.

ERA *See* electron ring accelerator.

eradiation *See* terrestrial radiation.

erasability of storage [COMPUT SCI] Ability to erase data that are recorded in a particular location and replace them with new data; storage media are said to be erasable (for example, magnetic tape) or nonerasable (for example, punched cards).

erasable programmable read-only memory [COMPUT SCI] A read-only memory in which stored data can be erased by ultraviolet light or other means and reprogrammed bit by bit with appropriate voltage pulses. Abbreviated EPROM.

erasable storage [COMPUT SCI] Any storage medium which permits new data to be written in place of the old, such as magnetic disk or tape, but not punched card or punched tape.

erase [COMPUT SCI] To change all the binary digits in a digital computer storage device to binary zeros. [ELECTR] **1.** To remove recorded material from magnetic tape by passing the tape through a strong, constant magnetic field (dc erase) or through a high-frequency alternating magnetic field (ac erase). **2.** To eliminate previously stored information in a charge-storage tube by charging or discharging all storage elements.

erase character *See* ignore character.

erase oscillator [ELECTR] The oscillator used in a magnetic recorder to provide the high-frequency signal needed to erase a recording on magnetic tape; the bias oscillator usually serves also as the erase oscillator.

erasing head [ELECTR] A magnetic head used to obliterate material previously recorded on magnetic tape.

erasing speed [ELECTR] In charge-storage tubes, the rate of erasing successive storage elements.

erbia *See* erbium oxide.

erbium [CHEM] A trivalent metallic rare-earth element, symbol Er, of the yttrium subgroup, found in euxenite, gadolinite, fergusonite, and xenotine; atomic number 68, atomic weight 167.26, specific gravity 9.051; insoluble in water, soluble in acids; melts at 1400–1500°C.

erbium halide [INORG CHEM] A compound of erbium and one of the halide elements.

erbium nitrate [INORG CHEM] $Er(NO_3)_3 \cdot 5H_2O$ Pink crystals that are soluble in water, alcohol, and acetone; may explode if it is heated or shocked.

erbium oxalate [ORG CHEM] $Er_2(C_2O_4)_3 \cdot 10H_2O$ A red powder that decomposes at 575°C; used to separate erbium from common metals.

erbium oxide [INORG CHEM] Er_2O_3 Pink powder that is insoluble in water; used as an actuator for phosphors and in manufacture of glass that absorbs in the infrared. Also known as erbia.

erbium sulfate [INORG CHEM] $Er_2(SO_4)_3 \cdot 8H_2O$ Red crystals that are soluble in water.

erbon [ORG CHEM] $C_{11}H_9Cl_5O_3$ A white solid with a melting point of 49–50°C; insoluble in water; used as an herbicide for perennial broadleaf weeds. Also known as 2-(2,4,5-trichlorophenoxy)ethyl 2,2-dichloropropionate.

erect image [OPTICS] An image in which directions are the same as those in the object, in contrast to an inverted image.

erecting lens [OPTICS] An eyepiece sometimes used in Kepler telescopes that consists of four lenses and provides an erect image, which is more convenient for viewing terrestrial objects than the inverted image provided by simpler eyepieces.

erecting prism [OPTICS] A system of prisms that converts the inverted image formed by most types of astronomical telescopes into an erect image.

erection [CIV ENG] Positioning and fixing the frame of a structure. [PHYSIO] The enlarged state of erectile tissue when engorged with blood, as of the penis or clitoris.

erection bolt [CIV ENG] A threaded rod with a head at one end, used to temporarily join parts of a structure during construction.

erection stress [MECH] The internal forces exerted on a structural member during construction.

erection tower [CIV ENG] A temporary framework built at a construction site for hoisting equipment.

erector [PHYSIO] Any muscle that produces erection of a part.

erect stem [BOT] A stem that stands, having a vertical or upright habit.

Eremascoideae [BOT] A monogeneric subfamily of ascosporogenous yeasts characterized by mostly septate mycelia, and spherical asci with eight oval to round ascospores.

eremophobia [PSYCH] An abnormal fear of being lonely.

Erethizontidae [VERT ZOO] The New World porcupines, a family of rodents characterized by sharply pointed, erectile hairs and four functional digits.

ereuthophobia *See* erythrophobia.

erg [PHYS] A unit of energy or work in the centimeter-gram-second system of units, equal to the work done by a force of magnitude of 1 dyne when the point at which the force is applied is displaced 1 centimeter in the direction of the force. Also known as dyne centimeter (dyne-cm).

ERG *See* electroretinogram.

Ergasilidae [INV ZOO] A family of copepod crustaceans in the suborder Cyclopoida in which the females are parasitic on aquatic animals, while the males are free-swimming.

ergastic [CYTOL] Pertaining to the nonliving components of protoplasm.

ergastoplasm [CYTOL] A cytoplasm component which shows an affinity for basic dyes; a form of the endoplasmic reticulum.

ergodic [STAT] **1.** Property of a system or process in which averages computed from a data sample over time converge, in a probabilistic sense, to ensemble or special averages. **2.** Pertaining to such a system or process.

ergodic theory [MATH] The study of measure-preserving transformations. [STAT MECH] Mathematical theory which attempts to show that the various possible microscopic states of a system are equally probable, and that the system is therefore ergodic.

ergodic transformation [MATH] A measure-preserving transformation on X with the property that whenever X is written as a union of two disjoint invariant subsets, one of these must have measure zero.

ergograph [ENG] An instrument with a recording device used to measure work capacity of muscles.

ergometer [ENG] An instrument with a recording device used to measure work performed by muscles under control conditions.

ergon [QUANT MECH] A quantum of energy; for any oscillator it is equal to the product of the oscillator's frequency and Planck's constant.

ergonometrics [IND ENG] The application of various procedures for determining the time for an operator to perform a task satisfactorily, using the standard method in the usual environmental conditions.

ergonomics [IND ENG] The study of human capability and psychology in relation to the working environment and the equipment operated by the worker.

ergosterin *See* ergosterol.

ergosterol [BIOCHEM] $C_{28}H_{44}O$ A crystalline, water-insoluble, unsaturated sterol found in ergot, yeast, and other fungi, and which may be converted to vitamin D_2 on irradiation with ultraviolet light or activation with electrons. Also known as ergosterin.

ergot [MYCOL] The dark purple or black sclerotium of the fungus *Claviceps purpurea*. [ORG CHEM] Any of the five optically isomeric pairs of alkaloids obtained from this fungus; only the levorotatory isomers are physiologically active.

ergotinine [ORG CHEM] An alkaloid and an isomer of ergotoxine that is a 1:1:1 mixture of ergocornine, ergocristine, and ergocryptine; crystallizes in long needles from acetone solutions, melting point 229°C, and soluble in chloroform, alcohol, and absolute ether.

ergotism [MED] Acute or chronic intoxication resulting from ingestion of grain infected with ergot fungus, or from chronic use of drugs containing ergot.

ergotoxine [ORG CHEM] An alkaloid and an isomer of ergotinine that is a 1:1:1 mixture of ergocornine, ergocristine, and ergocryptine; crystallizes in orthorhombic crystals, melts at 190°C, and is soluble in methyl alcohol, ethyl alcohol, acetone, and chloroform.

Eri *See* Eridanus.

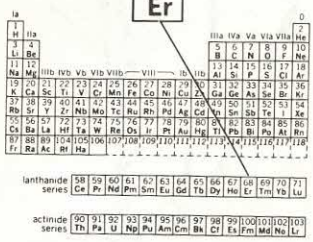
Erian [GEOL] Middle Devonian geologic time; a North American provincial series.

Erian orogeny [GEOL] One of the orogenies during Phanerozoic geologic time, at the end of the Silurian; the last part of the Caledonian orogenic era. Also known as Hibernian orogeny.

Ericaceae [BOT] A large family of dicotyledonous plants in

ERBIUM

68
Er



Periodic table of the chemical elements showing the position of erbium.

the order Ericales distinguished by having twice as many stamens as corolla lobes.

Ericales [BOT] An order of dicotyledonous plants in the subclass Dilleniidae; plants are generally sympetalous with unitegmic ovules and they have twice as many stamens as petals.

Erichsen test [MET] A cupping test to measure the ductility of a piece of sheet metal and to determine its suitability for deep drawing.

Erichsen value [MET] The depth of impression in millimeters required to fracture a cupped sheet metal supported on a ring and deformed at the center by a spherically shaped tool.

ericophyte [ECOL] A plant that grows on a heath or moor.

Ericsson cycle [THERMO] An ideal thermodynamic cycle consisting of two isobaric processes interspersed with processes which are, in effect, isothermal, but each of which consists of an infinite number of alternating isentropic and isobaric processes.

Erid *See* Eridanus.

Eridanus [ASTRON] A southern constellation made up of a long, crooked line of stars beginning near Rigel in the foot of Orion, and winding west and south to the first-magnitude star Achernar. Abbreviated Eri; Erid. Also known as River Po.

erigeron oil [MATER] A volatile oil, whose components are gallic and tannic acid, that is distilled from fleabane and horseweed.

erikite [MINERAL] A brown mineral consisting of a silicate and phosphate of cerium metals; occurs in orthorhombic crystals.

Erinaceidae [VERT ZOO] The hedgehogs, a family of mammals in the order Insectivora characterized by dorsal and lateral body spines.

erineum [PL PATH] An abnormal growth of hairs induced on the epidermis of a leaf by certain mites.

erinite [MINERAL] $Cu_5(OH)_4(AsO_4)_2$ Emerald-green mineral composed of basic copper arsenate.

Erinnidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Brachycera.

Eriocaulaceae [BOT] The single family of the order Eriocaulales.

Eriocaulales [BOT] An order of monocotyledonous plants in the subclass Commelinidae, having a perianth reduced or lacking and having unisexual flowers aggregated on a long peduncle.

Eriococcinae [INV ZOO] A family of homopteran insects in the superfamily Coccoidea; adult females and late instar nymphs have an anal ring.

Eriocraniidae [INV ZOO] A small family of lepidopteran insects in the superfamily Eriocranioidea.

Eriocranioidea [INV ZOO] A superfamily of lepidopteran insects in the suborder Homoneura comprising tiny moths with reduced, untoothed mandibles.

eriodictyol [ORG CHEM] $C_{15}H_{22}O_6$ A compound isolated from *Eriodictyon californicum* as needlelike crystals from a dilute alcohol solution, sparingly soluble in boiling water, hot alcohol, and glacial acetic acid; used in medicine as an expectorant. Also known as 3′,4′,5,7-tetrahydroxyflavanone.

eriometer [OPTICS] A device used to measure diameters of small particles or fibers by observing the diameter of the diffraction pattern produced by them in light coming from a small hole in a metal plate.

erionite [MINERAL] A chabazite mineral of the zeolite family that contains calcium ions and crystallizes in the hexagonal system.

Eriophyidae [INV ZOO] The bud mites or gall mites, a family of economically important plant-feeding mites in the suborder Trombidiformes.

eriophyllous [BOT] Having leaves covered by a cottony pubescence.

erlang [COMMUN] A unit of communication traffic load, equal to the traffic load whose calls, if placed end to end, will keep one path continuously occupied.

Erlenmeyer flask [CHEM] A conical glass laboratory flask, with a broad bottom and a narrow neck.

Erlenmeyer synthesis [ORG CHEM] Preparation of cyclic ethers by the condensation of an aldehyde with an α-acylamino acid in the presence of acetic anhydride and sodium acetate.

eroding velocity [GEOL] The minimum average velocity required for eroding homogeneous material of a given particle size.

Eros [ASTRON] An asteroid that is about 32 kilometers in diameter; its closest approach to the earth is every 44 years.

erose [BIOL] Having an irregular margin.

erosion [GEOL] **1.** The loosening and transportation of rock debris at the earth's surface. **2.** The wearing away of the land, chiefly by rain and running water. [MED] **1.** Surgical removal of tissues by scraping. **2.** Excision of a joint.

erosional unconformity [GEOL] The surface that separates older, eroded rocks from younger, overlying sediments.

erosion-corrosion [MET] Attack on a metal surface resulting from the combined effects of erosion and corrosion.

erosion cycle [GEOL] A postulated sequence of conditions through which a new landmass proceeds as it wears down, classically the concept of youth, maturity, and old age, as stated by W.M. Davis; an original landmass is uplifted above base level, cut by canyons, gradually converted into steep hills and wide valleys, and is finally reduced to a flat lowland at or near base level.

erosion pavement [GEOL] A layer of pebbles and small rocks that prevents the soil underneath from eroding.

erosion platform *See* wave-cut platform.

erosion ridge [HYD] One of a group of ridges on the surface of snow; formed by the corrosive action of wind-blown snow.

erosion surface [GEOL] A land surface shaped by agents of erosion.

erotic [PSYCH] **1.** Pertaining to the libido or sexual passion. **2.** Moved by or arousing sexual desire.

erotophobia [PSYCH] An abnormal fear of love.

Erotylidae [INV ZOO] The pleasing fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

ERP *See* effective radiated power; emergency recorder plot.

Errantia [INV ZOO] A group of 34 families of polychaete annelids in which the anterior region is exposed and the linear body is often long and is dorsoventrally flattened.

erratic [GEOL] A rock fragment that has been transported a great distance, generally by glacier ice or floating ice, and differs from the bedrock on which it rests.

error [COMPUT SCI] An incorrect result arising from approximations used in numerical methods, rather than from a human mistake or computer malfunction. [SCI TECH] Any discrepancy between a computed, observed, or measured quantity and the true, specified, or theoretically correct value of that quantity.

error analysis [COMPUT SCI] In the solution of a problem on a digital computer, the estimation of the cumulative effect of rounding or truncation errors associated with basic arithmetic operations.

error burst [COMPUT SCI] The condition when more than one bit is in error in a given number of bits.

error character [COMPUT SCI] A character that indicates the existence of an error in the data being processed or transmitted, and usually specifies that a certain amount of preceding or following data is to be ignored.

error checking and recovery [COMPUT SCI] An automatic procedure which checks for parity and will proceed with the execution after error correction.

error-checking code *See* self-checking code.

error code [COMPUT SCI] A specific character punched into a card or tape to indicate that a conscious error was made in the associated block of data; machines reading the error code may be programmed to throw out the entire block automatically.

error coefficient [CONT SYS] The steady-state value of the output of a control system, or of some derivative of the output, divided by the steady-state actuating signal. Also known as error constant.

error constant *See* error coefficient.

error-correcting code [COMPUT SCI] Data representation that allows for error detection and error correction if the error is of a specific kind.

error-correcting telegraph system [COMMUN] System employing an error-detecting code, and so conceived that any false signal initiates a repetition of the transmission of the character incorrectly received.

error correction [COMMUN] Any system for reducing errors in an incoming message, such as sending redundant signals as a check. [COMPUT SCI] Computer device for automatically locating and correcting a machine error of dropping a bit or picking up an extraneous bit, without stopping the machine or having it go to a programmed recovery routine. [ELEC] Correction of time errors in interconnected alternating-current power systems resulting from deviations from normal frequency, in order to make all areas synchronous.

error correction routine [COMPUT SCI] A program which

corrects specific error conditions in another program, routine, or subroutine.

error-detecting code *See* self-checking code.

error-detecting system [COMPUT SCI] An automatic system which detects an error due to a lack of data, or erroneous data during transmission.

error detection and feedback system [COMPUT SCI] An automatic system which retransmits a piece of data detected by the computer as being in error.

error detection routine *See* diagnostic routine.

error diagnostic [COMPUT SCI] A computer printout of an instruction or data statement, pinpointing an error in the instruction or statement and spelling out the type of error involved.

error frequency limit [COMPUT SCI] The maximum number of single bit errors per unit of time that a computer will accept before a machine check interrupt is initiated. Abbreviated EFL.

error function [MATH] The real function defined as the integral from 0 to x of $e^{-t^2}\,dt$ or $e^{t^2}\,dt$, or the integral from x to ∞ of $e^{-t^2}\,dt$.

error-indicating system [COMPUT SCI] Built-in circuits designed to indicate automatically that certain computational errors have occurred.

error interrupt [COMPUT SCI] The halt in execution of a program because of errors which the computer is not capable of correcting.

error list [COMPUT SCI] A list generated by a compiler showing invalid or erroneous instructions in a source program.

error message [COMPUT SCI] A message indicating detection of an error.

error of closure [ENG] Also known as angular error of closure. **1.** The amount by which the measurement of the azimuth of the first line of a traverse, made after completing the circuit, fails to equal the initial measurement. **2.** The amount by which the sum of the angles measured around the horizon differs from 360°.

error of perpendicularity [NAV] That error in the reading of a marine sextant due to nonperpendicularity of the index mirror to the frame.

error range [COMPUT SCI] A range of values such that an error condition will result if a specified data item falls within it. [STAT] The difference between the highest and lowest error values; a measure of the uncertainty associated with a number.

error rate [COMMUN] The number of erroneous bits or characters received for some fixed number of bits transmitted (such as 100,000).

error report [COMPUT SCI] A list produced by a computer showing the error conditions, such as overflows and errors resulting from incorrect or unmatched data, that are generated during program execution.

error routine [COMPUT SCI] A routine which takes control of a program and initiates corrective actions when an error is detected.

error signal [CONT SYS] In an automatic control device, a signal whose magnitude and sign are used to correct the alignment between the controlling and the controlled elements. [ELEC] *See* error voltage. [ELECTR] A voltage that depends on the signal received from the target in a tracking system, having a polarity and magnitude dependent on the angle between the target and the center of the scanning beam.

error tape [COMPUT SCI] The magnetic tape on which erroneous records are stored during processing.

error voltage [ELEC] A voltage, usually obtained from a selsyn, that is proportional to the difference between the angular positions of the input and output shafts of a servosystem; this voltage acts on the system to produce a motion that tends to reduce the error in position. Also known as error signal.

ertor [METEOROL] The effective (radiational) temperature of the ozone layer (region).

ERTS *See* earth resources technology satellite.

erucic acid [ORG CHEM] $C_{22}H_{42}O_2$ A monoethenoid acid that is the cis isomer of brassidic acid and makes up 40 to 50% of the total fatty acid in rapeseed, wallflower seed, and mustard seed; crystallizes as needles from alcohol solution, insoluble in water, soluble in ethanol and methanol. Also known as *cis*-13-docosenoic acid.

eruption [GEOL] The ejection of solid, liquid, or gaseous material from a volcano.

eruptive prominence [ASTRON] A prominence on the sun that is formed from active material above the chromosphere and reaches high altitudes on the sun at great speed.

eruptive rock [PETR] **1.** Rock formed from a volcanic eruption. **2.** Igneous rock that reaches the earth's surface in a molten condition.

eruptive star [ASTRON] A star that has a rapid change in its intensity because of the physical change it undergoes; examples are flare stars, recurrent novae, novae, supernovae, and nebular variables.

Erwinia [MICROBIO] A genus of motile, rod-shaped bacteria in the family Enterobacteriaceae; these organisms invade living plant tissues and cause dry necroses, galls, wilts, and soft rots.

Erwinieae [MICROBIO] Formerly a tribe of phytopathogenic bacteria in the family Enterobacteriaceae, including the single genus *Erwinia*.

erysipelas [MED] An acute, infectious bacterial disease caused by *Streptococcus pyogenes* and characterized by inflammation of the skin and subcutaneous tissues.

erysipeloid [MED] A bacterial infection caused by *Erysipelothrix rhuscopathiae* and occurring on the hands of people who handle infected meat or fish.

Erysipelothrix [MICROBIO] A genus of gram-positive, rod-shaped bacteria of uncertain affiliation; cells have a tendency to form long filaments.

Erysiphaceae [MYCOL] The powdery mildews, a family of ascomycetous fungi in the order Erysiphales with light-colored mycelia and conidia.

Erysiphales [MYCOL] An order of ascomycetous fungi which are obligate parasites of seed plants, causing powdery mildew and sooty mold.

erythema [MED] Localized redness of the skin in areas of variable size.

erythema multiforme [MED] An acute inflammatory skin disease characterized by red macules, papules, or tubercles on the extremities, neck, and face.

erythema nodosum [MED] The occurrence of pink to blue, tender nodules on the anterior surfaces of the lower legs; more frequent in women than men.

erythremia *See* erythrocytosis; polycythemia vera.

erythrine *See* erythrite.

erythrite [MINERAL] $Co_3(AsO_4)_2 \cdot 8H_2O$ A crimson, peach, or pink-red secondary oxidized cobalt mineral that occurs in monoclinic crystals, in globular and reniform masses, or in earthy forms. Also known as cobalt bloom; cobalt ocher; erythrine; peachblossom ore; red cobalt. [ORG CHEM] *See* erythritol.

erythritol [ORG CHEM] $H(CHOH)_4H$ A tetrahydric alcohol; occurs as tetragonal prisms, melting at 121°C, soluble in water; used in medicine as a vasodilator. Also known as anterythrite; erythrite; ethroglucin; erythrol; phycite; tetrahydroxy butane.

erythroblast [HISTOL] A nucleated cell occurring in bone marrow as the earliest recognizable cell of the erythrocytic series.

erythroblastosis [MED] The abnormal presence of erythroblasts in the blood. [VET MED] A virus disease of birds; considered to be part of the avian leukosis complex in which there is an abnormal number of erythroblasts in the blood.

erythroblastosis fetalis [MED] A form of hemolytic anemia affecting the fetus and newborn infant when a mother is Rh-negative and has developed antibodies against an Rh-positive fetus. Also known as hemolytic disease of newborn.

erythrocruorin [BIOCHEM] Any of the iron-porphyrin protein respiratory pigments found in the blood and tissue fluids of certain invertebrates; corresponds to hemoglobin in vertebrates.

erythrocyte [HISTOL] A type of blood cell that contains a nucleus in all vertebrates but humans and that has hemoglobin in the cytoplasm. Also known as red blood cell.

erythrocytopoiesis *See* erythropoiesis.

erythrocytosis [MED] An increase in the number of circulating erythrocytes of more than two standard deviations above the mean normal, usually occurring secondary to hypoxia. Also known as erythremia; polycythemia.

erythrodermia [MED] A skin condition in which the whole body surface is marked by an inflammatory blood vessel dilation.

erythroidine [ORG CHEM] $C_{16}H_{19}NO_3$ An alkaloid existing in two forms: α-erythroidine and β-erythroidine, isolated

from *Erythrina* species; β-erythroidine has an action similar to that of curare as a skeletal muscle relaxant.

erythrol *See* erythritol.

erythromelalgia [MED] A cutaneous vasodilation of the feet or, more rarely, of the hands; characterized by redness, mottling, changes in skin temperature, and neuralgic pains. Also known as acromelalgia; Mitchell's disease.

erythromycin [MICROBIO] A crystalline antibiotic produced by *Streptomyces erythreus* and used in the treatment of gram-positive bacterial infections.

D-erythropentose *See* ribulose.

erythrophilous [BIOL] Having an affinity for red dyes and other coloring matter.

erythrophleine [ORG CHEM] $C_{24}H_{39}NO_5$ An alkaloid isolated from the bark of *Erythrophleum guineense;* used in medicine experimentally for its digitalislike action.

erythrophobia [PSYCH] **1.** An abnormal fear of red colors; may be associated with a fear of blood. **2.** Fear of blushing. Also known as ereuthophobia.

erythrophore [ZOO] A chromatophore containing a red pigment, especially a carotenoid.

erythropia *See* erythropsia.

erythropoiesis [PHYSIO] The process by which erythrocytes are formed. Also known as erythrocytopoiesis.

erythropoietin [BIOCHEM] A hormone, thought to be produced by the kidneys, that regulates erythropoiesis, at least in higher vertebrates.

erythropsia [MED] An abnormality of vision in which all objects appear red; red vision. Also known as erythropia.

erythrose [ORG CHEM] $HOCH_2(CHOH)_2CHO$ A tetrose sugar obtained from erythrol; a syrupy liquid at room temperature.

erythrosiderite [MINERAL] $K_2FeCl_5 \cdot H_2O$ Mineral composed of hydrous potassium iron chloride; occurs in lavas.

erythrosin [ORG CHEM] $C_{13}H_{18}O_6N_2$ A red compound obtained by reacting tyrosine with nitric acid.

erythrosis [MED] **1.** Overproliferation of erythropoietic tissue, as found in polycythemia. **2.** The unusual red skin color of individuals with polycythemia.

Erythroxylaceae [BOT] A homogeneous family of dicotyledonous woody plants in the order Linales characterized by petals that are internally appendiculate, three carpels, and flowers without a disk.

erythroxylon *See* cocaine.

erythrulose [BIOCHEM] $C_4H_8O_4$ A ketose sugar occurring as an oxidation product of erythritol due to the action of certain bacteria.

Erzgebirgian orogeny [GEOL] Diastrophism of the early Late Carboniferous.

Es *See* einsteinium.

Esaki tunnel diode *See* tunnel diode.

Esbach's reagent [PATH] A solution of 1 gram of trinitrophenol and 2 grains of citric acid in 100 milliliters of water; used in determining albumin in urine.

ESCA *See* x-ray photoelectron spectroscopy.

escalation [IND ENG] Provision in actual or estimated costs for inflational increases in the costs of equipment, materials, labor, and so on, over those specified in an original contract.

escalator [MECH ENG] A continuously moving stairway and handrail.

E scan *See* E scope.

escape character [COMPUT SCI] A character used to indicate that the succeeding character or characters are expressed in a code different from the code currently in use.

escape hatch [ENG] A hatch which permits men to escape from a compartment, such as the interior of a submarine or aircraft, when normal means of exiting are blocked.

escapement [HOROL] A device in a timepiece consisting of a toothed wheel which engages alternate pallets attached to an oscillating member. [MECH ENG] A ratchet device that permits motion in one direction slowly.

escape rocket [AERO ENG] A small rocket engine attached to the leading end of an escape tower, to provide additional thrust to the capsule in an emergency; it helps separate the capsule from the booster vehicle and carries it to an altitude where parachutes can be deployed.

escape tower [AERO ENG] A trestle tower placed on top of a space capsule, connecting the capsule to the escape rocket on top of the tower; used for emergencies.

escape trunk [NAV ARCH] An escape compartment in a submarine, designed to receive a rescue chamber or deep-submergence rescue vehicle.

escape velocity [AERO ENG] In space flight, the speed at which an object is able to overcome the gravitational pull of the earth.

escape wheel [HOROL] The final wheel in a timepiece train, designed to transmit impulses to a lever.

escaping tendency [PHYS CHEM] The tendency of a solute species to escape from solution; related to the chemical potential of the solute.

escar *See* esker.

escarpment [GEOL] A cliff or steep slope of some extent, generally separating two level or gently sloping areas, and produced by erosion or by faulting. Also known as scarp. [ORD] The ground surrounding a fortified place which has been cut away nearly vertically to prevent an enemy's approach.

eschar [GEOL] *See* esker. [MED] A dry crust or slough, especially one formed after a thermal or chemical burn.

escharotic [MED] **1.** Caustic. **2.** Producing an eschar.

Escherichia [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; straight rods occurring singly or in pairs.

Escherichia coli [MICRO] The type species of the genus, occurring as part of the normal intestinal flora in vertebrates. Also known as colon bacillus.

Escherichieae [MICROBIO] Formerly a tribe of bacteria in the family Enterobacteriaceae defined by the ability to ferment lactose, with the rapid production of acid and visible gas.

Eschka mixture [ANALY CHEM] A mixture of two parts magnesium oxide and one part anhydrous sodium carbonate; used as a fusion mixture for determining sulfur in coal.

eschwegeite *See* tanteuxenite.

Eschweiler-Clarke modification [ORG CHEM] A modification of the Leuckart reaction, involving reductive alkylation of ammonia or amines (except tertiary amines) by formaldehyde and formic acid.

eschynite [MINERAL] $(Ce,Ca,Fe,Th)(Ti,Cb)_2O_6$ A black mineral, occurring in prismatic crystals; a rare oxide of cesium, titanium, and other metals, which is isomorphous with priorite.

Esclangon effect [OPTICS] Bending of a reflected light ray caused by movement of the mirror in a direction making an acute angle with its surface.

E scope [ELECTR] A cathode-ray scope on which signals appear as spots, with range as the horizontal coordinate and elevation angle or height as the vertical coordinate. Also known as E indicator; E scan.

escort fighter [AERO ENG] A fighter designed or equipped for long-range missions, usually to accompany heavy bombers on raids.

esculin [PHARM] $C_{15}H_{16}O_9$ A substance extracted from the leaves and bark of the horse chestnut tree; used as a skin protectant. Also known as bicolorin; 6,7-dihydroxycoumarin-6-glucoside; enallachrome; esculoside; polychrome.

esculoside *See* esculin.

escutcheon [DES ENG] An ornamental shield, flange, or border used around a dial, window, control knob, or other panel-mounted part. Also known as escutcheon plate.

escutcheon plate *See* escutcheon.

ESD *See* external symbol dictionary.

esdragol *See* estragole.

eserine *See* physostigmine.

Eshelby twist [SOLID STATE] A torsional deformation of a crystal whisker resulting from a screw dislocation along the whisker axis.

eskar *See* esker.

eskebornite [MINERAL] $CuFeSe_2$ The selenium analog of the mineral pyrrhotite ($Fe_{1-x}S$).

esker [GEOL] A sinuous ridge of constructional form, consisting of stratified accumulations, glacial sand, and gravel. Also known as asar; back furrow; escar; eschar; eskar; osar; serpent kame.

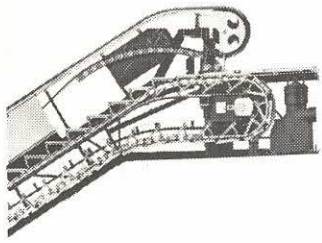
Esocidae [VERT ZOO] The pikes, a family of fishes in the order Clupeiformes characterized by an elongated beaklike snout and sharp teeth.

Esocoidei [VERT ZOO] A small suborder of fresh-water fishes in the order Salmoniformes; includes the pikes, mudminnows, and pickerels.

esophageal diverticulum [MED] An outpocketing of the wall of the esophagus, or of the pharynx just above the opening to the esophagus.

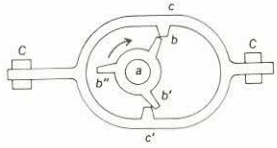
esophageal fistula [MED] Congenitally, an abnormal tube

ESCALATOR



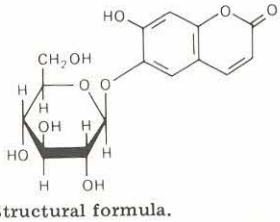
Cutaway view of escalator. *(Otis Elevator Co.)*

ESCAPEMENT



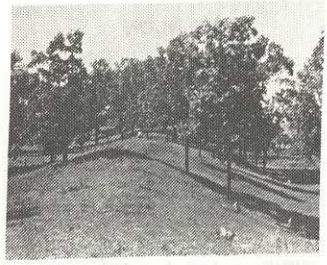
Simple escapement. Oscillating member cc' is an open bar arranged to slide longitudinally in bearings CC; wheel a turns continuously in direction of arrow; wheel has teeth b, b', b''; tooth b is just ceasing to drive pallet c to the right.

ESCULIN



Structural formula.

ESKER



View along the crest of an esker in southeastern Wisconsin. *(W. C. Alden, USDG)*

communicating between the esophagus and an internal organ, usually the trachea; an acquired esophageal fistula usually communicates between the esophagus and the skin through an external opening, or may communicate with internal organs.

esophageal gland [ANAT] Any of the digestive glands within the submucosa of the esophagus; secretions are chiefly mucus and serve to lubricate the esophagus.

esophageal hiatus [ANAT] The opening in the diaphragm for passage of the esophagus.

esophageal teeth [VERT ZOO] The enamel-tipped hypapophyses of the posterior cervical vertebrae of certain snakes, which penetrate the esophagus and function to break eggshells.

esophagitis [MED] Inflammation of the esophagus.

esophagogastrostomy [MED] Establishment, by surgery, of an anastomosis between the esophagus and the stomach; may be performed by the abdominal route or by transpleural operation.

esophagus [ANAT] The tubular portion of the alimentary canal interposed between the pharynx and the stomach. Also known as gullet.

esotropia [MED] Convergent strabismus, occurring when one eye fixes upon an object and the other deviates inward. Also known as cross-eye.

ESP *See* extrasensory perception.

espalier drainage *See* trellis drainage.

esparto wax [MATER] Vegetable wax extracted from esparto grass; it is hard, blends well, and is easy to emulsify; used to give smoothness to polishes.

ESR *See* electron paramagnetic resonance.

ESSA *See* environmental survey satellite.

Essen coefficient [ELEC] The torque exerted on the moving part of an electric rotating machine divided by the volume enclosed by the air gap.

essential amino acid [BIOCHEM] Any of eight of the 20 naturally occurring amino acids that are indispensable for optimum animal growth but cannot be formed in the body and must be supplied in the diet.

essential fatty acid [BIOCHEM] Any of the polyunsaturated fatty acids which are required in the diet of mammals; they are probably precursors of prostaglandins.

essential hypertension [MED] Elevation of the systemic blood pressure, of unknown origin. Also known as primary hypertension.

essential oil [MATER] Any of the odoriferous oily products of plant origin which are distillable; the principal constituents are terpenes, but benzenoid and aliphatic compounds may also be present. Also known as ethereal oil.

essential singularity [MATH] An isolated singularity of a complex function which is neither removable nor a pole.

essexite [PETR] A rock of igneous origin composed principally of plagioclase hornblende, biotite, and titanaugite.

established flow [FL MECH] The flow when the boundary layer of a fluid flowing in a duct completely fills the duct; that is, when the effect of the wall shearing stress extends completely across the duct.

establishment [OCEANOGR] The interval of time between the transit (upper or lower) of the moon and the next high water at a place.

ester [ORG CHEM] The compound formed by the elimination of water and the bonding of an alcohol and an organic acid.

esterase [BIOCHEM] Any of a group of enzymes that catalyze the synthesis and hydrolysis of esters.

ester gum [ORG CHEM] A compound obtained by forming an ester of a natural resin with a polyhydric alcohol; used in varnishes, paints, and cellulosic lacquers. Also known as rosin ester.

esterification [ORG CHEM] A chemical reaction whereby esters are formed.

estersil [ORG CHEM] Hydrophobic silica powder, an ester of —SiOH with a monohydric alcohol; used as a filler in silicone rubbers, plastics, and printing inks.

esthacyte [INV ZOO] A simple sensory cell occurring in certain lower animals, such as sponges. Also spelled aesthacyte.

esthesia [PHYSIO] The capacity for sensation, perception, or feeling. Also spelled aesthesia.

esthesiometer [ENG] An instrument used to measure tactile sensibility by determining the distance by which two points pressed against the skin must be separated in order that they be felt as separate. Also spelled aesthesiometer.

esthesioneuroblastoma *See* neuroepithelioma.

esthesioneuroepithelioma *See* neuroepithelioma.

esthiomene [MED] The chronic ulcerative lesion of the vulva in lymphogranuloma venereum.

estimate [SCI TECH] A statement of the value of a quantity or function based on incomplete data or evidence, or on a rough or approximate calculation.

estimated position [NAV] The most probable position of a craft determined from incomplete data or data of questionable accuracy.

estimated time [IND ENG] A predicted element or operation time.

estimated time of arrival [NAV] The predicted time of reaching a destination or way point. Abbreviated ETA.

estimated time of departure [NAV] The predicted time of leaving a place. Abbreviated ETD.

estimated time of interception [NAV] The predicted time of intercepting a craft by another craft.

estival [ASTRON] Of or pertaining to the summer. Also spelled aestival.

estivation [PHYSIO] **1.** The adaptation of certain animals to the conditions of summer, or the taking on of certain modifications, which enables them to survive a hot, dry summer. **2.** The dormant condition of an organism during the summer.

estivoautumnal malaria *See* falciparum malaria.

estradiol [BIOCHEM] $C_{18}H_{24}O_2$ An estrogenic hormone produced by follicle cells of the vertebrate ovary; provokes estrus and proliferation of the human endometrium, and stimulates ICSH (interstitial-cell-stimulating hormone) secretion.

estragole [ORG CHEM] $C_6H_4(C_3H_5)(OCH_3)$ A colorless liquid with the odor of anise, found in basil oil, estragon oil, and anise bark oil; used in perfumes and flavorings. Also known as *para*-allylanisole; chavicol methyl ether; esdragol; methyl chavicol.

estragon oil [MATER] Essential oil, colorless to yellowish green, with aniselike odor and aromatic flavor; distilled from flowering herb tarragon, *Artemisia dracunculus;* used chiefly as flavoring. Also known as tarragon oil.

estriol [BIOCHEM] $C_{18}H_{24}O_3$ A crystalline estrogenic hormone obtained from human pregnancy urine.

estrogen [BIOCHEM] Any of various natural or synthetic substances possessing the biologic activity of estrus-producing hormones.

estrogenic hormone [BIOCHEM] A hormone, found principally in ovaries and also in the placenta, which stimulates the accessory sex structures and the secondary sex characteristics in the female.

estrone [BIOCHEM] $C_{18}H_{22}O_2$ An estrogenic hormone produced by follicle cells of the vertebrate ovary; functions the same as estradiol.

estrous cycle [PHYSIO] The physiological changes that take place between periods of estrus in the female mammal.

estrus [PHYSIO] The period in female mammals during which ovulation occurs and the animal is receptive to mating.

estuarine deposit [GEOL] A sediment deposited at the heads and floors of estuaries.

estuarine environment [OCEANOGR] The physical conditions and influences of an estuary.

estuarine oceanography [OCEANOGR] The study of the chemical, physical, biological, and geological properties of estuaries.

estuary [GEOGR] A semienclosed coastal body of water which has a free connection with the open sea and within which sea water is measurably diluted with fresh water. Also known as branching bay; drowned river mouth; firth.

esu *See* electrostatic units.

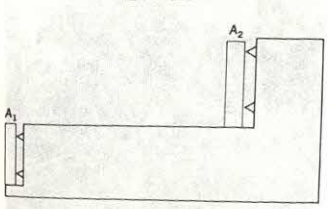
E.T. *See* ephemeris time.

ETA *See* estimated time of arrival.

etalon [OPTICS] **1.** Two adjustable parallel mirrors mounted so that either one may serve as one of the mirrors in a Michelson interferometer; used to measure distances in terms of wavelengths of spectral lines. **2.** An instrument similar to the Fabry-Perot interferometer, except that the distance between the plates is fixed. Also known as Fabry-Perot etalon.

eta meson [PARTIC PHYS] Neutral pseudoscalar meson having zero isotopic spin and hypercharge, positive charge parity and G parity, and a mass of about 549 MeV; decays via electromagnetic interactions.

ETALON



An etalon with two adjustable mirrors A_1 and A_2 which are to be used with the Michelson interferometer in distance measurement.

etamine [TEXT] Cotton material that is loosely woven and lightweight but has a coarse texture.
eta-prime meson *See* chi meson.
Etard reaction [ORG CHEM] Direct oxidation of an aromatic or heterocyclic bound methyl group to an aldehyde by utilizing chromyl chloride or certain metallic oxides.
etch [GRAPHICS] To incise lines on a plate of metal, glass, or other material by covering it with an acid-resistant coating, scratching through the coating, and then permitting an acid bath to erode exposed parts of the plate. [MET] To corrode the surface of a metal in order to reveal its composition and structure.
etch cleaning [MET] Removing soil by electrolytic or chemical action; removes some of the surface metal along with the dirt.
etch cracks [MET] Shallow cracks in the surface of hardened steel that result from reaction with an acid, causing hydrogen cracking.
etched circuit [ENG] A printed circuit formed by chemical or electrolytic removal of unwanted portions of a layer of conductive material bonded to an insulating base.
etch figures [MET] Minute, faceted pits or surfaces produced on a metal surface by chemical reaction with an etchant. [MINERAL] A minute pit produced by a solvent on the crystal face of a mineral which reveals its molecular structure.
etch printing [GRAPHICS] Printing with a printing plate that has an image formed by chemical or electrolytic action.
ETD *See* estimated time of departure.
etesian climate *See* Mediterranean climate.
etesians [METEOROL] The prevailing northerly winds in summer in the eastern Mediterranean, and especially the Aegean Sea; basically similar to the monsoon and equivalent to the maestro of the Adriatic Sea.
ethal *See* cetyl alcohol.
ethamine *See* ethyl amine.
ethanal *See* acetaldehyde.
ethanamide *See* acetamide.
ethanamidine hydrochloride *See* acetamidine hydrochloride.
ethane [ORG CHEM] CH_3CH_3 A colorless, odorless gas belonging to the alkane series of hydrocarbons, with freezing point of $-183.3°C$ and boiling point of $-88.6°C$; used as a fuel and refrigerant and for organic synthesis.
1,2-ethanediamine *See* ethylenediamine.
ethanedioyl chloride *See* oxalyl chloride.
ethanedithioamide *See* dithiooxamide.
1,2-ethanedithiol [ORG CHEM] $HSCH_2CH_2SH$ A liquid, freely soluble in alcohol and in alkalies; used as a metal complexing agent. Also known as dithioethyleneglycol; ethylenedimercaptan.
ethane nitrile *See* acetonitrile.
ethanethiol *See* ethyl mercaptan.
ethanethiolic acid *See* thioacetic acid.
ethanoic acid *See* acetic acid.
ethanol [ORG CHEM] C_2H_5OH A colorless liquid, miscible with water, boiling point 78.32°C; used as a reagent and solvent. Also known as alcohol; ethyl alcohol; grain alcohol.
ethanol acid *See* glyoxalic acid.
ethanolamine [ORG CHEM] $NH_2(CH_2)_2OH$ A colorless liquid, miscible in water; used in scrubbing H_2S and CO_2 from petroleum gas streams, for dry cleaning, in paints, and in pharmaceuticals. Also known as 2-aminoethanol; 2-hydroxyethylamine; monoethanolamine.
ethanolurea [ORG CHEM] $NH_2CONHCH_2CH_2OH$ A white solid; its formaldehyde condensation products are thermoplastic and water-soluble.
ethanoylaminoethanoic acid *See* aceturic acid.
ethanoyl chloride *See* acetyl chloride.
ethbenzamide *See* salicylamide.
ethene *See* ethylene.
ethenol *See* vinyl alcohol.
ethenylamidine hydrochloride *See* acetamidine hydrochloride.
ethephon [ORG CHEM] $C_2H_6ClO_3P$ A white solid with a melting point of 74.75°C; very soluble in water; used as a growth regulator for tomatoes, apples, cherries, and walnuts. Also known as CEPHA; 2-(chloroethyl)phosphonic acid.
ether [ELECTROMAG] The medium postulated to carry electromagnetic waves, similar to the way a gas carries sound waves. [ORG CHEM] **1.** One of a class of organic compounds characterized by the structural feature of an oxygen linking two hydrocarbon groups (such as R—O—R). **2.** $(C_2H_5)_2O$ A colorless liquid, slightly soluble in water; used as a reagent, intermediate, anesthetic, and solvent. Also known as ethyl ether.
ether drag [ELECTROMAG] The hypothesis, advanced unsuccessfully to account for results of the Michelson-Morley experiment, that ether is dragged along with matter.
ether drift [ELECTROMAG] Hypothetical motion of the ether relative to the earth.
ethereal oil *See* essential oil.
etherification [ORG CHEM] The process of making an ether from an alcohol.
etherize [MED] To produce anesthesia by administration of ether.
ether thermoscope [PHYS] A device for detecting radiant heat; consists of an evacuated U-shaped tube, with ether at the bottom of the tube and a bulb at each end, one bulb being blackened.
ethidine *See* ethylidine.
ethidium bromide [ORG CHEM] $C_{21}H_{20}BrN_3$ Dark red crystals with a melting point of 238–240°C; used in treating trypanosomiasis in animals and as an inhibitor of deoxyribonucleic and ribonucleic acid synthesis. Also known as homidium bromide.
ethinyl [ORG CHEM] The $CH_3{:}C—$ radical from acetylene. Also known as acetenyl; acetylenyl; ethynyl.
ethiofencarb [ORG CHEM] $C_{11}H_{15}O_2NS$ A yellow liquid, used as an insecticide in fruits, vegetables, and ornamentals. Also known as 2-ethylmercaptomethylphenyl-*N*-methylcarbamate.
ethiolate [ORG CHEM] $C_7H_{15}ONS$ A yellow liquid with a boiling point of 206°C; used as a preemergence herbicide for corn. Also known as *S*-ethyldiethylthiocarbamate.
ethion [ORG CHEM] $C_9H_{22}O_4P_2S_3$ A clear liquid, slightly soluble in water; used as an insecticide and miticide in the control of aphids, mites, scales, thrips, and foliage-eating larvae on food, fiber, and ornamental crops. Also known as *O,O,O′,O′*-tetraethyl *S,S′*-methylene bisphosphorodithioate.
ethionic acid [ORG CHEM] $HO{\cdot}SO_2{\cdot}CH_2{\cdot}CH_2{\cdot}SO_2OH$ An unstable diacid, known only in solution. Also known as ethylene sulfonic acid.
ethionine [BIOCHEM] $C_5H_{13}O_2N$ An amino acid that is the ethyl analog of and the biological antagonist of methionine.
Ethiopian zoogeographic region [ECOL] A geographic unit of faunal homogeneity including all of Africa south of the Sahara.
ethirimol [ORG CHEM] $C_{12}H_{21}N_3O$ A white, crystalline compound with a melting point of 159–160°C; slight solubility in water; used as a fungicide for powdery mildew of barley. Also known as 5-*n*-butyl-2-ethylamino-4-hydroxy-6-methylpyrimidine.
ethmoid bone [ANAT] An irregularly shaped cartilage bone of the skull, forming the medial wall of each orbit and part of the roof and lateral walls of the nasal cavities.
ethmolith [GEOL] A downward tapering, funnel-shaped, discordant intrusion of igneous rocks.
ethmoturbinate [ANAT] Of or pertaining to the masses of ethmoid bone which form the lateral and superior portions of the turbinate bones in mammals.
ethnobotany [ANTHRO] The study of how cultures utilize plants and plant products.
ethnogeography [ANTHRO] The scientific study of the geographic distribution of races, peoples, or cultural groups and their adaptation and relation to the environments in which they live.
ethnology [ANTHRO] The science that deals with the study of the origin, distribution, and relations of races or ethnic groups of mankind.
ethnopsychology [PSYCH] The study of the psychology of races or ethnic groups.
ethnozoology [ANTHRO] The study of how cultures use animals and animal by-products.
ethohexadiol [ORG CHEM] $C_8H_{18}O_2$ A slightly oily liquid, used as an insect repellent. Also known as 2-ethyl-1,3-hexanediol; 2-ethyl-3-propyl-1,3-propanediol; octylene glycol.
ethology [VERT ZOO] The study of animal behavior in a natural context.
ethoprop [ORG CHEM] $C_8H_{19}O_2PS_2$ A pale yellow liquid compound, insoluble in water; used as an insecticide for soil

insects and as a nematicide for plant parasitic nematodes. Also known as *O*-ethyl-*S*,*S*-dipropylphosphorodithioate.

ethoxide [ORG CHEM] A compound formed from ethanol by replacing the hydrogen of the hydroxy group by a monovalent metal. Also known as ethylate.

ethoxy [ORG CHEM] The C_2H_5O—radical from ethyl alcohol. Also known as ethyoxyl.

***para*-ethoxyacetanilide** *See* acetophenetidin.

2-ethoxybenzenecarbonamide *See* salicylamide.

***S*-(*N*-ethoxycarbonyl-*N*-methylcarbamoylmethyl)-*O*,*O*-diethylphosphorodithioate** *See* mercarbam.

6-ethoxy-1,2-dihydro-2,2,4-trimethylquinoline *See* ethoxyquin.

2-ethoxyethanol *See* cellosolve.

2-(2-ethoxyethoxy)ethanol *See* diethylene glycol monoethyl ether.

1-ethoxy-2-hydroxy-4-propenylbenzene *See* propenyl guaethol.

ethoxylation [CHEM ENG] A catalytic process which involves the direct addition of ethylene oxide to an alkyl phenol or to an aliphatic alcohol.

ethoxyquin [ORG CHEM] $C_{14}H_{19}NO$ A dark liquid, used as a growth regulator to protect apples and pears in storage. Also known as 6-ethoxy-1,2-dihydro-2,2,4-trimethylquinoline.

ethroglucin *See* erythritol.

ethyl [ORG CHEM] **1.** The hydrocarbon radical C_2H_5. **2.** Trade name for the tetraethyllead antiknock compound in gasoline.

ethyl acetate [ORG CHEM] $CH_3COOC_2H_5$ A colorless liquid, slightly soluble in water; boils at 77°C; a medicine, reagent, and solvent. Also known as acetic ester; acetic ether; acetidin.

ethyl acetic acid *See* butyric acid.

ethyl acetoacetate [ORG CHEM] $CH_3COCH_2COOC_2H_5$ A colorless liquid, boiling at 181°C; used as a reagent, intermediate, and solvent. Also known as acetoacetic ester; diacetic ether.

ethyl acetone *See* pentanone.

ethyl acetylene [ORG CHEM] Compound with boiling point 8.1°C; insoluble in water, soluble in alcohol; used in organic synthesis. Also known as 1-butine; 1-butyne.

ethyl acrylate [ORG CHEM] $C_5H_8O_2$ A colorless liquid, boiling at 99°C; used to manufacture chemicals and resins.

ethyl alcohol *See* ethanol.

ethyl amine [ORG CHEM] A colorless liquid, boiling at 15°C, water-soluble; used as a solvent, as a dye intermediate, and in organic synthesis. Also known as aminoethane; ethamine.

ethyl-*para*-aminobenzoate [ORG CHEM] $C_6H_4NH_2CO_2C_2H_5$ A white powder, melting point 88–92°C, slightly soluble in ethanol and ether, very slightly soluble in water; used as a local anesthetic. Also known as benzocaine.

2-(ethylamino)-4-(isopropylamino)-6-(methylthio)-*s*-triazine [ORG CHEM] $C_9H_{17}N_5S$ White crystals with a melting point of 84–85°C; solubility in water is 185 parts per million at 20°C; used as an herbicide for pineapple, sugarcane, and bananas. Also known as ametryn.

ethyl amyl ketone [ORG CHEM] $C_8H_{16}O$ A colorless liquid, almost insoluble in water; used in perfumery. Also known as octanone-3.

ethylate *See* ethoxide.

ethylation [ORG CHEM] Formation of a new compound by introducing the ethyl radical ($C_2H_5^-$).

ethyl benzene [ORG CHEM] $C_6H_5C_2H_5$ A colorless liquid that boils at 136°C, insoluble in water; used in organic synthesis, as a solvent, and in making styrene.

ethyl benzoate [ORG CHEM] $C_6H_5COOCH_2CH_3$ Colorless, aromatic liquid, boiling at 213°C, insoluble in water; used as a solvent, in flavoring extracts, and in perfumery.

ethyl-*N*-benzoyl-*N*-(3,4-dichlorophenyl)-2-aminopropionate *See* benzoylpropethyl.

α-ethylbenzylalcohol *See* 1-phenyl-1-propanol.

ethyl borate [ORG CHEM] $B(OC_2H_5)_3$ A salt of ethanol and boric acid; colorless, flammable liquid; used in antiseptics, disinfectants, and fireproofing. Also known as boron triethoxide; triethylic borate.

ethyl bromide [ORG CHEM] C_2H_5Br A colorless liquid, boiling at 39°C; used as a refrigerant and in organic synthesis. Also known as bromic ether; bromoethane.

2-ethylbutene [ORG CHEM] $CH_3CH_2(C_2H_5)CCH_2$ Colorless liquid, soluble in alcohol and organic solvents, insoluble in water; used in organic synthesis.

2-ethylbutyl acetate [ORG CHEM] $C_2H_5CH(C_2H_5)CH_2O_2CCH_3$ Colorless liquid with mild odor; used as a solvent for resins, lacquers, and nitrocellulose.

2-ethylbutyl alcohol [ORG CHEM] $(C_2H_5)_2CHCH_2OH$ Stable, colorless liquid, miscible in most organic solvents, slightly water-soluble; used as a solvent for resins, waxes, and dyes, and in the synthesis of perfumes, drugs, and flavorings.

ethyl butyl ketone [ORG CHEM] $C_2H_5COC_4H_9$ A colorless liquid, boiling at 147°C; used in solvent mixtures. Also known as 3-heptanone.

ethyl butyrate [ORG CHEM] $C_3H_7COOC_2H_5$ A colorless liquid, boiling at 121°C; used in flavoring extracts and perfumery. Also known as butyric ether.

ethyl caprate [ORG CHEM] $CH_3(CH_2)_8COOC_2H_5$ A colorless liquid, used in the manufacture of wine bouquets and cognac essence. Also known as ethyl decanoate.

ethyl caproate [ORG CHEM] $C_5H_{11}COOC_2H_5$ A colorless to yellow liquid, boiling at 167°C, soluble in ether and alcohol, and having a pleasant odor; used as a chemical intermediate and in the food industry as an artificial fruit essence. Also known as ethyl hexanoate; ethyl hexoate.

ethyl caprylate [ORG CHEM] $CH_3(CH_2)_6COOC_2H_5$ A clear, colorless liquid with a pineapple odor; used to make fruit ethers. Also known as ethyl octanoate.

ethyl carbamate *See* urethane.

ethyl carbinol *See* propyl alcohol.

ethyl carbonate *See* diethyl carbonate.

ethyl cellulose [ORG CHEM] The ethyl ester of cellulose; it has film-forming properties and is inert to alkalies and dilute acids; used in adhesives, lacquers, and coatings.

ethyl chloride [ORG CHEM] C_2H_5Cl A colorless gas, liquefying at 12.2°C, slightly soluble in water; used as a solvent, in medicine, and as an intermediate. Also known as chloroethane; hydrochloric ether; monochloroethane; muriatic ether.

ethyl chloroacetate [ORG CHEM] $CH_2ClCOOC_2H_5$ A colorless liquid, boiling at 145°C; used as a poison gas, solvent, and chemical intermediate.

ethyl chlorophyllide [BIOCHEM] A compound formed by replacing the phytyl ($C_{20}H_{39}$) tail of the chlorophyll molecule with a short ethyl (C_2H_5) tail; crystallizes easily and has an absorption spectrum and electrochemical properties similar to those of chlorophyll.

ethyl cinnamate [ORG CHEM] $C_6H_5CH=CHCOOC_2H_5$ An oily liquid with a faint cinnamon odor; used as a fixative for perfumes. Also known as ethyl phenylacrylate.

ethyl crotonate [ORG CHEM] $CH_3CHCHCO_2C_2H_5$ A compound with a pungent aroma; boiling point of 143–147°C, soluble in water, soluble in ether; one of two isomeric forms used as an organic intermediate, a solvent for cellulose esters, and as a plasticizer for acrylic resins. Also known as *trans*-2-butenoic acid.

ethyl crotonic acid [ORG CHEM] $CH_3CHCC_2H_5COOH$ Colorless monoclinic crystals, subliming at 40°C; used as a peppermint flavoring.

ethyl cyanide [ORG CHEM] C_2H_5CN A colorless liquid that boils at 97.1°C; poisonous. Also known as hydrocyanic ether; propionitrile.

ethyl decanoate *See* ethyl caprate.

ethyl 4,4′-dichlorobenzilate *See* chlorobenzilate.

***S*-ethyldiethylthiocarbamate** *See* ethiolate.

***S*-ethyl diisobutylthiocarbamate** *See* butylate.

ethyl-*N*-(3-dimethylaminopropyl)thiolcarbamate hydrochloride *See* prothiocarb.

***O*-ethyl-*S*,*S*-diphenyldithiophosphate** *See* edifenphos.

***O*-ethyl-*S*,*S*-dipropylphosphorodithioate** *See* ethoprop.

***S*-ethyl-*N*,*N*-dipropylthiocarbamate** [ORG CHEM] $C_9H_{19}NOS$ An amber liquid soluble in water at 370 parts per million; used as a pre- and postemergence herbicide on vegetable crops. Also known as EDTC.

ethyl enanthate [ORG CHEM] $CH_3(CH_2)_5COOC_2H_5$ A clear, colorless oil with a boiling point of 187°C; soluble in alcohol, chloroform, and ether; taste and odor are fruity; used as a flavor for liqueurs and soft drinks. Also known as cognac oil; ethyl heptanoate; ethyl oenanthate.

ethylene [ORG CHEM] C_2H_4 A colorless, flammable gas, boiling at −102.7°C; used as an agricultural chemical, in medicine, and for the manufacture of organic chemicals and polyethylene. Also known as ethene; olefiant gas.

ethylene alkylation [CHEM ENG] A catalytic petroleum-re-

fining process in which dry isobutane and ethylene react to form ethylene alkylate.

ethyleneamine *See* piperazine.

3,3′-ethylenebis(tetrahydro-4,6-dimethyl-2*H*-1,3,5-thiadiazine-2-thione) *See* milneb.

ethylene bromide *See* ethylene dibromide.

ethylene carbonate [ORG CHEM] $(CH_2O)_2CO$ Odorless, colorless solid with low melting point; soluble in water and organic solvents; used as a polymer and resin solvent, in solvent extraction, and in organic syntheses.

ethylene chloride [ORG CHEM] $ClCH_2CH_2Cl$ A colorless, oily liquid, boiling at 83.7°C; used as a solvent and fumigant, for organic synthesis, and for ore flotation. Also known as Dutch liquid; ethylene dichloride.

ethylene chlorobromide [ORG CHEM] CH_2BrCH_2Cl Volatile, colorless liquid with chloroformlike odor; soluble in ether and alcohol but not in water; general-purpose solvent for cellulosics; used in organic synthesis.

ethylene chlorohydrin [ORG CHEM] $ClCH_2CH_2OH$ A colorless, poisonous liquid, boiling at 129°C; used as a solvent and in organic synthesis. Also known as chloroethyl alcohol.

ethylene cyanide [ORG CHEM] $C_2H_4(CN)_2$ Colorless crystals, melting at 57°C; used in organic synthesis. Also known as succinonitrite.

ethylene cyanohydrin [ORG CHEM] C_3H_5ON A colorless liquid that is miscible with water and boils at 221°C. Also known as 2-cyanoethanol; 1-hydroxy-2-cyanoethane.

ethylene diacetate *See* ethylene glycol diacetate.

ethylenediamine [ORG CHEM] $NH_2CH_2CH_2NH_2$ Colorless liquid, melting at 8.5°C, soluble in water; used as a solvent, corrosion inhibitor, and resin and in adhesive manufacture. Also known as diaminoethane; 1,2-ethanediamine.

ethylenediaminetetraacetic acid [ORG CHEM] $(HOOCCH_2)_2NCH_2CH_2N(CH_2COOH)$ White crystals, slightly soluble in water and decomposing above 160°C; the sodium salt is a strong chelating agent, reacting with many metallic ions to form soluble nonionic chelate. Abbreviated EDTA.

ethylene dibromide [ORG CHEM] $BrCH_2CH_2Br$ A colorless, poisonous liquid, boiling at 131°C; insoluble in water; used in medicine, as a solvent in organic synthesis, and in antiknock gasoline. Also known as 1,2-dibromoethane; ethylene bromide.

ethylene dichloride *See* ethylene chloride.

ethylenedimercaptan *See* 1,2-ethanedithiol.

ethylene glycol *See* glycol.

ethylene glycol bis(trichloroacetate) [ORG CHEM] $C_4H_4Cl_6O_4$ A white solid with a melting point of 40.3°C; used as an herbicide for cotton and soybeans. Also known as EGT.

ethylene glycol diacetate [ORG CHEM] $CH_3COOCH_2CH_2OOCCH_3$ A liquid used as a solvent for oils, cellulose esters, and explosives. Also known as ethylene diacetate; glycol diacetate.

ethylene glycol monobutyl ether *See* 2-butoxyethanol.

ethylene glycol monomethyl ether *See* 2-methoxyethanol.

ethylene glycol monophenyl ether *See* 2-phenoxyethanol.

ethylenehydrinsulfonic acid *See* isethionic acid.

ethyleneimine [ORG CHEM] C_2H_4NH Highly corrosive liquid, colorless and clear; miscible with organic solvents and water; used as an intermediate in fuel oil production, refining lubricants, textiles, and pharmaceuticals. Also known as aziridine.

ethylene nitrate [ORG CHEM] $(CH_2NO_3)_2$ An explosive yellow liquid, insoluble in water. Also known as glycoldinitrate.

ethylene oxide [ORG CHEM] $(CH_2)_2O$ A colorless gas, soluble in organic solvents and miscible in water, boiling point 11°C; used in organic synthesis, for sterilizing, and for fumigating. Also known as 1,2-epoxyethane.

ethylene-propylene terpolymer [MATER] An elastomer which is based on ethylene and propylene terpolymers with small amounts of a nonconjugated diene and which can be vulcanized; used for automotive parts, cable coating, hose, footwear, and other products. Abbreviated EPDM; EPT.

ethylene resin [ORG CHEM] A thermoplastic material composed of polymers of ethylene; the resin is synthesized by polymerization of ethylene at elevated temperatures and pressures in the presence of catalysts. Also known as polyethylene; polyethylene resin.

ethylene sulfonic acid *See* ethionic acid.

ethylethanolamine [ORG CHEM] $C_2H_5NHCH_2CH_2OH$ Water-white liquid with amine odor; soluble in alcohol, ether, and water; used in dyes, insecticides, fungicides, and surface-active agents.

ethyl ether *See* ether.

***ortho*-ethyl ether** *See* salicylamide.

ethyl ether-boron trifluoride complex *See* boron trifluoride etherate.

***S*-ethyl-*N*-ethyl-*N*-cyclohexylthiocarbamate** *See* cycloate.

ethylethylene *See* butene-1.

ethyl formate [ORG CHEM] $HCOOC_2H_5$ A colorless liquid, boiling at 54.4°C; used as a solvent, fumigant, and larvicide and in flavors, resins, and medicines.

ethyl heptanoate *See* ethyl enanthate.

***S*-ethyl hexahydro-1*H*-azepine-1 carbothioate** *See* molinate.

2-ethyl-1,3-hexanediol *See* ethohexadiol.

ethyl hexanoate *See* ethyl caproate.

2-ethyl-1-hexanol *See* 2-ethyl-hexyl alcohol.

ethyl hexoate *See* ethyl caproate.

2-ethyl hexoic acid [ORG CHEM] $C_4H_9CH(C_2H_5)COOH$ A liquid that is slightly soluble in water, boils at 226.9°C, and has a mild odor; used as an intermediate to make metallic salts for paint and varnish driers, esters for plasticizers, and light metal salts for conversion of some oils to grease. Also known as butyl ethylacetic acid.

2-ethylhexyl acetate [ORG CHEM] $CH_3COOCH_2CHC_2H_5C_4H_9$ Water-white, stable liquid; used as a solvent for nitrocellulose, resins, and lacquers. Also known as octyl acetate.

2-ethylhexyl acrylate [ORG CHEM] $CH_2CHCOOCH_2CH(C_2H_5)C_4H_9$ Pleasant-smelling liquid; used as monomer for plastics, protective coatings, and paper finishes.

2-ethylhexyl alcohol [ORG CHEM] $C_4H_9CH(C_2H_5)CH_2OH$ Colorless, slightly viscous liquid; used as a defoaming or wetting agent, as a solvent for protective coatings, waxes, and oils, and as a raw material for plasticizers. Also known as 2-ethyl-1-hexanol; octyl alcohol.

2-ethylhexylamine [ORG CHEM] $C_4H_9CH(C_2H_5)CH_2NH_2$ Water-white liquid with slight ammonia odor; slightly water-soluble; used to synthesize detergents, rubber chemicals, and oil additives.

2-ethylhexyl bromide [ORG CHEM] $C_4H_9CH(C_2H_5)CH_2Br$ Water-white, water-insoluble liquid; used to prepare pharmaceuticals and disinfectants.

2-ethylhexyl chloride [ORG CHEM] $C_4H_9CH(C_2H_5)CH_2Cl$ Colorless liquid; used to synthesize cellulose derivatives, pharmaceuticals, resins, insecticides, and dyestuffs.

ethyl-*para*-hydroxybenzoate [ORG CHEM] $HOC_6H_4COOC_2H_5$ Crystals with a melting point of 116°C that are soluble in water, alcohol, and ether; used as a preservative for pharmaceuticals. Also known as ethylparaben.

ethyl-*para*-hydroxyphenyl ketone *See para*-hydroxypropiophenone.

1-ethyl-3-hydroxypiperidine [PHARM] $C_7H_{15}NO$ A liquid with a boiling point of 93–95°C; used as an antispasmodic drug. Also known as 1-ethyl-3-piperidinol.

ethyl-2-hydroxypropionate *See* ethyl lactate.

ethylic compound [ORG CHEM] Generic term for ethyl compounds.

ethylic ether *See* diethyl ether.

ethylidine [ORG CHEM] The $CH_3{\cdot}CH{=}$ radical from ethane, C_2H_6. Also known as ethidine.

ethyl iodide [ORG CHEM] C_2H_5I A colorless liquid, boiling at 72.3°C; used in medicine and in organic synthesis. Also known as hydroiodic ether; iodoethane.

ethyl isobutylmethane *See* 2-methylhexane.

ethyl isovalerate [ORG CHEM] $(CH_3)_2CHCH_2COOC_2H_5$ A colorless, oily liquid with an apple odor, soluble in water and miscible with alcohol, benzene, and ether; used for flavoring beverages and confectioneries.

ethyl lactate [ORG CHEM] $CH_3CHOHCOOC_2H_5$ A colorless liquid that boils at 154°C, has a mild odor, and is miscible with water and organic solvents such as alcohols, ketones, esters, and hydrocarbons; used as a flavoring and as a solvent for cellulose compounds such as nitrocellulose, cellulose acetate, and cellulose ethers. Also known as ethyl-2-hydroxypropionate.

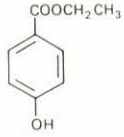
ethyl malonate [ORG CHEM] $CH_2(COOC_2H_5)_2$ A colorless liquid, boiling at 198°C; used as an intermediate and a plasticizer. Also known as malonic ester.

ethyl mercaptan [ORG CHEM] C_2H_5SH A colorless liquid,

2-ETHYLHEXYL ALCOHOL

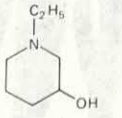
Structural formula.

ETHYL-PARA-HYDROXY-BENZOATE



Structural formula.

1-ETHYL-3-HYDROXY-PIPERIDINE



Structural formula.

boiling at 36°C. Also known as ethanethiol; ethyl sulfhydrate; thioethyl alcohol.

2-ethylmercaptomethylphenyl-*N*-methylcarbamate *See* ethiofencarb.

ethyl methacrylate [ORG CHEM] $CH_2CCH_3COOC_2H_5$ Colorless, easily polymerized liquid, water-insoluble; used to produce polymers and chemical intermediates.

ethyl(2*E*,4*E*)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienethiolate *See* triprene.

ethylmethylacetylene *See* pentyne.

ethyl methyl ketone *See* methyl ethyl ketone.

ethyl 4-(methylthio)-*meta*-tolyl isopropylphosphoramidate [ORG CHEM] $C_{13}H_{22}NO_2PS$ A brown, crystalline compound with a melting point of 49°C; limited solubility in water; used as a nematicide and fumigant to treat seeds and turf grasses.

ethyl nitrate [ORG CHEM] $C_2H_5NO_3$ A colorless, flammable liquid, boiling at 87.6°C; used in perfumes, drugs, and dyes and in organic synthesis.

ethyl nitrite [ORG CHEM] $C_2H_5NO_2$ A colorless liquid, boiling at 16.4°C; used in medicine and in organic synthesis. Also known as sweet spirits of niter.

***O*-ethyl-*O*-*para*-nitrophenyl phenylphosphonothioate** [ORG CHEM] $C_2H_5O_4NPS$ A yellow, crystalline compound with a melting point of 36°C; used as an insecticide and miticide on fruit crops.

ethyl octanoate *See* ethyl caprylate.

ethyl oenanthate *See* ethyl enanthate.

ethyl oleate [ORG CHEM] $C_{20}H_{38}O_2$ A yellow oil, insoluble in water; used as a solvent, plasticizer, and lubricant.

ethyl orthosilicate *See* ethyl silicate.

ethyl oxalate [ORG CHEM] $(COOC_2H_5)_2$ Oily, unstable, colorless liquid that is combustible; miscible with organic solvents, very slightly soluble in water; used as a solvent for cellulosics and resins, and as an intermediate for dyes and pharmaceuticals.

ethyl oxide *See* diethyl ether.

ethylparaben *See* ethyl-*para*-hydroxybenzoate.

ethyl phenylacrylate *See* ethyl cinnamate.

ethyl phenyl carbinol *See* 1-phenyl-1-propanol.

***N*-ethyl-5-phenylisoxazolium-3′-sulfonate** [ORG CHEM] $C_{11}H_{11}NO_4S$ Crystals that decompose at 207–208°C; used to form peptide bonds. Also known as Woodward's Reagent K.

1-ethyl-3-piperidinol *See* 1-ethyl-3-hydroxypiperidine.

ethyl propionate [ORG CHEM] $C_2H_5COOC_2H_5$ A colorless liquid, slightly soluble in water, boiling at 99°C; used as solvent and pyroxylin cutting agent. Also known as propionic ether.

2-ethyl-3-propyl-1,3-propanediol *See* ethohexadine.

ethyl salicylate [ORG CHEM] $(HO)C_6H_4COOC_2H_5$ A clear liquid with a pleasant odor; used in commercial preparation of artificial perfumes. Also known as sal ethyl; salicylic acid ethyl ether; salicylic ether.

ethyl silicate [ORG CHEM] $(C_2H_5)_4SiO_4$ A colorless, flammable liquid, hydrolyzed by water; used as a preservative for stone, brick, and masonry, in lacquers, and as a bonding agent. Also known as ethyl orthosilicate.

ethyl sulfate *See* diethyl sulfate.

ethyl sulfhydrate *See* ethyl mercaptan.

ethyl sulfide [ORG CHEM] $(C_2H_5)_2S$ A colorless, oily liquid, boiling at 92°C; used as a solvent and in organic synthesis. Also known as diethyl sulfide; ethylthioethane.

2-ethylthio-4,6-bis(isopropylamino)-*S*-trizaine *See* dipropetryn.

ethylthioethane *See* ethyl sulfide.

***ortho*-ethyl(*O*-2,4,5-trichlorophenyl)ethylphosphonothioate** [ORG CHEM] $C_{10}H_{12}OPSCl_3$ An amber liquid with a boiling point of 108°C at 0.01 mmHg; solubility in water is 50 parts per million; used as an insecticide for vegetable crops and soil pests on meadows. Also known as trichloronate.

ethyl urethane *See* urethane.

ethyl vanillin [ORG CHEM] $C_2H_5O(OH)C_6H_3CHO$ A compound, crystallizing in fine white crystals that melt at 76.5°C, has a strong vanilla odor and four times the flavor of vanilla, soluble in organic solvents such as alcohol, chloroform, and ether; used in the food industry as a flavoring agent to replace or fortify vanilla.

ethyne *See* acetylene.

ethynyl *See* ethinyl.

ethynylation [ORG CHEM] Production of an acetylenic derivative by the condensation of acetylene with a compound such as an aldehyde; for example, production of butynediol from the union of formaldehyde with acetylene.

ethyoxyl *See* ethoxy.

etioallocholane *See* androstane.

etioblast [BOT] An immature chloroplast, containing prolamellar bodies.

etiolation [BOT] The yellowing or whitening of green plant parts grown in darkness.

etiology [MED] Any factors which cause disease. [SCI TECH] A branch of science dealing with the causes of phenomena.

etioporphyrin [ORG CHEM] $C_{31}H_{34}N_4$ A synthetic porphyrin that has four ethyl and four methyl groups in a red-pigmented compound whose crystals melt at 280°C.

E transformer [ELECTROMAG] A transformer consisting of two coils wound around a laminated iron core in the shape of an E, with the primary and secondaries occupying the center and outside legs respectively.

E trisomy *See* trisomy 18 syndrome.

Ettingshausen coefficient [PHYS] A measure of the strength of the Ettingshausen effect, equal to the ratio of the temperature gradient to the product of the current density and magnetic field strength which produce this gradient.

Ettingshausen effect [PHYS] The phenomenon that, when a metal strip is placed with its plane perpendicular to a magnetic field and an electric current is sent longitudinally through the strip, corresponding points on opposite edges of the strip have different temperatures.

Ettingshausen-Nernst coefficient [PHYS] A measure of the strength of the Ettingshausen-Nernst effect, equal to the ratio of the electric field to the product of the temperature gradient and magnetic field strength which produce this field.

Ettingshausen-Nernst effect [PHYS] The phenomenon that, when a conductor or semiconductor is subjected to a temperature gradient and to a magnetic field perpendicular to the temperature gradient, an electric field arises perpendicular to both the temperature gradient and the magnetic field. Also known as Nernst effect.

ettringite [MINERAL] $Ca_6Al_2(SO_4)_3(OH)_{12}\cdot 26H_2O$ A mineral composed of hydrous basic calcium and aluminum sulfate.

Eu *See* europium.

EU *See* expected value.

Eubacteriales [MICROBIO] Formerly an order of the class Schizomycetes; considered the true bacteria and characterized by simple, undifferentiated, rigid cells of either spherical or straight, rod-shaped form.

Eubacterium [MICROBIO] A genus of bacteria in the family Propionibacteriaceae; obligate anaerobes producing a mixture of organic acids (butyric, acetic, formic, and lactic) from carbohydrates and peptone.

Eubasidiomycetes [MYCOL] An equivalent name for Homobasidiomycetidae.

Eubrya [BOT] A subclass of the mosses (Bryopsida); the leafy gametophytes arise from buds on the protonemata, which are nearly always filamentous or branched green threads attached to the substratum by rhizoids.

Eubryales [BOT] An order of mosses (Bryatae); plants have the sporophyte at the end of a stem, vary in size from small to robust, and generally grow in tufts.

eucairite [MINERAL] CuAgSe A white, native selenide that crystallizes in the isometric crystal system.

eucalyptol [ORG CHEM] $C_{10}H_{18}O$ A colorless oil with a camphorlike odor; boiling point is 174–177°C; used in pharmaceuticals, perfumery, and flavoring. Also known as cajeputol; cineol.

Eucalyptus [BOT] A large genus of evergreen trees belonging to the myrtle family (Myrtaceae) and occurring in Australia and New Guinea.

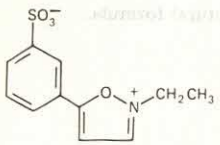
eucalyptus gum [PHARM] The dried gummy exudate from *Eucalyptus longirostris* of Australia, composed of kinotannic acid, kino red, glucoside, catechol, and pyrocatechol; used in medicine as an astringent and antidiarrheal agent. Also known as eucalyptus kino; red gum.

eucalyptus kino *See* eucalyptus gum.

eucalyptus oil [MATER] Any of various essential oils of various eucalyptus leaves, a yellow liquid miscible with alcohol; varies from peppermint to turpentine in odor; used in perfumery, medicine, and ore flotation.

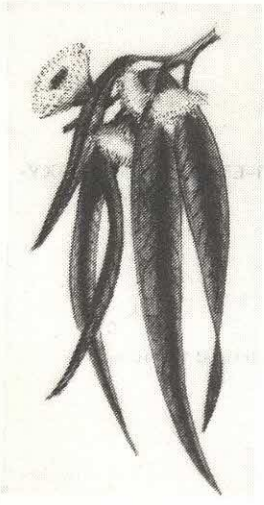
eucalyptus resin oil *See* eucalyptus tar.

N-ETHYL-5-PHENYLISOXAZOLIUM-3′-SULFONATE



Structural formula.

EUCALYPTUS



Eucalyptus globulus showing spray of mature foliage.

eucalyptus tar [MATER] Residue from caustic treating of oil from distilled eucalyptus leaves; used to perfume soaps and as a disinfectant. Also known as eucalyptus resin oil.

Eucarida [INV ZOO] A large superorder of the decapod crustaceans, subclass Malacostraca, including shrimps, lobsters, hermit crabs, and crabs; characterized by having the shell and thoracic segments fused dorsally and the eyes on movable stalks.

Eucaryota [BIOL] Primitive, unicellular organisms having a well-defined nuclear membrane, chromosomes, and mitotic cell division.

eucaryote *See* eukaryote.

eucatropine hydrochloride [PHARM] $C_{17}H_{25}O_3N \cdot HCl$ A white, odorless powder that melts at 183–186°C, is soluble in alcohol and chloroform, and insoluble in ether; used in medicine as a mydriatic.

Eucestoda [INV ZOO] The true tapeworms, a subclass of the class Cestoda.

Eucharitidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

euchlorin [MINERAL] $(K,Na)_8Cu_9(SO_4)_{10}(OH)_6$ An emerald-green mineral consisting of a basic sulfate of potassium, sodium, and copper; found in lava at Vesuvius.

euchroite [MINERAL] $Cu_2(AsO_4)(OH) \cdot 3H_2O$ An emerald green or leek green, orthorhombic mineral consisting of a hydrated basic copper arsenate.

euchromatin [CYTOL] The portion of the chromosomes that stains with low intensity, uncoils during interphase, and condenses during cell division.

Eucinetidae [INV ZOO] The plate thigh beetles, a family of coleopteran insects in the superfamily Dascilloidea.

euclase [MINERAL] $BeAlSiO_4(OH)$ A brittle, pale green, blue, yellow, or violet monoclinic mineral, occurring as prismatic crystals.

Euclasterida [INV ZOO] An order of asteroid echinoderms in which the arms are sharply distinguished from a small, central disk-shaped body.

Eucleidae [INV ZOO] The slug moths, a family of lepidopteran insects in the suborder Heteroneura.

euclidean algorithm [MATH] A method of finding the greatest common divisor of a pair of integers.

euclidean geometry [MATH] The study of the properties preserved by isometries of two- and three-dimensional euclidean space.

euclidean quantum field theory [QUANT MECH] A relativistic quantum field theory in which time is replaced by a purely formal imaginary time, resulting in replacement of Lorentz covariance by euclidean group covariance.

euclidean space [MATH] A space consisting of all ordered sets $(x_1, \ldots, x_n)$ of n numbers with the distance between $(x_1, \ldots, x_n)$ and $(y_1, \ldots, y_n)$ being given by

$$\left[\sum_{i=1}^{n} (x_i - y_i)^2\right]^{1/2};$$

the number n is called the dimension of the space.

Euclymeninae [INV ZOO] A subfamily of annelids in the family Maldonidae of the Sedentaria, having well-developed plaques and an anal pore within the plaque.

Eucnemidae [INV ZOO] The false click beetles, a family of coleopteran insects in the superfamily Elateroidea.

Eucoccida [INV ZOO] An order of parasitic protozoans in the subclass Coccidia characterized by alternating sexual and asexual phases; stages of the life cycle occur intracellularly in vertebrates and invertebrates.

Eucoelomata [ZOO] A large sector of the animal kingdom including all forms in which there is a true coelom or body cavity; includes all phyla above Aschelminthes.

Eucommiales [BOT] A monotypic order of dicotyledonous plants in the subclass Hamamelidae; plants have two, unitegmic ovules and lack stipules.

eucrite [MINERAL] An olivine-bearing gabbro containing unusually calcic plagiocase; a meteorite component.

eucryptite [MINERAL] $LiAlSiO_4$ A colorless or white lithium aluminum silicate mineral, crystallizing in the hexagonal system; specific gravity is 2.67.

Eudactylinidae [INV ZOO] A family of parasitic copepod crustaceans in the suborder Caligoida; found as ectoparasites on the gills of sharks.

eudialite [MINERAL] $(Na,Ca,Fe)_6ZrSi_6O_{18}(OH,Cl)$ Hexagonal-crystalline silicate chloride mineral; color is red to brown.

eudidymite [MINERAL] $NaBeSi_3O_7(OH)$ A glassy white mineral composed of sodium beryllium silicate.

eudiometer [ENG] An instrument for measuring changes in volume during the combustion of gases, consisting of a graduated tube that is closed at one end and has two wires sealed into it, between which a spark may be passed.

eudoxid *See* eudoxome.

eudoxome [INV ZOO] Cormidium of most calycophoran siphonophores which lead a free existence. Also known as eudoxid.

Euechinoidea [INV ZOO] A subclass of echinoderms in the class Echinoidea; distinguished by the relative stability of ambulacra and interambulacra.

Eugenia [ASTRON] An asteroid with a diameter of about 225 kilometers, mean distance from the sun of 2.721 astronomical units, and C-type surface composition.

eugenics [GEN] The use of practices that influence the hereditary qualities of future generations, with the aim of improving the genetic future of humanity.

eugenol [ORG CHEM] $CH_2CHCH_2C_6H_3(OCH_3)OH$ A colorless or yellowish aromatic liquid with spicy odor and taste, soluble in organic solvents, and extracted from clove oil; used in flavors, perfumes, medicines, and the manufacture of vanilla. Also known as 4-allyl-2-methoxyphenol.

eugeosyncline [GEOL] The internal volcanic belt of an orthogeosyncline.

Euglena [BIOL] A genus of organisms with one or two flagella, chromatophores in most species, and a generally elongate, spindle-shaped body; classified as algae by botanists (Euglenophyta) and as protozoans by zoologists (Euglenida).

Euglenida [INV ZOO] An order of protozoans in the class Phytamastigophorea, including the largest green, noncolonial flagellates.

Euglenidae [INV ZOO] The antlike leaf beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

Euglenoidina [INV ZOO] The equivalent name for Euglenida.

Euglenophyceae [BOT] The single class of the plant division Euglenophyta.

Euglenophyta [BOT] A division of the plant kingdom including one-celled, chiefly aquatic flagellate organisms having a spindle-shaped or flattened body, naked or with a pellicle.

euglobulin [BIOCHEM] True globulin; a simple protein that is soluble in distilled water and dilute salt solutions.

Eugregarinida [INV ZOO] An order of protozoans in the subclass Gregarinia; parasites of certain invertebrates.

euhedral *See* automorphic.

eukaryote [BIOL] A cell with a definitive nucleus. Also spelled eucaryote.

Eulamellibranchia [INV ZOO] The largest subclass of the molluscan class Bivalvia, having a heterodont shell hinge, leaflike gills, and well-developed siphons.

Eulenburg's disease *See* paramyotonia congenita.

Euler angles [MECH] Three angular parameters that specify the orientation of a body with respect to reference axes.

Euler characteristic of a topological space X [MATH] The number $\chi(X) = \Sigma(-1)^q \beta_q$, where β_q is the qth-Betti number of X.

Euler diagram [MATH] A diagram consisting of closed curves, used to represent relations between logical propositions or sets; similar to a Venn diagram.

Euler equation [MECH] Expression for the energy removed from a gas stream by a rotating blade system (as a gas turbine), independent of the blade system (as a radial- or axial-flow system).

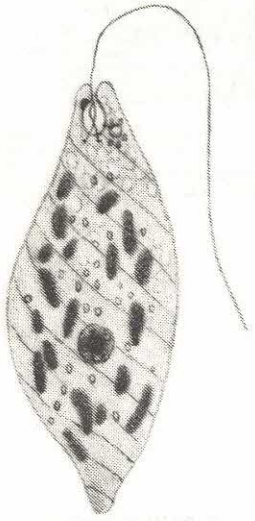
Euler equations of motion [MECH] A set of three differential equations expressing relations between the force moments, angular velocities, and angular accelerations of a rotating rigid body.

Euler force [MECH] The greatest load that a long, slender column can carry without buckling, according to the Euler formula for long columns.

Euler formula for long columns [MECH] A formula which gives the greatest axial load that a long, slender column can carry without buckling, in terms of its length, Young's modulus, and the moment of inertia about an axis along the center of the column.

Eulerian coordinates [FL MECH] Any system of coordinates in which properties of a fluid are assigned to points in space at each given time, without attempt to identify individual fluid parcels from one time to the next; a sequence of synoptic charts is a Eulerian representation of the data.

EUGLENA



Euglena showing many chloroplasts and spiral torsion.

Eulerian correlation [FL MECH] The correlation between the properties of a flow at various points in space at a single instant of time. Also known as synoptic correlation.

Eulerian equation [FL MECH] A mathematical representation of the motions of a fluid in which the behavior and the properties of the fluid are described at fixed points in a coordinate system.

Eulerian nutation *See* Chandler wobble.

Eulerian path [MATH] A path that traverses each of the lines in a graph exactly once.

Eulerian wind [METEOROL] A wind motion only in response to the pressure force; the cyclostrophic wind is a special case of the Eulerian wind, which is limited in its meteorological applicability to those situations in which the Coriolis effect is negligible.

Euler-Lagrange equation [MATH] A partial differential equation arising in the calculus of variations, which provides a necessary condition that $y(x)$ minimize the integral over some finite interval of $f(x,y,y')dx$, where $y' = dy/dx$; the equation is $(\partial f(x,y,y')/\partial y) - (d/dx)(\partial f(x,y,y')/\partial y') = 0$. Also known as Euler's equation.

Euler method [MECH] A method of studying fluid motion and the mechanics of deformable bodies in which one considers volume elements at fixed locations in space, across which material flows; the Euler method is in contrast to the Lagrangian method.

Euler number 1 [FL MECH] A dimensionless number used in the study of fluid friction in conduits, equal to the pressure drop due to friction divided by the product of the fluid density and the square of the fluid velocity.

Euler number 2 [FL MECH] A dimensionless number equal to two times the Fanning friction factor.

Euler-Rodrigues parameter [MECH] One of four numbers which may be used to specify the orientation of a rigid body; they are components of a quaternion.

Euler's equation *See* Euler-Lagrange equation.

Euler's expansion [FL MECH] The transformation of a derivative (d/dt) describing the behavior of a moving particle with respect to time, into a local derivative $(\delta/\delta t)$ and three additional terms that describe the changing motion of a fluid as it passes through a fixed point.

Euler's formula [MATH] The formula $e^{ix} = \cos x + i \sin x$, where $i = \sqrt{-1}$.

Euler's numbers [MATH] The numbers $E_2{}^n$ defined by the equation

$$\frac{1}{\cos z} = \sum_{n=0}^{\infty} (-1)^n \frac{E_{2n}}{(2n)!} z^{2n}.$$

Euler's theorem [MATH] For any polyhedron, $V - E + F = 2$, where V, E, F represent the number of vertices, edges, and faces respectively.

Euler transformation [MATH] A method of obtaining from a given convergent series a new series which converges faster to the same limit, and for defining sums of certain divergent series; the transformation carries the series $a_0 - a_1 + a_2 - a_3 + \ldots$ into a series whose nth term is

$$\sum_{r=0}^{n-1} (-1)^r \binom{n-1}{r} a_r/2^n.$$

eulittoral [OCEANOGR] A subdivision of the benthic division of the littoral zone of the marine environment, extending from high-tide level to about 60 meters, the lower limit for abundant growth of attached plants.

Eulophidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea including species that are parasitic on the larvae of other insects.

eulytine *See* eulytite.

eulytite [MINERAL] $Bi_4Si_3O_{12}$ A bismuth silicate mineral usually found as minute dark-brown or gray tetrahedral crystals; specific gravity is 6.11. Also known as agricolite; bismuth blende; eulytine.

Eumalacostraca [INV ZOO] A series of the class Crustacea comprising shrimplike crustaceans having eight thoracic segments, six abdominal segments, and a telson.

Eumetazoa [ZOO] A section of the animal kingdom that includes the phyla above the Porifera; contains those animals which have tissues or show some tissue formation and organ systems.

EUPHAUSIACEA

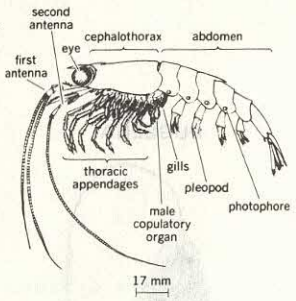


Diagram of a euphausiid crustacean.

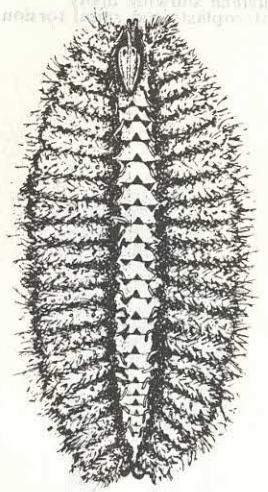
EUPHROSINIDAE



Euphrosine, dorsal view. *(After McIntosh)*

eumitosis [CYTOL] Typical mitosis.

Eumycetes [MYCOL] The true fungi, a large group of microorganisms characterized by cell walls, lack of chlorophyll, and mycelia in most species; includes the unicellular yeasts.

Eumycetozoida [INV ZOO] An order of protozoans in the subclass Mycetozoia; includes slime molds which form a plasmodium.

Eumycophyta [MYCOL] An equivalent name for the Eumycetes.

Eumycota [MYCOL] An equivalent name for Eumycetes.

Eunicea [INV ZOO] A superfamily of polychaete annelids belonging to the Errantia.

Eunicidae [INV ZOO] A family of polychaete annelids in the superfamily Eunicea having characteristic pharyngeal armature consisting of maxillae and mandibles.

Eunomia [ASTRON] An asteroid with a diameter of about 255 kilometers, mean distance from the sun of 2.642 astronomical units, and S-type surface composition.

eunuch [MED] An individual who has undergone complete loss of testicular function.

Euomphalacea [PALEON] A superfamily of extinct gastropod mollusks in the order Aspidobranchia characterized by shells with low spires, some approaching bivalve symmetry.

euonymit *See* dulcitol.

eupavarine [PHARM] $C_{20}H_{21}NO_2$ A crystalline alkaloid that melts at 214°C and is soluble in many organic solvents and hot water; used in medicine as an antispasmodic. Also known as 1-benzyl-3-ethyl-6,7,-dimethoxy isoquinoline.

eupelagic *See* pelagic.

Eupelmidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

Euphausiacea [INV ZOO] An order of planktonic malacostracans in the class Crustacea possessing photophores which emit a brilliant blue-green light.

euphenics [GEN] The production of a satisfactory phenotype by means other than eugenics.

Eupheterochlorina [INV ZOO] A suborder of flagellate protozoans in the order Heterochlorida.

Euphorbiaceae [BOT] A family of dicotyledonous plants in the order Euphorbiales characterized by dehiscent fruit having more than one seed and by epitropous ovules.

Euphorbiales [BOT] An order of dicotyledonous plants in the subclass Rosidae having simple leaves and unisexual flowers that are aggregated and reduced.

euphotic [OCEANOGR] Of or constituting the upper levels of the marine environment down to the limits of effective light penetration for photosynthesis.

Euphrosinidae [INV ZOO] A family of amphinomorphan polychaete annelids with short, dorsolaterally flattened bodies.

Euphrosyne [ASTRON] An asteroid with a diameter of about 250 kilometers, mean distance from the sun of 3.156 astronomical units, and C-type surface composition.

Euplexoptera [INV ZOO] The equivalent name for Dermaptera.

euploid [GEN] Having a chromosome complement that is an exact multiple of the haploid complement.

eupnea [PHYSIO] Normal or easy respiration rhythm.

Eupodidae [INV ZOO] A family of mites in the suborder Trombidiformes.

Euproopacea [PALEON] A group of Paleozoic horseshoe crabs belonging to the Limulida.

Europa [ASTRON] **1.** A satellite of Jupiter with a mean distance from Jupiter of 4.17×10^5 miles (6.71×10^5 kilometers), orbital period of 3.6 days, and diameter of about 1950 miles (3100 kilometers). Also known as Jupiter. **2.** An asteroid with a diameter of about 280 kilometers, mean distance from the sun of 3.096 astronomical units, and C-type surface composition.

Europe [GEOGR] A great western peninsula of the Eurasian landmass, usually called a continent; its eastern limits are arbitrary and are conventionally drawn along the water divide of the Ural Mountains, the Ural River, the Caspian Sea, and the Caucasus watershed to the Black Sea.

European boreal faunal region [ECOL] A zoogeographic region describing marine littoral faunal regions of the northern Atlantic Ocean between Greenland and the northwestern coast of Europe.

European canker [PL PATH] **1.** A fungus disease of apple, pear, and other fruit and shade trees caused by *Nectria galligena* and characterized by cankers with concentric rings of callus on

the trunk and branches. **2.** A fungus disease of poplars caused by *Dothichiza populea*.

European porcelain *See* porcelain.

europium [CHEM] A member of the rare-earth elements in the cerium subgroup, symbol Eu, atomic number 63, atomic weight 151.96, steel gray and malleable, melting at 1100–1200°C.

europium halide [INORG CHEM] Any of the compounds of the element europium and the halogen elements; for example, europium chloride, $EuCl_3 \cdot xH_2O$.

europium oxide [INORG CHEM] Eu_2O_3 A white powder, insoluble in water; used in red- and infrared-sensitive phosphors.

Eurotiaceae [MYCOL] A family of ascomycetous fungi of the order Eurotiales in which the asci are borne in cleistothecia or closed fruiting bodies.

Eurotiales [MYCOL] An order of fungi in the class Ascomycetes bearing ascospores in globose or broadly oval, delicate asci which lack a pore.

Euryalae [INV ZOO] The basket fishes, a family of echinoderms in the subclass Ophiuroidea.

Euryalina [INV ZOO] A suborder of ophiuroid echinoderms in the order Phrynophiurida characterized by a leathery integument.

Euryapsida [PALEON] A subclass of fossil reptiles distinguished by an upper temporal opening on each side of the skull.

eurybathic [ECOL] Living at the bottom of a body of water.

eurycephalic [ANTHRO] Having a cephalic index of 80–84.

Eurychilinidae [PALEON] A family of extinct dimorphic ostracods in the superfamily Hollinacea.

euryene [ANTHRO] Having a short or broad forehead or both with an upper facial index of 45–50.

eurygamous [INV ZOO] Mating in flight, as in many insect species.

euryhaline [ECOL] Pertaining to the ability of marine organisms to tolerate a wide range of saline conditions, and therefore a wide variation of osmotic pressure, in the evironment.

Eurylaimi [VERT ZOO] A monofamilial suborder of suboscine birds in the order Passeriformes.

Eurylaimidae [VERT ZOO] The broadbills, the single family of the avian suborder Eurylaimi.

eurymeric [ANTHRO] Having a broad femur with a platymeric index of 85–100.

Eurymylidae [PALEON] A family of extinct mammals presumed to be the ancestral stock of the order Lagomorpha.

euryon [ANAT] One of the two lateral points functioning as end points to measure the greatest transverse diameter of the skull.

Euryphoridae [INV ZOO] A family of copepod crustaceans in the order Caligoida; members are fish ectoparasites.

euryplastic [BIOL] Referring to an organism with a marked ability to change and adapt to a wide spectrum of environmental conditions.

euryprosopic [ANTHRO] Having a short or broad face or both with a facial index of 80–85.

Eurypterida [PALEON] A group of extinct aquatic arthropods in the subphylum Chelicerata having elongate-lanceolate bodies encased in a chitinous exoskeleton.

Eurypygidae [VERT ZOO] The sun bitterns, a family of tropical and subtropical New World birds belonging to the order Gruiformes.

eurypylous [INV ZOO] Having a wide opening; applied to sponges with wide apopyles opening directly into excurrent canals, and wide prosopyles opening directly from incurrent canals.

eurysome [ANTHRO] Having a broad, thickset body build.

eurytherm [BIOL] An organism that is tolerant of a wide range of temperatures.

Eurytomidae [INV ZOO] The seed and stem chalcids, a family of hymenopteran insects in the superfamily Chalcidoidea.

eurytopic [ECOL] Referring to organisms which are widely distributed.

Eusiridae [INV ZOO] A family of pelagic amphipod crustaceans in the suborder Gammaridea.

eusporangiate [BOT] Having sporogenous tissue derived from a group of epidermal cells.

eustachian tube [ANAT] A tube composed of bone and cartilage that connects the nasopharynx with the middle ear cavity.

eustachian valve *See* canal valve.

eustacy [OCEANOGR] Worldwide fluctuations of sea level due to changing capacity of the ocean basins or the volume of ocean water.

eustele [BOT] A modified siphonostele containing collateral or bicollateral vascular bundles; found in most gymnosperm and angiosperm stems.

eusternum [INV ZOO] The anterior sternal plate in insects.

Eusuchia [VERT ZOO] The modern crocodiles, a suborder of the order Crocodilia characterized by a fully developed secondary palate and procoelous vertebrae.

Eusyllinae [INV ZOO] A subfamily of polychaete annelids in the family Syllidae having a thick body and unsegmented cirri.

Eutardigrada [INV ZOO] An order of tardigrades which lack both a sensory cephalic appendage and a club-shaped appendage.

eutaxite [PETR] A rock exhibiting eutaxitic structure.

eutaxitic [PETR] Referring to the banded appearance in certain extrusive rocks, resulting from the layering of different textures, materials, or colors.

eutectic [MET] The microstructure that results when a metal of eutectic composition solidifies. [PHYS CHEM] An alloy or solution that has the lowest possible constant melting point.

eutectic crystallization [MET] Simultaneous crystallization of the constituents of a eutectic alloy during cooling of the melt.

eutectic melting [MET] Melting of isolated, microscopic areas of an alloy that correspond to the location of the eutectic of the system.

eutectic point [PHYS CHEM] The point in the constitutional diagram indicating the composition and temperature of the lowest melting point of a eutectic.

eutectic system [PHYS CHEM] The particular composition and temperature of materials at the eutectic point.

eutectic temperature [PHYS CHEM] The temperature at the lowest melting point of a eutectic.

eutectofelsite *See* eutectophyre.

eutectogenic system [PHYS CHEM] A multicomponent liquid-solid mixture in which pure solid phases of each component are in equilibrium with the remaining liquid mixture at a specific (usually minimum) temperature for a given composition, that is, the eutectic point.

eutectoid [MET] A mixture of phases whose composition is determined by the eutectoid point in the solid region of an equilibrium diagram and whose constituents are formed by the eutectoid reaction. [PHYS CHEM] The point in an equilibrium diagram for a solid solution at which the solution on cooling is converted to a mixture of solids.

eutectophyre [PETR] A light-colored tufflike igneous rock exhibiting a network of interlocking quartz and orthoclase crystals. Also known as eutectofelsite.

eutely [BIOL] Having the body composed of a constant number of cells, as in certain rotifers.

Euthacanthidae [PALEON] A family of extinct acanthodian fishes in the order Climatiiformes.

euthenics [BIOL] The science that deals with the improvement of the future of man by changing his environment.

Eutheria [VERT ZOO] An infraclass of therian mammals including all living forms except the monotremes and marsupials.

Eutrichosomatidae [INV ZOO] Small family of hymenopteran insects in the superfamily Chalcidoidea.

eutrophic [HYD] Pertaining to a lake containing a high concentration of dissolved nutrients; often shallow, with periods of oxygen deficiency.

eutrophication [ECOL] Of bodies of water, the process of becoming better nourished either naturally by processes of maturation or artificially by fertilization.

euxenite [MINERAL] A brownish-black rare-earth mineral that crystallizes in the orthorhombic system, contains oxide of calcium, cerium, columbium, tantalum, titanium, and uranium, and has a metallic luster; hardness is 6.5 on Mohs scale, and specific gravity is 4.7–5.0.

euxinic [HYD] Of or pertaining to an environment of restricted circulation and stagnant or anaerobic conditions.

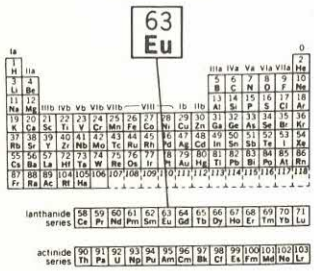
eV *See* electronvolt.

EV *See* expected value.

evacuate [ENG] To remove something, especially gases and vapors, from an enclosure, such as from the envelope of an electron tube, or from a well. Also known as exhaust.

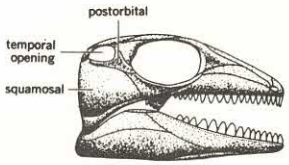
Evaniidae [INV ZOO] The ensign flies, a family of hymenopteran insects in the superfamily Proctotrupoidea.

EUROPIUM



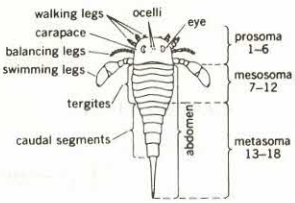
Periodic table of the chemical elements showing the position of europium.

EURYAPSIDA



Lateral view of *Araeoscelis* skull showing temporal opening. *(From A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

EURYPTERIDA



Dorsal view of features of a typical eurypterid. *(Adapted from Clarke and Ruedemann, 1912, from R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, McGraw-Hill, 2d ed., 1953)*

EUSTELE

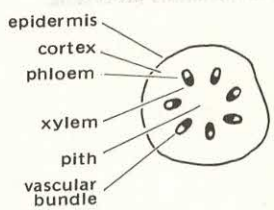


Diagram of a stem in cross section showing tissue arrangements of a eustele.

Evans-Burr unit [BIOL] A unit for the standardization of vitamin E.

evansite [MINERAL] $Al_3(PO_4)(OH)_6 \cdot 6H_2O$ A colorless to milky white mineral consisting of a hydrated basic aluminum phosphate; occurs in massive form and as stalactites.

evaporation [PHYS] Conversion of a liquid to the vapor state by the addition of latent heat.

evaporation capacity *See* evaporative power.

evaporation current [OCEANOGR] An ocean current resulting from the accumulation of water through precipitation and river runoff at one point, and loss by evaporation at another point.

evaporation gage *See* atmometer.

evaporation loss [CHEM ENG] The loss of a stored volatile liquid component or mixture by evaporation; controlled by temperature, pressure, and the presence or absence of vapor-recovery systems.

evaporation pan [ENG] A type of atmometer consisting of a pan, used in the measurement of the evaporation of water into the atmosphere.

evaporation power *See* evaporative power.

evaporation tank [ENG] A tank used to measure the evaporation of water under controlled conditions.

evaporative capacity *See* evaporative power.

evaporative condenser [MECH ENG] An apparatus in which vapor is condensed within tubes that are cooled by the evaporation of water flowing over the outside of the tubes.

evaporative cooling [ENG] **1.** Lowering the temperature of a large mass of liquid by utilizing the latent heat of vaporization of a portion of the liquid. **2.** Cooling air by evaporating water into it. **3.** *See* vaporization cooling.

evaporative cooling tower *See* wet cooling tower.

evaporative heat regulation [PHYSIO] The composite process by which an animal body is cooled by evaporation of sensible perspiration; this avenue of heat loss serves as a physical means of regulating the body temperature.

evaporative power [METEOROL] A measure of the degree to which the weather or climate of a region is favorable to the process of evaporation; it is usually considered to be the rate of evaporation, under existing atmospheric conditions, from a surface of water which is chemically pure and has the temperature of the lowest layer of the atmosphere. Also known as evaporation capacity; evaporation power; evaporative capacity; evaporativity; potential evaporation.

evaporativity *See* evaporative power.

evaporator [CHEM ENG] A device used to vaporize part or all of the solvent from a solution; the valuable product is usually either a solid or concentrated solution of the solute. [MECH ENG] Any of many devices in which liquid is changed to the vapor state by the addition of heat, for example, distiller, still, dryer, water purifier, or refrigeration system element where evaporation proceeds at low pressure and consequent low temperature.

evaporimeter *See* atmometer.

evaporite [GEOL] Deposits of mineral salts from sea water or salt lakes due to evaporation of the water.

evaporite pond [IND ENG] Any containment area for brines or solution-mined effluents constructed to permit solar evaporation and harvesting of dewatered evaporite concentrates.

evapotranspiration [HYD] Discharge of water from the earth's surface to the atmosphere by evaporation from lakes, streams, and soil surfaces and by transpiration from plants. Also known as fly-off; total evaporation; water loss.

evapotranspirometer [ENG] An instrument which measures the rate of evapotranspiration; consists of a vegetation soil tank so designed that all water added to the tank and all water left after evapotranspiration can be measured.

Evasé stack [CIV ENG] In tunnel engineering, an exhaust stack for air having a cross section that increases in the direction of airflow at a rate to regain pressure.

evection [ASTROPHYS] A perturbation of the moon in its orbit due to the attraction of the sun.

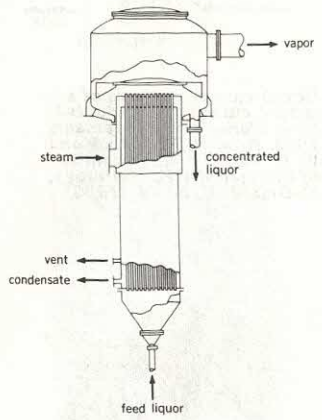
E vector [ELECTROMAG] Vector representing the electric field of an electromagnetic wave.

even-even nucleus [NUC PHYS] A nucleus which has an even number of neutrons and an even number of protons.

even function [MATH] A function with the property that $f(x) = f(-x)$ for each number x.

even harmonic [PHYS] A harmonic that is an even multiple of the fundamental frequency.

EVAPORATOR



Long-tube vertical evaporator used in chemicals processing.

evening gun [ORD] Firing of a gun as a signal for the lowering of the flag at retreat; the gun is fired after the sounding of the last note of the bugle call at retreat. Also known as retreat gun.

evening star [ASTRON] A misnomer for a planet that can be seen without a telescope when it sets after the sun.

evening twilight [ASTRON] The period of time between sunset and darkness.

even keel [NAV ARCH] Floating level, without inclination.

even number [MATH] An integer which is a multiple of 2.

even-odd nucleus [NUC PHYS] A nucleus which has an even number of protons and an odd number of neutrons.

even parity check [COMPUT SCI] A parity check in which the number of 0's or 1's in each word is expected to be even.

even permutation [MATH] A permutation which may be represented as a product of an even number of transpositions.

even pitch [DES ENG] The pitch of a screw in which the number of threads per inch is a multiple (or submultiple) of the threads per inch of the lead screw of the lathe on which the screw is cut.

event [COMPUT SCI] The moment of time at which a specified change of state occurs; usually marks the completion of an asynchronous input/output operation. [GEOL] An incident of probable tectonic significance, but whose full implications are unknown. [PHYS] A point in space-time. [STAT] A mathematical model of the result of a conceptual experiment; this model is a measurable subset of a probability space.

event horizon [RELAT] The boundary of a region of space-time from which it is not possible to escape to infinity. Symbolized $\mathcal{A}^+$.

Eventognathi [VERT ZOO] The equivalent name for Cypriniformes.

event recorder [ENG] A recorder that plots on-off information against time, to indicate when events start, how long they last, and how often they recur.

evergreen [BOT] Pertaining to a perennially green plant. Also known as aiophyllous.

Evershed effect [ASTRON] A displacement of spectral lines of sunspots near the sun's limb, caused by outward motion of gases from the center of the sunspot.

Eve's constant [NUCLEO] A measure of a substance's intensity of radioactivity, equal to the number of ions produced per cubic centimeter per second in air by 1 gram of the substance at a distance of 1 centimeter.

Evjen method [SOLID STATE] Method of calculating lattice sums in which groups of charges whose total charge is zero are taken together, so that the contribution of each group is small and the series rapidly converges.

evjite [PETR] A gabbro of hornblende in which the only light-colored mineral is labradorite or bytownite; hornblende must be primary, not uralitic.

evoked potential [PHYSIO] Electrical response of any neuron to stimuli.

evolute [MATH] The locus of the centers of curvature of a curve.

evolution [BIOL] The processes of biological and organic change in organisms by which descendants come to differ from their ancestors.

evolutionary operation [IND ENG] An iterative technique for optimizing a production process by systematically introducing small changes in the process and then observing and evaluating the results.

evorsion [GEOL] The process of pothole formation in riverbeds; plays an important role in denudation.

evorsion hollow *See* pothole.

EVR *See* electronic video recording.

EVT *See* equiviscous temperature.

Ewald-Kornfeld method [SOLID STATE] An extension of the Ewald method to calculate Coulomb energies of dipole arrays.

Ewald method [SOLID STATE] Method of calculating lattice sums in which certain mathematical techniques are employed to make series converge rapidly.

Ewald sphere [SOLID STATE] A sphere superimposed on the reciprocal lattice of a crystal, used to determine the directions in which an x-ray or other beam will be reflected by a crystal lattice.

E wave *See* transverse magnetic wave.

ewe [VERT ZOO] A mature female sheep, goat, or related animal, as the smaller antelopes.

Ewing's sarcoma [MED] A primary malignant tumor of bone, usually arising as a central tumor in long bone.

Ewing theory of ferromagnetism [SOLID STATE] Theory of ferromagnetic phenomena which assumes each atom is a permanent magnet which can turn freely about its center under the influence of applied fields and other magnets.

exact differential equation [MATH] A differential equation obtained by setting the exact differential of some function equal to zero.

exact differential form [MATH] A differential form which is the differential of some other form.

exact sequence [MATH] A sequence of homomorphisms with the property that the kernel of each homomorphism is precisely the image of the previous homomorphism.

EXAFS *See* extended x-ray absorption fine structure.

exalate [BOT] Being without winglike appendages.

exalbuminous *See* exendospermous.

exalted-carrier receiver [ELECTR] Receiver that counteracts selective fading by maintaining the carrier at a high level at all times; this minimizes the second harmonic distortion that would otherwise occur when the carrier drops out while leaving most of the sidebands at their normal amplitudes.

exanthema [MED] **1.** An eruption on the skin. **2.** Any disease or fever accompanied by a skin eruption.

exanthem subitum [MED] A mild, sometimes epidemic viral disease of young children, with abrupt onset, high fever, and rash. Also known as roseola infantum.

exarch [BOT] A vascular bundle in which the primary wood is centripetal.

exasperate [BIOL] Having a surface roughened by stiff elevations or bristles.

exaspidean [VERT ZOO] Of the tarsal envelope of birds, being continuous around the outer edge of the tarsus.

excavation [ARCHEO] Process of removing earth, stone, or other materials covering the remains of ancient civilizations. [CIV ENG] **1.** The process of digging a hollow in the earth. **2.** An uncovered cavity in the ground.

excavator [MECH ENG] A machine for digging and removing earth.

excelsior [MATER] Fine, curled wood shavings, used as packing material.

except [MATH] A logical operator which has the property that if P and Q are two statements, then the statement "P except Q" is true only when P alone is true; it is false for the other three combinations (P false Q false, P false Q true, and P true Q true).

except gate [ELECTR] A gate that produces an output pulse only for a pulse on one or more input lines and the absence of a pulse on one or more other lines.

exceptional Jordan algebra [MATH] A Jordan algebra that cannot be written as a symmetrized product over a matrix algebra; used in formulating a generalization of quantum mechanics.

exceptional space [QUANT MECH] A space used to describe a system with a finite number of degrees of freedom in a generalization of quantum mechanics; this generalization is achieved by reformulating quantum mechanics in terms of a Jordan algebra of observables and states, and then generalizing this to the exceptional Jordan algebra realized by the algebra of 3 × 3 Hermitian matrices over the Cayley numbers.

exception-item encoding [COMPUT SCI] A technique which allows the uninterrupted flow of a process by the automatic shunting of erroneous records to an error tape for later corrections.

exception-principle system [COMPUT SCI] A technique which assumes no printouts except when an error is encountered.

exception reporting [COMPUT SCI] A form of programming in which only values that are outside predetermined limits, representing significant changes, are selected for printout at the output of a computer.

excess air [ENG] Amount of air in a combustion process greater than the amount theoretically required for complete oxidation.

excess-3 code [MATH] A form of four-digit binary-coded decimal notation in which each decimal digit is represented by the sum of the corresponding four-digit binary number and the binary number 0011 (that is, the decimal number 3). Also known as XS-3 code.

excess coefficient [MECH ENG] The ratio $(A-R)/R$, where A is the amount of air admitted in the combustion of fuel and R is the amount required.

excess conduction [SOLID STATE] Electrical conduction by excess electrons in a semiconductor.

excess electron [SOLID STATE] Electron introduced into a semiconductor by a donor impurity and available for conduction.

excess-fifty code [COMPUT SCI] A number code in which the number n is represented by the binary equivalent of $n + 50$.

excessive precipitation [METEOROL] Precipitation (generally in the form of rain) of an unusually high rate of fall; although often used qualitatively, several meteorological services have adopted quantitative limits.

excess of arc [NAV] The part of a sextant arc beinning at zero and extending in the direction opposite to that part usually considered positive.

excess reactivity [NUCLEO] The amount of surplus reactivity over that needed to achieve criticality; it is built into a reactor (by using extra fuel) in order to compensate for fuel burnup and the accumulation of fission-product poisons during operation.

excess-three code [COMPUT SCI] A number code in which the decimal digit n is represented by the four-bit binary equivalent of $n + 3$.

exchange [COMMUN] **1.** A unit established by a telephone company for the administration of telephone service in a specified area, usually a town, a city, or a village and its environs, and consisting of one or more central offices together with the associated plant used in furnishing telephone service in that area. Also known as local exchange. **2.** Room or building equipped so telephone lines terminating there may be interconnected as required; equipment may include a switchboard or automatic switching apparatus. [COMPUT SCI] The interchange of contents between two locations. [QUANT MECH] **1.** Operation of exchanging the space and spin coordinates in a Schrödinger-Pauli wave function representing two identical particles; this operation must leave the wave function unchanged, except possibly for sign. **2.** Process of exchanging a real or virtual particle between two other particles.

exchangeable disk storage [COMPUT SCI] A type of disk storage, used as a backing storage, in which the disks come in capsules, each containing several disks; the capsules can be replaced during operation of the computer and can be stored until needed.

exchange adsorption [CHEM ENG] Ion exchange process in which the fluid phase contains (or consists of) two adsorbable components which together entirely saturate the surfaces of the adsorbent.

exchange anisotropy [ELECTROMAG] Phenomenon observed in certain mixtures of magnetic materials under certain conditions, in which magnetization is favored in some direction (rather than merely along some axis); thought to be caused by exchange coupling across the interface between compounds when one is ferromagnetic and one is antiferromagnetic.

exchange broadening [SPECT] The broadening of a spectral line by some type of chemical or spin exchange process which limits the lifetime of the absorbing or emitting species and produces the broadening via the Heisenberg uncertainty principle.

exchange buffering [COMPUT SCI] An input/output buffering technique that avoids the internal moving of data.

exchange cable [ELEC] Lead covered, nonquadded, paper-insulated cable used within a given area to provide cable pairs between local subscribers and a central office.

exchange capacity [GEOL] The ability of a soil material to participate in ion exchange as measured by the quantity of exchangeable ions in a given unit of the material.

exchange coefficient [FL MECH] A coefficient of eddy flux in turbulent flow, defined in analogy to those coefficients of the kinetic theory of gases. Also known as austausch coefficient; eddy coefficient; interchange coefficient.

exchange current [ELEC] The magnitude of the current which flows through a galvanic cell when it is operating in a reversible manner.

exchange degeneracy [PARTIC PHYS] Coincidence of two Regge trajectories for particles having the same quantum numbers (except for parity, charge parity, and G parity) where one would have expected separate trajectories for alternate Regge recurrences. [QUANT MECH] An exchange process that leads back to the original configuration. Also known as exchange symmetry.

exchange force [QUANT MECH] The force arising in an exchange interaction.

exchange integral [QUANT MECH] Integral over the coordinates of two identical particles which can be thought of as the interaction between a given state and a second state in which the coordinates of the particles are exchanged.

exchange interaction [QUANT MECH] **1.** An interaction represented by a potential involving exchange of space or spin coordinates, or both, of the particles involved; can be visualized physically in terms of exchange of particles. **2.** Any interaction which can be looked upon as due to exchange of particles.

exchange line [ELEC] Line joining a subscriber or switchboard to a commercial exchange.

exchange message [COMPUT SCI] A device, placed between a communication line and a computer, in order to take care of certain communication functions and thereby free the computer for other work.

exchange narrowing [SPECT] The phenomenon in which, when a spectral line is split and thereby broadened by some variable perturbation, the broadening may be narrowed by a dynamic process that exchanges different values of the perturbation.

exchange operator [QUANT MECH] An operator which exchanges the spatial coordinates of the particles in a wave function, or their spins, or both positions and spins.

exchange plant [COMMUN] Plant used to serve subscriber's needs as distinguished from that used for long-distance communication.

exchanger *See* heat exchanger.

exchange reaction [CHEM] Reaction in which two atoms or ions exchange places either in two different molecules or in the same molecule.

exchange symmetry *See* exchange degeneracy.

exchange transfusion [MED] The replacement of most or all of the recipient's blood in small amounts at a time by blood from a donor, a technique used particularly in cases of erythroblastosis fetalis, in certain types of poisoning such as salicylism, and occasionally in liver failure. Also known as replacement transfusion.

exchange velocity [CHEM] In an ion-exchange process, the speed with which one ion is displaced from an exchanger in favor of another ion.

excimer [CHEM] An excited diatomic molecule where both atoms are of the same species and are dissociated in the ground state.

excimer laser [OPTICS] A laser containing a noble gas, such as helium or neon, which is based on a transition between an excited state in which a metastable bond exists between two gas atoms and a rapidly dissociating ground state.

excipient [PHARM] Any inert substance combined with an active drug for preparing an agreeable or convenient dosage form.

exciplex [CHEM] An excited electron donor-acceptor complex which is dissociated in the ground state.

Excipulaceae [MYCOL] The equivalent name for Discellaceae.

excision [GEN] Recombination involving removal of a genetic element. [MED] The cutting out of a part; removal of a foreign body or growth from a part, organ, or tissue.

excision enzyme [BIOCHEM] A bacterial enzyme that removes damaged dimers from the deoxyribonucleic acid molecule of a bacterial cell following light or ultraviolet radiation or nitrogen mustard damage.

excitable [BIOL] Describing a tissue or organism that exhibits irritability.

excitation [ATOM PHYS] A process in which an atom or molecule gains energy from electromagnetic radiation or by collision, raising it to an excited state. [CONT SYS] The application of energy to one portion of a system or apparatus in a manner that enables another portion to carry out a specialized function; a generalization of the electricity and electronics definitions. [ELEC] The application of voltage to field coils to produce a magnetic field, as required for the operation of an excited-field loudspeaker or a generator. [ELECTR] **1.** The signal voltage that is applied to the control electrode of an electron tube. Also known as drive. **2.** Application of signal power to a transmitting antenna. [QUANT MECH] The addition of energy to a particle or system of particles at ground state to produce an excited state.

excitation anode [ELECTR] An anode used to maintain a cathode spot on a pool cathode of a gas tube when output current is zero.

excitation curve [NUC PHYS] A curve showing the relative yield of a specified nuclear reaction as a function of the energy of the incident particles or photons. Also known as excitation function.

excitation energy [QUANT MECH] The minimum energy required to change a system from its ground state to a particular excited state.

excitation function [ATOM PHYS] **1.** The cross section for an incident electron to excite an atom to a particular excited state expressed as a function of the electron energy. **2.** *See* excitation curve.

excitation index [SPECT] In emission spectroscopy, the ratio of intensities of a pair of extremely nonhomologous spectra lines; used to provide a sensitive indication of variation in excitation conditions.

excitation loss *See* core loss.

excitation potential [QUANT MECH] Electric potential which gives the excitation energy when multiplied by the magnitude of the electron charge.

excitation purity [ANALY CHEM] The ratio of the departure of the chromaticity of a specified color to that of the reference source, measured on a chromaticity diagram; used as a guide of the wavelength of spectrum color needed to be mixed with a reference color to give the specified color.

excitation spectrum [SPECT] The graph of luminous efficiency per unit energy of the exciting light absorbed by a photoluminescent body versus the frequency of the exciting light.

excitation voltage [ELEC] Nominal voltage required for excitation of a circuit.

excitation volume [PHYS] In electron-probe microanalysis, the volume of the x-ray source used to penetrate and diffuse into the target sample.

excited state [QUANT MECH] A stationary state of higher energy than the lowest stationary state or ground state of a particle or system of particles.

excited-state effect [SOLID STATE] The motion of a crystal defect through a process in which the defect is first raised into an excited state and then decays, together with the surroundings, into a state in which motion of the defect readily occurs.

exciter [ELEC] **1.** A small auxiliary generator that provides field current for an alternating-current generator. **2.** *See* exciter lamp. [ELECTR] A crystal oscillator or self-excited oscillator used to generate the carrier frequency of a transmitter. [ELECTROMAG] **1.** The portion of a directional transmitting antenna system that is directly connected to the transmitter. **2.** A loop or probe extending into a resonant cavity or waveguide.

exciter lamp [ELEC] A bright incandescent lamp having a concentrated filament, used to excite a phototube or photocell in sound movie and facsimile systems. Also known as exciter.

exciter response [ELEC] In electrical rotating machinery, the rate of increase or decrease of the main exciter voltage when resistance is suddenly removed from or inserted in the main exciter field circuit.

exciting current *See* magnetizing current.

exciting line [SPECT] The frequency of electromagnetic radiation, that is, the spectral line from a noncontinuous source, which is absorbed by a system in connection with some particular process.

exciton [SOLID STATE] An excited state of an insulator or semiconductor which allows energy to be transported without transport of electric charge; may be thought of as an electron and a hole in a bound state.

excitron [ELECTR] A single-anode mercury-pool tube provided with means for maintaining a continuous cathode spot.

exclusion area [NUCLEO] The area around a nuclear operation (reactor, bomb test, and so on) where human habitation is restricted.

exclusion principle [QUANT MECH] The principle that no two fermions of the same kind may simultaneously occupy the same quantum state. Also known as Pauli exclusion principle.

exclusive-NOR gate *See* equivalence gate.

exclusive or [COMPUT SCI] An instruction which performs the "exclusive or" operation on a bit-by-bit basis for its two operand words, usually storing the result in one of the operand locations. [MATH] A logic operator which has the property that if P is a statement and Q is a statement, then P exclusive or Q

EXCITATION

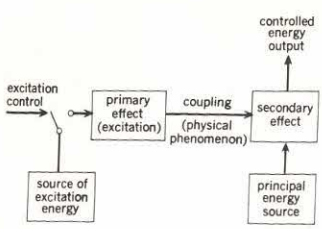


Diagram showing function of excitation in a control system.

is true if either but not both statements are true, false if both are true or both are false.

exclusive segments [COMPUT SCI] Parts of an overlay program structure that cannot be resident in main memory simultaneously.

exclusive species [ECOL] A species which is completely or nearly limited to one community.

Excorallanidae [INV ZOO] A family of free-living and parasitic isopod crustaceans in the suborder Flabellifera which have mandibles and first maxillae modified as hooklike piercing organs.

excoriation [MED] Abrasion of a portion of the skin.

excrement [PHYSIO] An excreted substance; the feces.

excrescence [BIOL] **1.** Abnormal or excessive increase in growth. **2.** An abnormal outgrowth.

excretion [PHYSIO] The removal of unusable or excess material from a cell or a living organism.

excretory system [ANAT] Those organs concerned with solid, fluid, or gaseous excretion.

excurrent [BIOL] Flowing out. [BOT] **1.** Having an undivided main stem or trunk. **2.** Having the midrib extending beyond the apex.

excursion [NUCLEO] A sudden, very rapid rise in the power level of a nuclear reactor caused by supercriticality.

excursion steamer [NAV ARCH] A steam-powered ship which carries passengers on recreational trips.

execute [COMPUT SCI] Usually, to run a compiled or assembled program on the computer; by extension, to compile or assemble and to run a source program.

execution control program [COMPUT SCI] The program delivered by the manufacturer which permits the computer to handle the programs fed to it.

execution cycle [COMPUT SCI] The time during which an elementary operation takes place.

execution error detection [COMPUT SCI] The detection of errors which become apparent only during execution time.

execution time [COMPUT SCI] The time during which actual work, such as addition or multiplication, is carried out in the execution of a computer instruction.

executive communications [COMPUT SCI] The routine information transmitted to the operator on the status of programs being executed and of the requirements made by these programs of the various components of the system.

executive-control language [COMPUT SCI] The generic term for a finite set of instructions which enables the programmer to run a program more efficiently.

executive file-control system [COMPUT SCI] The assignment of intermediate storage devices performed by the computer, and over which the programmer has no control.

executive guard mode [COMPUT SCI] A protective technique which prevents the programmer from accessing, or using, the executive instructions.

executive instruction [COMPUT SCI] Instruction to determine how a specially written computer program is to operate.

executive logging [COMPUT SCI] The automatic bookkeeping of time utilization by programs of the various components of a computer system.

executive routine [COMPUT SCI] A digital computer routine designed to process and control other routines. Also known as master routine; monitor routine.

executive schedule maintenance [COMPUT SCI] The scheduling of jobs to be run according to priorities as established and maintained by the control executive or executive supervisor.

executive supervisor [COMPUT SCI] The component of the computer system which controls the sequencing, setup, and execution of the jobs presented to it.

executive system [COMPUT SCI] A set of programs and routines which guides a computer in the performance of its tasks, assists the programs (and programmers) with certain supporting functions, and increases the usefulness of the computer's hardware. Also known as monitor system; operating system.

executive system concurrency [COMPUT SCI] The capability of the executive of a computer system to handle more than one job at the same time if these jobs do not require the same components at the same time.

executive-system control [COMPUT SCI] The control exerted over the executive system by means of job control cards or commands issued at a terminal.

executive-system utilities [COMPUT SCI] The set of programs, such as diagnostic programs or file utility programs, which enables the executive to handle the jobs efficiently and completely.

exendospermous [BOT] Lacking endosperm. Also known as exalbuminous.

exergonic [BIOCHEM] Of or pertaining to a biochemical reaction in which the end products possess less free energy than the starting materials; usually associated with catabolism.

exfoliation [GEOL] *See* sheeting. [MED] **1.** The separation of bone or other tissue in thin layers. **2.** A peeling and shedding of the horny layer of the skin. [MET] Peeling off or separation of metal at its surface in the form of thin, parallel scales or lamellae. [PETR] The breaking off of thin concentric shells, sheets, scales, plates, and so on, from a rock mass; measuring less than a centimeter to several meters in thickness, the loosened rock is spalled, peeled, or stripped. [SCI TECH] Flaking away or peeling off in scales.

exfoliation corrosion [MET] A type of corrosion that progresses parallel to the metal surface in such a manner that underlying layers are gradually separated.

exfoliation joint *See* sheeting structure.

exfoliative cytology [PATH] The study of cells shed spontaneously from the body surfaces; used principally in the diagnosis of cancer.

exhalation [GEOPHYS] The process by which radioactive gases escape from the surface layers of soil or loose rock, where they are formed by decay of radioactive salts. [PHYSIO] The giving off or sending forth in the form of vapor; expiration.

exhaust [MECH ENG] **1.** The working substance discharged from an engine cylinder or turbine after performing work on the moving parts of the machine. **2.** The phase of the engine cycle concerned with this discharge. **3.** A duct for the escape of gases, fumes, and odors from an enclosure, sometimes equipped with an arrangement of fans. [SCI TECH] *See* evacuate.

exhaust deflecting ring [MECH ENG] A type of jetavator consisting of a ring so mounted at the end of a nozzle as to permit it to be rotated into the exhaust stream.

exhaust gas [MECH ENG] Spent gas leaving an internal combustion engine or gas turbine.

exhaust-gas analyzer [ENG] An instrument that analyzes the gaseous products to determine the effectiveness of the combustion process.

exhaust head [ENG] A device placed on the end of an exhaust pipe to remove oil and water and to reduce noise.

exhaustion delirium [MED] Acute, confusional, delirious reactions brought about by extreme fatigue, long wasting illness, or prolonged insomnia.

exhaustion point [CHEM] In an ion-exchange process, the state of an adsorbent at which it no longer can produce a useful ion exchange.

exhaustion region [ELECTR] A layer in a semiconductor, adjacent to its contact with a metal, in which there is almost complete ionization of atoms in the lattice and few charge carriers, resulting in a space-charge density.

exhaust manifold [MECH ENG] A branched system of pipes to carry waste emissions away from the piston chambers of an internal combustion engine.

exhaust nozzle [AERO ENG] The terminal portion of a jet engine tail pipe.

exhaust pipe [MECH ENG] The duct through which engine exhaust is discharged.

exhaust scrubber [ENG] A purifying device on internal combustion engines which removes noxious gases from engine exhaust.

exhaust stream [AERO ENG] The stream of matter or radiation emitted from the nozzle of a rocket or other reaction engine.

exhaust stroke [MECH ENG] The stroke of an engine, pump, or compressor that expels the fluid from the cylinder.

exhaust suction stroke [MECH ENG] A stroke of an engine that simultaneously removes used fuel and introduces fresh fuel to the cylinder.

exhaust trail [METEOROL] A visible condensation trail (contrail) that forms when the water vapor of an aircraft exhaust is mixed with and saturates (or slightly supersaturates) the air in the wake of the aircraft.

exhaust valve [MECH ENG] The valve on a cylinder in an internal combustion engine which controls the discharge of spent gas.

exhaust velocity [FL MECH] The velocity of gaseous or

other particles in the exhaust stream of the nozzle of a reaction engine, relative to the nozzle.

exhibitionism [PSYCH] **1.** A sexual perversion in which pleasure is obtained by exposing the genitalia. **2.** In psychoanalysis, gratification of early sexual impulses in young children by physical activity, such as dancing. **3.** Any attracting of attention to oneself.

exhumation [GEOL] The uncovering or exposure through erosion of a former surface, landscape, or feature that had been buried by subsequent deposition.

exhumed *See* resurrected.

Exide ironclad battery [ELEC] A portable storage battery designed for propelling electric vehicles; a lead-antimony frame (positive plate) supports perforated hard-rubber tubes containing irregular lead-antimony cores packed with lead peroxide paste.

exine *See* exosporium.

exinite [GEOL] A hydrogen-rich maceral group consisting of spore exines, cuticular matter, resins, and waxes; includes sporinite, cutinite, alginite, and resinite. Also known as liptinite.

existence doubtful [NAV] In marine operations, expression used principally on charts to indicate the possible existence of a rock, shoal, and so on, the actual existence of which has not been established.

exit [COMPUT SCI] **1.** A way of terminating a repeated cycle of operations in a computer program. **2.** A place at which such a cycle can be stopped. [ENG] A door, passage, or place of egress.

exite [INV. ZOO] A movable appendage or lobe located on the external side of the limb of a generalized arthropod.

exit pupil [OPTICS] The image of the aperture stop of an optical system formed in the image space by rays emanating from a point on the optical axis in the object space.

exit region [METEOROL] The region of difluence at the downwind extremity of a jet stream.

ex lighterage [IND ENG] Price quoted exclusive of lighterage fees.

exline correction [FL MECH] Calculation of fluid-flow friction loss through annular sections with a correction for the flow eccentricity in the laminar-flow range.

exmeridian altitude [ASTRON] An altitude of a celestial body near the celestial meridian of the observer to which a correction is to be applied to determine the meridian altitude. Also known as circummeridian altitude.

exmeridian observation [ASTRON] **1.** Measurement of the altitude of a celestial body near the celestial meridian of the observer, for conversion to a meridian altitude. **2.** The altitude so measured.

exo- [ORG CHEM] A conformation of carbon bonds in a six-membered ring such that the molecule is boat-shaped with one or more substituents directed outward from the ring. [SCI TECH] A prefix denoting outside or outer.

exobiology [BIOL] The search for and study of extraterrestrial life.

exocarp *See* epicarp.

exoccipital [ANAT] Lying to the side of the foramen magnum, as the exoccipital bone.

exochorion [INV ZOO] The outer of two layers forming the covering of an insect egg.

exocline [GEOL] An inverted anticline or syncline.

exocoel [INV ZOO] The space between pairs of adjacent mesenteries in anthozoan polyps.

Exocoetidae [VERT ZOO] The halfbeaks, a family of actinopterygian fishes in the order Atheriniformes.

exocrine gland [PHYSIO] A structure whose secretion is passed directly or by ducts to its exterior surface, or to another surface which is continuous with the external surface of the gland.

exocuticle [INV ZOO] The middle layer of the cuticle of insects.

exocyclic double bond [ORG CHEM] A double bond that is connected to and external to a ring structure.

exocytosis [CYTOL] The extrusion of material from a cell.

exodermis *See* hypodermis.

exoelectrons [PHYS] Electrons emitted from the surfaces of metals and certain ceramics after these surfaces have been freshly formed by a process such as abrasion or fracture; electrons obtain energy required for emission from processes such as establishment of surface films and rearrangement of disturbed atoms.

exoenzyme [BIOCHEM] An enzyme that functions outside the cell in which it was synthesized.

exoergic *See* exothermic.

exoergic collision *See* collision of the second kind.

exogamy [GEN] Union of gametes from organisms that are not closely related. Also known as outbreeding.

exogastrula [EMBRYO] An abnormal gastrula that is unable to undergo invagination or further development because of a quantitative increase of presumptive endoderm.

exogenote [GEN] The genetic fragment transferred from the donor to the recipient cell during the process of recombination in bacteria.

exogenous [BIOL] **1.** Due to an external cause; not arising within the organism. **2.** Growing by addition to the outer surfaces. [PHYSIO] Pertaining to those factors in the metabolism of nitrogenous substances obtained from food.

exogenous electrification [ELEC] The separation of electric charge in a conductor placed in a preexisting electric field, especially applied to the charge separation observed on metal-covered aircraft, resulting from induction effects, and by itself does not create any net total charge on the conductor.

exogenous inclusion *See* xenolith.

exogenous variables [MATH] In a mathematical model, the independent variables, which are predetermined and given outside the model.

exogeosyncline [GEOL] A parageosyncline that lies along the cratonal border and obtains its clastic sediments from erosion of the adjacent orthogeosynclinal belt outside the craton. Also known as deltageosyncline; foredeep; transverse basin.

exognathite [INV ZOO] The external branch of an oral appendage of a crustacean.

Exogoninae [INV ZOO] A subfamily of polychaete annelids in the family Syllidae having a short, small body of few segments.

exogynous [BOT] Having the style longer than and exserted beyond the corolla.

exomorphic zone *See* aureole.

exomorphism [PETR] A change in a rock mass caused by intrusion of external igneous material; in the usual sense, contact metamorphism.

exon [GEN] That portion of deoxyribonucleic acid which codes for the final messenger ribonucleic acid.

exonephric [INV ZOO] Having the excretory organs discharge through the body wall.

exonuclease [BIOCHEM] Any of a group of enzymes which catalyze hydrolysis of single nucleotide residues from the end of a deoxyribonucleic acid chain.

exopathogen [PL PATH] An external, nonparasitic plant pathogen.

exopathogenesis [PL PATH] The external incitement of disease by a nonparasitic pathogen.

exopeptidase [BIOCHEM] An enzyme that acts on the terminal peptide bonds of a protein chain.

exophoria [MED] A type of heterophoria in which the visual lines tend outward.

exophthalmic goiter *See* hyperthyroidism.

exophthalmos [MED] Abnormal protrusion of the eyeball from the orbit.

exopodite [INV ZOO] The outer branch of a biramous crustacean appendage.

exoprosthesis [MED] An externally applied prosthesis.

Exopterygota [INV ZOO] A division of the insect subclass Pterygota including those insects which undergo a hemimetabolous metamorphosis.

exorheic [GEOL] Referring to a basin or region characterized by external drainage.

exoskeleton [INV ZOO] The external supportive covering of certain invertebrates, such as arthropods. [VERT ZOO] Bony or horny epidermal derivatives, such as nails, hoofs, and scales.

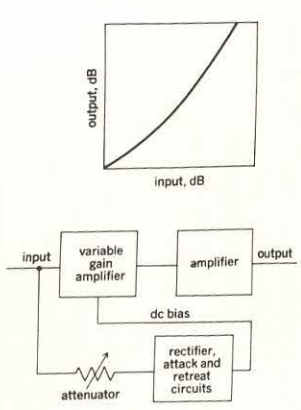
exosmosis [PHYSIO] Passage of a liquid outward through a cell membrane.

exosphere [METEOROL] An outermost region of the atmosphere, estimated at 500–1000 kilometers, where the density is so low that the mean free path of particles depends upon their direction with respect to the local vertical, being greatest for upward-traveling particles. Also known as region of escape.

exospore [MYCOL] An asexual spore formed by abstriction, as in certain Phycomycetes.

exosporium [BOT] The outer of two layers forming the wall of spores such as pollen and bacterial spores. Also known as exine.
exostome [BOT] The opening through the outer integument of a bitegmic ovule.
exostosis [MED] A benign cartilage-capped protuberance from the surface of long bones but also seen on flat bones, caused by chronic irritation as from infection, trauma, or osteoarthritis.
exotheca [INV ZOO] The tissue external to the theca of corals.
exotherm [CHEM ENG] The graphical plotting of heat rise and fall versus time for an exothermic reaction or process system.
exothermic [PHYS] Indicating liberation of heat. Also known as exoergic.
exotic [ECOL] Not endemic to an area.
exotic fuels [MATER] The hydroborons which have higher calorific values than do the carbon-hydrogen fuels, once proposed as high-energy fuels for aircraft and missiles; include borane (BH_3), borobutane (B_4H_{10}), and borodecane ($B_{10}H_{14}$).
exotic stream [HYD] A stream that crosses a desert as it flows to the sea, or any stream which derives most of its water from the drainage system of another region.
exotoxin [MICROBIO] A toxin that is excreted by a microorganism.
expandable space structure [AERO ENG] A structure which can be packaged in a small volume for launch and then erected to its full size and shape outside the earth's atmosphere.
expanded batch [COMPUT SCI] A level of computer processing more complex than basic batch, in which computer programs perform complex computations and produce reports that analyze performance in addition to reporting it.
expanded clay [MATER] A material made from common brick clays by grinding, screening, and then feeding through a gas burner at about 2700°F (1482°C), thus changing the ferric oxide to ferrous oxide and causing the formation of bubbles.
expanded-flow bin [ENG] A bin formed by attaching a mass-flow hopper to the bottom of a funnel-flow bin.
expanded foot [HYD] A broad, bulb-like or fan-shaped ice mass formed where a valley glacier flows beyond its confining walls and extends onto an adjacent lowland at the bottom of a mountain slope.
expanded metal [MET] An alloy which has expanded following cooling and solidification.
expanded plastic [MATER] A light, spongy plastic made by introducing pockets of air or gas. Also known as foamed plastic; plastic foam.
expanded position indicator display [ELECTR] Display of an expanded sector from a plan position indicator presentation.
expanded scope [ELECTR] Magnified portion of a given type of cathode-ray tube presentation.
expanded slag [MATER] Slag formed by running slag from phosphate rock onto a forehearth at about 2000°F (1093°C) and then treating it with water, high-pressure steam, and air; used to make lightweight concrete blocks.
expanded sweep [ELECTR] A cathode-ray sweep in which the movement of the electron beam across the screen is speeded up during a selected portion of the sweep time.
expander [ELECTR] A transducer that, for a given input amplitude range, produces a larger output range.
expanding [MET] A process used to increase the inside diameter of a hollow piece, such as a tube, cup, or shell.
expanding brake [MECH ENG] A brake that operates by moving outward against the inside rim of a drum or wheel.
expanding population [ECOL] A population containing a large proportion of young individuals.
expanding square search *See* square search.
expanding universe [ASTROPHYS] Explanation of the red shift observed in spectral lines from distant galaxies as due to a mutual recession of galaxies away from each other. [RELAT] A model of the universe describing the process defined in the astronomy definition, in which the universe is nonstatic, homogeneous, and isotropic; based on Einstein's field equations with a nonvanishing cosmical constant.
expandor [ELECTR] The part of a compandor that is used at the receiving end of a circuit to return the compressed signal to its original form; attentuates weak signals and amplifies strong signals.
expansine *See* patulin.
expansion [ELECTR] A process in which the effective gain of an amplifier is varied as a function of signal magnitude, the effective gain being greater for large signals than for small signals; the result is greater volume range in an audio amplifier and greater contrast range in facsimile. [MECH ENG] Increase in volume of working material with accompanying drop in pressure of a gaseous or vapor fluid, as in an internal combustion engine or steam engine cylinder. [PHYS] Process in which the volume of a constant mass of a substance increases.
expansion bolt [DES ENG] A bolt having an end which, when embedded into masonry or concrete, expands under a pull on the bolt, thereby providing anchorage.
expansion chamber *See* cloud chamber.
expansion chucking reamer [DES ENG] A machine reamer with an expansion screw at the end which increases the diameter.
expansion coefficient *See* coefficient of cubical expansion.
expansion cooling [MECH ENG] Cooling of a substance by having it undergo adiabatic expansion.
expansion ellipsoid [SOLID STATE] An ellipsoid whose axes have lengths which are proportional to the coefficient of linear expansion in the corresponding direction in a crystal.
expansion engine [MECH ENG] Piston-cylinder device that cools compressed air via sudden expansion; used in production of pure gaseous oxygen via the Claude cycle.
expansion factor [NAV] In radio hyperbolic navigation, a factor representing the degree to which the hyperbolas of a given group of hyperbolic lines of position diverge as the distance from the base line increases.
expansion fissures [GEOL] A system of fissures which radiate randomly and pass through feldspars and other minerals adjacent to olivine crystals that have been replaced by serpentine.
expansion fit [DES ENG] A condition of optimum clearance between certain mating parts in which the cold inner member is placed inside the warmer outer member and the temperature is allowed to equalize.
expansion joint [GEOL] *See* sheeting structure. [MECH ENG] **1.** A joint between parts of a structure or machine to avoid distortion when subjected to temperature change. **2.** A pipe coupling which, under temperature change, allows movement of a piping system without hazard to associated equipment.
expansion opening [ENG] A chamber in line with a pipe or tunnel and of larger diameter than the conduit containing liquid or gas, to allow lowering of pressure within the conduit by expansion of the fluid.
expansion ratio [FL MECH] For the calculation of the mass flow of a gas out of a nozzle or other expanding duct, the ratio of the nozzle exit section area to the nozzle throat area, or the ratio of final to initial volume. [MECH ENG] In a reciprocating piston engine, the ratio of cylinder volume with piston at bottom dead center to cylinder volume with piston at top dead center.
expansion reamer [ENG] A reamer whose diameter may be adjusted between limits by an expanding screw.
expansion rollers [CIV ENG] Rollers fitted to one support of a bridge or truss to allow for thermal expansion and contraction.
expansion shield [DES ENG] An anchoring device that expands as it is driven into masonry or concrete, pressing against the sides of the hole.
expansion system [PETRO ENG] Gas-liquid recovery system in which the refrigeration effect of rapidly depressurized well-stream effluent through a wellhead choke is used to obtain maximum removal of liquefiable hydrocarbons from the gas stream.
expansion valve [MECH ENG] A valve in which fluid flows under falling pressure and increasing volume.
expansion wave [FL MECH] A pressure wave or shock wave that decreases the density of air as the air passes through it.
expansive bit [DES ENG] A bit in which the cutting blade can be set at various sizes.
expansive cement [MATER] A type of hydraulic cement, usually of high sulfate and alumina content, that expands after hardening to compensate for drying shrinkage.
expansivity *See* coefficient of cubical expansion.
expectation *See* expected value.
expectation value [QUANT MECH] The average of the results of a large number of measurements of a quantity made on a system in a given state; in case the measurement disturbs the state, the state is reprepared before each measurement.

EXPANDER



Input-output characteristics and schematic block diagram of an expander.

expected approach clearance time [NAV] The anticipated time that an arriving aircraft will be cleared to commence approach for a landing.

expected utility *See* expected value.

expected value [MATH] **1.** For a random variable x with probability density function $f(x)$, this is the integral from $-\infty$ to ∞ of $xf(x)dx$. Also known as expectation. **2.** For a random variable x on a probability space (Ω,P), the integral of x with respect to the probability measure P. [SYS ENG] In decision theory, a measure of the value or utility expected to result from a given strategy, equal to the sum over states of nature of the product of the probability of the state times the consequence or outcome of the strategy in terms of some value or utility parameter. Abbreviated EV. Also known as expected utility (EU).

expectorant [PHARM] **1.** Tending to promote expectoration. **2.** An agent that promotes expectoration.

expectorate [PHYSIO] To eject phlegm or other material from the throat or lungs.

experiment [SCI TECH] The test of a hypothesis under controlled conditions.

experimental breeder reactor [NUCLEO] A fast, heterogeneous nuclear reactor used for research and breeding; its core consists of enriched ^{235}U surrounded by a blanket of natural uranium.

experimental design [STAT] A pattern for setting up experiments and making observations about the relationship between several variables in which one attempts to obtain as much information as possible for a fixed expenditure level.

experimental petrology [PETR] A branch of petrology in which phenomena that occur during petrological processes are reproduced and studied in the laboratory.

experimental psychology [PSYCH] The study of psychological phenomena by experimental methods.

experimental reactor [NUCLEO] A reactor to test the design of a new reactor concept.

expiration date [MATER] The anticipated date when a material may go from usable to unusable.

expiratory reserve volume [PHYSIO] At the end of a normal expiration, the quantity of air that can be expelled by forcible expiration.

expiratory standstill [PHYSIO] Suspension of action at the end of expiration.

exploded view [GRAPHICS] A drawing or picture of any article or piece of equipment in which the component parts are separated but so arranged to show their relationship to the whole.

exploding bridge wire [ENG] An initiator or system in which a very high energy electrical impulse is passed through a bridge wire, literally exploding the bridge wire and releasing thermal and shock energy capable of initiating a relatively insensitive explosive in contact with the bridge wire.

exploitation [MIN ENG] The extraction from the earth and utilization of ore, gas, oil, and minerals found by exploration.

exploration [MIN ENG] The search for economic deposits of minerals, ore, gas, oil, or coal by geological surveys, geophysical prospecting, boreholes and trial pits, or surface or underground headings, drifts, or tunnels.

exploratory well [PETRO ENG] An oil well drilled for purposes of exploration for underlying petroleum.

Explorer program [AERO ENG] A series of earth satellites begun by the U.S. Army and continued by NASA; *Explorer 1*, the first U.S. satellite, went into orbit on January 31, 1958.

exploring coil [ELECTROMAG] A small coil used to measure a magnetic field or to detect changes produced in a magnetic field by a hidden object; the coil is connected to an indicating instrument either directly or through an amplifier. Also known as magnetic test coil; search coil.

explosion [CHEM] A chemical reaction or change of state which is effected in an exceedingly short space of time with the generation of a high temperature and generally a large quantity of gas.

explosion breccia [PETR] Breccia resulting from volcanic eruption or a phreatic explosion.

explosion crater [GEOL] A volcanic crater formed by explosion and commonly developed along rift zones on the flanks of large volcanoes.

explosion door [MECH ENG] A door in a furnace which is designed to open at a predetermined pressure.

explosion method [THERMO] Method of measuring the specific heat of a gas at constant volume by enclosing the gas with an explosive mixture, whose heat of reaction is known, in a chamber closed with a corrugated steel membrane which acts as a manometer, and by deducing the maximum temperature reached on ignition of the mixture from the pressure change.

explosion rupture disk device [MECH ENG] A protective device used where the pressure rise in the vessel occurs at a rapid rate.

explosion tuff [GEOL] A tuff whose constituent ash particles are in the place they fell after being ejected from a volcanic vent.

explosion welding [MET] A solid-state process wherein bonding is produced by a controlled detonation, resulting in rapid movement together of the members to be joined.

explosive [MATER] A substance, such as trinitrotoluene, or a mixture, such as gunpowder, that is characterized by chemical stability but may be made to undergo rapid chemical change without an outside source of oxygen, whereupon it produces a large quantity of energy generally accompanied by the evolution of hot gases.

explosive-actuated device [ENG] Any of various devices actuated by means of explosive; includes devices actuated either by high explosives or low explosives, whereas propellant-actuated devices include only the latter.

explosive bolt [AERO ENG] A bolt designed to contain a remote-initiated explosive charge which, upon detonation, will shear the bolt or cause it to fail otherwise; applicable to such uses as stage separation of rockets, jettison of expended fuel tanks, and ejection of parachutes.

explosive cladding [MET] Bonding of a metal coating or metal cladding to a base metal by using the force of an explosive charge.

explosive D *See* ammonium picrate.

explosive decompression [AERO ENG] A sudden loss of pressure in a pressurized cabin, cockpit, or the like, so rapid as to be explosive, as when punctured by gunfire.

explosive disintegration [ENG] Explosive shattering when pressure is suddenly released on a pressured, permeable material (wood, mineral, and such) containing gas or liquid; the rupture of wood by this process is used to manufacture Masonite.

explosive echo ranging [ENG] Sonar in which a charge is exploded underwater to produce a shock wave that serves the same purpose as an ultrasonic pulse; the elapsed time for return of the reflected wave gives target range.

explosive evolution [EVOL] Rapid diversification of a group of fossil organisms in a short geological time.

explosive filler [MATER] Main explosive charge contained in a projectile, missile, bomb, or the like.

explosive fog signal [NAV] A fog signal produced by detonating an explosive charge.

explosive forming [MET] Shaping metal parts in dies by using an explosive charge to generate forming pressure.

explosive fuel [MATER] Any substance which combines with oxygen and other explosive ingredients to produce explosion energy, including aluminum, silicon, carbon, sulfur, glycerol, glucol, paraffin wax, diesel oil, and guar gum.

explosive index [GEOL] The percentage of pyroclastics in the material from a volcanic eruption.

explosive limits [CHEM ENG] The upper and lower limits of percentage composition of a combustible gas mixed with other gases or air within which the mixture explodes when ignited.

explosive ordnance [ORD] Ordnance materiel containing or consisting of explosives, such as bombs, mines, torpedoes, missiles, or projectiles.

explosive ordnance disposal [ORD] The handling, disarming, or destroying of unexploded missiles and other explosive ordnance. Abbreviated EOD.

explosive ordnance disposal unit [ORD] Organization of personnel with special training or equipment who render safe explosive ordnance, make intelligence reports on such ordnance, and supervise the safe removal and disposal therof.

explosive ordnance reconnaissance [ORD] Act of reconnoitering to determine the presence of an unexploded missile, ascertaining its nature, applying all practicable protective measures for the protection of personnel, installations, and equipment, and, finally, reporting essential information to the authority directing explosive ordnance disposal operations. Abbreviated EOR.

explosive ordnance reconnaissance agent [ORD] A person trained in explosive ordnance reconnaissance techniques

who takes required actions and renders the needed reports so that the unexploded ordnance in question can be effectively neutralized by the military. Abbreviated EORA.

explosive oxidizer [MATER] Any substance which yields oxygen to combine with fuels or other explosive ingredients to produce explosive energy, such as nitrates, chlorates, and perchlorates.

explosive rivet [ENG] A rivet holding a charge of explosive material; when the charge is set off, the rivet expands to fit tightly in the hole.

explosive train [ORD] A train of combustible and explosive elements arranged in order of decreasing sensitivity, inside a fuse, projectile, bomb, gun chamber, or the like; the function is to accomplish the controlled augmentation of a small impulse into one of suitable energy to cause the main charge of the munition to function.

explosive variable *See* cataclysmic variable.

exponent [MATH] A number or symbol placed to the right and above some given mathematical expression.

exponential amplifier [ELECTR] An amplifier capable of supplying an output signal proportional to the exponential of the input signal.

exponential atmosphere *See* isothermal atmosphere.

exponential curve [MATH] A graph of the function $y = a^x$, where a is a positive constant.

exponential decay [PHYS] The decrease of some physical quantity according to the exponential law $N = N_0 e^{-t/\tau}$.

exponential density function [MATH] A probability density function obtained by integrating a function of the form $\exp(-|x - m|/\sigma)$, where m is the mean and σ the standard deviation.

exponential distribution [STAT] A continuous probability distribution whose density function is given by $f(x) = ae^{-ax}$, where $a>0$ for $x>0$, and $f(x) = 0$ for $x \leq 0$; the mean and standard deviation are both $1/a$.

exponential equation [MATH] An equation containing e^x (the Naperian base raised to a power) as a term.

exponential experiment [NUCLEO] A nuclear experiment involving a subcritical assembly of fissionable and moderator material.

exponential function [MATH] The function $f(x) = e^x$, written $f(x) = \exp(x)$.

exponential growth [MICROBIO] The period of bacterial growth during which cells divide at a constant rate. Also known as logarithmic growth.

exponential horn [ENG ACOUS] A horn whose cross-sectional area increases exponentially with axial distance.

exponential integral [MATH] The function defined to be the integral from x to ∞ of $(e^{-t}/t)\,dt$ for x positive.

exponential law [MATH] *See* law of exponents. [PHYS] The principle that growth or decay of some physical quantity is at a rate such that its value at a certain time or place is the initial value times e raised to a power equal to a constant times some convenient coordinate, such as the elapsed time or the distance traveled by a wave; there is growth if the constant is positive, decay if it is negative.

exponential pile *See* exponential reactor.

exponential pulse [PHYS] Variation of some quantity with time similar to the displacement of a critically damped harmonic oscillator which is initially given an impulse in its equilibrium position.

exponential reactor [NUCLEO] A nuclear reactor which is designed specifically for exponential experiments, as well as for determining critical size. Also known as exponential pile.

exponential series [MATH] The Maclaurin series expansion of e^x, namely,

$$e^x = 1 + \sum_{n=1}^{\infty} \frac{x^n}{n!}.$$

exponential smoothing [IND ENG] A mathematical-statistical method of forecasting used in industrial engineering which assumes that demand for the following period is some weighted average of the demands for the past periods.

exponential transmission line [ELEC] A two-conductor transmission line whose characteristic impedance varies exponentially with electrical length along the line.

export kerosine [MATER] A grade of kerosine once used for export; has the darkest shade of the standard kerosine colors, namely standard white (also called export white). Also known as standard white kerosine.

exposure [BUILD] The distance from the butt of one shingle to the butt of the shingle above it, or the amount of a shingle that is seen. [GRAPHICS] The act of permitting light to fall upon a photosensitive material. [MED] The state of being open to some action or influence that may affect detrimentally, as cold, disease, or wetness. [METEOROL] The general surroundings of a site, with special reference to its openness to winds and sunshine. [NUCLEO] **1.** The total quantity of radiation at a given point, measured in air. **2.** The cumulative amount of radiation exposure to which nuclear fuel has been subjected in a nuclear reactor; usually expressed in terms of the thermal energy produced by the reactor per ton of fuel initially present, as megawatt days per ton. [OPTICS] *See* light exposure; radiant exposure.

exposure factor [NUCLEO] A quantity f used to specify radiographic exposure equal to st/d^2, where s is the intensity of radioactive source, t is the time, and d is the source to film distance.

exposure meter [OPTICS] An instrument used to measure the intensity of light reflected from an object, for the purpose of determining proper camera exposure.

exposure time [CIV ENG] The time period of interest for seismic hazard calculations such as the design lifetime of a building or the time over which the numbers of casualties should be estimated.

exposure voltage [ELEC] The voltage at which the document-illuminating lamps are operated during exposure.

expression [CHEM ENG] Separation of liquid from a two-phase solid-liquid system by compression under conditions that permit liquid to escape while the solid is retained between the compressing surfaces. Also known as mechanical expression. [COMPUT SCI] A mathematical or logical statement written in a source language, consisting of a collection of operands connected by operations in a logical manner.

expressway [CIV ENG] A limited-access, high-speed, divided highway having grade separations at points of intersection with other roads. Also known as limited-access highway.

expulsion fuse *See* expulsion-fuse unit.

expulsion-fuse unit [ELEC] A vented fuse unit in which the arc is extinguished by the expulsion of gases generated by the arc and lining of the fuse holder, sometimes with the aid of a spring. Also known as expulsion fuse.

exsecant [MATH] The trigonometric function defined by subtracting unity from the secant, that is $\text{exsec}\,\theta = \sec\theta - 1$.

exserted [BIOL] Protruding beyond the enclosing structure, such as stamens extending beyond the margin of the corolla.

exsheath [INV ZOO] To escape from the residual membrane of a previous developmental stage, used of the larva of certain nematodes, microfilaria, and so on.

exsiccate [SCI TECH] To dry by driving off, or draining of, moisture.

exsolution [GEOL] A phenomenon during which molten rock solutions separate when cooled.

exsolution lamellae [GEOL] Layers of sedimentary rock that solidify from solution by either precipitation or secretion.

exstipulate [BOT] Lacking stipules.

exstrophy [MED] Eversion; the turning inside out of a part.

exsurgence *See* resurgence.

extended area [DES ENG] An engineering surface that has been extended areawise without increasing diameter, as by using pleats (as in filter cartridges) or fins (as in heat exchangers).

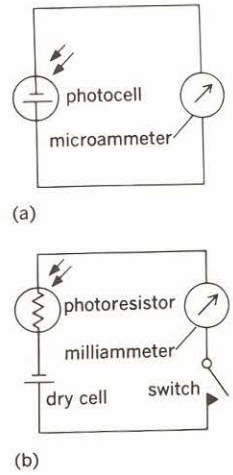
extended-area service [COMMUN] Telephone exchange service, without toll charges, that extends over an area where there is a community of interest, in return for a somewhat higher exchange service rate.

extended binary-coded decimal interchange code [COMPUT SCI] A computer code that uses eight binary positions to represent a single character, giving a possible maximum of 256 characters. Abbreviated EBCDIC.

extended channel status word [COMPUT SCI] Stored information which follows an input/output interrupt. Abbreviated ECSW.

extended dislocation [CRYSTAL] A dislocation in a close-packed structure consisting of a strip of stacking fault edged by two lines across which slip through a fraction of a lattice constant, into one of the alternative stacking positions, has occurred.

EXPOSURE METER



Basic exposure meter circuits. (a) Photovoltaic-type circuit. (b) Photoconductive-type circuit.

extended-entry decision table [COMPUT SCI] A decision table in which the condition stub cites the identification of the condition but not the particular values, which are entered directly into the condition entries.

extended forecast [METEOROL] In general, a forecast of weather conditions for a period extending beyond 2 days from the day of issue. Also known as long-range forecast.

extended-interaction tube [ELECTR] Microwave tube in which a moving electron stream interacts with a traveling electric field in a long resonator; bandwidth is between that of klystrons and traveling-wave tubes.

extended-precision word [COMPUT SCI] A piece of data of 16 bytes in floating-point arithmetic when additional precision is required.

extended-range Dovap [NAV] A baseline extension of the Dovap system to provide a coherent reference to the ground transmitter and all Dovap receivers located beyond line-of-sight to the ground transmitter. Abbreviated Extradop.

extended-range forecast *See* medium-range forecast.

extended state [QUANT MECH] A state of motion in which an electron may be found anywhere within a region of a material of linear extent equal to that of the material itself.

extended stream [HYD] A stream lengthened by the extension of its downstream course; the course is through a newly emerged land such as a coastal plain.

extended time scale *See* slow time scale.

extended valley [GEOL] **1.** A valley that is lengthened downstream either by a regression of the sea or by uplift of the coastal region. **2.** A valley formed by or containing an extended stream.

extended x-ray absorption fine structure [PHYS] A variation in the x-ray absorption of a substance as a function of energy, at energies just above that required for photons to liberate core electrons into the continuum; it is due to interference between the outgoing photoelectron waves and electron waves backscattered from atoms adjacent to the absorbing atoms. Abbreviated EXAFS.

extender [CHEM] A material used to dilute or extend or change the properties of resins, ceramics, paints, rubber, and so on. [ELEC] A male or female receptacle connected by a short cable to make a test point more conveniently accessible to a test probe.

extender plasticizer *See* secondary plasticizer.

extend flip-flop [COMPUT SCI] A special flag set when there is a carry-out of the most significant bit in the register after an addition or a subtraction.

extending flow [HYD] A glacial flow pattern in which velocity increases as the distance downstream becomes greater.

extensibility [MECH] The amount to which a material can be stretched or distorted without breaking.

extensible language [COMPUT SCI] A programming language which can be modified by adding new features or changing existing ones.

extensible system [COMPUT SCI] A computer system in which users may extend the basic system by implementing their own languages and subsystems and making them available for others to use.

extension [PHYSIO] A movement which has the effect of straightening a limb.

extensional fault *See* tension fault.

extension bolt [DES ENG] A vertical bolt that can be slid into place by a long extension rod; used at the top of doors.

extension cord [ELEC] A line cord having a plug at one end and an outlet at the other end.

extension fracture [GEOL] A fracture that develops perpendicular to the direction of greatest stress and parallel to the direction of compression.

extension jamb [BUILD] A jamb that extends past the head of a door or window.

extension joints [GEOL] Fractures that form parallel to a compressive force.

extension ladder [DES ENG] A ladder of two or more nesting sections which can be extended to almost the combined length of the sections.

extension mechanism [COMPUT SCI] One of the components of an extensible language which allows the definition of new language features in terms of the primitive facilities of the base language.

extension of a field [MATH] Any field containing the original field.

extension ore *See* possible ore.

extension spring [DES ENG] A tightly coiled spring designed to resist a tensile force.

extensive air shower *See* Auger shower.

extensive property [PHYS CHEM] A noninherent property of a system, such as volume or internal energy, that changes with the quantity of material in the system; the quantitative value equals the sum of the values of the property for the individual constituents.

extensive shower *See* Auger shower.

extensometer [ENG] **1.** A strainometer that measures the change in distance between two reference points separated 20–30 meters or more; used in studies of displacements due to seismic activities. **2.** An instrument designed to measure minute deformations of small objects subjected to stress.

extent [COMPUT SCI] The physical locations in a mass-storage device or volume allocated for use by a particular data set.

exterior algebra [MATH] An algebra whose structure is analogous to that of the collection of differential forms on a Riemannian manifold. Also known as Grassmann algebra.

exterior angle [MATH] **1.** An angle between one side of a polygon and the prolongation of an adjacent side. **2.** An angle made by a line (the transversal) that intersects two other lines, and either of the latter on the outside.

exterior ballistics [MECH] The science concerned with behavior of a projectile after leaving the muzzle of the firing weapon.

exterior of a set [MATH] The largest open set contained in the complement of a given set.

extern [COMPUT SCI] A pseudoinstruction found in several assembly languages which explicitly tells an assembler that a symbol is external, that is, not defined in the program module.

external aileron [AERO ENG] An aileron offset from the wing; that is, not forming a part of the wing.

external angle [MATH] The angle defined by an arc around the boundaries of an internal angle or included angle.

external ankle height [ANTHRO] A measure of the vertical distance taken from the lower end of the fibula to the floor.

external armature [ELEC] Armature for a machine of special design in which the armature is a ring which rotates around the magnetic poles.

external auditory meatus [ANAT] The external passage of the ear, leading to the tympanic membrane in reptiles, birds, and mammals.

external beam [NUCLEO] A beam of particles which originate in a particle accelerator and are directed outside the accelerator so that they can be used for experiments with external apparatus.

external brake [MECH ENG] A brake that operates by contacting the outside of a brake drum.

external carotid artery [ANAT] An artery which originates at the common carotid and distributes blood to the anterior part of the neck, face, scalp, side of the head, ear, and dura mater.

external centerless grinding [MECH ENG] A process by which a metal workpiece is finished on its external surface by supporting the piece on a blade while it is advanced between a regulating wheel and grinding wheel.

external circuit [PHYS CHEM] All connecting wires, devices, and current sources which achieve desired conditions within an electrolytic cell.

external combustion engine [MECH ENG] An engine in which the generation of heat is effected in a furnace or reactor outside the engine cylinder.

external delay [COMPUT SCI] Time during which a computer cannot be operated due to circumstances beyond the reasonable control of the operators and maintenance engineers, such as a failure of the public power supply.

external-device address [COMPUT SCI] The address of a component such as a tape drive.

external-device control [COMPUT SCI] The capability of an external device to create an interrupt during the execution of a job.

external-device operands [COMPUT SCI] The part of an instruction referring to an external device such as a tape drive.

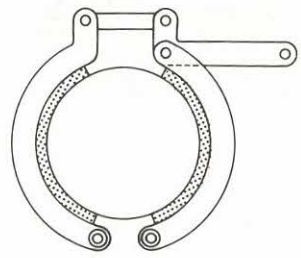
external-device response [COMPUT SCI] The signal from an external device, such as a tape drive, that it is not busy.

external ear [ANAT] The portion of the ear that receives sound waves, including the pinna and external auditory meatus.

external error [COMPUT SCI] An error sensed by the computer when this error occurs in a device such as a disk drive.

external fertilization [PHYSIO] Those processes involved in the union of male and female sex cells outside the body of the female.
external force [MECH] A force exerted on a system or on some of its components by an agency outside the system.
external galaxy [ASTRON] Any galaxy known to exist, besides the Milky Way.
external gas injection [PETRO ENG] Pressure-maintenance gas injection with wells located in the structurally higher positions of the reservoir, usually in the primary or secondary gas cap. Also known as crestal injection; gas-cap injection.
external gill [ZOO] A gill that is external to the body wall, as in certain larval fishes and amphibians, and in many aquatic insects.
external grinding [MECH ENG] Grinding the outer surface of a rotating piece of work.
external header [MECH ENG] Manifold connecting sections of a cast iron boiler.
external interrupt [COMPUT SCI] Any interrupt caused by the operator or by some external device such as a tape drive.
external-interrupt status word [COMPUT SCI] The content of a special register which indicates, among other things, the source of the interrupt.
external label [COMPUT SCI] A reference to a variable not defined in a program segment.
externally fired boiler [MECH ENG] A boiler that has refractory or cooling tubes surrounding its furnace.
externally stored program [COMPUT SCI] A program achieved by wiring plugboards, as in some tabulating equipment.
external memory [COMPUT SCI] Any storage device not an integral part of a computer system, such as a magnetic tape or a deck of cards.
external-mix oil burner [ENG] A burner utilizing a jet stream of air to strike the liquid fuel after it has left the burner orifice.
external photoelectric effect *See* photoemission.
external Q [ELECTR] The inverse of the difference between the loaded and unloaded Q values of a microwave tube.
external respiration [PHYSIO] The processes by which oxygen is carried into living cells from the outside environment and by which carbon dioxide is carried in the reverse direction.
external shoe brake [MECH ENG] A friction brake operated by the application of externally contracting elements.
external signal [COMPUT SCI] Any message to an operator for which no printout is required but which is self-explanatory, such as a light condition indicating whether the equipment is on or off.
external sorting [COMPUT SCI] The sorting of a list of items by a computer, in which the list is too large to be brought into the memory at one time, and instead is brought into the memory a piece at a time so as to produce a collection of ordered sublists which are subsequently reordered by the computer to produce a single list.
external storage [COMPUT SCI] Large-capacity, slow-access data storage attached to a digital computer and used to store information that exceeds the capacity of main storage.
external symbol dictionary [COMPUT SCI] A list of external symbols and their relocatable addresses which allows the linkage editor to resolve interprogram references. Abbreviated ESD.
external thread [DES ENG] A screw thread cut on an outside surface.
external time [IND ENG] The time used to perform work by the operator outside the machine cycle, resulting in a loss of potential machine operating time.
external upset casing [PETRO ENG] Special oil- or gas-well casing designed for extreme conditions requiring greater than usual strength and leak resistance. Also known as extreme line casing.
external wave [FL MECH] **1.** A wave in fluid motion having its maximum amplitude at an external boundary such as a free surface. **2.** Any surface wave on the free surface of a homogeneous incompressible fluid is an external wave.
external work [THERMO] The work done by a system in expanding against forces exerted from outside.
exteroceptor [PHYSIO] Any sense receptor at the surface of the body that transmits information about the external environment.
extinction [ASTRON] The reduction in the apparent brightness of a celestial object due to absorption and dispersion of its light by the atmosphere; it is greater at low altitudes. [EVOL] The worldwide death and disappearance of a specific organism or group of organisms. [HYD] The drying up of lake by either water loss or destruction of the lake basin. [OPTICS] Phenomenon in which plane polarized light is almost completely absorbed by a polarizer whose axis is perpendicular to the plane of polarization. [PHYS CHEM] *See* absorbance. [PSYCH] Decrease in frequency and elimination of a conditioned response if reinforcement of the response is withheld.
extinction coefficient *See* absorptivity.
extinction meter [OPTICS] An exposure meter in which light intensity is measured by gradually attenuating the light by a known fraction until a selected design is just visible or disappears.
extinction voltage [ELECTR] The lowest anode voltage at which a discharge is sustained in a gas tube.
extirpate [BIOL] To uproot, destroy, make extinct, or exterminate.
extracellular [BIOL] Outside the cell.
extrachromosomal inheritance *See* cytoplasmic inheritance.
extract [CHEM] Material separated from liquid or solid mixture by a solvent. [COMPUT SCI] **1.** To form a new computer word by extracting and putting together selected segments of given words. **2.** To remove from a computer register or memory all items that meet a specified condition. [PHARM] **1.** A pharmaceutical preparation obtained by dissolving the active constituents of a drug with a suitable menstruum, evaporating the solvent, and adjusting to prescribed standards. **2.** A preparation, usually in a concentrated form, obtained by treating plant or animal tissue with a solvent to remove desired odiferous, flavorful, or nutritive components of the tissue.
extractant [CHEM] The liquid used to remove a solute from another liquid.
extract a root of a number [MATH] To determine a root of the number, usually a positive real root, or a negative real odd root of a negative number.
extract instruction [COMPUT SCI] An instruction that requests the formation of a new expression from selected parts of given expressions.
extraction [CHEM] A method of separation in which a solid or solution is contacted with a liquid solvent (the two being essential mutually insoluble) to transfer one or more components into the solvent. [MED] The act or process of pulling out a tooth.
extraction column [CHEM ENG] Vertical-process vessel in which a desired product is separated from a liquid by countercurrent contact with a solvent in which the desired product is preferentially soluble.
extraction parachute [AERO ENG] An auxiliary parachute designed to release and extract cargo from aircraft in flight and to deploy cargo parachutes.
extraction turbine [MECH ENG] A steam turbine equipped with openings through which partly expanded steam is bled at one or more stages.
extractive distillation [CHEM ENG] A distillation process to separate components from eutectic mixtures; a solution of the mixture is cooled, causing one component to crystallize out and the other to remain in solution; used to separate *p*-xylene and *m*-xylene, using *n*-pentane as the solvent.
extractive metallurgy [MET] Extraction of metals from ore by various chemical and mechanical methods.
extract oil [MATER] The less desirable portion of the oil being solvent-refined; it is dissolved in and selectively removed by the solvent.
extractor [CHEM ENG] An apparatus designed for solvent-contact with liquids or solids for removal of specified components. [COMPUT SCI] *See* mask. [ENG] **1.** A machine for extracting a substance by a solvent or by centrifugal force, squeezing, or other action. **2.** An instrument for removing an object. [ORD] A device in the breech mechanism of a gun, rifle, or the like, for pulling an empty cartridge case or an unfired cartridge out of the chamber of a gun, rifle, or the like.
extractor groove [ORD] Groove machined in the base of a cartridge case, a short distance above the head, which receives the extractor of the breech mechanism and permits the case to be withdrawn by the extractor; used in automatic weapons, in preference to extractor rims (flanges) formed on the cartridge case base.

EXTERNAL SHOE BRAKE



External shoe brake; shoes are lined with frictional material (shaded area).

Extradop *See* extended-range Dovap.

extrados [ARCH] The upper or outer curve of an arch.

extraembryonic coelom [EMBRYO] The cavity in the extraembryonic mesoderm; it is continuous with the embryonic coelom in the region of the umbilicus, and is obliterated by growth of the amnion.

extraembryonic membrane *See* fetal membrane.

extragalactic [ASTRON] Beyond the Milky Way.

extragalactic radio source [ASTROPHYS] A source of radio emission outside the Milky Way.

extra-high tension [ELECTR] British term for the high direct-current voltage applied to the second anode in a cathode-ray tube, ranging from about 4000 to 50,000 volts in various sizes of tubes. Abbreviated eht.

extra-high voltage [ELEC] A voltage above 345 kilovolts used for power transmission. Abbreviated ehv.

extrajunctional receptor [PHYSIO] An acetylcholine receptor which occurs randomly over a muscle fiber surface outside the area of the neuromuscular junction.

extraneous emission [ELECTR] Any emission of a transmitter or transponder, other than the output carrier fundamental, plus only those sidebands intentionally employed for the transmission of intelligence.

extraneous light [GRAPHICS] Undesired illumination striking photographic area or copy field.

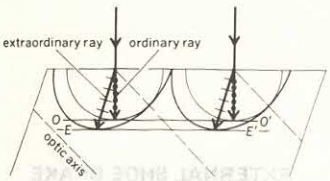
extraneous response [ELECTR] Any undersired response of a receiver, recorder, or other susceptible device, due to the desired signals, undersired signals, or any combination or interaction among them.

extraordinary component *See* extraordinary wave.

extraordinary index [OPTICS] The index of refraction of the extraordinary wave propagating in a direction perpendicular to the optical axis of a uniaxial crystal.

extraordinary ray [OPTICS] One of two rays into which a ray incident on an anisotropic uniaxial crystal is split; its deviation at the crystal's surface depends on the orientation of the crystal, and it is deviated even in the case of normal incidence.

EXTRAORDINARY RAY



Huygens construction for a plane wave incident normally on transparent calcite showing the ordinary and extraordinary ray. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

extraordinary wave [GEOPHYS] Magnetoionic wave component which, when viewed below the ionosphere in the direction of propagation, has clockwise or counterclockwise elliptical polarization respectively, accordingly as the earth's magnetic field has a positive or negative component in the same direction. Also known as X wave. [OPTICS] Component of electromagnetic radiation propagating in an anisotropic uniaxial crystal whose electric displacement vector lies in the plane containing the optical axis and the direction normal to the wavefront; it gives rise to the extraordinary ray. Also known as extraordinary component.

extrapolation [MATH] Estimating a function at a point which is larger than (or smaller than) all the points at which the value of the function is known.

extrapolation ionization chamber [NUCLEO] An ionization chamber so designed that volume, electrode separation, or some other factor can be varied in suitable steps for measurement purposes; the resulting measured values are plotted in appropriate form and the desired result is obtained by extrapolation of the curve.

extrapyramidal system [ANAT] Descending tracts of nerve fibers arising in the cortex and subcortical motor areas of the brain.

extrasensory perception [PSYCH] The alleged phenomenon of perception or awareness of external events in the absence of any sensory stimulation arising from the events. Abbreviated ESP.

extrasystole [MED] Premature beat of the heart.

extraterrestrial noise [ELECTROMAG] Cosmic and solar noise; radio disturbances from other sources other than those related to the earth.

extraterrestrial radiation [ASTROPHYS] Electromagnetic radiation which originates outside the earth or its atmosphere, as in the sun or stars.

extratropical cyclone [METEOROL] Any cyclone-scale storm that is not a tropical cyclone. Also known as extratropical low; extratropical storm.

extratropical low *See* extratropical cyclone.

extratropical storm *See* extratropical cyclone.

extrauterine pregnancy [MED] Gestation outside the uterus.

extravasation [GEOL] The eruption of lava from a vent in the earth. [MED] The pouring out or eruption of a body fluid from its proper channel or vessel into the surrounding tissue.

extravehicular activity [AERO ENG] Activity conducted outside a spacecraft during space flight.

extremals [MATH] For a variational problem in the calculus of variations entailing use of the Euler-Lagrange equation, the extremals are the solutions of this equation.

extreme [CLIMATOL] The highest, and in some cases the lowest, value of a climatic element observed during a given period or during a given month or season of that period; if this is the whole period for which observations are available, it is the absolute extreme. [MATH] *See* extremum.

extreme and mean ratio *See* golden section.

extreme close-up [GRAPHICS] A picture taken at extremely close range; for example, an extreme close-up of a face might show only an eye.

extreme line casing *See* external upset casing.

extreme line tubing [PETRO ENG] Special oil- or gas-well tubing designed for extreme conditions requiring greater than usual strength and leak resistance.

extremely high frequency [COMMUN] The frequency band from 30,000 to 300,000 megahertz in the radio spectrum. Abbreviated EHF.

extremely low frequency [COMMUN] A frequency below 300 hertz in the radio spectrum. Abbreviated ELF.

extreme narrowing approximation [SPECT] A mathematical approximation in the theory of spectral-line shapes to the effect that the exchange narrowing of a perturbation is complete.

extreme point [MATH] **1.** A maximum or minimum value of a function. **2.** A point in a convex subset K of a vector space is called extreme if it does not lie on the interior of any line segment contained in K.

extreme-pressure lubricant *See* EP lubricant.

extreme range [ORD] Greatest range of a weapon; for example, the greatest distance a gun will shoot.

extreme relativistic limit [PHYS] Limit which a formula describing a particle's behavior approaches when the speed of the particle approaches the speed of light.

extreme spread [ORD] In a firing accuracy test, the distance between the two shots farthest from each other.

extreme terms [MATH] The first and last terms in a proportion.

extreme ultraviolet radiation *See* vacuum ultraviolet radiation.

extreme value problem [MATH] A set of mathematical conditions which may be met by values that are less than or greater than an upper or a lower bound, that is, an extreme value.

extremum [MATH] A maximum or minimum value of a function. Also known as extreme.

extrinsic factor *See* vitamin B_{12}.

extrinsic photoconductivity [ELECTR] Photoconductivity that occurs for photon energies smaller than the band gap and corresponds to optical excitation from an occupied imperfection level to the conduction band, or to an unoccupied imperfection level from the valence band, of a material.

extrinsic photoemission [ELECTR] Photoemission by an alkali halide crystal in which electrons are ejected directly from negative ion vacancies, forming color centers. Also known as direct ionization.

extrinsic properties [ELECTR] The properties of a semiconductor as modified by impurities or imperfections within the crystal.

extrinsic semiconductor [ELECTR] A semiconductor whose electrical properties are dependent on impurities added to the semiconductor crystal, in contrast to an intrinsic semiconductor, whose properties are characteristic of an ideal pure crystal.

extrinsic sol [PHYS CHEM] A colloid whose stability is attributed to electric charge on the surface of the colloidal particles.

extrinsic variable star [ASTRON] A variable star, such as an eclipsing variable, whose variation in apparent brightness is due to some external cause, rather than to actual variation in the amount of radiation emitted.

extrophy [MED] Malformation of an organ.

extrorse [BIOL] Directed outward or away from the axis of growth.

extroversion [BIOL] A turning outward. [PSYCH] The turning to things and persons outside oneself rather than to one's own thoughts and feelings.

extrudate [ENG] Ductile metal, plastic, or other semisoft solid material that has been shaped into a continuous form (such as fiber, film, pipe, or wire coating) by forcing the semisolid material through a die opening of appropriate shape.

extruder [ENG] A device that forces ductile or semisoft solids through die openings of appropirate shape to produce a continuous film, strip, or tubing.

extrusion [ENG] A process in which a hot or cold semisoft solid material, such as metal or plastic, is forced through the orifice of a die to produce a continuously formed piece in the shape of the desired product. [GEOL] Emission of magma or magmatic materials at the surface of the earth. [TEXT] A process for making continuous-filament synthetic fibers by forcing a syruplike liquid through minute holes of a spinneret.

extrusion billet [MET] A slug of heated metal that is forced through a die by a hydraulic ram in direct extrusion operations.

extrusion coating [ENG] A process of placing resin on a substrate by extruding a thin film of molten resin and pressing it onto or into the substrates, or both, without the use of adhesives.

extrusion cooking [FOOD ENG] The process by which moistened, expansile materials are plasticized in a tube by combination of moisture, heat, pressure, and mechanical shear.

extrusion defect [MET] Impaired flow of an extrusion product due to surface oxidation of the ingot or billet.

extrusion ingot [MET] A cylindrical casting used to form extruded products.

extrusion metal [MET] Any of numerous nonferrous metals, alloys, and other materials used in extrusion operations.

extrusion pressing *See* cold extrusion.

extrusive rock *See* volcanic rock.

exudate [MED] **1.** A proteinaceous, cellular material that passes through blood vessel walls into the surrounding tissue in inflammation or a superficial lesion. **2.** Any substance that is exuded.

exudation *See* sweating.

exudation vein *See* segregated vein.

exumbrella [INV ZOO] The outer, convex surface of the umbrella of jellyfishes.

eye [FOOD ENG] A hole formed in certain cheeses during ripening, such as in swiss cheese. [ZOO] A photoreceptive sense organ that is capable of forming an image in vertebrates and in some invertebrates such as the squids and crayfishes.

eye assay [MIN ENG] An estimate of the valuable mineral content of a core or ore sample as based on visual inspection. Also known as eyeball assay.

eyeball [ANAT] The globe of the eye.

eyeball assay *See* eye assay.

eyeball potential [PHYSIO] Very small electrical potentials at the eyeball surface resulting from depolarization of muscles controlling eye position.

eyebar [DES ENG] A metal bar having a hole or eye through each enlarged end.

eyebolt [DES ENG] A bolt with a loop at one end.

eye coal [GEOL] Coal characterized by small, circular or elliptic structural disks that reflect light and are arranged in parallel planes either in or normal to the bedding. Also known as augen kohle; circular coal.

eye-ear plane [ANTHRO] In craniometric study, a position for placing a human skull so that the lower margins of the orbits and the upper margin of the auditory meatus are on the same horizontal plane. Also known as Frankfurt horizontal.

eyeglasses [OPTICS] Optical devices containing corrective lenses for defects of vision or for special purposes.

eye lens [OPTICS] The lens in a two-lens eyepiece which is nearer to the eye.

eyelet [DES ENG] A small ring or barrel-shaped piece of metal inserted into a hole for reinforcement.

eyeleting [ENG] Forming a lip around the rim of a hole.

eyelid [ANAT] A movable, protective section of skin that covers and uncovers the eyeball of many terrestrial animals.

eyelights [GRAPHICS] Low-intensity light sources used to add sparkle to the eyes or teeth and reduce shadows on the face; usually placed at eye level.

eye of the storm [METEOROL] The center of a tropical cyclone, marked by relatively light winds, confused seas, rising temperature, lowered relative humidity, and often by clear skies.

eye of the wind [METEOROL] The point or direction from which the wind is blowing.

eyepiece [OPTICS] A lens or optical system which offers to the eye the image originating from another system (the objective) at a suitable viewing distance. Also known as ocular.

eye screw [DES ENG] A screw with an open loop head.

eye socket *See* orbit.

eyespot [BOT] **1.** A small photosensitive pigment body in certain unicellular algae. **2.** A dark area around the hilum of certain seeds, as some beans. [INV ZOO] A simple organ of vision in many invertebrates consisting of pigmented cells overlying a sensory termination. [PL PATH] A fungus disease of sugarcane and certain other grasses which is caused by *Helminthosporium sacchari* and characterized by yellowish oval lesions on the stems and leaves.

eyestalk [INV ZOO] A movable peduncle bearing a terminal eye in decapod crustaceans.

Eykman formula [OPTICS] An empirical formula which relates the molal refraction of a liquid at a given optical frequency to its index of refraction, density, and molecular weight.

Eyring equation [PHYS CHEM] An equation, based on statistical mechanics, which gives the specific reaction rate for a chemical reaction in terms of the heat of activation, entropy of activation, the temperature, and various constants.

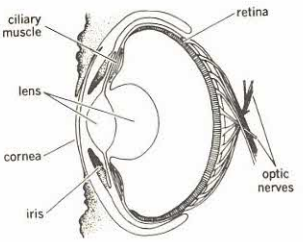
Eyring formula [FL MECH] A formula, based on the Eyring theory of rate processes, which relates shear stress acting on a liquid and the resulting rate of shear.

Eyring molecular system [FL MECH] Theory to account for liquid properties; assumes that each liquid molecule can move freely within a certain free volume. Also known as Eyring theory.

Eyring theory *See* Eyring molecular system.

E zone [COMMUN] One of the three zones into which the earth is divided to show the variations of the F_2 layer in respect of longitude when making frequency predictions; it roughly covers Asia, Australia, the Philippines, and Japan.

EYE



Octopus eye (after J. Wells). *(From R. D. Barnes, Invertebrate Zoology, 2d ed., W. B. Saunders Co., 1968)*

F

f [PHYS] Notation representing the Coriolis parameter.

F *See* farad; fluorine.

F_1 [GEN] Notation for the first filial generation resulting from a cross.

F_2 [GEN] Notation for the progeny produced by intercrossing members of the F_1. Also known as second generation.

F-6 *See* Skyray.

F-11 *See* Tiger.

F-84 *See* Thunderstreak.

F-86 *See* Sabrejet.

F-100 *See* Super Sabre.

F-105 *See* Thunderchief.

fA *See* femtoampere.

Faber flaw [SOLID STATE] A deformation in a superconducting material that acts as a nucleation center for the growth of a superconducting region.

Fabian system [MIN ENG] The free-fall drilling system from which all other free-fall systems have originated.

fabric [ARCH] The framework of a building. [GEOL] The spatial orientation of the elements of a sedimentary rock. [PETR] The sum of all the structural and textural features of a rock. Also known as petrofabric; rock fabric; structural fabric. [SCI TECH] **1.** Arrangement or pattern of constituent parts. **2.** Materials used in fabrication. [TEXT] A thin, flexible material made of any combination of cloth, fiber, polymeric film, sheet, or foam.

fabric analysis *See* structural petrology.

fabrication [ENG] **1.** The manufacture of parts, usually structural or electromechanical parts. **2.** The assembly of parts into a structure.

fabric diagram [PETR] In structural petrology, a graphic representation of the data of fabric elements. Also known as petrofabric diagram.

fabric domain [PETR] A three-dimensional area or volume of uniform rock fabric delineated by boundaries such as structural or compositional discontinuities.

fabric element [PETR] A surface or line of structural discontinuity in a rock fabric.

Fabriciinae [INV ZOO] A subfamily of small to minute, colonial, sedentary polychaete annelids in the family Sabellidae.

fabric laminate [MATER] Layers of fabric alternating with plastic, used as insulation in electrical equipment.

fabric-type dust collector [MIN ENG] A collector which removes dust particles from ore by means of a filter made of fabric.

fabric weight [TEXT] The number of ounces per square yard of a fabric.

Fabry-Barot method [OPTICS] Method of determining the index of refraction of a prism in which the prism is set up so that the incident beam is perpendicular to the emergent face, and the index of refraction is calculated from the angle of the prism and the angle of deviation.

Fabry-Perot etalon *See* etalon.

Fabry-Perot filter [OPTICS] An optical interference filter, similar to the Fabry-Perot interferometer except that the space between the partially reflecting surfaces is only a few thousand angstroms.

Fabry-Perot fringes [OPTICS] Series of rings observed when a monochromatic light source is viewed through a Fabry-Perot interferometer.

Fabry-Perot interferometer [OPTICS] An interferometer having two parallel glass plates (whose separation of a few centimeters may be varied), silvered on their inner surfaces so that the incoming wave is multiply reflected between them and ultimately transmitted.

facade [ARCH] The front of a building or a face of a building, given special architectural treatment.

face [ANAT] The anterior portion of the head, including the forehead and jaws. [CRYSTAL] *See* crystal face. [ELECTR] *See* faceplate. [GEOL] **1.** The main surface of a landform. **2.** The original surface of a layer of rock. [GRAPHICS] **1.** A particular style or size of letter as distinguished from another style or size. Also known as typeface. **2.** The printing surface of a printing plate or the front surface of a piece of paper. [MIN ENG] A surface on which mining operations are being performed. Also known as breast. [TEXT] The side of a fabric which is more attractive than the other side because of features such as weave, luster, or finish.

face angle [MATH] An angle between two successive edges of a polyhedral angle.

face area [MIN ENG] The working area toward the interior of the last open crosscut in an entry or room.

face belt conveyor [MIN ENG] A lightweight belt conveyor used at the working face in a mine.

face-bonding [ELECTR] Method of assembling hybrid microcircuits wherein semiconductor chips are provided with small mounting pads, turned facedown, and bonded directly to the ends of the thin-film conductors on the passive substrate.

face boss [MIN ENG] A foreman in charge of operations at the working face in a bituminous coal mine.

face brick [MATER] A brick of some esthetic quality to be used on the exposed surface of a building wall or other structure.

face-bridging ligand [ORG CHEM] A ligand that forms a bridge over one triangular face of the polyhedron of a metal cluster structure.

face-centered cubic lattice [CRYSTAL] A lattice whose unit cells are cubes, with lattice points at the center of each face of the cube, as well as at the vertices. Abbreviated fcc lattice.

face-centered orthorhombic lattice [CRYSTAL] An orthorhombic lattice which has lattice points at the center of each face of a unit cell, as well as at the vertices.

face conveyor [MIN ENG] Any type of mine conveyor used at and parallel to a working face.

face-discharge bit [MECH ENG] A liquid-coolant bit designed for drilling in soft formations and for use on a double-tube core barrel, the inner tube of which fits snugly into a recess cut into the inside wall of the bit directly above the inside reaming stones; the coolant flows through the bit and is ejected at the cutting face. Also known as bottom-discharge bit; face-ejection bit.

faced wall [BUILD] A wall whose masonry facing and backing are of different materials.

face-ejection bit *See* face-discharge bit.

face feed [MET] In brazing or soldering, the deposition of filler metal to the joint, usually by hand.

face gear [DES ENG] A gear having teeth cut on the face.

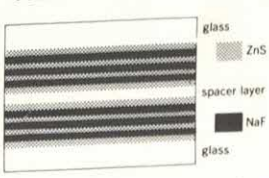
face haulage *See* primary haulage.

face height [MIN ENG] The vertical distance between the top and toe of a quarry or opencast face.

facellite *See* kaliophillite.

faceman [MIN ENG] A coal miner who performs the duties involved in drilling underground openings into which explo-

FABRY-PEROT FILTER



Schematic diagram of seven-layer solid Fabry-Perot filter. *(From D. E. Gray, ed., American Institute of Physics Handbook, McGraw-Hill, 1957)*

sives are charged and set off, to extract coal, slate, and rock. Also known as coal digger; coal getter.

face mechanization [MIN ENG] The use of a cutter-loader on a longwall face.

face milling [MECH ENG] Milling flat surfaces perpendicular to the rotational axis of the cutting tool.

face mold [ENG] A pattern for cutting forms out of sheets of wood, metal, or other material.

face nailing [ENG] Nailing of facing wood to a base, leaving the nailheads exposed.

face of a geometric simplex [MATH] Any simplex whose vertices are also vertices of the original simplex.

face of weld [MET] The exposed surface on the welded side of an arc weld or gas weld.

faceplate [ELECTR] The transparent or semitransparent glass front of a cathode-ray tube, through which the image is viewed or projected; the inner surface of the face is coated with fluorescent chemicals that emit light when hit by an electron beam. Also known as face. [ENG] **1.** A disk fixed perpendicularly to the spindle of a lathe and used for attachment of the workpiece. **2.** A protective plate used to cover holes in machines or other devices. **3.** In scuba or skin diving, a glass or plastic window positioned over the face to provide an air space between the diver's eyes and the water.

face sampling [MIN ENG] Taking random samples of ore and rock from exposed faces of ore and waste.

face shield [ENG] A detachable wraparound guard fitted to a worker's helmet to protect the face from flying particles.

face signal [MIN ENG] A wire stretched along the face and connected to a panel near the main gate to control the running of a face conveyor.

facet [ANAT] A small plane surface, especially on a bone or a hard body; may be produced by wear, as a worn spot on the surface of a tooth. [GEOGR] Any part of an intersecting surface that constitutes a unit of geographic study, for example, a flat or a slope. [INV ZOO] The surface of a simple eye in the compound eye of arthropods and certain other invertebrates. [MATER] The plane surface of a crystal, a cut precious stone, or other fractured surface.

faceted pebble [GEOL] A pebble with three or more faces naturally worn flat and meeting at sharp angles.

faceted spur [GEOL] A spur or ridge with an inverted-V face resulting from faulting or from the trimming, beveling, or truncating motion of streams, waves, or glaciers.

face tile [MATER] Tile with one finished surface, intended for use on a face.

face timbering [MIN ENG] Positioning of safety posts at the working portion of a coal face to support the roof of the mine.

face veneer [MATER] Wood veneer selected for its decorative qualities rather than its strength.

facework [CIV ENG] Ornamental or otherwise special material on the front side or outside of a wall.

face worker [MIN ENG] A miner who works regularly at the face.

facial angle [ANTHRO] The angle formed by the union of a line connecting nasion and gnathion with the Frankfort horizontal plane of the head.

facial artery [ANAT] The external branch of the external carotid artery.

facial bone [ANAT] The bone comprising the nose and jaws, formed by the maxilla, zygoma, nasal, lacrimal, palatine, inferior nasal concha, vomer, mandible, and parts of the ethmoid and sphenoid.

facial index [ANTHRO] The ratio of the breadth of the face to its length multiplied by 100.

facial nerve [ANAT] The seventh cranial nerve in vertebrates; a paired composite nerve, with motor elements supplying muscles of facial expression and with sensory fibers from the taste buds of the anterior two-thirds of the tongue and from other sensory endings in the anterior part of the throat.

facies [ANAT] Characteristic appearance of the face in association with a disease or abnormality. [ECOL] The makeup or appearance of a community or species population. [GEOL] Any observable attribute or attributes of a rock or stratigraphic unit, such as overall appearance or composition, of one part of the rock or unit as contrasted with other parts of the same rock or unit.

facies map [GEOL] A stratigraphic map indicating distribution of sedimentary facies within a specific geologic unit.

facility assignment [COMPUT SCI] The allocation of core memory and external devices by the executive as required by the program being executed.

facility dispersion [COMMUN] The distribution of circuits between two points over more than one physical or geographic route to reduce the likelihood of a trunk group being put completely out of service by facility damage or other circuit failure.

facility security clearance [ORD] An administrative determination that, from a security viewpoint, a facility is eligible for access to classified information of a certain category (and all lower categories).

facing [CIV ENG] A covering or casting of some material applied to the outer face of embankments, buildings, and other structures. [MECH ENG] Machining the end of a flat rotating surface by applying a tool perpendicular to the axis of rotation in a spiral planar path. [MET] A fine molding sand applied to the face of a mold.

facing-point lock [CIV ENG] A lock used on a railroad track, such as a switch track, which contains a plunger that engages a rod on the switch point to lock the device.

facing wall [CIV ENG] Concrete lining against the earth face of an excavation; used instead of timber sheeting.

facsimile [COMMUN] **1.** A system of communication in which a transmitter scans a photograph, map, or other fixed graphic material and converts the information into signal waves for transmission by wire or radio to a facsimile receiver at a remote point. Also known as fax; phototelegraphy; radiophoto; telephoto; telephotography; wirephoto. **2.** A photograph transmitted by radio to a facsimile receiver. Also known as radiophoto. [GRAPHICS] An exact copy of a book, document, painting, or other material.

facsimile chart [METEOROL] Any graphic form of weather information, usually a type of synoptic chart, which has been reproduced by facsimile equipment. Also known as fax chart; fax map.

facsimile modulation [COMMUN] Process in which the amplitude, frequency, or phase of a transmitted wave is varied with time in accordance with a facsimile transmission signal.

facsimile posting [COMPUT SCI] The process of transferring by a duplicating process a printed line of information from a report, such as a listing of transactions prepared on an accounting machine, to a ledger or other recorded sheet.

facsimile receiver [ELECTR] The receiver used to translate the facsimile signal from a wire or radio communication channel into a facsimile record of the subject copy.

facsimile recorder [ELECTR] The section of a facsimile receiver that performs the final conversion of electric signals to an image of the subject copy on the record medium.

facsimile signal [COMMUN] The picture signal produced by scanning the subject copy in a facsimile transmitter.

facsimile signal level [ELECTR] Maximum facsimile signal power or voltage (root mean square or direct current) measured at any point in a facsimile system.

facsimile synchronizing [ELECTR] Maintenance of predetermined speed relations between the scanning spot and the recording spot within each scanning line.

facsimile telegraph [COMMUN] A telegraph system designed to transmit pictures.

facsimile transmitter [ELECTR] The apparatus used to translate the subject copy into facsimile signals suitable for delivery over a communication system.

factor I *See* fibrinogen.

factor II *See* prothrombin.

factor III *See* thromboplastin.

factor IV [BIOCHEM] Calcium ions involved in the mechanism of blood coagulation.

factor V *See* proaccelerin.

factor VII [BIOCHEM] A procoagulant, related to prothrombin, that is involved in the formation of a prothrombin-converting principle which transforms prothrombin to thrombin. Also known as stable factor.

factor VIII *See* antihemophilic factor.

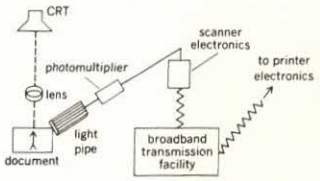
factor IX *See* Christmas factor.

factor X *See* Stuart factor.

factor XI [BIOCHEM] A procoagulant present in normal blood but deficient in hemophiliacs. Also known as plasma thromboplastin antecedent (PTA).

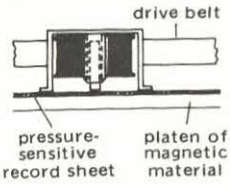
factor XII [BIOCHEM] A blood clotting factor effective experimentally only in vitro; deficient in hemophiliacs. Also known as Hageman factor.

FACSIMILE



The scanning and transmission components of a facsimile system that uses a cathode-ray-tube (CRT) flying-spot scanner.

FACSIMILE RECORDER



Magnetically driven stylus for recording on a pressure-sensitive record sheet.

factorable polynomial [MATH] A polynomial which has polynomial factors other than itself.

factor analysis [MATH] Given sets of variables which are related linearly, factor analysis studies techniques of approximating each set relative to the others; usually the variables denote numbers.

factor comparison [IND ENG] A quantitative system of job evaluation in which jobs are given relative positions on a rating scale based on a comparison of factors composing the job with certain previously selected key jobs.

factor group *See* quotient group.

factorial design [STAT] A design for an experiment that allows the experimenter to find out the effect levels of each factor on levels of all the other factors.

factorial of a positive integer n [MATH] The product of all positive integers less than or equal to n; written $n!$; by convention $0! = 1$.

factoring [MATH] Finding the factors of an integer or polynomial.

factoring of the secular equation [MATH] Factoring the polynomial that results from expanding the secular determinant of a matrix, in order to find the roots of this polynomial, which are the eigenvalues of the matrix.

factor model [STAT] Any one of the probability models which goes into the construction of a product model.

factor of an integer [MATH] Any integer which when multiplied by another integer gives the original integer.

factor of a polynomial [MATH] Any polynomial which when multiplied by another polynomial gives the original polynomial.

factor of proportionality [MATH] Two quantities A and B are related by a factor of proportionality μ if either $A = \mu B$ or $B = \mu A$.

factor of safety [MECH] **1.** The ratio between the breaking load on a member, appliance, or hoisting rope and the safe permissible load on it. Also known as safety factor. **2.** *See* factor of stress intensity.

factor of stress concentration [MECH] Any irregularity producing localized stress in a structural member subject to load. Also known as fatigue-strength reduction factor.

factor of stress intensity [MECH] The ratio of the maximum stress to which a structural member can be subjected, to the maximum stress to which it is likely to be subjected. Also known as factor of safety.

factor of subdivision [NAV ARCH] An arbitrary factor used in computing allowable floodable length of ships after damage, set up by regulations and international convention.

factor ring *See* quotient ring.

factor space *See* quotient space.

factor theorem of algebra [MATH] A polynomial $f(x)$ has $(x - a)$ as a factor if and only if $f(a) = 0$.

factory [IND ENG] A building or group of buildings where goods are manufactured.

factory-data collection [COMPUT SCI] The continuous input of data achieved in a working area by having the worker insert a precoded card into a device connected to a computer.

factory lumber [MATER] Softwood lumber graded and used in the factory for the manufacture of such items as doors, sashes, moldings, and so on.

factory ship [NAV ARCH] A ship equipped both to catch and to process fish into products such as frozen filet, frozen whole fish, and fish meal.

facula [ASTRON] Any of the large patches of bright material forming a veined network in the vicinity of sunspots; faculae appear to be more permanent than sunspots and are probably due to elevated clouds of luminous gas.

facultative aerobe [MICROBIO] An anaerobic microorganism which can grow under aerobic conditions.

facultative anaerobe [MICROBIO] A microorganism that grows equally well under aerobic and anaerobic conditions.

facultative parasite [ECOL] An organism that can exist independently but may be parasitic on certain occasions, such as the flea.

facultative photoheterotroph [MICROBIO] Any bacterium that usually grows anaerobically in light but can also grow aerobically in the dark.

FAD *See* flavin adenine dinucleotide.

fade chart [ELECTROMAG] Graph on which the null areas of an air-search radar antenna are plotted as an aid to estimating target altitude.

fade-in [COMMUN] A gradual increase in signal strength, as at the start of a radio or television program or when changing to a new scene, to make sound volume and picture brightness increase gradually. [GRAPHICS] In motion pictures, the gradual emergence of a screen image from black.

fade-out [COMMUN] A gradual and temporary loss of a received radio or television signal due to magnetic storms, atmospheric disturbances, or other conditions along the transmission path.

fader [ELECTR] A multiple-unit level control used for gradual changeover from one microphone, audio channel, or television camera to another.

fading [COMMUN] Variations in the field strength of a radio signal, usually gradual, that are caused by changes in the transmission medium.

fading margin [COMMUN] **1.** Number of decibels of attenuation which may be added to a specified radio-frequency propagation path before the signal-to-noise ratio of a specified channel falls below a specified minimum. **2.** Allowance made in radio system planning to accommodate estimated fading.

Fagaceae [BOT] A family of dicotyledonous plants in the order Fagales characterized by stipulate leaves, seeds without endosperm, female flowers generally not in catkins, and mostly three styles and locules.

Fagales [BOT] An order of dicotyledonous woody plants in the subclass Hamamelidae having simple leaves and much reduced, mostly unisexual flowers.

Fagergren cell [MIN ENG] A froth-flotation cell in which a squirrel-cage rotor is driven concentrically in a vertical stator, so that air is drawn down the rotor shaft and dispersed into the pulp.

Fagersta cut [MIN ENG] A cut drilled with handheld equipment in two steps, first as a pilot hole and then as an enlargement of this hole.

fagopyrism [VET MED] Photosensitization of the skin and mucous membranes, accompanied by convulsions; produced especially in sheep and swine by feeding on the buckwheat plant, *Fagopyrum sagittatum*, or clovers and grasses containing flavin or carotene and xanthophyll.

fahlband [GEOL] A stratum containing metal sulfides; occurs in crystalline rock.

fahlore *See* tetrahedrite.

Fahnestock clip [ELEC] A spring-type terminal to which a temporary connection can readily be made.

Fahrenheit scale [THERMO] A temperature scale; the temperature in degrees Fahrenheit (°F) is the sum of 32 plus 9/5 the temperature in degrees Celsius; water at 1 atmosphere (101, 325 newtons per square meter) pressure freezes very near 32°F and boils very near 212°F.

Fahrenheit's hydrometer [ENG] A type of hydrometer which carries a pan at its upper end in which weights are placed; the relative density of a liquid is measured by determining the weights necessary to sink the instrument to a fixed mark, first in water and then in the liquid being studied.

failed hole [ENG] A drill hole loaded with dynamite which did not explode. Also known as missed hole.

fail-safe system [ENG] A system designed so that failure of power, control circuits, structural members, or other components will not endanger people operating the system or other people in the vicinity.

failsafe tape *See* incremental dump tape.

failure [MECH] Condition caused by collapse, break, or bending, so that a structure or structural element can no longer fulfill its purpose.

failure logging [COMPUT SCI] The automatic recording of the state of various components of a computer system following detection of a machine fault; used to initiate corrective procedures, such as repeating attempts to read or write a magnetic tape, and to aid customer engineers in diagnosing errors.

failure rate [ENG] The probability of failure per unit of time of items in operation; sometimes estimated as a ratio of the number of failures to the accumulated operating time for the items.

fair [METEOROL] Generally descriptive of pleasant weather conditions, with regard for location and time of year; it is subject to popular misinterpretation, for it is a purely subjective description; when this term is used in forecasts of the U.S. Weather Bureau, it is meant to imply no precipitation, less than 0.4 sky cover of low clouds, and no other extreme conditions of cloudiness or windiness.

fairchildite [MINERAL] $K_2Ca(CO_3)_2$ A mineral composed of potassium calcium carbonate; occurs in partly burned trees.

fair curves [NAV ARCH] Curves which are smooth without sharp changes in direction over any portion of their length.

faired cable [DES ENG] A trawling cable covered by streamlined surfaces to reduce hydrodynamic drag.

fairfieldite [MINERAL] $Ca_2Mn(PO_4)_2 \cdot 2H_2O$ A white or pale-yellow mineral composed of hydrous calcium manganese phosphate and occurring in foliated or fibrous form.

fair game [MATH] A game in which all of the participants have equal expectation of gain.

fairing [AERO ENG] A structure or surface on an aircraft or rocket that functions to reduce drag, such as the streamlined nose of a satellite-launching rocket.

fairlead [AERO ENG] A guide through which an airplane antenna or control cable passes. [MECH ENG] A group of pulleys or rollers used in conjunction with a winch or similar apparatus to permit the cable to be reeled from any direction. [NAV ARCH] A block, ring, or other fitting through which passes a line or the running rigging on a ship to prevent chafing.

fair line [NAV ARCH] A line formed by the intersection of a plane with a ship's surface, which surface is smooth and is such as to minimize resistance to the ship's motion.

fair tide [NAV] A tidal current setting in such a direction as to increase the speed of a vessel.

fairwater [NAV ARCH] A device for making fair the lines of an underwater fitting.

fairway [NAV] Open water of sufficient depth for navigation; a marine thoroughfare.

fairway buoy [NAV] A buoy indicating a fairway, having safe water on both sides.

fair-weather cumulus *See* cumulus humilis cloud.

fair wind *See* favorable wind.

fairy ring spot [PL PATH] A fungus disease of carnations caused by *Heterosporium echinulatum*, producing bleached spots with concentric dark zones on the leaves.

fairy stone *See* staurolite.

fake [NAV ARCH] To lay a rope or chain down in long bights side by side or in coils in regular order.

fake set *See* false set.

falcate [ASTRON] Crescent-shaped; applied usually to the appearance of the moon, Venus, and Mercury during their crescent phases. [BIOL] Shaped like a sickle.

falciform [BIOL] Sickle-shaped.

falciform ligament [ANAT] The ventral mesentery of the liver; its peripheral attachment extends from the diaphragm to the umbilicus and contains the round ligament of the liver.

falciparum malaria [MED] A severe form of malaria caused by *Plasmodium falciparum* and characterized by sudden attacks of chills, fever, and sweating at irregular intervals; the infecting organism usually localizes in a specific organ, causing capillary blockage. Also known as aged malaria; estivoautumnal malaria; malignant malaria; pernicious malaria.

falcon [VERT ZOO] Any of the highly specialized diurnal birds of prey composing the family Falconidae; these birds have been captured and trained for hunting.

Falcon [ORD] A U.S. Air Force air-to-air guided missile having either radar or infrared homing guidance, a speed of about Mach 2, and a range of about 5 miles (8 kilometers); can be carried in quantity by interceptor aircraft.

Falconbridge process [MET] Recovery of nickel from a nickel-copper matte; the matte is first crushed and roasted to remove sulfur, and the copper is acid-leached, filtered off, and electrolyzed; the residual solids are melted, cast as anodes, and refined electrolytically to produce nickel.

Falconidae [VERT ZOO] The falcons, a family consisting of long-winged predacious birds in the order Falconiformes.

Falconiformes [VERT ZOO] An order of birds containing the diurnal birds of prey, including falcons, hawks, vultures, and eagles.

falculate [ZOO] Curved and with a sharp point.

Fales-Stuart windmill [MECH ENG] A windmill developed for farm use from the two-blade airfoil propeller. Also known as Stuart windmill.

Falk flexible coupling [MECH ENG] A spring coupling in which a continuous steel spring is threaded back and forth through axial slots in the periphery of two hubs on the shaft ends.

FALES-STUART WINDMILL

Fales-Stuart windmill for farm use.

FALL LINE

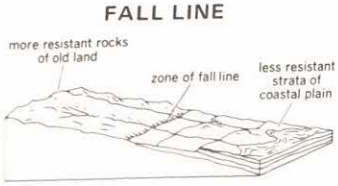


Diagram showing zone of fall line.

Falkland Current [OCEANOGR] An ocean current flowing northward along the Argentine coast.

fall [ASTRON] **1.** Of a spacecraft or spatial body, to drop toward a spatial body under the influence of its gravity. **2.** *See* autumn. [MECH ENG] The rope or chain of a hoisting tackle. [MIN ENG] A mass of rock, coal, or ore which has fallen from the roof or side in any subterranean working or gallery.

fallaway section [AERO ENG] A section of a rocket vehicle that is cast off from the vehicle during flight, especially such a section that falls back to the earth.

fallback [COMPUT SCI] The system, electronic or manual, which is substituted for the computer system in case of breakdown. [GEOL] Fragmented ejecta from an impact or explosion crater during formation which partly refills the true crater almost immediately. [NUCLEO] That part of the material carried into the air by an atomic explosion which ultimately drops back to the earth or water at the site of the explosion.

fall block [MECH ENG] A pulley block that rises and falls with the load on a lifting tackle.

faller [MECH ENG] A machine part whose operation depends on a falling action.

falling-ball viscometer *See* falling-sphere viscometer.

falling body [MECH] A body whose motion is accelerated toward the center of the earth by the force of gravity, other forces acting on it being negligible by comparison.

falling disease [VET MED] A terminal manifestation of copper deficiency in which the animal collapses and dies because of heart failure.

falling-drop method [PHYS] Technique for measurement of liquid densities in which the time of fall of a drop of the sample liquid through a reference liquid is measured.

falling film [FL MECH] A theoretical liquid film that moves downward in even flow on a vertical surface in laminar flow; the concept is used for heat- and mass-transfer calculations.

falling-film cooler [ENG] Liquid cooling system in which the cooling liquid flows down vertical tube exterior surfaces in a thin film, and hot process fluid flows upward through the tubes.

falling-film evaporator [ENG] Liquid evaporator system with heated vertical tubes; liquid to be evaporated flows down the inside tube surfaces as a film, evaporating as it flows.

falling-film molecular still *See* falling-film still.

falling-film still [CHEM ENG] Special molecular distillation apparatus designed for high evaporative and separation efficiency. Also known as falling-film molecular still.

falling-sphere viscometer [ENG] A viscometer which measures the speed of a spherical body falling with constant velocity in the fluid whose viscosity is to be determined. Also known as falling-ball viscometer.

falling tide *See* ebb tide.

fall line [GEOL] **1.** The zone or boundary between resistant rocks of older land and weaker strata of plains. **2.** The line indicated by the edge over which a waterway suddenly descends, as in waterfalls.

falloff curve [PETRO ENG] Graphical representatation of bottom-hole pressure falloff for a shut-in well as the reservoir drainage area expands.

fall of ground [MIN ENG] The fall of rock from the roof into a mine opening.

Fallopian tube [ANAT] Either of the paired oviducts that extend from the ovary to the uterus for conduction of the ovum in mammals.

fallout [NUCLEO] The material that descends to the earth or water well beyond the site of a surface or subsurface nuclear explosion. Also known as atomic fallout; radioactive fallout.

fallout area [NUCLEO] The area on which radioactive materials have settled out, or the area on which it is predicted from weather conditions that radioactive materials may settle out.

fallout shelter [CIV ENG] A structure that affords some protection against fallout radiation and other effects of nuclear explosion; maximum protection is in reinforced concrete shelters below the ground. Also known as radiation shelter.

fallout winds [METEOROL] Tropospheric winds that carry the radioactive fallout materials, observed by standard winds-aloft observation techniques.

fallow [AGR] Pertaining to land normally used for crop production but left unsown for one or more growing seasons.

fall streaks *See* virga.

fall-streak hole [METEOROL] A hole occurring in a cloud layer of supercooled water droplets; produced by the local

freezing of some of the droplets and their coversion into fallout, frequently in a streak form.

Fallstreifen *See* virga.

fall time [ELEC] Measure of time required for a circuit to change its output from a high level to a low level.

fall velocity *See* settling velocity.

fall wind [METEOROL] A strong, cold, downslope wind, differing from a foehn in that the initially cold air remains relatively cold despite adiabatic warming upon descent, and from the gravity wind in that it is a larger-scale phenomenon prerequiring an accumulation of cold air at high elevations.

false acceptance [STAT] Accepting on the basis of a statistical test a hypothesis which is wrong.

false alarm [ELECTR] In radar, an indication of a detected target even though one does not exist, due to noise or interference levels exceeding the set threshold of detection.

false attic [BUILD] A section under a roof normally occupied by an attic, but which has no windows and does not enclose rooms.

false bedding [GEOL] An inclined bedding produced by currents.

false blossom [PL PATH] **1.** A fungus disease of the cranberry caused by *Exobasidium oxycocci;* erect flower buds are formed which produce malformed flowers that set no fruit. Also known as rosebloom. **2.** A similar virus disease of the cranberry transmitted by the leafhopper, *Scleroracus vaccinii*. Also known as Wisconsin false blossom.

false body [PHYS CHEM] The property of certain colloidal substances, such as paints and printing inks, of solidifying when left standing.

false bottom [CIV ENG] A temporary bottom installed in a caisson to add to its buoyancy. [MET] An insert put in either member of a die set to increase the strength and improve the life of the die. [MIN ENG] A flat, hexagonal or cylindrical iron die upon which ore is crushed in a stamp mill.

false cirrus cloud [METEOROL] Cirrus composed of the debris of the upper frozen parts of a cumulonimbus cloud.

false cleavage [GEOL] **1.** A weak cleavage at an angle to the slaty cleavage. **2.** Spaced surfaces about a millimeter apart along which a rock splits.

false drop *See* false retrieval.

false drumlin *See* rock drumlin.

false form *See* pseudomorph.

false galena *See* sphalerite.

false header [CIV ENG] A half brick used to complete a visible bond; it is not a header.

false horizon [NAV] A line resembling the visible horizon but above or below it.

false ice foot [OCEANOGR] Ice that forms along a beach terrace and attaches to it just above the high-water mark; derived from water coming from melting snow above the terrace.

false lapis *See* lazulite.

false ligament [ANAT] Any peritoneal fold which is not a true supporting ligament.

false light [NAV] A light which is unavoidably exhibited by an aid to navigation and which is not intended to be a part of the proper characteristic of the light, such as reflections from storm panes.

false ogive [ORD] A rounded or pointed hollow cup added to the nose of a projectile to improve streamlining. Also known as ballistic cap.

false oolith *See* pseudo-oolith.

false pyroelectricity *See* tertiary pyroelectricity.

false rejection [STAT] Rejecting on the basis of a statistical test a hypothesis which is correct.

false retrieval [COMPUT SCI] An item retrieved in an automatic library search which is unrelated or vaguely related to the subject of the search. Also known as false drop.

false rib [ANAT] A rib that is not attached to the sternum directly; any of the five lower ribs on each side in humans.

false ring [BOT] A layer of wood that is less than a full season's growth and often does not form a complete ring.

false set [MATER] Rapid hardening of freshly mixed cement paste, mortar, or concrete with minimum evolution of heat; plasticity can be restored by mixing without addition of water. [MIN ENG] A light, temporary lagging set of timber supporting the side and roof lagging until the drive is advanced sufficiently to allow the heavy permanent set to be put, at which time the false set is taken out and used again in advance of the next permanent set. Also known as fake set.

false smut [PL PATH] **1.** A fungus disease of palm caused by *Graphiola phoenicis* and characterized by small cylindrical protruding pustules, often surrounded by yellowish leaf tissue. **2.** *See* green smut.

false sorts [COMPUT SCI] Entries irrelevant to the subject sought which are retrieved in a search.

false stull [MIN ENG] A stull so placed as to offer support or reinforcement for a stull, prop, or other timber.

false target [ELECTR] A nonexistent target which shows up on a radar scope as the result of time delay.

false target generator [ELECTR] An electronic countermeasure device that generates a delayed return signal on an enemy radar frequency to give erroneous position information.

false topaz *See* citrine.

false twist [TEXT] A method by which certain synthetic yarns are given stretch characteristics; yarns are wound under heat to eliminate the twist, but because of the yarns' tendency to retain the twist, fabrics made from them have elasticity. Also known as memory twist.

false warm sector [METEOROL] The sector, in a horizontal plane, between the occluded front and a secondary cold front of an occluded cyclone.

false white rainbow *See* fogbow.

falsework [CIV ENG] A temporary support used until the main structure is strong enough to support itself.

faltung [MATH] A family of functions where the convolution of any two members of the family is also a member of the family. Also known as convolution family.

falx [ANAT] A sickle-shaped structure.

famatinite [MINERAL] Cu_3SbS_4 A reddish-gray mineral composed of copper antimony sulfide.

familial [BIOL] Of, pertaining to, or occurring among the members of a family.

familial aldosterone deficiency [MED] A hereditary metabolic disorder, probably due to a defect in the enzyme involved in dehydrogenation of 18-hydroxycorticosterone to aldosterone, characterized by growth retardation and hypoaldosteronism.

familial dysautonomia [MED] A hereditary disease transmitted as an autosomal recessive and characterized from infancy by evidence of autonomic nervous system dysfunction, including feeding difficulties, absence of overflow tears, indifference to pain, absent corneal reflexes and deep tendon reflexes, and absence of fungiform papillae on the tongue; most common in Jewish children.

familial Mediterranean fever [MED] A hereditary disease of unknown cause characterized by recurrent fever, abdominal and chest pain, arthralgia, and rash, sometimes terminating in renal failure. Abbreviated FMF. Also known as familial recurring polyserositis; periodic disease; periodic peritonitis.

familial osteochondrodystrophy *See* Morquio's syndrome.

familial polyposis [MED] A hereditary condition transmitted as an autosomal dominant and characterized by the appearance of polyps in the small intestine and colon; malignant degeneration is common.

familial recurring polyserositis *See* familial Mediterranean fever.

familial splenic anemia *See* Gaucher's disease.

family [CHEM] A group of elements whose chemical properties, such as valence, solubility of salts, and behavior toward reagents, are similar. [SYST] A taxonomic category based on the grouping of related genera.

family mold [ENG] A multicavity injection mold where each cavity forms a component part of the finished product.

famphur [ORG CHEM] $C_{10}H_{16}NO_5PS_2$ A crystalline compound with a melting point of 55°C; slightly soluble in water; used as an insecticide for lice and grubs of reindeer and cattle. Also known as *O,O*-dimethyl-*O*-[(*para*-dimethylsulfamoyl)-phenyl]phosphorothioate.

fan [AGR] A mechanical device used for winnowing grain. [BIOL] Any structure, such as a leaf or the tail of a bird, resembling an open fan. [ELECTROMAG] Volume of space periodically energized by a radar beam (or beams) repeatedly traversing an established pattern. [GEOL] A gently sloping, fan-shaped feature usually found near the lower termination of a canyon. [MECH ENG] **1.** A device, usually consisting of a rotating paddle wheel or an airscrew, with or without a casing, for producing currents in order to circulate, exhaust, or deliver large volumes of air or gas. **2.** A vane to keep the sails of a windmill facing the direction of the wind.

fan antenna [ELECTROMAG] An array of folded dipoles of

different length forming a wide-band ultra-high-frequency or very-high-frequency antenna.

fan beam [ELECTROMAG] **1.** A radio beam having an elliptically shaped cross section in which the ratio of the major to the minor axis usually exceeds 3 to 1; the beam is broad in the vertical plane and narrow in the horizontal plane. **2.** A radar beam having the shape of a fan.

fan brake [MECH ENG] A fan used to provide a load for a driving mechanism.

Fanconi's anemia [MED] An infantile anemia that resembles pernicious anemia; related to excessive chromosomal breakage and associated with the risk of developing leukemia.

Fanconi's syndrome *See* amino diabetes.

fan cut [ENG] A cut in which holes of equal or increasing length are drilled in a pattern on a horizontal plane or in a selected stratum to break out a considerable part of the plane or stratum before the rest of the round is fired.

fan drift [MIN ENG] The short tunnel connecting the upcast shaft with the exhaust fan.

fan-drift doors [MIN ENG] Isolation doors for each drift leading to each fan, when there are two fans at a mine.

fan drilling [ENG] **1.** Drilling boreholes in different vertical and horizontal directions from a single-drill setup. **2.** A radial pattern of drill holes from a setup.

fan efficiency [MECH ENG] The ratio obtained by dividing a fan's useful power output by the power input (the power supplied to the fan shaft); it is expressed as a percentage.

fan fold [GEOL] A fold of strata in which both limbs are overturned, forming a syncline or anticline.

fang [ANAT] The root of a tooth. [VERT ZOO] A long, pointed tooth, especially one of a venomous serpent.

fang bolt [DES ENG] A bolt having a triangular nut with sharp projections at its corners; used to attach metal pieces to wood.

fanglomerate [GEOL] Coarse material in an alluvial fan, with the rock fragments being only slightly worn.

fan-in [ELECTR] The number of inputs that can be connected to a logic circuit.

fanjet [AERO ENG] A turbojet engine whose performance has been improved by the addition of a fan which operates in an annular duct surrounding the engine.

fanlight [ARCH] A segmented semicircular window over a door or window.

fan marker *See* fan-marker beacon.

fan-marker beacon [NAV] A very-high frequency radio facility having a vertically directed fan beam interesecting an airway to provide a fix. Also known as fan marker; radio fan-marker beacon.

fanned-beam antenna [ELECTROMAG] Unidirectional antenna so designed that transverse cross sections of the major lobe are approximately elliptical.

fanning beam [ELECTROMAG] Narrow antenna beam which is repeatedly scanned over a limited arc.

Fanning friction factor [FL MECH] A dimensionless number used in studying fluid friction in pipes, equal to the pipe diameter times the drop in pressure in the fluid due to friction as it passes through the pipe, divided by the product of the pipe length and the kinetic energy of the fluid per unit volume. Symbolized f.

fanning mill [FOOD ENG] A device consisting of two vibrating screens and utilizing an air blast to clean and separate grain.

Fanning's equation [FL MECH] The equation expressing that frictional pressure drop of fluid flowing in a pipe is a function of the Reynolds number, rate of flow, acceleration due to gravity, and length and diameter of the pipe.

fanning strip [ELEC] Insulated board, often of wood, which serves to spread out the wires of a cable for distribution to a terminal board.

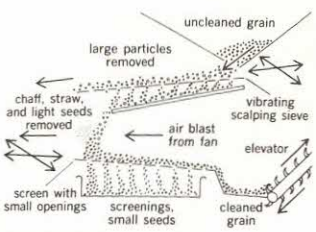
Fanno flow [FL MECH] An ideal flow used to study the flow of fluids in long pipes; the flow obeys the same simplifying assumptions as Rayleigh flow except that the assumption there is no friction is replaced by the requirement the flow be adiabatic.

fan-out [ELECTR] The number of parallel loads that can be driven from one output mode of a logic circuit.

fan rating [MECH ENG] The head, quantity, power, and efficiency expected from a fan operating at peak efficiency.

fan ring [DES ENG] Circular metallic collar encircling (but spaced away from) the tips of the fan blade in process equipment, such as air-cooled heat exchangers; ring design is critical to the efficiency of fan performance.

FANNING MILL



Fanning mill operation.

fan shaft [DES ENG] The spindle on which a fan impeller is mounted. [MIN ENG] The ventilating shaft to which a mine fan is connected.

fan-shaped delta *See* arcuate delta.

fan static pressure [MECH ENG] The total pressure rise diminished by the velocity pressure in the fan outlet.

fan shooting [ENG] Seismic exploration in which seismometers are placed in a fan-shaped array to detect anomalies in refracted-wave arrival times indicative of circular rock structures such as salt domes.

fantail [NAV ARCH] The area of the upper deck of a ship which is nearest the stern.

fan test [MECH ENG] Observations of the quantity, total pressure, and power of air circulated by a fan running at a known constant speed.

Fantl unit [BIOL] A unit for the standardization of thrombin.

fan total head [MECH ENG] The sum of the fan static head and the velocity head at the fan discharge corresponding to a given quantity of airflow.

fan total pressure [MECH ENG] The algebraic difference between the mean total pressure at the fan outlet and the mean total pressure at the fan inlet.

fan truss [CIV ENG] A truss with struts arranged as radiating lines.

fan vaulting [ARCH] Vaulting in which the ribs diverge like the rays of a fan.

fan velocity pressure [MECH ENG] The velocity pressure corresponding to the average velocity at the fan outlet.

farad [ELEC] The unit of capacitance in the meter-kilogram-second system, equal to the capacitance of a capacitor which has a potential difference of 1 volt between its plates when the charge on one of its plates is 1 coulomb, there being an equal and opposite charge on the other plate. Symbolized F.

faraday [PHYS] The electric charge required to liberate 1 gram-equivalent of a substance by electrolysis; experimentally equal to 96,487.0 ± 1.6 coulombs. Also known as Faraday constant.

Faraday birefringence [OPTICS] Difference in the indices of refraction of left and right circularly polarized light passing through matter parallel to an applied magnetic field; it is responsible for the Faraday effect.

Faraday cage *See* Faraday shield.

Faraday constant *See* faraday.

Faraday cylinder [ELEC] **1.** A closed, or nearly closed, hollow conductor, usually grounded, within which apparatus is placed to shield it from electrical fields. **2.** A nearly closed, insulated, hollow conductor, usually shielded by a second grounded cylinder, used to collect and detect a beam of charged particles.

Faraday dark space [ELECTR] The relatively nonluminous region that separates the negative glow from the positive column in a cold-cathode glow-discharge tube.

Faraday disk machine [ELECTROMAG] A device for demonstrating electromagnetic induction, consisting of a copper disk in which a radial electromotive force is induced when the disk is rotated between the poles of a magnet. Also known as Faraday generator.

Faraday effect [OPTICS] Rotation of polarization of a beam of linearly polarized light when it passes through matter in the direction of an applied magnetic field; it is the result of Faraday birefringence. Also known as Faraday rotation; Kundt effect; magnetic rotation.

Faraday generator *See* Faraday disk machine.

Faraday ice bucket experiment [ELEC] Experiment in which one lowers a charged metal body into a pail and observes the effect on an electroscope attached to the pail, with and without contact between body and pail; the experiment shows that charge resides on a conductor's outside surface.

Faraday rotation *See* Faraday effect.

Faraday rotation isolator *See* ferrite isolator.

Faraday screen *See* Faraday shield.

Faraday shield [ELEC] Electrostatic shield composed of wire mesh or a series of parallel wires, usually connected at one end to another conductor which is grounded. Also known as Faraday cage; Faraday screen.

Faraday's law of electromagnetic induction [ELECTROMAG] The law that the electromotive force induced in a circuit by a changing magnetic field is equal to the negative of the rate of change of the magnetic flux linking the circuit. Also known as law of electromagnetic induction.

Faraday's laws of electrolysis [PHYS CHEM] **1.** The amount of any substance dissolved or deposited in electrolysis is proportional to the total electric charge passed. **2.** The amounts of different substances dissolved or desposited by the passage of the same electric charge are proportional to their equivalent weights.

faradic current [ELEC] An intermittent and nonsymmetrical alternating current like that obtained from the secondary winding of an induction coil; used in electrobiology.

faradization [PHYSIO] Use of a faradic current to stimulate muscles and nerves.

farcy *See* glanders.

far-end crosstalk [COMMUN] Crosstalk that travels along the disturbed circuit in the same direction as desired signals in that circuit.

farewell buoy *See* sea buoy.

far field *See* Fraunhofer region.

farinaceous [BIOL] Having a mealy surface covering. [FOOD ENG] **1.** Containing starch or flour. **2.** Having the texture of meal. [GEOL] Of a rock or sediment, having a texture that is mealy, soft, and friable, for example, a limestone or a pelagic ooze.

Farinales [BOT] An order that includes several groups regarded as orders of the Commelinidae in other systems of classification.

far-infrared maser [ENG] A gas maser that generates a beam having a wavelength well above 100 micrometers, and ranging up to the present lower wavelength limit of about 500 micrometers for microwave oscillators.

far-infrared radiation [ELECTROMAG] Infrared radiation the wavelengths of which are the longest of those in the infrared region, about 50–1000 micrometers; requires diffraction gratings for spectroscopic analysis.

Farinosae [BOT] The equivalent name for Farinales.

farinose [AGR] Yielding farina, a fine meal of vegetable matter. [BIOL] Covered with a white powdery substance.

farm [AGR] A tract of land used for cultivating crops or raising animals.

farmer's lung [MED] An acute pulmonary disorder caused by the inhalation of spores from moldy hay or straw.

farmer's year [CLIMATOL] In Great Britain, the 12-month period starting with the Sunday nearest March 1.

farming [AGR] The skills and practices of agriculture.

farnesol [BIOCHEM] $C_{15}H_{25}OH$ A colorless liquid extracted from oils of plants such as citronella, neroli, cyclamen, and tuberose; it has a delicate floral odor, and is an intermediate step in the biological synthesis of cholesterol from mevalonic acid in vertebrates; used in perfumery.

Farnsworth image dissector tube *See* image dissector tube.

far point [OPTICS] The farthest point from an eye at which an object is distinctly seen; for a normal eye it is theoretically at infinity. Also known as punctum remotum.

far region *See* Fraunhofer region.

farringtonite [MINERAL] $Mg_3(PO_4)_2$ Colorless, wax-white, or yellow phosphate mineral known only in meteorites.

farsightedness *See* hypermetropia.

far-ultraviolet radiation [ELECTROMAG] Ultraviolet radiation in the wavelength range of 200–300 nanometers; germicidal effects are greatest in this range.

far vane [NAV] In marine operations, the instrument sighting vane on the opposite side of the instrument from the observer's eye.

far zone *See* Fraunhofer region.

fascia [BUILD] A wide board fixed vertically on edge to the rafter ends or wall which carries the gutter around the eaves of a roof. [HISTOL] Layers of areolar connective tissue under the skin and between muscles, nerves, and blood vessels.

fasciate [BOT] Having bands or stripes.

fasciation [PL PATH] Malformation of plant parts resulting from disorganized tissue growth.

fascicle [BOT] A small bundle, as of fibers or leaves.

fasciculate [BOT] Arranged in tufts or fascicles.

fasciculation potential [PHYSIO] An action potential which is quantitatively comparable to that of a motor unit and which represents spontaneous contraction of a bundle of muscle fibers.

fasciculus [ANAT] A bundle or tract of nerve, muscle, or tendon fibers isolated by a sheath of connective tissues and having common origins, innervation, and functions.

fascine [CIV ENG] A cylindrical bundle of brushwood 1–3 feet (30–90 centimeters) in diameter and 10–20 feet (3–6 meters) long, used as a facing for seawalls on riverbanks, as a foundation mat, as a dam in an estuary, or to protect bridge, dike, and pier foundations from erosion.

Fasciola hepatica [INV ZOO] A digenetic trematode which parasitizes sheep, cattle, and occasionally humans.

fasciole [INV ZOO] A band of cilia on the test of certain sea urchins.

fascioliasis [MED] The infection of humans with *Fasciola hepatica*.

fasciolopsiasis [MED] The presence of the parasite *Fasciolopsis buski* in a person's small intestine.

Fasciolopsis buski [INV ZOO] A large, fleshy trematode, native to eastern Asia and the southwestern Pacific, which parasitizes humans.

fascioscapulohumeral dystrophy [MED] A progressive hereditary form of muscular dystrophy involving atrophy of the muscles of the face, pectoral girdle, and upper arm.

fast [GRAPHICS] A relative term given to the speed of emulsion.

fast-access storage [COMPUT SCI] The section of a computer storage from which data can be obtained most rapidly.

fast automatic gain control [ELECTR] Radar automatic gain control method characterized by a response time that is long with respect to a pulse width, and short with respect to the time on target.

fast axis [OPTICS] The direction of the electrical displacement vector of light propagating in an anisotropic crystal with the greatest possible phase velocity corresponding to a specified direction of propagation.

fast break [MET] Interruption of the current in the magnetizing coil during nondestructive testing of magnetic particles; induces eddy currents and strong magnetization.

fast breeder reactor [NUCLEO] A type of fast reactor using highly enriched fuel in the core, fertile material in the blanket, and a liquid-metal coolant, such as sodium; high-speed neutrons fission the fuel in the compact core, and the excess neutrons convert fertile material to fissionable isotopes; the breeding ratio is 1.0 or larger. Abbreviated FBR.

fast-burst reactor [NUCLEO] A nuclear reactor that supplies microsecond pulses of fast neutrons for use in biomedical research.

fast chemical reaction [PHYS CHEM] A reaction with a half-life of milliseconds or less; such reactions occur so rapidly that special experimental techniques are required to observe their rate.

fast coupling [MECH ENG] A flexible geared coupling that uses two interior hubs on the shafts with circumferential gear teeth surrounded by a casing having internal gear teeth to mesh and connect the two hubs.

fast-delay detonation [ENG] The firing of blasts by means of a blasting timer or millisecond delay caps.

fast effect [NUCLEO] The reactivity change (increase in neutrons) due to fissions caused by fast neutrons in a thermal reactor.

fastener [DES ENG] **1.** A device for joining two separate parts of an article or structure. **2.** A device for holding closed a door, gate, or similar structure.

fastening [DES ENG] A spike, bolt, nut, or other device to connect rails to ties.

fastest mile [METEOROL] Over a specified period (usually the 24-hour observational day), the fastest speed, in miles per hour, of any mile of wind, with its accompanying direction.

fast fission [NUC PHYS] Fission caused by fast neutrons.

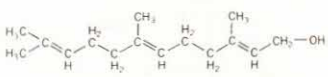
fast-fission factor [NUCLEO] The ratio of the number of neutrons produced by nuclear fissions due to neutrons of all energies in an infinite medium, to the number of neutrons produced by nuclear fissions due to thermal neutrons only.

fast Fourier transform [MATH] A Fourier transform employing the Cooley-Tukey algorithm to reduce the number of operations.

fast ice [HYD] Any type of sea, river, or lake ice attached to the shore (ice foot, ice shelf), beached (shore ice), stranded in shallow water, or frozen to the bottom of shallow waters (anchor ice). Also known as landfast ice. [OCEANOGR] Sea ice generally remaining in the position where originally formed and sometimes attaining a considerable thickness; it is attached to the shore or over shoals where it may be held in position by islands, grounded icebergs, or polar ice. Also known as coastal ice; coast ice.

fastigiate [BOT] **1.** Having erect branches that are close to

FARNESOL



Structural formula of farnesol.

the stem. **2.** Becoming narrower at the top. [ZOO] Arranged in a conical bundle.

fast ion *See* small ion.

fast-joint [ENG] Pertaining to a joint with a permanently secured pin.

fast line [PETRO ENG] In a drilling operation, the end of the drilling line that is attached to the drum or reel; it travels with greater velocity than any other part of the drilling line.

fast neutron [NUCLEO] A neutron having energy much greater than some arbitrary lower limit (that may be only a few thousand electron volts).

fast-neutron spectrometry [NUC PHYS] Neutron spectrometry in which nuclear reactions are produced by or yield fast neutrons; such reactions are more varied than in the slow-neutron case.

fast nova [ASTRON] A nova whose brightness rises quickly to a maximum, remains near maximum for a short time, and then decreases to the original value in a few years or less.

fast pin [ENG] A pin that fastens immovably, particularly the pin in a fast joint.

fast powder [MATER] Any explosive having a high-speed detonation.

fast reactor [NUCLEO] A nuclear reactor in which most of the fissions are produced by fast neutrons, with little or no moderator to slow down the neutrons.

fast-spiral drill *See* high-helix drill.

fast time constant [ELEC] An electric circuit which combines resistance and capacitance to give a short time constant for capacitor discharge through the resistor. [ELECTR] Circuit with short time constant used to emphasize signals of short duration to produce discrimination against low-frequency components of clutter in radar.

fast time scale [COMPUT SCI] In simulation by an analog computer, a scale in which the time duration of a simulated event is less than the actual time duration of the event in the physical system under study.

fast-vibration direction [OPTICS] The direction of the electric field vector of the ray of light that travels with the greatest velocity in an anisotropic crystal and therefore corresponds to the minimum refractive index.

fat [ANAT] Pertaining to an obese person. [BIOCHEM] Any of the glyceryl esters of fatty acids which form a class of neutral organic compounds. [PHYSIO] The chief component of fat cells and other animal and plant tissues.

fatal accident [MIN ENG] A coal mine accident in which less than five persons are killed and property damage is slight; excludes ignitions and mine fires.

fatal error [COMPUT SCI] An error in a computer program which causes running of the program to be terminated.

Fata Morgana [OPTICS] A complex mirage characterized by multiple distortions of images, generally in the vertical, so that such objects as cliffs or cottages are distorted and magnified into fantastic castles.

fat body [INV ZOO] A nutritional reservoir of fatty tissue surrounding the viscera or forming a layer beneath the integument in the immature larval stages of many insects. [VERT ZOO] A mass of adipose tissue attached to each genital gland in amphibians.

fat cell [HISTOL] The principal component of adipose connective tissue; two types are yellow fat cells and brown fat cells.

fat dye [MATER] A type of oil-soluble dye used in the coloring of candles and other wax products.

fate map [EMBRYO] A graphic scheme indicating the definite spatial arrangement of undifferentiated embryonic cells in accordance with their destination to become specific tissues.

fat embolus [MED] An embolus composed principally of fatty substances.

fathom [OCEANOGR] The common unit of depth in the ocean, equal to 6 feet (1.8288 meters).

fathom curve *See* isobath.

fatigue [ELECTR] The decrease of efficiency of a luminescent or light-sensitive material as a result of excitation. [MECH] Failure of a material by cracking resulting from repeated or cyclic stress. [PHYSIO] Exhaustion of strength or reduced capacity to respond to stimulation following a period of activity.

fatigue allowance [IND ENG] An adjustment to normal time to compensate for production time lost due to exhaustion of the worker.

fatigue factor [IND ENG] The element of physical and mental exhaustion in a time-motion study; the multiplier used to add the fatigue allowance to the normal time.

fatigue life [MECH] The number of applied repeated stress cycles a material can endure before failure.

fatigue limit [MECH] The maximum stress that a material can endure for an infinite number of stress cycles without breaking. Also known as endurance limit.

fatigue notch factor [MET] A notch, scratch, or other impairment on the surface of a metal resulting in premature failure of the metal.

fatigue notch sensitivity [MET] A measure of the reduction of fatigue strength of a metal resulting from a notch.

fatigue ratio [MECH] The ratio of the fatigue limit or fatigue strength to the static tensile strength. Also known as endurance ratio.

fatigue strength [MECH] The maximum stress a material can endure for a given number of stress cycles without breaking. Also known as endurance strength.

fatigue-strength reduction factor *See* factor of stress concentration.

fatigue test [ENG] Test to determine the range of alternating stress which a material can withstand without breaking.

fat liquoring agents [MATER] Oil-in-water emulsions used to replace oils in tanned (deoiled) leather hides.

fat-metabolizing hormone *See* ketogenic hormone.

fat mortar [MATER] Mortar that adheres to the trowel.

fat necrosis [MED] Pathologic death of adipose tissue often accompanied by soap production from the hydrolyzed fat; associated with pancreatitis.

fat oil [MATER] Enriched absorber oil that is drawn off from the absorber column after being saturated by hydrocarbon values stripped from a wet natural-gas stream.

Fatou-Lebesgue lemma [MATH] Given a sequence f_n of positive measurable functions on a measure space (X, μ), then

$$\int_X (\liminf_n f_n)\, d\mu \leq \liminf_n \int_X f_n\, d\mu.$$

fatty acid [ORG CHEM] An organic monobasic acid of the general formula $C_nH_{2n+1}COOH$ derived from the saturated series of aliphatic hydrocarbons; examples are palmitic acid, stearic acid, and oleic acid; used as a lubricant in cosmetics and nutrition, and for soaps and detergents.

fatty acid peroxidase [BIOCHEM] An enzyme present in germinating plant seeds which catalyzes the oxidation of the carboxyl carbon of fatty acids to carbon dioxide.

fatty-acid pitch *See* packing house pitch.

fatty acyl carnitine [BIOCHEM] Transport form of fatty acids which allows them to cross the mitochondrial membrane; formed by reaction of fatty acyl-coenzyme A with carnitine by employing the enzyme carnitine acyltransferase. Also known as acyl carnitine.

fatty acyl-coenzyme A [BIOCHEM] Activated form of fatty acids formed by the enzyme acyl-coenzyme A synthetase at the expense of adenosinetriphosphate. Also known as acyl-coenzyme A.

fatty alcohol [ORG CHEM] A high-molecular-weight, straight-chain primary alcohol derived from natural fats and oils; includes lauryl, stearyl, oleyl, and linoleyl alcohols; used in pharmaceuticals, cosmetics, detergents, plastics, and lube oils and in textile manufacture.

fatty amine [ORG CHEM] RCH_2NH_2 A normal aliphatic amine from oils and fats; used as a plasticizer, in medicine, as a chemical intermediate, and in rubber manufacture.

fatty ester [ORG CHEM] $RCOOR'$ A fatty acid in which the alkyl group (R') of a monohydric alcohol replaces the active hydrogen; for example, $RCOOCH_3$ from reaction of RCOOH with methane.

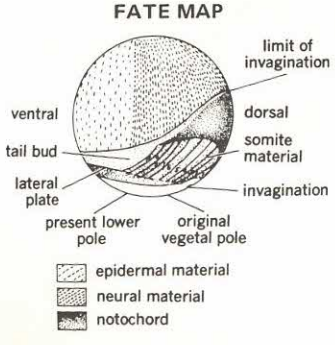
fatty infiltration [PHYSIO] Infiltration of an organ or tissue with excessive amounts of fats.

fatty metamorphosis [MED] Fatty degeneration, fatty infiltration, or both.

fatty nitrile [ORG CHEM] RCN An ester of hydrogen cyanide derived from fatty acid; used in lube oil additives and plasticizers, and as a chemical intermediate.

faucal [BIOL] Of or pertaining to the fauces. [INV ZOO] The opening of a spiral shell.

fauces [ANAT] The passage in the throat between the soft palate and the base of the tongue. [BOT] The throat of a calyx, corolla, or similar part.



A fate map for the beginning gastrula of a urodele shown in lateral view. *(After W. Vogt, 1926)*

faucet [ENG] A fixture through which water is drawn from a pipe or vessel.

faucial tonsil *See* palatine tonsil.

Faugeron kiln [ENG] A coal-fired tunnel kiln for firing feldspathic porcelain; the distinctive feature is the separation of the tunnel into a series of chambers by division walls on the cars and drop arches in the roof.

faujasite [MINERAL] $(Na_2,Ca)Al_2Si_4O_{12}\cdot 6H_2O$ Zeolite mineral of the sodalite group, crystallizing in the cubic system.

fault [ELEC] A defect, such as an open circuit, short circuit, or ground, in a circuit, component, or line. Also known as electrical fault; faulting. [ELECTR] Any physical condition that causes a component of a data-processing system to fail in performance. [GEOL] A fracture in rock along which the adjacent rock surfaces are differentially displaced.

fault basin [GEOL] A region depressed in relation to surrounding regions and separated from them by faults.

fault block [GEOL] A rock mass that is bounded by faults; the faults may be elevated or depressed and not necessarily the same on all sides.

fault-block mountain *See* block mountain.

fault breccia [GEOL] The assembly of angular fragments found frequently along faults. Also known as dislocation breccia.

fault cliff *See* fault scarp.

fault current *See* fault electrode current.

fault electrode current [ELEC] The current to an electrode under fault conditions, such as during arc-backs and load short circuits. Also known as fault current; surge electrode current.

fault escarpment *See* fault scarp.

fault finder [ENG] Test set for locating trouble conditions in communications circuits or systems.

faulting [ELEC] *See* fault. [GEOL] The fracturing and displacement processes which produce a fault.

fault ledge *See* fault scarp.

fault line [GEOL] Intersection of the fault surface with the surface of the earth or any other horizontal surface of reference. Also known as fault trace.

fault-line scarp [GEOL] A cliff produced when a soft rock erodes against hard rock at a fault.

fault masking [COMPUT SCI] Any type of hardware redundancy in which faults are corrected immediately and the operations of fault detection, location, and correction are indistinguishable.

fault plane [GEOL] A planar fault surface.

fault rock [GEOL] A rock often found along a fault plane and made up of fragments formed by the crushing and grinding which accompany a dislocation.

fault scarp [GEOL] A steep cliff formed by movement along one side of a fault. Also known as cliff of displacement; fault cliff; fault escarpment; fault ledge.

fault separation [GEOL] Apparent displacement of a fault measured on the basis of disrupted linear features.

fault strike [GEOL] The angular direction, with respect to north, of the intersection of the fault surface with a horizontal plane.

fault system [GEOL] Two or more fault sets which interconnect.

fault terrace [GEOL] A step on a slope, produced by displacement of two parallel faults.

fault throw [GEOL] The amount of vertical displacement of rocks due to faulting.

fault tolerance [SYS ENG] The capability of a system to perform its functions in accord with design specifications even in the presence of component failures.

fault trace *See* fault line.

fault trap [GEOL] Oil or gas reservoir formed by a structural trap limited in one or more directions by subterranean geological faulting.

fault-trough lake *See* sag pond.

fault vein [GEOL] A mineral vein deposited in a fault fissure.

fault wall [GEOL] The mass of rock on a particular side of a fault.

fault zone [GEOL] A fault expressed as an area of numerous small fractures. Also known as distributed fault.

fauna [ZOO] **1.** Animals. **2.** The animal life characteristic of a particular region or environment.

faunal extinction [EVOL] The worldwide death and disappearance of diverse animal groups under circumstances that suggest common and related causes. Also known as mass extinction.

faunal region [ECOL] A division of the zoosphere, defined by geographic and environmental barriers, to which certain animal communities are bound.

faunizone [GEOL] A bed characterized by fossils of a particular assemblage of fauna.

faunule [PALEON] The localized stratigraphic and geographic distribution of a particular taxon.

Faure storage battery [ELEC] A storage battery in which the plates consist of lead-antimony supporting grids covered with a lead oxide paste, immersed in weak sulfuric acid. Also known as pasted-plate storage battery.

Faust jig [MIN ENG] A plunger-type jig, usually built with multiple compartments; distinguished by synchronized plungers on both sides of the screen plate, withdrawal of refuse through kettle valves in each compartment, and discharge of the hutch periodically by means of hand valves.

favism [MED] An acute hemolytic anemia, usually in persons of Mediterranean area descent, occurring when an individual with glucose-6-phosphate dehydrogenase deficiency of erythrocytes eats the beans or inhales the pollen of *Vicia faba*.

favorable current [NAV] A current flowing in such a direction as to increase the speed of a vessel over the ground.

favorable wind [NAV] A wind which aids a craft in making progress in a desired direction; usually used in plural form and chiefly in connection with sailing vessels. Also known as fair wind.

Favorskii rearrangement [ORG CHEM] A reaction in which α-halogenated ketones undergo rearrangement in the presence of bases, with loss of the halogen and formation of carboxylic acids or their derivatives with the same number of carbon atoms.

Favositidae [PALEON] A family of extinct Paleozoic corals in the order Tabulata.

favus [MED] A fungal infection of the scalp, usually caused by *Trichophyton schoenleini*, characterized by round, yellow, cup-shaped crusts having a peculiar mousy odor. Also known as tinea favosa.

fax *See* facsimile.

fax chart *See* facsimile chart.

Faxen drag factor *See* drag factor.

fax map *See* facsimile chart.

fayalite [MINERAL] Fe_2SiO_4 A brown to black mineral of the olivine group, consisting of iron silicate and found either massive or in crystals; specific gravity is 4.1.

faying surface [ENG] The surfaces of materials in contact with each other and joined or about to be joined together.

F band [SOLID STATE] The optical absorption band arising from *F* centers.

FB data set [COMPUT SCI] A data set which has F-format logical records and whose physical records are all some multiple of the size of the logical record, except possibly for a few truncated blocks. Also known as blocked F-format data set.

FBM data set [COMPUT SCI] An FB data set which has a machine-control (M) character in its first byte of information.

FBR *See* fast breeder reactor.

FBSA data set [COMPUT SCI] An FBS data set which has an ASCII (American Standard Code for Information Interchange) control (A) character in its first byte of information.

FBS data set [COMPUT SCI] An FB data set which has at most one truncated block, which must be the last one in the data set. Also known as standard blocked F-format data set.

fcc lattice *See* face-centered cubic lattice.

F center [SOLID STATE] A color center consisting of an electron trapped by a negative ion vacancy in an ionic crystal, such as an alkali halide or an alkaline-earth fluoride or oxide.

F corona [ASTRON] The outer layer of the sun's corona. Also known as Fraunhofer corona.

FD&C color *See* food color.

F display [ELECTR] A rectangular display in which a target appears as a centralized blip when the radar antenna is aimed at it; horizontal and vertical aiming errors are respectively indicated by the horizontal and vertical displacement of the blip.

fdm *See* frequency-division multiplexing.

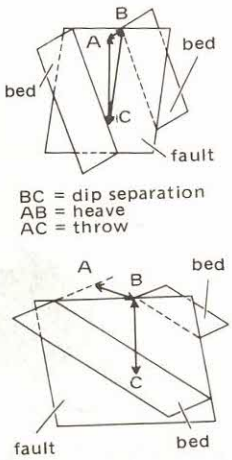
Fe *See* iron.

feasible ground [MIN ENG] Ground that is easy to work and yet will stand without the support of timber or boards.

feasible method *See* interaction prediction method.

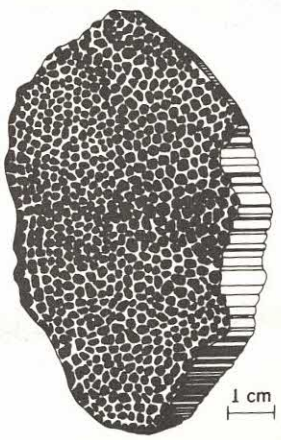
feasible solution [COMPUT SCI] In linear programming, any set of values for the variables x_j, $j = 1, 2, \ldots, n$, that (1)

FAULT



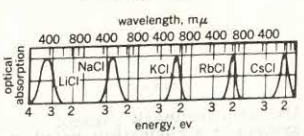
Disruption of a rock bed by a fault.

FAVOSITIDAE



Whole portion of a coral colony of *Favosites gothlandica* Lam from Niagara Limestone (Wenlock) of Owen Sound, Ontario. *(After H. G. Nicholson)*

F BAND



F bands in different alkali halide crystals.

satisfy the set of restrictions

$$\sum_{j=1}^{n} a_{ij}x_j \leq b_i,\ i = 1, 2, \ldots, m$$

(alternatively,

$$\sum_{j=1}^{n} a_{ij}x_j \geq b_i, \text{ or } \sum_{j=1}^{n} a_{ij}x_j = b_i)$$

where the b_i are numerical constants known collectively as the right-hand side and the a_{ij} are coefficients of the variables x_j, and (2) satisfy the restrictions $x_j \geq 0$.

feasibility study [SYS ENG] **1.** A study of applicability or desirability of any management or procedural system from the standpoint of advantages versus disadvantages in any given case. **2.** A study to determine the time at which it would be practicable or desirable to install such a system when determined to be advantageous. **3.** A study to determine whether a plan is capable of being accomplished successfully.

feasibility test [SYS ENG] A test conducted to obtain data in support of a feasibility study or to demonstrate feasibility.

feather [MECH ENG] To change the pitch on a propeller. [METEOROL] *See* barb. [VERT ZOO] An ectodermal derivative which is a specialized keratinous outgrowth of the epidermis of birds; functions in flight and in providing insulation and protection.

feather alum *See* alunogen; halotrichite.

Feather analysis [NUCLEO] A technique for determining the range in aluminum of the beta rays of a species by comparing the absorption curve of that species with the absorption curve of a reference species.

feather cloth [TEXT] Fabric in which feather fluff is introduced for softness or decoration.

featheredge [CIV ENG] The thin edge of a gravel-surfaced road. [DES ENG] A wood tool with a level edge used to straighten angles in the finish coat of plaster.

feathering [FOOD ENG] Flocculation of the cream (fat) in homogenized milk when added to hot coffee or tea due to a defect in the chemistry of the cream. [MECH ENG] A pitch position in a controllable-pitch propeller; it is used in the event of engine failure to stop the windmilling action, and occurs when the blade angle is about 90° to the plane of rotation. Also known as full feathering. [VERT ZOO] Plumage.

feathering propeller [MECH ENG] A variable-pitch marine or airscrew propeller capable of increasing pitch beyond the normal high pitch value to the feathered position.

feather joint [ENG] A joint made by cutting a mating groove in each of the pieces to be joined and inserting a feather in the opening formed when the pieces are butted together. Also known as ploughed-and-tongued joint. [GEOL] One of a series of joints in a fault zone formed by shear and tension. Also known as pinnate joint.

feather ore *See* jamesonite.

feather rot [PL PATH] A fungus rot of both dead and living tree trunks caused by *Poria subacida* and characterized by the white stringy or spongy nature of the rotted tissue.

feature extraction-classification model [COMPUT SCI] A method of automatic pattern recognition in which recognition is achieved by making measurements on the patterns to be recognized, and then deriving features from these measurements.

febrile disease [MED] Any disease associated with or characterized by fever.

febriphobia [PSYCH] An abnormal fear of fever.

fecal pellets [GEOL] Mainly the excreta of invertebrates occurring in marine deposits and as fossils in sedimentary rocks. Also known as castings.

feces [PHYSIO] The waste material eliminated by the gastrointestinal tract.

Fechner color [OPTICS] A sensation of color caused by achromatic stimuli at intervals in time.

Fechner fraction [PHYSIO] The smallest difference in the brightness of two sources that can be detected by the human eye divided by the brightness of one of them.

Fechner law [PHYSIO] The intensity of a sensation produced by a stimulus varies directly as the logarithm of the numerical value of that stimulus.

fecundity [BIOL] The innate potential reproductive capacity of the individual organism, as denoted by its ability to form and separate from the body the mature germ cells.

Federal Telecommunications System [COMMUN] System of commercial telephone lines, leased by the government, for use between major government installations for official telecommunications.

Fedorov stage *See* universal stage.

fedsim star [COMPUT SCI] The starlike shape that is characteristic of the Kiviat graph of a well-balanced computer system.

feed [AGR] Any crops or other food substances for livestock. [COMPUT SCI] **1.** To supply the material to be operated upon to a machine. **2.** A device capable of so feeding. [ELECTR] To supply a signal to the input of a circuit, transmission line, or antenna. [ELECTROMAG] The part of a radar antenna that is connected to or mounted on the end of the transmission line and serves to radiate radio-frequency electromagnetic energy to the reflector or receive energy therefrom. [ENG] **1.** Process or act of supplying material to a processing unit for treatment. **2.** The material supplied to a processing unit for treatment. [FOOD ENG] The fermenting wort that is removed from the yeast troughs during brewing processes. [MECH ENG] Forward motion imparted to the cutters or drills of cutting or drilling machinery.

feedback [ELECTR] The return of a portion of the output of a circuit or device to its input. [SCI TECH] The control of input as a function of output by returning a portion of the output to the input.

feedback admittance [ELECTR] Short-circuit transadmittance from the output electrode to the input electrode of an electron tube.

feedback amplifier [ELECTR] An amplifier in which a passive network is used to return a portion of the output signal to its input so as to change the performance characteristics of the amplifier.

feedback branch [CONT SYS] A branch in a signal-flow graph that belongs to a feedback loop.

feedback circuit [ELECTR] A circuit that returns a portion of the output signal of an electronic circuit or control system to the input of the circuit or system.

feedback compensation [CONT SYS] Improvement of the response of a feedback control system by placing a compensator in the feedback path, in contrast to cascade compensation. Also known as parallel compensation.

feedback control loop *See* feedback loop.

feedback control signal [CONT SYS] The portion of an output signal which is retransmitted as an input signal.

feedback control system [CONT SYS] A system in which the value of some output quantity is controlled by feeding back the value of the controlled quantity and using it to manipulate an input quantity so as to bring the value of the controlled quantity closer to a desired value. Also known as closed-loop control system.

feedback factor [ELECTR] The fraction of the output voltage of an oscillator which is applied to the feedback network.

feedback inhibition [BIOCHEM] A cellular control mechanism by which the end product of a series of metabolic reactions inhibits the activity of the first enzyme in the sequence.

feedback loop [CONT SYS] A closed transmission path or loop that includes an active transducer and consists of a forward path, a feedback path, and one or more mixing points arranged to maintain a prescribed relationship between the loop input signal and the loop output signal. Also known as feedback control loop.

feedback oscillator [ELECTR] An oscillating circuit, including an amplifier, in which the output is fed back in phase with the input; oscillation is maintained at a frequency determined by the values of the components in the amplifier and the feedback circuits.

feedback regulator [CONT SYS] A feedback control system that tends to maintain a prescribed relationship between certain system signals and other predetermined quantities.

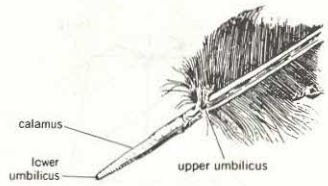
feedback transfer function [CONT SYS] In a feedback control loop, the transfer function of the feedback path.

feedback winding [ELECTR] A winding to which feedback connections are made in a magnetic amplifier.

feed chute [ORD] A chute or passage through which ammunition is guided into the breech mechanism of a machine gun.

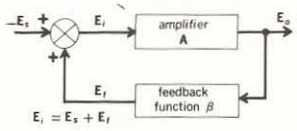
feed-control valve [MECH ENG] A small valve, usually a needle valve, on the outlet of the hydraulic-feed cylinder on the swivel head of a diamond drill, used to control minutely the speed of the hydraulic piston travel and hence the rate at which the bit is made to penetrate the rock.

FEATHER



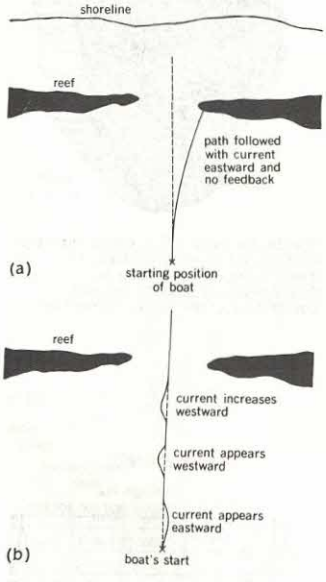
Detail of the base of a feather. *(From J. Van Tyne and A. J. Berger, Fundamentals of Ornithology, 2d ed., copyright © 1976 by John Wiley & Sons, Inc.; reprinted by permission)*

FEEDBACK CIRCUIT



Block diagram of a feedback circuit: E_S is sinusoidal input signal; E_i is actuating signal; E_O is output signal; E_f is feedback signal; A is amplifier gain; and β is feedback function.

FEEDBACK CONTROL SYSTEM



Use of a feedback control system in a navigation problem. *(a)* Course with no feedback. *(b)* Course with feedback.

feeder [ELEC] **1.** A transmission line used between a transmitter and an antenna. **2.** A conductor, or several conductors, connecting generating stations, substations, or feeding points in an electric power distribution system. **3.** A group of conductors in an interior wiring system which link a main distribution center with secondary or branch-circuit distribution centers. [GEOL] A small ore-bearing vein which merges with a larger one. [HYD] *See* tributary. [MECH ENG] **1.** A conveyor adapted to control the rate of delivery of bulk materials, packages, or objects, or a control device which separates or assembles objects. **2.** A device for delivering materials to a processing unit. [MET] A runner or riser so placed that it can feed molten metal to the contracting mass of the casting as it cools in its flask, therefore preventing formation of cavities or porous structure. [ORD] A device that supplies ammunition to a weapon, usually actuated by an automatic or semiautomatic mechanism.

feeder beach [GEOL] A beach that is artificially widened and nourishes downdrift beaches by natural littoral currents or forces.

feeder-breaker [MECH ENG] A unit that breaks and feeds ore or crushed rock to a materials-handling system at a required rate.

feeder cable [COMMUN] In communications practice, a cable extending from the central office along a primary route (main feeder cable) or from a main feeder cable along a secondary route (branch feeder cable) and providing connections to one or more distribution cables.

feeder canal [CIV ENG] A canal serving to conduct water to a larger canal.

feeder conveyor [MECH ENG] A short auxiliary conveyor designed to transport materials to another conveyor. Also known as stage loader.

feeder current [OCEANOGR] A current which flows parallel to the shore before converging with other such currents and forming the neck of a rip current.

feeder distribution center [COMMUN] Distribution center at which feeders or subfeeders are connected.

feeder panel [ELEC] The part of a switchboard in an electric power distribution system where feeder connections are made.

feeder reactor [ELECT] A small inductor connected in series with a feeder in order to limit and localize the disturbances due to faults on the feeder.

feeder road [CIV ENG] A road that feeds traffic to a more important road.

feeder trough [MIN ENG] The trough connected to the conveyor pan line in a duckbill.

feeder yarn [TEXT] Yarn that is furnished to the throwing process.

feedforward control [CONT SYS] Process control in which changes are detected at the process input and an anticipating correction signal is applied before process output is affected.

feedhead [MET] A reservoir of molten metal that is left above a casting in order to supply additional metal as the casting solidifies and shrinks. Also known as riser; sinkhead.

feeding mechanism [ZOO] A mechanism by which an animal obtains and utilizes food materials.

feeding rod [MET] A rod used by working up and down to keep the passage clear between riser and casting.

feed lines [MET] The pattern produced on the surface of a piece of metal by machine grinding.

feed materials [NUCLEO] Refined uranium or thorium metal or their pure compounds in a form suitable for use in nuclear reactor fuel elements or as feed for uranium-enrichment processes.

feed nut [MECH ENG] The threaded sleeve fitting around the feed screw on a gear-feed drill swivel head, which is rotated by means of paired gears driven from the spindle or feed shaft.

feed off [ENG] To lower the bit continuously or intermittently during a drilling operation by disengaging the drum brake.

feed pipe [MECH ENG] The pipe which conducts water to a boiler drum.

feed pitch [DES ENG] The distance between the centers of adjacent feed holes in punched paper tape.

feed preparation unit [CHEM ENG] A processing unit (such as distillation or desulfurization units) providing feedstock for subsequent processing.

feed pressure [MECH ENG] Total weight or pressure, expressed in pounds or tons, applied to the drilling stem to make the drill bit cut and penetrate the geologic, rock, or ore formation.

feed pump [MECH ENG] A pump used to supply water to a steam boiler.

feed rate *See* cutting speed.

feed ratio [MECH ENG] The number of revolutions a drill stem and bit must turn to advance the drill bit 1 inch when the stem is attached to and rotated by a screw- or gear-feed type of drill swivel head with a particular pair of the set of gears engaged. Also known as feed speed.

feed reel [ENG] The reel from which paper tape or magnetic tape is being fed.

feed screw [MECH ENG] The externally threaded drill-rod drive rod in a screw- or gear-feed swivel head on a diamond drill; also used on percussion drills, lathes, and other machinery.

feed shaft [MECH ENG] A short shaft or countershaft in a diamond-drill gear-feed swivel head which is rotated by the drill motor through gears or a fractional drive and by means of which the engaged pair of feed gears is driven.

feed shelf [COMPUT SCI] **1.** A device for supporting documents for manual sensing. **2.** The first few feet of a tape reel, used to prime the tape drive.

feed speed *See* feed ratio.

feedstock [ENG] The raw material furnished to a machine or process.

feed-tape [COMPUT SCI] A mechanism which will feed tape to be read or sensed.

feedthrough [ELEC] A conductor that connects patterns on opposite sides of a printed circuit board. Also known as interface connection.

feedthrough capacitor [ELEC] A feedthrough terminal that provides a desired value of capacitance between the feedthrough conductor and the metal chassis or panel through which the conductor is passing; used chiefly for bypass purposes in ultra-high-frequency circuits.

feedthrough insulator *See* feedthrough terminal.

feedthrough terminal [ELEC] An insulator designed for mounting in a hole in a panel, wall, or bulkhead, with a conductor in the center on the insulator to permit feeding electricity through the partition. Also known as feedthrough insulator.

feed track [COMPUT SCI] The longitudinal channel on a paper tape that contains the feed holes.

feed travel [MECH ENG] The distance a drilling machine moves the steel shank in traveling from top to bottom of its feeding range.

feed tray [CHEM ENG] For a tray-type distillation column, that tray on which fresh feedstock is introduced into the system.

feed trough [MECH ENG] A receptacle into which feedwater overflows from a boiler drum.

feedwater [MECH ENG] The water supplied to a boiler or still.

feedwater heater [MECH ENG] An apparatus that utilizes steam extracted from an engine or turbine to heat boiler feedwater.

feeler pin [MECH ENG] A pin that allows a duplicating machine to operate only when there is a supply of paper.

feel the bottom [NAV] The effect on a ship underway in shallow water which tends to reduce its speed, make it slow in answering the helm, and often make it sheer off course; the speed reduction is largely due to increased wave making resistance resulting from higher pressure differences due to restriction of flow around the hull; the increased velocity of the water flowing past the hull results in an increase in squat. Also known as smell the bottom.

Fehling's reagent [ANALY CHEM] A solution of cupric sulfate, sodium potassium tartrate, and sodium hydroxide, used to test for the presence of reducing compounds such as sugars.

Feinc filter [MIN ENG] A vacuum-type drum filter in which a system of parallel strings is used to carry the filter cake away from the drum, instead of the usual filter cloth.

Feit-Thompson theorem [MATH] The proposition that every group of odd order is solvable.

feldspar [MINERAL] A group of silicate minerals that make up about 60% of the outer 15 kilometers of the earth's crust; they are silicates of aluminum with the metals potassium, sodium, and calcium, and rarely, barium.

feldspathic graywacke [PETR] Sandstone containing less than 75% quartz and chert and 15–75% detrital clay matrix, and having feldspar grains in greater abundance than rock fragments. Also known as arkosic wacke; high-rank graywacke.

feldspathic sandstone [PETR] Sandstone rich in feldspar; intermediate in composition between arkosic sandstone and quartz sandstone, made up of 10–25% feldspar and less than 20% matrix material.

feldspathic shale [PETR] A well-laminated shale with more than 10% feldspar in the silt size and with a finer matrix of kaolinitic clay minerals.

feldspathization [GEOL] Formation of feldspar in a rock usually as a result of metamorphism leading toward granitization.

feldspathoid [GEOL] Aluminosilicates of sodium, potassium, or calcium that are similar in composition to feldspars but contain less silica than the corresponding feldspar.

Felidae [VERT ZOO] The cats and saber-toothed cats, a family of mammals in the superfamily Feloidea.

feline [VERT ZOO] **1.** Of or relating to the genus *Felis*. **2.** Catlike.

Felis [VERT ZOO] The type genus of the Felidae, comprising the true or typical cats, both wild and domestic.

fell [FOR] The timber cut in a given season.

fell-field [ECOL] A culture community of dwarfed, scattered plants or grasses above the timberline.

Fell system [CIV ENG] A method of traction intended for steep railroad slopes; a central rail is gripped between horizontal wheels on the locomotive.

Feloidea [VERT ZOO] A superfamily of catlike mammals in the order Carnivora.

Felon's unit [BIOL] A unit for the standardization of antipneumococcic serum.

felsenmeer [GEOL] A flat or gently sloping veneer of angular rock fragments occurring on moderate mountain slopes above the timber line.

felsic [MINERAL] A light-colored mineral. [PETR] Of an igneous rock, having a mode containing light-colored minerals.

felsite [PETR] **1.** A light-colored, fine-grained igneous rock composed chiefly of quartz or feldspar. **2.** A rock characterized by felsitic texture.

felsöbányaite [MINERAL] $Al_4(SO_4)(OH)_{10}\cdot 5H_2O$ A yellow to white, probably orthorhombic mineral consisting of a hydrated basic sulfate of aluminum; occurs as aggregates of lamellar crystals.

felsophyric *See* aphaniphyric.

felt [MATER] A fibrous, watertight heavy paper of organic or asbestos fibers impregnated with asphalt and used as an overlining or an underlining for roofs. Also known as felt paper. [TEXT] A compressed, densely matted unwoven fabric of wool, sometimes with rayon or hair.

felt side [MATER] The upper side of a sheet of paper which was not in contact with the wire in a papermaking machine.

felty [GEOL] Referring to a pilotaxitic texture in which the microlites are randomly oriented.

Felty's syndrome [MED] A complex of symptoms involving rheumatoid arthritis, splenomegaly, lymphadenopathy, and anemia.

female [BOT] A flower lacking stamens. [ZOO] An individual that bears young or produces eggs.

female connector [ELEC] A connector having one or more contacts set into recessed openings; jacks, sockets, and wall outlets are examples.

female fitting [DES ENG] In a paired pipe or an electrical or mechanical connection, the portion (fitting) that receives, contrasted to the male portion (fitting) that inserts.

female heterogamety [GEN] The occurrence, in females of a species, of an unequal pair of sex chromosomes.

female homogamety [GEN] The occurrence, in females of a species, of an equal pair of sex chromosomes.

female pseudohermaphroditism *See* gynandry.

feminizing syndrome [MED] Any of a number of symptom complexes in which males tend to take on feminine characteristics due to alterations of adrenocortiocotropin output.

femitrons [ELECTR] Class of field-emission microwave devices.

femoral artery [ANAT] The principal artery of the thigh; originates as a continuation of the external iliac artery.

femoral hernia [MED] A hernia that occurs at the passage of the arteries and veins from the abdomen into the legs below the inguinal ligament.

femoral nerve [ANAT] A mixed nerve of the leg; the motor portion innervates muscles of the thigh, and the sensory portion innervates portions of the skin of the thigh, leg, hip, and knee.

femoral ring [ANAT] The abdominal opening of the femoral canal.

femoral vein [ANAT] A vein accompanying the femoral artery.

femorotibial index [ANTHRO] The ratio of the length of the femur to the length of the tibia multiplied by 100.

femto- [SCI TECH] A prefix representing 10^{-15}, which is 0.000 000 000 000 001, or one-thousandth of a millionth of a millionth.

femtoampere [ELEC] A unit of current equal to 10^{-15} ampere. Abbreviated fA.

femtometer [MECH] A unit of length, equal to 10^{-15} meter; used particularly in measuring nuclear distances. Abbreviated fm. Also known as fermi.

femtovolt [ELEC] A unit of voltage equal to 10^{-15} volt. Abbreviated fV.

femur [ANAT] **1.** The proximal bone of the hind or lower limb in vertebrates. **2.** The thigh bone in humans, articulating with the acetabulum and tibia.

fen [GEOGR] Peat land covered by water, especially in the upper regions of old estuaries and around lakes, that can be drained only artificially.

fenaminosulf [ORG CHEM] $C_8H_{10}N_3SO_3Na$ A yellow-brown powder, decomposing at 200°C; used as a fungicide for seeds and seedlings in crops. Also known as *para*-dimethylaminobenzenediazo sodium sulfonate.

fenazaflor [ORG CHEM] $C_{15}H_7Cl_2F_3N_2O_2$ A greenish-yellow, crystalline compound with a melting point of 103°C; used as an insecticide and miticide for spider mites and eggs. Also known as phenyl 5,6-dichloro-2-trifluoromethyl-1-benzimidazole carboxylate.

fenbutatin oxide [ORG CHEM] $C_{60}H_{78}OSn_2$ A white, crystalline compound, insoluble in water; used to control mites in deciduous and citrus fruits. Also known as distannoxane; hexakis(β,β-dimethylphenethyl).

fence [AERO ENG] A stationary plate or vane projecting from the upper surface of an airfoil, substantially parallel to the airflow, used to prevent spanwise flow. [COMPUT SCI] *See* fence cell. [ENG] **1.** A line of data-acquisition or tracking stations used to monitor orbiting satellites. **2.** A line of radar or radio stations for detection of satellites or other objects in orbit. **3.** A line or network of early-warning radar stations. **4.** A concentric steel fence erected around a ground radar transmitting antenna to serve as an artificial horizon and suppress ground clutter that would otherwise drown out weak signals returning at a low angle from a target. **5.** An adjustable guide on a tool.

fence cell [COMPUT SCI] A criterion for dividing a list into two equal or nearly equal parts in the course of a binary search. Also known as fence.

fenchol *See* fenchyl alcohol.

fenchone [ORG CHEM] $C_{10}H_{16}O$ An isomer of camphor; a colorless oil that boils at 193°C and is soluble in ether; a constituent of fennel oil; used as a flavoring.

fenchyl alcohol [ORG CHEM] $C_{10}H_{18}O$ A colorless solid or oily liquid, boiling at 198–204°C, isolated from pine oil and turpentine and also made synthetically; used as a solvent, an intermediate in organic synthesis, and as a flavoring. Also known as fenchol; 1-hydroxy fenchane.

fender [CIV ENG] A timber, cluster of piles, or bag of rope placed along dock or bridge pier to prevent damage by docking ships or floating objects. [ENG] A cover over the upper part of a wheel of an automobile or other vehicle. [MIN ENG] A thin pillar of coal adjacent to the gob, left for protection while driving a lift through the mine pillar. [NAV ARCH] A padded device acting as a buffer to prevent damage between two ships or between a ship and dock.

Fenestellidae [PALEON] A family of extinct fenestrated, cryptostomatous bryozoans which abounded during the Silurian.

fenestra [ANAT] An opening in the medial wall of the middle ear. [MED] An opening in a bandage or plaster splint for examination or drainage.

fenestrated membrane [HISTOL] One of the layers of elastic tissue in the tunica media and tunica intima of large arteries.

fenestration [ARCH] The arrangement of openings, especially windows, in the wall of a building. [BIOL] **1.** A transparent or windowlike break or opening in the surface. **2.** The presence of windowlike openings.

fenitrothion [ORG CHEM] $C_9H_{12}NO_5PS$ A yellow-brown liquid, insoluble in water; used as a miticide and insecticide for rice, orchards, vegetables, cereals, and cotton, and for fly and mosquito control. Also known as *O,O*-dimethyl-*O*-(4-nitro-*meta*-tolyl)phosphorothioate.

fennel [BOT] *Foeniculum vulgare*. A tall perennial herb of the family Umbelliferae; a spice is derived from the fruit.

fennel oil [MATER] The essential oil obtained from fennel; a colorless liquid with aromatic scent and bitter taste, insoluble in water and boiling at 160–220°C; used in medicine, perfumes, and liqueurs. Also known as oil of fennel.

fenolactine *See para*-lactophenetide.

fen peat *See* lowmoor peat.

Fenske equation *See* Fenske-Underwood equation.

Fenske-Underwood equation [CHEM ENG] Equation in plate-to-plate distillation-column calculations relating the number of theoretical plates needed at total reflux to overall relative volatility and the liquid-vapor composition ratios on upper and lower plates. Also known as Fenske equation.

fenson [ORG CHEM] $C_{12}H_9ClO_2S$ A colorless, crystalline compound with a melting point of 61–62°C; insoluble in water; used as a miticide for pears, peaches, and apples. Also known as *para*-chlorophenylbenzenesulfonate; CPBS: PCPBS.

fenster *See* window.

fensulfothion [ORG CHEM] $C_{11}H_{17}S_2O_2P$ A brown liquid with a boiling point of 138–141°C; used as an insecticide and nematicide in soils. Also known as *O,O*-diethyl-*O*-*para*-(methylsulfinylphenyl)phosphorothioate.

fenthion *See O,O*-dimethyl *O*-[3-methyl-4(methylthio)phenyl]-phosphorothioate.

fentiazon [ORG CHEM] $(C_6H_5)_2C_3HN_2S_2$ A yellow, crystalline compound with a melting point of 296.4°C; used as a fungicide for rice. Also known as 3-benzylideneamino-4-phenylthiazoline-2-thione.

fentinacetate [ORG CHEM] $C_{20}H_{18}O_2Sn$ A yellow to brown, crystalline solid that melts at 124–125°C; used as a fungicide, molluscicide, and algicide for early and late blight on potatoes, sugarbeets, peanuts, and coffee. Also known as triphenyltinacetate.

fenuron [ORG CHEM] $C_9H_{12}N_2O$ A white, crystalline compound with a melting point of 133–134°C; soluble in water; used as an herbicide to kill weeds and bushes. Also known as 3-phenyl-1,1-dimethylurea.

fenuron-TCA [ORG CHEM] $C_{11}H_{13}Cl_3N_2O_3$ A white, crystalline compound with a melting point of 65–68°C; moderately soluble in water; used as an herbicide for noncrop areas. Also known as 3-phenyl-1,1-dimethylurea trichloroacetate.

FEP resin *See* fluorinated ethylene propylene resin.

ferbam [ORG CHEM] $C_9H_{18}FeN_3S_6$ A black powder that decomposes at 180°C; slight solubility in water; used as a fungicide for fruit, tobacco, and other crops. Also known as ferric dimethyl dithiocarbamate.

ferberite [MINERAL] $FeNO_4$ A black mineral of the wolframite solid-solution series occurring as monoclinic, prismatic crystals and having a submetallic luster; hardness is 4.5 on Mohs scale, and specific gravity is 7.5.

ferghanite [MINERAL] $U_3(VO_4)_2 \cdot 6H_2O$ Sulfur-yellow mineral composed of hydrated uranium vanadate, occurring in scales.

fergusonite [MINERAL] $Y_2O_3 \cdot (Nb,Ta)_2O_5$ Brownish-black rare-earth mineral with a tetragonal crystal form; it is isomorphous with formanite.

Fermat's last theorem [MATH] The conjecture that there are no positive integer solutions of the equation $x^n + y^n = z^n$ for $n \geq 3$.

Fermat's principle [OPTICS] The principle that an electromagnetic wave will take a path that involves the least travel time when propagating between two points. Also known as least-time principle; stationary time principle.

ferment [BIOCHEM] An agent that can initiate fermentation and other metabolic processes.

fermentation [MICROBIO] An enzymatic transformation of organic substrates, especially carbohydrates, generally accompanied by the evolution of gas; a physiological counterpart of oxidation, permitting certain organisms to live and grow in the absence of air; used in various industrial processes for the manufacture of products such as alcohols, acids, and cheese by the action of yeasts, molds, and bacteria; alcoholic fermentation is the best-known example. Also known as zymosis.

fermentation accelerator [MATER] Substance that speeds chemical fermentation (as for wines) without participating in the resulting chemical changes; can be an enzyme or other catalytic agent.

fermentation tube [MICROBIO] A culture tube with a vertical closed arm to collect gas formed in a broth culture by microorganisms.

fermenter [FOOD ENG] A vessel used for fermenting, such as a vat for fermenting mash in brewing.

ferment oil [MATER] A volatile oil formed by the fermentation of plant material in which the oil was not present originally.

fermi *See* femtometer.

Fermi age [NUCLEO] The value calculated for the slowing-down area in the Fermi age model; it has the dimensions of area, not time. Also known as age; neutron age; symbolic age of neutrons.

Fermi age model [NUCLEO] A model used in studying the slowing down of neutrons by elastic collisions; it is assumed that the slowing down takes place by a very large number of very small energy changes.

Fermi beta-decay theory [NUC PHYS] Theory in which a nucleon source current interacts with an electron-neutrino field to produce beta decay, in a manner analogous to the interaction of an electric current with an electromagnetic field during the emission of a photon of electromagnetic radiation.

Fermi constant [NUC PHYS] A universal constant, introduced in beta-disintegration theory, that expresses the strength of the interaction between the transforming nucleon and the electron-neutrino field.

Fermi-Dirac distribution function [STAT MECH] A function specifying the probability that a member of an assembly of independent fermions, such as electrons in a semiconductor or metal, will occupy a certain energy state when thermal equilibrium exists.

Fermi-Dirac gas *See* Fermi gas.

Fermi-Dirac statistics [STAT MECH] The statistics of an assembly of identical half-integer spin particles; such particles have wave functions antisymmetrical with respect to particle interchange and satisfy the Pauli exclusion principle.

Fermi distribution [SOLID STATE] Distribution of energies of electrons in a semiconductor or metal as given by the Fermi-Dirac distribution function; nearly all energy levels below the Fermi level are filled, and nearly all above this level are empty.

Fermi energy [STAT MECH] **1.** The average energy of electrons in a metal, equal to ⅗ of the Fermi level. **2.** *See* Fermi level.

Fermi gas [STAT MECH] An assembly of independent particles that obey Fermi-Dirac statistics, and therefore obey the Pauli exclusion principle; this concept is used in the free-electron theory of metals and in one model of the behavior of the nucleons in a nucleus. Also known as Fermi-Dirac gas.

Fermi hole [SOLID STATE] A region surrounding an electron in a solid in which the energy band theory predicts that the probability of finding other electrons is less than the average over the volume of the solid.

Fermi level [STAT MECH] The energy level at which the Fermi-Dirac distribution function of an assembly of fermions is equal to one-half. Also known as Fermi energy.

Fermi liquid [CRYO] A liquid of particles which have Fermi-Dirac statistics; an example is the liquid phase of helium-3, in which the atoms belong to the isotope with mass number 3.

fermion [QUANT MECH] A particle, such as the electron, proton, or neutron, which obeys the rule that the wave function of several identical particles changes sign when the coordinates of any pair are interchanged; it therefore obeys the Pauli exclusion principle.

fermion field [QUANT MECH] An operator defined at each point in space-time that creates or annihilates a particular type of fermion and its antiparticle.

Fermi plot *See* Kurie plot.

Fermi resonance [PHYS CHEM] In a polyatomic molecule, the relationship of two vibrational levels that have in zero approximation nearly the same energy; they repel each other, and the eigenfunctions of the two states mix.

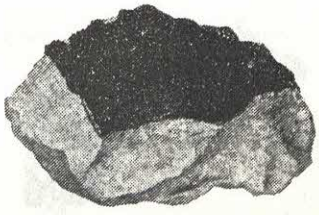
Fermi selection rules [NUC PHYS] Selection rules for beta decay in a Fermi transition; that is, there is no change in total angular momentum or parity of the nucleus in an allowed transition.

Fermi's golden rules [QUANT MECH] The equations giving the first-order (rule number 2) and second-order (rule number 1) contributions to the transition probability per unit time induced

FENNEL

Fennel (*Foeniculum vulgare*). (USDA)

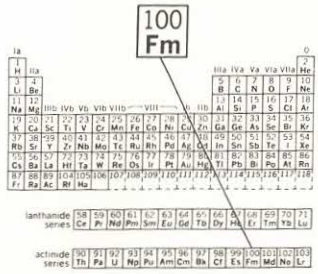
FERBERITE



2.5 cm

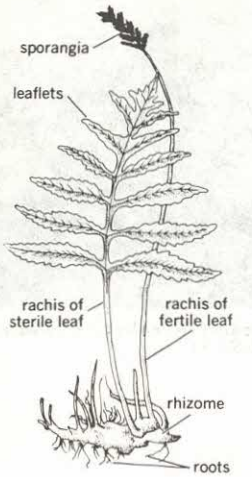
Black, prismatic ferberite crystals on granite, found in Boulder County, Colorado. (*Specimen from Department of Geology, Bryn Mawr College*)

FERMIUM



Periodic table of the chemical elements showing the position of fermium.

FERN

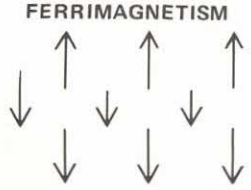


The sensitive fern *(Onoclea sensibilis)*, a representative of the Polypodiopsida. *(From W. W. Robbins, T. E. Weier, and C. R. Stocking, Botany: An Introduction to Plant Science, 3d ed., copyright © 1964 by John Wiley & Sons, Inc.; reprinted by permission)*

FERRET

Black-footed ferret *(Mustela nigripes)* of North America.

FERRIMAGNETISM



Schematic representation of arrangement of magnetic moments of neighboring ions in collinear ferrimagnetism.

by a perturbation Hamiltonian, in terms of matrix elements of the perturbation Hamiltonian.

Fermi sphere [STAT MECH] The Fermi surface of an assembly of fermions in the approximation that the fermions are free particles.

Fermi surface [SOLID STATE] A constant-energy surface in the space containing the wave vectors of states of members of an assembly of independent fermions, such as electrons in a semiconductor or metal, whose energy is that of the Fermi level.

Fermi temperature [STAT MECH] The energy of the Fermi level of an assembly of fermions divided by Boltzmann's constant, which appears as a parameter in the Fermi-Dirac distribution function.

Fermi transition [NUC PHYS] Beta decay subject to Fermi selection rules.

fermium [CHEM] A synthetic radioactive element, symbol Fm, with atomic number 100; discovered in debris of the 1952 hydrogen bomb explosion, and now made in nuclear reactors.

fermorite [MINERAL] $(Ca,Sr)_5[(As,P)O_4]_3$ A white mineral composed of arsenate, phosphate, and fluoride of calcium and strontium, occurring in crystalline masses.

fern [BOT] Any of a large number of vascular plants composing the division Polypodiophyta.

fernandinite [MINERAL] A dull green mineral composed of hydrous calcium vanadyl vanadate.

fernico [MET] An iron-nickel-cobalt alloy used for metal-to-glass seals.

Ferranti effect [ELEC] A rise in voltage occurring at the end of a long transmission line when its load is disconnected.

ferrate [INORG CHEM] A multiple iron oxide with another oxide, for example, Na_2FeO_4.

ferredoxins [BIOCHEM] Iron-containing proteins that transfer electrons, usually at a low potential, to flavoproteins; the iron is not present as a heme.

ferreed switch [ELEC] A switch whose contacts are mounted on magnetic blades or reeds sealed into an evacuated tubular glass housing, the contacts being operated by external electromagnets or permanent magnets.

ferret [ORD] An aircraft, ship, or vehicle especially equipped for the detection, location, recording, and analyzing of electromagnetic radiation. [VERT ZOO] *Mustela nigripes*. The largest member of the weasel family, Mustelidae, and a relative of the European polecat; has yellowish fur with black feet, tail, and mask.

ferriamphibole [MINERAL] The ferric ion equivalent of the amphibole group of minerals.

ferric [INORG CHEM] The term for a compound of trivalent iron, for example, ferric bromide, $FeBr_3$.

ferric acetate [ORG CHEM] $Fe_2(C_2H_3O_2)_3$ A brown compound, soluble in water; used as a tonic and dye mordant.

ferric ammonium alum *See* ferric ammonium sulfate.

ferric ammonium citrate [ORG CHEM] $Fe(NH_4)_3(C_6H_5O_7)_2$ Red, deliquescent scales or granules; odorless, water soluble, and affected by light; used in medicine and blueprint photography.

ferric ammonium oxalate [ORG CHEM] $(NH_4)_3Fe(C_2O_4)_3 \cdot 3H_2O$ Green, crystalline material, soluble in water and alcohol, sensitive to light; used in blueprint photography.

ferric ammonium sulfate [INORG CHEM] $FeNH_4(SO_4)_2 \cdot 12H_2O$ Efflorescent, water-soluble crystals; used in medicine, in analytical chemistry, and as a mordant in textile dyeing. Also known as ferric ammonium alum; iron ammonium sulfate.

ferric arsenate [INORG CHEM] $FeAsO_4 \cdot 2H_2O$ A green or brown powder, insoluble in water, soluble in dilute mineral acids; used as an insecticide.

ferric bromide [INORG CHEM] $FeBr_3$ Red, deliquescent crystals that decompose upon heating; soluble in water, ether, and alcohol; used in medicine and analytical chemistry. Also known as ferric sesquibromide; ferric tribromide; iron bromide.

ferric chloride [INORG CHEM] $FeCl_3$ Brown crystals, melting at 300°C, that are soluble in water, alcohol, and glycerol; used as a coagulant for sewage and industrial wastes, as an oxidizing and chlorinating agent, as a disinfectant, in copper etching, and as a mordant. Also known as anhydrous ferric chloride; ferric trichloride; flores martis; iron chloride.

ferric citrate [ORG CHEM] $FeC_6H_5O_7 \cdot 3H_2O$ Red scales that react to light; soluble in water, insoluble in alcohol; used as a medicine for certain blood disorders, and for blueprint paper. Also known as iron citrate.

ferric dichromate [INORG CHEM] $Fe_2(CrO_4)_3$ A red-brown, granular powder, miscible in water; used as a mordant.

ferric dimethyl dithiocarbamate *See* ferbam.

ferric ferrocyanide [INORG CHEM] $Fe_4[Fe(CN)_6]_3$ Dark-blue crystals, used as a pigment, and with oxalic acid in blue ink. Also known as iron ferrocyanide.

ferric fluoride [INORG CHEM] FeF_3 Green, rhombohedral crystals, soluble in water and acids; used in porcelain and pottery manufacture. Also known as iron fluoride.

ferrichrome [MICROBIO] A cyclic hexapeptide that is a microbial hydroxamic acid and is involved in iron transport and metabolism in microorganisms.

ferric hydrate *See* ferric hydroxide.

ferric hydroxide [INORG CHEM] $Fe(OH)_3$ A brown powder, insoluble in water; used as arsenic poisoning antidote, in pigments, and in pharmaceutical preparations. Also known as ferric hydrate; iron hydroxide.

ferric nitrate [INORG CHEM] $Fe(NO_3)_3 \cdot 9H_2O$ Colorless crystals, soluble in water and decomposed by heat; used as a dyeing mordant, in tanning, and in analytical chemistry. Also known as iron nitrate.

ferric oxalate [ORG CHEM] $Fe_2(COO)_3$ Yellow scales, soluble in water, decomposing when heated at about 100°C; used as a catalyst and in photographic printing papers.

ferric oxide [INORG CHEM] Fe_2O_3 Red, hexagonal crystals or powder, insoluble in water and soluble in acids, melting at 1565°C; used as a catalyst and pigment for metal polishing, in metallurgy, and in medicine. Also known as ferric oxide red; jeweler's rouge; red ocher.

ferric oxide red *See* ferric oxide.

ferric phosphate [INORG CHEM] $FePO_4 \cdot 2H_2O$ Yellow, rhombohedral crystals, insoluble in water, soluble in acids; used in medicines and fertilizers. Also known as iron phosphate.

ferric resinate [ORG CHEM] Reddish-brown, water-insoluble powder; used as a drier for paints and varnishes. Also known as iron resinate.

ferricrete [GEOL] A conglomerate of surficial sand and gravel held together by iron oxide resulting from percolating solutions of iron salts.

ferric sesquibromide *See* ferric bromide.

ferric stearate [ORG CHEM] $Fe(C_{18}H_{35}O_2)_3$ A light-brown, water-insoluble powder; used as a varnish drier. Also known as iron stearate.

ferric sulfate [INORG CHEM] $Fe_2(SO_4)_3 \cdot 9H_2O$ Yellow, water-soluble, rhombohedral crystals, decomposing when heated; used as a chemical intermediate, disinfectant, soil conditioner, pigment, and analytical reagent, and in medicine. Also known as iron sulfate.

ferric tribromide *See* ferric bromide.

ferric trichloride *See* ferric chloride.

ferric vanadate [INORG CHEM] $Fe(VO_3)_3$ Grayish-brown powder, insoluble in water and alcohol; used in metallurgy. Also known as iron metavanadate.

ferricyanic acid [INORG CHEM] $H_3Fe(CN)_6$ A red-brown unstable solid.

ferricyanide [INORG CHEM] A salt containing the radical $Fe(CN)_6^{3-}$.

ferrierite [MINERAL] $(Na,K)_2MgAl_3Si_{15}O_{36}(OH) \cdot 9H_2O$ A zeolite mineral crystallizing in the orthorhombic system.

ferriferous [GEOL] Of a sedimentary rock, iron-rich. [MINERAL] Of a mineral, iron-bearing.

ferrihemoglobin [BIOCHEM] Hemoglobin in the oxidized state. Also known as methemoglobin.

ferrimagnet *See* ferrimagnetic material.

ferrimagnetic amplifier [ELECTR] A microwave amplifier using ferrites.

ferrimagnetic limiter [ELECTROMAG] Power limiter used in microwave systems to replace transmit-receive tubes; uses ferrimagnetic material (such as a piece of ferrite or garnet) that exhibits nonlinear properties.

ferrimagnetic material [SOLID STATE] A material displaying ferrimagnetism; the ferrites are the principal example. Also known as ferrimagnet.

ferrimagnetic resonance [PHYS] Magnetic resonance of a ferrimagnetic material.

ferrimagnetism [SOLID STATE] A type of magnetism in which the magnetic moments of neighboring ions tend to align nonparallel, usually antiparallel, to each other, but the moments are of different magnitudes, so there is an appreciable resultant magnetization.

ferrimolybdite [MINERAL] $Fe_2(MoO_4)_3 \cdot 8H_2O$ A colorless to canary yellow, probably orthorhombic mineral consisting of hydrated ferric molybdate; occurs in massive form, as crusts or aggregates.

ferrimycin [MICROBIO] The representative antibiotic of the sideromycin group; a hydroxamic acid compound.

ferrinatrite [MINERAL] $Na_3Fe(SO_4)_3 \cdot 3H_2O$ A greenish or white mineral composed of sodium ferric iron double sulfate; usually occurs in spherical forms.

ferriporphyrin [BIOCHEM] A red-brown to black complex of iron and porphyrin in which the iron is in the 3+ oxidation state.

ferrisicklerite [MINERAL] $(Li,Fe,Mn)(PO_4)$ Mineral composed of phosphate of lithium, ferric iron, and manganese, more iron being present than manganese; it is isomorphous with sicklerite.

ferristor [ELECTR] A miniature, two-winding, saturable reactor that operates at a high carrier frequency and may be connected as a coincidence gate, current discriminator, free-running multivibrator, oscillator, or ring counter.

ferrisulphas *See* ferrous sulfate.

ferrite [INORG CHEM] An unstable compound of a strong base and ferric oxide which exists in alkaline solution, such as $NaFeO_2$. [MET] Iron that has not combined with carbon in pig iron or steel. [PETR] Grains or scales of unidentifiable, generally transparent amorphous iron oxide in the matrix of a porphyritic rock. [SOLID STATE] Any ferrimagnetic material having high electrical resistivity which has a spinel crystal structure and the chemical formula XFe_2O_4, where X represents any divalent metal ion whose size is such that it will fit into the crystal structure.

ferrite attenuator *See* ferrite limiter.

ferrite banding [MET] The formation of faint bands (flow lines) of free ferrite in rolled steel, running in the direction of working. Also known as ferrite ghosts; ferrite streaks; ghost lines; ghost structure.

ferrite bead [ELECTR] Magnetic information storage device consisting of ferrite powder mixtures in the form of a bead fired on the current-carrying wires of a memory matrix.

ferrite circulator [ELECTROMAG] A combination of two dual-mode transducers and a 45° ferrite rotator, used with rectangular waveguides to control and switch microwave energy. Also known as ferrite phase-differential circulator.

ferrite core [ELECTR] A magnetic core made of ferrite material. Also known as dust core; powdered-iron core.

ferrite-core memory [ELECTR] A magnetic memory consisting of a matrix of tiny toroidal cores molded from a square-loop ferrite, through which are threaded the pulse-carrying wires and the sense wire.

ferrite device [ELEC] An electrical device whose principle of operation is based upon the use of ferrities in powdered, compressed, sintered form, making use of their ferrimagnetism and their high electrical resistivity, which makes eddy-current losses extremely low at high frequencies.

ferrite ghosts *See* ferrite banding.

ferrite isolator [ELECTROMAG] A device consisting of a ferrite rod, centered on the axis of a short length of circular waveguide, located between rectangular-waveguide sections displaced 45° with respect to each other, which passes energy traveling through the waveguide in one direction while absorbing energy from the opposite direction. Also known as Faraday rotation isolator.

ferrite limiter [ELECTROMAG] A passive, low-power microwave limiter having an insertion loss of less than 1 decibel when operating in its linear range, with minimum phase distortion; the input signal is coupled to a single-crystal sample of either yttrium iron garnet or lithium ferrite, which is biased to resonance by a magnetic field. Also known as ferrite attenuator.

ferrite number [MET] The standard value assigned to austenitic stainless steel to denote a specific ferrite content; used instead of percent ferrite.

ferrite phase-differential circulator *See* ferrite circulator.

ferrite-rod antenna [ELECTROMAG] An antenna consisting of a coil wound on a rod of ferrite; used in place of a loop antenna in radio receivers. Also known as ferrod; loopstick antenna.

ferrite rotator [ELECTROMAG] A gyrator consisting of a ferrite cylinder surrounded by a ring-type permanent magnet, inserted in a waveguide to rotate the plane of polarization of the electromagnetic wave passing through the waveguide.

ferrite streaks *See* ferrite banding.

ferrite switch [ELECTROMAG] A ferrite device that blocks the flow of energy through a waveguide by rotating the electric field vector 90°; the switch is energized by sending direct current through its magnetizing coil; the rotated electromagnetic wave is then reflected from a reactive mismatch or absorbed in a resistive card.

ferrite-tuned oscillator [ELECTR] An oscillator in which the resonant characteristic of a ferrite-loaded cavity is changed by varying the ambient magnetic field, to give electronic tuning.

ferritic stainless steel [MET] Any magnetic iron alloy containing more than 12% chromium having a body-centered cubic structure. Also known as stainless iron.

ferritin [BIOCHEM] An iron-protein complex occurring in tissues, probably as a storage form of iron.

ferritremolite [MINERAL] The ferric ion equivalent of the monoclinic amphibole, tremolite.

ferritungstite [MINERAL] $Fe_2(WO_4)(OH)_4 \cdot 4H_2O$ A yellow ocher mineral composed of hydrous ferric tungstate, occurring as a powder.

ferroacoustic storage [ELECTR] A delay-line type of storage consisting of a thin tube of magnetostrictive material, a central conductor passing through the tube, and an ultrasonic driving transducer at one end of the tube.

ferroalloy [MET] Any alloy containing iron, usually in major amount. Also known as ferrous alloy.

ferroaluminum [MET] An alloy of iron and aluminum; added to molten steel as a deoxidizer or as an alloying component.

ferroamphibole [MINERAL] The ferrous iron equivalent of the amphibole group of minerals.

ferroan dolomite [MINERAL] A species of ankerite having less than 20% of the manganese positions occupied by iron.

ferroaugite [MINERAL] A form of monoclinic pyroxene.

ferroboron [MET] An alloy of iron and boron that is added to steel to form hardened special steels; two grades are used, 10% boron and 17% boron.

ferrocarbon titanium [MET] An alloy of iron with 15–20% titanium and 3–8% carbon; may be added to molten steel as a component of low-alloy steel.

ferrocene [ORG CHEM] $(CH_2)_5Fe(CH_2)_5$ Orange crystals that are soluble in ether, melting point 174°C; used as a combustion control additive in fuels, and for heat stabilization in greases and plastics. Also known as dicyclopentadienyl iron.

ferrocerium [MET] An alloy of iron with a high percentage of cerium; used to make cigarette lighter flints.

ferrochelatase [BIOCHEM] A mitochondrial enzyme which catalyzes the incorporation of iron into the protoporphyrin molecule.

ferrochromium [MET] A crude ferroalloy containing chromium.

ferrocolumbium [MET] An alloy of iron and columbium (niobium); used to add columbium to certain alloy steels.

ferrocyanic acid [INORG CHEM] $H_4Fe(CN)_6$ A white solid obtained by treating ferrocyanides with acid.

ferrocyanide [INORG CHEM] A salt containing the radical $Fe(CN)_6^{4-}$.

ferrocyanide process [CHEM ENG] A regenerative chemical treatment for removal of mercaptans from petroleum fuels; uses caustic–sodium ferrocyanide reagent.

ferrod *See* ferrite-rod antenna.

Ferrod [GEOL] A suborder of the soil order Spodosol that is well drained and contains an iron accumulation with little organic matter.

ferrodolomite [MINERAL] $CaFe(CO_3)_2$ A mineral composed of calcium iron carbonate, isomorphous with dolomite, and occurring in ankerite.

ferroelectric [SOLID STATE] A crystalline substance displaying ferroelectricity, such as barium titanate, potassium dihydrogen phosphate, and Rochelle salt; used in ceramic capacitors, acoustic transducers, and dielectric amplifiers. Also known as seignette-electric.

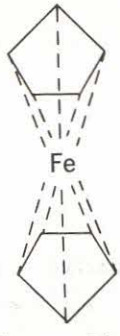
ferroelectric converter [ELEC] A converter that transforms thermal energy into electric energy by utilizing the change in the dielectric constant of a ferroelectric material when heated beyond its Curie temperature.

ferroelectric crystal [SOLID STATE] A crystal of a ferroelectric material.

ferroelectric domain [SOLID STATE] A region of a ferroelectric material within which the spontaneous polarization is constant.

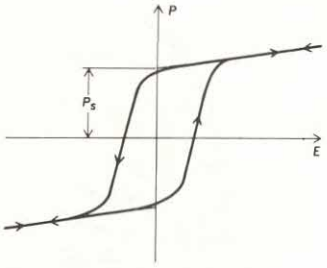
ferroelectric hysteresis [ELEC] The dependence of the po-

FERROCENE



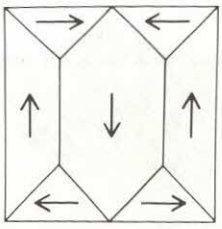
Structural diagram of ferrocene.

FERROELECTRIC HYSTERESIS LOOP



Hysteresis loop showing the relation between the resulting polarization P of the ferroelectric crystal and the externally applied electric field E; P_s is permanent or spontaneous magnetization.

FERROMAGNETIC DOMAIN



Drawing of a uniaxial crystal showing the ferromagnetic domains. The arrows show the direction of the magnetic field in each domain.

larization of ferroelectric materials not only on the applied electric field but also on their previous history; analogous to magnetic hysteresis in ferromagnetic materials. Also known as dielectric hysteresis; electric hysteresis.

ferroelectric hysteresis loop [ELEC] Graph of polarization or electric displacement versus applied electric field of a material displaying ferroelectric hysteresis.

ferroelectricity [SOLID STATE] Spontaneous electric polarization in a crystal; analogous to ferromagnetism.

ferroelectric shutter [OPTICS] A shutter consisting of a slab of ferroelectric crystal located between polarizers whose planes are at right angles; opens to pass light when activated by a pulse of up to 100 volts.

ferrofluid [MATER] A colloidal suspension of ultramicroscopic magnetic particles in a carrier liquid, used as a lubricant or damping liquid.

ferrogabbro [PETR] A gabbro rock in which the pyroxene and olivine constituents have an unusually high iron content.

ferrograph analyzer [ENG] An instrument used for ferrography; a pump delivers a small sample of the fluid to a microscope slide mounted above a magnet that generates a high-gradient magnetic field, causing particles to be deposited in a gradient of sizes along the slide.

ferrography [ENG] Wear analysis of machine bearing surfaces by collection of ferrous (or nonferrous) wear particles from lubricating oil in a ferrograph analyzer; the method can be applied to human joints by collecting fragments of cartilage, bone, or prosthetic materials from synovial fluid.

ferromagnetic amplifier [ELECTR] A parametric amplifier based on the nonlinear behavior of ferromagnetic resonance at high radio-frequency power levels; incorrectly known as garnet maser.

ferromagnetic ceramic *See* ceramic magnet.

ferromagnetic crystal [SOLID STATE] A crystal of a ferromagnetic material. Also known as polar crystal.

ferromagnetic domain [SOLID STATE] A region of a ferromagnetic material within which atomic or molecular magnetic moments are aligned parallel. Also known as magnetic domain.

ferromagnetic film *See* magnetic thin film.

ferromagnetic material [SOLID STATE] A material displaying ferromagnetism, such as the various forms of iron, steel, cobalt, nickel, and their alloys.

ferromagnetic resonance [SOLID STATE] Magnetic resonance of a ferromagnetic material.

ferromagnetics [ELECTR] The science that deals with the storage of binary information and the logical control of pulse sequences through the utilization of the magnetic polarization properties of materials.

ferromagnetic tape [ELECTROMAG] A tape made of magnetic material for use in winding closed magnetic cores of toroids and transformers.

ferromagnetism [SOLID STATE] A property, exhibited by certain metals, alloys, and compounds of the transition (iron group) rare-earth and actinide elements, in which the internal magnetic moments spontaneously organize in a common direction; gives rise to a permeability considerably greater than that of vacuum, and to magnetic hysteresis.

ferromagnetography [GRAPHICS] A printing technique in which magnetic iron particles are applied to a latent image magnetized onto a metal sheet or drum, then transferred to ordinary paper and fixed in position by heat, pressure, or other means.

ferromanganese [MET] A ferroalloy containing about 80% manganese and used in steelmaking.

ferrometer [ENG] An instrument used to make permeability and hysteresis tests of iron and steel.

ferromolybdenum [MET] A molybdenum-iron alloy produced in the electric furnace or by a thermite process; used to introduce molybdenum into iron or steel alloys, and as a coating material on welding rods.

ferronickel [MET] A crude ferroalloy containing nickel.

ferrophosphorus [MET] A by-product formed in the heating of iron, phosphate rock, silica, and coke; this alloy is used to increase fluidity in steel casting.

ferroporphyrin [BIOCHEM] A red complex of porphyrin and iron in which the iron is in the 2+ oxidation state.

ferroprussiate paper [MATER] A paper used in a blueprint process to reproduce plans and drawings.

ferroresonant circuit [ELECTR] A resonant circuit in which a saturable reactor provides nonlinear characteristics, with tuning being accomplished by varying circuit voltage or current.

ferroresonant static inverter [ELEC] A static inverter consisting of a simple square-wave inverter system and a tuned output transformer that performs filtering, voltage regulation, and current limiting.

ferrosilicon [MET] A crude ferroalloy containing 15–95% silicon and used in steelmaking.

ferrosilicon process *See* Pidgeon process.

ferrosilite [MINERAL] A mineral in the orthopyroxene group; the iron analog of enstatite; occurs in hypersthene, but is not found separately in nature.

ferrospinel *See* hercynite.

ferrotitanium [MET] A ferroalloy containing 15–45% titanium and used in steelmaking.

ferrotremolite [MINERAL] The ferrous iron equivalent of the monoclinic amphibole, tremolite.

ferrotungsten [MET] A crude ferroalloy containing tungsten and used in steelmaking.

ferrotype [GRAPHICS] A photograph formed on a metal plate coated with collodion and sensitive salts.

ferrouranium [MET] An alloy of iron and uranium.

ferrous [CHEM] The term or prefix used to denote compounds of iron in which iron is in the divalent (2+) state.

ferrous acetate [ORG CHEM] $Fe(CH_3COO)_2 \cdot 4H_2O$ Soluble green crystals, soluble in water and alcohol, that are combustible and that oxidize to basic ferric acetate in air; used as textile dyeing mordant, as wood preservative, and in medicine. Also known as iron acetate.

ferrous alloy *See* ferroalloy.

ferrous ammonium sulfate [INORG CHEM] $Fe(SO_4)\text{-}(NH)_2SO_4 \cdot 6H_2O$ Light-green, water-soluble crystals; used in medicine, analytical chemistry, and metallurgy. Also known as iron ammonium sulfate; Mohr's salt.

ferrous arsenate [INORG CHEM] $Fe_3(AsO_4)_2 \cdot 6H_2O$ Water-insoluble, toxic green amorphous powder, soluble in acids; used in medicine and as an insecticide. Also known as iron arsenate.

ferrous carbonate [INORG CHEM] $FeCO_3$ Green rhombohedral crystals that are soluble in carbonated water and decompose when heated; used in medicine.

ferrous chloride [INORG CHEM] $FeCl_2 \cdot 4H_2O$ Green, monoclinic crystals, soluble in water; used as a mordant in dyeing, for sewage treatment, in metallurgy, and in pharmaceutical preparations. Also known as iron chloride; iron dichloride.

ferrous hydroxide [INORG CHEM] $Fe(OH)_2$ A white, water-insoluble, gelatinous solid that turns reddish-brown as it oxidizes to ferric hydroxide.

ferrous oxalate [ORG CHEM] $Fe(COO)_2$ A water-soluble, yellow powder; used in photography and medicine. Also known as iron oxalate.

ferrous oxide [INORG CHEM] FeO A black powder, soluble in water, melting at 1419°C. Also known as black iron oxide; iron monoxide.

ferrous sulfate [INORG CHEM] $FeSO_4 \cdot 7H_2O$ Blue-green, water-soluble, monoclinic crystals; used as a mordant in dyeing wool, in the manufacture of ink, and as a disinfectant. Also known as ferrisulphas; green copperas; green vitriol; iron sulfate.

ferrous sulfide [INORG CHEM] FeS Black crystals, insoluble in water, soluble in acids, melting point 1195°C; used to generate hydrogen sulfide in ceramics manufacture. Also known as iron sulfide.

ferrovanadium [MET] An iron alloy high in vanadium (35–55%); used to add 0.1–2.5% vanadium during the manufacture of engineering steels and high-strength steels.

ferruccite [MINERAL] $NaBF_4$ An orthorhombic boron mineral consisting of sodium fluoborate.

ferruginous [SCI TECH] **1.** Pertaining to or containing iron. **2.** Having the appearance or color of iron rust (ferric oxide).

ferrule [DES ENG] **1.** A metal ring or cap attached to the end of a tool handle, post, or other device to strengthen and protect it. **2.** A bushing inserted in the end of a boiler flue to spread and tighten it. [ENG] *See* stabilizer.

ferrum [CHEM] Latin term for iron; derivation of the symbol Fe.

ferry [NAV ARCH] A boat which carries people, automotive vehicles, or goods across a river or other body of water, usually traveling back and forth on a regular schedule. [ORD] **1.** To

deliver aircraft or ships by operating them under their own power. **2.** To transport personnel and materiel by air.

fersmanite [MINERAL] $(Na,Ca)_2(Tl,Cb)Si(O,F)_6$ A brown mineral composed of a silicate fluoride of sodium, calcium, titanium, and columbium.

fersmite [MINERAL] $(Ca,Ce)(Cb,Ti)_2(O,F)_6$ A black mineral composed of an oxide and fluoride of calcium and columbium with cerium and titanium.

fertile material [NUCLEO] A material, such as thorium-232 or uranium-238, which is capable of being transformed into a fissionable material by capture of a neutron.

fertility [BIOL] The state of or capacity for abundant productivity.

fertility factor [GEN] An episomal bacterial sex factor which determines the role of a bacterium as either a male donor or as a female recipient of genetic material. Also known as F factor; sex factor.

fertilization [PHYSIO] The physicochemical processes involved in the union of the male and female gametes to form the zygote.

fertilization membrane [CYTOL] A membrane that separates from the surface of and surrounds many eggs following activation by the sperm; prevents multiple fertilization.

fertilizer [MATER] Material that is added to the soil to supply chemical elements needed for plant nutrition.

fertilizin [BIOCHEM] A mucopolysaccharide, derived from the jelly coat of an egg, that plays a role in sperm recognition and the stimulation of sperm motility and metabolic activity.

ferulic acid [ORG CHEM] $C_{10}H_{10}O_4$ A compound widely distributed in small amounts in plants, having two isomers: the cis form is a yellow oil, and the trans form is obtained from water solutions as orthorhombic crystals.

fervanite [MINERAL] $Fe_4V_4O_{16}\cdot 5H_2O$ Golden-brown mineral composed of a hydrated iron vanadate; although itself not radioactive, it occurs with radioactive minerals.

fervenulin [MICROBIO] $C_7H_7N_5O_2$ An antibiotic from culture filtrates of *Streptomyces fervens;* yellow, orthorhombic crystals can be formed; melting point is 178–179°C. Also known as planomycin.

fescue [BOT] A group of grasses of the genus *Festuca,* used for both hay and pasture.

Fessler compound [FOOD ENG] Flocculating-salt mixture used to remove copper and iron from wines.

FET *See* field-effect transistor.

fetal asphyxia [MED] Deprivation of oxygen to the fetus due to interference with its blood supply.

fetal fat-cell lipoma *See* liposarcoma.

fetal hemoglobin [BIOCHEM] A normal embryonic hemoglobin having alpha chains identical to those of normal adult human hemoglobin, and gamma chains similar to adult beta chains.

fetal membrane [EMBRYO] Any one of the membranous structures which surround the embryo during its development period. Also known as extraembryonic membrane.

fetch [COMPUT SCI] To locate and load into main memory a requested load module, relocating it as necessary and leaving it in a ready-to-execute condition. [OCEANOGR] **1.** The distance traversed by waves without obstruction. **2.** An area of the sea surface over which seas are generated by a wind having a constant speed and direction. **3.** The length of the fetch area, measured in the direction of the wind in which the seas are generated. Also known as generating area.

fetch ahead *See* instruction lookahead.

fetch bit [COMPUT SCI] The fifth bit in a storage key; the value of the fetch bit can protect a stored block from destruction or from being accessed by unauthorized programs.

fetometamorphism [INV ZOO] A life cycle variation in the Cantharidae (Coleoptera); the larvae hatch prematurely as legless, immature prelarvae.

fettling knife [GRAPHICS] A sharp instrument with a flexible blade tapering to a point; used in ceramics for carving of clay models, sgraffito, removing mold marks, and miscellaneous other purposes.

fetus [EMBRYO] **1.** The unborn offspring of viviparous mammals in the later stages of development. **2.** In human beings, the developing body in utero from the beginning of the ninth week after fertilization through the fortieth week of intrauterine gestation, or until birth.

Feulgen reaction [ANALY CHEM] An aldehyde specific reaction based on the formation of a purple-colored compound when aldehydes react with fuchsin-sulfuric acid; deoxyribonucleic acid gives this reaction after removal of its purine bases by acid hydrolysis; used as a nuclear stain.

fever [MED] An elevation in the central body temperature of warm-blooded animals caused by abnormal functioning of the thermoregulatory mechanisms.

Feylinilidae [VERT ZOO] The limbless skinks, a family of reptiles in the suborder Sauria represented by four species in tropical Africa.

Feynman diagram [QUANT MECH] A diagram which gives an intuitive picture of a term in a perturbation expansion of a scattering matrix element or other physical quantity associated with interactions of particles; each line represents a particle, each vertex an interaction.

Feynman integral [QUANT MECH] A term in a perturbation expansion of a scattering matrix element; it is an integral over the Minkowski space of various particles (or over the corresponding momentum space) of the product of propagators of these particles and quantities representing interactions between the particles.

Feynman propagator [QUANT MECH] A factor $(\rho + m)/(\rho^2 - m^2 + i\epsilon)$ in a transition amplitude corresponding to a line that connects two vertices in a Feynman diagram, and that represents a virtual particle.

Feynman's superfluidity theory [CRYO] Microscopic theory of superfluid helium which accounts for the spectrum of elementary excitations assumed by Landau's superfluidity theory.

F factor *See* fertility factor.

F format [COMPUT SCI] **1.** In data management, a fixed-length logical record format. **2.** In FORTRAN, a real variable formatted as $F\mu.d$, where μ is the width of the field and d represents the number of digits to appear after the decimal point.

FG achromatism *See* actinic achromatism.

fiber [BOT] **1.** An elongate, thick-walled, tapering plant cell that lacks protoplasm and has a small lumen. **2.** A very slender root. [MET] **1.** The characteristic of wrought metal that indicates directional properties as revealed by etching or by fracture appearance. **2.** The pattern of preferred orientation of metal crystals after a deformation process, usually wiredrawing. [OPTICS] A transparent threadlike object made of glass or clear plastic, used to conduct light along selected paths. [TEXT] An extremely long, pliable, cohesive natural or manufactured threadlike object from which yarns are spun to be woven into textiles.

fiberboard [MATER] A hard isotropic board made by compressing wood chips or other vegetable fibers.

fiber bundle [OPTICS] A flexible bundle of glass or other transparent fibers, parallel to each other, used in fiber optics to transmit a complete image from one end of the bundle to the other.

fiber crops [AGR] Plants, such as flax, hemp, jute, and sisal, cultivated for their content or yield of fibrous material.

fiber flax [BOT] The flax plant grown in fertile, well-drained, well-prepared soil and cool, humid climate; planted in the early spring and harvested when half the seed pods turn yellow; used in the manufacture of linen.

fiber grease [MATER] Solid-base lubricating grease; contains soap fibers 1–1000 micrometers long and 0.1–1.0 micrometer wide, which stabilize lubricating action by immobilizing fluid lubricating components.

fiberizer [MIN ENG] A hammer mill which cracks open asbestos-bearing rock to yield a fibrous product.

fiber metal [MET] Any material composed of metal fibers that are pressed or sintered together or infiltrated with resin or other material.

fiber metallurgy [MET] A branch of metallurgy concerned with the study of metal fibers.

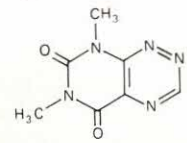
fiber optics [OPTICS] The technique of transmitting light through long, thin, flexible fibers of glass, plastic, or other transparent materials; bundles of parallel fibers can be used to transmit complete images.

fiber plaster [MATER] Gypsum plaster containing hair or wood fiber as a binder.

fiberscope [OPTICS] An arrangement of parallel glass fibers with an objective lens on one end and an eyepiece at the other; the assembly can be bent as required to view objects that are inaccessible for direct viewing.

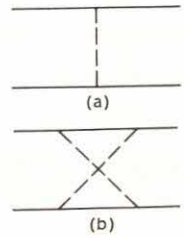
fiber stress [MECH] **1.** The tensile or compressive stress on the fibers of a fiber metal or other fibrous material, especially

FERVENULIN



Structural formula.

FEYNMAN DIAGRAM



Typical Feynman diagrams for two-particle scattering. *(a)* Second-order diagram, *(b)* fourth-order diagram. Solid lines represent scattered particles; broken lines, particles which transmit force between them.

FIBER FLAX

The type of flax plant grown for fiber, usually taller than the seed flax plant.

when fiber orientation is parallel with the neutral axis. **2.** Local stress through a small area (a point or line) on a section where the stress is not uniform, as in a beam under bending load.

fiber waveguide *See* optical waveguide.

Fibonacci sequence [MATH] The sequence 1,1,2,3,5, 8,13,21, ..., or any sequence where each entry is the sum of the two previous entries.

fibratus [METEOROL] A cloud species characterized by a fine hairlike or striated composition, the filaments of which are usually distinctly separated from each other; the extremities of these filaments are always thin and never terminated by tufts or hooks. Also known as filosus.

fibril [BIOL] A small thread or fiber, as a root hair or one of the structural units of a striated muscle. [MATER] One of the minute threadlike elements of a natural or synthetic fiber.

fibrillating [TEXT] A process for producing fibers by mechanically cracking sheets of polymer film that have been stretched and oriented along their direction of extrusion.

fibrillation [PHYSIO] An independent, spontaneous, local twitching of muscle fibers. [TEXT] A process in which yarn is extruded as a ribbon or a tape rather than as a fine filament.

fibrillose [BIOL] Having fibrils.

fibrin [BIOCHEM] The fibrous, insoluble protein that forms the structure of a blood clot; formed by the action of thrombin.

fibrinase [BIOCHEM] An enzyme that catalyzes the formation of covalent bonds between fibrin molecules. Also known as fibrin-stabilizing factor.

fibrinogen [BIOCHEM] A plasma protein synthesized by the parenchymal cells of the liver; the precursor of fibrin. Also known as factor I.

fibrinogenopenia [MED] A congenital hemorrhagic diathesis in which there is a decrease in fibrinogen in the plasma.

fibrinoid [BIOCHEM] A homogeneous, refractile, oxyphilic substance occurring in degenerating connective tissue, as in term placentas, rheumatoid nodules, and Aschoff bodies, and in pulmonary alveoli in some prolonged pneumonitides.

fibrinolysin *See* plasmin.

fibrinolysis [PHYSIO] Liquefaction of coagulated blood by the action of plasmin on fibrin.

fibrinous pericarditis [MED] Inflammation of the pericardium involving the deposition of fibrin and leukocytes between the layers of the pericardium; seen in rheumatic carditis and acute infectious diseases.

fibrin-stabilizing factor *See* fibrinase.

Fibrist [GEOL] A suborder of the soil order Histosol, consisting mainly of recognizable plant residues or sphagnum moss and saturated with water most of the year.

fibroadenoma [MED] A benign tumor containing both fibrous and glandular elements.

fibroblast [HISTOL] A stellate connective tissue cell found in fibrous tissue. Also known as a fibrocyte.

fibroblastic [PETR] Of a metamorphic rock, having a texture that is homeoblastic as a result of the development of minerals with a fibrous habit during recrystallization.

fibrocartilage [HISTOL] A form of cartilage rich in dense, closely opposed bundles of collagen fibers; occurs in intervertebral disks, in the symphysis pubis, and in certain tendons.

fibrocyte *See* fibroblast.

fibroferrite [MINERAL] $Fe(SO_4)(OH)\cdot 5H_2O$ A yellowish mineral composed of a hydrous basic ferric sulfate, occurring in fibrous form.

fibroid [HISTOL] Composed of fibrous tissue.

fibroid deoxyribonucleic acid [MOL BIO] Sections of relatively uncoiled double-stranded deoxyribonucleic acid thought to be regions of specific base sequences for coding rather than gene control.

fibroid tumor *See* fibroma.

fibroin [BIOCHEM] A protein secreted by spiders and silkworms which rapidly solidifies into strong, insoluble thread that is used to form webs or cocoons.

fibrolite *See* sillimanite.

fibroma [MED] A benign tumor composed primarily of fibrous connective tissue. Also known as fibroid tumor.

fibroma molluscum *See* neurofibromatosis.

fibromatosis [MED] **1.** The occurrence of multiple fibromas. **2.** Localized proliferation of fibroblasts without apparent cause.

fibromyoma [MED] A benign tumor, usually of smooth muscle, with a prominent fibrous stroma; commonly a uterine leiomyoma.

fibromyosis *See* interstitial endometrosis.

fibromyositis *See* myositis.

fibroplasia [MED] The growth of fibrous tissue, as in the second phase of wound healing.

fibrosarcoma [MED] A sarcoma composed of spindle cells that produce collagenous fibrils.

fibrosing adenomatosis *See* sclerosing adenomatosis.

fibrosis [MED] Growth of fibrous connective tissue in an organ or part in excess of that naturally present.

fibrositis [MED] Inflammation of white fibrous connective tissue, usually in a joint region.

fibrous composite [MATER] A composite material consisting of fibers embedded in a matrix.

fibrous dysplasia [MED] **1.** Extensive formation of fibrous tissue and transformation of bony tissue in one or more bones. **2.** Development of abnormal amounts of fibrous tissue in the mammary glands.

fibrous fracture [MECH] Failure of a material resulting from a ductile crack; broken surfaces are dull and silky. Also known as ductile fracture.

fibrous ice *See* acicular ice.

fibrous osteoma *See* ossifying fibroma.

fibrous plaster [MATER] Gypsum plaster reinforced or backed with sisal or canvas.

fibrous protein [BIOCHEM] Any of a class of highly insoluble proteins representing the principal structural elements of many animal tissues.

fibrous structure [MATER] A ropy surface on a fractured material. [MET] **1.** A lamination on an etched section of a forging. **2.** In wrought iron, a structure consisting of slag fibers embedded in ferrite.

fibula [ANAT] The outer and usually slender bone of the hind or lower limb below the knee in vertebrates; it articulates with the tibia and astragalus in humans, and is ankylosed with the tibia in birds and some mammals.

ficam *See* 2,2-dimethyl-1,3-benzodioxol-4-yl-*N*-methylcarbomate.

ficin [ORG CHEM] A proteolytic enzyme obtained from fig latex or sap; hydrolyzes casein, meat, fibrin, and other proteinlike materials; used in the food industry and as a diagnostic aid in medicine.

Fick's law [PHYS] The law that the rate of diffusion of matter across a plane is proportional to the negative of the rate of change of the concentration of the diffusing substance in the direction perpendicular to the plane.

fictitious [NAV] Pertaining to or measured from an arbitrary reference line as in fictitious equator, fictitious latitude, or fictitious longitude.

fictitious craft [NAV] In marine usage, an imaginary craft used in the solution of certain maneuvering problems, as when a ship to be intercepted is expected to change course or speed during the interception run.

fictitious equator [NAV] A reference line serving as the origin for measurement of a fictitious latitude.

fictitious graticule [NAV] A graticule formed from a set of fictitious parallels and meridians to resemble the geographic graticule but offset from it; coordinates taken from the fictitious graticule are used with a transverse or oblique map projection or with a navigation grid.

fictitious latitude [NAV] Angular distance from the equator as shown on a fictitious graticule.

fictitious longitude [NAV] The arc of the equator between the prime meridian and any given meridian derived from the fictitious graticule.

fictitious loxodrome *See* fictitious rhumb line.

fictitious loxodromic curve *See* fictitious rhumb line.

fictitious meridian [NAV] One of the coordinates of a fictitious graticule.

fictitious parallel [NAV] One of the coordinates derived from a fictitious graticule.

fictitious pole [NAV] One of the two points 90° from the equator on a fictitious graticule; called transverse or oblique pole, depending upon the type of fictitious equator.

fictitious rhumb line [NAV] A line on a fictitious graticule making the same oblique angle with all meridians. Also known as fictitious loxodrome; fictitious loxodromic curve.

fictitious ship [NAV] An imaginary ship serving as a fictitious craft.

fictitious vehicle [NAV] An imaginary vehicle serving as a fictitious craft.

fictitious year [ASTRON] The period between successive returns of the fictitious mean sun to a sidereal hour angle of 80° (right ascension 18 hours 40 minutes; about January 1); the length of the fictitious year is the same as that of the tropical year, since both are based upon the position of the sun with respect to the vernal equinox. Also known as Besselian year.

Ficus [BOT] A genus of tropical trees in the family Moraceae including the rubber tree and the fig tree. [INV ZOO] A genus of gastropod mollusks having pear-shaped, spirally ribbed sculptured shells.

fiddley *See* fidley.

fidelity [COMMUN] The degree to which a system accurately reproduces at its output the essential characteristics of the signal impressed on its input.

fidley [NAV ARCH] Also spelled fiddley. **1.** A wide opening above a fire room through which pass ventilators. **2.** A framework of iron about the ladder of a hatch in a ship's deck leading below the deck.

FIDO [METEOROL] A system for artificially dissipating fog, in which gasoline or other fuel is burned at intervals along an airstrip to be cleared. Derived from fog investigation dispersal operations.

fiducial point [OPTICS] A mark, or one of several marks, visible in the field of view of an optical instrument, used as a reference or for measurement. Also known as fiduciary point.

fiducial temperature [METEOROL] That temperature at which, in a specified latitude, the reading of a particular barometer does not require temperature or latitude correction. [THERMO] Any of the temperatures assigned to a number of reproducible equilibrium states on the International Practical Temperature Scale; standard instruments are calibrated at these temperatures.

fiduciary point *See* fiducial point.

fiedlerite [MINERAL] $Pb_3(OH)_2Cl_4$ A colorless mineral composed of a hydroxychloride of lead, occurring as monoclinic crystals.

Fiedler's myocarditis *See* interstitial myocarditis.

field [COMPUT SCI] A specified area, such as a group of card columns or a set of bit locations in a computer word, used for a particular category of data. [ELEC] That part of an electric motor or generator which produces the magnetic flux which reacts with the armature, producing the desired machine action. [ELECTR] One of the equal parts into which a frame is divided in interlaced scanning for television; includes one complete scanning operation from top to bottom of the picture and back again. [GEOL] A region or area with a particular mineral resource, for example, a gold field. [GEOPHYS] That area or space in which a particular geophysical effect, such as gravity or magnetism, occurs and can be measured. [MATH] An algebraic system possessing two operations which have all the properties that addition and multiplication of real numbers have. [MED] The area in which surgery is taking place, bounded on all sides by sterilized tissue or drapes. Also known as sterile field. [OPTICS] *See* field of view. [PHYS] **1.** An entity which acts as an intermediary in interactions between particles, which is distributed over part or all of space, and whose properties are functions of space coordinates and, except for static fields, of time; examples include gravitational field, sound field, and the strain tensor of an elastic medium. **2.** The quantum-mechanical analog of this entity, in which the function of space and time is replaced by an operator at each point in space-time.

field artillery [ORD] Artillery mounted on carriages, and mobile enough to accompany infantry or armored units in the field.

field artillery observer [ORD] A person who watches the effects of artillery fire, adjusts the center of impact of that fire onto a target, and reports results to the firing agency.

field artillery trainer [ORD] A small practice gun and carriage unit with a telescope and a mechanism for adjusting elevation and deflection; used in training field artillery personnel.

fieldata code [COMMUN] A standardized military data transmission code, seven data bits plus one parity bit.

field brightness *See* adaptation luminance.

field changes [METEOROL] With regard to thunderstorm electricity, the rapid variations in the vertical component of the electric field strength at the earth's surface.

field coil [ELECTROMAG] A coil used to produce a constant-strength magnetic field in an electric motor, generator, or excited-field loudspeaker; depending on the type of motor or generator, the field core may be on the stator or the rotor. Also known as field winding.

field delimiter [COMPUT SCI] Any symbol, such as a slash, colon, tab, or space, which enables an assembler to recognize the end of a field.

field desorption [SOLID STATE] A technique which tears atoms from a surface by an electric field applied at a sharp dip to produce very well-ordered, clean, plane surfaces of many crystallographic orientations.

field desorption mass spectroscopy [SPECT] A technique for analysis of nonvolatile molecules in which a sample is deposited on a thin tungsten wire containing sharp microneedles of carbon on the surface; a voltage is applied to the wire, thus producing high electric-field gradients at the points of the needles, and moderate heating then causes desorption from the surface or molecular ions, which are focused into a mass spectrometer.

field-desorption microscope [ELECTR] A type of field-ion microscope in which the tip specimen is imaged by ions that are field-desorbed or field-evaporated directly from the surface rather than by ions obtained from an externally supplied gas.

field discharge [ELECTR] A spark discharge due to high potential across a gap.

field discharge switch [ELEC] A special type of switch that is connected in series with the field winding of an electrical machine, and that is operated to connect a resistor in parallel with the field winding before the main supply contacts are opened, in order to prevent the self-induced electromotive force in the field winding from reaching dangerous levels.

field distortion [ELECTROMAG] Any alteration in the direction of an electric or magnetic field; in particular, distortion of the magnetic fields between the north and south poles of a generator due to the counter electromotive force in the armature winding.

field-effect capacitor [ELECTR] A capacitor in which the effective dielectric is a region of semiconductor material that has been depleted or inverted by the field effect.

field-effect device [ELECTR] A semiconductor device whose properties are determined largely by the effect of an electric field on a region within the semiconductor.

field-effect diode [ELECTR] A semiconductor diode in which the charge carriers are of only one polarity.

field-effect display [OPTICS] A type of numerical display device in which a liquid-crystal cell is sandwiched between polarizers; the cell is treated so that it normally rotates light 90°, but ceases to rotate light when an electric field is applied to it, altering the transmission of the device.

field-effect phototransistor [ELECTR] A field-effect transistor that responds to modulated light as the input signal.

field-effect tetrode [ELECTR] Four-terminal device consisting of two independently terminated semiconducting channels so displaced that the conductance of each is modulated along its length by the voltage conditions in the other.

field-effect transistor [ELECTR] A transistor in which the resistance of the current path from source to drain is modulated by applying a transverse electric field between grid or gate electrodes; the electric field varies the thickness of the depletion layer between the gates, thereby reducing the conductance. Abbreviated FET.

field-effect-transistor resistor [ELECTR] A field-effect transistor in which the gate is generally tied to the drain; the resultant structure is used as a resistance load for another transistor.

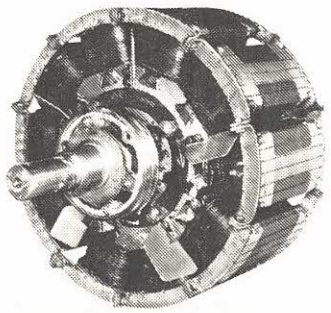
field-effect varistor [ELECTR] A passive, two-terminal, nonlinear semiconductor device that maintains constant current over a wide voltage range.

field emission [ELECTR] The emission of electrons from the surface of a metallic conductor into a vacuum (or into an insulator) under influence of a strong electric field; electrons penetrate through the surface potential barrier by virtue of the quantum-mechanical tunnel effect. Also known as cold emission.

field-emission microscope [ELECTR] A device that uses field emission of electrons or of positive ions (field-ion microscope) to produce a magnified image of the emitter surface on a fluorescent screen.

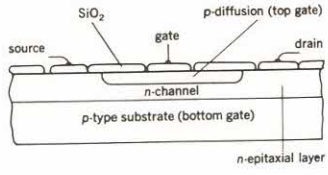
field-emission tube [ELECTR] A vacuum tube within which field emission is obtained from a sharp metal point; must be more highly evacuated than an ordinary vacuum tube to prevent contamination of the point.

FIELD COIL



A rotor of a synchronous motor showing the field coils. *(Allis-Chalmers)*

FIELD-EFFECT TRANSISTOR



One type of field-effect transistor: the junction-gate field-effect transistor.

FIELD EMISSION

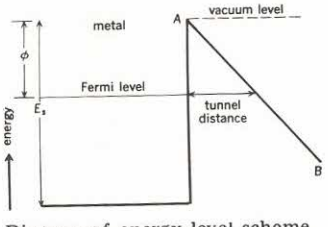


Diagram of energy level scheme for field emission from a metal at absolute zero. Dashed vacuum level represents energy of an electron at rest in free space. Energy of conduction electron at rest in metal lies below vacuum level by amount E_s. Energy levels below Fermi level are occupied by conduction electrons whereas those above are empty. AB is the potential of an electron outside the metal in presence of a strong constant field produced by a positive electrode. ϕ is the work function.

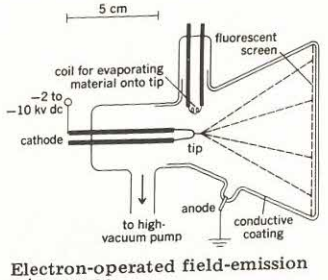
FIELD-EMISSION MICROSCOPE



Electron-operated field-emission microscope.

field emplacement [ORD] Platform, support, or other position for artillery, machine guns, and so forth, in the field.

field engineer [COMPUT SCI] A professional who installs computer hardware on customers' premises, performs routine preventive maintenance, and repairs equipment when it is out of order. Also known as field service representative. [ENG] **1.** An engineer who is in charge of directing civil, mechanical, and electrical engineering activities in the production and transmission of petroleum and natural gas. **2.** An engineer who operates at a construction site.

field-enhanced emission [ELECTR] An increase in electron emission resulting from an electric field near the surface of the emitter.

field excitation [MECH ENG] Control of the speed of a series motor in an electric or diesel-electric locomotive by changing the relation between the armature current and the field strength, either through a reduction in field current by shunting the field coils with resistance, or through the use of field taps.

field flattener [OPTICS] A thin planoconvex lens placed in front of the photographic plate in some telescopes that have a curved focal plane so as to focus light on the flat plate.

field focus [GEOPHYS] The total area or volume occupied by an earthquake source.

field fortification [ORD] Fortification constructed in the field to strengthen the natural defenses of the ground features, including foxholes, obstacles, trenches, gun emplacements, and so forth.

field-free emission current [ELECTR] Electron current emitted by a cathode when the electric field at the surface of the cathode is zero. Also known as zero-field emission.

field frequency [ELECTR] The number of fields transmitted per second in television; equal to the frame frequency multiplied by the number of fields that make up one frame. Also known as field repetition rate.

field geology [GEOL] The study of rocks and rock materials in their environment and in their natural relations to one another.

field gradient [PHYS] **1.** A vector obtained by applying the del operator to a scalar field. **2.** A tensor obtained by dyadic multiplication of the del operator with a vector field.

field gun [ORD] Any artillery piece mounted on a carriage for use in the field, for example, a cannon.

field index [NUCLEO] The constant n for a betatron in which the magnetic field strength at radius r is equal to $B_0\,(r/R)^{-n}$, where R is the radius of equilibrium orbit of an electron, and B_0 is the corresponding magnetic field. Also known as n value.

field intensity [COMMUN] In Federal Communications Commission regulations, the electric field intensity in the horizontal direction. [PHYS] *See* field strength.

field investigation [SCI TECH] An investigation carried out in the field; usually applied to an investigation made by someone not domiciled at the site.

field ionization [ELECTR] The ionization of gaseous atoms and molecules by an intense electric field, often at the surface of a solid.

field-ion microscope [ELECTR] A microscope in which atoms are ionized by an electric field near a sharp tip; the field then forces the ions to a fluorescent screen, which shows an enlarged image of the tip, and individual atoms are made visible; this is the most powerful microscope yet produced. Also known as ion microscope.

field laboratory [SCI TECH] Usually a temporary or portable laboratory facility set up at the site of an operation to conduct chemical or physical evaluations.

field length [COMPUT SCI] The number of columns, characters, or bits in a specified field.

field lens [OPTICS] The lens in a two-lens eyepiece which is farther from the eye.

field line annihilation *See* field line reconnection.

field line reconnection [ASTRON] A topological rearrangement of the magnetic field lines surrounding an astronomical body, for example, the transfer of lines between open and closed configurations in the terrestrial magnetotail; a possible source of the energy released explosively in solar flares and magnetospheric substorms. Also known as field line annihilation; magnetic merging.

field luminance *See* adaptation luminance.

field magnet [ELECTROMAG] The magnet which creates a magnetic field in an electric machine or device.

field map [MAP] A map made in the field and bearing observations of various kinds upon which the final map is based.

field moisture [HYD] Water in the ground above the water table.

field of fire [ORD] The area which a weapon or group of weapons may cover effectively with fire from a given position.

field of planes on a manifold [MATH] A continuous assignment of a vector subspace of tangent vectors to each point in the manifold. Also known as plane field.

field of search [ELECTR] The space that a radar set or installation can cover effectively.

field of vectors on a manifold [MATH] A continuous assignment of a tangent vector to each point in the manifold. Also known as vector field.

field of view [OPTICS] The area or solid angle which can be viewed through an optical instrument. Also known as field.

field operator [QUANT MECH] An operator function of space and time for the annihilation or creation of a particle.

field pattern *See* radiation pattern.

field piece [ORD] An artillery gun or howitzer mounted on a carriage, for use in the field.

field pole [ELECTROMAG] A structure of magnetic material on which a field coil of a loudspeaker, motor, generator, or other electromagnetic device may be mounted.

field pressure [GEOL] The pressure of natural gas in the underground formations from which it is produced.

field-programmable logic array [ELECTR] A programmed logic array in which the internal connections of the logic gates can be programmed once in the field by passing high current through fusible links, by using avalanche-induced migration to short base-emitter junctions at desired interconnections, or by other means. Abbreviated FPLA. Also known as programmable logic array.

field quenching [MET] The quench cooling and tempering of a heated metal object at the site of construction or operation by using portable equipment rather than fixed manufacturing facilities. [SOLID STATE] Decrease in the emission of light of a phosphor excited by ultraviolet radiation, x-rays, alpha particles, or cathode rays when an electric field is simultaneously applied.

field repetition rate *See* field frequency.

field rheostat [ELEC] A rheostat used to adjust the current in the field winding of an electric machine.

field scan [ELECTR] Television term denoting the vertical excursion of an electron beam downward across a cathode-ray tube face, the excursion being made in order to scan alternate lines.

field section [COMPUT SCI] A portion of a field, such as the section formed by the second and third character of a 10-character field.

field-sequential color television [COMMUN] A color television system in which the individual red, green, and blue primary colors are associated with successive fields.

field service representative *See* field engineer.

field shift [NUC PHYS] The portion of the mass shift produced by the change in the size and shape of the nuclear charge distribution when neutrons are added to the nucleus. Also known as volume shift.

field stars [ASTRON] Background stars when a specific object is being observed.

field stop [OPTICS] An opening, usually circular, in an opaque screen, whose edges determine the limits of the field of view of an optical instrument.

field strength [PHYS] A vector characterizing a field. Also known as field intensity.

field-strength meter [ENG] A calibrated radio receiver used to measure the field strength of radiated electromagnetic energy from a radio transmitter.

field-strip [ORD] To disassemble the major components of a machine gun, cannon, or other firearm for cleaning, inspection, or the like.

field telephone [COMMUN] A portable telephone designed for field or combat use.

field test [SCI TECH] A nonformal experiment, that is, one with fewer controls than a laboratory experiment, conducted under field conditions.

field theory [MATH] The study of fields and their extensions. [PHYS] A theory in which the basic quantities are fields; classically the equations governing the fields may be given; in quantum field theory the commutation rules satisfied by the field operators also are specified. [PSYCH] A psy-

chological theory that emphasizes the importance of interactions between events in an individual's environment.

field waveguide [ELECTROMAG] A single wire, threaded or coated with dielectric, which guides an electromagnetic field. Also known as G string.

field weapons [ORD] Weapons designed or intended for actual use in the field.

field weld [MET] A weld made at the construction site.

field winding *See* field coil.

field wire [ELEC] An insulated flexible wire or cable used in field telephone and telegraph systems.

fieldwork [SCI TECH] Work done, such as surveying or making geological observations, in the field.

Fierz interference [NUC PHYS] Interference between the axial vector and tensor parts of the weak interaction of nucleon and lepton (electron-neutrino) fields in beta decay; measurements of the beta-particle energy spectrum indicate that it vanishes.

fièvre boutonneuse [MED] A mild febrile rickettsial disease of humans caused by *Rickettsia conori;* characterized by a rash, tache noire (primary ulcer), and swollen lymph glands. Also known as boutonneuse fever; Marseilles fever.

fife rail [NAV ARCH] A metal or wooden rail with holes for belaying pins.

FIFO *See* first-in, first-out.

fifteen-degrees calorie *See* calorie.

fifth sound [CRYO] A temperature oscillation which propagates in helium II contained in a porous material such as a tightly packed powder, where the normal component is immobilized by its viscosity.

fifty-percent zone [ORD] Area enclosing the center of dispersion or impact within which one half of all shots fired with the same setting will fall.

fig [BOT] *Ficus carica*. A deciduous tree of the family Moraceae cultivated for its edible fruit, which is a syconium, consisting of a fleshy hollow receptacle lined with pistillate flowers.

fighter aircraft [AERO ENG] A military aircraft designed primarily to destroy other aircraft in the air; may also be used to bomb military targets; it is maneuverable and has a high rate of climb.

fighter bomber [AERO ENG] A fighter aircraft that is designed to have bombs, or rockets, added to it so that it may be used as a bomber.

fighter interceptor [AERO ENG] A fighter aircraft designed to intercept and shoot down enemy aircraft.

fighting compartment [ORD] A portion of a fighting vehicle in which the occupants service and fire the principal armament, occupying a part of the hull and all of the turret, if any.

Figitidae [INV ZOO] A family of hymenopteran insects in the superfamily Cynipoidea.

figurative constant [COMPUT SCI] A predefined constant in COBOL which does not require a description in data division, such as ZERO which stands for 0.

figure [MATER] The natural grain of wood, especially when it is cut as a veneer.

figurehead [NAV ARCH] An ornament placed on the foremost edge of the stem just below the bowsprit.

figure of merit [ELECTR] A performance rating that governs the choice of a device for a particular application; for example, the figure of merit of a magnetic amplifier is the ratio of usable power gain to the control time constant.

figure of the earth [GEOD] A precise geometric shape of the earth.

figures shift [COMMUN] A physical movement that permits a teletypewriter to print uppercase characters, numbers, symbols, and the like.

figure stone *See* agalmatolite.

Fiji disease [PL PATH] A virus disease of sugarcane; elongated swellings on the underside of leaves precede death of the plant.

filament [BOT] **1.** The stalk of a stamen which supports the anther. **2.** A chain of cells joined end to end, as in certain algae. [ELEC] Metallic wire or ribbon which is heated in an incandescent lamp to produce light, by passing an electric current through the filament. [ELECTR] A cathode made of resistance wire or ribbon, through which an electric current is sent to produce the high temperature required for emission of electrons in a thermionic tube. Also known as directly heated cathode; filamentary cathode; filament-type cathode. [INV ZOO] A single silk fiber in the cocoon of a silkworm. [MET] A long, flexible metal wire drawn very fine. [SCI TECH] A long, flexible object with a small cross section. [TEXT] A single continuous manufactured fiber which is extruded from a spinneret and joined with others to make a thread.

filamentary cathode *See* filament.

filament current [ELECTR] The current supplied to the filament of an electron tube for heating purposes.

filament drawing [MET] Reducing the cross section of wire by pulling it through a die to form a filament.

filament emission [ELECTR] Liberation of electrons from a heated filament wire in an electron tube.

filament lamp *See* incandescent lamp.

filamentous bacteria [MICROBIO] Bacteria, especially in the order Actinomycetales, whose cells resemble filaments and are often branched.

filament saturation *See* temperature saturation.

filament transformer [ELECTR] A small transformer used exclusively to supply filament or heater current for one or more electron tubes.

filament-type cathode *See* filament.

filament winding [ELECTR] The secondary winding of a power transformer that furnishes alternating-current heater or filament voltage for one or more electron tubes. [ENG] A process for fabricating a composite structure in which continuous fiber reinforcement (glass, boron, silicon carbide), either previously impregnated with a matrix material or impregnated during winding, are wound under tension over a rotating core.

filaria [INV ZOO] A parasitic filamentous nematode belonging to the order Filaroidea.

filariasis [MED] A disease due to the presence of hairlike nematodes (filariae) in humans, including *Wuchereria bancrofti, W. pacifica,* and *Onchocerca volvulus*.

Filarioidea [INV ZOO] An order of the class Nematoda comprising highly specialized parasites of humans and domestic animals.

filar micrometer [DES ENG] An instrument used to measure small distances in the field of an eyepiece by using two parallel wires, one of which is fixed while the other is moved at right angles to its length by means of an accurately cut screw. Also known as bifilar micrometer.

filature [TEXT] A factory where silk is unwound from cocoons and the strands are collected into skeins.

filbert [BOT] Either of two European plants belonging to the genus *Corylus* and producing a thick-shelled, edible nut. Also known as hazelnut.

file [COMPUT SCI] A collection of related records treated as a unit. [DES ENG] A steel bar or rod with cutting teeth on its surface; used as a smoothing or forming tool.

file control system [COMPUT SCI] Software package which handles the transfer of data from any device into any device.

file event [COMPUT SCI] A single access to any storage device for either input or output.

file gap [COMPUT SCI] An area in a data storage medium which is used mainly to indicate the end of a file and sometimes the beginning of another.

file hardness [ENG] Hardness of a material as determined by testing with a file of standardized hardness; a material which cannot be cut with the file is considered as hard as or harder than the file.

file header [COMPUT SCI] A set of words comprising the file name and various characteristics of the file, found at the beginning of a file stored on magnetic tape or disk.

file identification [COMPUT SCI] A device, such as a label or tag, used to identify, describe, or name a physical medium, such as a reel of digital magnetic tape or a box of punched cards, which contains data.

file layout [COMPUT SCI] A description of the arrangement of the data in a file.

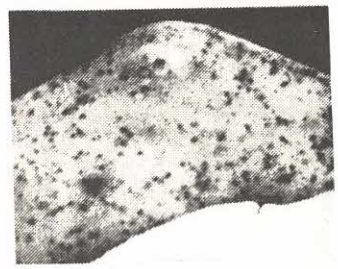
file maintenance [COMPUT SCI] Data-processing operation in which a master file is updated on the basis of one or more transaction files.

file name [COMPUT SCI] The name given by the programmer to a specific set of data.

file opening [COMPUT SCI] The process, carried out by computer software, of identifying a file and comparing the file header with specifications in the program being run to ensure that the file corresponds.

file organization [COMPUT SCI] The structure of a file meeting two requirements: to minimize the running time of the program, and to simplify the work involved in modifying the contents of the file.

FIÈVRE BOUTONNEUSE



Fièvre boutonneuse, showing rash and tache noire in popliteal area. *(From C. B. Philip, in R. L. Pullen, ed., Communicable Diseases, Lea and Febiger, 1950)*

FIG

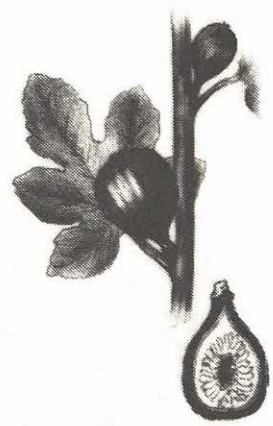


Fig *(Ficus carica)*, details of branch and fruit.

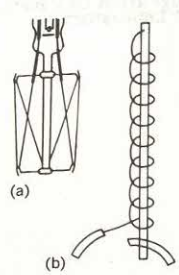
FILAMENT



Two types of filaments: *(a)* in incandescent lamp; *(b)* in thermionic tube. *(General Electric Co.)*

file organization routine [COMPUT SCI] A program which allocates data files into random-access storage devices.

file-oriented system [COMPUT SCI] A computer configuration which considers a heavy, or exclusive, usage of data files.

file printout [COMPUT SCI] Output from a computer printer consisting of a copy of the contents of a file held in some storage device, usually to assist in debugging a program.

file processing [COMPUT SCI] The job of updating, sorting, or validating a data file.

file protection [COMPUT SCI] A mechanical device or a computer command which prevents erasing of or writing upon a magnetic tape but allows a program to read the data from the tape.

file protection ring [COMPUT SCI] A ring that can be attached to, or detached from, the hub of a reel of magnetic tape, used to identify the reel's status and, in some computer systems, to prevent writing upon the tape when the ring is attached or detached.

file reference [COMPUT SCI] An operation involving looking up and retrieving the information on file for a specified item or items.

file search [COMPUT SCI] An operation involving looking through the file for information on all items falling in a specified category, extracting the information for any item where the information recorded meets certain criteria, and determining whether or not there exists a specified pattern of information anywhere in the file.

file security *See* data security.

file storage unit [COMPUT SCI] The component of a computer system that stores information required for reference.

filet lace [TEXT] Lace with knotted square-mesh ground and square design in darned or woven effect.

Filicales [BOT] The equivalent name for Polypodiales.

Filicineae [BOT] The equivalent name for Polypodiatae.

Filicornia [INV ZOO] A group of hyperiid amphipod crustaceans in the suborder Genuina having the first antennae inserted anteriorly.

filiform [BIOL] Threadlike or filamentous.

filiform corrosion [MET] A random threadlike deterioration of a painted or lacquered metal caused by superficial corrosion of the base metal.

filiform lapilli *See* Pele's hair.

filiform papilla [ANAT] Any one of the papillae occurring on the dorsum and margins of the oral part of the tongue, consisting of an elevation of connective tissue covered by a layer of epithelium.

fill [CIV ENG] Earth used for embankments or as backfill. [MIN ENG] *See* pack.

fill characters [COMPUT SCI] Nondata characters or bits which are used to fill out a field on the left if data are right-justified or on the right if data are left-justified.

filled band [SOLID STATE] An energy band, each of whose energy levels is occupied by an electron.

filled composite [MATER] Mixture (composite) of thermoplastic or thermosetting resin and granular or short-strand fiber fill.

filled insulation [MATER] A loose insulating material that is poured or blown into walls.

filled stopes [MIN ENG] Stopes filled with barren stone, low-grade ore, sand, or tailings (mill waste) after the ore has been extracted.

filled-system thermometer [ENG] A thermometer which has a bourdon tube connected by a capillary tube to a hollow bulb; the deformation of the bourdon tube depends on the pressure of a gas (usually nitrogen or helium) or on the volume of a liquid filling the system. Also known as filled thermometer.

filled thermometer *See* filled-system thermometer.

filled thermoplastic [MATER] A thermoplastic resin material that has been extended (filled) with an inert filler powder or fibers before curing.

filled thermoset [MATER] Thermosetting resin material that has been extended (filled) with an inert filler powder or fibers before curing.

filler [MATER] **1.** An inert material added to paper, resin, bituminous material, and other substances to modify their properties and improve quality. **2.** A material used to fill holes in wood, plaster, or other surfaces before applying a coating such as paint or varnish. [MET] The rod used to deposit metal in a joint in brazing, soldering, or welding.

filler specks [MATER] In a cast plastic object, visible specks of a filler such as wood flour or asbestos that stand out in color contrast against the surface of the object.

fillet [BUILD] A flat molding that separates rounded or angular moldings. [DES ENG] A concave transition surface between two otherwise intersecting surfaces. [ENG] **1.** Any narrow, flat metal or wood member. **2.** A corner piece at the juncture of perpendicular surfaces to lessen the danger of cracks, as in core boxes for castings. [FOOD ENG] A boneless slice of meat or fish.

fillet gage [DES ENG] A gage for measuring convex or concave surfaces.

fillet lightning *See* ribbon lightning.

fillet weld [MET] A weld joining two edges at right angles; cross-sectional configuration is approximately triangular.

fill factor [MECH ENG] The approximate load that the dipper of a shovel is carrying, expressed as a percentage of the rated capacity.

filling [ENG] The loading of trucks with any material. [METEOROL] An increase in the central pressure of a pressure system on a constant-height chart, or an analogous increase in height on a constant-pressure chart; the term is commonly applied to a low rather than to a high. [MIN ENG] Allowing a mine to fill with water. [TEXT] **1.** The yarn running perpendicular to the lengthwise, or warp, yarn in weaving. Also known as pick; weft; woof. **2.** In cloth finishing, a clay or starch used to add body and weight.

filling in [GRAPHICS] A condition in letterpress or offset lithography in which the area between the halftone dots is filled with ink or ink is plugging up the type.

fillowite [MINERAL] $H_2Na_6(Mn,Fe,Ca)_{14}(PO_4)_{12}\cdot H_2O$ A brown, yellow, or colorless mineral composed of a hydrous phosphate of manganese, iron, sodium, and other metals.

fill terrace *See* alluvial terrace.

fill-up work *See* internal work.

film [BIOL] A thin, membranous skin, such as a pellicle. [ELEC] The layer adjacent to the valve metal in an electrochemical valve, in which is located the high voltage drop when current flows in the direction of high impedance. [GRAPHICS] Plastic material, such as cellulose acetate or cellulose nitrate, coated with a light-sensitive emulsion, used to make negatives or transparencies in radiography or photography. [MATER] A flat section of a thermoplastic resin, a regenerated cellulose derivative, or other material that is extremely thin in comparison to its length and breadth and has a nominal maximum thickness of 0.25 millimeter. [MED] A pathological opacity, as of the cornea. [MET] Oxide coating on a metal.

film badge [NUCLEO] A device worn for the purpose of indicating the absorbed dose of radiation received by the wearer; usually made of metal, plastic, or paper and loaded with one or more pieces of x-ray film. Also known as badge meter.

film base [GRAPHICS] The celluloid component which supports the emulsion of photographic film.

film coefficient [THERMO] For a fluid confined in a vessel, the rate of flow of heat out of the fluid, per unit area of vessel wall divided by the difference between the temperature in the interior of the fluid and the temperature at the surface of the wall. Also known as convection coefficient.

film cooling [THERMO] The cooling of a body or surface, such as the inner surface of a rocket combustion chamber, by maintaining a thin fluid layer over the affected area.

film density [GRAPHICS] Degree of film image opacity.

film-development chromatography [ANALY CHEM] Liquid-analysis chromatographic technique in which the stationary phase (adsorbent) is a strip or layer, as in paper or thin-layer chromatography.

film integrated circuit [ELECTR] An integrated circuit whose elements are films formed in place on an insulating substrate.

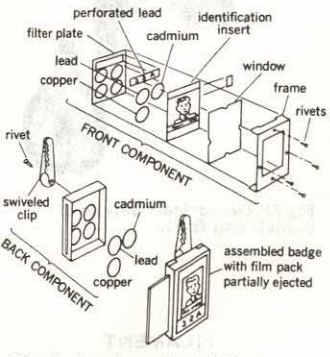
film jacket [GRAPHICS] A transparent acetate single or multiple sleeve or pocket made to hold microfilm in flat strips.

film mottle [GRAPHICS] Cloudy or blotchy appearance of photographic film; the uneven density is generally caused by insufficient agitation.

filmogen [MATER] The film-forming material or binder in paint which imparts continuity.

film opaque [GRAPHICS] Any of the liquids applied with small brushes to processed film to cover imperfections known as pinholes, very small transparent dots in an otherwise black emulsion area.

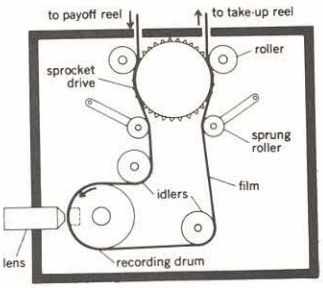
FILM BADGE



Film badge from Oak Ridge National Laboratory.

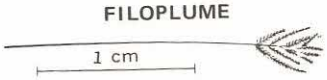
film optical-sensing device [COMPUT SCI] A device capable of digitizing the information stored on a film.
film plane [GRAPHICS] The position in a camera occupied by the film or plate.
film platen [ENG] A device which holds film in the focal plane during exposure.
film pressure [PHYS] The difference between the surface tension of a pure liquid and the surface tension of the liquid with a unimolecular layer of a given substance adsorbed on it. Also known as surface pressure.
film reader [ELECTR] A device for converting a pattern of transparent or opaque spots on a photographic film into a series of electric pulses. [OPTICS] A device for projecting or displaying microfilm so that an operator can read the data on the film; usually provided with equipment for moving or holding the film.
film recorder [ELECTR] A device which places data, usually in the form of transparent and opaque spots or light and dark spots, on photographic film.
film resistor [ELEC] A fixed resistor in which the resistance element is a thin layer of conductive material on an insulated form; the conductive material does not contain binders or insulating material.
film scanning [ELECTR] The process of converting motion picture film into corresponding electric signals that can be transmitted by a television system.
film size [GRAPHICS] Generally, an indication of film width, for example, 16 millimeter, or 5 inch, 8 inch, and so forth.
film sizing table [MIN ENG] A table used in ore dressing for sorting fine material by means of a film of flowing water.
film strength [MATER] **1.** The measurement of a lubricant's ability to keep an unbroken film over surfaces. **2.** The resistance to disruption by films of all types, such as plastic films or surface-coating films.
filmstrip [GRAPHICS] A continuous length of 35-millimeter film containing a number of still photographs, drawings, or charts, which are projected on a screen one at a time.
film theory [PHYS] A theory of the transfer of material or heat across a phase boundary, where one or both of the phases are flowing fluids, the main controlling factor being resistance to heat conduction or mass diffusion through a relatively stagnant film of the fluid next to the surface. Also known as boundary-layer theory.
film transport [MECH ENG] **1.** The mechanism for moving photographic film through the region where light strikes it in recording film tracks or sound tracks of motion pictures. **2.** The mechanism which moves the film print past the area where light passes through it in reproduction of picture and sound.
film vault [ENG] A place for safekeeping of film.
film weld [GRAPHICS] A butt splice of photographic film made with a heat splicer.
filoplume [VERT ZOO] A specialized feather that may be decorative, sensory, or both; it is always associated with papillae of contour feathers.
filopodia [INV ZOO] Filamentous pseudopodia.
filoreticulopodia [INV ZOO] Branched, filamentous pseudopodia.
Filosia [INV ZOO] A subclass of the class Rhizopodea characterized by slender filopodia which rarely anastomose.
filosus *See* fibratus.
filter [COMPUT SCI] A device or program that separates data or signals in accordance with specified criteria. [CONT SYS] *See* compensator. [ELECTR] Any transmission network used in electrical systems for the selective enhancement of a given class of input signals. Also known as electric filter; electric-wave filter. [ENG] A porous article or material for separating suspended particulate matter from liquids by passing the liquid through the pores in the filter and sieving out the solids. [ENG ACOUS] A device employed to reject sound in a particular range of frequencies while passing sound in another range of frequencies. Also known as acoustic filter. [MATH] A family of subsets of a set S: it does not include the empty set, the intersection of any two members of the family is also a member, and any subset of S containing a member is also a member. [OPTICS] An optical element that partially absorbs incident electromagnetic radiation in the visible, ultraviolet, or infrared spectra, consisting of a pane of glass or other partially transparent material, or of films separated by narrow layers; the absorption may be either selective or nonselective with respect to wavelength. Also known as optical filter. [SCI TECH] In general, a selective device that transmits a desired range of matter or energy while substantially attenuating all other ranges.
filterability [ENG] The adaptability of a liquid-solid system to filtration; system is not filterable if it is too viscous to be forced through a filter medium, or if the solids are too small to be stopped by the filter medium.
filterable virus [VIROL] Virus particles that remain in a fluid after passing through a diatomite or glazed porcelain filter with pores too minute to allow the passage of bacterial cells.
filter aid [MATER] An inert powder or granules such as diatomaceous earth, fly ash, or sand added to a solution that is to be filtered in order to form a porous bed on the filter and increase the rate and improve the quality of filtration.
filter bauxite [MATER] Crushed, screened, and calcined bauxite, in particles that range from 20–60 and from 30–60 mesh grades; used in ore refineries for filtering. Also known as activated bauxite.
filter bed [CIV ENG] A fill of pervious soil that provides a site for a septic field. [ENG] A contact bed used for filtering purposes.
filter cake [MATER] A concentrated solid or semisolid material that is separated from a liquid and remains on the filter after pressure filtration.
filter cake washing [CHEM ENG] An operation performed at the end of a filtration, in which residual liquid impurities are washed out of the cake by the flow of another liquid through the cake.
filter capacitor [ELEC] A capacitor used in a power-supply filter system to provide a low-reactance path for alternating currents and thereby suppress ripple currents, without affecting direct currents.
filter center [ORD] An information center at which all radar and other observed information concerning movements of friendly and enemy planes within a certain sector is screened and disseminated.
filter choke [ELEC] An iron-core coil used in a power-supply filter system to pass direct current while offering high impedance to pulsating or alternating current.
filter cloth [MATER] A fabric used as a medium for filtration.
filter crystal [ELECTR] Quartz crystal which is used in an electrical circuit designed to pass energy of certain frequencies.
filter design [ELECTR] The design of electrical networks in which the principle of electrical resonance is used to make the network accept wanted frequencies while rejecting unwanted ones.
filter discrimination [ELECTR] Difference between the minimum insertion loss at any frequency in a filter attenuation band and the maximum insertion loss at any frequency in the operating range of a filter transmission band.
filtered particle testing [ENG] A penetrant method of nondestructive testing by which cracks in porous objects (100 mesh or smaller) are indicated: a fluid containing suspended particles is sprayed on a test object; if a crack exists, particles are filtered out and concentrate at the surface as liquid flows into the crack.
filtered radar data [ELECTR] Radar data from which unwanted returns have been removed by mapping.
filtered stock [MATER] Lubricating oil which has been filtered or refiltered to improve performance characteristics.
filter factor [OPTICS] The number of times the exposure must be increased when a filter is used on a camera, because the filter absorbs some of the light.
filter feeder [INV ZOO] A microphagous organism that uses complex filtering mechanisms to trap particles suspended in water.
filter flask [CHEM] A flask with a side arm to which a vacuum can be applied; usually filter flasks have heavy side walls to withstand high vacuum.
filter impedance compensator [ELECTR] Impedance compensator which is connected across the common terminals of electric wave filters when the latter are used in parallel to compensate for the effects of the filters on each other.
filtering [ENG] The process of interpreting reported information on movements of aircraft, ships, and submarines in order to determine their probable true tracks and, where applicable, heights or depths.
filter leaf [CHEM ENG] The frame or structure in a filter press that holds the filter cloth or other filter medium; a number of leaves in series usually comprises a filter press.

FILM TRANSPORT



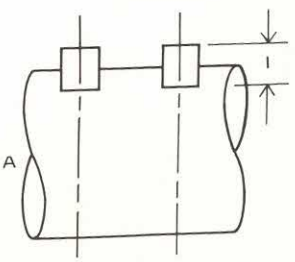
Photographic film-transport mechanism in a motion picture film sound recorder. *(After H. F. Olson, Acoustical Engineering, 3d ed., Van Nostrand, 1957)*

FILOPLUME



Drawing of a filoplume showing reduced hairlike vane. *(From J. C. Welty, The Life of Birds, Saunders, 1962)*

FILTER



A simple high-pass acoustic filter which rejects low frequencies; sound entering the open-ended tank at A will be transmitted through the filter only if the frequency is higher than the cutoff frequency; l represents the length of the tubes.

filter loss [SCI TECH] The amount of fluid passed through a permeable membrane in a given time.

filter medium [MATER] That portion of a filtration system that provides the liquid-solid separation, such as close-woven textiles or metal screens, papers, nonwoven fabrics, granular beds, or porous media.

filter paper [MATER] Porous cellulose paper used for filtering, especially for quantitative purposes.

filter pass band *See* filter transmission band.

filter photometer [ENG] A colorimeter in which the length of light is selected by the use of appropriate glass filters.

filter photometry [ANALY CHEM] **1.** Colorimetric analysis of solution colors with a filter applied to the eyepiece of a conventional colorimeter. **2.** Inspection of a pair of Nessler tubes through a filter.

filter press [ENG] A metal frame on which iron plates are suspended and pressed together by a screw device; liquid to be filtered is pumped into canvas bags between the plates, and the screw is tightened so that pressure is furnished for filtration.

filter-press cell [PHYS CHEM] An electrolytic cell consisting of several units in series, as in a filter press, in which each electrode, except the two end ones, acts as an anode on one side and a cathode on the other, and the space between electrodes is divided by porous asbestos diaphragms.

filter pump [MECH ENG] An aspirator or vacuum pump which creates a negative pressure on the filtrate side of the filter to hasten the process of filtering.

filter reactor [ELEC] A reactor used for reducing the harmonic components of voltage in an alternating-current or direct-current circuit.

filter sand [MATER] Graded sand used for filtering suspended matter from a flowing liquid stream.

filter screen [ENG] A fine-pored medium through which a liquid will pass and on which solids deposit; the medium may be a metal sieve screen or a woven fabric of metal or of natural or synthetic fibers.

filter section [ELEC] A simple *RC*, *RL*, or *LC* network used as a broad-band filter in a power supply, grid-bias feed, or similar device.

filter slot [ELECTROMAG] Choke in the form of a slot designed to suppress unwanted modes in a waveguide.

filter spectrophotometer [SPECT] Spectrophotographic analyzer of spectral radiations in which a filter is used to isolate narrow portions of the spectrum.

filter thickener [ENG] Device that thickens a liquid-solid mixture by removing a portion of the liquid by filtration, rather than by settling.

filter transmission band [ELECTR] Frequency band of free transmission; that is, frequency band in which, if dissipation is neglected, the attenuation constant is zero. Also known as filter pass band.

filter-type respirator [ENG] A protective device which removes dispersoids from the air by physically trapping the particles on the fibrous material of the filter.

filtrate [SCI TECH] The discharge liquor in filtration. Also known as mother liquor; strong liquor.

filtration [SCI TECH] A process of separating particulate matter from a fluid, such as air or a liquid, by passing the fluid carrier through a medium that will not pass the particulates.

fimbria *See* pilus.

fimbriate [BIOL] Having a fringe along the edge.

fin [AERO ENG] A fixed or adjustable vane or airfoil affixed longitudinally to an aerodynamically or ballistically designed body for stabilizing purposes. [DES ENG] A projecting flat plate or structure, as a cooling fin. [ENG] Material which remains in the holes of a molded part and which must be removed. [VERT ZOO] A paddle-shaped appendage on fish and other aquatic animals that is used for propulsion, balance, and guidance.

final amplifier [ELECTR] The transmitter stage that feeds the antenna.

final boiling point *See* end point.

final common pathway *See* lower motor neuron.

final diameter [NAV] The diameter of the circle traversed by a vessel after turning through 360° and maintaining the same speed and rudder angle; it is always less than the tactical diameter, and is measured perpendicular to the original course and between the tangents at the points where 180° and 360° of the turn have been completed.

final drawing [GRAPHICS] A completed mechanical drawing from which fabrication of an item can take place.

final filter *See* afterfilter.

final great-circle course [NAV] The direction, at the destination, of the great circle through that point and the point of departure, expressed as the angular distance from a reference direction, usually north, to that part of the great circle extending beyond the destination.

final heading [NAV] The aircraft heading at the end of a rating period while using gyro steering.

final lock mechanism [ORD] A device for locking the stroking member of a cartridge-actuated device in final position.

final mass [AERO ENG] The mass of a rocket after its propellants are consumed.

final-value theorem [MATH] The theorem that if $f(t)$ is a function which has a Laplace transform $F(s)$, and if the derivative of $f(t)$ with respect to t is also Laplace transformable, and if the limit of $f(t)$ as t approaches infinity exists, then this limit is equal to the limit of $sF(s)$ as s approaches zero.

financial planning system [COMPUT SCI] A decision-support system that allows the financial planner or manager to examine and evaluate many alternatives before making final decisions, and which employs the use of a model, usually a matrix of data elements which is constructed as a series of equations.

fin assembly [ORD] An assembly of metal blades, usually mounted lengthwise on a sleeve, used on a missile, such as bomb or rifle grenade, to give directional stability.

finch [VERT ZOO] The common name for birds composing the family Fringillidae.

find [IND ENG] The therblig representing the mental reaction which occurs on recognizing an object at the end of the elemental motion search; now seldom used.

finder [COMMUN] **1.** An optical or electronic device that shows the field of action covered by a television camera. **2.** Switch or relay group in telephone switching systems that selects the path which the call is to take through the system; operates under the control of the calling station's dial. [OPTICS] A small telescope having a wide-angle lens and low power, which is attached to a larger telescope and points in the same direction; used to locate objects that are to be viewed in the larger telescope.

finder beam [COMPUT SCI] A beam of light projected by a light pen on the spot on the display screen where the light pen photodetector is focused, in order to aid the user in positioning the light pen.

finder light [GRAPHICS] Light beam projected to show outline of photographic field.

F indicator *See* F scope.

finding circuit *See* lockout circuit.

findspot [ARCHEO] The place where an archeological object has been found.

fine admixture [GEOL] The smaller size grades of a sediment of mixed size grades.

fine delay [NAV] A dial on a loran navigation system receiver, for controlling relatively small changes in the position of the B trace pedestal, and serving as a vernier for the coarse delay.

fine earth [GEOL] A soil which can be passed through a 2 millimeter sieve without grinding its primary particles.

fin efficiency [ENG] In extended-surface heat-exchange equations, the ratio of the mean temperature difference from surface-to-fluid divided by the temperature difference from fin-to-fluid at the base or root of the fin.

fine gold [MET] Almost pure gold; the value of bullion gold depends on its percentage of fineness. [MIN ENG] In placer mining, gold in exceedingly small particles.

fine gravel [GEOL] Gravel consisting of particles with a diameter range of 1 to 2 millimeters.

fine grinding [MECH ENG] Grinding performed in a mill rotating on a horizontal axis in which the material undergoes final size reduction, to −100 mesh.

fine index [COMPUT SCI] The more specific of two indices consulted to gain access to a record.

fine-line printer [GRAPHICS] An accessory device mounted in a microfilmer to mark each filmed document.

fineness [MET] Degree of purity of gold or silver in parts per thousand.

fineness modulus [ENG] A number denoting the fineness of a fine aggregate or other fine material such as sand or paint.

fineness ratio [AERO ENG] The ratio of the length of a streamlined body, as that of a fuselage or airship hull, to its maximum diameter.

fines [MATER] **1.** Particles smaller than average in a mixture of particles varying in size. **2.** Fine material which passes through a standard screen on which coarser fragments are retained. [MET] That portion of a metal powder consisting of particles smaller than a specified size.

fine sand [GEOL] Sand grains between 0.25 and 0.125 millimeter in diameter.

fine-screen halftone [GRAPHICS] An illustration (photograph or artwork) reproduced for printing in a continuous tone by photographing the illustration with a 120-line to the inch screen between the illustration and the camera.

fine silver [MET] Silver having a minimum fineness of 999; considered to be pure silver.

fine structure [ATOM PHYS] The splitting of spectral lines in atomic and molecular spectra caused by the spin angular momentum of the electrons and the coupling of the spin to the orbital angular momentum.

fine-structure constant [PHYS] A fundamental dimensionless constant, equal to 2π times the square of the electron charge in electrostatic units, divided by the product of the speed of light and Planck's constant; mathematically, equal to $(7.297351 \pm 0.000011) \times 10^{-3}$, approximately $1/137$. Also known as Sommerfeld fine-structure constant.

fin fold [EMBRYO] A median integumentary fold extending along the body of a fish embryo which gives rise to the dorsal, caudal, and anal fins.

finger [ANAT] Any of the four digits on the hand other than the thumb. [GEOL] The tendency for gas which is displacing liquid hydrocarbons in a heterogeneous reservoir rock system to move forward irregularly (in fingers), rather than on a uniform front. [PETRO ENG] A pair or set of bracketlike projections placed at a strategic point in a drill tripod or derrick to keep a number of lengths of drill rods or casing in place when they are standing in the tripod or derrick.

finger bit [DES ENG] A steel rock-cutting bit having fingerlike, fixed or replaceable steel-cutting points.

finger board [PETRO ENG] A board with projecting dowels or pipe fingers located in the upper part of the drill derrick or tripod to support stands of drill rod, drill pipe, or casing.

finger chute [MIN ENG] Steel rails hinged independently over an ore chute, to control rate of flow of rock.

finger coal *See* natural coke.

finger lake [HYD] A long, comparatively narrow lake, generally glacial in origin; may occupy a rock basin in the floor of a glacial trough or be confined by a morainal dam across the lower end of the valley.

fingerprint [ANAT] A pattern of distinctive epidermal ridges on the bulbs of the inside of the end joints of fingers and thumbs. [GRAPHICS] An impression of a human fingerprint.

finger raise [MIN ENG] Steeply sloping openings permitting caved ore to flow down raises through grizzlies to chutes on the haulage level.

finial [ARCH] An ornamental terminating or capping feature on an upper extremity, as over a door or on a pinnacle or gable.

finish [MATER] **1.** A chemical or other material applied to surfaces to protect them, to alter their appearances, or to modify their physical properties; finishes can be physically, chemically, or electrolytically applied and have value for fabrics and fibers, metals, paper products, plastics, woods, and so on. **2.** The ultimate quality, condition, or appearance of the surface of a material.

finished goods [IND ENG] Manufactured products in inventory ready for packaging, shipment, or sale.

finished steel [MET] Steel that has undergone final processing and is ready for market.

finisher [CIV ENG] A construction machine used to smooth the freshly placed surface of a roadway, or to prepare the foundation for a pavement.

finish grinding [MECH ENG] The last action of a grinding operation to achieve a good finish and accurate dimensions.

finishing compound [MATER] A substance used to impart surface properties to textiles or leather, such as softness, flexibility, or fire resistance.

finishing hardware [BUILD] Items, such as hinges, door pulls, and strike plates, made in attractive shapes and finishes, and usually visible on the completed structure.

finishing hydrated lime [MATER] Any hydrated lime suitable for use in the finishing coat of plaster; characterized by a high degree of whiteness and plasticity.

finishing mill [MET] A rolling mill in which sheet, plate, and other mill products are subjected to final rolling operations.

finishing nail [DES ENG] A wire nail with a small head that can easily be concealed.

finishing roll [MIN ENG] The last roll, or the one that does the finest crushing in ore dressing.

finishing temperature [MET] The temperature at which hot-working is completed.

finish plate [DES ENG] A plate which covers and protects the cylinder setscrews; it is fastened to the underplate and forms part of the armored front for a mortise lock.

finish turning [MECH ENG] The operation of machining a surface to accurate size and producing a smooth finish.

finite clipping [ELECTR] Clipping in which the threshold level is large but is below the peak input signal amplitude.

finite closed aquifer [HYD] The part of a subterranean reservoir containing water (aquifer) in which the aquifer is limited (finite), with no water flow across the exterior reservoir boundary.

finite difference [MATH] The difference between the values of a function at two discrete points, used to approximate the derivative of the function.

finite difference equations [MATH] Equations arising from differential equations by substituting difference quotients for derivatives, and then using these equations to approximate a solution.

finite-element method [ENG] An approximation method for studying continuous physical systems, used in structural mechanics, electrical field theory, and fluid mechanics; the system is broken into discrete elements interconnected at discrete node points.

finite intersection property of a family of sets [MATH] If the intersection of any finite number of them is nonempty, then the intersection of all the members of the family is nonempty.

finite mathematics [MATH] **1.** Those parts of mathematics which deal with finite sets. **2.** Those fields of mathematics which make no use of the concept of limit.

finite matrix [MATH] A matrix with a finite number of rows and columns.

finite moment theorem [MATH] The theorem that if $f(x)$ is a continuous function, and if the integral of $f(x)\,x^n$ over a finite interval is zero for all positive integers n, then $f(x)$ is identically zero in that interval.

finite precision number [COMPUT SCI] A number that can be represented by a finite set of symbols in a given numeration system.

finite quantity [MATH] Any bounded quantity.

finite set [MATH] A set whose elements can be indexed by integers $1,2,3, \ldots,n$ inclusive.

finite state machine [COMPUT SCI] An automaton that has a finite number of distinguishable internal configurations.

fin keel [NAV ARCH] A metal plate or thin fairing attached to the keel of sailing craft to give resistance to lateral motion, and frequently having a cigar-shaped lead bulb at the bottom to give transverse stability. Also known as ballast fin.

Fink truss [CIV ENG] A symmetrical steel roof truss suitable for spans up to 50 feet (15 meters).

finned surface [MECH ENG] A tubular heat-exchange surface with extended projections on one side.

finnemanite [MINERAL] $Pb_5Cl(AsO_3)_3$ A gray, olive-green, or black hexagonal mineral composed of arsenite and chloride of lead.

fin reinforcing assembly [ORD] An assemblage of components required to reinforce a bomb fin assembly.

fin rot [VET MED] A bacterial disease of hatchery fishes characterized by necrosis and erosion of the fin tissue.

Finsen lamp [ELEC] A high-temperature carbon arc or mercury arc lamp that produces a mixture of blue, violet, and near-ultraviolet light; used to treat certain skin disorders and to test paints and other protective coatings.

finsen unit [ELECTROMAG] A unit of intensity of ultraviolet radiation, equal to the intensity of ultraviolet radiation at a specified wavelength whose energy flux is 100,000 watts per square meter; the wavelength usually specified is 296.7 nanometers. Abbreviated FU.

Finsler geometry [MATH] The study of the geometry of a

manifold in terms of the various possible metrics on it by means of Finsler structures.

Finsler structure on a manifold [MATH] A family of metrics varying continuously from point to point.

fin spine [VERT ZOO] A bony process that supports the fins of certain fishes.

fin stabilization [ORD] Method of stabilizing a projectile (as a rocket, bomb, or missile) during flight by the aerodynamic use of protruding fins.

fin waveguide [ELECTROMAG] Waveguide containing a thin longitudinal metal fin that serves to increase the wavelength range over which the waveguide will transmit signals efficiently; usually used with circular waveguides.

fiord *See* fjord.

fiorite *See* siliceous sinter.

Fior process [MET] The prereduction of high-grade iron particles or concentrates in a hot gaseous reactor to produce low-oxygen fines for partially metallized briquettes suitable for electric-arc steelmaking furnaces.

fir [BOT] The common name for any tree of the genus *Abies* in the pine family; needles are characteristically flat.

FIR

Cone and branches with flat needles of balsam fir *(Abies balsamea)*.

fire [CHEM] The manifestation of rapid combustion, or combination of materials with oxygen. [ENG] To blast with gunpowder or other explosives. [MIN ENG] A warning that a shot is being fired. [ORD] **1.** The discharge of a gun, launching of a missile, or the like. **2.** The projectiles or missiles fired. **3.** To discharge a weapon.

fire adjustment [ORD] Correcting the elevation and direction of a weapon, or regulating the explosion time of its projectile, so that the projectile will strike or burst at the desired point; for automatic weapons, it is a continuous operation from the instant the first rounds reach the vicinity of the target until the command "cease firing" is given.

firearm [ORD] **1.** In a general sense, a gun. **2.** A small arm, as a pistol or rifle, designed to be carried and used by an individual.

fire assay [MET] Analysis of a metal-bearing material, especially gold and silver, by assaying a sample with a suitable flux and measuring the content of resulting metal leads by weighing or atomic absorption techniques.

fireball [ASTRON] A bright meteor with luminosity equal to or exceeding that of the brightest planets. [NUCLEO] The luminous sphere of hot gases that forms a few millionths of a second after a nuclear explosion.

fire blight [PL PATH] A bacterial disease of apple, pear, and related pomaceous fruit trees caused by *Erwinia amylovora;* leaves are blackened, cankers form on the trunk, and flowers and fruits become discolored.

fireboat [NAV ARCH] A vessel similar to a tug but fitted with fire-fighting apparatus.

fire bomb [ORD] An item designed to be dropped from an aircraft to destroy or reduce the utility of a target by the effects of combustion.

fire boss [MIN ENG] An individual who examines a mine for gas and other dangers. Also known as mine examiner.

firebox [MECH ENG] The furnace of a locomotive or similar type of fire-tube boiler.

firebreak [FOR] A cleared area of land intended to check the spread of forest or prairie fire. [MIN ENG] A strip across an area in which either no combustible material is employed or in which, if timber supports are used, sand is filled and packed tightly around them.

firebrick [MATER] A refractory brick, often made of fireclay, that is able to withstand high temperature (up to 1500–1600°C) without fusion; used to line furnaces, fireplaces, and chimneys.

fire bridge [ENG] A low wall separating the hearth and the grate in a reverberatory furnace.

fireclay [GEOL] **1.** A clay that can resist high temperatures without becoming glassy. **2.** Soft, embedded, white or gray clay rich in hydrated aluminum silicates or silica and deficient in alkalies and iron.

fire control [ORD] Control over the direction, volume, and time of fire of guns or launchers by the use of certain electrical or electronic devices or aids, or by optical or mechanical systems.

fire-control circuit [ELECTR] An electric circuit in a fire-control system.

fire-control computer [ORD] A computer used to guide a fire-control system.

fire-control grid [ORD] A system of lines that divide a military map into squares, the distance between any two parallel lines representing 1000 yards or 1000 meters, depending on the type of map; maps using the fire-control grid are of sufficiently large scale to be useful in fire control.

fire-control instrument [ORD] An aiming circle, range finder, compass, telescope, or other instrument used in fire control.

fire-control quadrant [ORD] A chemical device with a scale to measure angles and a leveling adjustment, used to measure the elevation angles of a weapon for obtaining the horizontal range of a weapon; it is attached to the gun, gun mount, or gun carriage.

fire-control radar [ORD] Radar equipment used in a fire-control system.

fire-control sonar [ORD] Sonar used in determining the aiming of antisubmarine weapons.

fire-control system [ORD] A setup for control of the aiming and firing of guns, rockets, or guided missiles.

fire coordination [ORD] The planning and execution of fire so that targets are adequately covered by a suitable weapon or groups of weapons.

fire crack [ENG] A crack resulting from thermal stress which propagates on the heated side of a shell or header in a boiler or a heat transfer surface.

firecracker [ENG] A cylindrically shaped item containing an explosive and a fuse; used to simulate the noise of an explosive charge.

fire cut [BUILD] An angular cut made at the end of a joist which will rest on a brick wall.

firedamp [MIN ENG] **1.** A gas formed in mines by decomposition of coal or other carbonaceous matter; consists chiefly of methane and is combustible. **2.** An airtight stopping to isolate an underground fire and to prevent the inflow of fresh air and the outflow of foul air. Also known as fire wall.

firedamp alarm [MIN ENG] An instrument which gives a warning signal when the methane content in the mine atmosphere exceeds a known value.

firedamp detector [MIN ENG] A portable device to detect the presence and determine the percentage of firedamp in mine air.

firedamp drainage [MIN ENG] The collection of firedamp from coal strata, generally into pipes, with or without the use of suction. Also known as methane drainage.

firedamp drainage drill [MIN ENG] A heavy, compressed-air-operated, percussive, rotary or rotary-percussive drilling machine for putting up the boreholes in firedamp drainage.

firedamp explosion [MIN ENG] An explosion of a mixture of firedamp and air.

firedamp fringe [MIN ENG] The zone of contact between the coal gases and the ventilation air current at the face of the mine.

firedamp layer [MIN ENG] An accumulation of firedamp under the roof of a mine roadway where the ventilation is insufficient to dilute and remove the gas.

firedamp migration [MIN ENG] The movement of firedamp through the strata or coal of a mine.

firedamp pressure-chamber method [MIN ENG] A method of firedamp drainage in coal mines; pressure chambers built at the intake and the return of a worked-out area are used to trap firedamp, which is drawn off in pipes.

firedamp probe [MIN ENG] A flexible rubber tube connected to a rod, which can be thrust into roof cavities and breaks so that a sample of the air may be transferred to a methanometer and its firedamp content determined.

firedamp reforming process [CHEM ENG] A process in which methane (firedamp) is mixed with steam and passed over a nickel catalyst for conversion to a mixture of hydrogen and carbon monoxide; this mixture is blended with pure methane, and the result is a fuel of high calorific value.

fire-danger meter [ENG] A graphical aid used in fire-weather forecasting to calculate the degree of forest-fire danger (or burning index): commonly in the form of a circular slide rule, it relates numerical indices of the seasonal stage of foliage, the cumulative effect of past precipitation or lack thereof (buildup index), the measured fuel moisture, and the speed of the wind in the woods; the fuel moisture is determined by weighing a special type of wooden stick that has been exposed in the woods, its weight being proportional to its contained water; the calculated burning index falls on a scale of 1 to 100: 1 to 11 is no fire danger; 12 to 35 medium danger; 40 to 100 high danger.

fire detector [ENG] A temperature-sensing device designed

to sound an alarm, to turn on a sprinkler system, or to activate some other fire preventive measure at the first signs of fire.

fire direction [ORD] Tactical employment of fire power, exercise of tactical command of one or more units in the selection of targets, concentration or distribution of fire, and allocation of ammunition for each mission.

fire direction net [COMMUN] A communication system linking observers, liaison officers, air observers, and firing batteries with the fire direction center for the purposes of fire control.

fire disclimax [ECOL] A community that is perpetually maintained at an early stage of succession through recurrent destruction by fire followed by regeneration.

fire distribution [ORD] **1.** The use of weapons of a unit to cover a target most effectively. **2.** The application of fire on targets, or on subdivisions of a target, in order of their importance. **3.** The systematic assignment of targets to the batteries of a number of vessels by message.

fire door [ENG] **1.** The door or opening through which fuel is supplied to a furnace or stove. **2.** A door that can be closed to prevent the spreading of fire, as through a building or mine.

fired process equipment [ENG] Heaters, furnaces, reactors, incinerators, vaporizers, steam generators, boilers, and other process equipment for which the heat input is derived from fuel combustion (flames); can be direct-fired (flame in contact with the process stream) or indirect-fired (flame separated from the process fluid by a metallic wall).

fired state [ELECTR] The "on" state of a silicon controlled rectifier or other semiconductor switching device, occurring when a suitable triggering pulse is applied to the gate.

fire effect [ORD] Result of firing on enemy personnel and materiel.

fire escape [BUILD] An outside stairway usually made of steel and used to escape from a building in case of fire.

fire extinguisher [ENG] Any of various portable devices used to extinguish a fire by the ejection of a fire-inhibiting substance, such as water, carbon dioxide, gas, or chemical foam.

firefinder [ENG] An instrument consisting of a map and a sighting device; used in fire towers to locate forest fires.

fire flooding [PETRO ENG] A method to improve secondary recovery in an oil reservoir; a combustion process is started in the reservoir at an injection well by continued introduction of gas containing oxygen or other material to support combustion, and the combustion wave is driven through the reservoir toward the production well.

firefly [INV ZOO] Any of various flying insects which produce light by bioluminescence.

fire foam [MATER] A colloidal solution of small gas bubbles produced by chemical reaction or mechanical agitation and used to extinguish hydrocarbon fire.

fire for adjustment [ORD] Fire delivered for the purpose of determining firing data that will place the center of impact or burst on the desired portion of the target.

fire for effect [ORD] Fire which is delivered after the center of impact or burst is within the desired distance of the target or adjusting point.

fire-formed fragment *See* controlled fragment.

fire fountain *See* lava fountain.

fire hose [ENG] A collapsible, flameproof hose that can be attached to a hydrant, standpipe, or similar outlet to supply water to extinguish a fire.

fire hydrant [CIV ENG] An outlet from a water main provided inside buildings or outdoors to which fire hoses can be connected. Also known as fire plug; hydrant.

fire interrupter [ORD] For aircraft guns, a device (usually an electrical switch mechanically actuated) which interrupts firing of a weapon.

fire load [CIV ENG] The load of combustible material per square foot of floor space.

fire opal [MINERAL] A translucent or transparent, orangy-yellow, brownish-orange, or red variety of opal that gives out fiery reflections in bright light and that may have a play of colors. Also known as pyrophane; sun opal.

fire partition [BUILD] A wall inside a building intended to retard fire.

fire plug *See* fire hydrant.

fire point [CHEM] The lowest temperature at which a volatile combustible substance vaporizes rapidly enough to form above its surface an air-vapor mixture which burns continuously when ignited by a small flame.

firepower [ORD] **1.** The capability to deliver fire. **2.** The fire itself, or the quantity or effectiveness of fire delivered. **3.** Any explosive or missile that wreaks damage upon the target against which it is directed; for example, guns or rockets, or aircraft units and so forth armed with guns or rockets.

fireproof [BUILD] Having noncombustible walls, stairways, and stress-bearing members, and having all steel and iron structural members which could be damaged by heat protected by refractory materials. [MATER] The property of being relatively resistant to combustion.

fireproofing compound *See* fire retardant.

fire protection [CIV ENG] Measures for reducing injury and property loss by fire.

fire pump [MECH ENG] A pump for fire protection purposes usually driven by an independent, reliable prime mover and approved by the National Board of Fire Underwriters.

fire refining [MET] The refining of blister copper by treatment in a furnace under oxidizing conditions to remove the impurities and under reducing conditions to remove the excess oxygen.

fire-resistant [CIV ENG] Of a structural element, able to resist combustion for a specified time under conditions of standard heat intensity without burning or failing structurally.

fire retardant [MATER] A chemical used as a coating for or a component of a combustible material to reduce or eliminate a tendency to burn; used with textiles, plastics, rubbers, paints, and other materials. Also known as fireproofing compound.

fire retardant paint [MATER] A paint applied as a thin coating to reduce the rate of flame spread of a combustible material; based on silicone, casein, polyvinylchloride, or other substance.

fireroom [MECH ENG] That portion of a fossil fuel–burning plant which contains the furnace and associated equipment.

fire scale [MET] Copper oxide remaining below the surface of silver-copper alloys after annealing and pickling.

fire sprinkling system *See* sprinkler system.

fire standpipe [CIV ENG] A high, vertical pipe or tank that holds water to assure a positive, relatively uniform pressure, particularly to provide fire protection to upper floors of tall buildings.

firestone *See* flint.

fire stop [BUILD] An incombustible, horizontal or vertical barrier, as of brick across a hollow wall or across an open room, to stop the spread of fire. Also known as draught stop.

fire storm [ORD] A fire engulfing a city, produced by an air raid with incendiary or fire bombs.

fire superiority [ORD] Fire with greater effect than that of the enemy because of its greater accuracy and volume, making possible advances against the enemy without heavy losses.

fire support [ORD] The support or protection given forces in direct contact with the enemy by ground or naval guns or by aircraft engaging in close air support.

fire tower [BUILD] A fireproof and smokeproof stairway compartment running the height of a building. [FOR] A tower used to watch for fires, especially forest fires.

fire-tube boiler [MECH ENG] A steam boiler in which hot gaseous products of combustion pass through tubes surrounded by boiler water.

fire unit analyzer [ORD] An instrument for analyzing the effectiveness of an antiaircraft fire unit against hostile aircraft or missiles under the conditions stated on the face of the analyzer.

fire wall [CIV ENG] **1.** A fire-resisting wall separating two parts of a building from the lowest floor to several feet above the roof to prevent the spread of fire. **2.** A fire-resisting wall surrounding an oil storage tank to retain oil that may escape and to confine fire. [MIN ENG] *See* firedamp.

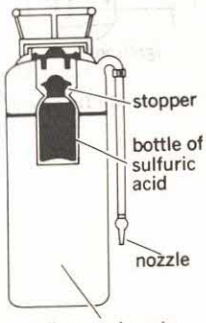
fire weather [METEOROL] The state of the weather with respect to its effect upon the kindling and spreading of forest fires.

fire welding *See* forge welding.

firing [ELECTR] **1.** The gas ionization that initiates current flow in a gas-discharge tube. **2.** Excitation of a magnetron or transmit-receive tube by a pulse. **3.** The transition from the unsaturated to the saturated state of a saturable reactor. [ENG] **1.** The act or process of adding fuel and air to a furnace. **2.** Igniting an explosive mixture. **3.** Treating a ceramic product with heat.

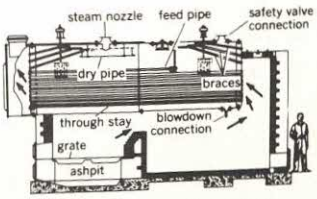
firing azimuth [ORD] Horizontal direction in which a gun or launcher is pointed for firing, expressed as an azimuth.

FIRE EXTINGUISHER



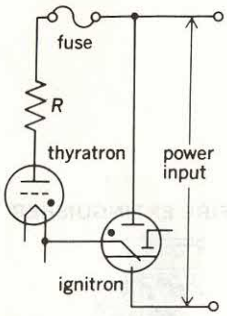
Soda-acid fire extinguisher. When it is inverted, the stopper falls out of place allowing sulfuric acid to react with soldium carbonate to produce carbon dioxide, which propels the solution through the nozzle.

FIRE-TUBE BOILER



A horizontal-return-tube fire-tube boiler. Part of the heat from the combustion gases is transferred directly to the lower portion of the shell of the boiler before making a return pass through the horizontal tubes, and then going up the stack.

FIRING CIRCUIT



Elementary anode firing circuit.

firing base [ORD] Part of the mechanism in some cannon that supports the gun carriage when it is in position for firing.

firing box [ELEC] A boxlike item in which are mounted switches, cables, fuses, plugs, indicator lights, batteries, and the like, specifically designed for firing a rocket or guided missile from a remote position.

firing button [ELEC] A button or switch for firing guns or rockets.

firing cable *See* shot-firing cable.

firing chamber *See* combustion chamber.

firing circuit [ELECTR] **1.** Circuit used with an ignitron to deliver a pulse of current of 5–50 amperes in the forward direction, from the igniter to the mercury, to start a cathode spot and to control the time of firing. **2.** By analogy, a similar control circuit of silicon-controlled rectifiers and like devices.

firing data [ORD] All data necessary for firing a weapon at a given objective, which may be determined by computation and then transmitted as verbal commands, or may be applied electromechanically by one of the several types of directing devices.

firing hammer [ORD] A metallic pivoted item, part of the firing mechanism of a firearm, designed to strike a firing pin or percussion cap and fire a gun.

firing interval [ORD] Period of time between firing one shot and the next.

firing jack [ORD] Adjustable device which stabilizes and levels certain mobile artillery weapons while the weapons are in firing position.

firing lanyard [ORD] A cord or cable of specific length, usually with a hook on one end and a handle on the opposite end, designed to be attached to a component of the firing mechanism of a gun, rocket launcher, or the like, and used to fire the weapon.

firing lock [ORD] A removable part of the firing mechanism in some weapons, incorporating the firing pin and the mechanism which drives it against the primer.

firing machine [ENG] An electric blasting machine. [MECH ENG] A mechanical stoker used to feed coal to a boiler furnace.

firing mechanism [ENG] A mechanism for firing a primer; the primer may be for initiating the propelling charge, in which case the firing mechanism forms a part of the weapon; if the primer is for the purpose of initiating detonation of the main charge, the firing mechanism is a part of the ammunition item and performs the function of a fuse.

firing pin [ORD] A device used in the firing mechanism of a gun, mine, bomb, fuse, projectile, or the like, which strikes and detonates a sensitive explosive to initiate an explosive train or a propelling charge.

firing point [ELECTR] *See* critical grid voltage. [ORD] Location from which fire is delivered in target practice.

firing position [ORD] Position of a weapon ready for firing.

firing potential [ELECTR] Controlled potential at which conduction through a gas-filled tube begins.

firing pressure [MECH ENG] The highest pressure in an engine cylinder during combustion.

firing rate [MECH ENG] The rate at which fuel feed to a burner occurs, in terms of volume, heat units, or weight per unit time.

firing table [ORD] A table or chart giving data needed for firing a gun accurately on a target under standard conditions, and also the corrections that must be made for special conditions such as winds or variations of temperature.

firing table elevation [ORD] The angle between the axis of the bore and the horizontal plane when the piece is laid to fire at a given range under conditions that are accepted as standard.

firing time [ORD] The period of time during which a weapon is fired.

firmer chisel [DES ENG] A small hand chisel with a flat blade; used in woodworking.

firm-joint caliper [DES ENG] An outside or inside caliper whose legs are jointed together at the top with a nut and which must be opened and closed by hand pressure.

firmoviscosity [MECH] Property of a substance in which the stress is equal to the sum of a term proportional to the substance's deformation, and a term proportional to its rate of deformation.

firmware [COMPUT SCI] A computer program or instruction, such as a microprogram, used so often that it is stored in a read-only memory instead of being included in software; often used in computers that monitor production processes.

firn [HYD] Material transitional between snow and glacier ice; it is formed from snow after existing through one summer melt season and becomes glacier ice when its permeability to liquid water drops to zero. Also known as firn snow.

firn basin *See* firn field.

fir needle oil [MATER] An essential oil distilled from the needles and twigs of some trees of the genus *Abies;* used in perfumery, flavoring, and medicine. Also known as fir oil.

firn field [HYD] The accumulation area or upper region of a glacier where snow accumulates and firn is secreted. Also known as firn basin.

firn ice *See* iced firn.

firnification [HYD] The process of firn formation from snow and of transformation of firn into glacier ice.

firn limit *See* firn line.

firn line [GEOL] **1.** The regional snow line on a glacier. **2.** The line that divides the ablation area of a glacier from the accumulation area. Also known as firn limit.

firn snow *See* firn; old snow.

fir oil *See* fir needle oil.

first answer print [GRAPHICS] The motion picture composite print, with the mixed sound track and the optical effects.

first arrival [ENG] In exploration refraction seismology, the first seismic event recorded on a seismogram; it is noteworthy in that only first arrivals are considered in this usage.

first bottom [GEOL] The floodplain of a river, below the first terrace.

first-class current [PARTIC PHYS] A weak-interaction current whose charge symmetry (or G parity) properties are the same as those of currents which arise in the Fermi theory of beta decay.

first countable topological space [MATH] A topological space in which every point has a countable number of open neighborhoods so that any neighborhood of this point contains one of these.

first-degree burn [MED] A mild burn characterized by pain and reddening of the skin.

first derived curve *See* derived curve.

first detector *See* mixer.

first estimate–second estimate method [NAV] The method of determining time of meridian transit (especially local apparent noon) for a moving craft; the time of transit is computed for an estimated longitude of the craft, and the longitude estimate is then revised to agree with the time determined by the first estimate, and a second computation is made; the process is repeated as many times as necessary to obtain an answer of the desired precision.

first filial generation [GEN] The first generation resulting from a cross with all members being heterozygous for characters which differ from those of the parents. Symbolized F_1.

first fire [ENG] The igniter used with pyrotechnic devices, consisting of first fire composition, loaded in direct contact with the main pyrotechnic charge; the ignition of the igniter or first fire is generally accomplished by fuse action.

first fire composition [MATER] A pyrotechnic composition (readily ignitable and easily pressed into a strong, solid mass), compounded to produce a high temperature, preferably with creation of slag to give heat capacity.

first Fresnel zone [ELECTROMAG] Circular portion of a wavefront transverse to the line between an emitter and a more distant point, where the resultant disturbance is being observed, whose center is the intersection of the front with the direct ray, and whose radius is such that the shortest path from the emitter through the periphery to the receiving point is one-half wavelength longer than the direct ray.

first-generation [COMPUT SCI] Denoting electronic hardware, logical organization, and software characteristic of a first-generation computer.

first-generation computer [COMPUT SCI] A computer from the earliest stage of computer development, ending in the early 1960s, characterized by the use of vacuum tubes, the performance of one operation at a time in strictly sequential fashion, and elementary software, usually including a program loader, simple utility routines, and an assembler to assist in program writing.

first gust [METEOROL] The sharp increase in wind speed often associated with the early mature stage of a thunderstorm cell; it occurs with the passage of the discontinuity zone which is the boundary of the cold-air downdraft.

first harmonic *See* fundamental.

first-in, first-out [IND ENG] An inventory cost evaluation method which transfers costs of material to the product in chronological order. Abbreviated FIFO.

first-item list [COMPUT SCI] A series of records that is printed with descriptive information from only the first record of each group.

first law of motion *See* Newton's first law.

first law of the mean [MATH] If a function $f(x)$ is continuous on the closed interval $[a,b]$ and differentiable on the open interval (a,b) and $f(a) = f(b)$, then there exists x_0, $a<x_0<b$, such that $f'(x_0) = 0$. Also known as mean value theorem; Rolle's theorem.

first law of thermodynamics [THERMO] The law that heat is a form of energy, and the total amount of energy of all kinds in an isolated system is constant; it is an application of the principle of conservation of energy.

first level address [COMPUT SCI] The location of a referenced operand.

first-level controller [CONT SYS] A controller that is associated with one of the subsystems into which a large-scale control system is partitioned by plant decomposition, and acts to satisfy local objectives and constraints. Also known as local controller.

first light [NAV] The beginning of morning nautical twilight, that is, when the center of the morning sun is 12° below the horizon.

first lunar meridian [ASTRON] The great circle on the moon which passes through the poles and through the center of the side of the moon that faces the earth.

first-order climatological station [METEOROL] A meteorological station at which autographic records or hourly readings of atmospheric pressure, temperature, humidity, wind, sunshine, and precipitation are made, together with observations at fixed hours of the amount and form of clouds and notes on the weather.

first-order leveling [ENG] Spirit leveling of high precision and accuracy in which lines are run first forward to the objective point and then backward to the starting point.

first-order reaction [PHYS CHEM] A chemical reaction in which the rate of decrease of concentration of component A with time is proportional to the concentration of A.

first-order spectrum [SPECT] A spectrum, produced by a diffraction grating, in which the difference in path length of light from adjacent slits is one wavelength.

first-order station [METEOROL] After U.S. National Weather Service practice, any meteorological station that is staffed in whole or in part by National Weather Service (Civil Service) personnel, regardless of the type or extent of work required of that station.

first-order subroutine [COMPUT SCI] A subroutine which is entered directly from a main routine or program and which leads back to that program. Also known as first-remove subroutine.

first-order theory [OPTICS] *See* Gaussian optics. [PHYS] A theory which takes into account only the most important terms, such as the term proportional to the independent variable in the series expansion of a function appearing in the theory.

first-order transition [THERMO] A change in state of aggregation of a system accompanied by a discontinuous change in enthalpy, entropy, and volume at a single temperature and pressure.

first point of Aries *See* vernal equinox.

first point of Cancer *See* summer solstice.

first point of Capricorn *See* winter solstice.

first point of Libra *See* autumnal equinox.

first quarter [ASTRON] The phase of the moon when it is near east quadrature, when the western half of it is visible to an observer on the earth.

first radiation constant [STAT MECH] A constant appearing in the Planck radiation formula; its value depends on the form of the formula used; in the formula for power emitted by a blackbody per unit area per unit wavelength interval, it is 2π times Planck's constant, times the square of the speed of light, or approximately 3.7415×10^{-16} watt (meter)^2. Symbolized c_1, C_1.

first-remove subroutine *See* first-order subroutine.

first selector [ELECTR] Selector which immediately follows a line finder in a switch train and which responds to dial pulses of the first digit of the called telephone number.

first water [LAP] The highest quality or the purest luster of a gemstone, such as that of a diamond which is flawless, perfectly clear and transparent, and colorless or almost blue-white.

firth *See* estuary.

fir wood oil *See* pine needle oil.

Fischer ellipsoid of 1960 [GEOD] The reference ellipsoid of which the semimajor axis is 6,378,166.000 meters, the semiminor axis is 6,356,784.298 meters, and the flattening or ellipticity is 1/298.3. Also known as Fischer spheroid of 1960.

Fischer-Hepp rearrangement [ORG CHEM] The rearrangement of a nitroso derivative of a secondary aromatic amine to a *p*-nitrosoarylamine; the reaction is brought about by an alcoholic solution of hydrogen chloride.

Fischer-Hinnen method [ELEC] Method of analysis of a complex waveform which has like loops above and below the time axis, in which the amplitude and phase of the *n*-th harmonic is determined from the ordinates of the resultant wave at a series of times which divide the half wave into $2n$ equal time intervals.

Fischer indole synthesis [ORG CHEM] A reaction to form indole derivatives by means of a ring closure of aromatic hydrazones.

fischerite [MINERAL] A green mineral composed of a basic aluminum phosphate; may be identical to wavellite.

Fischer polypeptide synthesis [ORG CHEM] A synthesis of peptides in which α-amino acids or those peptides with a free amino group react with acid halides of α-haloacids, followed by amination with ammonia.

Fischer's distribution [STAT] Given data from a normal population with S_1^2 and S_2^2 two independent estimates of variance, the distribution $\frac{1}{2} \log (S_1^2/S_2^2)$.

Fischer spheroid of 1960 *See* Fischer ellipsoid of 1960.

Fischer's salt *See* cobalt potassium nitrite.

Fischer-Tropsch process [CHEM ENG] A catalytic process to synthesize hydrocarbons and their oxygen derivatives by the controlled reaction of hydrogen and carbon monoxide.

Fischer-Yates test [STAT] A test of independence of data arranged in a 2×2 contingency table.

fish [VERT ZOO] The common name for the cold-blooded aquatic vertebrates belonging to the groups Cyclostomata, Chondrichthyes, and Osteichthyes.

fish-bone antenna [ELECTROMAG] **1.** Antenna consisting of a series of coplanar elements arranged in collinear pairs, loosely coupled to a balanced transmission line. **2.** Directional antenna in the form of a plane array of doublets arranged transversely along both sides of a transmission line.

fished joint [CIV ENG] A structural joint made with fish plates.

fisher [VERT ZOO] *Martes pennanti*. An arboreal, carnivorous mammal of the family Mustelidae; a relatively large weasellike animal with dark fur, found in northern North America.

fisheries conservation [ECOL] Those measures concerned with the protection and preservation of fish and other aquatic life, particularly in sea waters.

Fisher-Irwin test [STAT] A method for testing the null hypothesis in an experiment with quantal response.

fishery [ECOL] A place for harvesting fish or other aquatic life, particularly in sea waters.

Fishes *See* Pisces.

fisheye [MATER] A small globular mass which has not blended completely into the surrounding material and is particularly evident in a transparent or translucent material, such as a plastic coating or surface coating. [MET] *See* flake.

fish-eye stone *See* apophyllite.

fish gelatin *See* isinglass.

fish glue [MATER] An adhesive obtained from the skin of certain fish, principally cod; used in gummed tape, letterpress printing plates, and blueprint paper.

fishing [ENG] In drilling, the operation by which lost or damaged tools are secured and brought to the surface from the bottom of a well or drill hole.

fishing boat [NAV ARCH] A ship having the necessary equipment to catch fish, such as a fathometer and fishing nets, but not the equipment to process fish.

fishing grounds [NAV] Water areas in which fishing is frequently carried on.

fishing space [CIV ENG] The space between base and head of a rail in which a joint bar is placed.

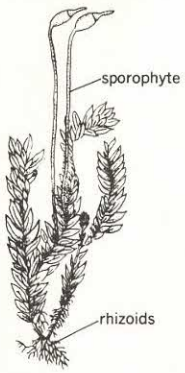
fishing tool [ENG] A device for retrieving objects from inaccessible locations.

fish ladder [CIV ENG] A type of fishway that carries water around a dam through a series of stepped baffles or boxes and thus facilitates the migration of fish.

FISHER

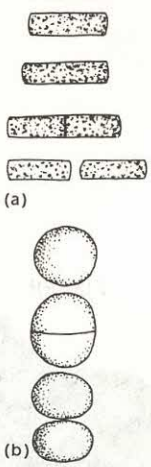
The fisher *(Martes pennanti)*, an arboreal, nocturnal carnivorous mammal of North America.

FISSIDENTALES



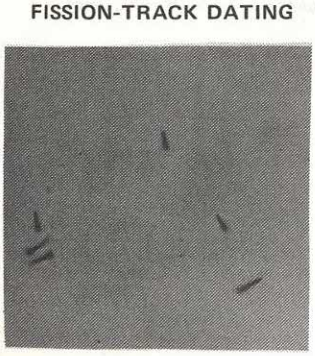
Entire plant of *Fissidens adiantoides.*

FISSION



Fission in bacteria: *(a)* in a bacillus; *(b)* in a coccus. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

FISSION-TRACK DATING



Etched natural fission tracks in muscovite mica crystal. The sample was etched in concentrated hydrofluoric acid.

fish lead [ENG] A type of sounding lead used without removal from the water between soundings.

fish lice [INV ZOO] The common name for all members of the crustacean group Arguloida.

fish liver oil [MATER] An oil extracted from certain fish livers and containing vitamin A; high-potency livers are obtained from cod, shark, and halibut; used in medicine and as a dietary supplement.

fish meal [FOOD ENG] A protein-rich, dried food product produced from the inedible portions of fishes by dry or wet rendering.

fishmouthing *See* alligatoring.

fish net buoy [NAV] A buoy marking the limit of a fish net area.

fish oil [MATER] Oil obtained from fish such as menhaden, pilchard, herring, and sardine; used as a drying oil in paint and as a raw material for detergents, resins, margarine, and so on.

fish paper [MATER] A type of fiber used in sheet form for insulating purposes where high mechanical strength is required, as in insulating transformer windings from the transformer core.

fish plate [CIV ENG] One of a pair of steel plates bolted to the sides of a rail or beam joint, to secure the joint.

fishpole antenna *See* whip antenna.

fish protein concentrate [FOOD ENG] A dried protein-rich food product in the form of flour or paste prepared from whole fish; used as a dietary supplement.

fish screen [CIV ENG] **1.** A screen set across a water intake canal or pipe to prevent fish from entering. **2.** Any similar barrier to prevent fish from entering or leaving a pond.

fish stakes [NAV] Poles or stakes placed in shallow water to outline fishing areas.

fishtail [MET] Excess metal trailing on the end of a roll forging.

fishtail bit [DES ENG] A drilling bit shaped like the tail of a fish.

fishtail burner [ENG] A burner in which two jets of gas impinge on each other to form a flame shaped like a fish's tail.

Fissidentales [BOT] An order of the Bryopsida having erect to procumbent, simple or branching stems and two rows of leaves arranged in one plane.

fissile [GEOL] Capable of being split along the line of the grain or cleavage plane. [NUCLEO] *See* fissionable.

fissiochemistry [CHEM] The process of producing chemical change by means of nuclear energy.

fission [BIOL] A method of asexual reproduction among bacteria, algae, and protozoans by which the organism splits into two or more parts, each part becoming a complete organism. [NUC PHYS] The division of an atomic nucleus into parts of comparable mass; usually restricted to heavier nuclei such as isotopes of uranium, plutonium, and thorium. Also known as atomic fission; nuclear fission.

fissionable [NUCLEO] **1.** A property of material whose nuclei are capable of undergoing fission. Also known as fissile. **2.** A material capable of fission.

fission barrier [NUC PHYS] One or more maxima in the plot of potential energy against nuclear deformation of a heavy nucleus, which inhibits spontaneous fission of the nucleus.

fission bomb *See* atomic bomb.

fission chamber [NUCLEO] An ionization chamber used to detect slow neutrons; the inside wall has a thin coating of uranium, in which a slow neutron produces a fission; the resulting highly ionizing fission fragments produce a count in the chamber. Also known as fission counter.

fission counter *See* fission chamber.

fission cross section [NUC PHYS] The cross section for a bombarding neutron, gamma ray, or other particle to induce fission of a nucleus.

fission detector [NUCLEO] Device for detecting spontaneous fission, consisting of a mica or special glass which is placed near the sample and which is subsequently chemically etched, making fission tracks visible.

fission fraction [NUCLEO] The fraction of the total yield of a nuclear weapon that is due to fission; for thermonuclear weapons the average value is about 50%.

fission fragments [NUCLEO] The nuclear species first produced when an atom such as uranium-238 or plutonium-239 undergoes fission. Also known as primary fission products.

fission fuel *See* nuclear fuel.

fission fungi [MICROBIO] A misnomer once used to describe the Schizomycetes.

fission-fusion bomb [NUCLEO] An explosive device which derives its energy in comparable amounts from nuclear fission and nuclear fusion.

fission isomer [NUC PHYS] A highly deformed nuclear state lying in the second well of a double-hump fission barrier.

fission neutron [NUC PHYS] A neutron emitted as a result of nuclear fission.

fission product [NUC PHYS] Any radioactive or stable nuclide resulting from fission, including both primary fission fragments and their radioactive decay products.

fission-product poisoning [NUCLEO] Inhibition of a nuclear chain reaction by fission products which have large cross sections for slow neutrons, and thus capture these neutrons before they can cause fission.

fission reactor *See* nuclear reactor.

fission spectrum [NUC PHYS] The energy distribution of neutrons arising from fission.

fission threshold [NUC PHYS] The minimum kinetic energy of a bombarding neutron required to induce fission of a nucleus.

fission-track dating [GEOL] A method of dating geological specimens by counting the radiation-damage tracks produced by spontaneous fission of uranium impurities in minerals and glasses.

fission yield [NUCLEO] The amount of energy released by fission in a nuclear explosion, as distinct from that released by fusion. [NUC PHYS] The percent of fissions that gives a particular nuclide or group of isobars.

fissiped [VERT ZOO] **1.** Having the toes separated to the base. **2.** Of or relating to the Fissipeda.

Fissipeda [VERT ZOO] Former designation for a suborder of the Carnivora.

fissium [NUCLEO] An equilibrium mixture of fission products in reactor fuel that can improve the stability of uranium and uranium-plutonium fuel alloys under fast-neutron irradiation.

fissure [GEOL] **1.** A high, narrow cave passageway. **2.** An extensive crack in a rock. [MET] A small cracklike discontinuity with a slight opening or displacement of the fracture surfaces.

Fissurellidae [INV ZOO] The keyhole limpets, a family of gastropod mollusks in the order Archeogastropoda.

fissure system [GEOL] A group of fissures having the same age and generally parallel strike and dip.

fissure vein [GEOL] A mineral deposit in a cleft or crack in the rock material of the earth's crust.

fistula [MED] An abnormal congenital or acquired communication between two surfaces or between a viscus or other hollow structure and the exterior.

Fistuliporidae [PALEON] A diverse family of extinct marine bryozoans in the order Cystoporata.

fistulous withers [VET MED] A chronic inflammation of the withers of a horse accompanied by fluid discharge, which may be initiated by mechanical injury but depends on bacterial (*Brucella abortus*) infection for development.

fit [DES ENG] The dimensional relationship between mating parts, such as press, shrink, or sliding fit.

fitness figure [METEOROL] In Great Britain, a measure of the "fitness" of the weather at an airport for the safe landing of aircraft; the figure F is computed on the basis of corrected values of visibility and cloud height; observed visibility is adjusted according to intensity of precipitation, and cloud height is corrected for height of nearby obstructions and cloud amount; further corrections are applied for the cross-runway component of the wind. Also known as fitness number.

fitness number *See* fitness figure.

fitter [ENG] One who maintains, repairs, and assembles machines in an engineering shop.

Fittig's synthesis [ORG CHEM] The synthesis of aromatic hydrocarbons by the condensation of aryl halides with alkyl halides, using sodium as a catalyst.

fitting [ENG] A small auxiliary part of standard dimensions used in the assembly of an engine, piping system, machine, or other apparatus.

fitting out [NAV ARCH] The preparation of a ship for active service by placing on board equipment and consumables required by the allowance list or for operation.

FitzGerald-Lorentz contraction [RELAT] The contraction of a moving body in the direction of its motion when its speed is comparable to the speed of light. Also known as Lorentz contraction; Lorentz-FitzGerald contraction.

five-and-ten system [METEOROL] The most common sys-

tem for representing wind speed, to the nearest 5 knots, in symbolic form on synoptic charts, consisting of drawing the appropriate number of half-barbs, barbs, and pennants from the end of the wind-direction shaft; in this system, a half-barb represents 5 knots, a barb 10 knots, a pennant 50 knots.

five-day forecast [METEOROL] A forecast of the average weather conditions and large-scale synoptic features in a 5-day period; a type of extended forecast.

five-dimensional space [MATH] A vector space whose basis has five vectors.

five-level code [COMPUT SCI] A code which uses five bits to specify each character.

five-level start-stop operation [COMMUN] Simplex mode of operation used in teletypewriter circuits; each code character is divided into five electrical units; the machine distributor unit makes a positive start and stop for the transmission of each character.

five-spot well pattern [PETRO ENG] A symmetrical network pattern of five wells (one in center, four equally spaced in a square pattern) as used in water-injection pressure maintenance of reservoirs.

five-wire line [ELEC] A transmission line which has four conductors, all in phase, at the corners of a square and a fifth conductor at the center of the square which is out of phase with the others.

fix [BIOL] To kill, harden, or preserve a tissue, organ, or organism by immersion in dilute acids, alcohol, or solutions of coagulants. [COMPUT SCI] A piece of coding that is inserted in a computer program to correct an error. [NAV] A position of a vessel or craft determined by its master, pilot, or navigator through the use of some or all of the equipments and techniques available.

fixation [PSYCH] A rigid habit developed as a consequence of repeated reinforcement, or of frustration.

fixative [MATER] **1.** A chemical or a mixture of chemicals used to treat biological specimens before preservation so as to retain a reasonable facsimile of their appearance when alive. **2.** A substance used to increase the durability of another substance; used to fix dye mordants, hold textile dyes and pigments, and slow the rate of perfume evaporation. Also known as fixing agent.

fixator [PHYSIO] A muscle whose action tends to hold a body part in a certain position or limit its movement.

fixed ammunition [ORD] Ammunition with primer and propellant contained in a cartridge case, permanently crimped or attached to a projectile, and loaded into the weapon as a unit.

fixed and flashing light [NAV] A fixed light varied at regular intervals by one or more flashes of greater brilliance.

fixed and group flashing light [NAV] A fixed light varied at regular intervals by a group of two or more flashes of greater brilliance.

fixed arch [CIV ENG] A stiff arch having rotation prevented at its supports.

fixed area [COMPUT SCI] That portion of the main storage occupied by the resident portion of the control program.

fixed artillery [ORD] Artillery weapons permanently installed on land and sea frontiers for the protection of important areas.

fixed attenuator *See* pad.

fixed-bed hydroforming [CHEM ENG] A cyclic petroleum process that utilizes a fixed bed of molybdenum oxide catalyst deposited on activated alumina.

fixed-bed operation [CHEM ENG] An operation in which the additive material (catalyst, absorbent, filter media, ion-exchange resin) remains stationary in the chemical reactor.

fixed bias [ELECTR] A constant value of bias voltage, independent of signal strength.

fixed-bias transistor circuit [ELECTR] A transistor circuit in which a current flowing through a resistor is independent of the quiescent collector current.

fixed-block [COMPUT SCI] Pertaining to an arrangement of data in which all the blocks of data have the same number of words or characters, as determined by either the hardware requirements of the computer or the programmer.

fixed bridge [CIV ENG] A bridge having permanent horizontal or vertical alignment.

fixed capacitor [ELEC] A capacitor having a definite capacitance value that cannot be adjusted.

fixed carbon [CHEM] Solid, combustible residue remaining after removal of moisture, ash, and volatile materials from coal, coke, and bituminous materials; expressed as a percentage.

fixed-charge problem [IND ENG] A linear programming problem in which each variable has a fixed-charge coefficient in addition to the usual cost coefficient; the fixed charge (for example, a setup time charge) is a nonlinear function and is incurred only when the variable appears in the solution with a positive level.

fixed contact [ELEC] A relatively immovable contact that is engaged and disengaged by a moving contact to make and break a circuit, as in a switch or relay.

fixed cost [IND ENG] A cost that remains unchanged during short-term changes in production level. Also known as overhead cost.

fixed-cycle operation [COMPUT SCI] An operation completed in a specified number of regularly timed execution cycles.

fixed disk [COMPUT SCI] A disk drive that permanently holds the disk platters.

fixed echo [ELECTR] An echo indication that remains stationary on a radar plan-position indicator display, indicating the presence of a fixed target.

fixed-electrode method [ENG] A geophysical surveying method used in a self-potential system of prospecting in which one electrode remains stationary while the other is grounded at progressively greater distances from it.

fixed emplacement [ORD] A fixed setting for a gun, usually made of reinforced concrete, with the base plate and base ring set in the concrete and bolted down. Also known as permanent emplacement.

fixed-end beam [CIV ENG] A beam that is supported at both free ends and is restrained against rotation and vertical movement. Also known as encastré beam.

fixed-end column [CIV ENG] A column with the end fixed so that it cannot rotate.

fixed end moment *See* fixing moment.

fixed-feed grinding [MECH ENG] Feeding processed material to a grinding wheel, or vice versa, in predetermined increments or at a given rate.

fixed field [COMPUT SCI] A field in computers, film selection devices, or punched cards, or a given number of holes along the edge of a marginal punched card, set aside, or "fixed," for the recording of a given type of characteristic.

fixed-field accelerator [NUCLEO] A circular particle accelerator whose magnetic fields do not vary with time, such as an ordinary cyclotron or a fixed-field, alternating-gradient synchrotron.

fixed-field method [COMPUT SCI] A method of data storage in which the same type of data is always placed in the same relative position.

fixed fin [AERO ENG] A nonadjustable vane or airfoil affixed longitudinally to an aerodynamically or ballistically designed body for stabilizing purposes.

fixed-focus lens [OPTICS] A lens whose focus is invariable, as on inexpensive cameras with no mechanism for adjusting focus but so designed that all objects from a few feet away to infinity are tolerably in focus.

fixed form coding [COMPUT SCI] Any method of coding a source language in which each part of the instruction appears in a fixed field.

fixed gun [ORD] An aircraft machine gun mounted rigidly to the aircraft, and aimed by moving the aircraft.

fixed-head disk [COMPUT SCI] A disk storage device in which the read-write heads are fixed in position, one to a track, and the arms to which they are attached are immovable.

fixed inductor [ELEC] An inductor whose coils are wound in such a manner that the turns remain fixed in position with respect to each other, and which either has no magnetic core or has a core whose air gap and position within the coil are fixed.

fixed ion [ANALY CHEM] An ion in the lattice of a solid ion exchanger.

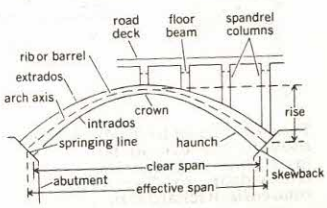
fixed-length field [COMPUT SCI] A field that always has the same number of characters, regardless of its content.

fixed-length record [COMPUT SCI] One of a file of records, each of which must have the same specified number of data units, such as blocks, words, characters, or digits.

fixed-level chart *See* constant-height chart.

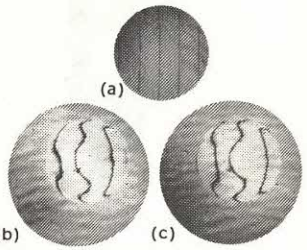
fixed light [NAV] A light used in navigation having constant luminous intensity. [NAV ARCH] A thick, usually circular

FIXED ARCH



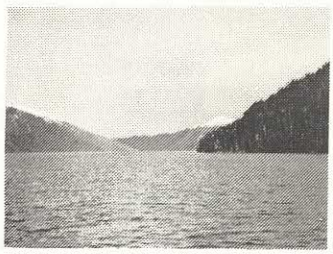
An open-spandrel, concrete, fixed arch bridge.

FIZEAU FRINGES



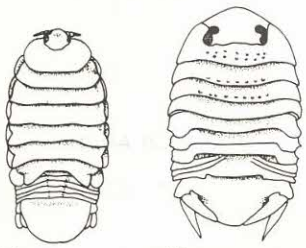
Fizeau multiple-beam fringe patterns (def. 2). *(a)* Narrow-gap plane mirrors. *(b)* Wide-gap test lens without end mirrors imaged on each other; *(c)* with mirrors imaged on each other.

FJORD



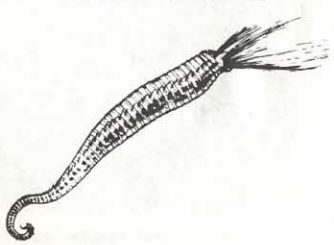
Fjord in Alaska. *(W. W. Atwood, USGS)*

FLABELLIFERA



Two examples of Flabellifera showing the caudal fan. *(a) Lironeca epimerias* Richardson. *(b) Tecticeps renoculis* Richardson.

FLABELLIGERIDAE



Pheurusa, a cage worm, shown in right lateral view.

glass fitted in a frame and fixed in an opening in the side of a ship or deckhouse or in a bulkhead, to provide light.

fixed logic [COMPUT SCI] Circuit logic of computers or peripheral devices that cannot be changed by external controls; connections must be physically broken to arrange the logic.

fixed memory [COMPUT SCI] Of a computer, a nondestructive readout memory that is only mechanically alterable.

fixed mooring berth [CIV ENG] A marine structure consisting of dolphins for securing a ship and a platform to support cargo-handling equipment.

fixed-needle traverse [ENG] In surveying, a traverse with a compass fitted with a sight line which can be moved above a graduated horizontal circle, so that the azimuth angle can be read, as with a theodolite.

fixed oil [MATER] A nonvolatile fatty oil of vegetable origin.

fixed point [ENG] A reproducible value, as for temperature, used to standardize measurements; derived from intrinsic properties of pure substances. [MATH] For a function f mapping a set S to itself, any element of S which f sends to itself.

fixed-point arithmetic [COMPUT SCI] **1.** A method of calculation in which the computer does not consider the location of the decimal or radix point because the point is given a fixed position. **2.** A type of arithmetic in which the operands and results of all arithmetic operations must be properly scaled so as to have a magnitude between certain fixed values.

fixed-point calculation [COMPUT SCI] A calculation made with fixed-point arithmetic.

fixed-point computer [COMPUT SCI] A computer in which numbers in all registers and storage locations must have an arithmetic point which remains in the same fixed location.

fixed-point part *See* mantissa.

fixed-point representation [COMPUT SCI] Any method of representing a number in which a fixed-point convention is used.

fixed-point system [COMPUT SCI] A number system in which the location of the point is fixed with respect to one end of the numerals, according to some convention.

fixed-position addressing [COMPUT SCI] Direct access to an item in a data file on disk or drum, as opposed to a sequential search for this item starting with the first item in the file.

fixed-position welding [MET] A welding operation in which the work is stationary.

fixed-product area [COMPUT SCI] The area in core memory where multiplication takes place for certain types of computers.

fixed-program computer [COMPUT SCI] A special-purpose computer having a program permanently wired in.

fixed rent *See* minimum rent.

fixed resistor [ELEC] A resistor that has no provision for varying its resistance value.

fixed screen [MIN ENG] A stationary panel, commonly of wedge wire, used to remove a large proportion of water and fines from a suspension of coal in water.

fixed service [COMMUN] Service providing radio communications between fixed points.

fixed sonar [ENG] Sonar in which the receiving transducer is not constantly rotated, in contrast to scanning sonar.

fixed square search *See* geographic square search.

fixed star [ASTRON] A misnomer to indicate those stars which kept apparently the same position with respect to other stars, in contrast to the planets which were termed wandering stars.

fixed storage [COMPUT SCI] A storage for data not alterable by computer instructions, such as magnetic-core storage with a lockout feature.

fixed target [ORD] A nonmovable or immobilized target, such as a city, factory, or surrounded troops.

fixed transmitter [ELECTR] Transmitter that is operated in a fixed or permanent location.

fixed word length [COMPUT SCI] The length of a computer machine word that always contains the same number of characters or digits.

fixer network [NAV] A combination of radio or radar direction-finding installations which, operating in conjunction, are capable of plotting the position relative to the ground of an aircraft in flight. Also known as fixer system.

fixer system *See* fixer network.

fixing agent *See* fixative.

fixing moment [MECH] The bending moment at the end support of a beam necessary to fix it and prevent rotation. Also known as fixed end moment.

fixity *See* continuity.

fixture [CIV ENG] An object permanently attached to a structure, such as a light or sink. [MECH ENG] A device used to hold and position a piece of work without guiding the cutting tool.

Fizeau fringes [OPTICS] **1.** Interference fringes of monochromatic light from interference in a geometrical situation other than plane parallel plates. Also known as fringes of equal thickness. **2.** Interference fringes in light from a Fizeau interferometer.

Fizeau interferometer [OPTICS] Interferometer in which light from a point source is collimated and multiply reflected between a plane mirror and the partially silvered inner surface of a parallel plane plate, and is viewed in reflection.

Fizeau toothed wheel [OPTICS] Rapidly rotating toothed wheel which was used to measure the speed of light by adjusting the rotation speed until light passing through one tooth opening and reflected from a distant mirror would pass through the next tooth opening on return.

fizelyite [MINERAL] A metallic, lead-gray mineral composed of a lead silver antimony sulfide, occurring as prisms.

fjord [GEOGR] A narrow, deep inlet of the sea between high cliffs or steep slopes. Also spelled fiord.

fjord valley [GEOGR] A deep, narrow channel occupied by the sea and extending inland about 50–100 miles (80–160 kilometers).

flabellate [BIOL] Fan-shaped.

Flabellifera [INV ZOO] The largest and morphologically most generalized suborder of isopod crustaceans; the biramous uropods are attached to the sides of the abdomen and may form, with the last abdominal fragment, a caudal fan.

Flabelligeridae [INV ZOO] The cage worms, a family of spioniform worms belonging to the Sedentaria; the anterior part of the body is often concealed by a cage of setae arising from the first few segments.

flabellum [INV ZOO] Any structure resembling a fan, as the epipodite of certain crustacean limbs.

flaccid [BOT] Deficient in turgor. [PHYSIO] Soft, flabby, or relaxed.

flacherie [INV ZOO] A fatal bacterial disease of caterpillars, especially silkworms, marked by loss of appetite, dysentery, and flaccidity of the body; after death the body darkens and liquefies.

Flacourtiaceae [BOT] A family of dicotyledonous plants in the order Violales having the characteristics of the more primitive members of the order.

Flade potential [MET] The potential of a passive metal immediately preceding a final steep fall from the passive to the active region.

flag [COMPUT SCI] Any of various types of indicators used for identification, such as a work mark, or a character that signals the occurrence of some condition, such as the end of a word. [ELECTR] A small metal tab that holds the getter during assembly of an electron tube. [ENG] **1.** A piece of fabric used as a symbol or as a signaling or marking device. **2.** A large sheet of metal or fabric used to shield television camera lenses from light when not in use.

flag alarm [ENG] A semaphore-type flag in the indicator of an instrument to serve as a signal, usually to warn that the indications are unreliable.

flag bridge [NAV ARCH] A separate structure built above the deck of a ship, designed for the use of a naval officer higher than the rank of captain; the visual control and communications center from which the officer exercises command of the tactical units and is separate from and at a different level from the navigation bridge.

flagella [BIOL] Relatively long, whiplike, centriole-based locomotor organelles on some motile cells.

Flagellata [INV ZOO] The equivalent name for Mastigophora.

flagellate [BIOL] **1.** Having flagella. **2.** An organism that propels itself by means of flagella. **3.** Resembling a flagellum. [INV ZOO] Any member of the protozoan superclass Mastigophora.

flagellated chamber [INV ZOO] An outpouching of the wall of the central cavity in Porifera that is lined with choanocytes; connects with incurrent canals through prosophyles.

flagellation [BIOL] The arrangement of flagella on an organism. [PSYCH] Beating or whipping as a means of producing sexual gratification.

flagellin [MICROBIO] The protein component of bacterial flagella.

flag flip-flop [COMPUT SCI] A one-bit register which indicates overflow, carry, or sign bit from past or current operations.

flag float [ENG] A pyrotechnic device that floats and burns upon the water, used for marking or signaling.

flaggy [GEOL] **1.** Of bedding, consisting of strata 10–100 centimeters in thickness. **2.** Of rock, tending to split into layers of suitable thickness (1–5 centimeters) for use as flagstones.

flagilliflory [BOT] Of flowers, hanging down freely from ropelike twigs.

flagman [CIV ENG] A range-pole carrier in a surveying party.

flag operand [COMPUT SCI] A part of the instruction of some assembly languages denoting which elements of the object instruction will be flagged.

flagpole [ENG] A single staff or pole rising from the ground and on which flags or other signals are displayed; on charts the term is used only when the pole is not attached to a building.

flag smut [PL PATH] A smut affecting the leaves and stems of cereals and other grasses, characterized by formation of sori within the tissues, which rupture releasing black spore masses and causing fraying of the infected area.

flagstaff [ENG] A pole or staff on which flags or other signals are displayed; on charts this term is used only when the pole is attached to a building.

flagstone [GEOL] **1.** A hard, thin-bedded sandstone, firm shale, or other rock that splits easily along bedding planes or joints into flat slabs. **2.** A piece of flagstone used for making pavement or covering the side of a house.

flag tower [NAV] A scaffoldlike tower from which flags are displayed.

flail tank [ORD] A specially constructed tank equipped with a flailing device, consisting of chain flails attached to a roller powered by the tank engine, employed to detonate antitank mines.

flair [CIV ENG] A gradual widening of the flangeway near the end of a guard line of a track or rail structure.

flajolotite [MINERAL] $4FeSbO_4 \cdot 3H_2O$ A claylike, lemon-yellow mineral composed of a hydrous iron antimonate, occurring in nodular masses.

flak [ORD] **1.** Explosive or exploding missile fired from antiaircraft cannon. **2.** Antiaircraft cannon, as in flak battery or flak installation.

flak analysis [ORD] The examination and study of flak intelligence to determine the nature, effectiveness, or probable effectiveness of enemy antiaircraft defenses.

flake [MATER] **1.** Dry, unplasticized, cellulosic plastics base. **2.** Plastic chip used as feed in molding operations. [MET] **1.** Discontinuous, internal cracks formed in steel during cooling due usually to the release of hydrogen. Also known as fisheye; snowflake; shattercrack. **2.** Fish-scale, flat particles in powder metallurgy. Also known as flake powder.

flake powder *See* flake.

flaking [CHEM ENG] Continuous process operation to remove heat from material in the liquid state to cause its solidification. [ENG] **1.** Reducing or separating into flakes. **2.** *See* frosting. [MIN ENG] Breaking small chips from the face of a refractory, particularly chrome ore containing refractories.

flaking mill [MECH ENG] A machine for converting material to flakes.

flak jacket [ENG] A jacket or vest of heavy fabric containing metal, nylon, or ceramic plates, designed especially for protection against flak; usually covers the chest, abdomen, back, and genitals, leaving the arms and legs free. Also known as flak vest.

flak vest *See* flak jacket.

flamboyant structure [GEOL] The optical continuity of crystals or grains as disturbed by a structure that is divergent.

flame [CHEM] A hot, luminous reaction front (or wave) in a gaseous medium into which the reactants flow and out of which the products flow.

flame annealing [MET] The careful heating of a metal part by flames, before or after working.

flame arc lamp [ELEC] An arc lamp in which carbon electrodes are impregnated with chemicals, such as calcium, barium, or titanium, which are more volatile than the carbon and radiate light when driven into the arc.

flame arrester [ENG] An assembly of screens, perforated plates, or metal-gauze packing attached to the breather vent on a flammable-product storage tank.

flame bucket [AERO ENG] A deep, cavelike construction built beneath a rocket launchpad, open at the top to receive the hot gases of the rocket, and open on one or three sides below, with a thick metal fourth side bent toward the open side or sides so as to deflect the exhaust gases.

flame bulb [INV ZOO] The enlarged terminal part of the flame cell of a protonephridium, consisting of a tuft of cilia.

flame cell [INV ZOO] A hollow cell that contains the terminal branches of excretory vessels in certain flatworms and rotifers and some other invertebrates.

flame cleaning [MET] Removing scale, rust, and dirt from metal surfaces by using a broad flame.

flame coating *See* flame plating.

flame collector [ENG] A device used in atmospheric electrical measurements for the removal of induction charge on apparatus; based upon the principle that products of combustion are ionized and will consequently conduct electricity from charged bodies.

flame cultivator [AGR] A flamethrower for destroying weeds between rows of crops.

flame cutting [MET] Use of an oxyacetylene, oxyhydrogen, or oxycoal gas flame to cut thick metal sections.

flame deflector [AERO ENG] **1.** In a vertical launch, any of variously designed obstructions that intercept the hot gases of the rocket engine so as to deflect them away from the ground or from a structure. **2.** In a captive test, an elbow in the exhaust conduit or flame bucket that deflects the flame into the open.

flame detector [MECH ENG] A sensing device which indicates whether or not a fuel is burning, or if ignition has been lost, by transmitting a signal to a control system.

flame emission spectroscopy [SPECT] A flame photometry technique in which the solution containing the sample to be analyzed is optically excited in an oxyhydrogen or oxyacetylene flame.

flame excitation [SPECT] Use of a high-temperature flame (such as oxyacetylene) to excite spectra emission lines from alkali and alkaline-earth elements and metals.

flame gouging [MET] A form of oxygen cutting by means of a cutting torch with a slightly curved tip, enabling the flame to strike the metal surface at a low angle and making shallow cuts possible. Also known as oxygen gouging.

flame hardening [MET] A method for local surface hardening of steel by passing an oxyacetylene or similar flame over the work at a predetermined rate.

flameholder [AERO ENG] A device that sustains combustion in a flowing mixture within the combustion chamber of some types of jet engines.

flame ionization detector [ANALY CHEM] A device in which the measured change in conductivity of a standard flame (usually hydrogen) due to the insertion of another gas or vapor is used to detect the gas or vapor.

flame laser [OPTICS] A molecular gas laser in which gases such as carbon disulfide and oxygen are mixed at low pressures and ignited; the flame is then self-sustaining and produces carbon monoxide laser emission.

flameout [AERO ENG] The extinguishing of the flame in a reaction engine, especially in a jet engine.

flame photometer [SPECT] One of several types of instruments used in flame photometry, such as the emission flame photometer and the atomic absorption spectrophotometer, in each of which a solution of the chemical being analyzed is vaporized; the spectral lines resulting from the light source going through the vapors enters a monochromator that selects the band or bands of interest.

flame photometry [SPECT] A branch of spectrochemical analysis in which samples in solution are excited to produce line emission spectra by introduction into a flame.

flame plate [ENG] One of the plates on a boiler firebox which are subjected to the maximum furnace temperature.

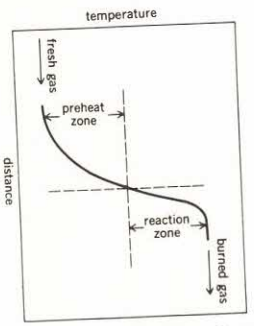
flame plating [MET] Coating a thin layer of refractory material on a surface by exploding a mixture of plating powder, oxygen, and acetylene. Also known as flame coating.

flame propagation [CHEM] The spread of a flame in a combustible environment outward from the point at which the combustion started.

flame-retarded resin [MATER] A resin which is compounded with certain chemicals to reduce or eliminate its tendency to burn.

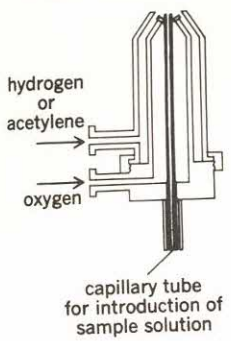
flame repellent [TEXT] Referring to a fabric that has been

FLAME



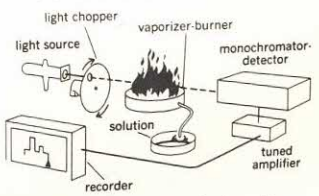
Temperature distribution through a flame front.

FLAME EMISSION SPECTROSCOPY



Beckman aspirator burner used to aspirate the solution directly into oxyhydrogen or oxyacetylene flame.

FLAME PHOTOMETER



Schematic diagram of atomic absorption spectrophotometer for determining metal concentrations.

rendered resistant to flash or sustained burning by chemical treatment.

flame spectrometry [SPECT] A procedure used to measure the spectra or to determine wavelengths emitted by flame-excited substances.

flame spectrophotometry [SPECT] A method used to determine the intensity of radiations of various wavelengths in a spectrum emitted by a chemical inserted into a flame.

flame spectrum [SPECT] An emission spectrum obtained by evaporating substances in a nonluminous flame.

flame speed [CHEM] The rate at which combustion moves through an explosive mixture.

flame spraying [ENG] **1.** A method of applying a plastic coating onto a surface in which finely powdered fragments of the plastic, together with suitable fluxes, are projected through a cone of flame. **2.** Deposition of a conductor on a board in molten form, generally through a metal mask or stencil, by means of a spray gun that feeds wire into a gas flame and drives the molten particles against the work.

flame straightening [MET] Correcting distorted structural metal to a straight form by local application of a gas-flame heat.

flamethrower [ENG] A device used to project ignited fuel from a nozzle so as to cause casualties to personnel or to destroy material such as weeds or insects.

flame trap [ENG] A device that prevents a gas flame from entering the supply pipe.

flame treating [ENG] A method of rendering inert thermoplastic objects receptive to inks, lacquers, paints, or adhesives, in which the object is bathed in an open flame to promote oxidation of the surface.

flamingo [VERT ZOO] Any of various long-legged and long-necked aquatic birds of the family Phoenicopteridae characterized by a broad bill resembling that of a duck but abruptly bent downward and rosy-white plumage with scarlet coverts.

flammability [CHEM] A measure of the extent to which a material will support combustion. Also known as inflammability.

flammability limits [CHEM] The stoichiometric composition limits (maximum and minimum) of an ignited oxidizer-fuel mixture what will burn indefinitely at given conditions of temperature and pressure without further ignition.

flammable [MATER] Of a material, capable of supporting combustion.

flammable liquid [MATER] A liquid which gives off combustible vapors.

Flamsteed's number [ASTRON] A number sometimes used with the possessive form of the Latin name of the constellation to identify a star, for example, 72 Ophiuchi.

flan [METEOROL] In Scotland, a sudden gust or squall of wind from land.

Flanders storm [METEOROL] In England, a heavy fall of snow coming with the south wind.

Flandrian transgression [OCEANOGR] The rapid rise of the North Sea between 8000 and 3000 B.C. from about 180 feet (55 meters) below to about 20 feet (6 meters) below its present level.

flange [SCI TECH] A projecting rim of an organism or mechanical part.

flanged pipe [DES ENG] A pipe with flanges at the ends; can be bolted end to end to another pipe.

flangeway [CIV ENG] Open way through a rail or track structure that provides a passageway for the flange of a wheel.

flank [CIV ENG] The outer edge of a carriageway. [DES ENG] **1.** The end surface of a cutting tool, adjacent to the cutting edge. **2.** The side of a screw thread. [GEOL] *See* limb. [VERT ZOO] The part of a quadruped mammal between the ribs and the pelvic girdle.

flank angle [DES ENG] The angle made by the flank of a screw thread with a line perpendicular to the axis of the screw.

flank hole [MIN ENG] **1.** A hole bored in advance of a working place when approaching old workings. **2.** A borehole driven from the side of an underground excavation, not parallel with the center line of the excavation, to detect water, gas, or other danger.

flank observation [ORD] Observation of fire from a place on, or near, the flank of the target; the angle at the target between the gun and the observer is between 75 and 105°.

flank wear [ENG] Loss of relief on the flank of a tool behind the cutting edge.

flannel [TEXT] A loosely woven, generally wool fabric with the weave concealed by a napped surface.

flannelette [TEXT] Plain cotton weave finished with a nap on one side. Also known as kimono flannel.

flap [AERO ENG] **1.** Any control surface, such as a speed brake, dive brake, or dive-recovery brake, used primarily to increase the lift or drag on an airplane, or to aid in recovery from a dive. **2.** Any rudder attached to a rocket and acting either in the air or within the jet stream.

flap attenuator [ELECTROMAG] A waveguide attenuator in which a contoured sheet of dissipative material is moved into the guide through a nonradiating slot to provide a desired amount of power absorption. Also known as vane attenuator.

flaperon [AERO ENG] A control surface used both as a flap and as an aileron.

flap gate [CIV ENG] A gate that opens or closes by rotation around hinges at the top of the gate. Also known as pivot leaf gate.

flap hinge *See* backflap hinge.

flapping [MET] Striking through the surface of molten copper to hasten oxidation by increasing the exposure to air.

flap valve [MECH ENG] A valve fitted with a hinged flap or disk that swings in one direction only.

flare [AERO ENG] To descend in a smooth curve, making a transition from a relatively steep descent to a direction substantially parallel to the surface, when landing an aircraft. [ASTRON] A bright eruption from the sun's chromosphere; flares may appear within minutes and fade within an hour, cover a wide range of intensity and size, and tend to occur between sunspots or over their penumbrae. [CHEM ENG] A device for disposing of combustible gases from refining or chemical processes by burning in the open, in contrast to combustion in a furnace or closed vessel or chamber. [DES ENG] An expansion at the end of a cylindrical body, as at the base of a rocket. [ELECTR] A radar screen target indication having an enlarged and distorted shape due to excessive brightness. [ELECTROMAG] *See* horn antenna. [ENG] A pyrotechnic item designed to produce a single source of intense light for such purposes as target or airfield illumination. [NAV ARCH] A concave curve of a boat's or ship's sides away from the center line, above the waterline, normally at the bow.

flareback [ORD] A rearward escapement of flame or gas from a gun.

flare chute [ENG] A flare attached to a parachute.

flare factor [ENG ACOUS] Number expressing the degree of outward curvature of the horn of a loudspeaker.

flareout [AERO ENG] That portion of the approach path of an aircraft in which the vertical component is modified to lessen the impact of landing.

flare spot [OPTICS] A small, diffuse, brightly illuminated region produced by multiple reflections of light from the various surfaces of an optical system.

flare stars *See* UV Ceti stars.

flare-type bucket [MIN ENG] A dragline bucket that has flared sides to allow heaped loading.

flare-type burner [ENG] A circular burner which discharges flame in the form of a cone.

flaring [MET] Increasing the diameter at the end of a pipe or tube.

flaser [GEOL] Streaky layer of parallel, scaly aggregates that surrounds the lenticular bodies of granular material in flaser structure; caused by pressure and shearing during metamorphism.

flaser gabbro [GEOL] A cataclastic gabbro that contains augen of feldspar or quartz surrounded by flakes of mica or chlorite.

flaser structure [GEOL] **1.** A metamorphic structure in which small lenses and layers of granular material are surrounded by a matrix of sheared, crushed material, resembling a crude flow structure. Also known as pachoidal structure. **2.** A primary sedimentary structure consisting of fine-sand or silt lenticles that are aligned and cross-bedded.

flash [ENG] In plastics or rubber molding or in metal casting, that portion of the charge which overflows from the mold cavity at the joint line. [MET] A fin of excess metal along the mold joint line of a casting, occurring between mating die faces of a forging or expelled from a joint in resistance welding.

flash arc [ELECTR] A sudden increase in the emission of large thermionic vacuum tubes, probably due to irregularities in the cathode surface.

flashback *See* backfire.

flashback arrester [ENG] A device which prevents a flash-

back from passing the point where the arrester is installed in a torch, thereby preventing damage.

flashback voltage [ELECTR] Inverse peak voltage at which ionization takes place in a gas tube.

flash-bang [ORD] The time interval between visual observation of the flash of a weapon being fired and the auditory perception of the sound of the discharge.

flash barrier [ELEC] A fireproof structure between conductors of an electric machine, designed to minimize flashover or the damage caused by flashover.

flashboard [CIV ENG] A relatively low, temporary barrier constructed of a series of boards along the top of a dam spillway to increase storage capacity.

flash boiler [MECH ENG] A boiler with hot tubes of small capacity; designed to immediately convert small amounts of water to superheated steam.

flash bomb [ENG] A bomb that illuminates the ground for night aerial photography.

flash burn [MED] Tissue injury resulting from exposure to high-intensity radiant heat.

flash butt welding [MET] Resistance welding to produce a butt joint by passing an electric current through two pieces of metal in light contact to create an arc which causes flashing and consequent heating; the weld is completed by applying pressure at the joint.

flash chamber [CHEM ENG] A conventional oil-and-gas separator operated at low pressure, with the liquid from a higher-pressure vessel being flashed into it. Also known as flash trap; flash vessel.

flash coat [MET] A thin coating that is forced from a flash-welded joint after the abutting surfaces are forced together.

flash depressor [MATER] A substance used to reduce the flash from a rocket motor.

flash drum [CHEM ENG] A facility, such as a tower, which receives the products of a preheater or heat exchanger to release pressure; volatile components are vaporized and separated for further fractionation.

flash dry [CHEM ENG] The rapid evaporation of moisture from a porous or granular solid by a sudden reduction in pressure or by placing the material in an updraft of warm air.

flasher [ELEC] A switch, generally either motor-driven or using a combination heater element and bimetallic strip, that turns lamps on and off rapidly.

flash exposure [GRAPHICS] In halftone photography, additional exposure given to reinforce the dots in the shadow zones of negatives.

flash factor [OPTICS] In photography using a photoflash lamp, a number dependent on the lamp and the film speed, equal to the product of the distance of the lamp from the subject and the correct *f*-number for that distance.

flash flood [HYD] A sudden local flood of short duration and great volume; usually caused by heavy rainfall in the immediate vicinity.

flash groove [ENG] **1.** A groove in a casting die so that excess material can escape during casting. **2.** *See* cutoff.

flash hider [ORD] A metallic cone or flat disks attached to the muzzle of the gun to conceal the flash when the gun is fired and to prevent temporary blindness of the gun crew while firing.

flashing [BUILD] A strip of sheet metal placed at the junction of exterior building surfaces to render the joint watertight. [CHEM ENG] Vaporization of volatile liquids by either heat or vacuum. [ENG] Burning brick in an intermittent air supply in order to impart irregular color to the bricks. [MET] The violent expulsion of small metal particles due to arcing during flash butt welding.

flashing flow [CHEM ENG] The condition when a liquid at its boiling point flows through a heated conduit and is further heated to cause partial vaporization (flashing), with a resultant two-phase (vapor-liquid) flow.

flashing light [NAV] A light showing one or more flashes at regular intervals, the duration of the light period is less than that of the dark period; in particular, a light showing a single flash at regular intervals; distinctive names are used to indicate different combinations of flashes.

flashing over [ELEC] Accidental formation of an arc over the surface of a rotating commutator from brush-to-brush; usually caused by faulty insulation between commutator segments.

flashing ring [ENG] A ring around a pipe that holds it in place as it passes through a partition such as a floor or wall.

flash lamp [ELECTR] A gaseous-discharge lamp used in a photoflash unit to produce flashes of light of short duration and high intensity for stroboscopic photography. Also known as stroboscopic lamp.

flashless [ORD] Of a propellant or a propelling charge that does not produce a muzzle flash in the weapon for which intended.

flash line [ENG] A raised line on the surface of a molding where the mold faces joined.

flash magnetization [ELECTROMAG] Magnetization of a ferromagnetic object by a current impulse of short duration.

flash message [COMMUN] A category of precedence reserved for initial enemy contact messages or operational combat messages of extreme urgency; brevity is mandatory.

flash mold [ENG] A mold which permits excess material to escape during closing.

flashover [ELEC] An electric discharge around or over the surface of an insulator.

flashover voltage [ELECTR] The voltage at which an electric discharge occurs between two electrodes that are separated by an insulator; the value depends on whether the insulator surface is dry or wet. Also known as sparkover voltage.

flash pasteurization [MICROBIO] A pasteurization method in which a heat-labile liquid, such as milk, is briefly subjected to temperatures of 230°F (110°C).

flash photography *See* stroboscopic photography.

flash photolysis [PHYS CHEM] A method of studying fast photochemical reactions in gas molecules; a powerful lamp is discharged in microsecond flashes near a reaction vessel holding the gas, and the products formed by the flash are observed spectroscopically.

flash plating [MET] Electrodeposition of a thin film of metal.

flash point [CHEM] The lowest temperature at which vapors from a volatile liquid will ignite momentarily upon the application of a small flame under specified conditions; test conditions can be either open- or closed-cup.

flash process [CHEM ENG] Liquid-vapor system in which the composition remains constant, but the proportion of gas and liquid phases changes as pressure or temperature change.

flash radiography [GRAPHICS] A radiography technique employing very short exposure times, such as 1 microsecond, to give unblurred pictures of moving objects.

flash ranging [ORD] Finding the position of the burst of a projectile or of an enemy gun by observing its flash.

flash ranging adjustment [ORD] Correcting friendly artillery fire on the basis of observation and location of the flash of shell bursts.

flash reconnaissance [ORD] Observation from ground posts or from aircraft to locate enemy gun positions by the flashes of enemy guns.

flash ridge [ENG] The part of a flash mold along which the excess material escapes before the mold is closed.

flash roast [MIN ENG] Rapid removal of sulfur from ore by having finely divided sulfide mineral fall through a heated oxidizing atmosphere. Also known as suspension roast.

flash separation [CHEM ENG] Process for separation of gas (vapor) from liquid components under reduced pressure; the liquid and gas remain in contact as the gas evolves from the liquid.

flash set [MATER] Rapid hardening of freshly mixed cement paste, mortar, or concrete with considerable evolution of heat; plasticity cannot be restored.

flash smelting [MET] Production of molten metal or matte in a vertical furnace in which concentrates are reacted with hot gases; the molten product is collected in a horizontal refractory-lined accumulator at the base of the furnace.

flash spectroscopy [SPECT] The study of the electronic states of molecules after they absorb energy from an intense, brief light flash.

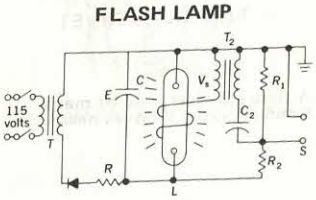
flash spectrum [ASTRON] The emission spectrum of the sun's chromosphere, observed for a few seconds just before and just after a total solar eclipse.

flash test [ELEC] A method of testing insulation by applying momentarily a voltage much higher than the rated working voltage.

flash trap *See* flash chamber.

flash vaporization [CHEM ENG] Rapid vaporization achieved by passing a volatile liquid through continuously heated coils. [ENG] A method used for withdrawing liquefied petroleum gas from storage in which liquid is first flashed into a

FLASH LAMP



Elementary circuit of electronic flash lamp *L*.

vapor in an intermediate pressure system, and then a second stage regulator provides the low pressure required to use the gas in appliances.

flash vessel *See* flash chamber.

flash welding [MET] A form of resistance butt welding used to weld wide, thin members or members with irregular faces, and tubing to tubing.

flask [CHEM] A long-necked vessel, frequently of glass, used for holding liquids. [MET] A frame used to hold molding sand in foundry work.

flat [ACOUS] A musical note that is a half step lower than a specified note. [ENG] A nonglossy painted surface. [GEOGR] A level tract of land. [GEOL] *See* mud flat. [GRAPHICS] **1.** The sheet of glass on which negative films are placed close together for printing on sensitized metal in the photoengraving process. **2.** An assemblage of negative or positive films used in preparing a photo-offset plate. [MINERAL] An inferior grade of rough diamonds. [NAV] **1.** A place covered with water too shallow for ordinary navigation. **2.** The area between high- and low-water marks along the edge of an arm of the sea, a bay, or tidal river; the term is usually used in the plural. [NAV ARCH] A partial deck below the main deck, constructed without any camber. [SCI TECH] **1.** A smooth, even surface. **2.** An object with a broad, shallow or thin form.

flat arch [ARCH] **1.** A straight horizontal arch consisting of mutually supportive wedge-shaped blocks. **2.** Any arch with a small rise-to-span ratio.

flat-back stope [MIN ENG] An overhand stoping method in which the ore is broken in slices parallel with the levels.

flatbed laser scanning [GRAPHICS] A method for the direct exposure of offset printing plates in which a laser beam is swept across a flat plate by an oscillation mirror or other scanner while being modulated by video signals from a similar reading system or by digital signals from a computer.

flatbed plotter [ENG] A graphics output device that draws by moving a pen in both horizontal and vertical directions over a sheet of paper; the overall size of the drawing is limited by the height and width of this bed.

flatbed press [GRAPHICS] A press whose printing plates for type and cuts are flat; it and the rotary press are the two major kinds of presses.

flatbed truck [ENG] A truck whose body is in the form of a platform.

flat belt [DES ENG] A power transmission belt, in the form of leather belting, used where high-speed motion rather than power is the main concern.

flat-belt conveyor [MECH ENG] A conveyor belt in which the carrying run is supported by flat-belt idlers or pulleys.

flat-belt pulley [DES ENG] A smooth, flat-faced pulley made of cast iron, fabricated steel, wood, and paper and used with a flat-belt drive.

flat-blade turbine [MECH ENG] An impeller with flat blades attached to the margin.

flat-bottom crown *See* flat-face bit.

flat cable [ELEC] A cable made of round or rectangular, parallel copper wires arranged in a plane and laminated or molded into a ribbon of flexible insulating plastic.

flatcar [ENG] A railroad car without fixed walls or a cover.

flat chisel [DES ENG] A steel chisel used to obtain a flat and finished surface.

flat-conductor cable [ELEC] A cable made of wide, flat conductors arranged side by side in a plane and protected by ribbons of insulating plastic.

flat crank [DES ENG] A crankshaft having one flat bearing journal.

flat-crested weir [CIV ENG] A type of measuring weir whose crest is in the horizontal plane and whose length is great compared with the height of water passing over it.

flat cut [MIN ENG] A manner of placing the boreholes, for the first shot in a tunnel, in which they are started about 2 or 3 feet (60–90 centimeters) above the floor and pointed downward so that the bottom of the hole will be about level with the floor.

flat die forging [MET] Die forging in which the metal is worked between simple contour dies.

flat drill [DES ENG] A type of rotary drill constructed from a flat piece of material.

flat edge trimmer [MECH ENG] A machine designed to trim the notched edges of metal shells.

flat etching [GRAPHICS] The chemical reduction of the silver deposit on a continuous-tone or halftone plate by placing it in a tray which holds an etching solution.

flat-face bit [DES ENG] A diamond core bit whose face in cross section is square. Also known as flat-bottom crown; flat-nose bit; square-nose bit.

flat fading [COMMUN] Type of fading in which all components of the received radio signal fluctuate in the same proportion simultaneously.

flat file [COMPUT SCI] A two-dimensional array.

flat fillet weld [MET] A fillet weld having a face that is relatively flat.

flatfish [VERT ZOO] Any of a number of asymmetrical fishes which compose the order Pleuronectiformes; the body is laterally compressed, and both eyes are on the same side of the head.

flat-flamed burner [ENG] A burner which emits a mixture of fuel and air in a flat stream through a rectangular nozzle.

flat form tool [DES ENG] A tool having a square or rectangular cross section with the form along the end.

flat grain [MATER] The grain pattern formed when soft wood is cut so that the tree's annular rings form an angle of 45° or less with the board's surface.

flathead rivet [DES ENG] A small rivet with a flat manufactured head used for general-purpose riveting.

flat jack [CIV ENG] A hollow steel cushion which is made of two nearly flat disks welded around the edge and which can be inflated with oil or cement under controlled pressure; used at the arch abutments and crowns to relieve the load on the formwork at the moment of striking the formwork.

flat line [ELECTROMAG] A radio-frequency transmission line, or part thereof, having essentially 1-to-1 standing wave ratio.

flat-lying [GEOL] Of mineral deposits and coal seams, having a relatively flat dip, up to 5°.

flat nose [ORD] A missile used against submarines, designed to prevent ricocheting on water impact.

flat-nose bit *See* flat-face bit.

flat of bottom [NAV ARCH] That portion of a ship's bottom without rise or having a rise with little or no curvature.

flatpack [ELECTR] Semiconductor network encapsulated in a thin, rectangular package, with the necessary connecting leads projecting from the edges of the unit.

flat-position welding [MET] Welding above the joint with the face of the weld in the horizontal reference plane. Also known as downhand welding.

flat roof [ARCH] A roof pitched only enough to allow water to drain off.

flat rope [DES ENG] A steel or fiber rope having a flat cross section and composed of a number of loosely twisted ropes placed side by side, the lay of the adjacent strands being in opposite directions to secure uniformity in wear and to prevent twisting during winding.

flats [GRAPHICS] Stage constructions, used in series, to produce a painted background, usually architectural details; they are canvas-covered frames and are used for all flat surfaces on the stage, such as room interiors or exterior walls of buildings.

flat slab [CIV ENG] A flat plate of reinforced concrete designed to span in two directions.

flat space-time [RELAT] Space-time in which the Riemann-Christoffel tensor vanishes; geometry is then equivalent to that of the Minkowski universe used in special relativity.

flat spin [MECH] Motion of a projectile with a slow spin and a very large angle of yaw, happening most frequently in fin-stabilized projectiles with some spin-producing moment, when the period of revolution of the projectile coincides with the period of its oscillation; sometimes observed in bombs and in unstable spinning projectiles.

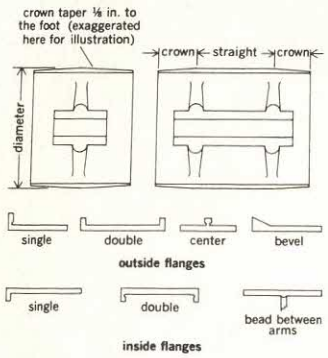
flat spring *See* leaf spring.

flattening [GEOD] The ratio of the difference between the equatorial and polar radii of the earth; the flattening of the earth is the ellipticity of the spheroid; the magnitude of the flattening is sometimes expressed as the numerical value of the reciprocal of the flattening. Also known as compression. [MET] Straightening of metal sheet by passing it through special rollers which flatten it without changing its thickness. Also known as roll flattening.

flattening test [MET] Quality test performed by flattening metal tubing between parallel plates that are a specified distance from each other.

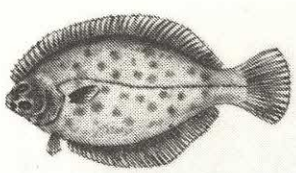
flatting agent [MATER] Additive substance for paints or var-

FLAT-BELT PULLEY



Diagrams of crowning and flanging on flat-belt pulleys. *(From D. C. Greenwood, Mechanical Power Transmission, McGraw-Hill, 1962)*

FLATFISH



A typical left-eye flounder, with both eyes on left side.

FLATHEAD RIVET

A flathead rivet, one of many standard types of rivet heads.

nishes to disperse incident light rays to give the dried surface a nonglossy matte finish.

flat-top antenna [ELECTROMAG] An antenna having two or more lengths of wire parallel to each other and in a plane parallel to the ground, each fed at or near its midpoint.

flat top response *See* band-pass response.

flat trajectory [MECH] A trajectory which is relatively flat, that is, described by a projectile of relatively high velocity.

flat tuning [ELECTR] Tuning of a radio receiver in which a change in frequency of the received waves produces only a small change in the current in the tuning apparatus.

flat-turret lathe [MECH ENG] A lathe with a low, flat turret on a power-fed cross-sliding headstock.

flatulence [MED] Excessive intestinal gas.

flatus [MED] Gas in the intestinal tract.

flatworm [INV ZOO] The common name for members of the phylum Platyhelminthes; individuals are dorsoventrally flattened.

flat yard [CIV ENG] A switchyard in which railroad cars are moved by locomotives, not by gravity.

flavan [BIOCHEM] $C_{15}H_{14}O$ 2-Phenylbenzopyran, an aromatic heterocyclic compound from which all flavonoids are derived.

flavanol [BIOCHEM] Yellow needles with a melting point of 169°C, derived from flavanone; a flavanoid pigment used as a dye. Also known as 3-hydroxyflavone.

flavanone [BIOCHEM] $C_{15}H_{12}O_2$ A colorless crystalline derivative of flavone.

flavescence [PL PATH] Yellowing or blanching of green plant parts due to diminution of chlorophyll accompanying certain virus disease.

flavin [BIOCHEM] **1.** A yellow dye obtained from the bark of quercitron trees. **2.** Any of several water-soluble yellow pigments occurring as coenzymes of flavoproteins.

flavin adenine dinucleotide [BIOCHEM] $C_{27}H_{33}N_9O_{15}P_2$ A coenzyme that functions as a hydrogen acceptor in aerobic dehydrogenases (flavoproteins). Abbreviated FAD.

flavin mononucleotide *See* riboflavin 5′-phosphate.

flavin phosphate *See* riboflavin 5′-phosphate.

Flavobacterium [MICROBIO] A genus of bacterium of uncertain affiliation; gram-negative coccobacilli or slender rods producing pigmented (yellow, red, orange, or brown) growth on solid media.

flavone [BIOCHEM] **1.** Any of a number of ketones composing a class of flavonoid compounds. **2.** $C_{15}H_{10}O_2$ A colorless crystalline compound occurring as dust on the surface of many primrose plants.

flavonoid [BIOCHEM] Any of a series of widely distributed plant constituents related to the aromatic heterocyclic skeleton of flavan.

flavonol [BIOCHEM] **1.** Any of a class of flavonoid compounds that are hydroxy derivatives of flavone. **2.** $C_{16}H_{10}O_2$ A colorless, crystalline compound from which many yellow plant pigments are derived.

flavoprotein [BIOCHEM] Any of a number of conjugated protein dehydrogenases containing flavin that play a role in biological oxidations in both plants and animals; a yellow enzyme.

flavor [PARTIC PHYS] A label used to distinguish different types of leptons (the electron, electron neutrino, muon, muon neutrino, and possibly others) and different color triplets of quarks (the up, down, strange, and charmed quarks, and possibly others).

flaw [MATER] A discontinuity in a material beyond acceptable established limits. [METEOROL] An English nautical term for a sudden gust or squall of wind. [MINERAL] A faulty part of a gemstone, such as a crack, visible imperfect crystallization, or internal twinning or cleavage. [OCEANOGR] **1.** The seaward edge of fast ice. **2.** A shore lead just outside fast ice.

flax [BOT] *Linum usitatissimum*. An erect annual plant with linear leaves and blue flowers; cultivated as a source of flaxseed and fiber.

flax rust [PL PATH] A disease of flax caused by the rust fungus *Melampsora lini*.

flaxseed [BOT] The seed obtained from the seed flax plant; a source of linseed oil.

flaxseed ore [GEOL] Iron ore composed of disk-shaped oölites that have been partially flattened parallel to the bedding plane.

flax wilt [PL PATH] A fungus disease of flax caused by *Fusarium oxysporum lini*; diseased plants wilt, yellow, and die.

F layer [GEOPHYS] An ionized layer in the F region of the ionosphere which consists of the F_1 and F_2 layers in the day hemisphere, and the F_2 layer alone in the night hemisphere; it is capable of reflecting radio waves to earth at frequencies up to about 50 megahertz.

F_1 layer [GEOPHYS] The ionosphere layer beneath the F_2 layer during the day, at a virtual height of 200–300 kilometers, being closest to earth around noon; characterized by a distinct maximum of free-electron density, except at high latitudes during winter, when the layer is not detectable.

F_2 layer [GEOPHYS] The highest constantly observable ionosphere layer, characterized by a distinct maximum of free-electron density at a virtual height from about 225 kilometers in the polar winter to more than 400 kilometers in daytime near the magnetic equator. Also known as Appleton layer.

fl dr *See* fluid dram.

flea [INV ZOO] Any of the wingless insects composing the order Siphonaptera; most are ectoparasites of mammals and birds.

flea-borne typhus *See* murine typhus.

flechette [ORD] **1.** A small fin-stabilized missile, a large number of which can be loaded in an artillery canister or in a warhead. **2.** *See* aerial dart.

fleece [TEXT] A fabric with a deep, soft, napped surface. [VERT ZOO] Coat of wool shorn from sheep; usually taken off the animal in one piece.

fleet [MECH ENG] Sidewise movement of a rope or cable when winding on a drum. [ORD] **1.** An organization of ships, aircraft, marine forces, and shore-based fleet activities, all under a commander who may exercise operational as well as administrative control. **2.** All naval operating forces.

fleet angle [MECH ENG] In hoisting gear, the included angle between the rope, in its position of greatest travel across the drum, and a line drawn perpendicular to the drum shaft, passing through the center of the head sheave or lead sheave groove.

fleet broadcast [COMMUN] The radio broadcast (in addition to the general broadcast) to all U.S. Navy ships and merchant ships, in which storm warnings are given.

fleeting target [ORD] Moving or transient target that remains within observing or firing distance for such a short period that it affords little time for deliberate adjustment and fire against it; for example, aircraft, vehicles, marching troops, and so forth.

Fleming cracking process [CHEM ENG] An obsolete liquid-phase thermal cracking process for heavy petroleum fractions; the charge was heated under pressure in a vertical shell still.

Fleming's rule *See* left-hand rule; right-hand rule.

Fleming's solution [MATER] A tissue fixative made up of a mixture of osmic, chromic and acetic acids.

Fleming tube [ELECTR] The original diode, consisting of a heated filament and a cold metallic electrode in an evacuated glass envelope; negative current flows from the filament to the cold electrode, but not in the reverse direction.

Flemish bond [CIV ENG] A masonry bond consisting of alternating stretchers and headers in each course, laid with broken joints.

Flemish garden wall bond [CIV ENG] A masonry bond consisting of headers and stretchers in the ratio of one to three or four in each course, with joints broken to give a variety of patterns.

flesh [ANAT] The soft parts of the body of a vertebrate, especially the skeletal muscle and associated connective tissue and fat.

Flesh-Demag process [CHEM ENG] A gas-making process in which a cyclic water-gas apparatus is used for feeding and charring the coal charge and for gas generation, with periodic automatic removal of the resultant ash.

fleshing machine [ENG] A machine that removes flesh from hides in a tannery.

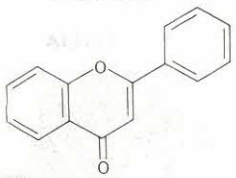
fleshy fruit [BOT] A fruit having a fleshy pericarp that is usually soft and juicy, but sometimes hard and tough.

Fletcher-Munson contour *See* equal loudness contour.

Fletcher radial burner [ENG] A burner with gas jets arranged radially.

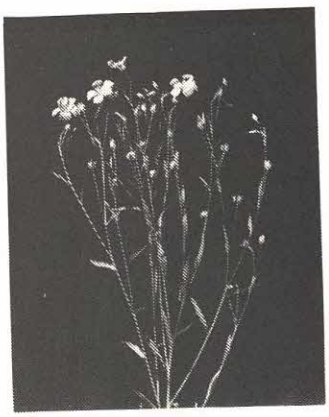
Flettner windmill [MECH ENG] An inefficient windmill with four arms, each consisting of a rotating cylinder actuated by a Savonius rotor.

FLAVONE



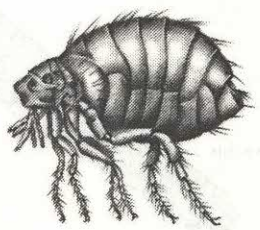
Structural formula of flavone (def. 2).

FLAX



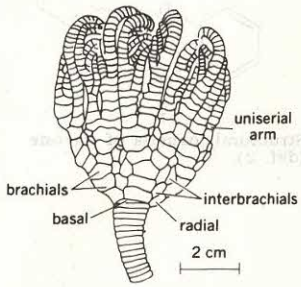
Flowering top of flax plant showing buds and seed capsules. *(USDA)*

FLEA



The sticktight flea, a bird parasite.

FLEXIBILIA



Talanterocrinus species. *(After F. Bather, 1900)*

flex [SCI TECH] To bend.

Flexibacter [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are unsheathed rods or filaments and are motile; microcysts are not known.

Flexibilia [PALEON] A subclass of extinct stalked or creeping Crinoidea; characteristics include a flexible tegmen with open ambulacral grooves, uniserial arms, a cylindrical stem, and five conspicuous basals and radials.

flexibility [MECH] The quality or state of being able to be flexed or bent repeatedly.

flexibilizer [MATER] An additive that gives an otherwise rigid plastic flexibility. Also known as plasticizer.

flexible circuit [ELECTR] A printed circuit made on a flexible plastic sheet that is usually die-cut to fit between large components.

flexible collodion [MATER] A collodion which has two additives (2% camphor and 3% castor oil) to make a pliable film.

flexible coupling [ELECTROMAG] A coupling designed to allow a limited angular movement between the axes of two waveguides. [MECH ENG] A coupling used to connect two shafts and to accommodate their misalignment.

flexible glue [MATER] A type of glue used for pliable molds and printers' rollers, for example, a mixture of glue, glycerol, and water.

flexible gun [ORD] A gun, especially a machine gun, mounted in an aircraft turret or on a post, tripod, or other mount in such a manner that the gun may be swung in both a vertical and horizontal plane.

flexible-joint pipe [ENG] Cast-iron pipe adapted to laying under water and capable of motion through several degrees without leakage.

flexible mold [ENG] A coating mold made of flexible rubber or other elastomeric materials; used mainly for casting plastics.

flexible pavement [CIV ENG] A road or runway made of bituminous material which has little tensile strength and is therefore flexible.

flexible resistor [ELEC] A wire-wound resistor having the appearance of a flexible lead; made by winding the Nichrome resistance wire around a length of asbestos or other heat-resistant cord, then covering the winding with asbestos and braided insulating covering.

flexible sandstone [GEOL] A variety of itacolumite that consists of fine grains and occurs in thin layers.

flexible shaft [MECH ENG] **1.** A shaft that transmits rotary motion at any angle up to about 90°. **2.** A shaft made of flexible material or of segments. **3.** A shaft whose bearings are designed to accommodate a small amount of misalignment.

flexible ventilation ducting [MIN ENG] Flexible fabric tubes covered with rubber or polyvinyl chloride, used for auxiliary ventilation.

flexible waveguide [ELECTROMAG] A waveguide that can be bent or twisted without appreciably changing its electrical properties.

flexion [BIOL] Act of bending, especially of a joint.

flexional symbols [COMPUT SCI] Symbols in which the meaning of each component digit is dependent on those which precede it.

flexion reflex [PHYSIO] An unconditioned, segmental reflex elicited by noxious stimulation and consisting of contraction of the flexor muscles of all joints on the same side. Also known as the nocioceptive reflex.

Flexithrix [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are usually sheathed filaments, and unsheathed cells are motile; microcysts are not known.

flexographic printing *See* flexography.

flexography [GRAPHICS] Relief printing with plates fastened to a cylinder and with a single inking roller supplied with aniline ink from two rollers in the ink fountain. Also known as aniline printing; aniline process; flexographic printing.

flexometer [ENG] An instrument for measuring the flexibility of materials.

flexor [PHYSIO] A muscle that bends or flexes a limb or a part.

flexowriter [COMPUT SCI] A typewriterlike device to read in manually or to read out information of a computer to which it is connected; it can also be used to punch paper tape.

flexuous [BIOL] **1.** Flexible. **2.** Bending in a zigzag manner. **3.** Wavy.

flexural modulus [MECH] A measure of the resistance of a beam of specified material and cross section to bending, equal to the product of Young's modulus for the material and the square of the radius of gyration of the beam about its neutral axis.

flexural rigidity [MECH] The ratio of the sideward force applied to one end of a beam to the resulting displacement of this end, when the other end is clamped.

flexural slip [GEOL] The slipping of sedimentary strata along bedding planes during folding, producing disharmonic folding and, when extreme, découllement. Also known as bedding-plane slip.

flexural strength [MECH] Strength of a material in blending, that is, resistance to fracture.

flexure [EMBRYO] A sharp bend of the anterior part of the primary axis of the vertebrate embryo. [GEOL] **1.** A broad, domed structure. **2.** A fold. [MECH] **1.** The deformation of any beam subjected to a load. **2.** Any deformation of an elastic body in which the points originally lying on any straight line are displaced to form a plane curve. [VERT ZOO] The last joint of a bird's wing.

flexure theory [MECH] Theory of the deformation of a prismatic beam having a length at least 10 times its depth and consisting of a material obeying Hooke's law, in response to stresses within the elastic limit.

flicker [OPTICS] A visual sensation produced by periodic fluctuations in light at rates ranging from a few cycles per second to a few tens of cycles per second.

flicker control [AERO ENG] Control of an aircraft, rocket, or such in which the control surfaces are deflected to their maximum degree with only a slight motion of the controller.

flicker effect [ELECTR] Random variations in the output current of an electron tube having an oxide-coated cathode, due to random changes in cathode emission.

flicker photometer [OPTICS] A photometer in which a single field of view is alternately illuminated by the light sources to be compared, and the rate of alternation is such that color flicker is absent but brightness flicker is not; disappearance of flicker signifies equality of luminance.

flight [AERO ENG] The movement of an object through the atmosphere or through space, sustained by aerodynamic reaction or other forces. [CIV ENG] A series of stairs between landings or floors.

flight briefing *See* pilot briefing.

flight characteristic [AERO ENG] A characteristic exhibited by an aircraft, rocket, or the like in flight, such as a tendency to stall or to yaw, or an ability to remain stable at certain speeds.

flight control system *See* vehicle control system.

flight conveyor [MECH ENG] A conveyor in which paddles, attached to single or double strands of chain, drag or push pulverized or granulated solid materials along a trough. Also known as drag conveyor.

flight deck [AERO ENG] In certain airplanes, an elevated compartment occupied by the crew for operating the airplane in flight. [NAV ARCH] The topmost complete deck of an aircraft carrier, used mainly for takeoff and landing of planes.

flight dynamics [AERO ENG] The study of the motion of an aircraft or missile; concerned with transient or short-term effects relating to the stability and control of the vehicle, rather than to calculating such performance as altitude or velocity.

flight envelope [AERO ENG] The boundary depicting, for a specific aircraft, the limits of speed, altitude, and acceleration which that aircraft cannot safely exceed.

flighter [FOOD ENG] A rotating vane used to cool brewers' wort.

flight feather [VERT ZOO] Any of the long contour feathers on the wing of a bird. Also known as remex.

flight feeder [MECH ENG] Short-length flight conveyor used to feed solids materials to a process vessel or other receptacle at a preset rate.

flight forecast [METEOROL] An aviation weather forecast for a specific flight.

flight inspection [NAV] Flight investigation certification of certain operational performance characteristics of electronic and visual navigation facilities by an authorized inspector in conformance with the U.S. Standard Flight Inspection Manual.

flight instrument [AERO ENG] An aircraft instrument used in the control of the direction of flight, attitude, altitude, or speed of an aircraft, for example, the artificial horizon, airspeed indicator, altimeter, compass, rate-of-climb indicator, accelerometer, turn-and-bank indicator, and so on.

FLIGHT FEATHER

Full view of a typical flight feather. *(From J. Van Tyne and A. J. Berger, Fundamentals of Ornithology, 2d ed., copyright © 1976 by John Wiley & Sons, Inc.; reprinted by permission)*

flight level [AERO ENG] A surface of constant atmospheric pressure which is related to the standard pressure datum.

flight log [NAV] **1.** A complete written record of a flight, normally showing flight planning information together with actual data recorded during the flight. **2.** A device that automatically records on a screen or map the flight path flown by an aircraft.

flight path [AERO ENG] The path made or followed in the air or in space by an aircraft, rocket, or such.

flight-path angle [AERO ENG] The angle between the horizontal (or some other reference angle) and a tangent to the flight path at a point. Also known as flight-path slope.

flight-path computer [COMPUT SCI] A computer that includes all of the functions of a course-line computer and also provides means for controlling the altitude of an aircraft in accordance with a desired plan of flight.

flight-path deviation [NAV] The difference between the flight track of an aircraft and the flight path, expressed in terms of either angular or linear measurement.

flight-path deviation indicator [NAV] An instrument providing visual indication of deviation from a flight path.

flight-path selector [NAV] An instrument used with a flight path computer to preset the values defining the flight path to a way point or terminal.

flight-path slope *See* flight-path angle.

flight plan [NAV] Information provided to air-traffic service units, giving in detail the proposed plan of flight, including times, altitudes, way points, and so on, and submitted for approval.

flight profile [AERO ENG] A graphic portrayal or plot of the flight path of an aeronautical vehicle in the vertical plane.

flight recorder [ENG] Any instrument or device that records information about the performance of an aircraft in flight or about conditions encountered in flight, for future study and evaluation.

flight rules [NAV] Rules established by competent authority to govern flights; the type of flight involved determines whether instrument flight rules or visual flight rules apply.

flight science [AERO ENG] The sum total of all knowledge that enables humans to accomplish flight; it is compounded of both science and engineering, and is concerned with airplanes, missiles, and crewed and uncrewed space vehicles.

flight simulator [AERO ENG] A training device or apparatus that simulates certain conditions of actual flight or of flight operations.

flight stability [AERO ENG] The property of an aircraft or missile to maintain its attitude and to resist displacement, and, if displaced, to tend to restore itself to the original attitude.

flight test [AERO ENG] **1.** A test by means of actual or attempted flight to see how an aircraft, spacecraft, space-air vehicle, or missile flies. **2.** A test of a component part of a flying vehicle, or of an object carried in such a vehicle, to determine its suitability or reliability in terms of its intended function by making it endure actual flight.

flight time [NAV] The elapsed time from the moment an aircraft first moves under its own power for the purpose of taking off until the moment it comes to rest at the end of the flight.

flight track *See* track.

flight visibility [METEOROL] Average visibility in a forward direction from an aircraft in flight.

flight-weather briefing *See* pilot briefing.

flinching [IND ENG] In inspection, failure to call a borderline defect a defect.

Flinders bar [NAV] A bar of soft unmagnetized iron placed vertically near a magnetic compass to counteract deviation caused by magnetic induction in vertical soft iron of the craft.

F line [SPECT] A green-blue line in the spectrum of hydrogen, at a wavelength of 486.133 nanometers.

flinkite [MINERAL] $Mn_3(AsO_4)(OH)_4$ Greenish-brown mineral composed of basic manganese arsenate, occurring in feathery forms.

flint [MINERAL] A black or gray, massive, hard, somewhat impure variety of chalcedony, breaking with a conchoidal fracture. Also known as firestone.

flint clay [GEOL] A hard, smooth, flintlike fireclay; when it is ground, it develops no plasticity, and it breaks with conchoidal fracture.

flint glass [MATER] **1.** Heavy, colorless, brilliant glass that contains lead oxide. **2.** Any high-quality glass.

flint mill [MECH ENG] A mill employing pebbles to pulverize materials (for example, in cement manufacture).

FLIP *See* floating instrument platform.

flip chip [ELECTR] A tiny semiconductor die having terminations all on one side in the form of solder pads or bump contacts; after the surface of the chip has been passivated or otherwise treated, it is flipped over for attaching to a matching substrate.

flip coil [ELECTROMAG] A small coil used to measure the strength of a magnetic field; it is placed in the field, connected to a ballistic galvanometer or other instrument, and suddenly flipped over 180°; alternatively, the coil may be held stationary and the magnetic field reversed.

flip-flop amplifier *See* wall-attachment amplifier.

flip-flop circuit *See* bistable multivibrator.

flip-open cutout fuse *See* dropout fuse.

flip-over process *See* Umklapp process.

flipper [VERT ZOO] A broad, flat appendage used for locomotion by aquatic mammals and sea turtles.

FLIR imager *See* forward-looking infrared imager.

flist [METEOROL] In Scotland, a keen blast or shower accompanied by a squall.

flitch beam [CIV ENG] A built-up beam composed of a metal plate sandwiched between flitches, that is, other strips of metal or other material.

flitch girder [CIV ENG] A girder composed of a metal plate sandwiched between flitches.

flitch plate [CIV ENG] The metal plate in a flitch beam or girder.

float [AGR] A device consisting of one or more blades used to level a seedbed. [BIOL] An air-filled sac in many pelagic flora and fauna that serves to buoy up the body of the organism. [DES ENG] A file which has a single set of parallel teeth. [ENG] **1.** A flat, rectangular piece of wood with a handle, used to apply and smooth coats of plaster. **2.** A mechanical device to finish the surface of freshly placed concrete paving. **3.** A marble-polishing block. **4.** Any structure that provides positive buoyancy such as a hollow, watertight unit that floats or rests on the surface of a fluid. **5.** *See* plummet. [GEOL] An isolated, displaced rock or ore fragment. [IND ENG] *See* bank. [TEXT] **1.** A thread used to create patterns in fabric by passing over other threads. **2.** A fabric defect caused by passing a thread over other threads where it should be interwoven.

floatability [MIN ENG] Response of a specific mineral to the flotation process.

float-and-sink analysis [MIN ENG] Use of a series of heavy liquids diminishing (or increasing) in density by accurately controlled stages in order to divide a sample of crushed coal or other minerals or metals into fractions that are either equal-settling or equal-floating at each stage.

float barograph [ENG] A type of siphon barograph in which the mechanically magnified motion of a float resting on the lower mercury surface is used to record atmospheric pressure on a rotating drum.

float chamber [ENG] A vessel in which a float regulates the level of a liquid.

float coal [GEOL] Small, irregularly shaped, isolated deposits of coal embedded in sandstone or in siltstone. Also known as raft.

float control [ENG] Floating device used to transmit a liquid-level reading to a control apparatus, such as an on-off switch controlling liquid flow into and out of a storage tank.

float-cut file [DES ENG] A coarse file used on soft materials.

floater *See* drift bottle.

float finish [CIV ENG] A rough concrete finish, obtained by using a wooden float for finishing.

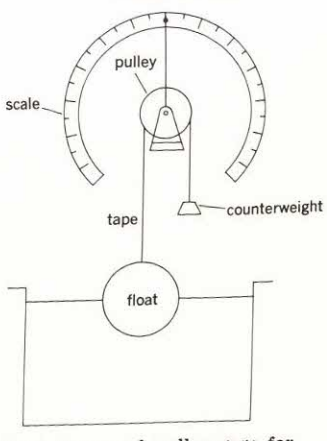
float gage [ENG] Any one of several types of instruments in which the level of a liquid is determined from the height of a body floating on its surface, by using pullies, levers, or other mechanical devices.

floating [ELECTR] The condition wherein a device or circuit is not grounded and not tied to an established voltage supply.

floating action [ENG] Controller action in which there is a predetermined relation between the deviation and the speed of a final control element; a neutral zone, in which no motion of the final control element occurs, is often used.

floating address [COMPUT SCI] The symbolic address used prior to its conversion to a machine address.

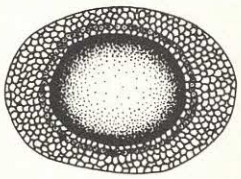
FLOAT GAGE



Float, tape, and pulley gage for measuring large changes in liquid level. *(From D. M. Considine ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

floating aid [NAV] A buoy serving as an aid to navigation, secured in its charted position by a mooring.
floating arithmetic *See* floating-point arithmetic.
floating axle [MECH ENG] A live axle used to turn the wheels of an automotive vehicle; the weight of the vehicle is borne by housings at the ends of a fixed axle.
floating battery [ELEC] A storage battery connected permanently in parallel with another power source; the battery normally handles only small charging or discharging currents, but takes over the entire load upon failure of the main supply.
floating block *See* traveling block.
floating carrier modulation *See* controlled carrier modulation.
floating charge [ELEC] Application of a constant voltage to a storage battery, sufficient to maintain an approximately constant state of charge while the battery is idle or on light duty.
floating chase [ENG] A mold part that can move freely in a vertical plane, which fits over a lower member (such as a cavity or plug) and into which an upper plug can telescope.
floating control [ENG] Control device in which the speed of correction of the control element (such as a piston in a hydraulic relay) is proportional to the error signal. Also known as proportional-speed control.
floating crane [CIV ENG] A crane having a barge or scow for an undercarriage and moved by cables attached to anchors set some distance off the corners of the barge; used for water work and for work on waterfronts.
floating-decimal arithmetic *See* floating-point arithmetic.
floating dock [CIV ENG] **1.** A form of dry dock for repairing ships; it can be partly submerged by controlled flooding to receive a vessel, then raised by pumping out the water so that the vessel's bottom can be exposed. Also known as floating dry dock. **2.** A barge or flatboat which is used as a wharf.
floating dollar sign [COMPUT SCI] A dollar sign used with an edit mask, allowing the sign to be inserted before the nonzero leading digit of a dollar amount.
floating dry dock *See* floating dock.
floating floor [BUILD] A floor constructed so that the wearing surface is separated from the supporting structure by an insulating layer of mineral wool, resilient quilt, or other material to provide insulation against impact sound.
floating foundation [CIV ENG] **1.** A reinforced concrete slab that distributes the concentrated load from columns; used on soft soil. **2.** A foundation mat several meters below the ground surface when it is combined with external walls.
floating grid [ELECTR] Vacuum-tube grid that is not connected to any circuit; it assumes a negative potential with respect to the cathode. Also known as free grid.
floating ice [OCEANOGR] Any form of ice floating in water, including grounded ice and drifting land ice.
floating input [ELEC] Isolated input circuit not connected to ground at any point.
floating instrument platform [NAV ARCH] A crewed, spar-buoy-type oceanographic platform with marine instruments mounted on the submerged portions. Abbreviated FLIP.
floating lever [MECH ENG] A horizontal brake lever with a movable fulcrum; used under railroad cars.
floating neutral [ELEC] Neutral conductor whose voltage to ground is free to vary when circuit conditions change.
floating pan [ENG] An evaporation pan in which the evaporation is measured from water in a pan floating in a larger body of water.
floating platen [ENG] In a multidaylight press, a platen that is between the main head and the press table and can be moved independently of them.
floating plug [MET] A plug or mandrel attached to a rod and used in plug drawing. Also known as a plug die.
floating-point arithmetic [MATH] A method of performing arithmetical operations, used especially by automatic computers, in which numbers are expressed as integers multiplied by the radix raised to an integral power, as 87×10^{-4} instead of 0.0087. Also known as floating arithmetic; floating-decimal arithmetic.
floating-point calculation [COMPUT SCI] A calculation made with floating-point arithmetic.
floating-point coefficient *See* mantissa.
floating-point package [COMPUT SCI] A program which enables a computer to perform arithmetic operations when such capabilities are not wired into the computer. Also known as floating-point routine.
floating-point routine *See* floating-point package.
floating-point system [COMPUT SCI] A number system in which the location of the point does not remain fixed with respect to one end of the numerals.
floating reticle [OPTICS] A reticle the image of which is movable within the field of view.
floating rib [ANAT] One of the last two ribs in humans which have the anterior end free.
floating roof [ENG] A type of tank roof (steel, plastic, sheet, or microballoons) which floats upon the surface of the stored liquid; used to decrease the vapor space and reduce the potential for evaporation.
floating sand [PETR] A single grain of quartz sand that does not appear to touch surrounding sand grains scattered throughout the finer-grained matrix of a sedimentary rock.
floating scraper [MECH ENG] A balanced scraper blade that rests lightly on a drum filter; removes solids collected on the rotating drum surface by riding on the drum's surface contour.
floating zone refining [MET] A variation of the zone-refining technique in which the molten zone is held in place by its own surface tension between two collinear rods; since no container is needed, contamination of the pure metal is avoided.
floatless level control [ENG] Any nonfloat device for measurement and control of liquid levels in storage tanks or process vessels; includes use of manometers, capacitances, electroprobes, nuclear radiation, and sonics.
float mineral [GEOL] Small ore fragments carried from the ore bed by the action of water or by gravity; a float mineral often leads to discovery of mines.
floatoblast [INV ZOO] A free-floating statoblast having a float of air cells.
float switch [ENG] A switch actuated by a float at the surface of a liquid.
float-type rain gage [ENG] A class of rain gage in which the level of the collected rainwater is measured by the position of a float resting on the surface of the water; frequently used as a recording rain gage by connecting the float through a linkage to a pen which records on a clock-driven chart.
float valve [ENG] A valve whose on-off action is controlled directly by the fall or rise of a float concurrent with the fall or rise of liquid level in a liquid-containing vessel.
floc [CHEM] Small masses formed in a fluid through coagulation, agglomeration, or biochemical reaction of fine suspended particles.
floccose [BOT] Covered with tufts of woollike hairs.
flocculant *See* flocculating agent.
flocculate [BIOL] Having small tufts of hairs. [CHEM] To cause to aggregate or coalesce into a flocculent mass.
flocculating agent [CHEM] A reagent added to a dispersion of solids in a liquid to bring together the fine particles to form flocs. Also known as flocculant.
flocculent [CHEM] Pertaining to a material that is cloudlike and noncrystalline.
flocculonodular lobes [ANAT] The pair of lateral cerebellar lobes in vertebrates which function to regulate vestibular reflexes underlying posture; referred to functionally as the vestibulocerebellum.
flocculus [ANAT] A prominent lobe of the cerebellum situated behind and below the middle cerebellar peduncle on each side of the median fissure. [ASTRON] A patch in the sun's surface seen in the light of calcium or hydrogen; the patch may be bright or dark and is usually in the vicinity of sunspots.
floccus [BOT] A tuft of woolly hairs. [METEOROL] A cloud species in which each element is a small tuft with a rounded top and a ragged bottom.
flock [TEXT] **1.** Pulverized wool, cotton, silk, or rayon fiber used to form velvety patterns on cloth. **2.** Woolen or cotton refuse reduced by machinery and used to stuff furniture.
flocking [TEXT] A design or a surface finish made by spraying short fibers so that they adhere electrostatically to a material.
floc point [ANALY CHEM] The temperature at which wax or solids separate from kerosine and other illuminating oils as a definite floc.
floc test [ANALY CHEM] A quantitative test applied to kerosine and other illuminating oils to detect substances rendered insoluble by heat.
floe [OCEANOGR] A piece of floating sea ice other than fast ice or glacier ice; may consist of a single fragment or of many consolidated fragments, but is larger than an ice cake and smaller than an ice field. Also known as ice floe.

FLOATOBLAST



Floatoblast of *Plumatella repens*, in Phylactolaemata, a class of fresh-water Bryozoans.

floeberg [OCEANOGR] A mass of hummocked ice formed by the piling up of many ice floes by lateral pressure; an extreme form of pressure ice; may be more than 50 feet (15 meters) high and resemble an iceberg.

floe till [GEOL] **1.** A glacial till resulting from the intact deposition of a grounded iceberg in a lake bordering an ice sheet. **2.** A lacustrine clay with boulders, stones, and other glacial matter dropped into it by melting icebergs. Also known as berg till.

flokite *See* mordenite.

flong [GRAPHICS] In stereotyping, a matrix, made from several paper sheets which have been moistened and pasted together, that receives the molten metal and becomes a duplicate of the type page after cooling.

flood [ELECTR] To direct a large-area flow of electrons toward a storage assembly in a charge storage tube. [ENG] To cover or fill with fluid. [HYD] The condition that occurs when water overflows the natural or artificial confines of a stream or other body of water, or accumulates by drainage over low-lying areas. [MECH ENG] To supply an excess of fuel to a carburetor so that the level rises above the nozzle. [OCEANOGR] The highest point of a tide.

floodable length [NAV ARCH] At any point in the length of a ship, the greatest part of the length centered at that point which can be flooded at the prescribed permeability without submerging the margin line.

flood basalt *See* plateau basalt.

flood basin [GEOL] **1.** The tract of land actually submerged during the highest known flood in a specific region. **2.** The flat, wide area lying between a low, sloping plain and the natural levee of a river.

flood control [CIV ENG] Use of levees, walls, reservoirs, floodways, and other means to protect land from water overflow.

flood coverage [PETRO ENG] The extent of subterranean coverage within an oil reservoir by the injection of pressure-maintenance (or water-drive) water.

flood current [OCEANOGR] The tidal current associated with the increase in the height of a tide.

flood dam [CIV ENG] A dam for storing floodwater, or for supplying a flood of water.

flooded stream *See* drowned stream.

flooded system [ENG] A system filled with so much tracer gas that probe testing for leaks suffers from a loss of sensitivity.

flood flow [HYD] Stream discharge during a flood.

flood fringe *See* pondage land.

floodgate [CIV ENG] **1.** A gate used to restrain a flow or, when opened, to allow a flood flow to pass. **2.** The lower gate of a lock.

flood icing *See* icing.

flooding [AGR] Filling of ditches or covering of land with water during the raising of crops; rice, for example, must have occasional flooding to grow properly. [CHEM ENG] Condition in a liquid-vapor counterflow device (such as a distillation column) in which the rate of vapor rise is such as to prevent liquid downflow, causing a buildup of the liquid (flooding) within the device. [PETRO ENG] Technique of increasing recovery of oil (secondary recovery) from a reservoir by injection of water into the formation to drive the oil toward producing wellholes. Also known as waterflooding.

flooding ice *See* icing.

floodlight [ELEC] A light projector used for outdoor lighting of buildings, parking lots, sports fields, and the like, usually having a filament lamp or mercury-vapor lamp and a parabolic reflector.

flood-out pattern [PETRO ENG] Pattern of subterranean water penetration and spread in an oil reservoir as a result of water injection.

floodplain [GEOL] The relatively smooth valley floors adjacent to and formed by alluviating rivers which are subject to overflow.

floodplain splay [GEOL] A small alluvial fan or other outspread deposit formed where an overloaded stream breaks through a levee (artificial or natural) and deposits its material (often coarse-grained) on the floodplain. Also known as channel splay.

flood plane [HYD] The position of a stream's water surface during a particular flood.

flood pot test [PETRO ENG] Laboratory simulation of an oil reservoir to appraise the residual reservoir saturation after waterflooding.

flood projection [COMMUN] In facsimile transmission, optical method in which the subject facsimile copy is illuminated and the scanning spot is delineated by an aperture between the subject copy and the light-sensitive device.

flood relief channel *See* bypass channel.

flood routing [HYD] The process of computing the progressive time and shape of a flood wave at successive points along a river. Also known as storage routing; streamflow routing.

Flood's equation [PHYS CHEM] A relation used to determine the liquidus temperature in a binary fused salt system.

flood stage [HYD] The stage, on a fixed river gage, at which overflow of the natural banks of the stream begins to cause damage in any portion of the reach for which the gage is used as an index.

flood tide [OCEANOGR] **1.** That period of tide between low water and the next high water. **2.** A tide at its highest point.

flood tuff *See* ignimbrite.

flood wall [CIV ENG] A levee or similar wall for the purpose of protecting the land from inundation by flood waters.

floodway *See* bypass channel.

floor [ENG] The bottom, horizontal surface of an enclosed space. [GEOL] **1.** The rock underlying a stratified or nearly horizontal deposit, corresponding to the footwall of more steeply dipping deposits. **2.** A horizontal, flat ore body. [MIN ENG] Boards laid at the heading to receive blasted rocks and to facilitate ore loading. [NAV ARCH] One of a series of vertical plates extending across the bottom of a ship at right angles to the center line and forming part of the bottom framing of the hull.

floor beam [BUILD] A beam used in the framing of floors in buildings. [CIV ENG] A large beam used in a bridge floor at right angles to the direction of the roadway, to transfer loads to bridge supports.

floorboard [MIN ENG] A thick wooden plank constituting part of a drill platform or other work platform.

floor burst [MIN ENG] A type of outburst in longwall faces which is preceded by heavy weighting due to floor lift; gas evolved below the seam collects beneath an impervious layer of rock, and a gas blister forms beneath the face, giving the observed floor lift; later, the floor fractures and the firedamp escapes into the mine atmosphere.

floor cut [MIN ENG] A machine-made cut in the floor dirt just below the coal seam.

floor drain [CIV ENG] A pipe or channel to remove water from under a floor in contact with soil.

floor framing [BUILD] Floor joists together with their strutting and supports.

flooring [MATER] Material suitable for use as a floor.

flooring saw [DES ENG] A pointed saw with teeth on both edges; cuts its own entrance into a material.

floor light [BUILD] A window set in a floor that is adapted for walking on and admitting light to areas below.

floor outlet [ELEC] An electrical outlet whose face is level with or recessed into a floor. Also known as floor plug.

floor plan [ARCH] A diagram of a floor showing partitions, doors, windows, and other features.

floor plate [BUILD] A flat board on a floor used to support wall studs. [ENG] A plate in a floor to which heavy work or machine tools can be bolted.

floor plug *See* floor outlet.

floor sill [MIN ENG] A large timber laid flat on the ground or in a level, shallow ditch, to which are fastened the drill-platform boards or planking, or which is used as the base for a full timber set.

floor system [CIV ENG] The structural floor assembly between supporting beams or girders in buildings and bridges.

flop gate [MIN ENG] An automatic gate used in placer mining when there is a shortage of water; the gate closes a reservoir until it is filled with water, then automatically opens and allows the water to flow into the sluices; when the reservoir is empty, the gate closes, and the operation is repeated.

flopover [ELECTR] A defect in television reception in which a series of frames move vertically up or down the screen, caused by lack of synchronization between the vertical and horizontal sweep frequencies.

floppy disk [COMPUT SCI] A flexible plastic disk about 7½ inches (19 centimeters) in diameter, coated with magnetic oxide

and used for data entry to a computer; a slot in its protective envelope or housing, which remains stationary while the disk rotates, exposes the track positions for the magnetic read/write head of the drive unit. Also known as diskette.

Floquet theorem [MATH] A second-order linear differential equation whose coefficients are periodic single-valued functions of an independent variable x, has a solution of the form $e^{\mu x}P(x)$ where μ is a constant and $P(x)$ a periodic function.

flora [BOT] **1.** Plants. **2.** The plant life characterizing a specific geographic region or environment.

floral axis [BOT] A flower stalk.

floral diagram [BOT] A diagram of a flower in cross section showing the number and arrangement of floral parts.

Florence oil *See* olive oil.

florencite [MINERAL] $CeAl_3(PO_4)_2(OH)_6$ Pale-yellow mineral composed of basic phosphate of cerium and aluminum.

florentium *See* promethium-147.

flores [CHEM] A form of a chemical compound made by the process of sublimation.

flores martis *See* ferric chloride.

floret [BOT] A small individual flower that is part of a compact group of flowers, such as the head of a composite plant or inflorescence.

Florey unit [BIOL] A unit for the standardization of penicillin.

floricome [INV ZOO] A type of branched hexaster spicule.

floriculture [AGR] A segment of horticulture concerned with commercial production, marketing, and retail sale of cut flowers and potted plants, as well as home gardening and flower arrangement.

Florida Current [OCEANOGR] A fast current that sets through the Straits of Florida to a point north of Grand Bahama Island, where it joins the Antilles Current to form the Gulf Stream.

Florideophyceae [BOT] A class of red algae, division Rhodophyta, having prominent pit connections between cells.

floriferous [BOT] Blooming freely, used principally of ornamental plants.

florigen [BIOCHEM] A plant hormone that stimulates buds to flower.

florivorous [ZOO] Feeding on flowers.

flor process [FOOD ENG] A technique used to make Spanish sherries involving the participation of a film-forming yeast growing on the surface of the wine in partially filled oak barrels; the yeast imparts the characteristic sherry flavor.

florula [ECOL] Plants which grow in a small, confined habitat, for example, a pond.

floscelle [INV ZOO] A flowerlike structure around the mouth of some echinoids.

Flosculariacea [INV ZOO] A suborder of rotifers in the order Monogononta having a malleoramate mastax.

Floscularildae [INV ZOO] A family of sessile rotifers in the suborder Floscullariacea.

flosculous [BOT] **1.** Composed of florets. **2.** Of a floret, tubular in form.

flosculus [BOT] A floret.

flospinning [MET] Power-spinning or flowing metal over a rotating bar for shaping into cylindrical, conical, and curvilinear parts.

floss [MET] Molten or solid slag floating on the surface of a metal melt.

floss hole [MET] A small door or opening of the bottom of a smokestack or flue for removal of ash.

flotation [ENG] A process used to separate particulate solids by causing one group of particles to float; utilizes differences in surface chemical properties of the particles, some of which are entirely wetted by water, others are not; the process is primarily applied to treatment of minerals but can be applied to chemical and biological materials; in mining engineering it is referred to as froth flotation.

flotation agent [CHEM] A chemical which alters the surface tension of water or which makes it froth easily.

flotation analysis [PHYS] Technique to measure liquid density in which a float of known density is adjusted with weights to match that of the liquid.

flotation cell [MIN ENG] The device in which froth flotation of ores is performed.

flotation collar [ENG] A buoyant bag carried by a spacecraft and designed so that it inflates and surrounds part of the outer surface if the spacecraft lands in the sea.

flotsam [ENG] Floating articles, particularly those that are thrown overboard to lighten a vessel in distress.

flounder [VERT ZOO] Any of a number of flatfishes in the families Pleuronectidae and Bothidae of the order Pleuronectiformes.

flour [FOOD ENG] A powdery meal obtained by milling wheat and other cereal grains or dry food products such as potato or banana.

flour gold [MET] The finest-size gold dust, much of which will float on water.

flour mill [FOOD ENG] A machine or factory that processes cereal grains such as wheat and rye into flour.

flow [COMPUT SCI] The sequence in which events take place or operations are carried out. [ENG] A forward movement in a continuous stream or sequence of fluids or discrete objects or materials, as in a continuous chemical process or solids-conveying or production-line operations. [FL MECH] The forward continuous movement of a fluid, such as gases, vapors, or liquids, through closed or open channels or conduits. [GEOL] Any rock deformation that is not instantly recoverable without permanent loss of cohesion. Also known as flowage; rock flowage. [PHYS] The movement of electric charges, gases, liquids, or other materials or quantities.

flowability [FL MECH] Capability of a liquid or loose particulate solid to move by flow.

flowage [GEOL] *See* flow. [HYD] Flooding of water onto adjacent land.

flowage line [GEOL] A contour line at the edge of a body of water, such as a reservoir, representing a given water level.

flow banding [GEOL] An igneous rock structure resulting from flowing of magmas or lavas and characterized by alternation of mineralogically unlike layers.

flow bean [PETRO ENG] A plug containing a small hole placed in the flow line at the well head which serves to maintain oil flow at a proper rate.

flow birefringence [PHYS CHEM] Orientation of long, thin asymmetric molecules in the direction of flow of a solution forced to flow through a capillary tube.

flow bog [ECOL] A peat bog with a surface level that fluctuates in accordance with rain and tides.

flow brazing [MET] A brazing process in which coalescence is produced by the heat of molten filler metal that is poured over a joint.

flow breccia [GEOL] A breccia formed with the movement of lava flow while the flow is still in motion.

flow brightening [MET] In a soldering process, the melting of a chemical or mechanical metallic coating on the base metal to be soldered.

flow cast [PETR] One of a group of bedding plane structures formed in graywacke.

flow chart [ENG] A graphical representation of the progress of a system for the definition, analysis, or solution of a data-processing or manufacturing problem in which symbols are used to represent operations, data or material flow, and equipment, and lines and arrows represent interrelationships among the components. Also known as control diagram; flow diagram; flow sheet.

flow-chart symbol [ENG] Any of the existing symbols normally used to represent operations, data or materials flow, or equipment in a data-processing problem or manufacturing-process description.

flow cleavage [GEOL] Rock cleavage in which solid flow of rock accompanies recrystallization. Also known as slaty cleavage.

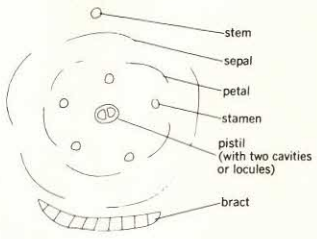
flow coat [ENG] A coating formed by pouring a liquid material over the object and allowing it to flow over the surface and drain off.

flow coefficient [FL MECH] An experimentally determined proportionality constant, relating the actual velocity of fluid flow in a pipe, duct, or open channel to the theoretical velocity expected under certain assumptions. [MECH ENG] A dimensionless number used in studying the power required by fans, equal to the volumetric flow rate through the fan divided by the product of the rate of rotation of the fan and the cube of the impeller diameter.

flow control [ENG] Any system used to control the flow of gases, vapors, liquids, slurries, pastes, or solid particles through or along conduits or channels.

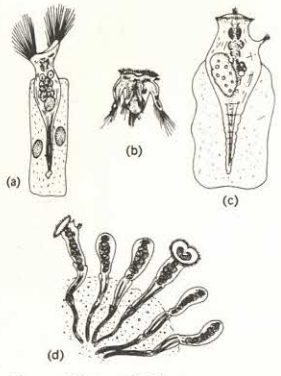
flow control valve [ENG] A valve whose flow opening is controlled by the rate of flow of the fluid through it; usually

FLORAL DIAGRAM



Graphic diagram of a cross section of a flower.

FLOSCULARIACEA



Sessile rotifers of the Floscullariacea. *(a) Floscularia mutabilis. (b) Pedalia mira. (c) Conchiloides* species. *(d) Lacinularia socialis.*

controlled by differential pressure across an orifice at the valve. Also known as rate-of-flow control valve.

flow counter *See* gas-flow counter tube.

flow diagram *See* flow chart.

flow direction [ENG] The antecedent-to-successor relation, indicated by arrows or other conventions, between operations on a flow chart.

flow distribution *See* flow field.

flow earth *See* solifluction mantle.

flow equation [FL MECH] Equation for the calculation of fluid (gas, vapor, liquid) flow through conduits or channels; consists of an interrelation of fluid properties (such as density or viscosity), environmental conditions (such as temperature or pressure), and conduit or channel geometry and conditions (such as diameter, cross-sectional shape, or surface roughness).

flower [BOT] The characteristic reproductive structure of a seed plant, particularly if some or all of the parts are brightly colored.

flowers of sulfur [PHARM] One of three forms of pharmaceutical sulfur, made by sublimation; the other two forms are precipitated sulfur and washed sulfur. Also known as sublimed sulfur.

flowers of tin *See* stannic oxide.

flow field [FL MECH] The velocity and the density of a fluid as functions of position and time. Also known as flow distribution.

flow figure *See* strain figure.

flow fold [GEOL] Folding in beds, composed of relatively plastic rock, that assume any shape impressed upon them by the more rigid surrounding rocks or by the general stress pattern of the deformed zone; there are no apparent surfaces of slip.

flow graph *See* signal-flow graph.

flowing-film concentration [MIN ENG] A concentration based on the fact that liquid films in laminar flow possess a velocity which is not the same in all depths of the film; by this principle lighter particles of ore may be washed off while the heavier particles accumulate and are intermittently removed.

flowing furnace [MET] A furnace from which molten metal can be tapped or drawn.

flowing pressure [PETRO ENG] Pressure at the bottom of an oil-well bore (bottom-hole pressure) during normal oil production.

flowing-pressure gradient [PETRO ENG] The slope of decreasing pressure plotted against distance measured for upward liquid flow in a continuous-flow gas-lift oil well.

flowing-temperature factor [THERMO] Calculation correction factor for gases flowing at temperatures other than that for which a flow equation is valid, that is, other than 60°F (15.5°C).

flowing well [PETRO ENG] Oil reservoir in which gas-drive pressure is sufficient to force oil flow up through and out of a wellhole.

flow layer [PETR] In an igneous rock, a layer which is different in composition or texture from adjacent layers.

flow line [ENG] **1.** The connecting line or arrow between symbols on a flow chart or block diagram. **2.** Mark on a molded plastic or metal article made by the meeting of two input-flow fronts during molding. Also known as weld mark. [HYD] A contour of the water level around a body of water. [PETR] In an igneous rock, any internal structure produced by parallel orientation of crystals, mineral streaks, or inclusions. [PETRO ENG] A pipeline that takes oil from a single well or a series of wells to a gathering center.

flow marks [MATER] Wavy surface marks on a thermoplastic resin molding due to improper flow of material into the mold.

flow measurement [ENG] The determination of the quantity of a fluid, either a liquid, a vapor, or a gas, that passes through a pipe, duct, or open channel.

flowmeter [ENG] An instrument used to measure pressure, flow rate, and discharge rate of a liquid, vapor, or gas flowing in a pipe. Also known as fluid meter.

flow mixer [MECH ENG] Liquid-liquid mixing device in which the mixing action occurs as the liquids pass through it; includes jet nozzles and agitator vanes. Also known as line mixer.

flow net [FL MECH] A diagram used in studying the flow of a fluid through a permeable substance (such as water through a soil structure) having two nests of curves, one representing the flow lines, which follow the path of the fluid, and the other the equipotential lines, which connect points of equal head.

flow nozzle [ENG] A flowmeter in a closed conduit, consisting of a short flared nozzle of reduced diameter inset into the inner diameter of a pipe; used to cause a temporary pressure drop in flowing fluid to determine flow rate via measurement of static pressures before and after the nozzle.

flow pattern [FL MECH] Pattern of two-phase flow in a conduit or channel pipe, taking into consideration the ratio of gas to liquid and conditions of flow resistance and liquid holdup.

flow process [ENG] System in which fluids or solids are handled in continuous movement during chemical or physical processing or manufacturing.

flow rate [FL MECH] Also known as rate of flow. **1.** Time required for a given quantity of flowable material to flow a measured distance. **2.** Weight or volume of flowable material flowing per unit time.

flow-rating pressure [MECH ENG] The value of inlet static pressure at which the relieving capacity of a pressure-relief device is established.

flow reactor [CHEM ENG] A dynamic reactor system in which reactants flow continuously into the vessel and products are continuously removed, in contrast to a batch reactor.

flow regime [HYD] A range of streamflows having similar bed forms, flow resistance, and means of transporting sediment.

flow resistance [FL MECH] **1.** Any factor within a conduit or channel that impedes the flow of fluid, such as surface roughness or sudden bends, contractions, or expansions. **2.** *See* viscosity.

flow rock [PETR] An igneous rock that had been liquid.

flow separation *See* boundary-layer separation.

flow sheet *See* flow chart.

flow slide [GEOL] A slide of waterlogged material in which the slip surface is not well defined.

flow soldering [ENG] Soldering of printed circuit boards by moving them over a flowing wave of molten solder in a solder bath; the process permits precise control of the depth of immersion in the molten solder and minimizes heating of the board. Also known as wave soldering.

flowstone [GEOL] Deposits of calcium carbonate that accumulated against the walls of a cave where water flowed on the rock.

flow stress [MECH] The stress along one axis at a given value of strain that is required to produce plastic deformation.

flow string [PETRO ENG] Total length of oil- or gas-well tubing made up of a string of interconnected tubing sections.

flow structure [GEOL] A primary sedimentary structure due to underwater slump or flow.

flow tank [PETRO ENG] A tank which receives oil from the well and where gas and water may be separated before the oil passes into a stock tank.

flow texture [PETR] A pattern of an igneous rock that is formed when the stream or flow lines of a once-molten material have a subparallel arrangement of prismatic or tabular cyrstals or microlites. Also known as fluidal texture.

flow transmitter [ENG] A device used to measure the flow of liquids in pipelines and convert the results into proportional electric signals that can be transmitted to distant receivers or controllers.

flow valve [ENG] A valve that closes itself when the flow of a fluid exceeds a particular value.

flow velocity [GEOL] In soil, a vector point function used to indicate rate and direction of movement of water through soil per unit of time, perpendicular to the direction of flow.

flow visualization [ENG] Method of making visible the disturbances that occur in fluid flow, using the fact that light passing through a flow field of varying density exhibits refraction and a relative phase shift among different rays.

flow welding [MET] A welding process in which coalescence is produced by heating with molten filler metal, which is poured over the joint until the welding temperature is attained and the required amount of filler metal is added.

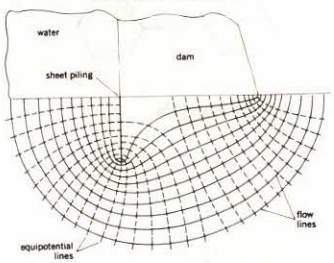
floxuridine [PHARM] $C_9H_{11}FN_2O_5$ Crystals that melt at 150–151°C; used as an antiviral drug and as an inhibitor of deoxyribonucleic acid synthesis. Abbreviated FUDR.

fl oz *See* fluid ounce.

fluctuating current [ELEC] Direct current that changes in value but not at a steady rate.

fluctuation [OCEANOGR] **1.** Wavelike motion of water. **2.** The variations of water-level height from mean sea level that are not due to tide-producing forces. [SCI TECH] **1.** Variation, especially back and forth between successive values in a series

FLOW NET



Flow net indicated under the cutoff wall of a dam. *(From D. P. Krynine, Soil Mechanics, 2d ed., McGraw-Hill, 1947)*

FLOW NOZZLE

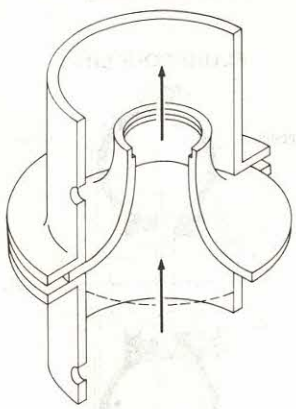


Diagram of a flow nozzle. Arrows indicate direction of fluid flow.

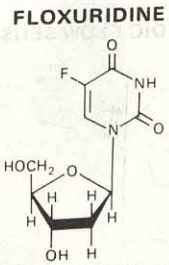
FLOXURIDINE



Structural formula.

of observations. **2.** Variation of data points about a smooth curve passing among them.

fluctuation noise *See* random noise.

fluctuation test [MICROBIO] A method of demonstrating that bacterial mutations preexist in a population before they are selected; a large parent population is divided into small parts which are grown independently and the number of mutants in each subculture determined; the number of mutants in the subculture will fluctuate because in some a mutant arises early (giving a large number of progeny), while in others the mutant arises late and gives few progeny.

fluctuation theory [OPTICS] The theory proposed by M. von Smoluchowski and A. Einstein which states that the scattering of light occurs in pure water because random molecular motion causes density variations which effect changes in the refraction of light.

fluctuation velocity *See* eddy velocity.

flue [ENG] A channel or passage for conveying combustion products from a furnace, boiler, or fireplace to or through a chimney.

flue dust [MET] Fine particles of metal or alloy emitted with the gases of a smelter or metallurgical furnace.

flue exhauster [ENG] A device installed as part of a vent in order to provide a positive induced draft.

flue gas [ENG] Gaseous combustion products from a furnace.

flue gas analyzer [ENG] A device that monitors the composition of the flue gas of a boiler heating unit to determine if the mixture of air and fuel is at the proper ratio for maximum heat output.

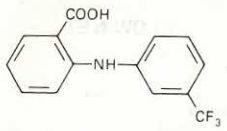
fluellite [MINERAL] $AlF_3 \cdot H_2O$ A colorless or white mineral composed of aluminum fluoride, occurring in crystals.

fluence [PHYS] A measure of time-integrated particle flux, expressed in particles per square centimeter.

fluent aphasia [PSYCH] Aphasia in which the facility of articulation, grammatical organization, and rate of speech are well preserved, while the comprehension of language and word choice are most affected; typically caused by lesions posterior to the rolandic fissure.

flufenamic acid [PHARM] $C_{14}H_{10}F_3NO_2$ Pale yellow needles with a melting point of 125°C; used as an anti-inflammatory drug or analgesic. Also known as 3′-trifluoromethyldiphenylamine-2-carboxylic acid.

FLUFENAMIC ACID



Structural formula.

fluid [PHYS] An aggregate of matter in which the molecules are able to flow past each other without limit and without fracture planes forming.

fluidal texture *See* flow texture.

fluid amplifier [ENG] An amplifier in which all amplification is achieved by interaction between jets of fluid, with no electronic circuit and usually no moving parts.

fluid-bed process [CHEM ENG] A type of process based on the tendency of finely divided powders to behave in a fluidlike manner when supported and moved by a rising gas or vapor stream; used mainly for catalytic cracking of petroleum distillates.

fluid catalyst [CHEM ENG] Finely divided solid particles utilized as a catalyst in a fluid-bed process.

fluid catalytic cracking [CHEM ENG] An oil refining process in which the gas-oil is cracked by a catalyst bed fluidized by using oil vapors.

fluid clutch *See* fluid drive.

fluid coal [MATER] Pulverized coal that, when mixed with air, can be transported through pipes.

fluid coefficient [PETRO ENG] A measure of the flow resistance to the leaking off of reservoir fracturing fluids into the formation during the fracturing operation.

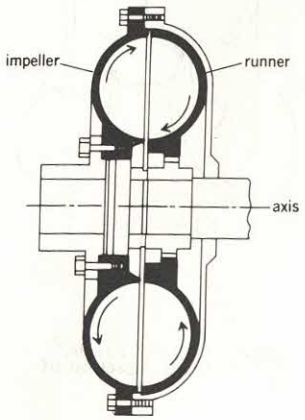
fluid coking [CHEM ENG] A thermal process utilizing the fluidized solids technique for continuous conversion of heavy, low-grade petroleum oils into petroleum coke and lighter hydrocarbon products.

fluid-compressed [MET] Pertaining to steel that has been compressed while still fluid to remove gases and make the material more homogeneous.

fluid computer [COMPUT SCI] A digital computer constructed entirely from air-powered fluid logic elements; it contains no moving parts and no electronic circuits; all logic functions are carried out by interaction between jets of air.

fluid-controlled valve [MECH ENG] A valve for which the valve operator is activated by a fluid energy, in contrast to electrical, pneumatic, or manual energy.

FLUID COUPLING



Basic fluid coupling. Fluid is contained in the impeller and the runner, both bladed rotors; the impeller acts as a pump and the runner reacts as a turbine.

fluid coupling [MECH ENG] A device for transmitting rotation between shafts by means of the acceleration and deceleration of a fluid such as oil. Also known as hydraulic coupling.

fluid density [FL MECH] The mass of a fluid per unit volume.

fluid die [MECH ENG] A die for shaping parts by liquid pressure; a plunger forces the liquid against the part to be shaped, making the part conform to the shape of a die.

fluid distributor [ENG] Device for the controlled distribution of fluid feed to a process unit, such as a liquid-gas or liquid-solids contactor, reactor, mixer, burner, or heat exchanger; can be a simple perforated-pipe sparger, spray head, or such.

fluid dram [MECH] Abbreviated fl dr. **1.** A unit of volume used in the United States for measurement of liquid substances, equal to 1/8 fluid ounce, or $3.6966911953125 \times 10^{-6}$ cubic meter. **2.** A unit of volume used in the United Kingdom for measurement of liquid substances and occasionally of solid substances, equal to 1/8 fluid ounce or approximately 3.55163×10^{-6} cubic meter.

fluid drive [MECH ENG] A power coupling operated on a hydraulic turbine principle in which the engine flywheel has a set of turbine blades which are connected directly to it and which are driven in oil, thereby turning another set of blades attached to the transmission gears of the automobile. Also known as fluid clutch; hydraulic clutch.

fluid duplicating [GRAPHICS] A system in which a master is produced by placing a special aniline-dye carbon paper under a sheet of coated paper; the carbon is placed face up, so that when the coated paper is typed or written on, a reversed copy is produced on the back of the sheet; a certain amount of dye from the carbon paper is transferred to the master, from which the copies are printed directly.

fluid dynamics [FL MECH] The science of fluids in motion.

fluid-energy mill [ENG] A size-reduction unit in which grinding is achieved by collision between the particles being ground and the energy supplied by a compressed fluid entering the grinding chamber at high speed. Also known as jet mill.

fluid-film bearing [MECH ENG] An antifriction bearing in which rubbing surfaces are kept apart by a film of lubricant such as oil.

fluid friction [FL MECH] Conversion of mechanical energy in fluid flow into heat energy.

fluid fuel reactor [NUCLEO] A type of reactor (for example, a fused-salt reactor) whose fuel is in fluid form.

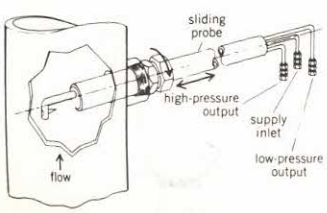
fluid geometry [GEOL] Fluid distribution in reservoir strata controlled by rock effective pore-size distribution, rock wettability characteristics in relation to the fluids present, method of producing saturation, and rock heterogeneity.

fluid hydroforming [CHEM ENG] A type of fluid catalytic cracking process used by petroleum refineries to upgrade low-octane-number stocks.

fluidic device [ENG] A device that operates by the interaction of streams of fluid.

fluidic flow sensor [ENG] A device for measuring the velocity of gas flows in which a jet of air or other selected gas is directed onto two adjacent small openings and is deflected by the flow of gas being measured so that the relative pressure on the two ports is a measure of gas velocity. Also known as deflected jet fluidic flowmeter.

FLUIDIC FLOW SENSOR



Schematic drawing of a fluidic flow sensor.

fluidic oscillator meter [ENG] A flowmeter that measures the frequency with which a fluid entering the meter attaches to one of two opposite diverging side walls and then the other, because of the Coanda effect.

fluidics [ENG] A control technology that employs fluid dynamic phenomena to perform sensing, control, information, processing, and actuation functions without the use of moving mechanical parts.

fluid inclusion [PETR] A tiny fluid-filled cavity in an igneous rock that forms by the entrapment of the liquid from which the rock crystallized.

fluid injection [PETRO ENG] The introduction of gases or liquids under pressure into a reservoir to force oil into producing wells.

fluidity [FL MECH] The reciprocal of viscosity; expresses the ability of a substance to flow.

fluidization [CHEM ENG] A roasting process in which finely divided solids are suspended in a rising current of air (or other fluid), producing a fluidized bed; used in the calcination of various minerals, in Fischer-Tropsch synthesis, and in the coal industry.

fluidized adsorption [CHEM ENG] Method of vapor- or gas-fractionation (separation via adsorption-desorption cycles) in a fluidized bed of adsorbent material.

fluidized bed [ENG] A cushion of air or hot gas blown through the porous bottom slab of a container which can be used to float a powdered material as a means of drying, heating, quenching, or calcining the immersed components.

fluidized-bed coating [ENG] Method for plastic-coating of objects; the heated object is immersed into the fluidized bed of a thermoplastic resin that then fuses into a continuous uniform coating over the immersed object.

fluidized-bed combustion [MECH ENG] A method of burning particulate fuel, such as coal, in which the amount of air required for combustion far exceeds that found in conventional burners; the fuel particles are continually fed into a bed of mineral ash in the proportions of 1 part fuel to 200 parts ash, while a flow of air passes up through the bed, causing it to act like a turbulent fluid.

fluidized-bed reactor *See* fluidized reactor.

fluidized reactor [NUCLEO] A nuclear reactor in which the fuel has been given the properties of a quasi-fluid, such as by suspension of fine fuel particles in a carrying gas or liquid. Also known as fluidized-bed reactor.

fluid logic [ENG] The simulation of logical operations by means of devices that employ fluid dynamic phenomena to control the interactions between sets of gases or liquids.

fluid-loss agent [MATER] Material used to thicken or gel crude oil, light oil, and water or acid fracturing fluids to seal off pores and flow channels in the reservoir matrix.

fluid-loss test [PETRO ENG] Measure of fracturing fluid loss versus time (spurt loss) before the fluid-loss agent forms a nonpermeable layer in the reservoir pore matrix.

fluid mechanics [MECH] The science concerned with fluids, either at rest or in motion, and dealing with pressures, velocities, and accelerations in the fluid, including fluid deformation and compression or expansion.

fluid meter *See* flow meter.

fluid ounce [MECH] Abbreviated fl oz. **1.** A unit of volume that is used in the United States for measurement of liquid substances, equal to 1/16 liquid pint, or 231/128 cubic inches, or $2.95735295625 \times 10^{-5}$ cubic meter. **2.** A unit of volume used in the United Kingdom for measurement of liquid substances, and occasionally of solid substances, equal to 1/20 pint or approximately 2.84130×10^{-5} cubic meter.

fluid resistance [FL MECH] The force exerted by a gas or liquid opposing the motion of a body through it. Also known as resistance.

fluid saturation [GEOL] Measure of the gross void space in a reservoir rock that is occupied by a fluid.

fluid statics [FL MECH] The determination of pressure intensities and forces exerted by fluids at rest.

fluid stress [MECH] Stress associated with plastic deformation in a solid material.

fluid ton [MECH] A unit of volume equal to 32 cubic feet or approximately 9.0614×10^{-2} cubic meter; used for many hydrometallurgical, hydraulic, and other industrial purposes.

fluid transmission [MECH ENG] Automotive transmission with fluid drive.

fluid viscosity ratio [PETRO ENG] Ratio of viscosity of a displacing gas to that of oil in a gas-drive reservoir; used in unit displacement efficiency calculations.

fluke [INV ZOO] The common name for more than 40,000 species of parasitic flatworms that form the class Trematoda. [NAV ARCH] The broad end of each arm of an anchor. [VERT ZOO] A flatfish, especially summer flounder.

flume [ENG] **1.** An open channel constructed of steel, reinforced concrete, or wood and used to convey water to be utilized for power, to transport logs, and so on. **2.** To divert by a flume, as the waters of a stream, in order to lay bare the auriferous sand and gravel forming the bed. [GEOL] A ravine with a stream flowing through it.

flumed [MIN ENG] In hydraulic mining, pertaining to the transportation of solids by suspension or flotation in flowing water.

fluoborate [INORG CHEM] **1.** Any of a group of compounds related to the borates in which one or more oxygens have been replaced by fluorine atoms. **2.** The BF_4^- ion, which is derived from fluoboric acid, HBF_4.

fluoboric acid [INORG CHEM] HBF_4 Colorless, clear, water-miscible acid; used for electrolytic brightening of aluminum and for forming stabilized diazo salts.

fluoborite [MINERAL] $Mg_3(BO_3)(F,OH)_3$ A colorless mineral composed of magnesium fluoborate; occurs in hexagonal prisms. Also known as nocerite.

fluocerite [MINERAL] $(Ce,La,Nd)F_3$ A reddish-yellow mineral composed of fluoride of cerium and related elements.

fluolite *See* pitchstone.

fluometuron [ORG CHEM] $C_{10}H_{11}F_3N_2O$ A white, crystalline solid with a melting point of 163–164.5°C; used as an herbicide for cotton and sugarcane. Also known as 1,1-dimethyl-3-(α,α,α-trifluoro-*meta*-tolyl)urea.

fluophor *See* luminophor.

fluor *See* fluorite.

fluoranthene [ORG CHEM] $C_{16}H_{10}$ A tetracyclic hydrocarbon found in coal tar fractions and petroleum, forming needlelike crystals, boiling point 250°C, and soluble in organic solvents such as ether and benzene.

fluorapatite [MINERAL] **1.** $Ca_5(PO_4)_3F$ A mineral of the solid-solution series of the apatite group; common accessory mineral in igneous rocks. **2.** An apatite mineral in which the fluoride member dominates.

fluorene [ORG CHEM] $C_{13}H_{10}$ A hydrocarbon chemical present in the middle oil fraction of coal tar; insoluble in water, soluble in ether and acetone, melting point 116–117°C; used as the basis for a group of dyes. Also known as 2,3-benzindene; diphenylenemethane.

2,7-fluorenediamine *See* 2,7-diaminofluorene.

fluorescein [ORG CHEM] $C_{20}H_{12}O_5$ A yellowish to red powder, melts and decomposes at 290°C, insoluble in water, benzene, and chloroform, soluble in glacial acetic acid, boiling alcohol, ether, dilute acids, and dilute alkali; used in medicine, in oceanography as a marker in sea water, and in textiles to dye silk and wool.

fluorescence [ATOM PHYS] **1.** Emission of electromagnetic radiation that is caused by the flow of some form of energy into the emitting body and which ceases abruptly when the excitation ceases. **2.** Emission of electromagnetic radiation that is caused by the flow of some form of energy into the emitting body and whose decay, when the excitation ceases, is temperature-independent. [NUC PHYS] Gamma radiation scattered by nuclei which are excited to and radiate from an excited state. [OPTICS] *See* bloom.

fluorescence analysis *See* fluorometric analysis.

fluorescence method [GRAPHICS] A method of ultraviolet photography in which the subject is illuminated by ultraviolet light, and a filter is used on the camera to absorb the reflected ultraviolet light and permit only the visible fluorescence to reach the film.

fluorescence microscope [OPTICS] A variation of the compound laboratory light microscope which is arranged to admit ultraviolet, violet, and sometimes blue radiations to a specimen, which then fluoresces.

fluorescence spectra [SPECT] Emission spectra of fluorescence in which an atom or molecule is excited by absorbing light and then emits light of characteristic frequencies.

fluorescent antibody [IMMUNOL] An antibody labeled by a fluorescent dye, such as fluorescein.

fluorescent antibody test [IMMUNOL] A clinical laboratory test based on the antigen used in the diagnosis of syphilis and lupus erythematosus and for identification of certain bacteria and fungi, including the tubercle bacillus.

fluorescent dye [CHEM] A highly reflective dye that serves to intensify color and add to the brilliance of a fabric.

fluorescent lamp [ELECTR] A tubular discharge lamp in which ionization of mercury vapor produces radiation that activates the fluorescent coating on the inner surface of the glass.

fluorescent pigment [CHEM] A pigment capable of absorbing both visible and nonvisible electromagnetic radiations and releasing them quickly as energy of desired wavelength; examples are zinc sulfide or cadmium sulfide.

fluorescent screen [ENG] A sheet of material coated with a fluorescent substance so as to emit visible light when struck by ionizing radiation such as x-rays or electron beams.

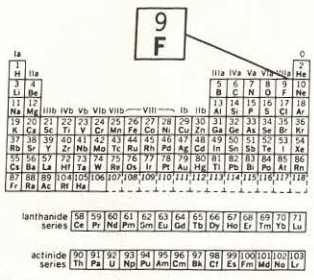
fluorescent staining [CYTOL] The use of fluorescent dyes to mark specific cell structures, such as chromosomes.

fluoridation [ENG] The addition of the fluorine ion (F^-) to municipal water supplies in a final concentration of 0.8–1.6 ppm (parts per million) to help prevent dental caries in children.

FLUKE

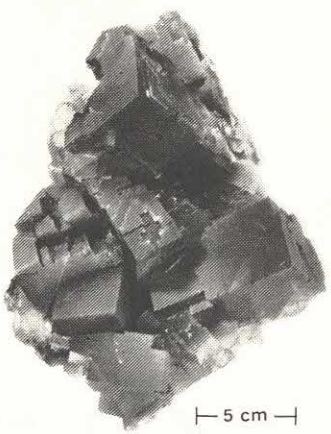
Liver fluke *Opisthorchis sinensis*, a trematode characterized by well-developed suckers.

FLUORINE



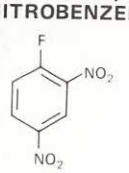
Periodic table of the chemical elements showing the position of fluorine.

FLUORITE



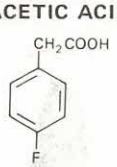
Fluorite crystals from Elizabethtown, Illinois. *(American Museum of Natural History specimen)*

1-FLUORO-2,4-DINITROBENZENE



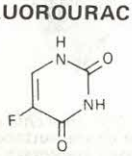
Structural formula.

PARA-FLUOROPHENYL-ACETIC ACID



Structural formula.

FLUOROURACIL



Structural formula.

[GEOCHEM] Formation in rocks of fluorine-containing minerals such as fluorite or topaz.

fluoride [INORG CHEM] A salt of hydrofluoric acid, HF, in which the fluorine atom is in the minus-one oxidation state.

fluorimeter *See* fluorometer.

fluorinated ethylene propylene resin [ORG CHEM] Copolymers of tetrafluoroethylene and hexafluoropropylene. Abbreviated FEP resin.

fluorination [CHEM] A chemical reaction in which fluorine is introduced into a chemical compound.

fluorine [CHEM] A gaseous or liquid chemical element, symbol F, atomic number 9, atomic weight 18.998; a member of the halide family, it is the most electronegative element and the most chemically energetic of the nonmetallic elements; highly toxic, corrosive, and flammable; used in rocket fuels and as a chemical intermediate.

fluorite [MINERAL] CaF_2 A transparent to translucent, often blue or purple mineral, commonly found in crystalline cubes in veins and associated with lead, tin, and zinc ores; hardness is 4 on Mohs scale; the principal ore of fluorine. Also known as Derbyshire spar; fluor; fluorspar.

fluoroacetate [ORG CHEM] Acetate in which carbon-connected hydrogen atoms are replaced by fluorine atoms.

fluoroacetic acid [ORG CHEM] CH_2FCOOH A poisonous, crystalline compound obtained from plants, such as those of the Dichapetalaceae family, South Africa, soluble in water and alcohol, and burns with a green flame; the sodium salt is used as a water-soluble rodent poison. Also known as fluoroethanoic acid; gifblaar poison.

fluoroalkane [ORG CHEM] Straight-chain, saturated hydrocarbon compound (or analog thereof) in which some of the hydrogen atoms are replaced by fluorine atoms.

***para*-fluoroaniline** [ORG CHEM] $FC_6H_4NH_2$ A liquid that is an intermediate in the manufacture of herbicides and plant growth regulators. Also known as 4-fluorobenzenamine.

4-fluorobenzenamine *See para*-fluoroaniline.%E E

fluorobenzene [ORG CHEM] C_6H_5F A colorless liquid with a boiling point of 84.9°C; used as an insecticide intermediate. Also known as phenyl fluoride.

4-fluorobenzeneacetic acid *See para*-fluorophenylacetic acid.

fluorocarbon [ORG CHEM] A hydrocarbon such as Freon in which part or all hydrogen atoms have been replaced by fluorine atoms; can be liquid or gas and is nonflammable and heat-stable; used as refrigerant, aerosol propellant, and solvent. Also known as fluorohydrocarbon.

fluorocarbon-11 *See* trichlorofluoromethane.

fluo rocarbon-21 *See* dichlorofluoromethane.

fluorocarbon fiber [ORG CHEM] Fiber made from a fluorocarbon resin, such as polytetrafluoroethylene resin.

fluorocarbon resin [ORG CHEM] Polymeric material made up of carbon and fluorine with or without other halogens (such as chlorine) or hydrogen; the resin is extremely inert and more dense than corresponding fluorocarbons such as Teflon.

fluorochemical [CHEM] Any chemical compound containing fluorine; usually refers to the fluorocarbons.

fluorochromasia [CYTOL] The immediate appearance of fluorescence inside viable cells on exposure to a fluorogenic substrate.

fluorocummingtonite [MINERAL] Cummingtonite with a high content of fluorine.

fluorod [NUCLEO] A rod made from silver-activated phosphate glass and used in solid-state dosimeters; under irradiation the rod absorbs ultraviolet light and emits orange fluorescent light; measurement of the intensity of the emitted light with a photomultiplier gives a measure of the absorbed dose of radiation.

fluorodichloromethane *See* dichlorofluoromethane.

fluorod ifen [ORG CHEM] $C_{13}H_7F_3N_2O_4$ A yellow, crystalline compound with a melting point of 93°C; used as a pre- and postemergence herbicide for food crops. Also known as *para*-nitrophenyl α,α,α,-trifluoro-2-nitro-*para*-tolyl ether.

1-fluoro-2,4-dinitrobenzene [ORG CHEM] $(NO_2)_2C_6H_3F$ Crystals that are soluble in benzene, propylene glycol, and ether; used as a reagent for labeling terminal amino acid groups and in the detection of phenols. Also known as 2,4-dinitro-1-fluorobenzene; Sanger's reagent.

fluoroethanoic acid *See* fluoroacetic acid.

fluoroform [ORG CHEM] CHF_3 A colorless, nonflammable gas, boiling point 84°C at 1 atmosphere (101, 325 newtons per square meter), freezing point 160°C at 1 atmosphere; used in refrigeration and as an intermediate in organic synthesis. Also known as propellant 23; refrigerant 23; trifluoromethane.

fluorogenic substrate [CHEM] A nonfluorescent material that is acted upon by an enzyme to produce a fluorescent compound.

fluorography [GRAPHICS] Photography of an image produced on a fluorescent screen. Also known as photofluorography.

fluorohydrocarbon *See* fluorocarbon.

fluorologging [ENG] A well-logging technique in which well cuttings are examined under ultraviolet light for fluorescence radiation related to trace occurrences of oil.

fluorometer [ENG] An instrument that measures the fluorescent radiation emitted by a sample which is exposed to monochromatic radiation, usually radiation from a mercury-arc lamp or a tungsten or molybdenum x-ray source that has passed through a filter; used in chemical analysis, or to determine the intensity of the radiation producing fluorescence. Also spelled fluorimeter.

fluorometric analysis [ANALY CHEM] A method of chemical analysis in which a sample, exposed to radiation of one wavelength, absorbs this radiation and reemits radiation of the same or longer wavelength in about 10^{-9} second; the intensity of reemited radiation is almost directly proportional to the concentration of the fluorescing material. Also known as fluorescence analysis; fluorometry.

fluorometry *See* fluorometric analysis.

***para*-fluorophenylacetic acid** [ORG CHEM] $FC_6H_4CH_2COOH$ Crystals with a melting point of 86°C; used as an intermediate in the manufacture of fluorinated anesthetics. Also known as 4-fluorobenzeneacetic acid.

fluorophosphoric acid [INORG CHEM] H_2PO_3F A colorless, viscous liquid that is miscible with water; used in metal cleaners and as a catalyst.

fluoroplastics [MATER] A family of plastics based on fluorine replacement of hydrogen atoms in hydrocarbon molecules; includes polytetrafluoroethylene (PTFE), polychlorotrifluoroethylene (PCTFE), polyvinylidene fluoride, and fluorinated ethylene propylene (FEP).

fluoroscope [ENG] A fluorescent screen designed for use with an x-ray tube to permit direct visual observation of x-ray shadow images of objects interposed between the x-ray tube and the screen.

fluoroscopic image intensifier [ELECTR] An electron-beam tube that converts a relatively feeble fluoroscopic image on the fluorescent input phosphor into a much brighter image on the output phosphor.

fluoroscopy [ENG] Use of a fluoroscope for x-ray examination.

fluorothene *See* chlorotrifluoroethylene polymer.

fluorotrichloromethane *See* trichlorofluoromethane.

fluorouracil [PHARM] $C_4H_3FN_2O_2$ Crystals that decompose at 282–283°C; used as an antineoplastic drug and as an inhibitor of deoxyribonucleic acid synthesis. Also known as 2,4-dioxo-5-fluoropyrimidine; 5-FU.

fluorspar *See* fluorite.

fluosilicate [INORG CHEM] A salt derived from fluosilicic acid, H_2SiF_6, and containing the SiF_6^{--} ion.

fluosilicic acid [INORG CHEM] H_2SiF_6 A colorless acid, soluble in water, which attacks glass and stoneware; highly corrosive and toxic; used in water fluoridation and electroplating. Also known as hydrofluorosilicic acid; hydrofluosilicic acid.

fluosolids system [MET] In pyrometallurgy, a roasting method for finely divided solids, in which air under pressure is blown through a heated bed of mineral to keep it fluid.

fluostigmine *See* isofluorphate.

fluosulfonic acid [INORG CHEM] HSO_3F Colorless, corrosive, fuming liquid; soluble in water with partial decomposition; used as organic synthesis catalyst and in electroplating.

flurenol [ORG CHEM] $C_{18}H_{18}O_3$ A solid, crystalline compound with a melting point of 70–71°C; used as an herbicide for vegetables, cereals, and ornamental flowers. Also known as *n*-butyl-9-hydroxy fluorene-9-carboxylate; flurecol-*n*-butyl-ester.

flurry [METEOROL] A brief shower of snow accompanied by a gust of wind, or a sudden, brief wind squall.

flush [ECOL] An evergreen herbaceous or nonflowering vegetation growing in habitats where seepage water causes the surface to be constantly wet but rarely flooded. [ENG] Pertaining to separate surfaces that are on the same level.

[GRAPHICS] A printing term that means no indention; headings are often run flush left, that is, they align at the left margin; flush-right lines align at the right.

flush bead *See* quirk bead.

flush coat [CIV ENG] A coating of bituminous material, used to waterproof a surface.

flush cover [GRAPHICS] In bookbinding, a book cover that has been trimmed to the same size as the text pages inside.

flushed-zone resistivity [PETRO ENG] Electrical resistivity of the reservoir area which surrounds a borehole to a distance of at least 3 inches (7.6 centimeters) and for which the original interstitial fluids have been flushed out by drilling-mud filtrate.

flush gate [CIV ENG] A gate for flushing a channel that lies below the gate of a dam.

flushing [CIV ENG] The removal or reduction to a permissible level of dissolved or suspended contaminants in an estuary or harbor. [ENG] Removing lodged deposits of rock fragments and other debris by water flow at high velocity; used to clean water conduits and drilled boreholes.

flushing oil [MATER] A solvent oil designed to remove used lubricating oil, decomposition products, and accumulated dirt from lubrication passages, crankcase surfaces, and lubricated moving parts of automotive engines.

flushing period [HYD] The interval of time required for a quantity of water equal to the volume of a lake to pass through the lake outlet; computed by dividing lake volume by mean flow rate of the outlet.

flush-joint casing [PETRO ENG] Lengths of casing that when connected end to end form a smooth joint flush with the outer diameter of the remainder of the section length.

flushometer [ENG] A valve that discharges a fixed quantity of water when a handle is operated; used to flush toilets and urinals.

flush production [PETRO ENG] First yield from a flowing oil well during its most productive period.

flush tank [CIV ENG] **1.** A tank in which water or sewage is retained for periodic release through a sewer. **2.** A small water-filled tank for flushing a water closet.

flush valve [ENG] A valve used for flushing toilets.

flute [DES ENG] A groove having a curved section, especially when parallel to the main axis, as on columns, drills, and other cylindrical or conical shaped pieces. [GEOL] **1.** A natural groove running vertically down the face of a rock. **2.** A groove in a sedimentary structure formed by the scouring action of a turbulent, sediment-laden water current, and having a steep upcurrent end.

flute cast [GEOL] A raised, oblong, or subconical welt on the bottom surface of a siltstone or sandstone bed formed by the filling of a flute.

fluted chucking reamer [DES ENG] A machine reamer with a straight or tapered shank and with straight or spiral flutes; the ends of the teeth are ground on a slight chamfer for end cutting.

fluted coupling *See* stabilizer.

flute length [DES ENG] On a twist drill, the length measured from the outside corners of the cutting lips to the farthest point at the back end of the flutes.

flute storage [ELECTR] Ferrite storage consisting of a number of parallel lengths of fine prism-shaped tubing, each surrounding an insulated axial conductor that acts as a word line; the lengths of tubing are intersected at right angles by parallel sets of insulated wire bit lines that are displaced slightly from the word lines; each intersection stores one bit.

fluting [MECH ENG] A machining operation whereby flutes are formed parallel to the main axis of cylindrical or conical parts.

flutter [ACOUS] Distortion that occurs in sound reproduction as a result of undesired speed variations during the recording, duplicating, or reproducing process. [ELECTROMAG] A fast-changing variation in received signal strength, such as may be caused by antenna movements in a high wind or interaction with a signal or another frequency. [ENG] The irregular alternating motion of the parts of a relief valve due to the application of pressure where no contact is made between the valve disk and the seat. [FL MECH] *See* aeronautical flutter. [MED] Rapid, regular contraction of the atrial muscle of the heart.

flutter echo [ACOUS] A multiple echo in which the reflections rapidly follow each other. [ELECTROMAG] A radar echo consisting of a rapid succession of reflected pulses resulting from a single transmitted pulse.

flutter valve [ENG] A valve that is operated by fluctuations in pressure of the material flowing over it; used in carburetors.

fluvarium [ENG] A large aquarium in which the tanks contain flowing stream water maintained by gravity, not pumps.

Fluvent [GEOL] A suborder of the soil order Entisol that is well-drained with visible marks of sedimentation and no identifiable horizons; occurs in recently deposited alluvium along streams or in fans.

fluvial [HYD] **1.** Pertaining to or produced by the action of a stream or river. **2.** Existing, growing, or living in or near a river or stream.

fluvial cycle of erosion *See* normal cycle.

fluvial deposit [GEOL] A sedimentary deposit of material transported by or suspended in a river.

fluvial sand [GEOL] Sand laid down by a river or stream.

fluvial soil [GEOL] Soil laid down by a river or stream.

fluviatile [GEOL] Resulting from river action.

fluviology [HYD] The science of rivers.

fluviomorphology *See* river morphology.

flux [ELECTROMAG] The electric or magnetic lines of force in a region. [MATER] **1.** In soldering, welding, and brazing, a material applied to the pieces to be united to reduce the melting point of solders and filler metals and to prevent the formation of oxides. **2.** A substance used to promote the fusing of minerals or metals. **3.** Additive for plastics composition to improve flow during physical processing. **4.** In enamel work, a substance composed of silicates and other materials that forms a colorless, transparent glass when fired. Also know as fondant. [NUCLEO] The product of the number of particles per unit volume and their average velocity; a special case of the physics definition. Also known as flux density. [PHYS] **1.** The integral over a given surface of the component of a vector field (for example, the magnetic flux density, electric displacement, or gravitational field) perpendicular to the surface; by definition, it is proportional to the number of lines of force crossing the surface. **2.** The amount of some quantity flowing across a given area (often a unit area perpendicular to the flow) per unit time; the quantity may be, for example, mass or volume of fluid, electromagnetic energy, or number of particles.

flux-cored welding [MET] Welding with a metal electrode that has a flux core.

flux density [NUCLEO] *See* flux. [PHYS] Any vector field whose flux is a significant physical quantity; examples are magnetic flux density, electric displacement, gravitational field, and the Poynting vector.

flux density threshold *See* threshold illuminance.

flux factor [MET] A factor for assessing the quality of steelworks-grade silica refractories.

flux gate [ENG] A detector that gives an electric signal whose magnitude and phase are proportional to the magnitude and direction of the external magnetic field acting along its axis; used to indicate the direction of the terrestrial magnetic field.

flux-gate magnetometer [ELECTROMAG] A magnetometer in which the degree of saturation of the core by an external magnetic field is used as a measure of the strength of the earth's magnetic field; the essential element is the flux gate.

flux guide [MET] A shaped piece of magnetic material used to guide magnetic flux in induction heating; may be used either to direct the flux to preferred locations or to prevent the flux from spreading beyond definite regions.

fluxing [MET] The development of the liquid phase in a ceramic body under heat treatment by the melting of low-fusion components; used in steel manufacture, metal smelting, and assaying.

fluxing ore [MET] An ore containing usually an appreciable amount of valuable metal, but smelted mainly because it contains fluxing agents which are required in the reduction of other ores.

fluxional compound [ORG CHEM] **1.** Any of a group of molecules which undergo rapid intramolecular rearrangements in which the component atoms are interchanged among equivalent structures. **2.** Molecules in which bonds are broken and reformed in the rearrangement process.

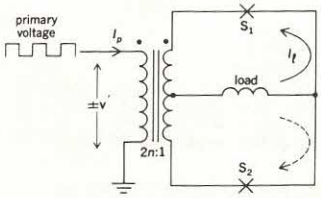
flux jumping *See* Meissner effect.

flux leakage [ELECTROMAG] Magnetic flux that does not pass through an air gap or other part of a magnetic circuit where it is required.

flux line *See* line of force.

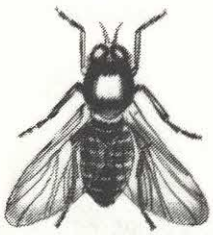
flux linkage [ELECTROMAG] The product of the number of

FLUX PUMP



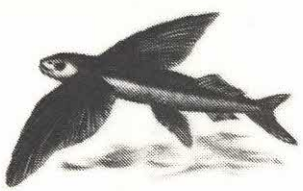
A flux-pump circuit (simplified).

FLY



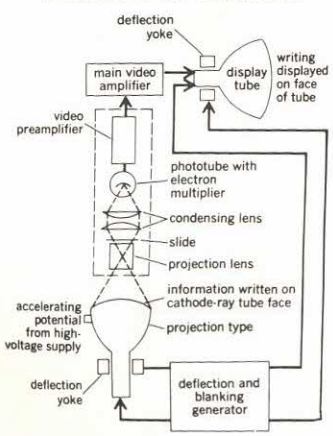
A common black fly *(Simulium)*.

FLYING FISH



The four-winged flying fish *(Parexocoetus mesogaster)*, with pectoral fins extended for gliding.

FLYING-SPOT SCANNER



The flying-spot scanner for electronic writing.

turns in a coil and the magnetic flux passing through the coil. Also known as linkage.

flux mapping [NUCLEO] The process of measuring the radiation flux at representative points within a nuclear reactor or around some other radiation source.

fluxmeter [ENG] An instrument for measuring magnetic flux.

flux of energy [PHYS] The energy which passes through a surface per unit area per unit time.

flux oil [MATER] An oil suitable for blending with bitumen or asphalt to form a product of greater fluidity or softer consistency.

flux oxygen cutting [MET] Oxygen cutting of metal with the aid of a flux to reduce the temperature.

flux path [ELECTROMAG] A path which is followed by magnetic lines of force and in which the magnetic flux density is significant.

flux pump [CRYO] A cryogenic direct-current generator that converts a small alternating-current input to a large direct-current output when cooled to about 4K; the output current builds up in a series of steps, much like the action of a pump.

flux refraction [ELECTROMAG] The abrupt change in direction of magnetic flux lines at the boundary between two media having different permeabilities, or of the electric flux lines at the boundary between two media having different dielectric constants, when these lines are oblique to the boundary.

flux unit [ASTROPHYS] A unit of energy flux density of radio-astronomical sources, equal to 10^{-26} watt per square meter per hertz. Abbreviated fu.

fly [INV ZOO] The common name for a number of species of the insect order Diptera characterized by a single pair of wings, antennae, compound eyes, and hindwings modified to form knoblike balancing organs, the halters. [MECH ENG] A fan with two or more blades used in timepieces or light machinery to govern speed by air resistance.

Fly *See* Musca.

fly ash [ENG] Fine particulate, essentially noncombustible refuse, carried in a gas stream from a furnace.

flyback [ELECTR] The time interval in which the electron beam of a cathode-ray tube returns to its starting point after scanning one line or one field of a television picture or after completing one trace in an oscilloscope. Also known as retrace; return trace. [HOROL] The return to zero of the timing hand of a stopwatch or chronograph.

flyback power supply [ELECTR] A high-voltage power supply used to produce the direct-current voltage of about 10,000–25,000 volts required for the second anode of a cathode-ray tube in a television receiver or oscilloscope.

flyback transformer *See* horizontal output transformer.

fly-by-wire system [AERO ENG] A flight control system that uses electric wiring instead of mechanical or hydraulic linkages to control the actuators for the ailerons, flaps, and other control surfaces of an aircraft.

fly cutter [MECH ENG] A cutting tool that revolves with the arbor of a lathe.

fly cutting [MECH ENG] Cutting with a milling cutter provided with only one tooth.

flying angle [AERO ENG] The acute angle between the longitudinal axis of an aircraft and the horizontal axis in normal level flight, or the angle of attack of a wing in normal level flight.

flying-aperture scanner [ELECTR] An optical scanner, used in character recognition, in which a document is flooded with light, and light is collected sequentially spot by spot from the illuminated image.

flying boat [AERO ENG] A seaplane with a fuselage that acts as a hull and is the means of the plane's support on water.

flying bomb [ORD] Popularly, any explosive robot plane, guided missile, rocket bomb, or the like; specifically, the German V-1 explosive robot plane of World War II.

flying bridge [NAV ARCH] A narrow walkway or platform built at the level of the top of the pilothouse and containing a duplicate set of controls for steering gear and engine-room signals and for navigating instruments; the platform extends from one side of the ship to the other. Also known as navigating bridge.

flying buttress [ARCH] A buttress connected to the building it supports by an arch.

flying clock [HOROL] A cesium-controlled high-precision time standard that can be kept in continuous operation on commercial aircraft as well as in automobiles.

flying-crane helicopter [AERO ENG] A heavy-lift helicopter used in rapid loading and unloading of, for example, cargo ships.

flying fish [VERT ZOO] Any of about 65 species of marine fishes which form the family Exocoetidae in the order Atheriniformes; characteristic enlarged pectoral fins are used for gliding.

Flying Fish *See* Volan.

flying head [ELECTR] A read/write head used on magnetic disks and drums, so designed that it flies a microscopic distance off the moving magnetic surface and is supported by a film of air.

flying hour rate *See* utilization rate.

flying paster [GRAPHICS] In web printing, an automatic device that splices a new web of paper onto the roll that is being used up without interrupting the printing process.

flying saucer *See* unidentified flying object.

flying shear [MET] A machine which cuts lengths of rolled products and allows for continuous production by reciprocating with the product while cutting.

flying spot [ELECTR] A small point of light, controlled mechanically or electrically, which moves rapidly in a rectangular scanning pattern in a flying-spot scanner.

flying-spot microscope [OPTICS] A microscope in which a minute spot of light, produced in the lens system, passes through a specimen while sweeping over it systematically, and falls on a photocell; the image is produced on a cathode-ray tube that is scanned in synchronization with the spot.

flying-spot scanner [ELECTR] A scanner used for television film and slide transmission, electronic writing, and character recognition, in which a moving spot of light, controlled mechanically or electrically, scans the image field, and the light reflected from or transmitted by the image field is picked up by a phototube to generate electric signals. Also known as optical scanner.

flying switch [ENG] Disconnection of railroad cars from a locomotive while they are moving and switching them to another track under their own momentum.

flying veins [GEOL] A series of mineral-deposit veins which overlap or intersect in a branchlike pattern.

fly-off *See* evapotranspiration.

fly rock [ENG] The fragments of rock thrown and scattered during quarry or tunnel blasting.

flysch [GEOL] Deposits of dark, fine-grained, thinly bedded sandstone shales and of clay, thought to be deposited by turbidity currents and originally defined as rock formations on the northern and southern borders of the Alps.

flyway [VERT ZOO] A geographic migration route for birds, including the breeding and wintering areas that it connects.

flywheel [MECH ENG] A rotating element attached to the shaft of a machine for the maintenance of uniform angular velocity and revolutions per minute. Also known as balance wheel.

flywheel synchronization [ELECTR] Automatic frequency control of a scanning system by using the average timing of the incoming sync signals, rather than by making each pulse trigger the scanning circuit; used in high-sensitivity television receivers designed for fringe-area reception, when noise pulses might otherwise trigger the sweep circuit prematurely.

fm *See* femtometer.

Fm *See* fermium.

FM *See* frequency modulation.

FM/AM multiplier [ELECTR] Multiplier in which the frequency deviation from the central frequency of a carrier is proportional to one variable, and its amplitude is proportional to the other variable; the frequency-amplitude-modulated carrier is then consecutively demodulated for frequency modulation (FM) and for amplitude modulation (AM); the final output is proportional to the product of the two variables.

F martingale [MATH] A stochastic process $\{X_t, t>0\}$ such that the conditional expectation of X_t given F_s equals X_s whenever $s<t$, where $F=\{F_t, t\geq 0\}$ is an increasing family of sigma algebras that represents the amount of information increasing with time.

FMF *See* familial Mediterranean fever.

FMN *See* riboflavin 5′-phosphate.

fnp *See* fusion point.

f number [OPTICS] A lens rating obtained by dividing the lens's focal length by its effective maximum diameter; the larger the f number, the less exposure is given. Also known as focal ratio. Also known as stop number.

foal [VERT ZOO] A young horse, especially one under 1 year of age.

foam [CHEM] An emulsionlike two-phase system where the dispersed phase is gas or air. [FL MECH] A froth of bubbles on the surface of a liquid, often stabilized by organic contaminants, as found at sea or along shore. [GEOL] *See* pumice.

foam-back fabric [TEXT] A fabric to the back of which is banded a thin layer of polyether or polyester foam. Also known as foam-laminated fabric.

foam crust [HYD] A snow surface feature that looks like small overlapping waves, like sea foam on a beach, occurring during the ablation of the snow surface and may further develop into a more pronounced wedge-shaped form, known as plowshares.

foam drilling [MIN ENG] A method of dust suppression in which thick foam is forced through the drill by means of compressed air, and the foam-and-dust mixture emerges from the mouth of the hole in the form of a thick sludge.

foamed plastic *See* expanded plastic.

foam glass [MATER] A light, black, opaque, cellular glass made by adding powdered carbon to crushed glass and firing the mixture.

foaminess [PHYS] The volume of foam produced in a liquid, in cubic centimeters, produced by passing air through it divided by the rate of flow of air, in cubic centimeters per second.

foaming [ENG] Any of various processes by which air or gas is introduced into a liquid or solid to produce a foam material. [GRAPHICS] A froth in a photographic emulsion containing minute bubbles caused by excessive turbulence.

foaming agent *See* blowing agent.

foam-in-place [ENG] The deposition of reactive foam ingredients onto the surface to be covered, allowing the foaming reaction to take place upon that surface, as with polyurethane foam; used in applying thermal insulation for homes and industrial equipment.

foam-laminated fabric *See* foam-back fabric.

foam line [OCEANOGR] The front of a wave as it moves toward the shore, after the wave has broken.

foam mark [GEOL] A surface sedimentary structure comprising a pattern of barely visible ridges and hollows formed where wind-driven sea foam passes over a surface of wet sand.

foam metal [MET] Cast metal with finely divided gas bubbles evenly distributed throughout the body of the metal; an example is foam aluminum.

foam rubber *See* rubber sponge.

focal distance *See* focal length.

focal infection [MED] Infection in a limited area, such as the tonsils, teeth, sinuses, or prostate.

focal length [OPTICS] The distance from the focal point of a lens or curved mirror to the principal point; for a thin lens it is approximately the distance from the focal point to the lens. Also known as focal distance.

focal plane [OPTICS] A plane perpendicular to the axis of an optical system and passing through the focal point of the system.

focal-plane shutter [OPTICS] A camera shutter consisting of a blind containing a slot; the blind is pulled rapidly across the film, exposing it through the slot.

focal point [OPTICS] The point to which rays that are initially parallel to the axis of a lens, mirror, or other optical system are converged or from which they appear to diverge. Also known as principal focus.

focal ratio *See* f number.

focal seizure [MED] An epileptic manifestation of a restricted nature, usually without loss of consciousness, due to irritation of a localized area of the brain.

focal spot [MET] In electron-beam or laser welding, the spot where the beam has the highest concentrated energy level.

focus [ELECTR] To control convergence or divergence of the electron paths within one or more beams, usually by adjusting a voltage or current in a circuit that controls the electric or magnetic fields through which the beams pass, in order to obtain a desired image or a desired current density within the beam. [GEOPHYS] The center of an earthquake and the origin of its elastic waves within the earth. [MATH] A point in the plane which together with a line (directrix) defines a conic section. [NUCLEO] To guide particles along a desired path in a particle accelerator by means of electric or magnetic fields. [OPTICS] **1.** The point or small region at which rays converge or from which they appear to diverge. **2.** To move an optical lens toward or away from a screen or film to obtain the sharpest possible image of a desired object.

focus control [ELECTR] A control that adjusts spot size at the screen of a cathode-ray tube to give the sharpest possible image; it may vary the current through a focusing coil or change the position of a permanent magnet. [OPTICS] A device to adjust a lens system to produce a sharp image.

focused-current log [ENG] A resistivity log that is obtained by means of a multiple-electrode arrangement.

focusing anode [ELECTR] An anode used in a cathode-ray tube to change the size of the electron beam at the screen; varying the voltage on this anode alters the paths of electrons in the beam and thus changes the position at which they cross or focus.

focusing coil [ELECTR] A coil that produces a magnetic field parallel to an electron beam for the purpose of focusing the beam.

focusing electrode [ELECTR] An electrode to which a potential is applied to control the cross-sectional area of the electron beam in a cathode-ray tube.

focusing glass [OPTICS] A magnifying glass designed to enlarge the image thrown on the ground glass of the viewfinder of a camera, to help achieve exact focusing.

focusing magnet [ELECTR] A permanent magnet used to produce a magnetic field for focusing an electron beam.

focusing scale [OPTICS] A graduated scale to indicate appropriate lens-to-image plane positions for given lens-to-object plane distances.

focus lamp [ELEC] **1.** A lamp whose filament has a spiral or zigzag form in order to reduce its size, so that it can be brought into the focus of a lens or mirror. **2.** An arc lamp whose feeding mechanism is designed to hold the arc in a constant position with respect to an optical system that is used to focus its rays.

focus projection and scanning [ELECTR] Method of magnetic focusing and electrostatic deflection of the electron beam of a hybrid vidicon; a transverse electrostatic field is used for beam deflection; this field is immersed with an axial magnetic field that focuses the electron beam.

foehn [METEOROL] A warm, dry wind on the lee side of a mountain range, the warmth and dryness being due to adiabatic compression as the air descends the mountain slopes. Also spelled föhn.

foehn air [METEOROL] The warm, dry air associated with foehn winds.

foehn cloud [METEOROL] Any cloud form associated with a foehn, but usually signifying only those clouds of the lenticularis species formed in the lee wave parallel to the mountain ridge.

foehn cyclone [METEOROL] A cyclone formed (or at least enhanced) as a result of the foehn process on the lee side of a mountain range.

foehn island [METEOROL] An isolated area where the foehn has reached the ground, in contrast to the surrounding area where foehn air has not replaced colder surface air.

foehn nose [METEOROL] As seen on a synoptic surface chart, a typical deformation of the isobars in connection with a well-developed foehn situation; a ridge of high pressure is produced on the windward slopes of the mountain range, while a foehn trough forms on the lee side; the isobars "bulge" correspondingly, giving a noselike configuration.

foehn pause [METEOROL] **1.** A temporary cessation of the foehn at the ground, due to the formation or intrusion of a cold air layer which lifts the foehn above the valley floor. **2.** The boundary between foehn air and its surroundings.

foehn period [METEOROL] The duration of continuous foehn conditions at a given location.

foehn phase [METEOROL] One of three stages to describe the development of the foehn in the Alps: the preliminary phase, when cold air at the surface is separated from warm dry air aloft by a subsidence inversion; the anticyclonic phase, when the warm air reaches a station as the result of the cold air flowing out from the plain; and the stationary phase or cyclonic phase, when the foehn wall forms and the downslope wind becomes appreciable.

foehn sickness [MED] A phenomenon in humans in alpine regions, marked by adverse psychological and physiological effects during prolonged periods of foehn wind.

foehn storm [METEOROL] A type of destructive storm which frequently occurs in October in the Bavarian Alps.

foehn trough [METEOROL] The dynamic trough formed in connection with the foehn.

foehn wall [METEOROL] The steep leeward boundary of flat, cumuliform clouds formed on the peaks and upper windward sides of mountains during foehn conditions.

fog [GRAPHICS] A dark, hazy deposit or veil of uniform density over all or parts of a piece of film or paper; can be caused by light other than that forming the image, lens flare, aged materials, or chemical impurities. [METEOROL] Water droplets or, rarely, ice crystals suspended in the air in sufficient concentration to reduce visibility appreciably.

fogbank [METEOROL] A fairly well-defined mass of fog observed in the distance, most commonly at sea.

fogbound [NAV] Surrounded by fog; the term refers to vessels which are unable to proceed because of the fog.

fogbow [OPTICS] A faintly colored circular arc similar to a rainbow but formed on fog layers containing drops whose diameters are of the order of 100 micrometers or less. Also known as false white rainbow; mistbow; white rainbow.

fog buoy *See* position buoy.

fog chamber *See* cloud chamber.

fog climax [ECOL] A community that deviates from a climatic climax because of the persistent occurrence of a controlling fog blanket.

fog dectector light [NAV] A light fitted in certain lighthouses for the automatic detection of fog, in addition to the main light.

fog deposit [HYD] The deposit of an ice coating on exposed surfaces by a freezing fog.

fog dispersal [METEOROL] Artificial dissipation of a fog by means such as seeding or heating.

fog drip [HYD] Water dripping to the ground from trees or other objects which have collected the moisture from drifting fog; the dripping can be as heavy as light rain, as sometimes occurs among the redwood trees along the coast of northern California.

fog drop [METEOROL] An elementary particle of fog, physically the same as a cloud drop. Also known as fog droplet.

fog droplet *See* fog drop.

fog forest [ECOL] The dense, rich forest growth which is found at high or medium-high altitudes on tropical mountains; occurs when the tropical rain forest penetrates altitudes of cloud formation, and the climate is excessively moist and not too cold to prevent plant growth.

fogged metal [MET] A metal whose luster has been highly reduced by corrosion products.

fog gong [NAV] A gong used as a fog signal.

fog gun [NAV] A gun used as a fog signal.

fog horizon [METEOROL] The top of a fog layer which is confined by a low-level temperature inversion so as to give the appearance of the horizon when viewed from above against the sky; the true horizon is usually obscured by the fog in such instances.

foghorn [NAV] A horn used as a fog signal.

fog quenching [MET] Rapid cooling of a metal piece in a fine vapor or mist.

fog scale [METEOROL] A classification of fog intensity based on its effectiveness in decreasing horizontal visibility; such practice is not current in United States weather observing procedures.

fog signal [NAV] **1.** A warning signal transmitted by a vessel or aid to navigation during periods of low visibility. **2.** The device for producing such a signal.

fog siren [NAV] A siren used as a fog signal.

fog track [NUCLEO] A line of condensation, produced in supersaturated water vapor by the passage of charged particles; used in studying the courses and collisions of particles in cloud chambers.

fog trumpet [NAV] A trumpet used as a fog signal.

fog whistle [NAV] A whistle used as a fog signal.

fog wind [METEOROL] Humid east wind which crosses the divide of the Andes east of Lake Titicaca and descends on the west in violent squalls; probably the same as puelche.

föhn *See* foehn.

foil [MET] A thin sheet of metal, usually less than 0.006 inch (0.15 millimeter) thick.

foil decorating [ENG] The molding of paper, textile, or plastic foil, printed with compatible inks, into a plastic part so that the foil is visible below the surface of the part as a decoration.

foil dosimeter [NUCLEO] A device for measuring the amount of radiation exposure by means of the degree of activation created in a metal foil inserted in the radiation field.

foil electret [ELEC] A thin film of strongly insulating material capable of trapping charge carriers, such as polyfluoroethylenepropylene, that is electrically charged to produce an external electric field; in the conventional design, charge carriers of one sign are injected into one surface, and a compensation charge of opposite sign forms on the opposite surface or an adjacent electrode.

Fokker-Planck equation [STAT MECH] An equation for the distribution function of a gas, analogous to the Boltzmann equation but applying where the forces are long-range and the collisions are not binary.

fold [ANAT] A plication or doubling, as of various parts of the body such as membranes and other flat surfaces. [GEOL] A bend in rock strata or other planar structure, usually produced by deformation; folds are recognized where layered rocks have been distorted into wavelike form. [MET] *See* lap.

fold belt *See* orogenic belt.

folded cavity [ELECTR] Arrangement used in a klystron repeater to make the incoming wave act on the electron stream from the cathode at several places and produce a cumulative effect.

folded dipole *See* folded-dipole antenna.

folded-dipole antenna [ELECTROMAG] A dipole antenna whose outer ends are folded back and joined together at the center; the impedance is about 300 ohms, as compared to 70 ohms for a single-wire dipole; widely used with television and frequency-modulation receivers. Also known as folded dipole.

folded horn [ENG ACOUS] An acoustic horn in which the path from throat to mouth is folded or curled to give the longest possible path in a given volume.

folded-plate roof [BUILD] A roof constructed of flat plates, usually of reinforced concrete, joined at various angles.

folding [COMPUT SCI] A method of hashing which consists of splitting the original key into two or more parts and then adding the parts together. [GEOL] Compression of planar structure in the formation of fold structures.

folding boards [MIN ENG] A shifting frame on which the cage rests in a mine. Also known as chairs; dogs; keeps; keps.

folding door [ENG] A door in sections that can be folded back or can be moved apart by sliding.

folding fin [AERO ENG] A fin hinged at its base to lie flat, especially a fin on a rocket that lies flat until the rocket is in flight.

foldover [ELECTR] Picture distortion seen as a white line on the side, top, or bottom of a television picture; generally caused by nonlinear operation in either the horizontal or vertical deflection circuits of a receiver.

fold system [GEOL] A group of folds with common trends and characteristics.

folia [PETR] Thin, leaflike layers that occur in gneissic or schistose rocks.

foliaceous [BOT] Consisting of or having the form or texture of a foliage leaf. [GEOL] Having a leaflike or platelike structure composed of thin layers of minerals. [ZOO] Resembling a leaf in growth form or mode.

foliage [BOT] The leaves of a plant.

foliar [BOT] Of, pertaining to, or consisting of leaves.

foliate papilla [VERT ZOO] One of the papillae found on the posterolateral margin of the tongue of many mammals, but vestigial or absent in humans.

foliated ice [HYD] Large masses of ice which grow in thermal contraction cracks in permafrost. Also known as ice wedge.

foliation [BOT] **1.** The process of developing into a leaf. **2.** The state of being in leaf. [GEOL] A laminated structure formed by segregation of different minerals into layers that are parallel to the schistosity. [MET] Beating metal into thin sheets.

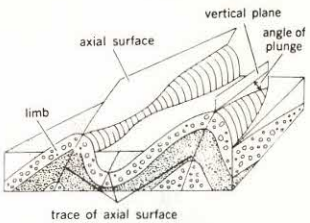
folic acid [BIOCHEM] $C_{19}H_{19}N_7O_6$ A yellow, crystalline vitamin of the B complex; it is slightly soluble in water, usually occurs in conjugates containing glutamic acid residues, and is found especially in plant leaves and vertebrate livers. Also known as pteroylglutamic acid (PGA).

folic acid sodium salt *See* sodium folate.

foliferous [BOT] Producing leaves.

foliicolous [BIOL] Growing or parasitic upon leaves, as certain fungi.

FOLD



Elements of folds.

folimat [ORG CHEM] $C_5H_{12}NO_4PS$ An oily liquid that decomposes at 135°C; soluble in water; used as an insecticide and miticide on fruit and vegetable crops and on ornamental flowers. Also known as dimethyl *S*-(*N*-methylcarbamoylmethyl)phosphorothioate; omethioate.

Folin solution [ANALY CHEM] An aqueous solution of 500 grams of ammonium sulfate, 5 grams of uranium acetate, and 6 grams of acetic acid in a volume of 1 liter; used to test for uric acid.

folio [GRAPHICS] The page number as it will appear in printed text.

foliobranchiate [VERT ZOO] Having leaflike gills.

foliolate [BOT] Having leaflets.

Folist [GEOL] A suborder of the soil order Histosol, consisting of wet forest litter resting on rock or rubble.

follicle [BIOL] A deep, narrow sheath or a small cavity. [BOT] A type of dehiscent fruit composed of one carpel opening along a single suture.

follicle-stimulating hormone [BIOCHEM] A protein hormone released by the anterior pituitary of vertebrates which stimulates growth and secretion of the Graafian follicle and also promotes spermatogenesis. Abbreviated FSH.

follicular lymphoma [MED] A premalignant lymphoma in which the lymph nodes show enlarged follicles composed predominantly of closely packed, large reticuloendothelial cells.

folliculate [BIOL] Having or composed of follicles.

folliculitis [MED] Inflammation of a follicle or group of follicles.

folliculitis keloidalis *See* keloid acne.

follow current [ELEC] The current at power frequency that passes through a surge diverter or other discharge path after a high-voltage surge has started the discharge.

follower [ENG] A drill used for making all but the first part of a hole, the first part being made with a drill of larger gage.

follower rail [MIN ENG] The rail of a mine switch on the other side of the turnout corresponding to the lead rail.

following limb [ASTRON] The half of the limb of a celestial body with an observable disk that appears to follow the body in its apparent motion across the field of view of a fixed telescope.

following sea [NAV] A sea in which the waves move in the general direction of the heading.

following wind [METEOROL] **1.** A wind blowing in the direction of ocean-wave advance. **2.** *See* tailwind. [NAV] Wind blowing in the general direction of a vessel's course.

follow spot [ELEC] A high-intensity spotlight used to follow action in arenas and stadiums and on large stages; it is equipped with adjustable iris and shutter controls, and its light source is either a carbon arc or an incandescent bulb.

follow-the-pointer indicator [ORD] Scale, on the mount of some types of artillery, that receives and registers firing data transmitted over a remote control system; the gun is kept properly aimed when its adjustment dials are matched with the readings on the indicator.

follow through [ORD] Material which follows the jet of a shaped charge through the hole formed in the target.

folpet [ORG CHEM] $C_9H_4Cl_3NO_2S$ A buff or white, crystalline compound with a melting point of 177–178°C; insoluble in water; used as a fungicide on fruits, vegetables, and ornamental flowers. Also known as *N*-(trichloromethylthio)-phthalimide.

Fomalhaut *See* α Piscis Australis.

fomite [MED] An inanimate object which may be contaminated with infectious organisms and thus serve to transmit disease.

fondant *See* flux.

font [GRAPHICS] A particular typeface and size, including all the uppercase and lowercase letters, punctuation marks, numerals, and so forth.

fontanelle [ANAT] A membrane-covered space between the bones of a fetal or young skull. [INV ZOO] A depression on the head of termites.

Fontéchevade man [PALEON] A fossil man representing the third interglacial *Homo sapiens* and having browridges and a cranial vault similar to those of modern *Homo sapiens*.

food [BIOL] A material that can be ingested and utilized by the organism as a source of nutrition and energy.

food additive [FOOD ENG] A substance added to foods during processing to improve color, texture, flavor, or keeping qualities; examples are antioxidants, emulsifiers, thickeners, preservatives, and colorants.

food allergy [IMMUNOL] A hypersensitivity to certain foods.

food-borne disease [MED] Any disease transmitted by contaminated foods.

food chain [ECOL] The scheme of feeding relationships by trophic levels which unites the member species of a biological community.

food chemistry [FOOD ENG] A specialized phase of food technology concerned with an understanding of the fundamental changes of composition and the physical condition of foodstuffs which may occur during and subsequent to industrial processing.

food color [MATER] A colorant, either a dye (soluble) or a lake (insoluble), permitted by the Food and Drug Administration for use in foods, drugs, and cosmetics. Also known as certified color; FD&C color.

food engineering [ENG] The technical discipline involved in food manufacturing and processing.

food infection [MED] A type of bacterial food poisoning in which the host is infected by organisms carried by food.

food manufacturing [FOOD ENG] The commercial production and packaging of foods that are fabricated by processing, by combining various ingredients, or both.

food microbiology [FOOD ENG] The science that deals with the microorganisms involved in the spoilage, contamination, and preservation of food.

food poisoning [MED] Poisoning due to intake of food contaminated by bacteria or poisonous substances produced by bacteria.

food preservation [FOOD ENG] Processing designed to protect food from spoilage caused by microbes, enzymes, and autooxidation.

food pyramid [ECOL] An ecological pyramid representing the food relationship among the animals in a community.

food science [FOOD ENG] The applied science which deals with the chemical, biochemical, physical, physiochemical, and biological properties of foods.

food spoilage [FOOD ENG] Deterioration in the color, flavor, odor, or consistency of a food product.

food technology [FOOD ENG] The application of science and engineering to the refining, manufacturing, and handling of foods; many food technologists are food scientists rather than engineers.

food vacuole [CYTOL] A membrane-bound organelle in which digestion occurs in cells capable of phagocytosis. Also known as heterophagic vacuole; phagocytic vacuole.

food web [ECOL] A modified food chain that expresses feeding relationships at various, changing trophic levels.

fool's gold *See* pyrite.

foot [ANAT] Terminal portion of a vertebrate leg. [INV ZOO] An organ for locomotion or attachment. [MECH] The unit of length in the British systems of units, equal to exactly 0.3048 meter. Abbreviated ft.

footage [ENG] The extent or length of a material expressed in feet. [MIN ENG] **1.** The number of feet of borehole drilled per unit of time, or that required to complete a specific project or contract. **2.** The payment of miners by the running foot of work.

foot-and-mouth disease [VET MED] A highly contagious virus disease of cattle, pigs, sheep, and goats that is transmissible to man; characterized by fever, salivation, and formation of vesicles in the mouth and pharynx and on the feet. Also known as hoof-and-mouth disease.

foot block [ENG] Flat pieces of wood placed under props in tunneling to give a broad base and thus prevent the superincumbent weight from pressing the props down.

foot breadth [ANTHRO] The measure of the maximum distance across the left foot, when the subject stands with his weight evenly distributed on both feet.

foot bridge [CIV ENG] A bridge structure used only for pedestrian traffic.

footcandle [OPTICS] A unit of illumination, equal to the illumination of a surface, 1 square foot in area, on which there is a luminous flux of 1 lumen uniformly distributed, or equal to the illumination of a surface all points of which are at a distance of 1 foot from a uniform point source of 1 candela; equal to approximately 10.7639 lux. Abbreviated ftc.

footeite *See* connellite.

foot gland [INV ZOO] A glandular structure which secretes

FOLLICLE

Follicles of the milkweed plant.

FOOD PYRAMID

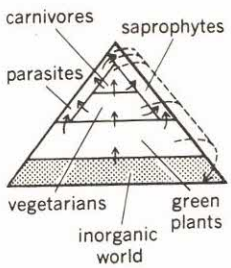


Diagram of the food pyramid showing the general trends in food circulation.

an adhesive substance in many animals. Also known as pedal gland.

foot guard [CIV ENG] A filler placed on the space between converging rails to prevent a foot from being wedged between the rails.

foot holes [MIN ENG] Holes cut in the sides of shafts or winzes to enable miners to climb up or down.

footing [CIV ENG] The widened base or substructure forming the foundation for a wall or a column.

footlambert [OPTICS] A unit of luminance (photometric brightness), equal to $1/\pi$ candela per square foot, or to the uniform luminance of a perfectly diffusing surface emitting or reflecting light at the rate of 1 lumen per square foot; equal to approximately 3.42625 nit. Abbreviated ft-L. Also known as equivalent footcandle.

foot length [ANTHRO] A measure of the distance from the heel to the longest toe of the left foot, when the subject stands with the weight evenly distributed on both feet.

foot-pound [MECH] **1.** Unit of energy or work in the English gravitational system, equal to the work done by 1 pound of force when the point at which the force is applied is displaced 1 foot in the direction of the force; equal to approximately 1.355818 joule. Abbreviated ft-lb; ft-lbf. **2.** Unit of torque in the English gravitational system, equal to the torque produced by 1 pound of force acting at a perpendicular distance of 1 foot from an axis of rotation. Also known as pound-foot. Abbreviated lbf-ft.

foot-poundal [MECH] **1.** A unit of energy or work in the English absolute system, equal to the work done by a force of magnitude 1 poundal when the point at which the force is applied is displaced 1 foot in the direction of the force; equal to approximately 0.04214011 joules. Abbreviated ft-pdl. **2.** A unit of torque in the English absolute system, equal to the torque produced by a force of magnitude 1 poundal acting at a perpendicular distance of 1 foot from the axis of rotation. Also known as poundal-foot. Abbreviated pdl-ft.

foot-pound-second system of units *See* British absolute system of units.

foot rot [PL PATH] Any disease that involves rotting of the stem or trunk of a plant. [VET MED] *See* foul foot.

foot screw [ENG] **1.** One of the three screws connecting the tribach of a theodolite or other level with the plate screwed to the tripod head. **2.** An adjusting screw that serves also as a foot.

foot section [MECH ENG] In both belt and chain conveyors that portion of the conveyor at the extreme opposite end from the delivery point.

foot's oil [CHEM] The oil sweated out of slack wax; it takes its name from the fact that it goes to the bottom, or foot, of the pan when sweated.

footstock [MECH ENG] A device containing a center which supports the workpiece on a milling machine; usually used in conjunction with a dividing head.

foot valve [MECH ENG] A valve in the bottom of the suction pipe of a pump which prevents backward flow of water.

footwall [GEOL] The mass of rock that lies beneath a fault, an ore body, or a mine working. Also known as heading side; heading wall; lower plate.

footwall shaft *See* underlay shaft.

forage [AGR] A vegetable food for domestic animals.

Foraky boring method [MIN ENG] A percussive boring system; a closed-in derrick contains the crown pulley, over which a steel rope with the boring tools is passed from a drum; the drum moves the tools, which are vibrated by a walking beam.

Foraky freezing process [MIN ENG] A method of shaft sinking through heavily watered sands by freezing the sands.

foramen [BIOL] A small opening, orifice, pore, or perforation.

foramen magnum [ANAT] A large oval opening in the occipital bone at the base of the cranium that allows passage of the spinal cord, accessory nerves, and vertebral arteries.

foramen of Magendie [ANAT] The median aperture of the fourth ventricle of the brain.

foramen of Monro *See* interventricular foramen.

foramen of Winslow *See* epiploic foramen.

foramen ovale [ANAT] An opening in the sphenoid for the passage of nerves and blood vessels. [EMBRYO] An opening in the fetal heart partition between the two atria.

foramen primum [EMBRYO] A temporary embryonic interatrial opening.

Foraminiferida [INV ZOO] An order of dominantly marine protozoans in the subclass Granuloreticulosia having a secreted or agglutinated shell enclosing the ameboid body.

forb [BOT] A weed or broadleaf herb.

forbesite [MINERAL] $H(Ni,Co)AsO_4 \cdot 3\frac{1}{2}H_2O$ A grayish-white mineral composed of hydrous nickel cobalt arsenate; occurs in fibrocrystalline form.

Forbes log [NAV] A log consisting essentially of a small rotator in a tube projecting below the bottom of a vessel, with suitable registering devices.

forbidden band [SOLID STATE] A range of unallowed energy levels for an electron in a solid.

forbidden-character code [COMPUT SCI] A bit code which exists only when an error occurs in the binary coding of characters.

forbidden-combination check [COMPUT SCI] A test for the occurrence of a nonpermissible code expression in a computer; used to detect computer errors.

forbidden line [ATOM PHYS] A spectral line associated with a transition forbidden by selection rules; optically this might be a magnetic dipole or electric quadrupole transition.

forbidden transition [QUANT MECH] A transition between two states of a quantum-mechnical system which is considerably less probable than a competing allowed transition.

Forbush decrease [ASTROPHYS] A sudden decrease in cosmic-ray intensity which occurs a day or two after a solar flare, and at the same time as the commencement of magnetic storms and auroral activity.

force [COMPUT SCI] To intervene manually in a computer routine and cause the computer to execute a jump instruction. [MECH] That influence on a body which causes it to accelerate; quantitatively it is a vector, equal to the body's time rate of change of momentum.

force-balance meter [ENG] A flowmeter that measures a force, such as that associated with the air pressure in a small bellows, that is required to balance the net force created by the differential pressure, on opposite sides of a diaphragm or diaphragm capsule, generated by a differential-producing primary device.

force constant [MECH] The ratio of the force to the deformation of a system whose deformation is proportional to the applied force. [PHYS CHEM] An expression for the force acting to restrain the relative displacement of the nuclei in a molecule.

forced-air heating [MECH ENG] A warm-air heating system in which positive air circulation is provided by means of a fan or a blower.

forced auxiliary ventilation [MIN ENG] A system in which the duct delivers the intake air to the face.

forced-caving system [MIN ENG] A stoping system in which the ore is broken down by large blasts into the stopes that are kept partly full of broken ore.

forced circulation [MECH ENG] The use of a pump or other fluid-movement device in conjunction with liquid-processing equipment to move the liquid through pipes and process vessels; contrasted to gravity or thermal circulation.

forced-circulation boiler [MECH ENG] A once-through steam generator in which water is pumped through successive parts.

forced convection [THERMO] Heat convection in which fluid motion is maintained by some external agency.

forced draft [MECH ENG] Air under positive pressure produced by fans at the point where air or gases enter a unit, such as a combustion furnace.

forced expiratory volume [MED] During the performance of a forced vital capacity measurement, the volume of exhaled gas over a specific time interval.

forced oscillation [MECH] An oscillation produced in a simple oscillator or equivalent mechanical system by an external periodic driving force. Also known as forced vibration.

forced programming *See* minimum-access programming.

forced ventilation [MECH ENG] A system of ventilation in which air is forced through ventilation ducts under pressure.

forced vibration *See* forced oscillation.

forced vital capacity [MED] Maximum gas volume which can be expired, as quickly and forcibly as possible, after a maximum inspiration.

forced wave [FL MECH] Any wave which is required to fit irregularities at the boundary of a system or satisfy some impressed force within the system; the forced wave will not in general be a characteristic mode of oscillation of the system.

force feedback [CONT SYS] A method of error detection in which the force exerted on the effector is sensed and fed back to the control, usually by mechanical, hydraulic, or electric transducers.

force fit *See* press fit.

force gage [ENG] An instrument which measures the force exerted on an object.

force main [CIV ENG] The discharge pipeline of a pumping station.

force piece *See* foreset.

force plate [ENG] A plate that carries the plunger or force plug of a mold and the guide pins on bushings.

force plug [ENG] A mold member that fits into the cavity block, exerting pressure on the molding compound. Also known as piston; plunger.

force polygon [MECH] A closed polygon whose sides are vectors representing the forces acting on a body in equilibrium.

forceps [DES ENG] A pincerlike instrument for grasping objects. [INV ZOO] A pair of curved, hard, movable appendages at the end of the abdomen of certain insects, for example, the earwig. [MED] A device with two blades or limbs opposite each other which is operated by handles or by direct force on the blades; used in surgery to grasp, compress, and hold tissue, a body part, or surgical substances.

force pump [MECH ENG] A pump fitted with a solid plunger and a suction valve which draws and forces a liquid to a considerable height above the valve or puts the liquid under a considerable pressure.

forcing [GRAPHICS] The attempt to bring out detail in an underexposed negative by extending the development time or by using an accelerator.

forcing cone [ORD] Tapered beginning of the lands at the origin of the rifling of a gun tube; the forcing cone allows the rotating band of the projectile to be gradually engaged by the rifling, thereby centering the projectile in the bore.

forcing fan [MIN ENG] A fan which forces the intake air into mine workings. Also known as blowing fan.

forcipate [BIOL] Shaped like forceps; deeply forked.

forcipate trophus [INV ZOO] A type of masticatory apparatus in certain predatory rotifers which resembles forceps and is used for grasping.

Forcipulatida [INV ZOO] An order of echinoderms in the subclass Asteroidea characterized by crossed pedicellariae.

ford [HYD] A shallow and usually narrow part of a stream, estuary, or other body of water that may be crossed; for example, by wading or by a wheeled land vehicle.

fording depth [ENG] Maximum depth at which a particular vehicle can operate in water.

fore [NAV ARCH] **1.** The front part of a ship. **2.** In the direction of or toward the bow.

forearm [ANAT] The part of the upper extremity between the wrist and the elbow. Also known as antebrachium.

forearm circumference [ANTHRO] The measure of the circumference taken halfway between the elbow and the wrist.

forearm length [ANTHRO] A measure of the distance from the tip of the elbow to the tip of the middle finger, with the arm flexed at the elbow.

forebay [CIV ENG] **1.** A small reservoir at the head of the pipeline that carries water to the consumer; it is the last free water surface of a distribution system. **2.** A reservoir feeding the penstocks of a hydro-power plant.

forebody [NAV ARCH] The part of a ship's hull in front of the amidships.

forebrain [EMBRYO] The most anterior expansion of the neural tube of a vertebrate embryo. [VERT ZOO] The part of the adult brain derived from the embryonic forebrain; includes the cerebrum, thalamus, and hypothalamus.

forecast [METEOROL] A statement of expected future meteorological occurrences.

forecasting [COMMUN] The prediction of conditions of radio propagation for a period extending anywhere from a few hours to a few months. [METEOROL] Procedures for extrapolation of the future characteristics of weather on the basis of present and past conditions.

forecastle deck [NAV ARCH] A deck extending from the stem aft over a forecastle erection.

forecast period [METEOROL] The time interval for which a forecast is made.

forecast-reversal test [METEOROL] A test used to evaluate the adequacy of a given method of forecast verification; the same verification method is applied, simultaneously, to a given forecast and to a fabricated forecast of opposite conditions; comparison of the verification scores gives an indication of the value of the verification system.

forecast verification [METEOROL] Any process for determining the accuracy of a weather forecast by comparing the predicted weather with the observed weather of the forecast period; used to test forecasting skills and methods.

foredeep [GEOL] **1.** A long, narrow depression that borders an orogenic belt, such as an island arc, on the convex side. **2.** *See* exogeosyncline.

fore drift [MIN ENG] That one of a pair of parallel headings which is kept a short distance in advance of the other.

foredune [GEOL] A coastal dune or ridge that is parallel to the shoreline of a large lake or ocean and is stabilized by vegetation.

forefinger [ANAT] The index finger; the first finger next to the thumb.

forefoot [NAV ARCH] The extreme forward end of the bottom of a ship. [VERT ZOO] An anterior foot of a quadruped.

foreground [COMPUT SCI] A program or process of high priority that utilizes machine facilities as needed, with less critical, background work performed in otherwise unused time.

foregut [EMBRYO] The anterior alimentary canal in a vertebrate embryo, including those parts which will develop into the pharynx, esophagus, stomach, and anterior intestine.

forehand welding [MET] Welding in which the flame is directed against the base metal ahead of the weld and is moved in the direction of welding. Also known as forward welding.

forehead [ANAT] The part of the face above the eyes.

forehearth [MET] **1.** A bay in front of the hearth of a furnace. **2.** A receptacle in front of a hearth to receive the molten products.

foreign-body locator [ENG] A device for locating foreign metallic bodies in tissue by means of suitable probes that generate a magnetic field; the presence of a magnetic body within this field is indicated by a meter or a sound signal.

foreign element [IND ENG] A work element which is not a part of the normal work cycle, either because it is accidental or because it occurs only occasionally.

foreign inclusion [PETR] A fragmentary piece of country rock which is enclosed in an igneous intrusion.

foreign matter [SCI TECH] Any substance not belonging naturally in the place where found.

foreland [GEOGR] An extensive area of land jutting out into the sea. [GEOL] **1.** A lowland area onto which piedmont glaciers have moved from adjacent mountains. **2.** A stable part of a continent bordering an orogenic or mobile belt.

foreland facies *See* shelf facies.

forelimb [ANAT] An appendage (as a wing, fin, or arm) of a vertebrate that is, or is homologous to, the foreleg of a quadruped.

forellenstein *See* troctolite.

Forel scale [OCEANOGR] A scale of yellows, greens, and blues for recording the color of sea water as seen against the white background of a Secchi disk.

forensic chemistry [CHEM] The application of chemistry to the study of materials or problems in cases where the findings may be presented as technical evidence in a court of law.

forensic engineering [ENG] The application of accepted engineering practices and principles for discussion, debate, argumentative, or legal purposes.

forensic medicine [MED] Application of medical evidence or medical opinion for purposes of civil or criminal law.

forensic physics [PHYS] The application of physics for discussion, debate, argumentative, or legal purposes.

forensic science [SCI TECH] The application of science for discussion, debate, argumentative or legal purposes.

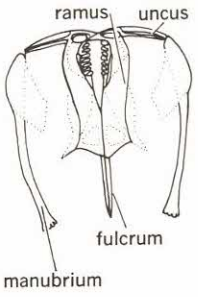
forepeak [NAV ARCH] A tank in the extreme forward end of a ship that is usually used for fresh water, but can carry ballast or bunkers.

forepeak bulkhead [NAV ARCH] The partition wall nearest the stem; it forms the after-boundary of the forepeak tank.

forepoling [MIN ENG] A timbering method for a very weak roof in which a bench of timbers is set and boards or long wedges are placed above the header; as the next bench of timbers is placed at the inbye end of the wedges, other like wedges are driven in under the first wedges and over the second header. Also known as spiling.

fore pump *See* backing pump.

FORCIPATE TROPHUS



Ventral view of *Dicranophorus* forcipate trophus. *(After Hauer)*

forerunner [OCEANOGR] Low, long-period ocean swell which commonly precedes the main swell from a distant storm, especially a tropical cyclone.

foreset [MIN ENG] **1.** To place a prop under the coal-face end of a bar. **2.** Timber set used for roof support at the working face. Also known as force piece.

foreset bed [GEOL] One of a series of inclined symmetrically arranged layers of a cross-bedding unit formed by deposition of sediments that rolled down a steep frontal slope of a delta or dune.

foreshaft sinking [MIN ENG] The first 150 feet (46 meters) of shaft sinking from the surface; the plant and services for the main shaft are installed during this step.

foreshock [GEOPHYS] A tremor which precedes a larger earthquake or main shock.

foreshore [GEOL] The zone that lies between the ordinary high- and low-watermarks and is daily traversed by the rise and fall of the tide. Also known as beach face.

foresight [ENG] **1.** A sight or bearing on a new survey point, taken in a forward direction and made in order to determine its elevation. **2.** A sight on a previously established survey point, taken in order to close a circuit. **3.** A reading taken on a level rod to determine the elevation of the point on which the rod rests when read. Also known as minus sight.

forest [ECOL] An ecosystem consisting of plants and animals and their environment, with trees as the dominant form of vegetation.

forestaff *See* cross-staff.

forestay [NAV ARCH] In sailing vessels, a stay extending from the foremast to the bow deck, bowsprit, or jibboom.

forest climate *See* humid climate.

forest conservation [ECOL] Those measures concerned with the protection and preservation of forest lands and resources.

forest ecology [ECOL] The science that deals with the relationship of forest trees to their environment, to one another, and to other plants and to animals in the forest.

forest fire [FOR] Uncontrolled combustion of forest fuels.

forest management [FOR] Measures concerned with the effective organization of a forest to ensure continued production of its goods and services.

forest mapping [FOR] The branch of forestry dealing with the preparation of maps showing the distribution and conformation of individual forest stands.

forest measurement [FOR] The branch of forestry concerned with the measurement of standing trees, cut roundwood, and lumber products.

forest product [FOR] Any material afforded by a forest for commercial use, such as tree products and forage.

forest resources [FOR] Forest land and the trees on it.

forestry [ECOL] The management of forest lands for wood, forages, water, wildlife, and recreation.

forest soil [FOR] The natural medium for growth of tree roots and associated forest vegetation.

forest stand [FOR] The basic unit of forest mapping; a group of trees that are more or less homogeneous with regard to species composition, density, size, and sometimes habitat.

forest-tundra [ECOL] A temperate and cold savanna which occurs at high altitudes and consists of scattered or clumped trees and a shrub layer of varying coverage.

forest wind [METEOROL] A light breeze which blows from forests toward open country on calm clear nights.

forfeiture [MIN ENG] Loss of a mining claim by operation of the law, without regard to the intention of the locator, whenever he fails to preserve his right by complying with the conditions imposed by law.

forge [MET] **1.** To form a metal, usually hot, into desirable shapes by employing compressive forces. **2.** A machine or place in which metal is formed hot, or where iron is produced from its ore.

forgeability [MET] Suitability of a material for forging.

forge delay time [MET] The time between the start of weld time and the time when forging pressure is reached by the electrode force.

forge welding [MET] A group of welding processes in which the parts to be joined, usually iron, are heated to about 1000°C and then hammered or pressed together. Also known as fire welding.

forging [MET] **1.** Using compressive force to shape metal by plastic deformation; dies may be used. **2.** A piece of work made by forging.

forging brass [MET] Brass composed of 60% copper, 38% zinc, and 2% lead, used for hot forgings, hardware, and plumbing supplies; it is extremely plastic when hot, is corrosion-resistant, and has excellent mechanical properties.

forging hammer [MET] A hammer used to pound metal into forgings.

forging plane [MET] The plane of the principal die face when oriented normal to the direction of ram travel.

forging press [MET] A press designed to operate dies in die forging.

forging range [MET] Optimum temperature range in which a metal can be forged.

forging rolls [MET] A machine used in making forgings by rolling the metal.

forging stock [MET] A section or a piece of metal used to make a forging.

forked lightning [GEOPHYS] A common form of lightning, in a cloud-to-ground discharge, which exhibits downward-directed branches from the main lightning channel.

forklift [MECH ENG] A machine, usually powered by hydraulic means, consisting of two or more prongs which can be raised and lowered and are inserted under heavy materials or objects for hoisting and moving them.

forklift truck *See* fork truck.

fork oscillator [ELECTR] An oscillator that uses a tuning fork as the frequency-determining element.

fork truck [MECH ENG] A vehicle equipped with a forklift. Also known as forklift truck.

form [CIV ENG] Temporary boarding, sheeting, or pans of plywood, molded fiber glass, and so forth, used to give desired shape to poured concrete or the like. [GRAPHICS] Type and material that is secured in a chase and is ready for printing or for producing an electrotype plate.

formability [MATER] Capability of a material to be shaped by plastic deformation.

formal charge [PHYS CHEM] The apparent charge of an element in a compound; for example, magnesium has a formal charge of +2 in MgO and oxygen has a charge of −2.

formaldehyde [ORG CHEM] HCHO The simplest aldehyde; a gas at room temperature, and a poisonous, clear, colorless liquid solution with pungent odor; used to make synthetic resins by reaction with phenols, urea, and melamine, as a chemical intermediate, as an embalming fluid, and as a disinfectant. Also known as formol; methylene oxide.

formaldehyde sodium bisulfite [ORG CHEM] CH_3NaO_4S A compound used as a fixing agent for fibers containing keratin, in metallurgy for flotation of lead-zinc ores, and in photography. Also known as methylolsulfonic acid sodium salt; sodium formaldehyde-bisulfite.

formalin [MATER] An aqueous solution of formaldehyde, usually 37% formaldehyde by weight.

formal language [COMPUT SCI] An abstract mathematical object used to model the syntax of a programming or natural language.

formal logic [MATH] The study of the permissible relationships between propositions, a study that concerns the form rather than the content.

formamidase [BIOCHEM] An enzyme involved in tryptophane catabolism; catalyzes the conversion of *N*-formylkynurenine to kynurenine and formate.

formamide [ORG CHEM] **1.** A compound containing the radical HCONH. **2.** $HCONH_2$ A clear, colorless hygroscopic liquid, boiling at 200–212°C; soluble in water and alcohol; used as a solvent, softener, and chemical intermediate. Also known as formylamine; methanamide.

formamidinesulfinic acid [ORG CHEM] $H_2NC(NH)SO_2H$ A reagent for the reduction of ketones to secondary alcohols. Also known as aminoiminomethanesulfinic acid.

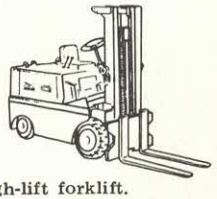
formanite [MINERAL] A mineral composed of an oxide of uranium, zirconium, thorium, calcium, tantalum, and niobium with some rare-earth metals.

format [COMPUT SCI] The specific arrangement of data on a printed page, punched card, or such to meet established presentation requirements.

formate [ORG CHEM] A compound containing the $HCOO^-$ radical.

format effector *See* layout character.

FORKLIFT



A high-lift forklift.

formation [GEOL] Any assemblage of rocks which have some common character and are mappable as a unit.
formation bombing [ORD] Bombing by aircraft in formation.
formation factor [GEOCHEM] The ratio between the conductivity of an electrolyte and that of a rock saturated with the same electrolyte. Also known as resistivity factor. [GEOL] A function of the porosity and internal geometry of a reservoir rock system, expressed as $F = \phi^{-m}$, where ϕ is the fractional porosity of the rock, and m is the cementation factor (pore-opening reduction).
formation fracturing [PETRO ENG] Method of applying hydraulic pressure to a reservoir formation to cause the rock to split open, that is to fracture; used to increase oil production.
formation resistivity [GEOPHYS] Electrical resistivity of reservoir formations measured by electrical log sondes; used for clues to formation lithography and fluid content.
formation solubility [PETRO ENG] Measure of formation rock solubility in oil-well acidizing solution (hydrochloric acid or hydrochloric-hydrofluoric acids).
formation tester [PETRO ENG] Device for retrieval of samples of fluid from an oil-reservoir formation.
formation water [HYD] Water present with petroleum or gas in reservoirs. Also known as oil-reservoir water.
formatted tape [COMPUT SCI] A magnetic tape which employs a prerecorded timing track by means of which blocks of data can be found after reference to a directory table.
form clamp [CIV ENG] An adjustable metal clamp used to secure planks of wooden forms for concrete columns or beams.
form contour [MAP] A topographic contour determined either by stereoscopic examination of aerial photographs without the use of ground control or by some other method besides conventional surveying.
form cutter *See* formed cutter.
form drag [FL MECH] **1.** The drag from all causes resulting from the particular shape of a body relative to its direction of motion, as of fuselage, wing, or nacelle. **2.** At supersonic speed, the drag caused by losses due to shock waves, exclusive of losses due to skin friction.
formed cutter [MECH] A cutting tool shaped to make surfaces with irregular geometry. Also known as form cutter.
form factor [ELEC] **1.** The ratio of the effective value of a periodic function, such as an alternating current, to its average absolute value. **2.** A factor that takes the shape of a coil into account when computing its inductance. Also known as shape factor. [MECH] The theoretical stress concentration factor for a given shape, for a perfectly elastic material. [PHYS] A function which describes the internal structure of a particle, allowing calculations to be made even though the structure is unknown. [QUANT MECH] An expression used in studying the scattering of electrons or radiation from atoms, nuclei, or elementary particles, which gives the deviation from point particle scattering due to the distribution of charge and current in the target.
form feed character [COMPUT SCI] A control character that determines when a printer or display device moves to the next page, form, or equivalent unit of data.
form feeding [COMPUT SCI] The positioning of documents in order to move them past printing or sensing devices, either singly or in continuous rolls.
form function [ORD] The mathematical expression for the relationship between the fraction of the propellant burned and the distance that each burning surface has regressed.
form grinding [MECH ENG] Grinding by use of a wheel whose cutting face is contoured to the reverse shape of the desired form.
formic acid [ORG CHEM] HCOOH A colorless, pungent, toxic, corrosive liquid melting at 8.4°C; soluble in water, ether, and alcohol; used as a chemical intermediate and solvent, in dyeing and electroplating processes, and in fumigants. Also known as methanoic acid.
Formicariidae [VERT ZOO] The antbirds, a family of suboscine birds in the order Passeriformes.
formication [MED] An abnormal sensation as of insects crawling in or upon the skin; a common symptom in diseases of the spinal cord and the peripheral nerves; may be a hallucination.
formic ether *See* ethyl formate.
Formicidae [INV ZOO] The ants, social insects composing the single family of the hymenopteran superfamily Formicoidea.
formicivorous [ZOO] Feeding on ants.
Formicoidea [INV ZOO] A monofamilial superfamily of hymenopteran insects in the suborder Apocrita, containing the ants.
forming [ELEC] Application of voltage to an electrolytic capacitor, electrolytic rectifier, or semiconductor device to produce a desired permanent change in electrical characteristics as a part of the manufacturing process. [ENG] A process for shaping or molding sheets, rods, or other pieces of hot glass, ceramic ware, plastic, or metal by the application of pressure.
forming die [ENG] A die like a drawing die, but without a blank holder.
forming press [MECH ENG] A punch press for forming metal parts.
forming rolls [MECH ENG] Rolls contoured to give a desired shape to parts passing through them.
forming tool [DES ENG] A nonrotating tool that produces its inverse form on the workpiece.
form line [MAP] An approximation of a contour line without a definite elevation value, as one derived by visual observation, sometimes supplemented by measured elevations but not in sufficient quantity to produce accurate results; used principally to indicate the appearance of terrain which has not been accurately surveyed.
form of the physical store [COMPUT SCI] The code store considered as a physical structure, which can exhibit many different forms: discrete (cards), continuous (tapes), linear (tapes), cylindrical (drums), three-dimensional (array of cores), disks, strips, sheets, reels, and so on.
form oil [MATER] An oil utilized on the contact surface of wooden or metal concrete forms to prevent concrete from sticking.
formol *See* formaldehyde.
formonitrile *See* hydrocyanic acid.
formothion *See* *O*,*O*-dimethyl-*S*-(*N*-methyl-*N*-formylcarbamoylmethyl)phosphorodithioate.
form process chart [IND ENG] A graphic representation of the process flow of paperwork forms. Also known as forms analysis chart; functional forms analysis chart; information process analysis chart.
form roller [GRAPHICS] An inking or dampening roller which is in direct contact with the plate on a printing press.
forms analysis chart *See* form process chart.
forms control buffer [COMPUT SCI] A reserved storage containing coordinates for a page position on the printer; earlier printers utilized a carriage control tape, allowing the page to be set at a specific position.
form stop [COMPUT SCI] A device which stops a machine when its supply of paper has run out.
formula [CHEM] **1.** A combination of chemical symbols that expresses a molecule's composition. **2.** A reaction formula showing the interrelationship between reactants and products. [MATH] An equation or rule relating mathematical objects or quantities.
formulation [CHEM] The particular mixture of base chemicals and additives required for a product.
formula transition *See* FORTRAN.
formula weight [CHEM] **1.** The gram-molecular weight of a substance. **2.** In the case of a substance of uncertain molecular weight such as certain proteins, the molecular weight calculated from the composition, assuming that the element present in the smallest proportion is represented by only one atom.
formwork [CIV ENG] A temporary wooden casing used to contain concrete during its placing and hardening. Also known as shuttering.
form-wound coil [ELEC] Armature coil that is formed or shaped over a fixture before being placed on the armature of a motor or generator.
formyl [ORG CHEM] The formic acid radical, HCO—; it is characteristic of aldehydes.
formylamine *See* formamide.
2-formyl-3,4-dihydro-2*H*-pyran *See* acrolein dimer.
formyl methionine [BIOCHEM] Formylated methionine; initiates peptide chain synthesis in bacteria.
for-next loop [COMPUT SCI] In computer programming, a high-level logic statement which defines a part of a computer program that will be repeated a certain number of times.
fornix [ANAT] A structure that is folded or arched.

[BOT] A small scale, especially in the corolla tube of some plants.

Forrel cell [METEOROL] A type of atmospheric circulation in which air moves away from the thermal equator at low latitude levels and in the opposite direction in higher latitudes.

Forrester machine [MIN ENG] A pneumatic flotation cell in which pulp is aerated by low-pressure air, delivering a mineralized froth along the overflow, and tailings to the end weir.

forril farina *See* rock milk.

fors *See* G; gram-force.

Forssman antibody [IMMUNOL] A heterophile antibody that reacts with Forssman antigen.

Forssman antigen [IMMUNOL] A heterophile antigen, occurring in a variety of unrelated animals, which elicits production of hemolysin (Forssman antibody) for sheep red blood cells.

forsterite [MINERAL] Mg_2SiO_4 A whitish or yellowish, magnesium-rich variety of olivine. Also known as white olivine.

fort [ORD] **1.** Permanent post as opposed to a camp, which is a temporary installation. **2.** Land area within which harbor defense units are located.

fortification [ORD] **1.** A structure or earthworks, usually heavily armed, constructed as a defense; a fortified place or position. **2.** The act or art of fortifying.

fortification agate *See* landscape agate.

Fortin barometer [ENG] A type of cistern barometer; provision is made to increase or decrease the volume of the cistern so that when a pressure change occurs, the level of the cistern can be maintained at the zero of the barometer scale (the ivory point).

fortnightly nutation [ASTRON] Nutation caused by the change in declination of the moon, having a displacement of up to 0.1 second of arc and a period of 15 days.

fortnightly tide [OCEANOGR] A tide occurring at intervals of one-half the period of oscillation of the moon, approximately 2 weeks.

FORTRAN [COMPUT SCI] A family of procedure-oriented languages used mostly for scientific or algebraic applications; derived from formula translation.

Fortrat parabola [SPECT] Graph of wave numbers of lines in a molecular spectral band versus the serial number of the successive lines.

fortuitous distortion [COMMUN] Distortion in a telegraph system which includes effects that cannot be classified as bias or characteristic distortion; it is a departure (for one occurrence of a particular signal pulse) from the average combined effects of bias and characteristic distortion; the direct opposite of systematic distortion.

Fortuna [ASTRON] An asteroid with a diameter of about 220 kilometers, mean distance from the sun of 2.442 astronomical units, and C-type surface composition.

forty-four-type repeater [ELECTR] Type of telephone repeater employing two amplifiers and no hybrid arrangements; used in a four-wire system.

Forty Saints' storm [METEOROL] A southerly gale in Greece, occurring a little before the equinox in March.

forward [NAV] In a direction nearer dead ahead than dead astern.

forward-acting regulator [ELECTR] Transmission regulator in which the adjustment made by the regulator does not affect the quantity which caused the adjustment.

forward-backward counter [COMPUT SCI] A counter that has both an add and a subtract input so as to count in either an increasing or a decreasing direction. Also known as bidirectional counter.

forward bias [ELECTR] A bias voltage that is applied to a *pn*-junction in the direction that causes a large current flow; used in some semiconductor diode circuits.

forward coupler [ELECTR] Directional coupler used to sample incident power.

forward current [ELECTR] Current which flows upon application of forward voltage.

forward direction [ELECTR] Of a semiconductor diode, the direction of lower resistance to the flow of steady direct current.

forward drop [ELECTR] The voltage drop in the forward direction across a rectifier.

forward error analysis [COMPUT SCI] A method of error analysis based on the assumption that small changes in the input data lead to small changes in the results, so that bounds for the errors in the results caused by rounding or truncation errors in the input can be calculated.

forward extrusion [MET] A cold extrusion process in which a formed blank is placed in a die cavity and struck by a punch; the metal is extruded through an annular space between the die and the end of the punch, moving in the same direction as the punch.

forward-looking infrared imager [ENG] An infrared imaging device which employs an optomechanical system to make a two-dimensional scan, and produces a visible image corresponding to the spatial distribution of infrared radiation. Abbreviated FLIR imager. Also known as framing imager.

forward of the beam [NAV] Any direction between broad on the beam and ahead.

forward path [CONT SYS] The transmission path from the loop actuating signal to the loop output signal in a feedback control loop.

forward perpendicular [NAV ARCH] A vertical line through the intersection of the design waterline and the forward end of a ship. Abbreviated FP.

forward propagation by ionospheric scatter [COMMUN] Radio communications technique using the scattering phenomenon exhibited by electromagnetic waves in the 30–100-megahertz region when passing through the ionosphere at an elevation of about 85 kilometers.

forward propagation by tropospheric scatter [COMMUN] Radio communications technique using high transmitting power levels, large antenna arrays, and the scattering phenomenon of the troposphere to permit communications far beyond line-of-sight distances.

forward quarter [NAV ARCH] The portions of the sides of a ship immediately abaft the stem.

forward recovery time [ELECTR] Of a semiconductor diode, the time required for the forward current or voltage to reach a specified value after instantaneous application of a forward bias in a given circuit.

forward scatter [COMMUN] **1.** Propagation of electromagnetic waves at frequencies above the maximum usable high frequency through use of the scattering of a small portion of the transmitted energy when the signal passes from an unionized medium into a layer of the ionosphere. **2.** Collectively, the very-high-frequency forward propagation by ionospheric scatter and ultra-high-frequency forward propagation by tropospheric scatter communications techniques. [GEOPHYS] The scattering of radiant energy into the hemisphere of space bounded by a plane normal to the direction of the incident radiation and lying on the side toward which the incident radiation was advancing.

forward scattering [PHYS] **1.** Scattering in which there is no change in the direction of motion of the scattered particles. **2.** Scattering in which the angle between the initial and final directions of motion of the scattered particles is less than 90°

forward-scatter propagation *See* scatter propagation.

forward transfer function [CONT SYS] In a feedback control loop, the transfer function of the forward path.

forward voltage drop *See* diode forward voltage.

forward wave [ELECTR] Wave whose group velocity is the same direction as the electron stream motion.

forward welding *See* forehand welding.

FOSDIC II [COMPUT SCI] An electronic scanner which reads filmed images of punched cards, searches for cards containing specified information, and copies the selected information onto new cards for computer input. Derived from film optical scanning device for input to computers.

foshagite [MINERAL] $Ca_5Si_3O_{10}(OH)_2 \cdot 2H_2O$ A white mineral composed of a basic hydrous calcium silicate.

fossa [ANAT] A pit or depression. [VERT ZOO] *Cryptoprocta ferox*. A Madagascan carnivore related to the civets.

fossil [PALEON] The organic remains, traces, or imprint of an organism preserved in the earth's crust since some time in the geologic past.

fossil dune [GEOL] An ancient desert dune.

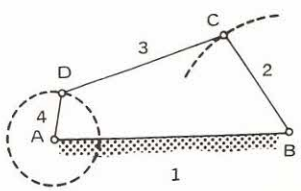
fossil fuel [GEOL] Any hydrocarbon deposit that may be used for fuel; examples are petroleum, coal, and natural gas.

fossil ice [HYD] **1.** Relatively old ground ice found in regions of permafrost. **2.** Underground ice in regions where present-day temperatures are not low enough to have formed it.

fossil man [PALEON] Ancient man identified from prehistoric skeletal remains which are archeologically earlier than the Neolithic.

fossil permafrost *See* passive permafrost.
fossil reef [GEOL] An ancient reef.
fossil resin [GEOL] A natural resin in geologic deposits which is an exudate of long-buried plant life; for example, amber, retinite, and copal.
fossil soil *See* paleosol.
fossil turbulence [METEOROL] Inhomogeneities of temperature and humidity remaining in the air after the motion which produced them has subsided and the density has become uniform; causes scattering of radio waves, and lumpy clouds when air is rising.
fossil wax *See* ozocerite.
fossorial [VERT ZOO] Adapted for digging.
Foster-Seely discriminator *See* phase-shift discriminator.
Foster's formula [MIN ENG] The empirical formula $R = 3\sqrt{DT}$ for determining the radius R of a shaft pillar, where D = depth in feet and T = thickness of lode in feet.
Foster's reactance theorem [CONT SYS] The theorem that the most general driving point impedance or admittance of a network, in which every mesh contains independent inductance and capacitance, is a meromorphic function whose poles and zeros are all simple and occur in conjugate pairs on the imaginary axis, and in which these poles and zeros alternate.
Foucault current *See* eddy current.
Foucault knife-edge test [OPTICS] Test of a lens or a concave mirror in which a pinhole source is placed at twice the focal length behind the lens or at the mirror's center of curvature, the eye is placed at the image of the pinhole, and defects in the lens or mirror result in irregular darkening of the image when a knife edge is moved across the image immediately in front of the eye.
Foucault mirror [OPTICS] Experiment for measuring the speed of light in which light is reflected from a rapidly rotating mirror to a distant mirror and back, and the speed of light is deduced from the displacement of the beam after its second reflection from the rotating mirror, the angular speed of the rotating mirror, and the distance the light travels.
Foucault pendulum [MECH] A swinging weight supported by a long wire, so that the wire's upper support restrains the wire only in the vertical direction, and the weight is set swinging with no lateral or circular motion; the plane of the pendulum gradually changes, demonstrating the rotation of the earth on its axis.
fougasse [ORD] A mine constructed so that upon explosion of the charge, pieces of metal, rock, gasoline, or other substances are blown in a predetermined direction.
foulard [TEXT] Lightweight twill, often printed in a small pattern; originally silk, but frequently woven of rayon, wool, cotton, or nylon.
foul berth [NAV] A berth in which a vessel at anchor is in danger of striking or fouling another vessel, the ground, or an obstruction.
foul bottom [CIV ENG] A hard, uneven, rocky or obstructed bottom having poor holding qualities for anchors, or one having rocks or wreckage that would endanger an anchored vessel. [NAV ARCH] Referring to the underwater portion of the hull when covered with foreign matter such as barnacles or grass.
foulbrood [INV ZOO] The common name for three destructive bacterial diseases of honeybee larvae.
foul foot [VET MED] A feedlot disease of cattle and sheep marked by inflammation and ulceration of the feet; common in wet feedlots. Also called foot rot.
Foulger's test [ANALY CHEM] A test for fructose in which urea, sulfuric acid, and stannous chloride are added to the solution to be tested, the solution is boiled, and in the presence of fructose a blue coloration forms.
fouling [NAV ARCH] The adhesion of different marine organisms to the underwater parts of ships, causing the ships to lose speed. [ORD] The deposit that remains on the bore of a gun after firing.
fouling factor [CHEM ENG] In heat transfer, the lowering of clear-film transfer rates resulting from corrosion, dirt, or roughness of the surface of tube walls of heat exchangers.
fouling organism [ECOL] Any aquatic organism with a sessile adult stage that attaches to and fouls underwater structures of ships.
fouling plates [ENG] Metal plates submerged in water to allow attachment of fouling organisms, which are then analyzed to determine species, growth rate, and growth pattern, as influenced by environmental conditions and time.
fouling point [CIV ENG] **1.** The point at a switch or turnout beyond which railroad cars must be placed so as not to interfere with cars on the main track. **2.** The location of insulated joints in a turnout on signaled tracks.
foundation [CIV ENG] **1.** The ground that supports a building or other structure. **2.** The portion of a structure which transmits the building load to the ground.
foundation coefficient [GEOPHYS] A coefficient which expresses how much stronger the effect of an earthquake is on a given rock than it would be on an undisturbed crystalline rock under the same conditions.
foundation mat *See* raft foundation.
founder [GEOL] To sink under water either by depression of the land or by rise of sea level, especially in reference to large crustal masses, islands, or significant portions of continents.
foundry [ENG] A building where metal or glass castings are produced.
foundry alloy *See* master alloy.
foundry core sand *See* core sand.
foundry engineering [ENG] The science and practice of melting and casting glass or metal.
foundry facing [MET] A material applied to a sand mold to improve the surface quality of a casting.
foundry proofs [GRAPHICS] Proofs of type pages that have been locked up within frames prior to casting; identified by black bands around each page of type, caused by bearers that lend support to the type page when stereotypes or electrotypes are made.
foundry sand [MET] Sand used in foundries to make molds for the casting of metal shapes.
foundry type [GRAPHICS] Type cast as single characters. Also known as hand type.
fountain [GRAPHICS] **1.** In printing, a container or reservoir on a press that contains an ink supply. **2.** In offset lithography, a fountain solution (usually a water-alcohol mixture) that wets the nonprinting areas of the plate.
fountain effect [FL MECH] The effect occurring when two containers of superfluid helium are connected by a capillary tube and one of them is heated, so that helium flows through the tube in the direction of higher temperature.
fourable [PETRO ENG] A section of drill pipe casing or tubing comprising four joints that are screwed together.
fourable board [PETRO ENG] A platform installed in an oil derrick at an elevation of 80–120 feet (24–37 meters) above the derrick floor to support the derrick operator while pipe is being raised or lowered.
four-address [COMPUT SCI] Pertaining to an instruction address which contains four address parts.
four-ball tester [ENG] A machine designed to measure the efficiency of lubricants by driving one ball against three stationary balls clamped together in a cup filled with the lubricant; performance is evaluated by measuring wear-scar diameters on the stationary balls.
four-bar linkage [MECH ENG] A plane linkage consisting of four links pinned tail to head in a closed loop with lower, or closed, joints.
Fourcault process [ENG] A process for forming sheet glass in which the molten glass is drawn vertically upward.
four-channel sound system *See* quadraphonic sound system.
fourchite [PETR] A monchiquite that lacks feldspar and olivine.
four-color printing [GRAPHICS] A method of reproducing full-color originals, such as paintings and color photographs, by overprinting a series of four plates in yellow, magenta, cyan, and black ink.
four-color separation process [GRAPHICS] Conversion of a color illustration into four negative films from which the four printing plates [yellow, magenta, cyan (blue) and black[that will be used in the printing process are made; the negative film for yellow is made by photographing the illustration through a blue filter, the magenta through a green filter, the cyan through a red filter, and the black through a yellow filter.
four-course radio range station [NAV] Radio navigation land station in the aeronautical radio navigation service providing radio equisignal zones.
four-current density [RELAT] A four-vector whose three space components are those of the ordinary current density and whose time component is the charge density.
four-degree calorie [CHEM] The heat needed to change the temperature of 1 gram of water from 3.5 to 4.5°C.
Fourdrinier machine [MECH ENG] A papermaking ma-

FOUR-BAR LINKAGE



Four-bar linkage, a common form of bar linkage. Bars join and pivot at points A,B,C, and D.

chine; a paper web is formed on an endless wire screen; the screen passes through presses and over dryers to the calenders and reels.

four-factor formula [NUCLEO] The principle that the multiplication factor of a thermal reactor with no leakage is the product of the average number of fast neutrons emitted when a nucleus in the fuel material captures a thermal neutron, the fast fission factor, the fraction of neutrons which are not captured while being slowed down, and the number of thermal neutrons absorbed in the fuel divided by the total number of neutrons absorbed in the fuel and the moderator.

four-force [RELAT] A four-vector equal to the product of the rest mass of a particle and the rate of change of its four-momentum with respect to its proper time.

four-frequency diplex telegraphy [COMMUN] Frequency-shift telegraphy in which each of the four possible signal combinations corresponding to two telegraph channels is represented by a separate frequency.

four-hundred-day clock *See* anniversary clock.

fourier *See* thermal ohm.

Fourier analysis [MATH] The study of convergence of Fourier series and when and how a function is approximated by its Fourier series or transform.

Fourier analyzer [ENG] A digital spectrum analyzer that provides push-button or other switch selection of averaging, coherence function, correlation, power spectrum, and other mathematical operations involved in calculating Fourier transforms of time-varying signal voltages for such applications as identification of underwater sounds, vibration analysis, oil prospecting, and brain-wave analysis.

Fourier-Bessel integrals [MATH] Given a function $F(v,\theta)$ independent of θ where v,θ are the polar coordinates in the plane, these integrals have the form

$$\int_0^\infty u\,du \int_0^\infty F(r)\,J_m(ur)\,r\,dr,$$

where J_m is a Bessel function order m.

Fourier-Bessel series [MATH] For a function $f(x)$, the series whose mth term is $a_m J_0(j_m x)$, where $j_1, j_2, \ldots$ are positive zeros of the Bessel function J_0 arranged in ascending order, and a_m is the product of $2/J_1^2(j_m)$ and the integral over t from 0 to 1 of $tf(t)J_0(j_m t)$; J_1 is a Bessel function.

Fourier-Bessel transform *See* Hankel transform.

Fourier expansion *See* Fourier series.

Fourier heat equation *See* Fourier law of heat conduction; heat equation.

Fourier integrals [MATH] For a function $f(x)$ the Fourier integrals are

$$\frac{1}{\pi}\int_0^\infty du \int_{-\infty}^\infty f(t)\cos u(x-t)\,dt,$$

$$\frac{1}{\pi}\int_0^\infty du \int_{-\infty}^\infty f(t)\sin u(x-t)\,dt.$$

Fourier law of heat conduction [THERMO] The law that the rate of heat flow through a substance is proportional to the area normal to the direction of flow and to the negative of the rate of change of temperature with distance along the direction of flow. Also known as Fourier heat equation.

Fourier-Legendre series [MATH] Given a function $f(x)$, the series from $n = 0$ to infinity of $a_n P_n(x)$, where $P_n(x)$, $n = 0,1,2, \ldots$ are the Legendre polynomials, and a_n is the product of $(2n+1)/2$ and the integral over x from -1 to 1 of $f(x)P_n(x)$.

Fourier number [FL MECH] A dimensionless number used in unsteady-state flow problems, equal to the product of the dynamic viscosity and a characteristic time divided by the product of the fluid density and the square of a characteristic length. Symbolized Fo_f. [PHYS] A dimensionless number used in the study of unsteady-state mass transfer, equal to the product of the diffusion coefficient and a characteristic time divided by the square of a characteristic length. Symbolized N_{Fom}. [THERMO] A dimensionless number used in the study of unsteady-state heat transfer, equal to the product of the thermal conductivity and a characteristic time, divided by the product of the density, the specific heat at constant pressure, and the distance from the midpoint of the body through which heat is passing to the surface. Symbolized N_{Foh}.

Fourier series [MATH] The Fourier series of a function $f(x)$ is

$$\frac{1}{2}a_0 + \sum_{n=1}^{\infty}(a_n \cos nx + b_n \sin nx)$$

with

$$a_n = \frac{1}{\pi}\int_{-\pi}^{\pi} f(x)\cos nx\,dx,$$

$$b_n = \frac{1}{\pi}\int_{-\pi}^{\pi} f(x)\sin nx\,dx.$$

Also known as Fourier expansion.

Fourier space [MATH] The space in which the Fourier transform of a function is defined.

Fourier spectrum [PHYS] A plot of the magnitude and phase of the Fourier transform of a function.

Fourier's theorem [MATH] If $f(x)$ satisfies the Dirichlet conditions on the interval $-\pi<x<\pi$, then its Fourier series converges to $f(x)$ for all values of x in this interval at which $f(x)$ is continuous, and approaches $\frac{1}{2}[f(x+0)+f(x-0)]$ at points at which $f(x)$ is discontinuous, where $f(x-0)$ is the limit on the left of f at x and $f(x+0)$ is the limit on the right of f at x.

Fourier-Stieltjes series [MATH] For a function $f(x)$ of bounded variation on the interval $[0,2\pi]$, the series from $n = 0$ to infinity of $c_n \exp(inx)$, where c_n is $1/2\pi$ times the integral from $x = 0$ to $x = 2\pi$ of $\exp(-inx)df(x)$.

Fourier-Stieltjes transform [MATH] For a function $f(y)$ of bounded variation on the interval $(-\infty, \infty)$, the function $F(x)$ equal to $1/\sqrt{2\pi}$ times the integral from $y = -\infty$ to $y = \infty$ of $\exp(-ixy)df(y)$.

Fourier synthesis [MATH] The determination of a periodic function from its Fourier components.

Fourier transform [MATH] For a function $f(t)$, the function $F(x)$ equal to $1/\sqrt{2\pi}$ times the integral over t from $-\infty$ to ∞ of $f(t)\exp(itx)$.

four-layer device [ELECTR] A *pnpn* semiconductor device, such as a silicon controlled rectifier, that has four layers of alternating *p*- and *n*-type material to give three *pn* junctions.

four-layer diode [ELECTR] A semiconductor diode having three junctions, terminal connections being made to the two outer layers that form the junctions; a Shockley diode is an example.

four-layer transistor [ELECTR] A junction transistor having four conductivity regions but only three terminals; a thyristor is an example.

four-level laser [PHYS] A laser in which the lowest level for a laser transition is an excited state rather than the ground level.

fourmarierite [MINERAL] An orange-red to brown mineral composed of a hydrous oxide of lead and uranium.

four-phase modulation [COMMUN] Modulation in which data are encoded on a carrier frequency as a succession of phase shifts that will be 45, 135, 225, or 315°; each phase shift contains 2 bits of information called dibits, as follows: 225° represents 00, 315° is 01, 45° is 11, and 135° is 10.

four-piece set [MIN ENG] Squared timber frame used in underground driving to give all-around support to weak ground.

four-plus-one address [COMPUT SCI] An instruction that contains four operand addresses and a control address.

four-point bearing [NAV] A relative bearing of 045° or 315°.

four-pole double-throw [ELEC] A 12-terminal switch or relay contact arrangement that simultaneously connects two pairs of terminals to either of two other pairs of terminals. Abbreviated 4PDT.

four-quadrant multiplier [COMPUT SCI] A multiplier in an analog computer in which both the reference signal and the number represented by the input may be bipolar, and the multiplication rules for algebraic sign are obeyed. Also known as quarter-square multiplier.

fourré *See* temperate and cold scrub; tropical scrub.

four-stroke cycle [MECH ENG] An internal combustion engine cycle completed in four piston strokes; includes a suction stroke, compression stroke, expansion stroke, and exhaust stroke.

four-tape [COMPUT SCI] To sort input data, supplied on two tapes, into incomplete sequences alternately on two output tapes; the output tapes are used for input on the succeeding pass, resulting in longer and longer sequences after each pass, until the data are all in one sequence on one output tape.

fourth dimension [RELAT] Time in the theory of relativity, in which space and time are conceived as particular aspects of a four-dimensional world.
fourth-power law *See* Stefan-Boltzmann law.
fourth sound [CRYO] A pressure wave which propagates in helium II contained in a porous material such as a tightly packed powder, and which results entirely from motion of the superfluid component, the normal component being immobilized by its viscosity.
four-track tape [ENG ACOUS] Magnetic tape on which two tracks are recorded for each direction of travel, to provide stereo sound reproduction or to double the amount of source material that can be recorded on a given length of 1/4-inch (0.635 centimeter) tape.
four-vector [RELAT] A set of four quantities which transform under a Lorentz transformation in the same way as the three space coordinates and the time coordinate of an event. Also known as Lorentz four-vector.
four-vector potential [ELECTROMAG] A four-vector whose space components are the magnetic vector potential and whose time component is the electric scalar potential.
four-way dip [GEOPHYS] In seismic prospecting, dip determined by an array of geophones which are set up at points in four directions from a shot point; three of the locations are essential and the fourth serves as a control point.
four-velocity [RELAT] A four-vector whose components are the rates of change of the space and time coordinates of a particle with respect to the particle's proper time.
four-way reinforcing [CIV ENG] A system of reinforcing rods in concrete slab construction in which the rods are placed parallel to two adjacent edges and to both diagonals of a rectangular slab.
four-way switch [ELEC] An electric switch employed in house wiring, that makes it possible to turn a light on or off at three or more places.
four-way valve [MECH ENG] A valve at the junction of four waterways which allows passage between any two adjacent waterways by means of a movable element operated by a quarter turn.
four-wheel drive [MECH ENG] An arrangement in which the drive shaft acts on all four wheels of the automobile.
four-wire circuit [COMMUN] A two-way circuit using two paths so arranged that communication currents are transmitted in one direction only on one path, and in the opposite direction on the other path; the transmission path may or may not employ four wires.
four-wire line [ELECTROMAG] A transmission line in which four conductors lie at the corners of a rectangle, and each conductor is in phase with the conductor at the opposite corner and out of phase with the conductors at adjacent corners.
four-wire repeater [ELECTR] Telephone repeater for use in a four-wire circuit and in which there are two amplifiers, one serving to amplify the telephone currents in one side of the four-wire circuit, and the other serving to amplify the telephone currents in the other side of the four-wire circuit.
four-wire subscriber line [COMMUN] Four-wire circuit connecting a subscriber directly to a switching center.
four-wire terminating set [ELECTR] Hybrid arrangement by which four-wire circuits are terminated on a two-wire basis for interconnection with two-wire circuits.
fovea [BIOL] A small depression or pit.
fovea centralis [ANAT] A small, rodless depression of the retina in line with the visual axis, which affords acute vision.
foveal vision [PHYSIO] Vision achieved by looking directly at objects in the daylight so that the image falls on or near the fovea centralis. Also known as photopic vision.
foveola [BIOL] A small pit, especially one in the embryonic gastric mucosa from which gastric glands develop.
foveolate [BIOL] Having small depressions; pitted.
fowan [METEOROL] A dry, scorching wind of Great Britain and the Isle of Man.
fowl [AGR] A domestic cock or hen, especially an adult hen, as chicken or several gallinaceous birds.
Fowler-DuBridge theory [SOLID STATE] Theory of photoelectric emission from a metal based on the Sommerfeld model, which takes into account the thermal agitation of electrons in the metal and predicts the photoelectric yield and the energy spectrum of photoelectrons as functions of temperature and the frequency of incident radiation.
Fowler function [SOLID STATE] A mathematical function used in the Fowler-DuBridge theory to calculate the photoelectric yield.
fowlerite [MINERAL] A zinc-bearing variety of rhodonite.
fowl pox [VET MED] A disease of birds caused by a virus and characterized by wartlike nodules on the skin, particularly on the head.
fox [VERT ZOO] The common name for certain members of the dog family (Canidae) having relatively short legs, long bodies, large erect ears, pointed snouts, and long bushy tails.
Fox broadcast [COMMUN] Radio broadcast of messages for which receiving stations make no acknowledgment.
foxhole [ORD] A small pit used for cover, usually for one or two soldiers, and so constructed that an occupant can fire effectively from it.
fox lathe [MECH ENG] A lathe with chasing bar and leaders for cutting threads; used for turning brass.
foyaite [PETR] A nepheline syenite composed chiefly of potassium feldspar.
fp *See* freezing point.
FP *See* forward perpendicular.
FPLA *See* field-programmable logic array.
F process [MATH] A stochastic process $\{X_t, t>0\}$ whose value at time t is determined by the information up to time t; more precisely, the events $\{X_t \leq a\}$ belong to F_t for every t and a, where $F = \{F_t, t \geq 0\}$ is an increasing family of sigma algebras that represents the amount of information increasing with time.
fps system of units *See* British absolute system of units.
Fr *See* francium; statcoulomb.
fractal [MATH] A geometrical shape whose structure is such that magnification by a given factor reproduces the original object.
fraction [CHEM] One of the portions of a volatile liquid within certain boiling point ranges, such as petroleum naphtha fractions or gas-oil fractions. [MATH] An expression which is the product of a real number or complex number with the multiplicative inverse of a real or complex number. [MET] In powder metallurgy, that portion of sample that lies between two stated particle sizes. Also known as cut. [SCI TECH] A portion of a mixture which represents a discrete unit and can be isolated from the whole system.
fractional condensation [CHEM] Separation of components of vaporized liquid mixtures by condensing the vapors in stages (partial condensation); highest-boiling-point components condense in the first condenser stage, allowing the remainder of the vapor to pass on to subsequent condenser stages.
fractional crystallization [PETR] Separation of a cooling magma into multiple minerals as the different minerals cool and congeal at progressively lower temperatures. Also known as crystallization differentiation; fractionation.
fractional distillation [CHEM] A method to separate a mixture of several volatile components of different boiling points; the mixture is distilled at the lowest boiling point, and the distillate is collected as one fraction until the temperature of the vapor rises, showing that the next higher boiling component of the mixture is beginning to distill; this component is then collected as a separate fraction.
fractional equation [MATH] **1.** Any equation that contains fractions. **2.** An equation in which the unknown variable appears in the denominator of one or more terms.
fractional gas-flow curve [PETRO ENG] Graph of the fraction of free injected gas flowing through a reservoir formation versus the liquid saturation of the gas for various parameter values of oil viscosity; used to calculate displacement efficiency during gas injection.
fractional horsepower motor [ELEC] Any motor built into a frame smaller than that for a motor having an open construction and a continuous rating of 1 horsepower (745.7 watts) at 1800 revolutions per minute.
fractional precipitation [ANALY CHEM] Method for separating elements or compounds with similar solubilities by a series of analytical precipitations, each one improving the purity of the desired element.
fractional sampling [MIN ENG] Mechanical selection of samples of uniformly graded material without segregation.
fractional sine wave [PHYS] A pulse train whose waveform is a truncated sine wave.
fractionating column [CHEM] An apparatus used widely for separation of fluid (gaseous or liquid) components by vapor-liquid fractionation or liquid-liquid extraction or liquid-solid adsorption.

FOX

The gray fox *(Urocyon cineroargenteus)*, similar to the red fox but flecked with gray, found from the Great Lakes to South America.

fractionation [CHEM] Separation of a mixture in successive stages, each stage removing from the mixture some proportion of one of the substances, as by differential solubility in water-solvent mixtures. [NUCLEO] Alterations in the isotopic composition of substances found in nature or in radioactive weapon debris, which result from small differences in the physical and chemical properties of isotopes of an element. [PETR] *See* fractional crystallization.

fraction defective [IND ENG] The number of units per 100 pieces which are defective in a lot; expressed as a decimal.

fractoconformity [GEOL] The relation between conformable strata, where faulting of the older beds occurs at the same time as deposition of the newer beds.

fractography [MET] The microscopic examination of fractured metal surfaces.

fracture [GEOL] A crack, joint, or fault in a rock due to mechanical failure by stress. Also known as rupture. [MED] The breaking of bone, cartilage, or teeth. [MINERAL] A break in a mineral other than along a cleavage plane. [SCI TECH] **1.** The act, process, or state of being broken. **2.** The surface appearance of a freshly broken material. **3.** The break produced by fracturing.

fracture cleavage [GEOL] Cleavage that occurs in deformed but only slightly metamorphosed rocks along closely spaced, parallel joints and fractures.

fractured formation [PETRO ENG] Reservoir formation in which rock has been split by hydraulic pressure produced by injected fluids.

fracture dome [MIN ENG] The zone of loose or semiloose rock which exists in the immediate hanging or footwall of a stope.

fracture plane inclination [GEOL] Gradient or inclination of the plane of fracture formed in a reservoir formation.

fracture strength *See* fracture stress.

fracture stress [MECH] The minimum tensile stress that will cause fracture. Also known as fracture strength.

fracture system [GEOL] A stress-related group of contemporaneous fractures.

fracture test [ENG] **1.** Macro- or microscopic examination of a fractured surface to determine characteristics such as grain pattern, composition, or the presence of defects. **2.** A test designed to evaluate fracture stress.

fracture wear [MECH] The wear on individual abrasive grains on the surface of a grinding wheel caused by fracture.

fracture zone [GEOL] An elongate zone on the deep-sea floor that is of irregular topography and often separates regions of different depths; frequently crosses and displaces the mid-oceanic ridge by faulting.

fractus [METEOROL] A cloud species in which the cloud elements are irregular but generally small in size, and which presents a ragged, shredded appearance, as if torn; these characteristics change ceaselessly and often rapidly.

fragility [SCI TECH] The state or quality of being fragile, that is, brittle or easily broken.

fragility test [PATH] A measure of the resistance of red blood cells to osmotic hemolysis in hypotonic salt solutions of graded dilutions.

fragipan [GEOL] A dense, natural subsurface layer of hard soil with relatively slow permeability to water, mostly because of its extreme density or compactness rather than its high clay content or cementation.

fragment [ORD] **1.** A piece of an exploding or exploded bomb, projectile, or the like. **2.** To break into fragments.

fragmental printing [GRAPHICS] A nonstandard typeface, used for printing large characters, in which the elements of a rectangular grid are either wholly filled, wholly empty, or half filled, with the portion on one side of a diagonal filled and the other half empty.

fragmentation [CYTOL] Amitotic division; a type of asexual reproduction. [MIN ENG] The blasting of coal, ore, or rock into pieces small enough to load, handle, and transport without the need for hand-breaking or secondary blasting. [PSYCH] Disordered behavior and mental processes.

fragmentation ammunition [ORD] Ammunition that is primarily intended to produce a fragmentation effect.

fragmentation bomb [ORD] An item designed to be dropped from aircraft to produce many small, high-velocity fragments when detonated.

fragmentation bomb cluster [ORD] Multiple fragmentation bombs suspended and dropped from a single station of a bomb rack on an airplane.

fragmentation grenade [ORD] A hand grenade designed to fragment, an effective weapon against personnel; since the thrower needs protective cover, it is used primarily for defensive operations, and is often called a defensive grenade.

fragmentation nucleus [METEOROL] A tiny ice particle broken from a large ice crystal, serving as an ice nucleus; that is, a growth center for a new ice crystal.

fragmentation protective body armor [ORD] Armor designed to provide fragmentation protection to vital areas of the body; usually provided in the form of garments which contain steel, nylon, or other resistant materials.

fragmentation test [ORD] A test conducted to determine the number and weight distribution, and (where the method used permits) the velocity and spatial distribution of fragments produced by a projectile or other munition upon detonation.

fragment emission [ORD] In terminal ballistics, the pattern of the fragments upon leaving the exploded projectile or other munition, including the number of fragments and the direction, weight, and velocity of each fragment.

fragmenting [COMPUT SCI] The breaking up of a document into its various components.

fragment simulator projectile [ORD] Projectile which simulates the action of a fragment; used in ballistic tests at the proving ground.

Frahm frequency meter *See* vibrating-reed frequency meter.

frambesia *See* yaws.

framboid [GEOL] A microscopic aggregate of pyrite grains, often occurring in spheroidal clusters.

frame [BUILD] The skeleton structure of a building. Also known as framing. [COMMUN] One cycle of a regularly recurring series of pulses. [COMPUT SCI] **1.** A row of recording or punch positions extending across a magnetic or paper tape in a direction at right angles to its motion. **2.** *See* central processing unit. [ELECTR] **1.** One complete coverage of a television picture. **2.** A rectangular area representing the size of copy handled by a facsimile system. [GRAPHICS] A single complete picture on motion picture film.

frame frequency [ELECTR] The number of times per second that the frame is completely scanned in television. Also known as picture frequency.

frame of reference [PHYS] A coordinate system for the purpose of assigning positions and times to events. Also known as reference frame.

frame period [ELECTR] A time interval equal to the reciprocal of the frame frequency.

framer [ELECTR] Device for adjusting facsimile equipment so the start and end of a recorded line are the same as on the corresponding line of the subject copy.

frame set [MIN ENG] The arrangement of the legs and cap or crossbar so as to provide support for the roof of an underground passage. Also known as framing; set.

frameshift mutation [GEN] A mutation caused by addition or deletion of nucleotides in numbers other than three which shifts the translation reading frame so a new set of codons beyond the point of abnormality in the messenger ribonucleic acid is read. Also known as phase-shift mutation.

framework [ENG] The load-carrying frame of a structure; may be of timber, steel, or concrete. [GEOL] **1.** In a sediment or sedimentary rock, the rigid arrangement created by particles that support one another at contact points. **2.** A fixed calcareous structure impervious to waves, built by sedentary organisms (for example, sponges, corals, and bryozoans) in a high-energy environment.

framework silicate *See* tectosilicate.

framing [BUILD] *See* frame. [ELECTR] **1.** Adjusting a television picture to a desired position on the screen of the picture tube. **2.** Adjusting a facsimile picture to a desired position in the direction of line progression. Also known as phasing. [MIN ENG] *See* frame set.

framing camera [OPTICS] A motion picture camera that automatically controls the position of successive still photographs on the film so that, when the film is subsequently projected, the image will appear steady on the screen.

framing control [ELECTR] **1.** A control that adjusts the centering, width, or height of the image on a television receiver screen. **2.** A control that shifts a received facsimile picture horizontally.

framing imager *See* forward-looking infrared imager.

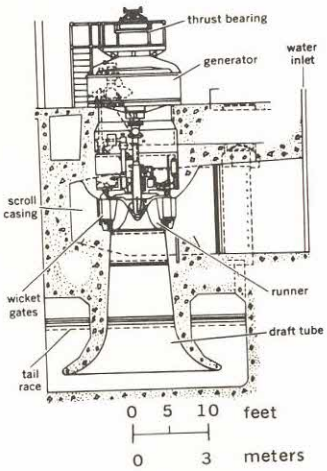
framing plan [NAV ARCH] A diagram showing positions and type of construction of the framing members of a ship.
framing square [DES ENG] A graduated carpenter's square used for cutting off and making notches.
framing table [MIN ENG] An inclined table on which ore slimes are separated by running water.
Francisella [MICROBIO] A genus of gram-negative, aerobic bacteria of uncertain affiliation; cells are small, coccoid to ellipsoidal, pleomorphic rods and can be parasitic on mammals, birds, and arthropods.
Francis formula [FL MECH] An equation for the calculation of water flow rate over a rectangular weir in terms of length and head.
Francis turbine [MECH ENG] A reaction hydraulic turbine of relatively medium speed with radial flow of water in the runner.
francium [CHEM] A radioactive alkali-metal element, symbol Fr, atomic number 87, atomic weight distinguished by nuclear instability; exists in short-lived radioactive forms, the chief isotope being francium-223.
Franck-Condon principle [PHYS CHEM] The principle that in any molecular system the transition from one energy state to another is so rapid that the nuclei of the atoms involved can be considered to be stationary during the transition.
franckeite [MINERAL] A dark-gray or black massive mineral composed of lead antimony tin sulfide.
Franck-Hertz experiment [ELECTR] Experiment for measuring the kinetic energy lost by electrons in inelastic collisions with atoms; it established the existence of discrete energy levels in atoms, and can be used to determine excitation and ionization potentials.
francolite [MINERAL] $Ca_5(PO_4,CO_3)_3(F,OH)$ Colorless fluoride-bearing carbonate-apatite.
Franconian [GEOL] A North American stage of geologic time; the middle Upper Cambrian.
frangible [MECH] Breakable, fragile, or brittle.
frangible bullet [ORD] A brittle plastic or other nonmetallic bullet for firing practice which, upon striking a target, breaks into powder or small fragments without penetrating.
frangible grenade [ORD] Improvised incendiary hand grenade consisting of a glass container filled with a flammable liquid, with an igniter attached, and which breaks and ignites upon striking a resistant target, such as a tank.
frangula emodin *See* emodin.
frangulic acid *See* emodin.
Frankfurt horizontal *See* eye-ear plane.
Frankia [MICROBIO] The single genus of the family Frankiaceae.
Frankiaceae [MICROBIO] A family of bacteria in the order Actinomycetales; filamentous cells form true mycelia; they are symbiotic and found in active, nitrogen-fixing root nodules.
frankincense *See* olibanum.
frankincense oil *See* olibanum oil.
Frankland's method [ORG CHEM] Reaction of dialkyl zinc compounds with alkyl halides to form hydrocarbons; may be used to form paraffins containing a quaternary carbon atom.
franklin *See* statcoulomb.
Franklin centimeter [ELEC] A unit of electric dipole moment, equal to the dipole moment of a charge distribution consisting of positive and negative charges of 1 statcoulomb separated by a distance of 1 centimeter.
Franklin equation [ENG ACOUS] An equation for intensity of sound in a room as a function of time after shutting off the source, involving the volume and exposed surface area of the room, the speed of sound, and the mean sound-absorption coefficient.
franklinite [MINERAL] $ZnFe_2O_4$ Black, slightly magnetic mineral member of the spinel group; usually possesses extensive substitution of divalent manganese and iron for the divalent zinc, and limited trivalent manganese for the trivalent iron.
Frank partial dislocation [CRYSTAL] A partial dislocation whose Burger's vector is not parallel to the fault plane, so that it can only diffuse and not glide, in contrast to a Schockley partial dislocation.
Frank-Read source [MET] **1.** The creation of dislocations by application of shear stress to an edge dislocation anchored terminally, causing formation of an unstable loop form followed by formation of a closed dislocation line and the establishment of the original condition. **2.** One of the sources of dislocations in a plastically deforming metal.
Franz-Keldysh effect [OPTICS] A shift to longer wavelength in the spectrum transmitted by a semiconductor when a strong electric field is applied.
Frary metal [MET] Metal containing 97–98% lead alloyed with 1–2% barium and calcium; used for bearings.
Frasch process [MIN ENG] A process to remove sulfur from sulfur beds; superheated water is forced under pressure into the sulfur bed, and the molten sulfur is thus forced to the surface.
Fraser's air-sand process [MIN ENG] A process in which dry, specific-gravity separation of coal from refuse is achieved by utilizing a flowing dense medium intermediate in density between coal and refuse.
fraternal twins *See* dizygotic twins.
Fraude's reagent *See* perchloric acid.
fraunhofer [SPECT] A unit for measurement of the reduced width of a spectrum line such that a spectrum line's reduced width in fraunhofers equals 10^6 times its equivalent width divided by its wavelength.
Fraunhofer corona *See* F corona.
Fraunhofer diffraction [OPTICS] Diffraction of a beam of parallel light observed at an effectively infinite distance from the diffracting object, usually with the aid of lenses which collimate the light before diffraction and focus it at the point of observation.
Fraunhofer lines [SPECT] The dark lines constituting the Fraunhofer spectrum.
Fraunhofer region [ELECTROMAG] The region far from an antenna compared to the dimensions of the antenna and the wavelength of the radiation. Also known as far field; far region; far zone; radiation zone.
Fraunhofer spectrum [SPECT] The absorption lines in sunlight, due to the cooler outer layers of the sun's atmosphere.
Frazer-Brace extraction method [CHEM ENG] A method used to extract oil from citrus fruit; utilizes a machine which has abrasive carborundum rolls to rasp the peel from the fruit under a water spray; the water-and-peel mixture is screened and settled to allow oil separation.
frazil [HYD] Ice crystals which form in supercooled water that is too turbulent to permit coagulation of the crystals into sheet ice.
frazil ice [HYD] A spongy or slushy accumulation of frazil in a body of water. Also known as needle ice.
freckle [MED] A pigmented macule resulting from focal increase in melanin, usually associated with exposure to sunlight, commonly on the face.
Fredholm determinant [MATH] A power series obtained from the function $K(x,y)$ of the Fredholm equation which provides solutions to the equation under certain conditions.
Fredholm integral equations [MATH] Given functions $f(x)$ and $K(x,y)$, the Fredholm integral equations with unknown function y are

$$\text{type 1: } f(x) = \int_a^b K(x,t)\, y(t)\, dt, \text{ and}$$

$$\text{type 2: } y(x) = f(x) + \lambda \int_a^b K(x,t)\, y(t)\, dt.$$

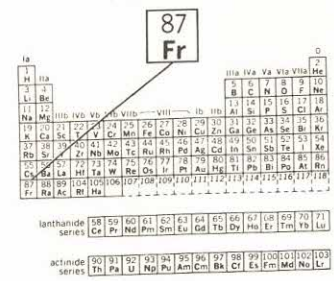
Fredholm operator [MATH] A linear operator between Banach spaces which has closed range, and both the Fredholm operator and its adjoint have finite dimensional null space.
Fredholm theorem [MATH] A Fredholm equation of type 2 with continuous $f(x)$ has a unique continuous solution, or else the corresponding equation of type 1 has a positive number of linearly independent solutions.
Fredholm theory [MATH] The study of the solutions of the Fredholm equations.
free admittance [ELEC] The reciprocal of the blocked impedance of a transducer.
free air *See* free atmosphere.
free-air anomaly [GEOPHYS] A gravity anomaly calculated as the difference between the measured gravity and the theoretical gravity at sea level and a free-air coefficient determined by the elevation of the measuring station.
free-air gravity anomaly [GEOPHYS] A measure of the mass excesses and deficiencies within the earth; calculated as the difference between the measured gravity and the theoretical gravity at sea level and a free-air coefficient determined by the elevation of the measuring station.
free-air temperature [METEOROL] Temperature of the atmosphere, obtained by a thermometer located so as to avoid as completely as practicable the effects of extraneous heating.

FRANCIS TURBINE



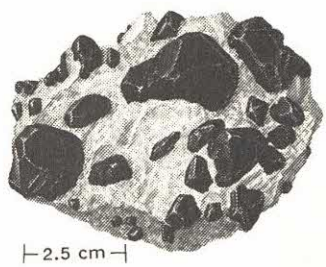
Cross section of a Francis turbine installation.

FRANCIUM



Periodic table of the chemical elements showing the position of francium.

FRANKLINITE



Franklinite crystals in calcite, Franklin, New Jersey. *(Specimen from Department of Geology, Bryn Mawr College)*

FRAUNHOFER DIFFRACTION

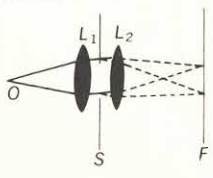


Diagram of Fraunhofer diffraction, with circular aperture. Light source O lies at the principal focus of lens L_1, which renders light parallel as it falls on aperture S. The second lens L_2 focuses parallel diffracted beams on observing screen F.

free ascent [ENG] Emergency ascent by a diver by floating to the surface through natural buoyancy or through assisted buoyancy with a life jacket.

free association [PSYCH] **1.** Spontaneous, consciously unrestricted association of ideas or mental images. **2.** A method used in psychoanalysis to gain an understanding of the organization of the content of the mind.

free atmosphere [GEOPHYS] That portion of the earth's atmosphere, above the planetary boundary layer, in which the effect of the earth's surface friction on the air motion is negligible and in which the air is usually treated (dynamically) as an ideal fluid. Also known as free air.

free atom [ATOM PHYS] An atom, as in a gas, whose properties, such as spectrum and magnetic moment, are not significantly affected by other atoms, ions, or molecules nearby.

free balloon [AERO ENG] A balloon that ascends without a tether, propulsion or guidance; it is made to descend by the release of gas.

freeboard [ANALY CHEM] The space provided above the resin bed in an ion-exchange column to allow for expansion of the bed during backwashing. [CIV ENG] The height between normal water level and the crest of a dam or the top of a flume. [NAV ARCH] The vertical distance from the intersection of the top of the freeboard deck amidships with the outer surface of the side plating to the upper edge of the summer load line, or in general terms, the distance from the waterline to the deck.

freeboard deck [NAV ARCH] The lowest exposed deck of a ship, below which all bulkheads must be made watertight.

free-burning coal *See* noncaking coal.

free carbon [MET] Elemental carbon present in a metal in an uncombined state.

free charge [ELEC] Electric charge which is not bound to a definite site in a solid, in contrast to the polarization charge.

free convection *See* natural convection.

free convection number *See* Grashof number.

free crushing [MIN ENG] Crushing under conditions of speed and feed so that there is ample room for the fine ore to fall away from the coarser material and thereby escape further crushing.

free-cutting steel [MET] Steel that contains a higher percentage of sulfur than carbon steel, making it very easy to machine.

free cyanide [CHEM] Cyanide not combined as part of an ionic complex.

free diving [ENG] Diving with the use of scuba equipment to allow freedom and maneuverability.

freedom to mine [MIN ENG] The law by which anybody has the right to mine certain minerals when he has prospected for them and has filed a proper application for the right to mine them.

free-drop [ENG] To air-drop supplies or equipment without parachute.

free electromagnetic field [ELECTROMAG] An electromagnetic field in empty space that does not interact with matter.

free electron [PHYS] An electron that is not constrained to remain in a particular atom, and is therefore able to move in matter or in a vacuum when acted on by external electric or magnetic fields.

free-electron theory of metals [SOLID STATE] A model of a metal in which the free electrons, that is, those giving rise to the conductivity, are regarded as moving in a potential (due to the metal ions in the lattice and to all the remaining free electrons) which is approximated as constant everywhere inside the metal. Also known as Sommerfeld model; Sommerfeld theory.

free end *See* free face.

free energy [THERMO] **1.** The internal energy of a system minus the product of its temperature and its entropy. Also known as Helmholtz free energy; Helmholtz function; Helmholtz potential; thermodynamic potential at constant volume; work function. **2.** *See* Gibbs free energy.

free enthalpy *See* Gibbs free energy.

free face [MIN ENG] The exposed surface of a mass of rock or of coal. Also known as free end.

free fall [MECH] The ideal falling motion of a body acted upon only by the pull of the earth's gravitational field. [PETRO ENG] In deep drilling, an arrangement by which the bit is permitted to fall freely to the bottom at each drop or down stroke.

free falling [MECH ENG] In ball milling, the peripheral speed at which part of the crop load breaks clear on the ascending side and falls clear to the toe of the charge.

free-fed [MIN ENG] In comminution, pertaining to rolls fed only enough ore to maintain a ribbon of material between them.

free ferrite [MET] Relatively pure metallic iron phase present in steel or cast iron.

free field [ACOUS] An isotropic, homogeneous sound field that is free from all bounding surfaces. [COMPUT SCI] A property of information retrieval devices which permits recording of information in the search medium without regard to preassigned fixed fields. [PHYS] A field in empty space not interacting with other fields or sources.

free-field room *See* anechoic chamber.

free-field storage [COMPUT SCI] Data storage that allows recording of the data without regard for fixed or preassigned fields.

free fit [DES ENG] A fit between mating pieces where accuracy is not essential or where large variations in temperature may occur.

free flight [MECH] Unconstrained or unassisted flight.

free-flight angle [MECH] The angle between the horizontal and a line in the direction of motion of a flying body, especially a rocket, at the beginning of free flight.

free-flight melt spinning [MET] Rapid-quenching process in which the molten metal is forced through an orifice under pressure and the jet is solidified while in free flight; quench rates reach 1000 K per second.

free-flight trajectory [MECH] The path of a body in free fall.

free foehn *See* high foehn.

free gas [PETRO ENG] A hydrocarbon that exists in the gaseous phase at reservoir pressure and temperature and remains a gas when produced under normal conditions. [PHYS] Any gas at any pressure not in solution, or mechanically held in the liquid hydrocarbon phase.

free-gas saturation [PETRO ENG] Proportion of oil-reservoir pore structure saturated by free (undissolved) gas.

free gold [MET] Gold that is in the free state, that is, not combined with other substances.

free grid *See* floating grid.

free group [MATH] A group whose generators satisfy the equation $x \circ y = e$ (e is the identity element in the group) only when $x = y^{-1}$ or $y = x^{-1}$.

free gyroscope [ENG] A gyroscope that uses the property of gyroscopic rigidity to sense changes in altitude of a machine, such as an airplane; the spinning wheel or rotor is isolated from the airplane by gimbals; when the plane changes from level flight, the gyro remains vertical and gives the pilot an artificial horizon reference.

free hole [SOLID STATE] Any hole which is not bound to an impurity or to an exciton.

free impedance [ELECTR] Impedance at the input of the transducer when the impedance of its load is made zero. Also known as normal impedance.

freeing port [NAV ARCH] An opening in a ship's side, at the level of the deck or in the bulwark, to allow water to escape.

free instruments [ENG] Instruments designed to initially sink to the ocean bottom, release their ballast, and then rise to the surface where they are retrieved with their acquired payload.

free ion [PHYS CHEM] An ion, such as found in an ionized gas, whose properties, such as spectrum and magnetic moment, are not significantly affected by other atoms, ions, or molecules nearby.

free-machining steel [MET] Steel to which impurities have been added to improve machinability.

Freeman-Nichols roaster [MIN ENG] A unit in which pyrite flotation concentrates are flash-roasted.

freemartin [VERT ZOO] An intersexual, usually sterile female calf twinborn with a male.

free meander [HYD] A stream meander that displaces itself very easily by lateral corrasion.

free milling [MIN ENG] A process applied to ores which contain free gold or silver and can be reduced by crushing and amalgamation (by gravity or on blankets), without roasting or other chemical treatment.

free-milling gold [MET] Gold that has a clean surface so that it readily amalgamates with mercury (by gravity or on blankets) after liberation by comminution.

free-milling ore [MIN ENG] Ore containing gold which can be caught with mercury by a variety of gravity processes or on blankets.

free module [MATH] A module which is a free group with respect to its additive group.
free molecule [PHYS CHEM] A molecule, as in a gas, whose properties, such as spectrum and magnetic moment, are not affected by other atoms, ions, and molecules nearby.
free molecule flow [PHYS] Flow of a gas in which the mean free path of the molecules is long compared to a characteristic dimension of the flow field, such as the diameter of a tube through which gas is flowing. Also known as Knudsen flow.
free motional impedance [ELECTR] Of a transducer, the complex remainder after the blocked impedance has been subtracted from the free impedance.
free oscillation [PHYS] The oscillation of a physical system with no externally applied stimuli. Also known as free vibration.
free-pendulum clock *See* Shortt clock.
free-piston engine [MECH ENG] A prime mover utilizing free-piston motion controlled by gas pressure in the cylinders.
free port [CIV ENG] An isolated, enclosed, and policed port in or adjacent to a port of entry, without a resident population.
free progressive wave [PHYS] A wave in a medium or in vacuum, free from boundary effects. Also known as free wave.
free radical [CHEM] An atom or a diatomic or polyatomic molecule which possesses at least one unpaired electron. [ORG CHEM] A species which is uncharged and possesses one or more unpaired electrons. Also known as a radical.
free recoil [ORD] The movement in recoil of the recoiling parts of a gun, if unimpeded by resistances such as springs or pneumatic pressure; it is a theoretical term used in recoil mechanism design.
free-recoil mount [ORD] A proving ground gun mount designed to closely approximate free-recoil conditions; used for determining design information.
free recombination [GEN] Genetic recombination having a frequency of 50%, that is, occurring by independent reassortment.
free rocket [ORD] A rocket having fixed fins but no control surface, that is, no provision for guidance.
free run [ORD] As applied to guns, the travel of a projectile from its original position in the gun chamber until it engages with the rifling in the gun bore.
free-running frequency [ELECTR] Frequency at which a normally driven oscillator operates in the absence of a driving signal.
free-running multivibrator *See* astable multivibrator.
free-running sweep [ELECTR] Sweep triggered continuously by an internal trigger generator.
free settling [MIN ENG] In classification, the free fall of particles through fluid media.
free sheet [GRAPHICS] A type of paper free of mechanical pulp.
free space [COMMUN] A region high enough so that the radiation pattern of an antenna is not affected by surrounding objects such as buildings, trees, hills, and the earth.
free-space field intensity [ELECTROMAG] Radio field intensity that would exist at a point in a uniform medium in the absence of waves reflected from the earth or other objects.
free space loss [ELECTROMAG] The theoretical radiation loss, depending only on frequency and distance, that would occur if all variable factors were disregarded when transmitting energy between two antennas.
free-space propagation [ELECTROMAG] Propagation of electromagnetic radiation over a straight-line path in a vacuum or ideal atmosphere, sufficiently removed from all objects that affect the wave in any way.
free-space radar equation [ELECTROMAG] Equation that governs a radar signal characteristic when it is propagated between a radar set and a reflecting object or target in otherwise empty space.
free-space radiation pattern [ELECTROMAG] Radiation pattern that an antenna would have if it were in free space where there is nothing to reflect, refract, or absorb the radiated waves.
free space wave [ELECTROMAG] An electromagnetic wave propagating in a vacuum, free from boundary effects.
freestone [BOT] A fruit stone to which the fruit does not cling, as in certain varieties of peach. [GEOL] Stone, particularly a thick-bedded, even-textured, fine-grained sandstone, that breaks freely and is able to be cut and dressed with equal facility in any direction without tending to split.
free-stream Mach number [AERO ENG] The Mach number of the total airframe (entire aircraft) as contrasted with the local Mach number of a section of the airframe.
free surface [FL MECH] A boundary between two homogeneous fluids.
free-swelling index [ENG] A test for measuring the free-swelling properties of coal; consists of heating 1 gram of pulverized coal in a silica crucible over a gas flame under prescribed conditions to form a coke button, the size and shape of which are then compared with a series of standard profiles numbered 1 to 9 in increasing order of swelling.
free symbol [COMPUT SCI] A contextual symbol preceded and followed by a space; it is always meaningful and always used to symbolize both grammatical and nongrammatical meaning; an example is the English "I."
free symbol sequence [COMPUT SCI] A symbol sequence either not preceded, or not followed, or neither preceded nor followed by space.
Free test [PATH] Demonstration of a delayed hypersensitivity reaction to Bedsonia antigen in the diagnosis of lymphogranuloma venereum.
free-traveling wave *See* progressive wave.
free tree [MATH] A tree graph in which there is no node which is distinguished as the root.
free turbine [MECH ENG] In a turbine engine, a turbine wheel that drives the output shaft and is not connected to the shaft driving the compressor.
free vector [MECH] A vector whose direction in space is prescribed but whose point of application and line of application are not prescribed.
free vibration *See* free oscillation.
free volume [STAT MECH] In a lattice theory of a dense gas or liquid, the volume of the cage in which a given molecule is free to wander when its nearest neighbors are fixed at their lattice positions.
free vortex [FL MECH] Two-dimensional fluid flow in which the fluid moves in concentric circles at speeds inversely proportional to the radii of the circles.
free wall [MIN ENG] The wall of an ore vein filling which scales off cleanly from the gouge.
free-water content *See* water content.
free-water elevation *See* water table.
free-water surface *See* water table.
free wave *See* free progressive wave.
freeze [ENG] **1.** To permit drilling tools, casing, drivepipe, or drill rods to become lodged in a borehole by reason of caving walls or impaction of sand, mud, or drill cuttings, to the extent that they cannot be pulled out. Also known as bind-seize. **2.** To burn in a bit. Also known as burn-in. **3.** The premature setting of cement, especially when cement slurry hardens before it can be ejected fully from pumps or drill rods during a borehole cementation operation. **4.** The act or process of drilling a borehole by utilizing a drill fluid chilled to minus 30–40°F, (minus 34–40°C) as a means of consolidating, by freezing, the borehole wall materials or core as the drill penetrates a water-saturated formation, such as sand or gravel. [PHYS CHEM] To solidify a liquid by removal of heat.
freeze drying [ENG] A method of drying materials, such as certain foods, that would be destroyed by the loss of volatile ingredients or by drying temperatures above the freezing point; the material is frozen under high vacuum so that ice or other frozen solvent will quickly sublime and a porous solid remain.
freeze etching [CRYO] A method using cryogenics to prepare specimens for study with a microscope.
freeze-out lake [HYD] A shallow lake which may be deeply frozen over for long periods of time.
freezer [MECH ENG] An insulated unit, compartment, or room in which perishable foods are quick-frozen and stored.
freeze sinking [MIN ENG] A method of shaft sinking in waterlogged strata by the use of cold brine circulating through a system of pipes until an ice wall is formed. Also known as freezing method.
freeze-up [HYD] The formation of a continuous ice cover on a body of water. [MECH ENG] Abnormal operation of a refrigerating unit because ice has formed at the expansion device.
freezing drizzle [METEOROL] Drizzle that falls in liquid form but freezes upon impact with the ground to form a coating of glaze.
freezing level [METEOROL] The lowest altitude in the atmosphere over a given location, at which the air temperature is 0°C; the height of the 0°C constant-temperature surface.

freezing-level chart [METEOROL] A synoptic chart showing the height of the 0°C constant-temperature surface by means of contour lines.

freezing method *See* freeze sinking.

freezing microtome [ENG] A microtome used to cut frozen tissue.

freezing mixture [PHYS CHEM] A mixture of substances whose freezing point is lower than that of its constituents.

freezing nucleus [METEOROL] Any particle which, when present within a mass of supercooled water, will initiate growth of an ice crystal about itself.

freezing point [PHYS CHEM] The temperature at which a liquid and a solid may be in equilibrium. Abbreviated fp.

freezing-point depression [PHYS CHEM] The lowering of the freezing point of a solution compared to the pure solvent; the depression is proportional to the active mass of the solute in a given amount of solvent.

freezing precipitation [METEOROL] Any form of liquid precipitation that freezes upon impact with the ground or exposed objects; that is, freezing rain or freezing drizzle.

freezing rain [METEOROL] Rain that falls in liquid form but freezes upon impact to form a coating of glaze upon the ground and on exposed objects.

Fregatidae [VERT ZOO] Frigate birds or man-o'-war birds, a family of fish-eating birds in the order Pelecaniformes.

F region [GEOPHYS] The general region of the ionosphere in which the F_1 and F_2 layers tend to form.

freibergite [MINERAL] A steel-gray, silver-bearing variety of tetrahedrite.

freieslebenite [MINERAL] $Pb_3Ag_5Sb_5S_{12}$ A steel-gray to dark mineral composed of a sulfide of antimony, lead, and silver.

freight car [ENG] A railroad car in or on which freight is transported.

freighter [ENG] A ship or aircraft used mainly for carrying freight.

freight ton *See* ton.

freirinite [MINERAL] $Na_3Cu_3(AsO_4)_2(OH)_3 \cdot H_2O$ A lavender to turquoise-blue mineral composed of a basic hydrous arsenate of sodium and copper.

fremontite *See* natromontebrasite.

Frenatae [INV ZOO] The equivalent name for Heteroneura.

french [MECH] A unit of length used to measure small diameters, especially those of fiber optic bundles, equal to ⅓ millimeter.

French chalk [MATER] Finely ground talc.

french coupling [DES ENG] A coupling having both right- and left-handed threads.

french curve [GRAPHICS] A guide, usually made of clear plastic, used for making regular, irregular, and reverse curves in mechanical drawings and illustrations.

French drain [CIV ENG] An underground passage for water, consisting of loose stones covered with earth.

French measles *See* rubella.

French polish [MATER] Shellac dissolved in methylated spirits.

Frenet-Serret formulas [MATH] Formulas in the theory of space curves, which give the directional derivatives of the unit vectors along the tangent, principal normal and binormal of a space curve in the direction tangent to the curve. Also known as Serret-Frenet formulas.

Frenkel defect [SOLID STATE] A crystal defect consisting of a vacancy and an interstitial which arise when an atom is plucked out of a normal lattice site and forced into an interstitial position. Also known as Frenkel pair.

Frenkel exciton [SOLID STATE] A tightly bound exciton in which the electron and the hole are usually on the same atom, although the pair can travel anywhere in the crystal.

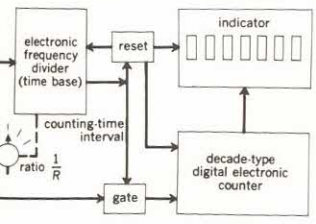
Frenkel-Halsey-Hill isotherm equation [PHYS] An equation for the volume v of a gas adsorbed on a surface at a given temperature, $\ln (p/p_o) = k/v^s$, where p is the pressure of the gas, p_o is the vapor pressure, and k and s are constants.

Frenkel pair *See* Frenkel defect.

frenulum [ANAT] **1.** A small fold of integument or mucous membrane. **2.** A small ridge on the upper part of the anterior medullary velum. [INV ZOO] A spine on most moths that projects from the hindwings and is held to the forewings by a clasp, thus coupling the wings together.

frenum [ANAT] A fold of tissue that restricts the movements of an organ.

FREQUENCY COUNTER



lock diagram of electronic gital counter.

frequency [PHYS] The number of cycles completed by a periodic quantity in a unit time.

frequency agility [ORD] The ability to shift the frequency of a radar transmitter rapidly and continually in order to avoid jamming by the enemy, to reduce mutual interference with friendly sources, to enhance echoes from targets, or to provide the required patterns of electronic countermeasures or electronic counter-countermeasures radiation.

frequency allocation [COMMUN] Assignment of available frequencies in the radio spectrum to specific stations and for specific purposes, to give maximum utilization of frequencies with minimum interference between stations.

frequency analysis [COMPUT SCI] A determination of the number of times certain parts of an algorithm are executed, indicating which parts of the algorithm consume large quantities of time and hence where efforts should be directed toward improving the algorithm.

frequency analyzer [ELECTR] A device which measures the intensity of many different frequency components in some oscillation, as in a radio band; used to identify transmitting sources.

frequency-azimuth intensity [ELECTR] Type of radar display in which frequency, azimuth, and strobe intensity are correlated.

frequency band [PHYS] A continuous range of frequencies extending between two limiting frequencies.

frequency bridge [ELECTR] A bridge in which the balance varies with frequency in a known manner, such as the Wien bridge; used to measure frequency.

frequency carrier system [COMMUN] A form of frequency division multiplex in which intelligence is carried on subcarriers.

frequency changer *See* frequency converter.

frequency-changer station [ELEC] An installation at which power is transmitted between two alternating-current electric power systems operating at different frequencies by a direct-current link.

frequency characteristic *See* frequency-response curve.

frequency coding [PHYSIO] A means by which the central nervous system analyzes the content of a receptor message; the frequency of discharged impulses is a function of the rate of rise of the generator current and indirectly of the stimulus strength; the greater the stimulus intensity, the higher the impulse frequency of the message.

frequency compensation *See* compensation.

frequency conversion [ELECTR] Converting the carrier frequency of a received signal from its original value to the intermediate frequency value in a superheterodyne receiver.

frequency converter [ELEC] A circuit, device, or machine that changes an alternating current from one frequency to another, with or without a change in voltage or number of phases. Also known as frequency changer; frequency translator.

frequency counter [ELECTR] An electronic counter used to measure frequency by counting the number of cycles in an electric signal during a preselected time interval.

frequency curve [STAT] A graphical representation of a continuous frequency distribution; the value of the variable is the abscissa and the frequency is the ordinate.

frequency cutoff [ELECTR] The frequency at which the current gain of a transistor drops 3 decibels below the low-frequency gain value.

frequency deviation [COMMUN] The peak difference between the instantaneous frequency of a frequency-modulated wave and the carrier frequency.

frequency discriminator [ELECTR] A discriminator circuit that delivers an output voltage which is proportional to the deviations of a signal from a predetermined frequency value.

frequency distortion [ELECTR] Distortion in which the relative magnitudes of the different frequency components of a wave are changed during transmission or amplification. Also known as amplitude distortion; amplitude-frequency distortion; waveform-amplitude distortion.

frequency distribution [MATH] A function which measures the relative frequency or probability that a variable can take on a set of values.

frequency diversity [COMMUN] Diversity reception involving the use of carrier frequencies separated 500 hertz or more and having the same modulation, to take advantage of the fact that fading does not occur simultaneously on different frequencies.

frequency divider [ELECTR] A harmonic conversion transducer in which the frequency of the output signal is an integral submultiple of the input frequency. Also known as counting-down circuit.

frequency-division data link [COMMUN] Data link using frequency division techniques for channel spacing.

frequency-division multiplexing [COMMUN] A multiplex system for transmitting two or more signals over a common path by using a different frequency band for each signal. Abbreviated fdm. Also known as frequency multiplexing.

frequency domain [COMMUN] A plane on which signal strength can be represented graphically as a function of frequency, instead of a function of time. [CONT SYS] Pertaining to a method of analysis, particularly useful for fixed linear systems in which one does not deal with functions of time explicitly, but with their Laplace or Fourier transforms, which are functions of frequency.

frequency-domain reflectometer [ELECTROMAG] A tuned reflectometer used for measuring reflection coefficients and impedance of waveguides over a wide frequency range, by sweeping a band of frequencies and analyzing the reflected returns.

frequency doubler [ELECTR] An amplifier stage whose resonant anode circuit is tuned to the second harmonic of the input frequency; the output frequency is then twice the input frequency. Also known as doubler.

frequency drift [ELECTR] A gradual change in the frequency of an oscillator or transmitter due to temperature or other changes in the circuit components that determine frequency.

frequency-exchange signaling [COMMUN] Signaling in which the change from one signaling condition to another is accompanied by decay in amplitude of one or more other frequencies.

frequency factor [PHYS CHEM] The constant A (or ν) in the Arrhenius equation, which is the relation between reaction rate and absolute temperature T; the equation is $k = Ae - \Delta H_{act}/RT$, where k is the specific rate constant, ΔH_{act} is the heat of activation, and R is the gas constant.

frequency frogging [COMMUN] Interchanging of frequency allocations for carrier channels to prevent singing, reduce crosstalk, and reduce the need for equalization; modulators in each repeater translate a low-frequency group to a high-frequency group, and vice versa.

frequency function *See* probability density function.

frequency interlace [COMMUN] Carrier chrominance signal frequency chosen so I and J sidebands are interwoven with luminance sidebands in the same bandwidth and in a manner that causes no mutual interference.

frequency locus [CONT SYS] The path followed by the frequency transfer function or its inverse, either in the complex plane or on a graph of amplitude against phase angle; used in determining zeros of the describing function.

frequency meter [ENG] **1.** An instrument for measuring the frequency of an alternating current; the scale is usually graduated in hertz, kilohertz, and megahertz. **2.** A device calibrated to indicate frequency of a radio wave.

frequency mixing [OPTICS] The combination of two or more electromagnetic waves in a nonlinear medium to form another wave whose frequency is a sum or difference of the frequencies of the incident waves.

frequency-modulated carrier current telephony [COMMUN] Telephony involving the use of a frequency-modulated carrier signal transmitted over power-line wires or other wires.

frequency-modulated cyclotron *See* synchrocyclotron.

frequency-modulated jamming [ELECTR] Jamming technique consisting of a constant amplitude radio-frequency signal that is varied in frequency about a center frequency to produce a signal over a band of frequencies.

frequency-modulated laser [OPTICS] A helium-neon or other laser in which an ultrasonic modulation cell is used to impress a frequency-modulated video signal on the output beam of the laser.

frequency-modulated radar [ENG] Form of radar in which the radiated wave is frequency modulated, and the returning echo beats with the wave being radiated, thus enabling range to be measured.

frequency modulation [COMMUN] Modulation in which the instantaneous frequency of the modulated wave differs from the carrier frequency by an amount proportional to the instantaneous value of the modulating wave. Abbreviated FM.

frequency-modulation broadcast band [COMMUN] The band of frequencies extending from 88 to 108 megahertz; used for frequency-modulation radio broadcasting in the United States.

frequency-modulation detector [ELECTR] A device, such as a Foster-Seely discriminator, for the detection or demodulation of a frequency-modulated wave.

frequency-modulation Doppler [ENG] Type of radar involving frequency modulation of both carrier and modulation on radial sweep.

frequency modulation–frequency modulation [COMMUN] System in which frequency modulated subcarriers are used to frequency modulate a second carrier.

frequency-modulation laser [OPTICS] Conventional laser containing a phase modulator inside its Fabry-Perot cavity; characterized by the lack of noise resulting from the random fluctuation in the phase in the various modes.

frequency-modulation noise level on carrier [COMMUN] Residual frequency modulation resulting from disturbance produced in an aural transmitter operating within the band of 50 to 15,000 hertz.

frequency modulation–phase modulation [COMMUN] System in which the several frequency-modulated subcarriers are used to phase modulate a second carrier.

frequency-modulation receiver [ELECTR] A radio receiver that receives frequency-modulated waves and delivers corresponding sound waves.

frequency-modulation receiver deviation sensitivity [ELECTR] Least frequency deviation that produces a specified output power.

frequency-modulation transmitter [ELECTR] A radio transmitter that transmits a frequency-modulated wave.

frequency-modulation tuner [ELECTR] A tuner containing a radio-frequency amplifier, converter, intermediate-frequency amplifier, and demodulator for frequency-modulated signals, used to feed a low-level audio-frequency signal to a separate af amplifer and loudspeaker.

frequency modulator [ELECTR] A circuit or device for producing frequency modulation.

frequency monitor [ELECTR] An instrument for indicating the amount of deviation of the carrier frequency of a transmitter from its assigned value.

frequency multiplexing *See* frequency-division multiplexing.

frequency multiplier [ELECTR] A harmonic conversion transducer in which the frequency of the output signal is an exact integral multiple of the input frequency. Also known as multiplier.

frequency offset [COMMUN] **1.** Change in the frequency received on a transmission line from that which was transmitted, which can occur if suppressed-carrier multiplexing is used, and may result in errors. **2.** A small difference in the carrier frequencies of television stations in adjacent cities operating on the same channel.

frequency-offset transponder [ELECTR] Transponder that changes the signal frequency by a fixed amount before retransmission.

frequency optimum traffic *See* optimum working frequency.

frequency polygon [STAT] A graph obtained from a frequency distribution by joining with straight lines points whose abscissae are the midpoints of successive class intervals and whose ordinates are the corresponding class frequencies.

frequency prediction chart [COMMUN] Graph showing curve for the maximum usable frequency, frequency optimum traffic, and lowest usable frequency between two specific points for various times throughout a 24-hour period.

frequency pulling [ELECTR] A change in the frequency of an oscillator due to a change in load impedance.

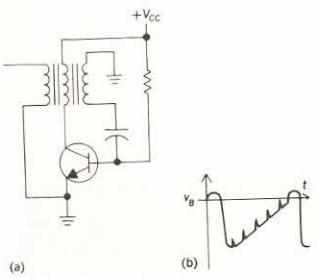
frequency recorder [ELEC] An instrument which uses a frequency bridge to sense the frequency of an alternating current, and which makes a graphical record of this frequency as a function of time.

frequency regulator [ELEC] A device that maintains the frequency of an alternating-current generator at a predetermined value.

frequency relay [ELECTR] Relay which functions at a predetermined value of frequency; may be an over-frequency relay, an under-frequency relay, or a combination of both.

frequency response [ENG] A measure of the effectiveness with which a circuit, device, or system transmits the different frequencies applied to it; it is a phasor whose magnitude is the

FREQUENCY DIVIDER

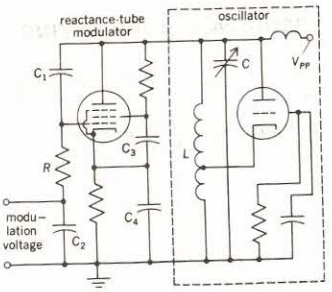


The blocking oscillator as a frequency divider. *(a)* Circuit. *(b)* Base voltage.

FREQUENCY METER

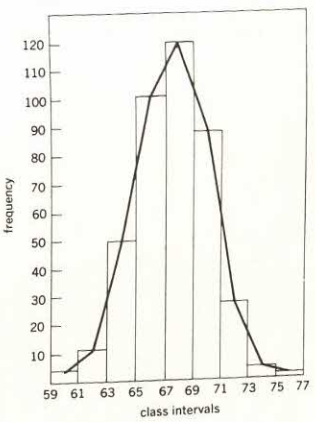
Cutaway view of an indirect-drive switchboard-type frequency meter (def. 1). *(James G. Biddle Co.)*

FREQUENCY MODULATOR



Basic circuit of reactance-tube type of frequency modulator.

FREQUENCY POLYGON



The conversion of a histogram into a frequency polygon by connecting the midpoint value (at the top of each rectangle) with the adjacent midpoint value by straight lines.

ratio of the magnitude of the output signal to that of a sine-wave input, and whose phase is that of the output with respect to the input. Also known as amplitude-frequency response; sine-wave response.

frequency-response curve [ENG] A graph showing the magnitude or the phase of the freqency response of a device or system as a function of frequency. Also known as frequency characteristic.

frequency-response equalization *See* equalization.

frequency-response trajectory [CONT SYS] The path followed by the frequency-response phasor in the complex plane as the frequency is varied.

frequency run [ELECTR] A series of tests made to determine the amplitude-frequency response characteristic of a transmission line, circuit, or device.

frequency scan antenna [ELECTROMAG] A radar antenna similar to a phased array antenna in which one dimensional scanning is accomplished through frequency variation.

frequency scanning [ELECTR] Type of system in which output frequency is made to vary at a mechanical rate over a desired frequency band.

frequency-selective device *See* electric filter.

frequency separation multiplier [ELECTR] Multiplier in which each of the variables is split into a low-frequency part and a high-frequency part that are multiplied separately, and the results added to give the required product; this system makes it possible to get high accuracy and broad bandwidth.

frequency separator [ELECTR] The circuit that separates the horizontal and vertical synchronizing pulses in a monochrome or color television receiver.

frequency shift [ELECTR] A change in the frequency of a radio transmitter or oscillator. Also known as radio-frequency shift.

frequency-shift converter [ELECTR] A device that converts a received frequency-shift signal to an amplitude-modulated signal or a direct-current signal.

frequency-shift keyer [ELECTR] A lever to effect a frequency shift, that is, a change in the frequency of a radio transmitter, oscillator, or receiver.

FREQUENCY-SHIFT KEYING

The radio waveform used in frequency-shift keying.

frequency-shift keying [COMMUN] A form of frequency modulation used especially in telegraph and facsimile transmission, in which the modulating wave shifts the output frequency between predetermined values corresponding to the frequencies of correlated sources. Abbreviated FSK. Also known as frequency-shift modulation; frequency-shift transmission.

frequency-shift modulation *See* frequency-shift keying.

frequency-shift transmission *See* frequency-shift keying.

frequency-slope modulation [COMMUN] Type of modulation in which the carrier signal is swept periodically over the entire width of the band, much as in chirp radar; modulation of the carrier with a voice or other communication signal changes the bandwidth of the system without affecting the uniform distribution of energy over the band.

frequency spectrum [PHYS] A plot of the distribution of the intensity of some type of electromagnetic or acoustic radiation as a function of frequency. [SYS ENG] In the analysis of a random function of time, such as the amplitude of noise in a system, the limit as T approaches infinity of $1/2\pi T$ times the ensemble average of the squared magnitude of the amplitude of the Fourier transform of the function from $-T$ to T. Also known as power-density spectrum; power spectrum; spectral density.

frequency splitting [ELECTR] One condition of operation of a magnetron which causes rapid alternating from one mode of operation to another; this results in a similar rapid change in oscillatory frequency and consequent loss in power at the desired frequency.

frequency stability [ELECTR] The ability of an oscillator to maintain a desired frequency; usually expressed as percent deviation from the assigned frequency value.

frequency stabilization [COMMUN] Process of controlling the center or carrier frequency so that it differs from that of a reference source by not more than a prescribed amount.

frequency standard [ELECTR] A stable oscillator, usually controlled by a crystal or tuning fork, that is used primarily for frequency calibration.

frequency study *See* work sampling.

frequency swing [COMMUN] **1.** Peak difference between the maximum and the minimum values of the instantaneous frequency. **2.** In frequency modulation, a term loosely used to describe the change in frequency resulting from the modulation.

frequency synthesizer [ELECTR] A device that provides a choice of a large number of different frequencies by combining frequencies selected from groups of independent crystals, frequency dividers, and frequency multipliers.

frequency telemetering [COMMUN] The transmittal of an alternating-current signal from a primary element by variations in the signal frequency, instead of intensity.

frequency theory [PHYSIO] A theory of human hearing according to which every specific frequency of sound energy is represented by nerve impulses of the same frequency, and pitch differentiation and analysis are carried out by the brain centers. Also known as telephone theory.

frequency-time-intensity [ELECTR] Type of radar display in which the frequency, time, and strobe intensity are correlated.

frequency tolerance [ELECTR] Of a radio transmitter, extent to which the carrier frequency of the transmitter may be permitted to depart from the frequency assigned.

frequency-to-voltage converter [ELECTR] A converter that provides an analog output voltage which is proportional to the frequency or repetition rate of the input signal derived from a flowmeter, tachometer, or other alternating-current generating device. Abbreviated F/V converter.

frequency transformation [CONT SYS] A transformation used in synthesizing a band-pass network from a low-pass prototype, in which the frequency variable of the transfer function is replaced by a function of the frequency. Also known as low-pass band-pass transformation.

frequency translation [COMMUN] Moving a modulated radio-frequency carrier signal to a new location in the frequency spectrum without disturbing the relationship of the carrier to its sidebands.

frequency translator *See* frequency converter.

frequency-type telemeter [ELECTR] Telemeter that employs frequency of an alternating current or voltage as the translating means.

frequency variation [ELECTR] The change over time of the deviation from assigned frequency of a radio-frequency carrier (or power supply system); usually tightly controlled because of national or industry standards.

fresco [GRAPHICS] Painting of two types, buon fresco and fresco secco; in buon fresco, dry pigments are ground with water and applied on a wet lime plaster wall, and as the plaster dries, the pigment is permanently bound to it; fresco secco utilizes pigments ground in glue, casein, or polymer emulsions and applied on a dry plaster wall that has been wetted with limewater.

fresh [GEOL] Unweathered in reference to a rock or rock surface. [METEOROL] Pertaining to air which is stimulating and refreshing.

fresh breeze [METEOROL] In the Beaufort wind scale, a wind whose speed is 17 to 21 knots (19 to 24 miles per hour, or 31 to 39 kilometers per hour).

fresh-core technique [PETRO ENG] A method in which a core sample, fresh from the field, is subjected to waterflooding in the laboratory, and the resulting residual oil is determined; used to calculate total waterflood recovery of oil from a reservoir formation.

freshet [HYD] **1.** The annual spring rise of streams in cold climates as a result of melting snow. **2.** A flood resulting from either rain or melting snow; usually applied only to small streams and to floods of minor severity. **3.** A small fresh-water stream.

fresh gale [METEOROL] In the Beaufort wind scale, a wind whose speed is from 34 to 40 knots (39 to 46 miles per hour, or 63 to 74 kilometers per hour).

fresh ice *See* newly formed ice.

fresh water [HYD] Water containing no significant amounts of salts, such as in rivers and lakes.

fresh-water ecosystem [ECOL] The living organisms and nonliving materials of an inland aquatic environment.

fresnel [PHYS] A unit of frequency, equal to 10^{12} hertz.

Fresnel-Arago laws [OPTICS] The three laws stating that two rays of polarized light interfere in the same way as ordinary light if they are polarized in the same plane, but do not interfere if they are polarized at right angles; two rays polarized from ordinary light at right angles do not interfere in the ordinary sense when they are brought into the same plane of polarization;

and two rays polarized at right angles from plane polarized light, and then brought into the same polarization plane, interfere.

Fresnel biprism [OPTICS] A very flat triangular prism which has two very acute angles and one very obtuse angle; used to observe the interference of light from a slit passing through the two halves of the prism.

Fresnel diffraction [OPTICS] Diffraction in which the source of light or the observing screen are at a finite distance from the aperture or obstacle.

Fresnel drag coefficient [OPTICS] The quantity $1 - (1/n^2)$, where n is the index of diffraction of a transparent medium, believed by Fresnel to be the ratio of the velocity with which ether was dragged along in the medium to the velocity of the medium itself.

Fresnel ellipsoid [OPTICS] An ellipsoid whose three perpendicular axes are proportional to the principal values of the wave velocity of light in an anisotropic medium. Also known as ray ellipsoid.

Fresnel equations [OPTICS] Equations which give the intensity of each of the two polarization components of light which is reflected or transmitted at the boundary between two media with different indices of refraction.

Fresnel fringe [OPTICS] One of a series of light and dark bands that appear near the edge of a shadow in Fresnel diffraction.

Fresnel integrals [MATH] Given a parameter x, the integrals over t from 0 to x of $\sin t^2$ and of $\cos t^2$ or from x to ∞ of $(\cos t)/t^{1/2}$ and of $(\sin t)/t^{1/2}$.

Fresnel lens [OPTICS] A thin lens constructed with stepped setbacks so as to have the optical properties of a much thicker lens.

Fresnel mirrors [OPTICS] Two plane mirrors which are inclined to each other on the order of a degree and used to observe the interference of light which originates from a slit and is reflected from both mirrors.

Fresnel ovaloid [OPTICS] For an anisotropic crystal, an ovaloid whose central section normal to the propagation direction of an electromagnetic wave gives the axes of polarization of the displacement vector and the associated wave velocities.

Fresnel reflection formula [OPTICS] The Fresnel equations for light reflected from a boundary.

Fresnel region [ELECTROMAG] The region between the near field of an antenna (close to the antenna compared to a wavelength) and the Fraunhofer region.

Fresnel rhomb [OPTICS] A glass rhomb which has an acute angle of about 52°; light which is incident normal to the end of the rhomb undergoes two internal reflections, and if it is initially linearly polarized at an angle of 45° to the plane of incidence, it emerges circularly polarized.

Fresnel spotlight [ELEC] A lighting instrument that is composed of a lamp and a Fresnel (stepped planoconvex) lens; the unit can be made with or without reflectors and has a system to adjust the spacing between the lamp and the lens so as to control the light beam; models range from 100 to 5000 watts.

Fresnel theory of double refraction [OPTICS] The theory which explains double refraction of a crystal in terms of nonspherical wave surfaces.

Fresnel zones [ELECTROMAG] Circular portions of a wavefront transverse to a line between an emitter and a point where the disturbance is being observed; the nth zone includes all paths whose lengths are between $n-1$ and n half-wavelengths longer than the line-of-sight path. Also known as half-period zones.

Fresnian [GEOL] A North American stage of upper Eocene geologic time, above Narizian and below Refugian.

fretting corrosion [MET] Surface damage usually in an air environment between two surfaces, one or both of which are metals, in close contact under pressure and subject to a slight relative motion. Also known as chafing corrosion.

Freudianism [PSYCH] The psychoanalytic school of psychiatry founded by Sigmund Freud.

Freundlich isotherm equation [PHYS] Equation which states that the volume of gas adsorbed on a surface at a given temperature is proportional to the pressure of the gas raised to a constant power.

Freund method [ORG CHEM] A method for preparation of cycloparaffins in which dihalo derivatives of the paraffins are treated with zinc to produce the cycloparaffin.

Freund's adjuvant [IMMUNOL] A water-oil emulsion containing a killed microorganism (usually *Mycobacterium tuberculosis*) which enhances antigenicity.

friability [MATER] The ease with which a material is crumbled, pulverized, or reduced to powder.

friable [MATER] Referring to the property of a substance capable of being easily rubbed, crumbled, or pulverized into powder.

friagem [METEOROL] A period of cold weather in the middle and upper parts of the Amazon Valley and in eastern Bolivia, occurring during the dry season in the Southern Hemisphere winter. Also known as vriajem.

friar's cloth *See* monk's cloth.

friar's cowl *See* aconite.

Fricke dosimeter [NUCLEO] A radiation dosimeter in which the energy of ionizing radiation is determined from the amount of ferrous ions converted to ferric ions in an aerated acidic ferrous sulfate solution.

friction [MECH] A force which opposes the relative motion of two bodies whenever such motion exists or whenever there exist other forces which tend to produce such motion.

frictional *See* cohesionless.

frictional electricity [ELEC] The electric charges produced on two different objects, such as silk and glass or catskin and ebonite, by rubbing them together. Also known as triboelectricity.

frictional grip [MECH] The adhesion between the wheels of a locomotive and the rails of the railroad track.

frictional secondary flow *See* secondary flow.

friction bearing [MECH ENG] A solid bearing that directly contacts and supports an axle end.

friction blocks [PETRO ENG] Thin blocks with cylindrical surfaces that drag on the inside of the well casing to prevent rotation of the packer (seal between the outside of tubing and inside of casing).

friction bonding [ENG] Soldering of a semiconductor chip to a substrate by vibrating the chip back and forth under pressure to create friction that breaks up oxide layers and helps alloy the mating terminals.

friction brake [MECH ENG] A brake in which the resistance is provided by friction.

friction calendering [ENG] Process wherein an elastomeric compound is forced into the interstices of woven or cord fabrics while passing between calender rolls.

friction clutch [MECH ENG] A clutch in which torque is transmitted by pressure of the clutch faces on each other.

friction coefficient *See* coefficient of friction.

friction crack [GEOL] A short, crescent-shaped crack in glaciated rock produced by a localized increase in friction between rock and ice, oriented transverse to the direction of ice flow.

friction damping [MECH] The conversion of the mechanical vibrational energy of solids into heat energy by causing one dry member to slide on another.

friction depth [OCEANOGR] The depth at which the velocity of wind-driven current becomes neglibible compared to the surface velocity; sometimes referred to as the depth of the Ekman layer.

friction drive [MECH ENG] A drive that operates by the friction forces set up when one rotating wheel is pressed against a second wheel.

friction factor [FL MECH] Any of several dimensionless numbers used in studying fluid friction in pipes, equal to the Fanning friction factor times some dimensionless constant.

friction feed [MIN ENG] Longitudinal movement or advance of a drill stem and bit accomplished by friction devices in a diamond-drill swivel head, as opposed to a system consisting entirely of meshing gears.

friction flow [FL MECH] Fluid flow in which a significant amount of mechanical energy is dissipated into heat by action of viscosity.

friction gear [MECH ENG] Gearing in which motion is transmitted through friction between two surfaces in rolling contact.

friction head [FL MECH] The head lost by the flow in a stream or conduit due to frictional disturbances set up by the moving fluid and its containing conduit and by intermolecular friction.

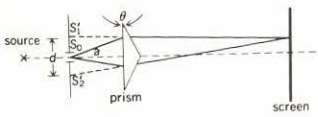
friction horsepower [MECH ENG] Power dissipated in a machine through friction.

friction layer *See* surface boundary layer.

frictionless flow *See* inviscid flow.

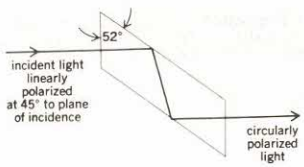
friction loss [MECH] Mechanical energy lost because of mechanical friction between moving parts of a machine.

FRESNEL BIPRISM



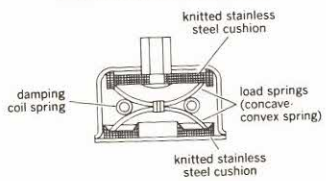
Light from slit S_0 is transmitted through two halves of the Fresnel biprism to the screen. The beam from each half strikes the screen at a different angle and will appear to come from a source (S_1', S_2') slightly displaced from the slit. Separation of S_1' and S_2' equals $2a(\mu-1)\theta$, where
a = distance of slit from biprism,
θ = acute angle of prism,
μ = index of refraction of prism material.

FRESNEL RHOMB



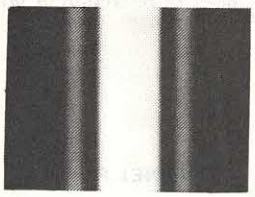
Graphic demonstration of the Fresnel rhomb.

FRICTION DAMPING



A frictional damper, effective in vertical and horizontal directions.

FRINGE



A Fraunhofer diffraction pattern, for a slit, or fringe, photographed with visible light. *(F. S. Harris)*

friction pile [CIV ENG] A bearing pile surrounded by earth and supported entirely by friction; carries no load at its end.

friction ridge [ANAT] One of the integumentary ridges on the plantar and palmar surfaces of primates.

friction saw [MECH ENG] A toothless circular saw used to cut materials by fusion due to frictional heat.

friction sawing [MECH ENG] A burning process to cut stock to length by using a blade saw operating at high speed; used especially for the structural parts of mild steel and stainless steel.

friction tape [MATER] Cotton tape impregnated with a sticky moisture-repelling compound; used chiefly to hold rubbertape insulation in position over a joint or splice.

friction torque [MECH] The torque which is produced by frictional forces and opposes rotational motion, such as that associated with journal or sleeve bearings in machines.

friction-tube viscometer [ENG] Device to determine liquid viscosity by measurement of pressure drop through a friction tube with the liquid in viscous flow; gives direct solution to Poiseuille's equation.

friction velocity [METEOROL] A reference wind velocity defined by the relation $u\sqrt{|\tau/\rho|}$, where τ is the Reynolds stress, ρ the density, and u the friction velocity.

friction welding [ENG] A welding process for metals and thermoplastic materials in which two members are joined by rubbing the mating faces together under high pressure.

friction yielding prop *See* mechanical yielding prop.

Friedel-Crafts reaction [ORG CHEM] A substitution reaction, catalyzed by aluminum chloride in which an alkyl (R—) or an acyl (RCO—) group replaces a hydrogen atom of an aromatic nucleus to produce hydrocarbon or a ketone.

friedelite [MINERAL] $Mn_8Si_6O_{18}(OH,Cl)_4 \cdot 3H_2O$ A rose-red mineral composed of manganese silicate with chlorine.

Friedel's law [CRYSTAL] The law that x-ray or electron diffraction measurements cannot determine whether or not a crystal has a center of symmetry.

Friedlander's bacillus *See* Klebsiella pneumoniae.

Friedlander's pneumonia [MED] Inflammation of the lungs caused by *Klebisiella pneumoniae*.

Friedlander synthesis [ORG CHEM] A synthesis of quinolines; the method is usually catalyzed by bases and consists of condensation of an aromatic *o*-amino-carbonyl derivative with a compound containing a methylene group in the alpha position to the carbonyl.

Friedman test [PATH] A pregnancy test in which a female rabbit is given an intravenous injection of urine from the patient; formation of corpora lutea in the ovaries indicates a positive test.

Friedman universe [ASTRON] A nonstatic, homogeneous, isotropic model of the universe that displays expansion or contraction and has nonzero matter density.

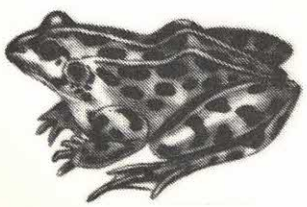
Friedrich's ataxia [MED] A hereditary sclerosis of the spine with speech impairment, lateral curvature of the spine, and palsy of the lower limbs. Also known as hereditary spinal ataxia.

Fries rearrangement [ORG CHEM] The conversion of a phenolic ester into the corresponding *o*- and *p*-hydroxyketone by treatment with catalysts of the type of aluminum chloride.

Fries' rule [ORG CHEM] The rule that the most stable form of the bonds of a polynuclear compound is that arrangement which has the maximum number of rings in the benzenoid form, that is, three double bonds in each ring.

frieze [ARCH] A decorated band immediately below the cornice on an interior wall. [TEXT] Thick, heavyweight coating and upholstery fabric, with a rough, raised fibrous surface and a more or less hard feel.

FROG



Common frog *(Rana temporaria)*.

frigate [NAV ARCH] **1.** In the U.S. Navy, a ship larger than a destroyer and smaller than a cruiser, having a displacement of 4000–9000 tons, designed mainly as an escort ship for an attack aircraft carrier. **2.** In the British and Canadian navies, an escort ship larger than a corvette and smaller than a destroyer, having a displacement of 1200–2500 tons, corresponding in size to a destroyer escort in the U.S. Navy.

frigidoreceptor [PHYSIO] A cutaneous sense organ which is sensitive to cold.

frigorie [THERMO] A unit of rate of extraction of heat used in refrigeration, equal to 1000 fifteen-degree calories per hour, or 1.16264 ± 0.00014 watt.

frigorimeter [ENG] A thermometer which measures low temperatures.

frilling [GRAPHICS] Emulsion at the edges of a photographic film loosened from base of film.

fringe [OPTICS] One of the light or dark bands produced by interference or diffraction of light.

fringe area [COMMUN] An area just beyond the limits of the reliable service area of a television transmitter, in which signals are weak and erratic.

fringe howl [ENG ACOUS] Squeal or howl heard when some circuit in a receiver is on the verge of oscillation.

fringe joint [GEOL] A small-scale joint peripheral to, and usually at a 5–25° angle from the face of, the master joint.

fringe magnetic field [ELECTROMAG] The part of the magnetic field of a horseshoe magnet that extends outside the space between its poles.

fringe ore [GEOL] Ore located on the outer boundary of a mineralization pattern or halo. Also known as halo ore.

fringe region [METEOROL] The upper portion of the exosphere, where the cone of escape equals or exceeds 180°; in this region the individual atoms have so little chance of collision that they essentially travel in free orbits, subject to the earth's gravitation, at speeds imparted by the last collision. Also known as spray region.

fringes of equal thickness *See* Fizeau fringes.

fringe value [OPTICS] A quantity used in photoelastic work, equal to the stress which must be applied to a material, in pounds per square inch (1 pound per square inch equals approximately 6.89476 kilopascals), to produce a relative retardation of 1 wavelength between the components of a linearly polarized light beam when the light passes through a thickness of 1 inch (2.54 centimeters) in a direction perpendicular to the stress.

Fringillidae [VERT ZOO] The finches, a family of oscine birds in the order Passeriformes.

fringing groove [ORD] A groove cut into a rotating band to collect metal from the band while it travels through the bore, to prevent its forming a fringe in rear of the rotating band; causes excess dispersion and short range.

fringing reef [GEOL] A coral reef attached directly to or bordering the shore of an island or continental landmass.

Frise aileron [AERO ENG] A type of aileron having its leading edge projecting well ahead of the hinge axis.

frisket [GRAPHICS] A mask used to protect the portions of photographs and artwork that are not be be airbrushed.

frit [MATER] Fusible ceramic mixture used to make glazes and enamels for dinnerware and metallic surfaces, as on stoves and metal-base basins and tubs.

fritillary [BOT] The common name for plants of the genus *Fritillaria*. [INV ZOO] The common name for butterflies in several genera of the subfamily Nymphalinae.

frit seal [ENG] A seal made by fusing together metallic powders with a glass binder, for such applications as hermetically sealing ceramic packages for integrated circuits.

fritting [ENG] Fusing materials for glass by application of heat. [MET] The pasty condition, usually occurring a little below the melting point, of the powdered ore, flux, and other reagents in fire assaying.

Fritz process [FOOD ENG] Treatment of cream containing up to 40–50% fat by continuous feeding to a cooled horizontal cylindrical tank, where it is distributed in a film and beaten by blades at 3000 revolutions per minute; the formed mass falls into a trough, where buttermilk drains off, and butter is moved out for kneading and packing.

Frobenius method [MATH] A method of finding a series solution near a point for a linear homogeneous ordinary differential equation.

Froehlich's syndrome *See* adiposogenital dystrophy.

frog [DES ENG] A hollow on one or both of the larger faces of a brick or block; reduces weight of the brick or block; may be filled with mortar. [ENG] A device which permits the train or tram wheels on one rail of a track to cross the rail of an intersecting track. [VERT ZOO] The common name for a number of tailless amphibians in the order Anura; most have hindlegs adapted for jumping, scaleless skin, and large eyes.

frogeye [PL PATH] Any of various leaf diseases characterized by formation of concentric rings around the diseased spots.

frogging repeater [ELECTR] Carrier repeater having provisions for frequency frogging to permit use of a single multipair voice cable without having excessive crosstalk.

frog storm [METEOROL] The first bad weather in spring after a warm period. Also known as whippoorwill storm.

frohbergite [MINERAL] $FeTe_2$ A mineral composed of iron telluride; it is isomorphous with marcasite.

from-to tester [ENG] Test equipment which checks continuity or impedance between points.

frond [BOT] **1.** The leaf of a palm or fern. **2.** A foliaceous thallus or thalloid shoot.

frondelite [MINERAL] $MnFe_4(PO_4)_5(OH)_5$ A mineral composed of basic phosphate of manganese and iron; it is isomorphous with rockbridgeite.

front [METEOROL] A sloping surface of discontinuity in the troposphere, separating air masses of different density or temperature.

front abutment pressure [GEOPHYS] The release of energy in the superincumbent strata above the seam induced by the extraction of the seam.

frontal-advance performance [PETRO ENG] The theory that, during the waterflood of a formation reservoir, displacement of oil causes a desaturation of the displaced fluids in accordance with relative-permeability relationships, and the displacement is linear.

frontal angle [ANTHRO] The angle formed by the intersection of lines from the bregma and glabella to the auricular point.

frontal apron *See* outwash plain.

frontal bone [ANAT] Either of a pair of flat membrane bones in vertebrates, and a single bone in humans, forming the upper frontal portion of the cranium; the forehead bone.

frontal contour [METEOROL] The line of intersection of a front (frontal surface) with a specified surface in the atmosphere, usually a constant-pressure surface; with respect to only one surface, this line is usually called the front.

frontal crest [ANAT] A median ridge on the internal surface of the frontal bone in humans.

frontal cyclone [METEOROL] Any cyclone associated with a front; often used synonymously with wave cyclone or with extratropical cyclone (as opposed to tropical cyclones, which are nonfrontal).

frontal drive [PETRO ENG] In an oil reservoir with constant pressure (by gas injection or from a large gas-to-oil ratio), the driving of oil fluids into the wellbore by the free gas.

frontal eminence [ANAT] The prominence of the frontal bone above each superciliary ridge in humans.

frontal fire [ORD] Fire delivered at right angles to the front of the target.

frontal fog [METEOROL] Fog associated with frontal zones and frontal passages.

frontal index [ANTHRO] The ratio of the least to the greatest breadth of the forehead multiplied by 100.

frontal inversion [METEOROL] A temperature inversion in the atmosphere, encountered upon vertical ascent through a sloping front (or frontal zone).

frontal lifting [METEOROL] The forced ascent of the warmer, less-dense air at and near a front, occurring whenever the relative velocities of the two air masses are such that they converge at the front.

frontal lobe [ANAT] The anterior portion of a cerebral hemisphere, bounded behind by the central sulcus and below by the lateral cerebral sulcus.

frontal nerve [ANAT] A somatic sensory nerve, attached to the ophthalmic nerve, which innervates the skin of the upper eyelid, the forehead, and the scalp.

frontal occlusion *See* occluded front.

frontal passage [AERO ENG] The transit of an aircraft through a frontal zone. [METEOROL] The passage of a front over a point on the earth's surface.

frontal plain *See* outwash plain.

frontal plane [ANAT] Any plane parallel with the long axis of the body and perpendicular to the sagittal plane. [MED] In electrocardiography and vectorcardiography, the projection of the vertical axis.

frontal precipitation [METEOROL] Any precipitation attributable to the action of a front; used mainly to distinguish this type from air-mass precipitation and orographic precipitation.

frontal profile [METEOROL] The outline of a front as seen on a vertical cross section oriented normal to the frontal surface.

frontal sinus [ANAT] Either of a pair of air spaces within the frontal bone above the nasal bridge.

frontal strip [METEOROL] The presentation of a front, on a synoptic chart, as a frontal zone; that is, two lines, rather than a single line, are drawn to represent the boundaries of the zone; a rare usage.

frontal system [METEOROL] A system of fronts as they appear on a synoptic chart.

frontal thunderstorm [METEOROL] A thunderstorm associated with a front; limited to thunderstorms resulting from the convection induced by frontal lifting.

frontal wave [METEOROL] A horizontal, wavelike deformation of a front in the lower levels, commonly associated with a maximum of cyclonic circulations in the adjacent flow; it may develop into a wave cyclone.

frontal zone [METEOROL] The three-dimensional zone or layer of large horizontal density gradient, bounded by frontal surfaces and surface front.

front-end [COMPUT SCI] Of a minicomputer, under programmed instructions, performing data transfers and control operations to relieve a larger computer of these routines.

front-end loader [MECH ENG] An excavator consisting of an articulated bucket mounted on a series of movable arms at the front of a crawler or rubber-tired tractor.

front-end processor [COMPUT SCI] A computer which connects to the main computer at one end and communications channels at the other, and which directs the transmitting and receiving of messages, detects and corrects transmission errors, assembles and disassembles messages, and performs other processing functions so that the main computer receives pure information.

front-end volatility [CHEM ENG] The volatility of the lower-boiling fractions of gasoline, such as butanes.

frontier of a set in a topological space [MATH] All points in the closure of the set but not in its interior. Also known as boundary of a set.

frontogenesis [METEOROL] **1.** The initial formation of a frontal zone or front. **2.** The increase in the horizontal gradient of an air mass property, mainly density, and the formation of the accompanying features of the wind field that typify a front.

frontogenetic function [METEOROL] A kinematic measure of the tendency of the flow in an air mass to increase the horizontal gradient of a conservative property.

frontolysis [METEOROL] **1.** The dissipation of a front or frontal zone. **2.** In general, a decrease in the horizontal gradient of an air mass property, principally density, and the dissipation of the accompanying features of the wind field.

front pinacoid [CRYSTAL] The {100} pinacoid in an orthorhombic, monoclinic, or triclinic crystal. Also known as macropinacoid; orthopinacoid.

front porch [COMMUN] Portion of a composite picture signal which lies between the leading edge of the horizontal blanking pulse and the leading edge of the corresponding synchronizing pulse.

front slagging [ENG] Skimming slag from the mixture of slag and molten metal as it flows through a taphole.

front slope *See* scarp slope.

front-to-back ratio [ELECTROMAG] Ratio of the effectiveness of a directional antenna, loudspeaker, or microphone toward the front and toward the rear. [SOLID STATE] Ratio of resistance of a crystal to current flowing in the normal direction to current flowing in the opposite direction.

frost [HYD] A covering of ice in one of its several forms, produced by the sublimation of water vapor on objects colder than 32°F (0°C).

frost action [GEOL] **1.** The weathering process caused by cycles of freezing and thawing of water in surface pores, cracks, and other openings. **2.** Alternate or repeated cycles of freezing and thawing of water contained in materials; the term is especially applied to disruptive effects of this action.

frostbite [MED] Injury to skin and subcutaneous tissues, and in severe cases to deeper tissues also, from exposure to extreme cold.

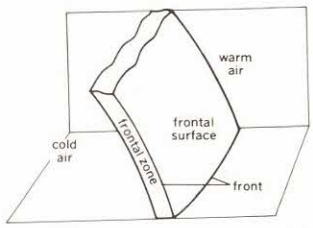
frost boil [GEOL] **1.** An accumulation of water and mud released from ground ice by accelerated spring thawing. **2.** A low mound formed by local differential frost heaving at a location most favorable for the formation of segregated ice and accompanied by the absence of an insulating cover of vegetation.

frost bursting *See* congelifraction.

frost churning *See* congeliturbation.

frost climate [CLIMATOL] The coldest temperature province in C. W. Thornthwaite's climatic classification: the climate of the ice cap regions of the earth, that is, those regions perennially covered with snow and ice.

FRONTAL ZONE



Schematic diagram of the frontal zone (the angle with earth's surface is much exaggerated).

frost cracks [BOT] Cracks in wood that have split outward from ray shakes.
frost day [METEOROL] An observational day on which frost occurs.
frosted glass [MATER] Glass that has been etched with sand, or appears to have been so treated.
frost feathers *See* ice feathers.
frost flakes *See* ice fog.
frost flowers *See* ice flowers.
frost fog *See* ice fog.
frost hazard [METEOROL] The risk of damage by frost, expressed as the probability or frequency of killing frost on different dates during the growing season, or as the distribution of dates of the last killing frost of spring or the first of autumn.
frost heaving [GEOL] The lifting and distortion of a surface due to internal action of frost resulting from subsurface ice formation; affects soil, rock, pavement, and other structures.
frost hollow [METEOROL] A small, low-lying zone which experiences frequent and severe frosts owing to the accumulation of cold night air; often severe where hills block the afternoon sunshine.
frosting [ENG] Decorating a scraped metal surface with a handscraper. Also known as flaking.
frostless zone [METEOROL] The warmest part of a slope above a valley floor, lying between the layer of cold air which forms over the valley floor on calm clear nights and the cold hill tops or plateaus; the air flowing down the slopes is warmed by mixing with the air above ground level, and to some extent also by adiabatic compression. Also known as green belt; verdant zone.
frost line [GEOL] **1.** The maximum depth of frozen ground during the winter. **2.** The lower limit of the permafrost. [MATER] In polyethylene film extrusion, a ring-shaped area with a frosty appearance at the point where the film reaches its final diameter.
frost mound [GEOL] A hill and knoll associated with frozen ground in a permafrost region, containing a core of ice. Also known as soffosian knob; soil blister.
frost point [METEOROL] The temperature to which atmospheric moisture must be cooled to reach the point of saturation with respect to ice.
frost-point hygrometer [ENG] An instrument for measuring the frost point of the atmosphere; air under test is passed continuously across a polished surface whose temperature is adjusted so that a thin deposit of frost is formed which is in equilibrium with the air.
frost-point technique *See* 8D technique (in the D's).
frost ring [BOT] A false annual growth ring in the trunk of a tree due to out-of-season defoliation by frost and subsequent regrowth of foliage.
frost riving *See* congelifraction.
frost shattering *See* congelifraction.
frost smoke [METEOROL] **1.** A rare type of fog formed in the same manner as a steam fog, but at colder temperatures so that it is composed of ice particles instead of water droplets. **2.** *See* steam fog.
frost splitting *See* congelifraction.
frost stirring *See* congelifraction.
frost table [GEOL] An irregular surface in the ground which, at any given time, represents the penetration of thawing into seasonally frozen ground.
frost weathering *See* congelifraction.
frost wedging *See* congelifraction.
frosty mildew [PL PATH] A leaf spot caused by fungi of the genus *Cercosporella* and characterized by pale to white lesions.
frost zone *See* seasonally frozen ground.
frother [CHEM] Substance used in flotation processes to make air bubbles sufficiently permanent, principally by reducing surface tension.
froth flotation [ENG] A process for recovery of particles of ore or other material, in which the particles adhere to bubbles and can be removed as part of the froth.
frothing [ENG] The producing of relatively stable bubbles at an air-liquid interface as the result of agitation, aeration, ebulliation, or chemical reaction; it can be an undesired side effect, but in minerals beneficiation it is the basis of froth flotation.
frothing collector [MIN ENG] An ore collector which in addition produces a stable foam.
froth promoter [CHEM] A chemical compound used with a frothing agent.
frottage [GRAPHICS] A technique in which a material, such as paper, is placed on a rough or irregular surface and is rubbed with a pencil or paint; the approximate image of the peaks and valleys results; the method is used to copy bas-reliefs, tombstones, and bronzes.
Froude number 1 [FL MECH] A dimensionless number used in studying the motion of a body floating on a fluid with production of surface waves and eddies; equal to the ratio of the square of the relative speed to the product of the acceleration of gravity and a characteristic length of the body. Symbolized N_{Fr1}.
Froude number 2 [FL MECH] A dimensionless number, equal to the ratio of the speed of flow of a fluid in an open channel to the speed of very small gravity waves, the latter being equal to the square root of the product of the acceleration of gravity and a characteristic length. Symbolized N_{Fr2}.
frozen flux [PL PHYS] The lines of force of a frozen-in field.
frozen fog *See* ice fog.
frozen ground [GEOL] Soil having a temperature below freezing, generally containing water in the form of ice. Also known as gelisol; merzlota; taele; tjaele.
frozen-in field [PL PHYS] A magnetic field in a plasma which has negligible electrical resistance; it can be shown that the lines of force of this field are constrained to move with the material.
frozen pipe [PETRO ENG] A pipe that is immobilized in a borehole because caving has settled around the outside of the pipe.
frozen precipitation [METEOROL] Any form of precipitation that reaches the ground in frozen form; that is, snow, snow pellets, snow grains, ice crystals, ice pellets, and hail.
frozen section [BIOL] A thin slice of material cut from a frozen sample of tissue or organ.
fructescence [BOT] The period of fruit maturation.
fructification [BOT] **1.** The process of producing fruit. **2.** A fruit and its appendages. [MYCOL] A sporogenous structure.
fructivorous *See* frugivorous.
D-fructopyranose *See* fructose.
fructose [BIOCHEM] $C_6H_{12}O_5$ The commonest of ketoses and the sweetest of sugars, found in the free state in fruit juices, honey, and nectar of plant glands. Also known as D-fructopyranose.
Frue vanner [MIN ENG] A side-shake type of ore-dressing apparatus consisting of an inclined rubber belt on which the material is washed by a constant flow of water.
frugivorous [ZOO] Fruit-eating. Also known as fructivorous.
fruit [BOT] A fully matured plant ovary with or without other floral or shoot parts united with it at maturity. [NAV] Radar-beacon-system video display of a synchronous beacon return which results when several interrogator stations are located within the same general area; each interrogator receives its own interrogated reply as well as many synchronous replies resulting from interrogation of the airborne transponders by other ground stations.
fruit bud [BOT] A fertilized flower bud that matures into a fruit.
fruit fly [INV ZOO] **1.** The common name for those acalyptrate insects composing the family Tephritidae. **2.** Any insect whose larvae feed on fruit or decaying vegetable matter.
fruiting body [BOT] A specialized, spore-producing organ.
fruiting myxobacteria *See* Myxobacterales.
frustrated internal reflectance *See* attenuated total reflectance.
frustration [PSYCH] The experience of nonfulfillment of some wish or need.
frustration threshold [PSYCH] The point at which an individual feels or shows frustration over inability to achieve an objective.
frustule [INV ZOO] **1.** The shell and protoplast of a diatom. **2.** A nonciliated planulalike bud in some hydrozoans.
frustum [MATH] The part of a solid between two cutting parallel planes.
frutescent [BIOL] *See* fruticose. [BOT] Shrublike in habit.
fruticose [BIOL] Resembling a shrub; applied especially to lichens. Also known as frutescent.
frying noise [ELEC] Noise in telephone transmission even when no conversation is taking place; caused by signal current

flowing across a resistance element having multiple intermittent paths. Also known as transmitter noise.

F scan *See* F scope.

F scope [ELECTR] A cathode-ray scope on which a single signal appears as a spot with bearing error as the horizontal coordinate and elevation angle error as the vertical coordinate, with cross hairs on the scope face to assist in bringing the system to bear on the target. Also known as F indicator; F scan.

FSH *See* follicle-stimulating hormone.

FSK *See* frequency-shift keying.

F star [ASTRON] A star whose spectral type is F; surface temperature is 7000K, and color is yellowish.

f stop [OPTICS] An aperture setting for a camera lens; indicated by the *f* number.

f-sum rule [ATOM PHYS] The rule that the sum of the *f* values (or oscillator strengths) of absorption transitions of an atom in a given state, minus the sum of the *f* values of the emission transitions in that state, equals the number of electrons which take part in these transitions. Also known as Thomas-Reiche-Kuhn sum rule.

ft *See* foot.

ftc *See* footcandle.

F test *See* variance ratio test.

ft-L *See* foot lambert.

ft-lb *See* foot-pound.

ft-lbf *See* foot-pound.

ft-pdl *See* foot-poundal.

fu *See* flux unit.

FU *See* finsen unit.

5-FU *See* fluorouracil.

Fubini's theorem [MATH] The theorem stating conditions under which

$$\int\int f(u,v)dudv = \int du \int f(u,v)dv = \int dv \int f(u,v)du.$$

Fucales [BOT] An order of brown algae composing the class Cyclosporeae.

fuchsin [ORG CHEM] $C_{20}H_{19}N_3$ Brownish-red crystals, used as a dye or in the commercial preparation of other dyes, and as an antifungal drug. Also known as magenta; rosaniline.

fuchsinophile [BIOL] Having an affinity for the dye fuchsin.

fuchsite [MINERAL] A bright-green variety of muscovite rich in chromium.

fucoid [GEOL] A tunnellike marking on a sedimentary structure identified as a trace fossil but not referred to a described genus.

fucoidin [BIOCHEM] A gum composed of L-fucose and sulfate acid ester groups obtained from *Fucus* species and other brown algae.

Fucophyceae [BOT] A class of brown algae.

L-fucopyranose *See* L-fucose.

L-fucose [BIOCHEM] $C_6H_{12}O_5$ A methyl pentose present in some algae and a number of gums and identified in the polysaccharides of blood groups and certain bacteria. Also known as 6-deoxy-L-galactose; L-fucopyranose; L-galactomethylose; L-rhodeose.

fucoxanthin [BIOCHEM] $C_{40}H_{60}O_6$ A carotenoid pigment; a partial xanthophyll ester found in diatoms and brown algae.

Fucus [BOT] A genus of dichotomously branched brown algae; it is harvested in the kelp industry as a source of algin.

FUDR *See* floxuridine.

fuel [MATER] A material that is burnt to release heat energy, for example, coal, oil, or uranium.

fuel assembly [NUCLEO] A combination of fuel and structural materials, used in some nuclear reactors to facilitate assembly of the core.

fuel bed [MECH ENG] A layer of burning fuel, as on a furnace grate or a cupola.

fuel cell [ELEC] A cell that converts chemical energy directly into electric energy, with electric power being produced as a part of a chemical reaction between the electrolyte and a fuel such as kerosine or industrial fuel gas.

fuel-cell catalyst [CHEM] A substance, such as platinum, silver, or nickel, from which the electrodes of a fuel cell are made, and which speeds the reaction of the cell; it is especially important in a fuel cell which does not operate at high temperatures.

fuel-cell electrolyte [CHEM] The substance which conducts electricity between the electrodes of a fuel cell.

fuel-cell fuel [CHEM] A substance, such as hydrogen, carbon monoxide, sodium, alcohol, or a hydrocarbon, which reacts with oxygen to generate energy in a fuel cell.

fuel cycle *See* reactor fuel cycle.

fuel decanner [NUCLEO] A machine used for removing the stainless steel or other metal cans that enclose the enriched uranium fuel rods of a nuclear reactor; the cans are removed by a chipless machining operation in which the tubing is sheared into a spiral strip.

fuel element [NUCLEO] A rod, tube, plate, or other geometrical form into which nuclear fuel is fabricated for use in a reactor.

fuel filter [ENG] A device, as in an internal combustion engine, that removes particles from the fuel.

fuel gas [MATER] A gaseous fuel used to provide heat energy when burned with oxygen.

fuel injection [MECH ENG] The delivery of fuel to an internal combustion engine cylinder by pressure from a mechanical pump.

fuel injector [MECH ENG] A pump mechanism that sprays fuel into the cylinder of an internal combustion engine at the appropriate part of the cycle.

fuel oil [MATER] A liquid product burned to generate heat, exclusive of oils with a flash point below 100°F (38°C); includes heating oils, stove oils, furnace oils, bunker fuel oils.

fuel pellet [NUCLEO] A small pellet of frozen deuterium and tritium that would be used as fuel in a laser-induced fusion power plant.

fuel plate [NUCLEO] A form of nuclear fuel element consisting of a flat or slightly curved sheet of fuel, which is usually a sandwich of uranium fuel protected by metallic cladding.

fuel pump [MECH ENG] A pump for drawing fuel from a storage tank and delivering it to an engine or furnace.

fuel reprocessing [NUCLEO] The processing of nuclear reactor fuel to recover the unused fissionable material.

fuel rod [NUCLEO] A long, rod-shaped fuel assembly.

fuel shutoff [AERO ENG] **1.** The action of shutting off the flow of liquid fuel into a combustion chamber or of stopping the combustion of a solid fuel. **2.** The event or time marking this action.

fuel structure ratio *See* fuel-weight ratio.

fuel system [MECH ENG] A system which stores fuel for present use and delivers it as needed.

fuel tank [MECH ENG] The operating, fuel-storage component of a fuel system.

fuel-weight ratio [AERO ENG] The ratio of the weight of a rocket's fuel to the weight of the unfueled rocket. Also known as fuel structure ratio.

fugacious [BOT] Lasting a short time; used principally to describe plant parts that fall soon after being formed.

fugacity [THERMO] A function used as an analog of the partial pressure in applying thermodynamics to real systems; at a constant temperature it is proportional to the exponential of the ratio of the chemical potential of a constituent of a system divided by the product of the gas constant and the temperature, and it approaches the partial pressure as the total pressure of the gas approaches zero.

fugitive air [MIN ENG] Air which moves through the ventilation fan but never reaches the mine workings.

fugitive dye [CHEM] A dye that is unstable, that is, not fast; used in the textile processing for purposes of identity.

fugue [PSYCH] A flight from reality, as in hysteria, during which an individual performs acts which later are not recollected.

fulchronograph [ENG] An instrument for recording lightning strokes, consisting of a rotating aluminum disk with several hundred steel fins on its rim; the fins are magnetized if they pass between two coils when these are carrying the surge current of a lightning stroke.

fulcrate [BIOL] Having a fulcrum.

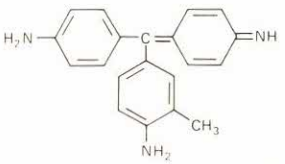
fulcrate trophus [INV ZOO] A type of masticatory apparatus in certain rotifers characterized by an elongate fulcrum.

fulcrum [MECH] The rigid point of support about which a lever pivots.

Fuld-Gross unit [BIOL] A unit for the standardization of trypsin.

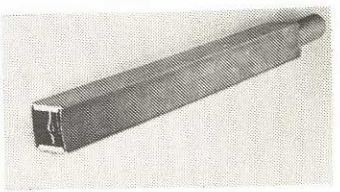
Fulgoroidea [INV ZOO] The lantern flies, a superfamily of homopteran insects in the series Auchenorrhyncha dis-

FUCHSIN



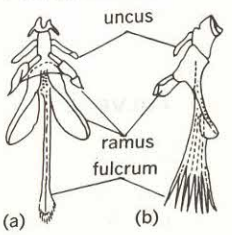
Structural formula.

FUEL ELEMENT



A plate-type fuel element. *(From Robert Laws, Salon of Photography)*

FULCRATE TROPHUS



Fulcrate trophus of *Seison*. *(a)* Dorsal view. *(b)* Lateral view. *(After de Beauchamp)*

tinguished by the anterior and middle coxae being of equal length and joined to the body at some distance from the median line.

fulgurator [ENG] An atomizer used to spray salt solutions into a flame for analysis.

fulgurite [GEOL] A glassy, rootlike tube formed when a lightning stroke terminates in dry sandy soil; the intense heating of the current passing down into the soil along an irregular path fuses the sand.

full adder [ELECTR] A logic element which operates on two binary digits and a carry digit from a preceding stage, producing as output a sum digit and a new carry digit.

full annealing [MET] Heating steel to a high temperature and then cooling to ambient or near-ambient temperatures.

full automatic [ORD] A weapon that provides continuous fire as long as the trigger is depressed; used to distinguish from semiautomatic.

full automatic plating [MET] Electroplating a piece of work that is carried through the full cycle automatically.

full-cell process [ENG] A process of preservative treatment of wood that uses a pressure vessel and first draws a vacuum on the charge of wood and then introduces the preservative without breaking the vacuum. Also known as Bethell process.

full duplex [COMPUT SCI] The complete duplication of any data-processing facility. [COMMUN] Of a telegraph or other data channel, able to operate in both directions simultaneously.

full-duplex operation [COMMUN] Simultaneous communications in both directions between two points.

full-ended [NAV ARCH] The condition when the extremities of the waterlines in the vicinity of the load line are strongly convex to the surrounding water and the ends of the sectional area curve are full indicating that the displacement is carried well forward and aft toward the ends of the vessel.

fuller [MET] A die or portion of a die used in preliminary forging operations to reduce the cross section somewhere between the ends of a piece of stock.

fuller's earth [GEOL] A natural, fine-grained earthy material, such as a clay, with high adsorptive power; consists principally of hydrated aluminum silicates; used as an adsorbent in refining and decolorizing oils, as a catalyst, and as a bleaching agent.

full-face firing [MIN ENG] Drilling of small-diameter holes from top to bottom of the face.

full-face tunneling [CIV ENG] A system of tunneling in which the tunnel opening is enlarged to desired diameter before extension of the tunnel face.

full feathering *See* feathering.

full-gear [MECH ENG] The condition of a steam engine when the valve is operated to the maximum extent by the link motion.

fulling [TEXT] A process in which a felt fabric is pounded with hammers in order to develop firmness.

fulling agent [TEXT] A soap solution used during the fulling of wool.

full linear group [MATH] The group of all nonsingular linear transformations of a vector space whose group operation is composition.

full load [ELEC] The greatest load that a circuit or piece of equipment is designed to carry under specified conditions.

full-load current [ELEC] The greatest current that a circuit or piece of equipment is designed to carry under specified conditions.

full-mill [BUILD] A type of construction in which all vertical apertures open onto shafts of brick or other fireproof material; used for fire retardance.

full moon [ASTRON] The moon at opposition, with a phase angle of 0°, when it appears as a round disk to an observer on the earth because the illuminated side is toward the observer.

full period allocated circuit [COMMUN] Communications link (allocated circuit) assigned for the exclusive use of previously defined users at two or more terminal points.

full-pitch winding [ELEC] An armature winding in which the distance between two active conductors of a coil equals the pole pitch.

full plate [HOROL] A watch with train wheels and escapement under a single plate; only the balance is exposed.

full-scale [ORD] Of an attack or other operation, all-out or maximum.

full-seam mining [MIN ENG] A mining system in which the entire section is dislodged together and the coal is separated from the rock outside the mine by the cleaning plant.

full section filter [ELECTR] A filter network whose graphical representation has the shape of the Greek letter pi, connoting capacitance in the upright legs and inductance or reactance in the horizontal member.

full subsidence [MIN ENG] The greatest amount of subsidence occurring as a result of mine workings.

full subtracter [ELECTR] A logic element which operates on three binary input signals representing a minuend, subtrahend, and borrow digit, producing as output a different digit and a new borrow digit. Also known as three-input subtracter.

full-track vehicle [MECH ENG] A vehicle entirely supported, driven, and steered by an endless belt, or track, on each side; for example, a tank.

full-wave amplifier [ELECTR] An amplifier without any clipping.

full-wave bridge [ELECTR] A circuit having a bridge with four diodes, which provides full-wave rectification and gives twice as much direct-current output voltage for a given alternating-current input voltage as a conventional full-wave rectifier.

full-wave control [ELECTR] Phase control that acts on both halves of each alternating-current cycle, for varying load power over the full range from 0 to the full-wave maximum value.

full-wave rectification [ELECTR] Rectification in which output current flows in the same direction during both half cycles of the alternating input voltage.

full-wave rectifier [ELECTR] A double-element rectifier that provides full-wave rectification; one element functions during positive half cycles and the other during negative half cycles.

full-wave vibrator [ELEC] A vibrator having an armature that moves back and forth between two fixed contacts so as to change the direction of direct-current flow through a transformer at regular intervals and thereby permit voltage stepup by the transformer; used in battery-operated power supplies for mobile and marine radio equipment.

full wires [MATER] In wire-mesh cloth, wires running the short way of the cloth as woven. Also known as shute wires.

full-word boundary [COMPUT SCI] In the IBM 360 system, any address which ends in 00, and is therefore a natural boundary for a four-byte machine word.

fully arisen sea *See* fully developed sea.

fully developed mine [MIN ENG] In coal mining, a mine where all development work has reached the boundaries and further extraction will be done on the retreat.

fully developed sea [OCEANOGR] The maximum ocean waves or sea state that can be produced by a given wind force blowing over sufficient fetch, regardless of duration. Also known as fully arisen sea.

fully parenthesized notation [MATH] A method of writing arithmetic expressions in which parentheses are placed around each pair of operands and its associated operator.

fulmar [VERT ZOO] Any of the oceanic birds composing the family Procellariidae; sometimes referred to as foul gulls because of the foul-smelling substance spat at intruders upon their nests.

fulminate [MED] Of a disease, to come suddenly and follow a severe, intense, and rapid course. [ORG CHEM] **1.** A salt of fulminic acid. **2.** $HgC_2N_2O_2$ An explosive mercury compound derived from the fulminic acid; used for the caps or exploders by means of which charges of gunpowder, dynamite, and other explosives are fired. Also known as mercury fulminate.

fulminic acid [ORG CHEM] CNOH An unstable isomer of cyanic acid, whose salts are known for their explosive characteristics. Also known as 4-cyanic acid; paracyanic acid.

fulminuric acid [ORG CHEM] $CN{\cdot}CH(NO_2){\cdot}CONH_2$ A trimer of cyanuric acid; a water-soluble compound, crystallizing in colorless needles, melting at 138°C, and exploding at 145°C. Also known as cyanonitroacetamide; 2-cyano-2-nitroethanamide; isocyanuric acid.

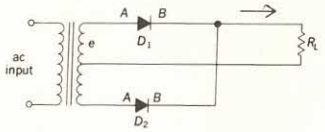
fuloppite [MINERAL] $Pb_3Sb_8S_{15}$ A lead gray, monoclinic mineral consisting of lead antimony sulfide.

fulvene [ORG CHEM] C_6H_6 A yellow oil, an isomer of benzene. Also known as methylenecyclopentadiene.

fumagillin [MICROBIO] $C_{26}H_{34}O_7$ An insoluble, crystalline antibiotic produced by a strain of the fungus *Aspergillus fumigatus*.

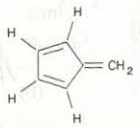
fumarase [BIOCHEM] An enzyme that catalyzes the hydration of fumaric acid to malic acid, and the reverse dehydration.

FULL-WAVE RECTIFIER



Circuit diagram of a full-wave diode rectifier.

FULVENE



Structural formula of fulvene.

Fumariaceae [BOT] A family of dicotyledonous plants in the order Papaverales having four or six stamens, irregular flowers, and no latex system.

fumaric acid [ORG CHEM] $C_4H_4O_4$ A dicarboxylic organic acid produced commercially by synthesis and fermentation; the trans isomer of maleic acid; colorless crystals, melting point 287°C; used to make resins, paints, varnishes, and inks, in foods, as a mordant, and as a chemical intermediate. Also known as boletic acid.

fumarole [GEOL] A hole, usually found in volcanic areas, from which vapors or gases escape.

fumble [IND ENG] An unintentional sensory-motor error that may be unavoidable.

fume hood [CHEM] A fume-collection device over an enclosed shelf or table, so that experiments involving poisonous or unpleasant fumes or gases may be conducted away from the experimental area.

fumes [CHEM] Particulate matter consisting of the solid particles generated by condensation from the gaseous state, generally after volatilization from melted substances, and often accompanied by a chemical reaction, such as oxidation.

fumigant [CHEM] A chemical compound which acts in the gaseous state to destroy insects and their larvae and other pests; examples are dichlorethyl ether, *p*-dichlorobenzene, and ethylene oxide.

fumigating [ENG] The use of a chemical compound in a gaseous state to kill insects, nematodes, arachnids, rodents, weeds, and fungi in confined or inaccessible locations; also used to control weeds, nematodes, and insects in the field.

fuming nitric acid [INORG CHEM] Concentrated nitric acid containing dissolved nitrogen dioxide; may be prepared by adding formaldehyde to concentrated nitric acid.

fuming sulfuric acid [INORG CHEM] Concentrated sulfuric acid containing dissolved sulfur trioxide. Also known as oleum.

fumulus [METEOROL] A very thin cloud veil at any level, so delicate that it may be almost invisible.

funal *See* sthène.

Funariales [BOT] An order of mosses; plants are usually annual, are terrestrial, and have stems that are erect, short, simple, or sparingly branched.

function [COMPUT SCI] In FORTRAN, a subroutine of a particular kind which returns a computational value whenever it is called. [MATH] A mathematical rule between two sets which assigns to each member of the first, exactly one member of the second.

functional [COMPUT SCI] In a linear programming problem involving a set of variables x_j, $j = 1, 2, \ldots, n$, a function of the form $c_1x_1 + c_2x_2 + \ldots + c_nx_n$ (where the c_j are constants) which one wishes to optimize (maximize or minimize, depending on the problem) subject to a set of restrictions. [MATH] Any function from a vector space into its scalar field.

functional analysis [MATH] A branch of analysis which studies the properties of mappings of classes of functions from one topological vector space to another.

functional bombing [ORD] The bombing of a specially selected class of key targets, such as dams or marshaling yards, that function within an industrial complex or transportation system, as opposed to the bombing of an entire system.

functional constraint [MATH] A mathematical equation which must be satisfied by the independent parameters in an optimization problem, representing some physical principle which governs the relationship among these parameters.

functional decomposition [CONT SYS] The partitioning of a large-scale control system into a nested set of generic control functions, namely the regulatory or direct control function, the optimizing control function, the adaptive control function, and the self-organizing function.

functional design [COMPUT SCI] A level of the design process in which subtasks are specified and the relationships among them defined, so that the total collection of subsystems performs the entire task of the system.

functional diagram [COMPUT SCI] A diagram that indicates the functions of the principal parts of a total system and also shows the important relationships and interactions among these parts.

functional electrical stimulation [MED] Therapeutic application of controlled amounts of electric current to muscles to make them contract in a nearly normal manner.

functional forms analysis chart *See* form process chart.

functional generator *See* function generator.

functional group [ORG CHEM] An atom or group of atoms, acting as a unit, that has replaced a hydrogen atom in a hydrocarbon molecule and whose presence imparts characteristic properties to this molecule; frequently represented as R—.

functional interleaving [COMPUT SCI] Alternating the parts of a number of sequences in a cyclic fashion, such as a number of accesses to memory followed by an access to a data channel.

functionality [CHEM] Ability of a compound to form covalent bonds; compounds may be mono-, di-, tri-, or polyfunctional, that is, one, two, three, or many functional groups may participate in a reaction.

functional multiplier *See* function multiplier.

functional paralysis *See* hysterical paralysis.

functional requirement [COMPUT SCI] The documentation which accompanies a program and states in detail what is to be performed by the system.

functional residual capacity [PHYSIO] The volume of gas which remains within the lungs at expiratory standstill.

functional specifications [COMPUT SCI] The documentation for the design of an information system, including the data base; the human and machine procedures; and the inputs, outputs, and processes for each data entry, query, update, and report program in the system.

functional switching circuit [ELECTR] One of a relatively small number of types of circuits which implements a Boolean function and constitutes a basic building block of a switching system; examples are the AND, OR, NOT, NAND, and NOR circuits.

functional unit [COMPUT SCI] The part of the computer required to perform an elementary process such as an addition or a pulse generation.

function code [COMPUT SCI] Special code which appears on a medium such as a paper tape and which controls machine functions such as a carriage return.

function-evaluation routine [COMPUT SCI] A canned routine such as a log function or a sine function.

function generator [ELECTR] Also known as functional generator. **1.** An analog computer device that indicates the value of a given function as the independent variable is increased. **2.** A signal generator that delivers a choice of a number of different waveforms, with provisions for varying the frequency over a wide range.

function hole *See* designation punch.

function key [COMPUT SCI] A special key on a keyboard to control a mechanical function, initiate a specific computer operation, or transmit a signal that would otherwise require multiple key strokes.

function multiplier [ELECTR] An analog computer device that takes in the changing values of two functions and puts out the changing value of their product as the independent variable is changed. Also known as functional multiplier.

function switch [ELECTR] A network having a number of inputs and outputs so connected that input signals expressed in a certain code will produce output signals that are a function of the input information but in a different code.

function table [COMPUT SCI] **1.** Sets of computer information arranged so an entry in one set selects one or more entries in the other sets. **2.** A computer device that converts multiple inputs into a single output or encodes a single input into multiple outputs. [MATH] A table that lists the values of a function for various values of the variable.

function unit [COMPUT SCI] In computer systems, a device which can store a functional relationship and release it continuously or in increments.

functor [COMPUT SCI] *See* logic element. [MATH] A function between categories which associates objects with objects and morphisms with morphisms.

fundamental [PHYS] The lowest frequency component of a complex wave. Also known as first harmonic; fundamental component.

fundamental affine connection [MATH] An affine connection whose coefficients arise from the covariant and contravariant metric tensors of a space.

fundamental circle *See* primary great circle.

fundamental complex [GEOL] An agglomeration of metamorphic rocks underlying sedimentary or unmetamorphosed rocks; specifically, an agglomeration of Archean rocks supporting a geological column.

fundamental component *See* fundamental.

fundamental forms of a surface [MATH] Differential forms which express the area and curvature of the surface.
fundamental frequency [PHYS] **1.** The lowest frequency at which a system vibrates freely. **2.** The lowest frequency in a complex wave.
fundamental group [COMMUN] In wire communications, a group of trunks that connect each local or trunk switching center to a trunk switching center of higher rank on which it homes; the term also applies to groups that interconnect zone centers.
fundamental group of a topological space [MATH] The group of homotopy classes of all closed paths about a point; this group yields information about the number and type of "holes" in a surface.
fundamental interaction [PARTIC PHYS] One of the fundamental forces that act between the elementary particles of matter.
fundamental jelly *See* ulmin.
fundamental mode [ELECTROMAG] The waveguide mode having the lowest critical frequency. Also known as dominant mode; principal mode. [PHYS] The normal mode of vibration having the lowest frequency.
fundamental motion *See* elemental motion.
fundamental particle *See* elementary particle.
fundamental quantity *See* base quantity.
fundamental region [MATH] Any region in the complex plane that can be mapped conformally onto all of the complex plane.
fundamental sequence *See* Cauchy sequence.
fundamental series [SPECT] A series occurring in the line spectra of many atoms and ions having one, two, or three electrons in the outer shell, in which the total orbital angular momentum quantum number changes from 3 to 2.
fundamental star places [ASTRON] The apparent right ascensions and declinations of 1535 standard comparison stars obtained by leading observatories and published annually under the sponsorship of the International Astronomical Union.
fundamental strength [GEOPHYS] The maximum stress that a geological structure can withstand without creep under certain conditions but without reference to time.
fundamental substance *See* ulmin.
fundamental tensor *See* metric tensor.
fundamental theorem of algebra [MATH] Every polynomial of degree n with complex coefficients has exactly n roots counted according to multiplicity.
fundamental theorem of arithmetic [MATH] Every positive integer greater than 1 can be factored uniquely into the form $P_1^{n_1} \dots P_i^{n_i} \dots P_k^{n_k}$, where the P_i are primes, the n_i positive integers.
fundamental theorem of calculus [MATH] Given a continuous function $f(x)$ on the closed interval $[a,b]$ the functional

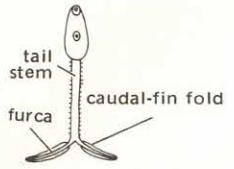
$$F(x) = \int_a^x f(t)\,dt$$

is differentiable on $[a,b]$ and $F'(x) = f(x)$ for every x in $[a,b]$, and if G is any function on $[a,b]$ such that $G'(x) = f(x)$ for all x in $[a,b]$, then

$$\int_a^b f(t)\,dt = G(b) - G(a).$$

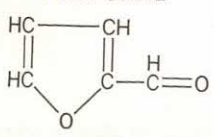
fundamental tone [ACOUS] The component tone of lowest pitch in a complex tone.
fundamental unit *See* base unit.
fundamental wavelength [PHYS] Of an oscillatory device, that wavelength corresponding to its fundamental frequency.
fundic gland [ANAT] Any of the glands of the corpus and fundus of the stomach.
fundus [ANAT] The bottom of a hollow organ.
fungi [MYCOL] Nucleated, usually filamentous, sporebearing organisms devoid of chlorophyll.
fungicide [MATER] An agent that kills or destroys fungi.
fungiform [BIOL] Mushroom-shaped.
fungiform papilla [ANAT] One of the low, broad papillae scattered over the dorsum and margins of the tongue.
Fungi Imperfecti [MYCOL] A class of the subdivision Eumycetes; the name is derived from the lack of a sexual stage.
fungi-proofing [ENG] Application of a protective chemical coating that inhibits growth of fungi.
fungistat [MATER] A compound that inhibits or prevents growth of fungi.
Fungivoridae [INV ZOO] The fungus gnats, a family of orthorrhaphous dipteran insects in the series Nematocera; the larvae feed on fungi.
fungivorous [ZOO] Feeding on or in fungi.
fungus [MYCOL] Singular of fungi.
fungus gall [PL PATH] A plant gall resulting from an attack of a parasitic fungus.
funicle *See* funiculus.
funicular [ENG] Cable railway up a mountain, with cars simultaneously ascending and descending to counterbalance.
funicular distribution [CHEM] The distribution of a two-phase, immiscible liquid mixture (such as oil and water, one a wetting phase, the other nonwetting) in a porous system when the wetting phase is continuous over the surface of the solids.
funicular polygon [MECH] **1.** The figure formed by a light string hung between two points from which weights are suspended at various points. **2.** A force diagram for such a string, in which the forces (weights and tensions) acting on points of the string from which weights are suspended are represented by a series of adjacent triangles.
funicular railroad [ENG] A railroad system used primarily to ascend and descend mountains; the weight of the descending train helps to move the ascending train up the mountain.
funiculus [ANAT] Also known as funicle. **1.** Any structure in the form of a chord. **2.** A column of white matter in the spinal cord. [BOT] The stalk of an ovule. [INV ZOO] A band of tissue extending from the adoral end of the coelom to the adoral body wall in bryozoans.
funnel [DES ENG] A tube with one conical end that sometimes holds a filter; the function is to direct flow of a liquid or, if a filter is present, to direct a flow that was filtered. [NAV ARCH] A smokestack of a ship.
funnel chest [MED] A developmental deformity in which the sternum is depressed and the ribs and costal cartilages curve inward.
funnel cloud [METEOROL] The popular term for the tornado cloud, often shaped like a funnel with the small end nearest the ground.
funnel-flow bin [ENG] A bin in which solid flows toward the outlet in a channel that forms within stagnant material.
fur [MATER] The dressed pelt of a mammal. [VERT ZOO] The coat of a mammal.
2-furaldehyde *See* furfural.
furan [ORG CHEM] **1.** One of a group of organic heterocyclic compounds containing a diunsaturated ring of four carbon atoms and one oxygen atom. **2.** C_4H_4O The simplest furan type of molecule; a colorless, mildly toxic liquid, boiling at 32°C, insoluble in water, soluble in alcohol and ether; used as a chemical intermediate. Also known as furfuran; tetrol.
2-furancarbinol *See* furfuryl alcohol.
furancarboxylic acid *See* furoic acid.
2,5-furandione *See* maleic anhydride.
furanose [BIOCHEM] A sugar whose cyclic or ring structure resembles that of furan.
furanoside [ORG CHEM] A glycoside whose cyclic sugar component resembles that of furan.
furan resin [ORG CHEM] A liquid, thermosetting resin in which the furan ring is an integral part of the polymer chain, made by the condensation of furfuryl alcohol; used as a cement and adhesive, casting resin, coating, and impregnant.
furca [INV ZOO] A forked process as the last abdominal segment of certain crustaceans, and as part of the spring in collembolans.
furcate [BIOL] Forked.
furcocercous cercaria [INV ZOO] A free-swimming, digenetic trematode larva with a forked tail.
furcula [ZOO] A forked structure, especially the wishbone of fowl.
furfural [ORG CHEM] C_4H_3OCHO When pure, a colorless liquid, soluble in organic solvents, slightly soluble in water; used as a lube oil–refining solvent, in cellulosic formulations, in making resins, as a weed killer, as a fungicide, and as a chemical intermediate. Also known as 2-furaldehyde; furfuraldehyde; furfurol; furol.
furfur alcohol *See* furfuryl alcohol.
furfuraldehyde *See* furfural.
furfural extraction [CHEM ENG] Process for the refining of

FURCOCERCOUS CERCARIA



Furcocercous cercaria, obtained either by crushing and examining freshly collected snails or by placing snails in water to permit larvae to escape.

FURFURAL



Structural formula of furfural.

lubricating oils and other organic materials by contact with furfural.

furfuran *See* furan.

furfurol *See* furfural.

furfuryl [ORG CHEM] The univalent radical C_5H_5O— from furfural.

furfuryl alcohol [ORG CHEM] $C_5H_6O_2$ A liquid with a faint burning odor and bitter taste, soluble in alcohol and ether, usually prepared from furfural; used as a solvent in the manufacturing of wetting agents and resins. Also known as 2-furancarbinol; furfur alcohol; furylcarbinol; 2-furylcarbinol; 2-hydroxy methyl furan.

furiani [METEOROL] A southwest wind that blows in the vicinity of the Po River, Italy, and is vehement and short-lived, followed by a gale from the south or southeast.

Furipteridae [VERT ZOO] The smoky bats, a family of mammals in the order Chiroptera having a vestigial thumb and small ears.

furlong [MECH] A unit of length, equal to 1/8 mile, 660 feet, or 201.168 meters.

furnace [ENG] An apparatus in which heat is liberated and transferred directly or indirectly to a solid or fluid mass for the purpose of effecting a physical or chemical change.

furnace black [CHEM] A carbon black formed by partial combustion of liquid and gaseous hydrocarbons in a closed furnace with a deficiency of oxygen; used as a reinforcing filler for synthetic rubber.

furnace brazing [MET] Joining two metals by mechanical union of the filler metal and joint, then heating the composite in a furnace.

furnace cupola *See* cupola.

furnace lining [ENG] The interior part of a furnace in contact with a molten charge and hot gases; constructed of heat-resistant material.

furnace oil [MATER] Distillate fuel oil intended primarily for domestic central heating systems; usually No. 1 fuel oil.

furnace refining [MET] Purification of molten metal by treatment in a reverberatory furnace.

furnace soldering [MET] Soldering by heating clamped members to the appropriate temperature in a furnace.

Furnariidae [VERT ZOO] The oven birds, a family of perching birds in the superfamily Furnarioidea.

Furnarioidea [VERT ZOO] A superfamily of birds in the order Passeriformes characterized by a predominance of gray, brown, and black plumage.

furniture [GRAPHICS] Wood or metal blocks which are used to fill the blank spaces in a form in the lockup process of letterpress printing.

furoic acid [ORG CHEM] $C_5H_4O_3$ Long monoclinic prisms crystallized from the water solution, soluble in ether and alcohol; used as a preservative and bactericide. Also known as furancarboxylic acid; pyromucic acid.

furol *See* furfural.

furred ceiling [BUILD] A ceiling in which the furring units are attached directly to the structural units of the building.

furring [BUILD] Thin strips of wood or metal applied to the joists, studs, or wall of a building to level the surface, create an air space, or add thickness.

furring brick [MATER] Hollow brick grooved for plastering.

furring tile [MATER] Non-load-bearing clay tile used for lining interior walls.

furrow [ENG] A trench plowed in the ground.

furrow irrigation [AGR] Irrigation via furrows between rows of crops.

furrow press [AGR] A device that firms the earth in a furrow after plowing.

Furry theorem [QUANT MECH] In quantum electrodynamics, the theorem that the contribution of a Feynman diagram, consisting of a closed polygon of fermion lines connected to an odd number of photon lines, vanishes.

furuncle [MED] A small cutaneous abscess, usually resulting from infection of a hair follicle by *Staphylococcus aureus*. Also known as boil.

furunculosis [MED] A condition marked by numerous furuncles, or the recurrence of furuncles following healing of a preceding crop.

furylcarbinol *See* furfuryl alcohol.

2-furylcarbinol *See* furfuryl alcohol.

fusain [GEOL] The local lithotype strands or patches, characterized by silky luster, fibrous structure, friability, and black color. Also known as mineral charcoal.

Fusarium [MYCOL] A genus of fungi in the family Tuberculariaceae having sickle-shaped, multicelled conidia; includes many important plant pathogens.

Fusarium oxysporum [MYCOL] A pathogenic fungus causing a variety of plant diseases, including cabbage yellows and wilt of tomato, flax, cotton, peas, and muskmelon.

Fusarium solani [MYCOL] A pathogenic fungus implicated in root rot and wilt diseases of several plants, including sisal and squash.

fuse [ELEC] An expandable device for opening an electric circuit when the current therein becomes excessive, containing a section of conductor which melts when the current through it exceeds a rated value for a definite period of time. Also known as electric fuse. [ENG] Also spelled fuze. **1.** A device with explosive components designed to initiate a train of fire or detonation in an item of ammunition by an action such as hydrostatic pressure, electrical energy, chemical energy, impact, or a combination of these. **2.** A nonexplosive device designed to initiate an explosion in an item of ammunition by an action such as continuous or pulsating electromagnetic waves or acceleration.

fuse alarm [ELEC] Circuit that produces a visual or audible signal to indicate a blown fuse.

fuse blasting cap [ENG] A small copper cylinder closed at one end and charged with a fulminate.

fuse block [ELEC] An insulating base on which are mounted fuse clips or other contacts for fuses. Also known as fuseboard.

fuseboard *See* fuse block.

fuse body [ENG] The part of a fuse contributing the major portion of the total weight, and which houses the majority of the functioning parts, and to which smaller parts are attached.

fuse box *See* cutout box.

fuse clip [ELEC] A spring contact used to hold and make connection to a cartridge-type fuse.

fuse cutout [ELEC] Assembly of a fuse support and a fuse holder which may or may not include the fuse link.

fused aromatic ring [ORG CHEM] A molecular structure in which two or more aromatic rings have two carbon atoms in common.

fused-electrolyte battery *See* thermal battery.

fuse diode [ELECTR] A diode that opens under specified current surge conditions.

fuse disconnecting switch [ELEC] Disconnecting switch in which a fuse unit forms a part of the blade.

fused junction *See* alloy junction.

fused-junction diode *See* alloy junction diode.

fused-junction transistor *See* alloy-junction transistor.

fused potassium sulfide *See* potassium sulfide.

fused quartz [MATER] A glasslike insulating material made by melting crushed crystals of natural quartz or a certain type of quartz sand.

fused-salt electrolysis [PHYS CHEM] Electrolysis with use of purified fused salts as raw material and as an electrolyte.

fused-salt reactor *See* molten-salt reactor.

fused semiconductor [ELECTR] Junction formed by recrystallization on a base crystal from a liquid phase of one or more components and the semiconductor.

fused silica *See* silica glass.

fused spray deposit [MET] In thermal spraying, deposit which is sprayed on a preheated substrate and has the capability to coalesce within itself as well as to the substrate.

fuse gage [ENG] An instrument for slicing time fuses to length.

fusehead [ENG] That part of an electric detonator consisting of twin metal conductors, bridged by fine resistance wire, and surrounded by a bead of igniting compound which burns when the firing current is passed through the bridge wire.

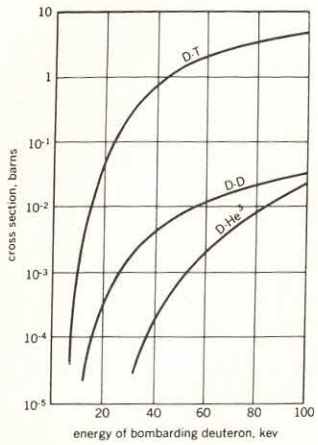
fuselage [AERO ENG] In an airplane, the central structure to which wings and tail are attached; it accommodates flight crew, passengers, and cargo.

fuse lighter [ENG] A device for facilitating the ignition of the powder core of a fuse.

fuse link [ELEC] Part of a fuse that carries the current of the circuit and all or part of which melts when the current exceeds a predetermined value.

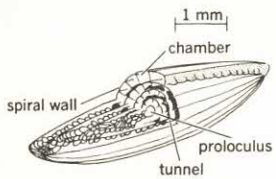
fusel oil [MATER] A volatile, poisonous mixture of isoamyl, butyl, propyl, and heptyl alcohols produced as by-products in

FUSION



Cross sections versus bombarding energy for three simple fusion reactions. D-T = deuterium-tritium reaction; D-D = deuterium-deuterium reaction; D-He^3 = deuterium-helium 3 reaction. *(From R. F. Post, Fusion power, Sci. Amer., 197(6):73–84, copyright © 1957 by Scientific American, Inc.; all rights reserved)*

FUSULINIDAE



A representative of the Fusulinidae shown in a cutaway diagram.

alcoholic fermentation of starches, grains, or fruits to produce ethyl alcohol.

fuse wire [ELEC] Wire made from an alloy that melts at a relatively low temperature and overheats to this temperature when carrying a particular value of overload current.

fusibility [THERMO] The quality or degree of being capable of being liquefied by heat.

fusible alloy [MET] A low melting alloy, usually of bismuth, tin, cadmium, and lead, which melts at temperatures as low as 70°C (160°F).

fusible plug *See* safety plug.

fusible resistor [ELEC] A resistor designed to protect a circuit against overload; its resistance limits current flow and thereby protects against surges when power is first applied to a circuit; its fuse characteristic opens the circuit when current drain exceeds design limits.

fusiform [BIOL] Spindle-shaped; tapering toward the ends.

fusiform bacillus [MICROBIO] A bacillus having one blunt and one pointed end, as *Fusobacterium fusiforme*.

fusiform initial cell [BOT] A cell type of the vascular cambium that gives rise to all cells in the vertical system of secondary xylem and phloem.

fusimotoneuron [PHYSIO] One of the small motor fibers, composing about 30% of the fibers in the ventral root of the spinal cord, which innervate intrafusal fibers.

fusing disk [MECH ENG] A rapidly spinning disk that cuts metal by melting it.

fusinite [GEOL] The micropetrological constituent of fusain which consists of carbonized woody tissue.

fusinization [GEOL] The process of formation of fusain in coal.

fusion [NUC PHYS] Combination of two light nuclei to form a heavier nucleus (and perhaps other reaction products) with release of some binding energy. Also known as atomic fusion; nuclear fusion. [PHYS CHEM] A change of the state of a substance from the solid phase to the liquid phase. Also known as melting.

fusion bomb [ORD] A bomb that depends upon nuclear fusion for release of energy. Also known as fusion weapon.

fusion crust [GEOL] A thin, glassy coating, usually black and rarely more than 1 millimeter thick, which is formed by ablation on the surface of a meteorite.

fusion fuel [NUCLEO] A substance which may generate energy in a fusion reaction, such as deuterium, deuterium and tritium, or deuterium and helium-3.

fusion nucleus [BOT] The triploid, or 3*n*, nucleus which results from double fertilization and which produces the endosperm in some seed plants.

fusion piercing [ENG] A method of producing vertical blastholes by virtually burning holes in rock. Also known as piercing.

fusion-piercing drill [ENG] A machine designed to use the fusion-piercing mode of producing holes in rock. Also known as det drill; jet-piercing drill; Linde drill.

fusion point [NUCLEO] The temperature of a plasma above which the rate of energy generation by nuclear fusion reactions exceeds the rate of energy loss from the plasma, so that the fusion reaction can be self-sustaining. Abbreviated fnp.

fusion reactor [NUCLEO] A proposed device in which controlled, self-sustaining nuclear fusion reactions would be carried out in order to produce useful power.

fusion tube [ANALY CHEM] Device used for the analysis of the elements in a compound by fusing them with another compound; for example, analysis of nitrogen in organic compounds by fusing the compound with sodium and analyzing for sodium cyanide.

fusion weapon *See* fusion bomb.

fusion welding [MET] Any welding operation involving melting of the base or parent metal.

fusion zone [MET] The volume of base or parent metal melted during a welding operation.

fusula [INV ZOO] A spindle-shaped, terminal projection of the spinneret of a spider.

Fusulinacea [PALEON] A superfamily of large, marine extinct protozoans in the order Foraminiferida characterized by a chambered calcareous shell.

Fusulinidae [PALEON] A family of extinct protozoans in the superfamily Fusulinacea.

Fusulinina [PALEON] A suborder of extinct rhizopod protozoans in the order Foraminiferida having a monolamellar, microgranular calcite wall.

future address patch [COMPUT SCI] A computer output containing the address of a symbol and the address of the last reference to that symbol.

future label [COMPUT SCI] An address referenced in the operand field of an instruction, but which has not been previously defined.

future of an event [RELAT] Those events which can be reached by a signal emitted at the event and which move at a speed less than or equal to the speed of light in a vacuum.

fuze *See* fuse.

fuzz [MATER] Fibers which protrude from the surface of a sheet of paper.

fuzzy set [MATH] An extension of the concept of a set, in which the characteristic function which determines membership of an object in the set is not limited to the two values 1 (for membership in the set) and 0 (for nonmembership), but can take on any value between 0 and 1 as well.

fV *See* femtovolt.

f value *See* oscillator strength.

F/V converter *See* frequency-to-voltage converter.

G

g *See* gram.

G [ELEC] *See* conductance. [MECH] A unit of acceleration equal to the standard acceleration of gravity, 9.80665 meters per second per second, or approximately 32.1740 feet per second per second. Also known as fors; grav. [SCI TECH] *See* giga-.

Ga *See* gallium.

GABA *See* γ-aminobutyric acid.

gabardine [TEXT] Steep twill fabric made of closely woven single or two-ply fibers of wool, rayon, polyester, or other yarn.

gabbro [PETR] A group of dark-colored, intrusive igneous rocks with granular texture, composed largely of basic plagioclase and clinopyroxene.

gabion [ENG] A bottomless basket of wickerwork or strap iron filled with earth or stones; used in building fieldworks or as revetments in mining. Also known as pannier.

gable [ARCH] The upper, triangular portion of the terminal wall of a building under the ridge of a sloped roof.

gable roof [ARCH] A sloping peaked roof that forms a gable at each end.

GABOB *See* 4-amino-3-hydroxybutyric acid.

Gabriel's synthesis [ORG CHEM] A synthesis of primary amines by the hydrolysis of N-alkylphthalimides; the latter are obtained from potassium phthalimide and alkyl halides.

gad [MIN ENG] **1.** A heavy steel wedge, 6 or 8 inches (15 or 20 centimeters) long, with a narrow chisel point used in mining to cut samples, break out pieces of loose rock, and so on. **2.** A small iron punch with a wooden handle used to break up ore.

gadder [MIN ENG] A small car or platform with a drilling machine attached, to make a straight line of holes along its course in getting out dimension stone. Also known as gadding car; gadding machine.

gadding car *See* gadder.

gadding machine *See* gadder.

Gadidae [VERT ZOO] A family of fishes in the order Gadiformes, including cod, haddock, pollock, and hake.

Gadiformes [VERT ZOO] An order of actinopterygian fishes that lack fin spines and a swim bladder duct and have cycloid scales and many-rayed pelvic fins.

gadoleic acid [ORG CHEM] $C_{20}H_{38}O_2$ A fatty acid derived from cod liver oil, and melting at 20°C.

gadolinite [MINERAL] $Be_2FeY_2Si_2O_{10}$ A black, greenish-black, or brown rare-earth mineral; hardness is 6.5–7 on Mohs scale, and specific gravity is 4–4.5.

gadolinium [CHEM] A rare-earth element, symbol Gd, atomic number 64, atomic weight 157.25; highly magnetic, especially at low temperatures.

gage Also spelled gauge. [CIV ENG] The distance between the inner faces of the rails of railway track; standard gage in the United States is 4 feet 8 1/2 inches (1.44 meters). [DES ENG] **1.** A device for determining the relative shape or size of an object. **2.** The thickness of a metal sheet, a rod, or a wire. [ENG] The minimum sieve size through which most (95% or more) of an aggregate will pass. [ORD] The interior diameter of the barrel of a shotgun expressed by the number of spherical lead bullets fitting it that are required to make a pound. [TEXT] A measure of the density of knit cloth, given in the number of stitches in 1.5 inches (3.7 centimeters).

gage block [DES ENG] A chrome steel block having two flat, parallel surfaces with the parallel distance between them being the size marked on the block to a guaranteed accuracy of a few millionths of an inch; used as the standard of precise lineal measurement for most manufacturing processes. Also known as precision block; size block.

gage cock [ENG] A valve located on a water column of a boiler drum.

gage complete penetration [ORD] Penetration in which a hole of sufficient size is made through the plate so as to fully admit a plug gage of a designated percentage of diameter; if the projectile remains in the plate and prevents the complete insertion of the plug gage through the hole, the round is disregarded.

gaged brick [MATER] Brick which has been ground or otherwise produced to accurate dimensions.

gage glass [ENG] A glass, plastic, or metal tube, usually equipped with shutoff valves, that is connected by a suitable fitting to a tank or vessel, for the measurement of liquid level.

gageite [MINERAL] $(Mn,Mg,Zn)_8Si_3O_{14}\cdot 2H_2O$(or $3H_2O$) A mineral composed of a hydrous silicate of manganese, magnesium, and zinc.

gage length [ENG] Original length of the portion of a specimen measured for strain, length changes, and other characteristics.

gage loss [MIN ENG] The diametrical reduction in the size of a bit or reaming shell caused by wear through use.

gage plate [CIV ENG] A plate inserted between the parallel rails of a railroad track to maintain the gage.

gage point [DES ENG] A point used to position a part in a jig, fixture, or qualifying gage.

gage pressure [MECH ENG] The amount by which the total absolute pressure exceeds the ambient atmospheric pressure.

gager [PETRO ENG] An oil-field worker who gathers oil samples, tests them to determine their gravity and freedom from water, and measures the quantity of oil that is run from the producer's tank to the pipeline.

gagger [MET] An irregular-shaped piece of metal used in a sand mold to reinforce and support a metal casting.

gaging [NUCLEO] The measurement of the thickness, density, or quantity of material by the amount of radiation it absorbs; this is the most common use of radioactive isotopes in industry. Also spelled gauging.

gahnite [MINERAL] $ZnAl_2O_4$ A usually dark-green, but sometimes yellow, gray, or black spinel mineral consisting of an oxide of zinc and aluminum. Also known as zinc spinel.

gaign [METEOROL] A cross-mountain wind that causes clouds to form on the crests of mountains in Italy.

gain [ELECTR] **1.** The increase in signal power that is produced by an amplifier; usually given as the ratio of output to input voltage, current, or power, expressed in decibels. Also known as transmission gain. **2.** *See* antenna gain. [ENG] A cavity in a piece of wood prepared by notching or mortising so that a hinge or other hardware or another piece of wood can be placed on the cavity.

gain asymptotes [CONT SYS] Asymptotes to a logarithmic graph of gain as a function of frequency.

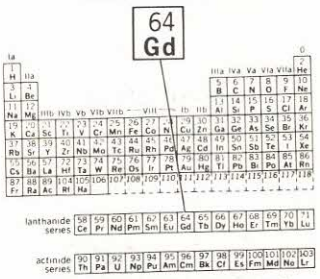
gain-bandwidth product [ELECTR] The midband gain of an amplifier stage multiplied by the bandwidth in megacycles.

gain control [ELECTR] A device for adjusting the gain of a system or component.

gain-crossover frequency [CONT SYS] The frequency at which the magnitude of the loop ratio is unity.

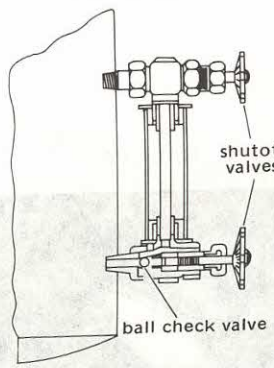
gain margin [CONT SYS] The reciprocal of the magnitude of

GADOLINIUM



Periodic table of the chemical elements showing the position of gadolinium.

GAGE GLASS



A low-pressure type of gage glass. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

the loop ratio at the phase crossover frequency, frequently expressed in decibels.

gain reduction [ELECTR] Diminution of the output of an amplifier, usually achieved by reducing the drive from feed lines by use of equalizer pads or reducing amplification by a volume control.

gain scheduling [CONT SYS] A method of eliminating influences of variations in the process dynamics of a control system by changing the parameters of the regulator as functions of auxiliary variables which correlate well with those dynamics.

gain sensitivity control *See* differential gain control.

gain turndown [ELEC] A receiver gain control incorporated in a transponder to protect the transmitter from overload.

gain twist [ORD] A type of rifling in which the twist is more rapid at the muzzle than at the breech, thus gradually increasing the rotation of the projectile.

gal [MECH] **1.** The unit of acceleration in the centimeter-gram-second system, equal to 1 centimeter per second squared; commonly used in geodetic measurement. Formerly known as galileo. Symbolized Gal. **2.** *See* gallon.

Gal *See* gal.

galactan [BIOCHEM] Any of a number of polysaccharides composed of galactose units. Also known as galactosan.

galactaric acid *See* mucic acid.

galactic center [ASTRON] The gravitational center of the Milky Way Galaxy; the sun and other stars of the Galaxy revolve about this center.

galactic circle *See* galactic equator.

galactic cluster *See* open cluster.

galactic concentration [ASTRON] A measure of the increasing density of stars toward the galactic plane, equal to the ratio of the density of stars of a given magnitude at the galactic plane to that at the galactic poles.

galactic coordinates *See* galactic system.

galactic disk [ASTRON] The flat distribution of stars and interstellar matter in the spiral arms and plane of the Milky Way Galaxy.

galactic equator [ASTRON] A great circle of the celestial sphere, inclined 62° to the celestial equator, coinciding approximately with the center line of the Milky Way, and constituting the primary great circle for the galactic system of coordinates; it is everywhere 90° from the galactic poles. Also known as galactic circle.

galactic halo [ASTRON] The spherical distribution of oldest stars that are centered about the galactic center of the Milky Way Galaxy.

galactic latitude [ASTRON] Angular distance north or south of the galactic equator; the arc of a great circle through the galactic poles, between the galactic equator and a point on the celestial sphere, measured northward or southward from the galactic equator through 90° and labeled N or S to indicate the direction of measurement.

galactic light [ASTRON] The part of the illumination of the night sky that is due to light emitted from stars but diffused through interstellar space.

galactic longitude [ASTRON] Angular distance east of sidereal hour angle 94°.4 along the galactic equator; the arc of the galactic equator or the angle at the galactic pole between the great circle through the intersection of the galactic equator and the celestial equator in Sagittarius (SHA 94°.4) and a great circle through the galactic poles, measured eastward from the great circle through SHA 94°.4 through 360°.

galactic nebula [ASTRON] A nebula that is in or near the galactic system known as the Milky Way.

galactic noise [ASTRON] Radio-frequency noise that originates outside the solar system; it is similar to thermal noise and is strongest in the direction of the Milky Way.

galactic nova [ASTRON] One of the novae that are concentrated largely in a band 10° on each side of the plane of the galaxy and are most frequent toward the center of the galaxy.

galactic nucleus [ASTRON] The center area in the galaxy about which there is a large spherical distribution of stars and from which the spiral arms emanate.

galactic plane [ASTRON] The plane that may be drawn through the galactic equator; the plane of the Milky Way Galaxy.

galactic pole [ASTRON] On the celestial sphere, either of the two points 90° from the galactic equator.

galactic radiation [ASTROPHYS] Radiation emanating from the Milky Way Galaxy.

galactic radio waves [ELECTROMAG] Radio waves emanating from the Milky Way Galaxy.

galactic rotation [ASTRON] The rotation of the Milky Way about an axis through the center and perpendicular to the plane of the Galaxy; the rotation is apparent from the highly flattened shape and from relative stellar motion.

galactic system [ASTRON] An astronomical coordinate system using latitude measured north and south from the galactic equator, and longitude measured in the sense of increasing right ascension from 0 to 360°. Also known as galactic coordinates.

galactic windows [ASTROPHYS] The regions near the equator of the Milky Way where there is low absorption of light by interstellar clouds so that some distant external galaxies may be seen through them.

galactitol *See* dulcitol.

galactocele [MED] **1.** A retention cyst caused by obstruction of one or more of the mammary ducts. **2.** A hydrocele with milky contents.

galactogen [BIOCHEM] A polysaccharide, in snails, that yields galactose on hydrolysis.

galactoglucomannan [BIOCHEM] Any of a group of polysaccharides which are prominent components of coniferous woods; they are soluble in alkali and consist of D-glucopyranose and D-mannopyranose units.

galactokinase [BIOCHEM] An enzyme which reacts D-galactose with adenosinetriphosphate to give D-galactose-1-phosphate and adenosinediphosphate.

galactolipid *See* cerebroside.

galactomannan [BIOCHEM] Any of a group of polysaccharides which are composed of D-galactose and D-mannose units, are soluble in water, and form highly viscous solutions; they are plant mucilages existing as reserve carbohydrates in the endosperm of leguminous seeds.

L-galactomethylose *See* L-fucose.

galactonic acid [BIOCHEM] $C_6H_{12}O_7$ A monobasic acid derived from galactose, occurring in three optically different forms, and melting at 97°C. Also known as pentahydroxyhexoic acid.

galactophore [ANAT] A duct that carries milk.

galactopoiesis [PHYSIO] Formation of the components of milk by the cells composing the lobuloalveolar glandular structure.

galactorrhea [MED] Excessive flow of milk.

galactosamine [BIOCHEM] $C_6H_{14}O_5N$ A crystalline amino acid derivative of galactose; found in bacterial cell walls.

galactosan *See* galactan.

galactose [BIOCHEM] $C_6H_{12}O_6$ A monosaccharide occurring in both levo and dextro forms as a constituent of plant and animal oligosaccharides (lactose and raffinose) and polysaccharides (agar and pectin). Also known as cerebrose.

galactosemia [MED] A congenital metabolic disorder caused by an enzyme deficiency and marked by high blood levels of galactose.

galactosidase [BIOCHEM] An enzyme that hydrolyzes galactosides.

galactoside [BIOCHEM] A glycoside formed by the reaction of galactose with an alcohol; yields galactose on hydrolysis.

galactosuria [MED] Passage of urine containing galactose.

galacturonic acid [BIOCHEM] The monobasic acid resulting from oxidation of the primary alcohol group of D-galactose to carboxyl; it is widely distributed as a constituent of pectins and many plant gums and mucilages.

galago *See* bushbaby.

galatea [TEXT] Strong warp-effect twill cotton fabric.

Galatheidea [INV ZOO] A group of decapod crustaceans belonging to the Anomura and having a symmetrical abdomen bent upon itself and a well-developed tail fan.

Galaxioidei [VERT ZOO] A suborder of mostly small, freshwater fishes in the order Salmoniformes.

galaxite [MINERAL] $MnAl_2O_4$ A black mineral of the spinel series composed of an oxide of manganese and aluminum.

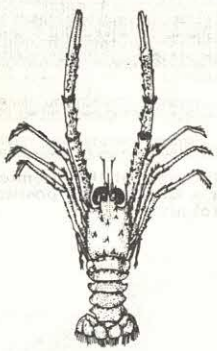
galaxy [ASTRON] A large-scale aggregate of stars, gas, and dust; the aggregate is a separate system of stars covering a mass range from 10^7 to 10^{12} solar masses and ranging in diameter from 1500 to 300,000 light-years.

Galaxy *See* Milky Way Galaxy.

galaxy cluster [ASTRON] A collection of from two to several hundred galaxies which are much more densely distributed than the average density of galaxies in space.

galbanum [MATER] A yellowish to brownish gum resin de-

GALATHEIDEA



Munida evermanni.
(Smithsonian Institution)

GALAXY

Great Spiral NGC 224 in Andromeda, which resembles the Milky Way Galaxy. Above it is elliptical galaxy NGC 205. Photograph is by the 48-inch (1.2-meter) Schmidt telescope. *(Hale Observatories)*

rived from *Ferula galbaniflua*, a perennial herb of western Asia; used in medicine.

Galbulidae [VERT ZOO] The jacamars, a family of highly iridescent birds of the order Piciformes that resemble giant hummingbirds.

gale [METEOROL] **1.** An unusually strong wind. **2.** In storm-warning terminology, a wind of 28–47 knots (52–87 kilometers per hour). **3.** In the Beaufort wind scale, a wind whose speed is 28–55 knots (52–102 kilometers per hour).

galea [ANAT] The epicranial aponeurosis linking the occipital and frontal muscles. [BIOL] A helmet-shaped structure. [BOT] A helmet-shaped petal near the axis. [INV ZOO] **1.** The endopodite of the maxilla of certain insects. **2.** A spinning organ on the movable digit of chelicerae of pseudoscorpions.

galeate [BIOL] **1.** Shaped like a helmet. **2.** Having a galea.

galena [MINERAL] PbS A bluish-gray to lead-gray mineral with brilliant metallic luster, specific gravity 7.5, and hardness 2.5 on Mohs scale; occurs in cubic or octahedral crystals, in masses, or in grains. Also known as blue lead; lead glance.

galenic [MINERAL] Containing galena. Also known as galenical.

galenical [MINERAL] *See* galenic. [PHARM] A medicinal preparation containing one or several active plant ingredients and produced so that inert constituents and other undesirable contents of the plant remain undissolved.

galenobismutite [MINERAL] $PbBi_2S_4$ A lead-gray or tin-white mineral consisting of bismuth sulfide; specific gravity is 6.9.

Galen's vein [ANAT] One of the two veins running along the roof the third ventricle that drain the interior of the brain.

Galeritidae [PALEON] A family of extinct exocyclic Euechinoidea in the order Holectypoida, characterized by large ambulacral plates with small, widely separated pore pairs.

galerna *See* galerne.

galerne [METEOROL] A squally northwesterly wind that is cold, humid, and showery, occurring in the rear of a low-pressure area over the English Channel and off the Atlantic coast of France and northern Spain. Also known as galerna; galerno; giboulee.

galerno *See* galerne.

gale warning [METEOROL] A storm warning for marine interests of impending winds from 28 to 47 knots (52–87 kilometers per hour), signaled by two triangular red pennants by day, and a white lantern over a red lantern by night.

Galilean glass *See* Galilean telescope.

Galilean satellites [ASTRON] The four largest and brightest satellites of Jupiter (Io, Europa, Ganymede, and Callisto).

Galilean telescope [OPTICS] A refracting telescope whose objective is a converging (convex) lens and whose eyepiece is a diverging (concave) lens; it forms erect images. Also known as Galilean glass.

Galilean transformation [MECH] A mathematical transformation used to relate the space and time variables of two uniformly moving (inertial) reference systems in nonrelativistic kinematics.

galileo *See* gal.

Galileo number [FL MECH] A dimensionless number used in studying the circulation of viscous liquids, equal to the cube of a characteristic dimension, times the acceleration of gravity, times the square of the liquid's density, divided by the square of its viscosity. Symbol N_{Ga}.

Galileo's law of inertia *See* Newton's first law.

galipol [ORG CHEM] $C_{15}H_{26}O$ A terpene alcohol derived from the oil of the angostura bark; colorless crystals that melt at 89°C.

gall [MED] A sore on the skin that is caused by chafing. [PHYSIO] *See* bile. [PL PATH] A large swelling on plant tissues caused by the invasion of parasites, such as fungi or bacteria, following puncture by an insect; insect oviposit and larvae of insects are found in galls.

gallacetophenone [ORG CHEM] $C_8H_8O_4$ A white to brownish-gray, crystalline powder, melting at 173°C, soluble in water, alcohol, and ether; used as an antiseptic. Also known as alizarin yellow C.

gallbladder [ANAT] A hollow, muscular organ in humans and most vertebrates which receives dilute bile from the liver, concentrates it, and discharges it into the duodenum.

gallego [METEOROL] A cold, piercing, northerly wind in Spain and Portugal.

gallein [ORG CHEM] $C_{20}H_{10}O_7$ A brown powder or green scales, broken down by heat; used as a pH indicator in the analysis of phosphates in urine and as an intermediate in the manufacture of dyes. Also known as anthracene violet; gallin; pyrogallolphthalein.

galleria forest [ECOL] A modified tropical deciduous forest occurring along stream banks.

Galleriinae [INV ZOO] A monotypic subfamily of lepidopteran insects in the family Pyralididae; contains the bee moth or wax worm (*Galleria mellonella*), which lives in beehives and whose larvae feed on beeswax.

gallery [GEOL] **1.** A horizontal, or nearly horizontal, underground passage, either natural or artificial. **2.** A subsidiary passage in a cave at a higher level than the main passage. [MIN ENG] A level or drift.

gallery deck [NAV ARCH] A partial deck below a flight deck on an aircraft carrier.

gallery practice ammunition [ORD] Small arms ammunition with a reduced charge, used for practice shooting in a gallery and also for guard purposes.

gallery testing [MIN ENG] A method of testing explosives; a test condition is achieved by firing light charges without any stemming, and heavier charges with only 1 inch (2.5 centimeters) of stemming.

galley [ENG] The kitchen of a ship, airplane, or trailer. [GRAPHICS] A flat, oblong, open-ended tray into which the letters assembled by hand in a composing stick are transferred after the composing stick is full.

galley proof [GRAPHICS] A reproduction taken from type while the type is still in the galley; the reproduction is reviewed for errors.

gallic acid [ORG CHEM] $C_7H_6O_5$ A crystalline compound that forms needles from solutions of absolute methanol or chloroform, dissolves in water, alcohol, ether, and glycerol; obtained from nutgall tannins or from *Penicillium notatum* fermentation; used to make antioxidants and ink dyes and in photography.

gallicolous [BIOL] Producing or inhabiting galls.

Galliformes [VERT ZOO] An order of birds that includes important domestic and game birds, such as turkeys, pheasants, and quails.

gallin *See* gallein.

gallinaceous [VERT ZOO] Of, pertaining to, or resembling birds of the order Galliformes.

galling [MET] Surface damage on mating, moving metal parts due to friction caused by local welding of high spots.

Gallionella [MICROBIO] A genus of appendaged bacteria; cells are kidney-shaped or rounded and occur on stalks; reproduce by binary fission.

gallium [CHEM] A chemical element, symbol Ga, atomic number 31, atomic weight 69.72. [MET] A silvery-white metal, melting at 29.7°C, boiling at 1983°C.

gallium arsenide [INORG CHEM] GaAs A crystalline material, melting point 1238°C; frequently alloys of this material are formed with gallium phosphide or indium arsenide.

gallium arsenide laser [OPTICS] A laser that emits light at right angles to a junction region in gallium arsenide, at a wavelength of 9000 angstroms (900 nanometers); can be modulated directly at microwave frequencies; cryogenic cooling is required.

gallium arsenide semiconductor [SOLID STATE] A semiconductor having a forbidden-band gap of 1.4 electron volts and a maximum operating temperature of 400°C when used in a transistor.

gallium halide [INORG CHEM] A compound formed by bonding of gallium to either chlorine, bromine, iodine, fluorine, or astatine.

gallium phosphide [INORG CHEM] GaP Transparent crystals made by reacting phosphorus and gallium suboxide at low temperature.

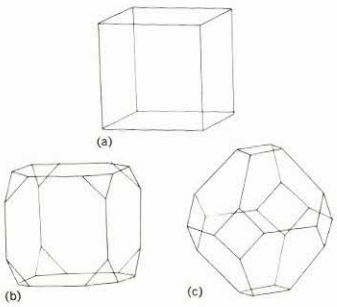
gallium phosphide semiconductor [SOLID STATE] A semiconductor having a forbidden-band gap of 2.4 electron volts and a maximum operating temperature of 870°C when used in a transistor.

gallivorous [ZOO] Feeding on the tissues of galls, especially certain insect larvae.

gallnut [PL PATH] A gall resembling a nut.

gallocyanine [ORG CHEM] $C_{15}H_{13}ClN_2O_5$ Green crystals soluble in alcohol, glacial acetic acid, alkali carbonates, and

GALENA



Forms of galena crystals: usually *(a)* cubic but sometimes modified to *(b,c)* octahedral truncations. *(From C. S. Hurlbut, Jr., Dana's Manual of Mineralogy, 17th ed., Wiley, 1959)*

GALILEAN TELESCOPE

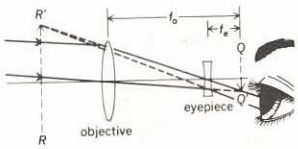


Diagram of Galilean telescope. QQ' is real inverted image which would be formed by objective alone. Eyepiece forms enlarged, erect virtual image, RR', which is viewed by observer; f_o and f_e are focal lengths of objective and eyepiece respectively. For distant object magnification is f_o/f_e.

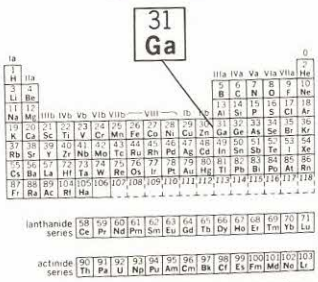
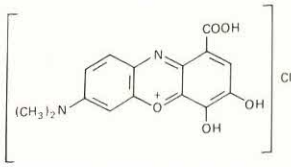
GALLIUM



Periodic table of the chemical elements showing the position of gallium.

GALLOCYANINE



Structural formula.

concentrated hydrochloric acid; used as a dye and as a reagent for the determination of lead.

gallodesoxycholic acid *See* chenodeoxycholic acid.

gallogen *See* ellagic acid.

gallon [MECH] Abbreviated gal. **1.** A unit of volume used in the United States for measurement of liquid substances, equal to 231 cubic inches, or to 3.785 411 784 $\times 10^{-3}$ cubic meter, or to 3.785 411 784 liters; equal to 128 fluid ounces. **2.** A unit of volume used in the United Kingdom for measurement of liquid and solid substances, usually the former; equal to the volume occupied by 10 pounds of weight of water of density 0.998859 gram per milliliter in air of density 0.001217 gram per milliliter against weights of density 8.136 grams per milliliter (the milliliter here has its old definition of 1.000028 $\times 10^{-6}$ cubic meter); approximately equal to 277.420 cubic inches, or to 4.54609 $\times 10^{-3}$ cubic meter, or to 4.54609 liters; equal to 160 fluid ounces.

gallop rhythm [MED] A three-sound sequence resulting from the intensification of the normal third or fourth heart sounds, occurring usually with a rapid ventricular rate.

gallotannic acid *See* tannic acid.

gallotannin *See* tannic acid.

Galloway sinking and walling stage *See* sinking and walling scaffold.

Galloway stage [MIN ENG] A platform of several decks suspended near the shaft during the sinking operation.

gallows frame [MIN ENG] *See* headframe. [NAV ARCH] A deck-mounted frame consisting of one U-shaped structural member or two legs and a header to provide large spacing at the head of the frame; accommodates securing points for a number of head blocks that can swing transversely without interference from each other.

gallstone [PATH] A nodule formed in the gallbladder or biliary tubes and composed of calcium, cholesterol, or bilirubin, or a combination of these.

galmei *See* hemimorphite.

Galofaro [OCEANOGR] A whirlpool in the Strait of Messina, between Sicily and Italy; formerly called Charybdis.

Galois field [MATH] A type of field extension obtained from considering the coefficients and roots of a given polynomial. Also known as root field.

Galois group [MATH] A group of isomorphisms of a particular field extension associated with a polynomial's roots.

Galois theory [MATH] The study of the Galois field and Galois group corresponding to a polynomial.

Galtonian curve [STAT] A graph showing the variation of any quantity from its normal value.

Galumnidae [INV ZOO] A family of oribatid mites in the suborder Sarcoptiformes.

galvanic [ELEC] Pertaining to electricity flowing as a result of chemical action.

galvanic battery [ELEC] A galvanic cell, or two or more such cells electrically connected to produce energy.

galvanic cell [ELEC] An electrolytic cell that is capable of producing electric energy by electrochemical action.

galvanic corrosion [MET] Electrochemical corrosion associated with the current in a galvanic cell, caused by dissimilar metals in an electrolyte because of the difference in potential (emf) of the two metals.

galvanic couple [ELEC] A pair of unlike substances, such as metals, which generate a voltage when brought in contact with an electrolyte.

galvanic current [ELEC] A steady direct current.

galvanic series [CHEM] The relative hierarchy of metals arranged in order from magnesium (least noble) at the anodic, corroded end through platinum (most noble) at the cathodic, protected end.

galvanic skin response [PHYSIO] The electrical reactions of the skin to any stimulus as detected by a sensitive galvanometer; most often used experimentally to measure the resistance of the skin to the passage of a weak electric current.

galvanism [BIOL] The use of a galvanic current for medical or biological purposes.

galvanize [MET] To deposit zinc on the surface of metal by the processes of hot dipping, sherardizing, or sometimes electroplating.

galvanoluminescence [PHYS] Light emission which may occur when electrodes of certain metals, such as aluminum or tantalum, are immersed in suitable electrolytes and current is passed between them.

galvanomagnetic effect [ELECTROMAG] One of the electrical or thermal phenomena occurring when a current-carrying conductor or semiconductor is placed in a magnetic field; examples are the Hall effect, Ettingshausen effect, transverse magnetoresistance, and Nernst effect. Also known as magnetogalvanic effect.

galvanometer [ENG] An instrument for indicating or measuring a small electric current by means of a mechanical motion derived from electromagnetic or electrodynamic forces produced by the current.

galvanometer constant [ELEC] Number by which a certain function of the reading of a galvanometer must be multiplied to obtain the current value in ordinary units.

galvanometer recorder [ENG ACOUS] A sound recorder in which the audio signal voltage is applied to a coil suspended in a magnetic field; the resulting movements of the coil cause a tiny attached mirror to move a reflected light beam back and forth across a slit in front of a moving photographic film.

galvanometer shunt [ELEC] Resistor connected in parallel with a galvanometer to increase its range under certain conditions; it allows only a known fraction of the current to pass through the galvanometer.

galvanostat [ELEC] A device to deliver constant current from a high-voltage battery.

galvanotaxis [BIOL] Movement of a free-living organism in response to an electrical stimulus.

galvanotropism [BIOL] Response of an organism to electrical stimulation.

galvo *See* metal fume fever.

gambir [MATER] The yellowish extract from the twigs and leaves of the Malayan wood vine *Uncaria gambir* (Rubiaceae); used for tanning and dyeing and as an astringent. Also known as pale catechu; terra japonica; white cutch.

gambrel roof [BUILD] A roof with two sloping sides stepped at different angles on each side of the center ridge; the lower slope is steeper than the upper slope.

game [MATH] A mathematical model expressing a contest between two players under specified rules.

game bird [BIOL] A bird that is legal quarry for hunters.

Gamella [MICROBIO] A genus of bacteria in the family Streptococcaceae; spherical cells occurring singly or in pairs with flattened adjacent sides; ferment glucose.

gamene *See* madder.

gametangial copulation [MYCOL] Direct fusion of certain fungal gametangia without differentiation of the gametes.

gamete [BIOL] A mature germ cell.

game theory [MATH] The mathematical study of games or abstract models of conflict situations from the viewpoint of determining an optimal policy or strategy. Also known as theory of games.

gametic copulation [MYCOL] The fusion of pairs of differentiated, uninucleate sexual cells or gametes formed in specialized gametangia.

gametocyte [HISTOL] An undifferentiated cell from which gametes are produced.

gametogenesis [BIOL] The formation of gametes, or reproductive cells such as ova or sperm.

gametophore [BOT] A branch that bears gametangia.

gametophyte [BOT] **1.** The haploid generation producing gametes in plants exhibiting metagenesis. **2.** An individual plant of this generation.

game tree [MATH] A tree graph used in the analysis of strategies for a game, in which the vertices of the graph represent positions in the game, and a given vertex has as its successors all vertices that can be reached in one move from the given position. Also known as lookahead tree.

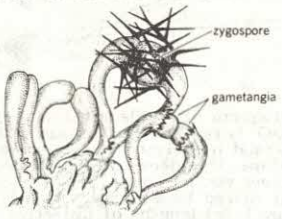
gamma [CHEM] The gamma position (the third carbon atom in an aliphatic carbon chain) on a chemical compound. [ELECTROMAG] A unit of magnetic field strength, equal to 10 microoersteds, or 0.00001 oersted. [GRAPHICS] A numerical indication of the degree of contrast in a television or photographic image; equal to the slope of the straight-line portion of the H and D curve for the emulsion or screen. [MECH] A unit of mass equal to 10^{-6} gram or 10^{-9} kilogram.

gamma-absorption gage *See* gamma gage.

gamma acid [ORG CHEM] $C_{10}H_5NH_2OHSO_3H$ White crystals, slightly soluble in water; an intermediate in dyestuff manufacture. Also known as 2-amino-8-naphthol-6-sulfonic acid; 7-amino-1-naphthol-3-sulfonic acid; 2,5-naphthylamine sulfonic acid; 3-sulfonic acid; 6-sulfonic acid.

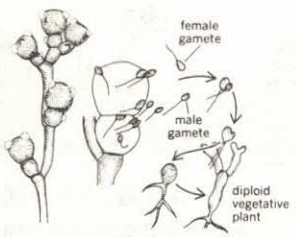
gamma camera [ENG] An instrument consisting of a large,

GAMETANGIAL COPULATION



Gametangial copulation, a sexual mechanism in fungi.

GAMETIC COPULATION



Gametic copulation, a sexual mechanism in fungi.

thin scintillation crystal or array of photomultiplier tubes, a multichannel collimator, and circuitry to analyze the pulses produced by the photomultipliers; used to visualize the distribution of radioactive compounds in the human body.

gamma counter [ENG] A device for detecting gamma radiation, primarily through the detection of fast electrons produced by the gamma rays; it either yields information about integrated intensity within a time interval or detects each photon separately.

gamma cross section [NUC PHYS] The cross section for absorption or scattering of gamma rays by a nucleus or atom.

gamma decay *See* gamma emission.

gamma distribution [STAT] A normal distribution whose frequency function involves a gamma function.

gamma emission [NUC PHYS] A quantum transition between two energy levels of a nucleus in which a gamma ray is emitted. Also known as gamma decay.

gamma flux density [NUC PHYS] The number of gamma rays passing through a unit area in a unit time.

gamma function [MATH] The complex function given by the integral with respect to t from 0 to ∞ of $e^{-t}t^{z-1}$; this function helps determine the general solution of Gauss' hypergeometric equation.

gamma gage [NUCLEO] A penetration-type thickness gage that measures the thickness or density of a sample by measuring its absorption of gamma rays. Also known as gamma-absorption gage.

gamma globulin [IMMUNOL] Any of the serum proteins with antibody activity.

gamma heating [NUCLEO] Heating resulting from absorption of gamma-ray energy by a material.

gamma iron [MET] Iron having a face-centered cubic lattice structure, stable between 910 and 1400°C.

gamma irradiation [NUCLEO] Exposure of a material to gamma rays.

gamma logging [ENG] Obtaining, by means of a gamma-ray probe, a record of the intensities of gamma rays emitted by the rock strata penetrated by a borehole.

gamma matrix *See* Dirac matrix.

gamma radiation [NUCLEO] Radiation of gamma rays.

gamma radiography [NUCLEO] Radiography by means of gamma rays.

gamma ray [NUC PHYS] A high-energy photon, especially as emitted by a nucleus in a transition between two energy levels.

gamma-ray altimeter [ENG] An altimeter, used at altitudes under several hundred feet, that measures the photon backscatter from the earth resulting from the transmission of photons to earth from a cobalt-60 gamma source in the plane.

gamma-ray astronomy [ASTRON] The study of gamma rays from extraterrestrial sources, especially gamma-ray bursts.

gamma-ray bursts [ASTRON] Intense blasts of soft gamma rays of unknown origin, which range in duration from a tenth of a second to tens of seconds and occur several times a year from sources widely distributed over the sky.

gamma-ray detector [ENG] An instrument used on ships to identify and measure abnormal concentrations of gamma rays in the oceans.

gamma-ray laser [PHYS] A hypothetical device which would generate coherent radiation in the range 0.005–0.5 nanometer by inducing isomeric radiative transitions between isomeric nuclear states. Also known as graser.

gamma-ray level indicator [ENG] A level indicator in which the rising level of the liquid or other material reduces the amount of radiation passing from a gamma-ray source through the container to a Geiger counter or other radiation detector.

gamma-ray probe [ENG] A gamma-ray counter built into a watertight case small enough to be lowered into a borehole.

gamma-ray scattering *See* Compton scattering.

gamma-ray source [NUCLEO] A quantity of radioactive material that emits gamma radiation and is in a form convenient for radiology.

gamma-ray spectrometry [NUCLEO] **1.** Determination of the energy distribution of gamma rays emitted by nuclei. Also known as gamma-ray spectroscopy. **2.** In particular, a variation of neutron activation analysis in which the induced radiation from the sample is gamma rays instead of neutrons.

gamma-ray spectroscopy *See* gamma-ray spectrometry.

gamma-ray telescope [ASTRON] Any device for detecting and determining the directions of extraterrestrial gamma rays, using coincidence or anticoincidence circuits with scintillation or semiconductor detectors to obtain directional discrimination.

gamma-ray tracking [ENG] Use of three tracking stations, located at the three corners of a triangle centered on a missile about to be launched, to obtain accurate azimuthal tracking of a cobalt-60 gamma source in the tail.

gamma-ray well logging [ENG] Measurement of gamma-ray intensity versus depth down the wellbore; used to identify rock strata, their position, and their thicknesses.

Gammaridea [INV ZOO] The scuds or sand hoppers, a suborder of amphipod crustaceans; individuals are usually compressed laterally, are poor walkers, and lack a carapace.

gamma scanning [NUCLEO] The scanning of a fuel rod in a nuclear reactor for gamma activity by moving the rod past a slit in a lead block; photons emerging from the slit are detected by a scintillation spectrometer and recorded as a function of rod position.

gamma structure [SOLID STATE] A Hume-Rothery designation for structurally analogous phases or intermetallic phases having 21 valence electrons to 13 atoms, analogous to the γ-brass structure.

gamma taxonomy [SYST] The level of taxonomic study concerned with biological aspects of taxa, including intraspecific populations, speciation, and evolutionary rates and trends.

gamma transition *See* glass transition.

gammil [CHEM] A unit of concentration, equal to a concentration of 1 milligram of solute in 1 liter of solvent. Also known as micril; microgammil.

gamodeme [ECOL] An isolated breeding community.

gamogony [INV ZOO] Spore formation by multiple fission in sporozoans. [ZOO] Sexual reproduction.

gamont [INV ZOO] The gametocyte of sporozoans.

gamopetalous [BOT] Having petals united at their edges. Also known as sympetalous.

gamophobia [PSYCH] An abnormal fear of marriage.

gamophyllous [BOT] Having the leaves of the perianth united.

gamosepalous [BOT] Having sepals united at their edges. Also known as synsepalous.

Gamow barrier [NUC PHYS] The potential barrier which retards the escape of alpha particles from the nucleus according to the Gamow-Condon-Gurney theory.

Gamow-Condon-Gurney theory [NUC PHYS] An early quantum-mechanical theory of alpha-particle decay according to which the alpha particle penetrates a potential barrier near the surface of the nucleus by a tunneling process.

Gamow-Teller interaction [NUC PHYS] Interaction between a nucleon source current and a lepton field which has an axial vector or tensor form.

Gamow-Teller selection rules [NUC PHYS] Selection rules for beta decay caused by the Gamow-Teller interaction; that is, in an allowed transition there is no parity change of the nuclear state, and the spin of the nucleus can either remain unchanged or change by ± 1; transitions from spin 0 to spin 0 are excluded, however.

Gampsonychidae [PALEON] A family of extinct crustaceans in the order Palaeocaridacea.

gang capacitor [ELEC] A combination of two or more variable capacitors mounted on a common shaft to permit adjustment by a single control.

gang chart [IND ENG] A multiple-activity process chart used for groups of men on materials-handling operations.

gang drill [MECH ENG] A set of drills operated together in the same machine; used in rock drilling.

ganged control [ELECTR] Controls of two or more circuits mounted on a common shaft to permit simultaneous control of the circuits by turning a single knob.

gangliated cord [ANAT] One of the two main trunks of the sympathetic nervous system, one trunk running along each side of the spinal column.

ganglioma [MED] A form of ganglioneuroma in which neuronal and glial elements appear in about equal proportions.

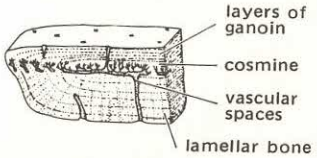
ganglion [ANAT] A group of nerve cell bodies, usually located outside the brain and spinal cord.

ganglioneuroma [MED] A tumor composed of sympathetic ganglion cells and sheathed nerve fibers.

ganglionitis [MED] Inflammation of a ganglion.

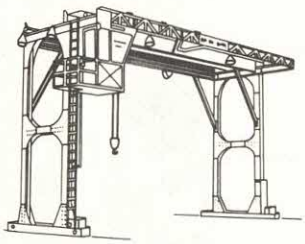
ganglioside [BIOCHEM] One of a group of glycosphingolipids found in neuronal surface membranes and spleen; they

GANOID SCALE



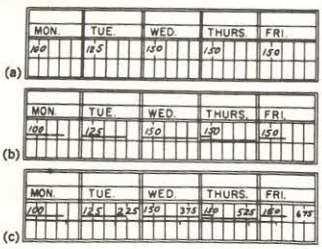
Ganoid scale, a type of primitive vertebrate scale. *(From A. S. Romer, The Vertebrate Body, Saunders, 1962)*

GANTRY CRANE



An overhead-type traveling gantry crane.

GANTT CHART



Gantt chart showing *(a)* the daily schedule, *(b)* the work actually accomplished, and *(c)* the cumulative schedule and work. *(From H. B. Maynard, ed., Industrial Engineering Handbook, McGraw-Hill, 2d ed., 1963)*

GAR

Long-nosed gar, which may grow to a length of 5 feet (1.5 meters).

contain an *N*-acyl fatty acid derivative of sphingosine linked to a carbohydrate (glucose or galactose); they also contain *N*-acetylglucosamine or *N*-acetylgalactosamine, and *N*-acetylneuraminic acid.

gang milling [ENG] Rolling of material by means of a composite machine with numerous cutting blades.

gangosa [MED] Destructive lesions of the nose and hard palate, sometimes more extensive, considered to be the tertiary stage of yaws.

gangplank [NAV ARCH] A long, narrow, movable bridge or plank from a ship to a pier or from one ship to another ship alongside.

gangplow [AGR] A plow with two or more cutters that turn parallel furrows.

gang-punch [COMPUT SCI] To punch identical or constant information into all of a group of punched cards.

gangrene [MED] A form of tissue death usually occurring in an extremity due to insufficient blood supply.

gangrenous stomatitis *See* noma.

gang saw [MECH ENG] A steel frame in which thin, parallel saws are arranged to operate simultaneously in cutting logs.

gang switch [ELEC] A combination of two or more switches mounted on a common shaft to permit operation by a single control. Also known as deck switch.

gangue [GEOL] The valueless rock or aggregates of minerals in an ore.

gangway [MIN ENG] **1.** A principal underground haulage road. **2.** A passageway into or out of an underground mine. [NAV ARCH] An opening in the rail or bulwarks of a ship through which one can enter or leave it.

ganister [MATER] A fine mixture of quartz and fireclay which is used to line certain furnaces for metallurgical processes. [PETR] A fine, hard quartzose sandstone; used to make refractory silica brick to line furnace reactors.

ganoid scale [VERT ZOO] A structure having several layers of enamellike material (ganoin) on the upper surface and laminated bone below.

ganoin [VERT ZOO] The enamellike covering of a ganoid scale.

ganomalite [MINERAL] $(Ca_2)Pb_3Si_3O_{11}$ A colorless to gray silicate of lead with calcium crystallizing in the tetragonal system.

ganophyllite [MINERAL] $(Na,K)(Mn,Fe,Al)_5(Si,Al)_6O_{15}(OH)_5 \cdot 2H_2O$ A brown, prismatic crystalline or foliated mineral composed of a hydrous silicate of manganese and aluminum.

gantlet [CIV ENG] A stretch of overlapping railroad track, with one rail of one track being between the two rails of another track; used over narrow bridges and passes.

gantry [ENG] A frame erected on side supports so as to span an area and support and hoist machinery and heavy materials.

gantry crane [MECH ENG] A bridgelike hoisting machine having fixed supports or arranged for running along tracks on ground level.

Gantt chart [IND ENG] In production planning and control, a type of bar chart depicting the work planned and done in relation to time; each division of space represents both a time interval and the amount of work to be done during that interval.

Gantt task and bonus plan [IND ENG] A wage incentive plan in which high task efficiency is maintained by providing a percentage bonus as a reward for production in excess of standard.

Ganymede [ASTRON] A satellite of Jupiter orbiting at a mean distance of 1,071,000 kilometers. Also known as Jupiter III.

gap [COMMUN] A region not adequately covered by the main lobes of a radar antenna. [COMPUT SCI] A uniformly magnetized area in a magnetic storage device (tape, disk), used to indicate the end of an area containing information. [ELEC] The spacing between two electric contacts. [ELECTROMAG] A break in a closed magnetic circuit, containing only air or filled with a nonmagnetic material. [GEN] A short region that is missing in one strand of a double-stranded deoxyribonucleic acid. [GEOGR] Any sharp, deep notch in a mountain ridge or between hills. [MET] An opening at the point of closest approach between faces of members in a weld joint.

gap coding [COMMUN] A process for conveying information by inserting gaps or periods of nontransmission in a system that normally transmits continuously.

gap digit [COMPUT SCI] A digit in a machine word that does not represent data or instructions, such as a parity bit or a digit included for engineering purposes.

gape [ANAT] The margin to margin distance between open jaws. [INV ZOO] The space between the margins of a closed mollusk valve.

gap factor [ELECTR] Ratio of the maximum energy gained in volts to the maximum gap voltage in a tube employing electron accelerating gaps, that is, a traveling-wave tube.

gap-filler radar [ENG] Radar used to fill gaps in radar coverage of other radar.

gap filling [ELECTROMAG] Electrical or mechanical rearrangement of an antenna array, or the use of a supplementary array, to produce lobes where gaps previously occurred.

gap-framepress [MECH ENG] A punch press whose frame is open at bed level so that wide work or strip work can be inserted.

gap-graded aggregate [MATER] Aggregate in which certain size particles are entirely or substantially absent.

gap lathe [MECH ENG] An engine lathe with a sliding bed providing enough space for turning large-diameter work.

gapless tape [COMPUT SCI] A magnetic tape upon which raw data is recorded in a continuous manner; the data are streamed onto the tape without the word gaps; the data still may contain signs and end-of-record marks in the gapless form.

gap markers [ORD] In land mine warfare, markers used to identify a minefield gap; gap markers at the entrance to and exit from the gap are referenced to a landmark or intermediate marker.

gapped tape [COMPUT SCI] A magnetic tape upon which blocked data has been recorded; it contains all of the flag bits and format to be read directly into a computer for immediate use.

gap scanning [ENG] In ultrasonic testing, a coupling technique in which a sound beam is projected through a short fluid column that flows through a nozzle on an ultrasonic search unit.

gap scatter [COMPUT SCI] The deviation from the exact distance required between read/write heads and the magnetized surface.

gar [VERT ZOO] The common name for about seven species of bony fishes in the order Semionotiformes having a slim form, an elongate snout, and close-set ganoid scales.

Garand rifle [ORD] A name for the .30-caliber M1 rifle, a weapon used by the U.S. Army up through 1957.

garbage *See* hash.

garbage collection [COMPUT SCI] In a computer program with dynamic storage allocation, the automatic process of identifying those memory cells whose contents are no longer useful for the computation in progress and then making them available for some other use.

garbage in, garbage out [COMPUT SCI] A phrase often stressed during introductory courses in computer utilization as a reminder that, regardless of the correctness of the logic built into the program, no answer can be valid if the input is erroneous. Abbreviated GIGO.

garbage pitch [MATER] Dark-brown to black pitch material obtained as a by-product residue from the burning of garbage; properties are analogous to complex hydrocarbons; used to make paints, varnishes, tarred paper, and waterproofing compound.

garbin [METEOROL] A sea breeze; in southwest France it refers to a southwesterly sea breeze which sets in about 9 A.M., reaches its maximum toward 2 P.M., and ceases about 5 P.M.

garble [COMMUN] To alter a message intentionally or unintentionally so that it is difficult to understand.

garboard strake [NAV ARCH] The strake of shell plating adjacent to the keel; this row of plates acts in conjunction with the keel, and the plates are made heavier than the other bottom plates.

Garbutt rod [PETRO ENG] A device used to pull the standing valve out of a tubing-type oil-well sucker-rod pump.

gardening [ASTRON] A phenomenon in which the lunar regolith is constantly churning at a very slow rate because of successive impacts; the result is that bottom material is brought up to the top and surface material is buried.

Gardner crusher [MIN ENG] A swing-and-hammer crusher; the U-shaped hammers are thrown by a revolving shaft against the feed and a heavy anvil inside the housing.

Gardner's syndrome [MED] A hereditary disorder transmitted as an autosomal dominant; manifested in childhood by multiple neoplasms, including bony and mesenteric tumors, fatty and fibrous skin, and intestinal polyps.

gargoylism *See* Hurler's syndrome.

garigue [ECOL] A low, open scrubland restricted to limestone sites in the Mediterranean area; characterized by small evergreen shrubs and low trees.

garland [MIN ENG] A channel fixed around a shaft in order to catch the water draining down the walls and conduct it to a lower level. Also known as water curb; water garland; water ring.

garlic [BOT] *Allium sativum*. A perennial plant of the order Liliales grown for its pungent, edible bulbs.

garlic oil [MATER] An essential oil obtained from steam distillation of garlic; contains chiefly a mixture of terpenes, with organic sulfides also present.

garner [AGR] **1.** A building or section of a building in which grain is stored. **2.** A bin for weighing grain.

garnet [MINERAL] A generic name for a group of mineral silicates that are isometric in crystallization and have the general chemical formula $A_3B_2(SiO_4)_3$, where A is Fe^{2+}, Mn^{2+}, Mg, or Ca, and B is Al, Fe^{3+}, Cr^{3+}, or Ti^{3+}; used as a gemstone and as an abrasive.

garnet hinge [DES ENG] A hinge with a vertical bar and horizontal strap.

garnet maser [ELECTR] A name incorrectly applied to a ferromagnetic amplifier.

garnet paper [MATER] Paper with a layer of crushed garnet on one side; used as an abrasive or polisher.

garnett [TEXT] **1.** A machine for removing foreign materials from fiber before it is carded. **2.** A machine for converting textile waste to fiber. **3.** The waste products of a garnett machine.

garnetting [TEXT] The reduction of textile waste materials to fiber.

garnierite [MINERAL] $(Ni,Mg)_3Si_2O_5(OH)_4$ An apple-green or pale-green, monoclinic serpentine; a gemstone and an ore of nickel. Also known as nepuite; noumeite.

garret [BUILD] The part of a house just under the roof.

garronite [MINERAL] $Na_2Ca_5Al_{12}Si_{20}O_{64}\cdot 27H_2O$ A zeolite mineral belonging to the phillipsite group; cyrstallizes in the tetragonal system.

garter spring [DES ENG] A closed ring formed of helically wound wire.

Gartner's duct [ANAT] The remnant of the embryonic Wolffian duct in the adult female mammal.

garúa [METEOROL] A dense fog or drizzle from low stratus clouds on the west coast of South America, creating a raw, cold atmosphere that may last for weeks in winter, and supplying a limited amount of moisture to the area. Also known as camanchaca.

gas [MATER] *See* gasoline. [ORD] To expose to a war gas. [PHYS] A phase of matter in which the substance expands readily to fill any containing vessel; characterized by relatively low density.

gas absorption operation [CHEM ENG] The recovery of solute gases present in gaseous mixtures of noncondensables; this recovery is generally achieved by contacting the gas stream with a liquid that offers specific or selective solubility for the solute gas to be recovered, or with an adsorbent (for example, synthetic or natural zeolite) that accepts only specific molecule sizes or shapes.

gas-activated battery [ELEC] A reserve battery which is activated by introducing a gas which reacts with a material between the electrodes of the battery to form an electrolyte.

gas adsorption [PHYS CHEM] The concentration of a gas upon the surface of a solid substance by attractive forces between the surface and the gas molecules.

gas alarm [MIN ENG] A signal system which warns mine workers of dangerous concentration of firedamp.

gas amplification [NUCLEO] The ratio of the charge collected to the charge liberated by the initial ionizing event in a radiation-counter tube.

gas analysis [ANALY CHEM] Analysis of the constituents or properties of a gas (either pure or mixed); composition can be measured by chemical adsorption, combustion, electrochemical cells, indicator papers, chromatography, mass spectroscopy, and so on; properties analyzed for include heating value, molecular weight, density, and viscosity.

gas anchor [PETRO ENG] A downhole gas separator used to reduce gas-in-oil froth before the pump to increase pump efficiency.

gas and mist sampler [MIN ENG] An instrument for automatic collection of one sample per hour of airborne contaminants such as sulfur dioxide or ammonia.

gas bearing [MECH ENG] A journal or thrust bearing lubricated with gas. Also known as gas-lubricated bearing.

gas black [CHEM] Fine particles of carbon formed by partial combustion or thermal decomposition of natural gas; used to reinforce rubber products such as tires. Also known as carbon black; channel black.

gas bomb [ORD] A bomb designed to produce casualties among personnel and to contaminate an area; a burster charge splits the bomb case and disperses the gas filler over the area.

gas brazing *See* gas-flame brazing.

gas-bubble protective device *See* Buchholz protective device.

gas buoy [NAV] A metal buoy having a gas light.

gas burner [ENG] A hole or a group of holes through which a combustible gas or gas-air mixture flows and burns.

gas cap [GEOPHYS] The gas immediately in front of a meteoroid as it travels through the atmosphere. [PETRO ENG] Gas occurring above liquid hydrocarbons in a reservoir under such trap conditions as the presence of water which prevents downward migration or the abutment of an impermeable formation against the reservoir.

gas capacitor [ELEC] A capacitor consisting of two or more electrodes separated by a gas, other than air, that serves as a dielectric.

gas-cap drive [PETRO ENG] Driving liquid hydrocarbons through a porous reservoir and toward well holes by utilizing the pressure of gas overlying the liquid pool.

gas-cap expansion [PETRO ENG] Process of reservoir-liquids displacement by the natural expansion of the reservoir gas cap to fill the voids vacated by recovered liquids.

gas-cap injection *See* external gas injection.

gas-cap reservoir [PETRO ENG] Two-phase reservoir in which a free area of gas (a gas cap) is underlain by an oil or liquid phase.

gas carburizing [MET] Surface hardening by heating a metal in gas of high carbon content in order to introduce carbon into the surface layers.

gas cell [ELEC] Cell in which the action depends on the absorption of gases by the electrodes.

gas-cell frequency standard [ATOM PHYS] An atomic frequency standard in which the frequency-determining element is a gas cell containing rubidium, cesium, or sodium vapor.

gas centrifuge process [NUCLEO] A method of isotope separation in which a mixture of isotopes in the gaseous state is spun at high speeds in a centrifuge, and centrifugal forces cause a concentration of heavy isotopes near the walls and light isotopes near the center.

gas check [ORD] Device in a gun that prevents escape of gas through the breech.

gas chromatograph [ANALY CHEM] The instrument used in gas chromatography to detect volatile compounds present; also used to determine certain physical properties such as distribution or partition coefficients and adsorption isotherms, and as a preparative technique for isolating pure components or certain fractions from complex mixtures.

gas chromatography [ANALY CHEM] A separation technique involving passage of a gaseous moving phase through a column containing a fixed adsorbent phase; it is used principally as a quantitative analytical technique for volatile compounds.

gas cleaning [ENG] Removing ingredients, pollutants, or contaminants from domestic and industrial gases.

gas column [GEOL] The difference in elevation between the highest and lowest parts of the various producing zones of a gas-producing formation.

gas-compression cycle [MECH ENG] A refrigeration cycle in which hot, compressed gas is cooled in a heat exchanger, then passes into a gas expander which provides an exhaust stream of cold gas to another heat exchanger that handles the sensible-heat refrigeration effect and exhausts the gas to the compressor.

gas compressor [MECH ENG] A machine that increases the pressure of a gas or vapor by increasing the gas density and delivering the fluid against the connected system resistance.

gas-condensate liquid [ORG CHEM] A hydrocarbon, such as propane, butane, and pentane, obtained as condensate when wet natural gas is compressed or refrigerated.

gas-condensate reservoir [GEOL] Hydrocarbon reservoir in which conditions of temperature and pressure have resulted in the condensation of the heavier hydrocarbon constituents from the reservoir gas.

gas-condensate well [PETRO ENG] A well producing hydrocarbons from a gas-condensate reservoir.

GAS CHROMATOGRAPH

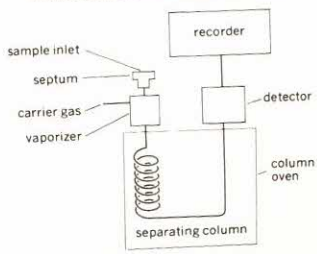


Diagram of a gas chromatograph.

gas coning [PETRO ENG] The tendency of gas in a gas-drive reservoir to push oil downward in an inverse cone contour toward the casing perforations; at the extreme of coning, gas, not oil, will be produced from the well.

gas constant [THERMO] The constant of proportionality appearing in the equation of state of an ideal gas, equal to the pressure of the gas times its molar volume divided by its temperature. Also known as gas-law constant.

gas-cooled reactor [NUCLEO] A nuclear reactor in which a gas, such as air, carbon dioxide, or helium, is used as a coolant.

gas counter [NUCLEO] A counter in which the radioactive sample is prepared in the form of a gas and introduced into the counter tube.

gas current [ELECTR] A positive-ion current produced by collisions between electrons and residual gas molecules in an electron tube. Also known as ionization current.

gas cut [PETRO ENG] A foamy mixture of gas and drilling mud recovered in testing.

gas cutting [MET] Cutting metal with the heat of an oxy-acetylene flame.

gas cyaniding *See* carbonitriding.

gas cycle [THERMO] A sequence in which a gaseous fluid undergoes a series of thermodynamic phases, ultimately returning to its original state.

gas cycling [PETRO ENG] A petroleum enhanced-recovery process which injects the gas produced with oil back into the oil sand to help produce more oil.

gas cylinder [MECH ENG] The chamber in which a piston moves in a positive displacement engine or compressor.

gas dehydrator [CHEM ENG] A device or system to remove moisture vapor from a gas stream, usually incorporates desiccant-type packed towers.

gas depletion drive *See* internal gas drive.

gas detector [MIN ENG] A device which indicates the existence of firedamp or other combustible or noxious gas in a mine.

gas-deviation factor *See* compressibility factor.

gas discharge [ELECTR] Conduction of electricity in a gas, due to movements of ions produced by collisions between electrons and gas molecules.

gas-discharge display [ELECTR] A display in which seven or more cathode elements form the segments of numerical or alphameric characters when energized by about 160 volts direct current; the segments are vacuum-sealed in a neon-mercury gas mixture.

gas-discharge lamp *See* discharge lamp.

gas-discharge laser [OPTICS] A gas laser in which optical pumping is caused by nonequilibrium processes in a gas discharge.

gas doping [ELECTR] The introduction of impurity atoms into a semiconductor material by epitaxial growth, by using streams of gas that are mixed before being fed into the reactor vessel.

gas-drive reservoir [PETRO ENG] An oil reservoir in which gas (either natural or reinjected) provides the driving force to sweep liquids through the formation and into the wellbore.

gas dynamic laser [OPTICS] A gas laser that converts thermal energy directly into coherent radiation at an efficiency high enough to offer promise of wireless power transmission.

gas dynamics [PHYS] The study of the motion of gases, and of its causes, which takes into account thermal effects generated by the motion.

gas embolus [MED] An embolus composed of a gas resulting from trauma or other causes.

gas emission [MIN ENG] The release of gas from the strata into the mine workings.

gas engine [MECH ENG] An internal combustion engine that uses gaseous fuel.

gaseous conduction analyzer [ENG] A device to detect organic vapors in air by measuring the change in current that flows between a heated platinum anode and a concentric platinum cathode.

gaseous diffusion [CHEM ENG] **1.** Pressure-induced free-molecular transfer of gas through microporous barriers as in the process of making fissionable fuel. **2.** Selective solubility diffusion of gas through nonporous polymers by absorption and solution of the gas in the polymer matrix.

gaseous diffusion plant [NUCLEO] A facility where the gaseous diffusion process is used in the separation of uranium isotopes in order to provide fissionable fuel for nuclear power plants and weapons.

gaseous diffusion process [NUCLEO] A method of separating isotopes in which an isotopic mixture of gases is allowed to diffuse through a porous wall; the lighter molecules pass through the porous wall more readily than the heavier molecules.

gaseous fuel [MATER] A combustible gas that can be burned in a furnace or an engine.

gaseous nebulae [ASTRON] Clouds of gas, such as the Network Nebula in Cygnus, that are members of the Milky Way galactic system and are small compared with its overall dimensions.

gas etching [ENG] The removal of material from a semiconductor circuit by reaction with a gas that forms a volatile compound.

gas explosion [MIN ENG] An explosion of firedamp in a coal mine; coal dust apparently does not play a significant part.

gas field [PETRO ENG] An area underlain with little or no interruption by one or more reservoirs of commercially valuable gas.

gas-filled cable [ELEC] A coaxial or other cable containing gas under pressure to serve as insulation and keep out moisture.

gas-filled diode [ELECTR] A gas tube which is a diode, such as a cold-cathode rectifier or phanotron.

gas-filled porosity [GEOL] A reservoir formation in which the pore space is filled by gas instead of liquid hydrocarbons.

gas-filled radiation counter [NUCLEO] A gas tube used to detect radiation by means of gas ionization.

gas-filled rectifier *See* cold-cathode rectifier.

gas-filled thermometer [ENG] A thermometer which uses a gas (usually nitrogen or hydrogen), that approximately follows the ideal gas law.

gas-filled triode [ELECTR] A gas tube which has a grid or other control element, such as a thyratron or ignitron.

gas filter [CHEM ENG] A device used to remove liquid or solid particles from a flowing gas stream.

gas-flame brazing [MET] A brazing process for which the heat is supplied by a gas flame. Also known as gas brazing.

gas-flow counter tube [NUCLEO] A radiation-counter tube in which an appropriate atmosphere is maintained by a flow of gas through the tube. Also known as flow counter; gas-flow radiation counter.

gas-flow radiation counter *See* gas-flow counter tube.

gas focusing [ELECTR] A method of concentrating an electron beam by utilizing the residual gas in a tube; beam electrons ionize the gas molecules, forming a core of positive ions along the path of the beam which attracts beam electrons and thereby makes the beam more compact. Also known as ionic focusing.

gas furnace [ENG] An enclosure in which a gaseous fuel is burned.

gas gangrene [MED] A localized, but rapidly spreading, necrotizing bacterial wound infection characterized by edema, gas production, and discoloration; caused by several species of *Clostridium*.

gas generator [CHEM] A device used to generate gases in the laboratory. [CHEM ENG] A chemical plant for producing gas from coal, for example, water gas. [MECH ENG] An apparatus that supplies a high-pressure gas flow to drive compressors, airscrews, and other machines.

gas gland [VERT ZOO] A structure inside the swim bladder of many teleosts which secretes gas into the bladder.

gas grenade [ORD] Popular name for a chemical grenade designed to release a war gas, usually tear gas or other irritants.

gas gun [ORD] Automatic gun operated solely by gas, utilizing a portion of the gas pressure from firing a bullet to act on some form of piston-and-cylinder arrangement.

gas heater [MECH ENG] A unit heater designed to supply heat by forced convection, using gas as a heat source.

gash fracture [GEOL] Open gashes that are formed diagonally to a fault or fault zone.

gas holder [ENG] Gas storage container with vertically free top section that moves up or down to adjust to the volume of gas held.

gas hole [ENG] A cavity formed in a casting as a result of cavitation.

gash vein [GEOL] A mineralized fissure that extends a short distance vertically.

gasification [CHEM ENG] Any chemical or heat process used to convert a substance to a gas; coal is converted by the Hygas process to a gaseous fuel. [MIN ENG] A method for exploiting poor-quality coal and thin coal seams by burning the coal in

place to produce combustible gas which can be burned to generate power or processed into chemicals and fuels. Also known as underground gasification.

gasifier [CHEM ENG] A unit for producing gas, particularly synthesis gas from coal.

gas ignition [MIN ENG] The setting on fire of an accumulation of firedamp in a coal mine.

gas injection [MECH ENG] Injection of gaseous fuel into the cylinder of an internal combustion engine at the appropriate part of the cycle. [PETRO ENG] The injection of gas into a reservoir to maintain formation pressure and to drive liquid hydrocarbons toward the wellbores.

gas-injection well [PETRO ENG] A well hole in a reservoir into which pressurized gas is injected to maintain formation pressure or to drive liquid hydrocarbons toward other well holes.

gas-insulated substation [ELEC] An electric power substation in which all live equipment and busbars are housed in grounded metal enclosures sealed and filled with sulfur hexafluoride gas.

gas ionization [ELECTR] Removal of the planetary electrons from the atoms of gas filling an electron tube, so that the resulting ions participate in current flow through the tube.

gasket [ENG] A packing made of deformable material, usually in the form of a sheet or ring, used to make a pressure-tight joint between stationary parts. Also known as static seal.

gas kinematics [FL MECH] The motion of a gas considered by itself, without regard for the causes of motion.

gas laser [OPTICS] A laser in which the active medium is a discharge in a gas contained in a glass or quartz tube with a Brewster-angle window at each end; the gas can be excited by a high-frequency oscillator or direct-current flow between electrodes inside the tube; the function of the discharge is to pump the medium, to obtain population inversion.

gas law [THERMO] Any law relating the pressure, volume, and temperature of a gas.

gas-law constant *See* gas constant.

gas lift [CHEM ENG] Solids movement operation in which an upward-flowing gas stream in a closed conduit or vessel is used to lift and move powdered or granular solid material. [PETRO ENG] The injection of gas near the bottom of an oil well to aerate and lighten the column of oil to increase oil production from the well.

gas-liquid chromatography [ANALY CHEM] A form of gas chromatography in which the fixed phase (column packing) is a liquid solvent distributed on an inert solid support. Abbreviated GLC. Also known as gas-liquid partition chromatography.

gas-liquid partition chromatography *See* gas-liquid chromatography.

gas logging [PETRO ENG] Hot-wire-detector or gas-chromatographic analysis and record of gas contained in the mud stream and cuttings for a well being drilled; a common way of detecting subsurface oil and gas shows.

gas-lubricated bearing *See* gas bearing.

gas magnification [ELECTR] Increase in current through a phototube due to ionization of the gas in the tube.

gas making [CHEM ENG] Making water gas or air gas by the action of steam and air upon hot coke.

gasman [MIN ENG] An underground official who examines the mine for firedamp and has charge of its removal.

gas manometer [ENG] A gage for determining the difference in pressure of two gases, usually by measuring the difference in height of liquid columns in the two sides of a U-tube.

gas maser [PHYS] A maser in which the microwave electromagnetic radiation interacts with the molecules of a gas such as ammonia; used chiefly in highly stable oscillator applications, as in atomic clocks.

gas mask [ENG] A device to protect the eyes and respiratory tract from noxious gases, vapors, and aerosols, by removing contamination with a filter and a bed of adsorbent material.

gas mechanics [FL MECH] The action of forces on gases.

gas meter [ENG] An instrument for measuring and recording the amount of gas flow through a pipe.

gas munition [ORD] A munition such as a bomb, projectile, pot, candle, or spray tank containing a war gas and a means of release.

gasogene [MATER] A fuel gas formed by incomplete combustion of charcoal; a European development as a substitute for gasoline. Also spelled gazogene.

gas oil [MATER] A petroleum distillate boiling within the general range 450–800°F (232–426°C); usually includes kerosine, diesel fuel, heating oils, and light fuel oils.

gas-oil ratio [PETRO ENG] Approximation of oil-reservoir composition, expressed in cubic feet of gas per barrel of liquid at 14.7 psia and 60°F (15.6°C).

gas-oil separator [PETRO ENG] An oil-field stock tank or series of tanks in which wellhead pressure is reduced so that the dissolved gas associated with reservoir oil is flashed off or separated as a separate phase. Also known as gas separator; oil-field separator; oil-gas separator; oil separator; separator.

gasoline [MATER] A fuel for internal combustion engines consisting essentially of volatile flammable liquid hydrocarbons; derived from crude petroleum by processes such as distillation reforming, polymerization, catalytic cracking, and alkylation; the common name is gas. Also known as petrol.

gasoline alkylate [MATER] A gasoline component usually formed by union of an olefin with isobutane by a refinery process known as alkylation; the product has high octane value and is blended with motor and aviation gasoline to improve antiknock value.

gasoline engine [MECH ENG] An internal combustion engine that uses a mixture of air and gasoline vapor as a fuel.

gasoline gel *See* gelatinized gasoline.

gasoline locomotive [MIN ENG] A mine locomotive which uses a gaseous fuel, is comparable to the steam locomotive in radius of travel, and has a speed of 3–12 miles per hour (5–19 kilometers per hour).

gasoline pool [MATER] A concept that considers gasolines of different qualities as a single group for the purpose of blending to meet final product specifications.

gasoline pump [MECH ENG] A device that pumps and measures the gasoline supplied to a motor vehicle, as at a filling station.

gasometer [ENG] A piece of equipment that holds and measures gas; may be used in analytical chemistry to measure the quantity of gas evolved in a reaction.

gasometric method [ANALY CHEM] An analytical technique for gases; the gas may be measured by instrumental methods or through chemical reactions with specific reagents.

gas packing [IND ENG] Packing a material such as food in an atmosphere consisting of an oxygen-free gas.

gaspar [MATER] A mixture of finely ground glass and quartz; a feldspar substitute in some applications and a hard-rubber filler.

gaspeite [MINERAL] $NaCO_3$ An anhydrous normal carbonate mineral with calcite structure.

gas phototube [ELECTR] A phototube into which a quantity of gas has been introduced after evacuation, usually to increase its sensitivity.

gas pliers [DES ENG] Pliers for gripping round objects such as pipes, tubes, and circular rods.

gas pocket [GEOL] A gas-filled cavity in rocks, especially above an oil pocket. [MET] A cavity in a metal which contains trapped gases.

gas port [ORD] An opening for the passage of gas in the cylinder of a gas-operated automatic weapon to admit some of the propellant gases from the gun barrel.

gas-pressure maintenance [PETRO ENG] The maintenance of oil-reservoir gas pressure, usually by gas injection, to increase hydrocarbon recovery and to improve reservoir production characteristics.

gas producer [CHEM ENG] A device for complete gasification of coal by utilizing simultaneously the air and water-gas reactions.

gas reservoir [GEOL] An accumulation of natural gas found with or near accumulations of crude oil in the earth's crust.

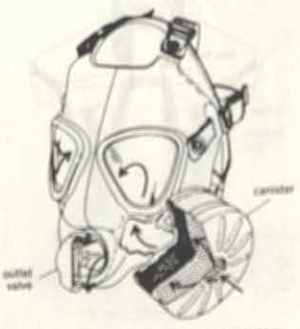
gas reversion [CHEM ENG] A process which combines thermal cracking or reforming of naphtha with thermal polymerization or alkylation of hydrocarbon gases carried out in the same reaction zone.

gas rig [MIN ENG] A borehole drill, either rotary or churn type, driven by a combustion-type engine energized by a combustible liquid, such as gasoline, or a combustible gas, such as bottle gas.

gas scattering [ELECTR] The scattering of electrons or other particles in a beam by residual gas in the vacuum system.

gas scrubbing [CHEM ENG] Removal of gaseous or liquid impurities from a gas by the action of a liquid; the gas is

GAS MASK



A gas mask with arrows showing airflow direction.

contacted with the liquid which removes the impurities by dissolving or by chemical combination.

gas seal [ENG] A seal which prevents gas from leaking to or from a machine along a shaft.

gas sendout [PETRO ENG] The total gas that is produced, purchased, or withdrawn from underground storage in a certain interval of time.

gas separator *See* gas-oil separator.

Gasserian ganglion [ANAT] A group of nerve cells of the sensory root of the trigeminal nerve. Also known as semilunar ganglion.

gas-shielded arc welding [MET] Use of a gas atmosphere to shield the molten metal from air in arc welding.

gassiness [ELECTR] Presence of unwanted gas in a vacuum tube, usually in relatively small amounts, caused by the leakage from outside or evolution from the inside walls or elements of the tube.

gassing [ELEC] The evolution of gas in the form of small bubbles in a storage battery when charging continues after the battery has been completely charged. [ENG] **1.** Absorption of gas by a material. **2.** Formation of gas pockets in a material. **3.** Evolution of gas from a material during a process or procedure. [TEXT] *See* singeing.

gas slippage [FL MECH] Phenomenon of gas bypassing liquids that occurs when the diameter of capillary openings approaches the mean free path of the gas; occurs not only in capillary tubing, but in porous oil-reservoir formations.

gas-solid chromatography [ANALY CHEM] A form of gas chromatography in which the moving phase is a gas and the stationary phase is a surface-active sorbent (charcoal, silica gel, or activated alumina). Abbreviated GSC.

gas solubility [PHYS CHEM] The extent that a gas dissolves in a liquid to produce a homogeneous system.

gas-solubility factor [PETRO ENG] The number of standard cubic feet of gas liberated under specified gas-oil separator conditions that are in solution in one barrel of stock-tank oil at reservoir temperature and pressure.

gas spurt [GEOL] An accumulation of organic matter on certain strata caused by escaping gas.

gas sterilization [MICROBIO] Sterilization of heat and liquid-labile materials by means of gaseous agents, such as formaldehyde, ethylene oxide, and β-propiolactone.

gas stimulation [PETRO ENG] The detonation of a nuclear explosive in the strata of a natural-gas field to make the gas flow more freely.

gas storage [FOOD ENG] Storage in a low-oxygen atmosphere to delay ripening.

gassy [MIN ENG] A coal mine rating by the U.S. Bureau of Mines, applicable when an ignition occurs or if a methane content exceeding 0.25% can be detected; work must be halted if the methane exceeds 1.5% in a return airway.

gassy tube [ELECTR] A vacuum tube that has not been fully evacuated or has lost part of its vacuum due to release of gas by the electrode structure during use, so that enough gas is present to impair operating characteristics appreciably. Also known as soft tube.

gas tank [ENG] A tank for storing gas or gasoline.

Gasteromycetes [MYCOL] A group of basidiomycetous fungi in the subclass Homobasidiomycetidae with enclosed basidia and with basidiospores borne symmetrically on long sterigmata and not forcibly discharged.

Gasterophilidae [INV ZOO] The horse bots, a family of myodarian cyclorrhaphous dipteran insects in the subsection Calypteratae, including individuals that cause myiasis in horses.

Gasterophilus [INV ZOO] A large genus of botflies in the family Gasterophilidae.

Gasterosteidae [VERT ZOO] The sticklebacks, a family of actinopterygian fishes in the order Gasterosteiformes.

Gasterosteiformes [VERT ZOO] An order of actinopterygian fishes characterized by a ductless swim bladder, a pelvic fin that is abdominal to subthoracic in position, and an elongate snout.

Gasteruptiidae [INV ZOO] A family of hymenopteran insects in the superfamily Proctotrupoidea.

gas tetrode *See* tetrode thyratron.

gas thermometer [ENG] A device to measure temperature by measuring the pressure exerted by a definite amount of gas enclosed in a constant volume; the gas (preferably hydrogen or helium) is enclosed in a glass or fused-quartz bulb connected to a mercury manometer. Also known as constant-volume gas thermometer.

gas thermometry [ENG] Measurement of temperatures with a gas thermometer; used with helium down to about 1 K.

gas thermostatic switch [ELEC] A thermostatic switch in which heat causes the pressure of gas in a sealed metal bellows to increase, thereby moving the bellows and closing the contacts of a switch.

gas tracer [MIN ENG] Dust clouds, chemical smoke, or gaseous or radioactive tracers used to detect slowly moving air currents in a mine.

gastralium [INV ZOO] A microsclere located just beneath the inner cell layer of hexactinellid sponges. [VERT ZOO] One of the riblike structures in the abdomen of certain reptiles.

gas trap [CIV ENG] A bend or chamber in a drain or sewer pipe that prevents sewer gas from escaping.

gas-treating system [CHEM ENG] A process system to remove nonhydrocarbon impurities (such as water vapor, hydrogen sulfide, or carbon dioxide) from wellhead gas.

gastrectomy [MED] Surgical removal of all or part of the stomach.

gastric acid [BIOCHEM] Hydrochloric acid secreted by parietal cells in the fundus of the stomach.

gastric cecum [INV ZOO] One of the elongated pouchlike projections of the upper end of the stomach in insects.

gastric enzyme [BIOCHEM] Any digestive enzyme secreted by cells lining the stomach.

gastric filament [INV ZOO] In scyphozoans, a row of filaments on the surface of the gastric cavity which function to kill or paralyze live prey taken into the stomach. Also known as phacella.

gastric gland [ANAT] Any of the glands in the wall of the stomach that secrete components of the gastric juice.

gastric hypothermia [MED] Cooling of the upper digestive tract; useful in the management of bleeding disorders.

gastric juice [PHYSIO] The digestive fluid secreted by gastric glands; contains gastric acid and enzymes.

gastric mill [INV ZOO] A grinding apparatus consisting of calcareous or chitinous plates in the pharynx or stomach of certain invertebrates.

gastric ostium [INV ZOO] The opening into the gastric pouch in scyphozoans.

gastric pouch [INV ZOO] One of the pouchlike diversions of a scyphozoan stomach.

gastric shield [INV ZOO] A thickening of the stomach wall in some mollusks for mixing the contents.

gastric ulcer [MED] An ulcer of the mucous membrane of the stomach.

gastrin [BIOCHEM] A polypeptide hormone secreted by the pyloric mucosa which stimulates the pancreas to release pancreatic fluid and the stomach to release gastric acid.

gastritis [MED] Inflammation of the stomach.

gastroanastomosis [MED] The surgical formation of a communication between the two pouches of the stomach. Also known as gastrogastrostomy.

gastroblast [INV ZOO] A feeding zooid of a tunicate colony.

gastrocnemius [ANAT] A large muscle of the posterior aspect of the leg, arising by two heads from the posterior surfaces of the lateral and medial condyles of the femur, and inserted with the soleus muscle into the calcaneal tendon, and through this into the back of the calcaneus.

gastrocoele *See* archenteron.

gastrodermis [INV ZOO] The cellular lining of the digestive cavity of certain invertebrates.

gastroduodenitis [MED] Inflammation of the stomach and duodenum.

gastroenteritis [MED] Inflammation of the mucosa of the stomach and intestine.

gastroenterology [MED] The branch of medicine concerned with study of the stomach and intestine.

gastroenterostomy [MED] Surgical formation of a connection between the stomach and small intestine.

gastroepiploic artery [ANAT] Either of two arteries arising from the gastroduodenal and splenic arteries respectively and forming an anastomosis along the greater curvature of the stomach.

gastrogastrostomy *See* gastroanastomosis.

gastrointestinal hormone [BIOCHEM] Any hormone secreted by the gastrointestinal system.

gastrointestinal system [ANAT] The portion of the diges-

tive system including the stomach, intestine, and all accessory organs.

gastrointestinal tract [ANAT] The stomach and intestine.

gastrojejunostomy [MED] Surgical establishment of an anastomosis between the jejunum and the anterior or posterior wall of the stomach.

gastrolith [VERT ZOO] A pebble swallowed by certain animals and retained in the gizzard or stomach, where it serves to grind food.

gastrolysis [MED] The breaking up of adhesions between the stomach and adjacent organs.

Gastromyzontidae [VERT ZOO] A small family of actinopterygian fishes of the suborder Cyprinoidei found in southeastern Asia.

gastropexy [MED] The fixation of a prolapsed stomach in its normal position by suturing it to the abdominal wall or other structure.

gastroplication [MED] An operation for relief of chronic dilation of the stomach by suturing a large horizontal fold in the stomach wall.

Gastropoda [INV ZOO] A large, morphologically diverse class of the phylum Mollusca, containing the snails, slugs, limpets, and conchs.

gastropore [INV ZOO] A pore containing a gastrozooid in hydrozoan corals.

gastroptosis [MED] Prolapse or downward displacement of the stomach.

gastroscope [MED] A hollow, tubular instrument used to examine the inside of the stomach by passage through the mouth and esophagus.

gastrosplenic ligament [ANAT] The fold of peritoneum passing from the stomach to the spleen. Also known as gastrosplenic omentum.

gastrosplenic omentum *See* gastrosplenic ligament.

gastrostome [INV ZOO] The opening of a gastropore.

gastrostomy [MED] The establishment of a fistulous opening into the stomach, with an external opening in the skin; used for artificial feeding.

gastrostyle [INV ZOO] A spiculated projection that extends into the gastrozooid from the base of the gastropore.

Gastrotricha [INV ZOO] A group of microscopic, pseudocoelomate animals considered either to be a class of the Aschelminthes or to constitute a separate phylum.

gastrozooid [INV ZOO] A nutritive polyp of colonial coelenterates, characterized by having tentacles and a mouth.

gastrula [EMBRYO] The stage of development in animals in which the endoderm is formed and invagination of the blastula has occurred.

gastrulation [EMBRYO] The process by which the endoderm is formed during development.

gas tube [ELECTR] An electron tube into which a small amount of gas or vapor is admitted after the tube has been evacuated; ionization of gas molecules during operation greatly increases current flow.

gas-tube boiler *See* waste-heat boiler.

gas-tungsten arc welding [MET] Arc welding by means of an electric arc between a single tungsten electrode and the work, with a shield of inert gas, such as argon or helium, around the electrode.

gas turbine [MECH ENG] A heat engine that converts energy of fuel into work by using compressed, hot gas as the working medium and that usually delivers its mechanical output through a rotating shaft. Also known as combustion turbine.

gas-turbine nozzle [MECH ENG] The component of a gas turbine in which the hot, high-pressure gas expands and accelerates to high velocity.

gas vacuole [BIOL] A membrane-bound, gas-filled cavity in some algae and protozoans; thought to control buoyancy.

gas vacuum breakdown [ELECTR] Ionization of residual gas in a vacuum, causing reverse conduction in an electron tube.

gas valve [ENG] An exhaust valve, held shut by rubber springs, used to discharge gas from the extreme top of a balloon.

gas vent [ENG] A pipe or hole that allows gas to pass off.

gas viscosity [FL MECH] The internal fluid function of a gas.

gas welding [MET] A welding process in which metals are joined by the heat of an oxyacetylene flame.

gas well [PETRO ENG] A well drilled for extraction of natural gas from a gas reservoir.

gas zone [GEOL] A rock formation containing gas under a pressure large enough to force the gas out if tapped from the surface.

gat [NAV] A natural or artificial passage or channel extending inland through shoals or steep banks.

GAT *See* Greenwich apparent time.

gate [CIV ENG] A movable barrier across an opening in a large barrier, a fence, or a wall. [ELECTR] **1.** A circuit having an output and a multiplicity of inputs and so designed that the output is energized only when a certain combination of pulses is present at the inputs. **2.** A circuit in which one signal, generally a square wave, serves to switch another signal on and off. **3.** One of the electrodes in a field-effect transistor. **4.** An output element of a cryotron. **5.** To control the passage of a pulse or signal. **6.** In radar, an electric waveform which is applied to the control point of a circuit to alter the mode of operation of the circuit at the time when the waveform is applied. Also known as gating waveform. [ENG] **1.** A device, such as a valve or door, for controlling the passage of materials through a pipe, channel, or other passageway. **2.** A device for positioning the film in a camera, printer, or projector. [GRAPHICS] The area or component in which the film is held at a fixed relationship to a lens. [MET] The opening in a casting mold through which molten metal enters the cavity. Also known as in-gate. [NAV] The position on the extension of the axis of a runway in use above which an aircraft heading toward that runway is required to pass at a time assigned by proper control authority. [NUCLEO] A movable barrier of shielding material used for closing a hole in a nuclear reactor. [ORD] A metal part in the rear of the cylinder of old-pattern revolvers that was turned out to expose the cylinder for loading.

gate-array device [ELECTR] An integrated logic circuit that is manufactured by first fabricating a two-dimensional array of logic cells, each of which is equivalent to one or a few logic gates, and then adding final layers of metallization that determine the exact function of each cell and interconnect the cells to form a specific network when the customer orders the device.

gate-controlled rectifier [ELECTR] A three-terminal semiconductor device, such as a silicon controlled rectifier, in which the unidirectional current flow between the rectifier terminals is controlled by a signal applied to a third terminal called the gate.

gate-controlled switch [ELECTR] A semiconductor device that can be switched from its nonconducting or "off" state to its conducting or "on" state by applying a negative pulse to its gate terminal and that can be turned off at any time by applying reverse drive to the gate. Abbreviated GCS.

gate conveyor [MIN ENG] A conveyor that carries coal from one source or face only, that is, from a single-unit or double-unit face.

gated-beam tube [ELECTR] A pentode electron tube having special electrodes that form a sheet-shaped beam of electrons; this beam may be deflected away from the anode by a relatively small voltage applied to a control electrode, thus giving extremely sharp cutoff of anode current.

gated sweep [ELECTR] Sweep in which the duration as well as the starting time is controlled to exclude undesired echoes from the indicator screen.

gate equivalent circuit [ELECTR] A unit of measure for specifying relative complexity of digital circuits, equal to the number of individual logic gates that would have to be interconnected to perform the same function as the digital circuit under evaluation.

gate generator [ELECTR] A circuit used to generate gate pulses; in one form it consists of a multivibrator having one stable and one unstable position.

gate interlock [MIN ENG] A system that prevents movement of shaft conveyances or transmission of action signals until all shaft gates are closed.

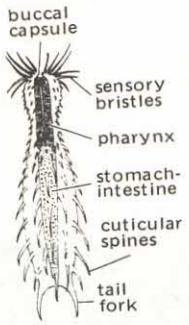
gate multivibrator [ELECTR] Rectangular-wave generator designed to produce a single positive or negative gate voltage when triggered and then to become inactive until the next trigger pulse.

gate pulse [ELECTR] A pulse that triggers a gate circuit so it will pass a signal.

gate road bunker [MIN ENG] An appliance for coal storage from the face conveyors during peaks of production or during a stoppage of the outby transport.

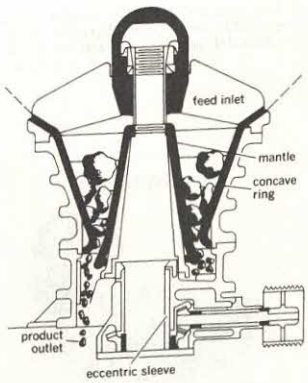
Gates crusher [MECH ENG] A gyratory crusher which has a cone or mantle that is moved eccentrically by the lower bearing sleeve.

GASTROTRICHA



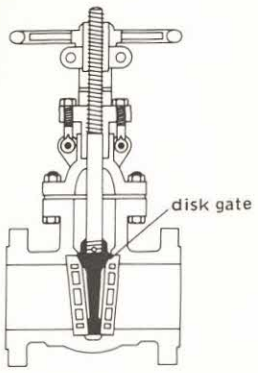
Chaetonotus, a freshwater gastrotrich.

GATES CRUSHER



Gyratory crusher of Gates type. *(Allis Chalmers Co.)*

GATE VALVE



e valve with disk gate; rising aded stem shows when valve pen.

gate turnoff [ELECTR] A *pnpn* switching device comparable to a silicon-controlled rectifier, but having a more complex gate structure that permits easy and fast turnoff as well as turn-on from its gate input terminal, at frequencies up to 100 kilohertz.

gate-turnoff silicon-controlled rectifier [ELECTR] A silicon-controlled rectifier that can be turned off by applying a current to its gate; used largely for direct-current switching, because turnoff can be achieved in a fraction of a microsecond.

gate valve [DES ENG] A valve with a disk-shaped closing element that fits tightly over an opening through which water passes.

gateway [COMMUN] A point of entry and exit to another system, such as the connection point between a local-area network and an external-communications network.

gate winding [ELECTR] A winding used in a magnetic amplifier to produce on-off action of load current.

gather [GRAPHICS] In bookbinding, to arrange in sequence the folded sheets or signatures of a book. [MIN ENG] **1.** To assemble loaded cars from several production points and deliver them to main haulage for transport to the surface or pit bottom. **2.** To drive a heading through disturbed or faulty ground so as to meet the seam of coal at a convenient level or point on the opposite side.

gathering area [PETRO ENG] The area, usually down the regional dip from a hydrocarbon trap, from which the oil or gas may have migrated updip into the trap.

gathering arm loader [MIN ENG] A machine for loading loose rock or coal; has a tractor-mounted chassis and carries a chain conveyor whose front end is built into a wedge-shaped blade.

gathering conveyor [MIN ENG] Any conveyor which gathers coal from other conveyors and delivers it either into mine cars or onto another conveyor.

gathering iron [ENG] A rod used to collect molten glass for glassblowing.

gathering locomotive *See* gathering motor.

gathering mine locomotive *See* gathering motor.

gathering motor [MIN ENG] A lightweight type of electric locomotive used to haul loaded cars from the working places to the main haulage road and to replace them with empties. Also known as electric gathering locomotive; gathering locomotive; gathering mine locomotive.

gathering motorman [MIN ENG] In bituminous coal mining, one who operates a mine locomotive to haul loaded mine cars from working places to sidings.

gathering mule [MIN ENG] The mule used to collect the loaded cars from the separate working places and to return empties.

gathering pallet [HOROL] A finger that moves the rack in a striking timepiece for each blow struck.

gathering pump [MIN ENG] A portable or semiportable pump that is required for removing water encountered while opening a new mine, for extending headings or entries in an operating mine, for pump rooms or rib sections lying in the dip, for collecting water from local pools, or for sinking a shaft.

gathering ring [ENG] A clay ring placed on molten glass to collect impurities and thus permit high-quality glass to be taken from the center.

gathering system [PETRO ENG] A pipeline system used to gather gas or oil production from a number of separate wells, bringing the combined production to a central storage, pipelining, or processing terminal.

gather way [NAV] To attain headway.

gather write [COMPUT SCI] An operation that creates a single output record from data items gathered from nonconsecutive locations in main memory.

gating [ELECTR] The process of selecting those portions of a wave that exist during one or more selected time intervals or that have magnitudes between selected limits. [ENG] A network of connecting channels, including sprues, runners, gates, and cavities, which conduct molten metal to the mold.

gating waveform *See* gate.

gatinon *See* benzthiazuron.

Gatling gun [ORD] Type of machine gun using multibarrels which fire in rotation; it permits very rapid fire because it reduces the problem of overheating in a single barrel.

Gatterman-Koch synthesis [ORG CHEM] A synthesis of aldehydes; aldehydes form when an aromatic hydrocarbon is heated in the presence of hydrogen chloride, certain metallic chloride catalysts, and either carbon monoxide or hydrogen cyanide.

Gatterman reaction [ORG CHEM] **1.** Reaction of a phenol or phenol ester, and hydrogen chloride or hydrogen cyanide, in the presence of a metallic chloride such as aluminum chloride to form, after hydrolysis, an aldehyde. **2.** Reaction of an aqueous ethanolic solution of diazonium salts with precipitated copper powder or other reducing agent to form diaryl compounds.

Gaucher's cells [PATH] Abnormal macrophages associated with Gaucher's disease.

Gaucher's disease [MED] A rare chronic, probably hereditary disease in which cells loaded with cerebrosides become localized in reticuloendothelial tissue and eventually cause tissue destruction; manifestations include enlargement of the spleen, bronzing of the skin, and anemia. Also known as cerebroside lipoidosis; familial splenic anemia.

gaufrage *See* plaiting.

gauge [ELECTROMAG] One of the family of possible choices for the electric scalar potential and magnetic vector potential, given the electric and magnetic fields.

gauge invariance [ELECTROMAG] The invariance of electric and magnetic fields and electrodynamic interactions under gauge transformations.

gauge theory [PHYS] Any field theory in which, as the result of the conservation of some quantity, it is possible to perform a transformation in which the phase of the fields is altered by a function of space and time without altering any measurable physical quantity, so that the fields obtained by any such transformation give a valid description of a given physical situation.

gauge transformation [ELECTROMAG] The addition of the gradient of some function of space and time to the magnetic vector potential, and the addition of the negative of the partial derivative of the same function with respect to time, divided by the speed of light, to the electric scalar potential; this procedure gives different potentials but leaves the electric and magnetic fields unchanged.

gauging *See* gaging.

Gaultheria [BOT] A genus of upright or creeping evergreen shrubs (Ericaceae).

gaultheria oil *See* methyl salicylate.

Gause's principle [ECOL] A statement that two species cannot occupy the same niche simultaneously. Also known as competitive exclusion principle.

gauss [ELECTROMAG] Unit of magnetic induction in the electromagnetic and Gaussian systems of units, equal to 1 maxwell per square centimeter, or 10^{-4} weber per square meter. Also known as abtesla (abt).

Gauss-Codazzi equations [MATH] Equations dealing with the components of the fundamental tensor and Riemann-Christoffel tensor of a surface.

Gauss' error curve *See* normal distribution.

Gauss eyepiece [OPTICS] A Ramsden eyepiece which has a thin glass plate between the two lenses, making an angle of 45° with the optical axis; used to set a telescope perpendicular to a plane reflecting surface.

Gauss formulas [MATH] Formulas dealing with the sine and cosine of angles in a spherical triangle.

Gauss' hypergeometric equation [MATH] The differential equation, arising in many physical contexts, $x(1-x)y'' + [c-(a+b+1)x]y' - aby = 0$.

Gaussian complex integers [MATH] Complex numbers whose real and imaginary parts are both integers.

Gaussian constant [ASTRON] The acceleration caused by the attraction of the sun at the mean distance of the earth from the sun.

Gaussian curvature [MATH] The invariant of a surface specified by Gauss' theorem. Also known as total curvature.

Gaussian curve [STAT] The bell-shaped curve corresponding to a population which has a normal distribution. Also known as normal curve.

Gaussian distribution *See* normal distribution.

Gaussian elimination [MATH] A method of solving a system of n linear equations in n unknowns, in which there are first $n-1$ steps, the mth step of which consists of subtracting a multiple of the mth equation from each of the following ones so as to eliminate one variable, resulting in a triangular set of equations which can be solved by back substitution, computing the nth variable from the nth equation, the $(n-1)$st variable from the $(n-1)$st equation, and so forth.

Gaussian error [NAV] Deviation of a magnetic compass due to transient magnetism which remains in a vessel's structure for short periods after the inducing force has been removed, usually appearing after a vessel has been on the same heading for a considerable time.

Gaussian noise [COMMUN] Noise that has a frequency distribution which follows the Gaussian curve. [MATH] *See* Wiener process.

Gaussian noise generator [ELECTR] A signal generator that produces a random noise signal whose frequency components have a Gaussian distribution centered on a predetermined frequency value.

Gaussian optics [OPTICS] An approximation which describes rays which are very close to the axis of an optical system and are nearly parallel to this axis, so that only the linear terms of Taylor series for the distance of a point from the axis or the angle which a ray makes with the axis need be considered. Also known as first-order theory.

Gaussian pulse [PHYS] A pulse for which the graph of intensity as a function of time is a Gaussian curve.

Gaussian reduction [MATH] A procedure of simplification of the rows of a matrix which is based upon the notion of solving a system of simultaneous equations. Also known as Gauss-Jordan elimination.

Gaussian system [ELECTROMAG] A combination of the electrostatic and electromagnetic systems of units (esu and emu), in which electrostatic quantities are expressed in esu and magnetic and electromagnetic quantities in emu, with appropriate use of the conversion constant c (the speed of light) between the two systems. Also known as Gaussian units.

Gaussian units *See* Gaussian system.

Gauss image point [OPTICS] A point through which pass all paraxial rays from a specified point source in an optical system.

Gauss-Jordan elimination *See* Gaussian reduction.

Gauss' law of flux [ELEC] The law that the total electric flux which passes out from a closed surface equals (in rationalized units) the total charge within the surface.

Gauss' law of the arithmetic mean [MATH] The law that a harmonic function can attain its maximum value only on the boundary of its domain of definition, unless it is a constant.

Gauss-Legendre rule [MATH] An approximation technique of definite integrals by a finite series which uses the zeros and derivatives of the Legendre polynomials.

Gauss lens system *See* Celor lens system.

Gauss' mean value theorem [MATH] The value of a harmonic function at a point in a planar region is equal to its integral about a circle centered at the point.

gaussmeter [ENG] A magnetometer whose scale is graduated in gauss or kilogauss, and usually measures only the intensity, and not the direction, of the magnetic field.

Gauss objective lens *See* Celor lens system.

Gauss point *See* cardinal point.

Gauss positions [ELECTROMAG] The Gauss A and B positions; that is, a point on the axis of a bar magnet is in Gauss A position, and a point on the magnetic equator of the magnet is in Gauss B position, with respect to the magnet.

Gauss' principle of least constraint [MECH] The principle that the motion of a system of interconnected material points subjected to any influence is such as to minimize the constraint on the system; here the constraint, during an infinitesimal period of time, is the sum over the points of the product of the mass of the point times the square of its deviation from the position it would have occupied at the end of the time period if it had not been connected to other points.

Gauss-Seidel method *See* Seidel method.

Gauss test [MATH] In an infinite series with general term a_n, if $a_{n+1}/a_n = 1 - (x/n) - [f(n)/n^{\lambda}]$ where x and λ are greater than 1, and $f(n)$ is a particular integer function, then the series converges.

Gauss' theorem [MATH] **1.** The assertion, under certain light restrictions, that the volume integral through a volume V of the divergence of a vector function is equal to the surface integral of the exterior normal component of the vector function over the boundary surface of V. Also known as divergence theorem. **2.** At a point on a surface the product of the principal curvatures is an invariant of the surface, called the Gaussian curvature.

gauze [MATER] **1.** A sheer, loosely woven textile fabric similar to cheesecloth; used for surgical dressings. **2.** A plastic or wire mesh.

gavage [MED] The administration of nourishment through a stomach tube.

gavial [VERT ZOO] The name for two species of reptiles composing the family Gavialidae.

Gavialidae [VERT ZOO] The gavials, a family of reptiles in the order Crocodilia distinguished by an extremely long, slender snout with an enlarged tip.

Gaviidae [VERT ZOO] The single, monogeneric family of the order Gaviiformes.

Gaviiformes [VERT ZOO] The loons, a monofamilial order of diving birds characterized by webbed feet, compressed, bladelike tarsi, and a heavy, pointed bill.

Gay-Lussac acid [MATER] Product of a Gay-Lussac tower in the chamber process for sulfuric acid manufacture; a mixture of sulfuric acid and nitrogen oxides.

Gay-Lussac's law *See* Charles' law; combining-volumes principle.

Gay-Lussac tower [CHEM ENG] A component part in the chamber process for sulfuric acid production that absorbs nitrogen oxides to form nitrous vitriol.

gaylussite [MINERAL] $Na_2Ca(CO_3)_2 \cdot 5H_2O$ A translucent, yellowish-white hydrous carbonate mineral, with a vitreous luster, crystallizing in the monoclinic system; found in dry lakes.

gazogene *See* gasogene.

gc *See* gigahertz.

g-cal *See* calorie.

GCA radar *See* ground-controlled approach radar.

gcd *See* greatest common divisor.

GCI radar *See* ground-controlled intercept radar.

g-cm *See* gram-centimeter.

GCS *See* gate-controlled switch.

Gd *See* gadolinium.

GDCH *See* α-dichlorohydrin.

G display [ELECTR] A rectangular radar display in which horizontal and vertical aiming errors are indicated by horizontal and vertical displacement, respectively, and range is indicated by the length of wings appearing on the blip, with length increasing as range decreases.

G drift [NAV] A drift component in gyros and accelerometers which is proportional to the nongravitational acceleration and which is caused by torques generated by mass unbalance.

G^2 drift [NAV] A drift component in gyros and accelerometers which is proportional to the square of the nongravitational acceleration and which is generated by the anisoelasticity of the rotor support.

Ge *See* germanium.

geanticline [GEOL] A broad land uplift; refers to the land mass from which sediments in a geosyncline are derived.

gear [DES ENG] A toothed machine element used to transmit motion between rotating shafts when the center distance of the shafts is not too large. [MECH ENG] **1.** A mechanism performing a specific function in a machine. **2.** An adjustment device of the transmission in a motor vehicle which determines mechanical advantage, relative speed, and direction of travel.

gearbox *See* transmission.

gear case [MECH ENG] An enclosure, usually filled with lubricating fluid, in which gears operate.

gear cutter [MECH ENG] A machine or tool for cutting teeth in a gear.

gear cutting [MECH ENG] The cutting or forming of a uniform series of toothlike projections on the surface of a workpiece.

gear down [MECH ENG] To arrange gears so the driven part rotates at a slower speed than the driving part.

gear drive [MECH ENG] Transmission of motion or torque from one shaft to another by means of direct contact between toothed wheels.

geared turbine [MECH ENG] A turbine connected to a set of reduction gears.

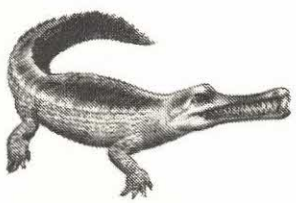
gear forming [MECH ENG] A method of gear cutting in which the desired tooth shape is produced by a tool whose cutting profile matches the tooth form.

gear generating [MECH ENG] A method of gear cutting in which the tooth is produced by the conjugate or total cutting action of the tool plus the rotation of the workpiece.

gear grinding [MECH ENG] A gear-cutting method in which gears are shaped by formed grinding wheels and by generation; primarily a finishing operation.

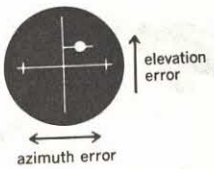
gear hobber [MECH ENG] A machine that mills gear teeth;

GAVIAL



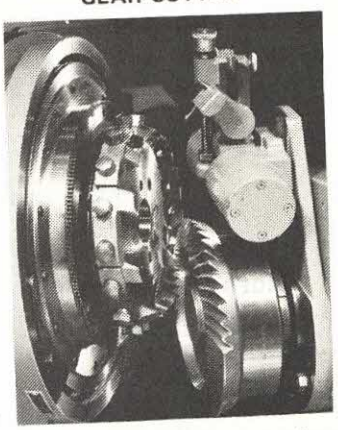
Indian gavial, fierce looking but not dangerous to man.

G DISPLAY



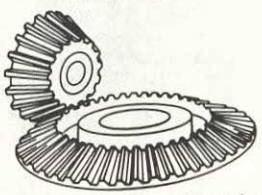
Type-G radar display, a three-dimensional display for use in an airplane cockpit.

GEAR CUTTER



Gear blank and cutter as used on a hypoid generator. Cutter has a series of cutting blades. *(Gleason Works)*

GEAR DRIVE



Bevel gears, a type of gear drive.

the rotational speed of the hob has a precise relationship to that of the work.

gearing [MECH ENG] A set of gear wheels.

gearing chain [MECH ENG] A continuous chain used to transmit motion from one toothed wheel, or sprocket, to another.

gearksutite [MINERAL] $CaAl(OH)F_4 \cdot H_2O$ A clayey mineral composed of hydrous calcium aluminum fluoride, occurring with cryolite.

gearless traction [MECH ENG] Direct drive, without reduction gears.

gear level [MECH ENG] To arrange gears so that the driven part and driving part turn at the same speed.

gear loading [MECH ENG] The power transmitted or the contact force per unit length of a gear.

gear meter [ENG] A type of positive-displacement fluid quantity meter in which the rotating elements are two meshing gear wheels.

gearmotor [MECH ENG] A motor combined with a set of speed-reducing gears.

gear oil [MATER] A lubricating oil for use in transmissions, most types of differential gears, and gears in gear boxes.

gear pump [MECH ENG] A rotary pump in which two meshing gear wheels contrarotate so that the fluid is entrained on one side and discharged on the other.

gear ratio [MECH ENG] The ratio of the angular speed of the driving member of a gear train or similar mechanism to that of the driven member; specifically, the number of revolutions made by the engine per revolution of the rear wheels of an automobile.

gear shaper [MECH ENG] A machine that makes gear teeth by means of a reciprocating cutter that rotates slowly with the work.

gear-shaving machine [MECH ENG] A finishing machine that removes excess metal from machined gears by the axial sliding motion of a straight-rack cutter or a circular gear cutter.

gearshift [MECH ENG] A device for engaging and disengaging gears.

gear streaks [GRAPHICS] A series of parallel streaks on a printed sheet which appear at intervals equal to those on the gear teeth of the printing cylinder.

gear teeth [DES ENG] Projections on the circumference or face of a wheel which engage with complementary projections on another wheel to transmit force and motion.

gear train [MECH ENG] A combination of two or more gears used to transmit motion between two rotating shafts or between a shaft and a slide.

gear up [MECH ENG] To arrange gears so that the driven part rotates faster than the driving part.

gear wheel [MECH ENG] A wheel that meshes gear teeth with another part.

gebli *See* ghibli.

Gecarcinidae [INV ZOO] The true land crabs, a family of decapod crustaceans belonging to the Brachygnatha.

gecko [VERT ZOO] The common name for more than 300 species of arboreal and nocturnal reptiles composing the family Gekkonidae.

Geco sampler [MIN ENG] Straight-line cutter designed to traverse a falling stream of ore or pulp at regular intervals, so as to divert a representative sample to a holding vessel.

gedanite [MINERAL] A brittle, wine-yellow variety of amber containing little succinic acid; found on the shore of the Baltic Sea.

Gedanken experiment [PHYS] German for "thought" experiment; a hypothetical experiment which is possible in principle and is analyzed (but not performed) to test some hypothesis.

gedrite [MINERAL] An aluminous variety of the mineral anthophyllite.

Gee [NAV] An electronic navigational system that establishes hyperbolic lines of position similar to those produced by loran, but employing a radio frequency of 22–30 and 40–85 megahertz, whereas standard loran operates in the 1700–2000-megahertz band.

Gee chart [NAV] A chart showing the hyperbolic lines of position which are produced by the Gee navigation system.

geepound *See* slug.

geg [METEOROL] A desert dust whirl of China and Tibet.

Gegenbauer polynomials [MATH] A family of polynomials solving a special case of the Gauss hypergeometric equation. Also known as ultraspherical polynomials.

gegenschein [ASTRON] A round or elongated, faint, ill-defined spot of light in the sky at a point 180° from the sun. Also known as counterglow; zodiacal counterglow.

gehlenite [MINERAL] Ca_2Al_2SiO A mineral of the melilite group that crystallizes in the tetragonal crystal system and is isomorphous with akermanite; a green, resinous material found with spinel.

Geiger-Briggs rule [NUCLEO] The rule that the range of an alpha ray in dry air, at 15°C and 1 atmosphere, above 5 centimeters, is proportional to its initial velocity raised to the 3.26 power; an improvement on the Geiger formula.

Geiger counter *See* Geiger-Müller counter.

Geiger counter tube *See* Geiger-Müller tube.

Geiger formula [NUCLEO] A formula which states that the range of an alpha particle in dry air, at 15°C and 1 atmosphere, is proportional to the cube of its initial velocity.

Geiger-Müller counter [NUCLEO] **1.** A radiation counter that uses a Geiger-Müller tube in appropriate circuits to detect and count ionizing particles; each particle crossing the tube produces ionization of gas in the tube which is roughly independent of the particle's nature and energy, resulting in a uniform discharge across the tube. Abbreviated GM counter. Also known as Geiger counter. **2.** *See* Geiger-Müller tube.

Geiger-Müller counter tube *See* Geiger-Müller tube.

Geiger-Müller probe [ENG] A Geiger-Müller counter in a watertight container, lowered into a borehole to log the intensity of the gamma rays emitted by radioactive substances in traversed rock. Also known as electronic logger; Geiger probe.

Geiger-Müller tube [NUCLEO] A radiation-counter tube operated in the Geiger region; it usually consists of a gas-filled cylindrical metal chamber containing a fine-wire anode at its axis. Also known as Geiger counter tube; Geiger-Müller counter; Geiger-Müller counter tube.

Geiger-Nutall rule [NUC PHYS] The rule that the logarithm of the decay constant of an alpha emitter is linearly related to the logarithm of the range of the alpha particles emitted by it.

Geiger probe *See* Geiger-Müller probe.

geikielite [MINERAL] $MgTiO_3$ A bluish-black or brownish-black mineral that crystallizes in the rhombohedral system and occurs in the form of rolled pebbles; it is isomorphous with ilmenite.

Geissler pump [ENG] A type of air pump that uses the principle of the Torricellian vacuum, and in which the vacuum is produced by the flow of mercury back and forth between a vertically adjustable and a fixed reservoir.

Geissler tube [ELECTR] An experimental discharge tube with two electrodes at opposite ends, used to demonstrate and study the luminous effects of electric discharges through various gases at low pressures.

geitonogamy [BOT] Pollination and fertilization of one flower by another on the same plant.

geking [OCEANOGR] Obtaining measurements of ocean movements with a geomagnetic electrokinetograph (GEK).

Gekkonidae [VERT ZOO] The geckos, a family of small lizards in the order Squamata distinguished by a flattened body, a long sensitive tongue, and adhesive pads on the toes of many species.

gel [CHEM] A two-phase colloidal system consisting of a solid and a liquid in more solid form than a sol.

Gelastocoridae [INV ZOO] The toad bugs, a family of tropical and subtropical hemipteran insects in the subdivision Hydrocorisae.

gelatin [MATER] *See* gelatin dynamite. [ORG CHEM] A protein derived from the skin, white connective tissue, and bones of animals; used as a food and in photography, the plastics industry, metallurgy, and pharmaceuticals.

gelatinase [BIOCHEM] An enzyme, found in some yeasts and molds, that liquefies gelatin.

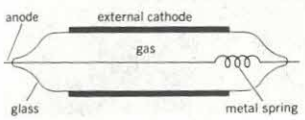
gelatin duplicating [GRAPHICS] A gelatin process in which the item to be reproduced is typed or drawn on a hard-surfaced master with inks containing aniline dyes; the master is then placed face down on a gelatin surface, and the dye is transferred to the gelatin within seconds; when blank paper is pressed against the gelatin, a small amount of the dye is released and a copy made.

gelatin dynamite [MATER] A high explosive consisting mainly of a jellylike mass of nitroglycerin, with sodium nitrate, meal, collodion cotton, and sodium carbonate; commonly used by drillers to shatter boulders encountered in driving pipe

GECKO

Banded gecko, which is brown with broad yellow bands, and is economically important as a destroyer of insects.

GEIGER-MÜLLER TUBE



Cylindrical external-cathode Geiger-Müller tube, with thin soda glass and central wire of 0.003-inch-diameter (0.08-millimeter-) tungsten. Metal spring keeps central wire taut.

through overburden, especially in water-filled or saturated ground. Also known as gelatin; gelignite; nitrogelatin.

gelatin extra [MATER] An explosive in which some of the nitroglycerin is replaced with ammonium nitrate.

gelatinized gasoline [MATER] Gasoline treated with a thickening agent; used in napalm bombs and flamethrowers. Also known as gasoline gel; jellied gasoline; thickened fuel.

gelatinizing agent [MATER] In manufacture of propellants, a material which softens the nitrocellulose, permitting the mixture to be processed and formed. Also known as gelling agent.

gelatin liquefaction [MICROBIO] Reduction of a gelatin culture medium to the liquid state by enzymes produced by bacteria in a stab culture; used in identifying bacteria.

gelatin model *See* electrolytic model.

gelatinobromide [MATER] A preparation of gelatin silver bromide that is light-sensitive and used in photography.

gelatin process [GRAPHICS] A process for reproducing a direct image by putting the image (writing, typed matter, or drawn images) on a master paper using a special process, pressing it into a gelatin pad, then transferring it from the gelatin to duplicator paper.

gelation [CHEM] **1.** The act or process of freezing. **2.** Formation of a gel from a sol.

gelation model [PETRO ENG] Electrolytic analog of a reservoir; used to investigate the areal sweep movement of water from multiple injection wells; operates by movement of copper ammonium and zinc ammonium ions through the gelatin in a flat tray that simulates the reservoir.

gel cement [MATER] Cement containing a small percentage of bentonite, which makes the mixture more homogeneous, increases the water-cement ratio, and reduces loss of water to the formation.

gel coat [MATER] A resin applied to the surface of a mold and gelled prior to placing plastic material in the mold in position for production; the gel coat becomes an integral part of the finished laminate and improves surface appearance.

Gelechiidae [INV ZOO] A large family of minute to small moths in the lepidopteran superfamily Tineoidea, generally having forewings and trapezoidal hindwings.

gel electrophoresis [CHEM] Electrophoresis performed in silica gel, a porous, inert medium.

gel filtration [ANALY CHEM] A type of column chromatography which separates molecules on the basis of size; higher-molecular-weight substances pass through the column first. Also known as molecular exclusion chromatography; molecular sieve chromatography.

gelifluction [GEOL] The slow, continuous downslope movement of rock debris and water-saturated soil that occurs above frozen ground, as in most polar regions and in many high mountain ranges.

gelifraction *See* congeliturbation.

gelignite *See* gelatin dynamite.

gelisol *See* frozen ground.

geliturbation *See* congeliturbation.

gelivation *See* congelifraction.

gelled cell [ELEC] A lead-acid cell with a nonspillable gelled electrolyte for portable use.

gelling agent *See* gelatinizing agent.

Gell-Mann–Nishijima scheme [PARTIC PHYS] A classification of elementary particles according to hypercharge, total isotopic spin, and its third component (which distinguishes between members of an isospin multiplet).

Gell-Mann–Okubo mass formula [PARTIC PHYS] A formula, based on SU(3) symmetry, giving the masses of the members of a unitary multiplet of mesons or baryons in terms of their total isotopic spin, hypercharge, and coefficients characteristic of the multiplet considered.

Gell-Mann relation [PARTIC PHYS] A relation, derived from the Gell-Mann–Okubo mass formula, between the masses of the pi, eta, and K mesons of a meson octet.

gel mineral *See* mineraloid.

Gelocidae [PALEON] A family of extinct pecoran ruminants in the superfamily Traguloidea.

gelose *See* ulmin.

gel paint [MATER] Paint formulation made thixotropic by the reaction of a small amount of polyamide resin with an alkyd resin vehicle.

gel permeation chromatography [ANALY CHEM] Analysis by chromatography in which the stationary phase consists of beads of porous polymeric material such as a cross-linked dextran carbohydrate derivative sold under the trade name Sephadex; the moving phase is a liquid.

gel point [PHYS CHEM] Stage at which a liquid begins to exhibit elastic properties and increased viscosity.

gelsemine [PHARM] $C_{20}H_{22}O_2N_2$ A white, crystalline alkaloid with a melting point of 178°C; derived from *Gelsemium sempervirens;* soluble in alcohol, ether, and dilute acids; used in medicine as a central nervous system stimulant.

gel strength [FL MECH] Of a colloid, the ability or a measure of its ability to form gels.

gem [MINERAL] A natural or artificially produced mineral or other material that has sufficient beauty and durability for use as a personal adornment.

GEM *See* air-cushion vehicle.

gem cutting [LAP] The polishing of rough gem materials into faceted or rounded forms for use in jewelry.

geminal [ORG CHEM] Referring to like atoms or groups attached to the same atom in a molecule.

geminate [BIOL] Growing in pairs or couples.

Gemini [ASTRON] A northern constellation; right ascension 7 hours, declination 20°N. Also known as Twins.

Geminids [ASTRON] A meteor shower that reaches maximum about December 13.

geminiflorous [BOT] Having flowers in pairs.

gemma [BOT] A small, multicellular, asexual reproductive body of some liverworts and mosses.

gemmation *See* budding.

gemmho [ELEC] A unit of conductance, equal to the conductance of a substance which has a resistance of 10^6 ohms, or to 10^{-6} mho.

gemmiform [BOT] Resembling a gemma or bud.

gemmiparous [BIOL] Producing a bud or reproducing by a bud.

gem mounting [LAP] Setting gems and gemstones in rings or other jewelry pieces made of precious metals.

gemmule [ANAT] A minute dendritic process functioning as a synaptic contact point. [BIOL] Any bud formed by gemmation. [INV ZOO] A cystlike, asexual reproductive structure of many Porifera that germinates when proper environmental conditions exist; it is a protective, overwintering structure which germinates the following spring.

Gemolite [OPTICS] A binocular magnifier with dark-field illumination, used to distinguish natural from synthetic gem materials.

gemology [MINERAL] The science concerned with the identification, grading, evaluation, fashioning, and other aspects of gemstones.

Gempylidae [VERT ZOO] The snake mackerels, a family of the suborder Scombroidei comprising compressed, elongate, or eel-shaped spiny-rayed fishes with caniniform teeth.

gem stick [LAP] A stick on which a gem is mounted before it is cut.

gemstone [GEOL] A mineral or petrified organic matter suitable for use in jewelry.

Gemuendinoidei [PALEON] A suborder of extinct raylike placoderm fishes in the order Rhenanida.

gena [ANAT] Cheek, or side of the head.

gender identity [PSYCH] The sum of those aspects of personal appearance and behavior culturally attributed to masculinity or femininity.

gending [METEOROL] A local dry wind in the northern plains of Java that resembles the foehn, caused by a wind crossing the mountains near the south coast and pushing between the volcanoes.

gene [GEN] The basic unit of inheritance.

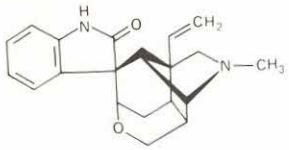
gene action [GEN] The functioning of a gene in determining the phenotype of an individual.

genecology [BIOL] The study of species and their genetic subdivisions, their place in nature, and the genetic and ecological factors controlling speciation.

gene conversion [GEN] A situation in which gametocytes of an individual that is heterozygous for a pair of alleles undergo meiosis, and the gametes produced are in a 3:1 ratio rather than the expected 2:2 ratio, implying that one allele was converted to the other.

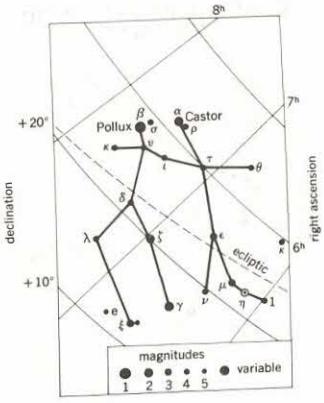
gene flow [GEN] The passage and establishment of genes characteristic of a breeding population into the gene complex of another population through hybridization and backcrossing.

GELSEMINE



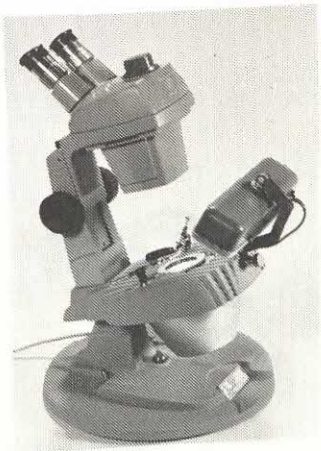
Structural formula.

GEMINI



Line pattern of the constellation Gemini. Grid lines represent coordinates of the sky. Apparent brightness, or magnitude, of stars is shown by sizes of dots graded by appropriate numbers as indicated.

GEMOLITE



The Gemolite, a binocular magnifier with dark-field illuminator. *(Gemological Institute of America)*

gene frequency [GEN] The number of occurrences of a specific gene within a population.

gene library [GEN] A random collection of cloned deoxyribonucleic acid fragments in a vector; includes all the genetic information of the species.

gene penetrance *See* penetrance.

gene pool [GEN] The totality of the genes of a specific population at a given time.

general address [COMMUN] Group of characters included in the heading of a message that causes the message to be routed to all addresses included in the general address category.

general anesthesia [MED] Loss of sensation with loss of consciousness, produced by administration of anesthetic drugs.

general anesthetic [PHARM] An agent that produces general anesthesia.

general arrangement plans [NAV ARCH] Plans showing the quarters, spaces, and compartments of a ship.

general broadcast [COMMUN] The radio broadcast, to all U.S. Navy ships and merchant ships, in which storm warnings, area forecasts, map analyses, surface weather reports, and upper air, upper wind, and aircraft reports are given.

general chart [NAV] A nautical chart intended for offshore coastwise navigation, using scales ranging from about 1:100,000 to 1:600,000, which are smaller than those of a coast chart, but larger than those of a sailing chart.

general circulation [METEOROL] The complete statistical description of atmospheric motions over the earth. Also known as planetary circulation.

general depot [ORD] Large supply establishment for receiving, storing, and issuing supplies for more than one technical service.

general formula [CHEM] A formula that can apply not only to one specific compound but to a series of related compounds; for example, the general formula for an aldehyde RCHO, where R is hydrogen in formaldehyde (the simplest aldehyde) and is a hydrocarbon radical for other aldehydes in the series such as CH_3 for acetaldehyde and C_2H_5 for proprionaldehyde.

generalized binomial trials model [STAT] A product model in which the nth factor model has two simple events with probabilities p_n and $q_n = 1 - p_n$. Also known as Poisson binomial trials model.

generalized coordinates [MECH] A set of variables used to specify the position and orientation of a system, in principle defined in terms of cartesian coordinates of the system's particles and of the time in some convenient manner; the number of such coordinates equals the number of degrees of freedom of the system Also known as Lagrangian coordinates.

generalized force [MECH] The generalized force corresponding to a generalized coordinate is the ratio of the virtual work done in an infinitesimal virtual displacement, which alters that coordinate and no other, to the change in the coordinate.

generalized function *See* distribution.

generalized hydrostatic equation [GEOPHYS] The vertical component of the vector equation of motion in natural coordinates when the acceleration of gravity is replaced by the virtual gravity; for most purposes it is identical to the hydrostatic equation.

generalized momentum *See* conjugate momentum.

generalized routine [COMPUT SCI] A routine which can process a wide variety of jobs; for example, a generalized sort routine which will sort in ascending or descending order on any number of fields whether alphabetic or numeric, or both, and whether binary coded decimals or pure binaries.

generalized transmission function [GEOPHYS] In atmospheric-radiation theory, a set of values, variable with wavelength, each one of which represents an average transmission coefficient for a small wavelength interval and for a specified optical path through the absorbing gas in question.

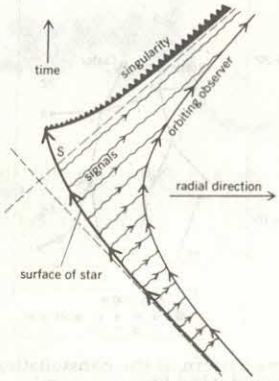
generalized velocity [MECH] The derivative with respect to time of one of the generalized coordinates of a particle. Also known as Lagrangian generalized velocity.

general manager [IND ENG] The person of general authority who performs all reasonable tasks in conducting the usual and customary business of the principal head or owner.

general paresis [MED] An inflammatory and degenerative disease of the brain caused by infection with *Treponema pallidum*. Also known as syphilitic meningoencephalitis.

general precession [ASTRON] The resultant motion of the components causing precession of the equinoxes westward along the ecliptic at the rate of about 50".3 per year.

GENERAL RELATIVISTIC COLLAPSE



Space-time diagram for the collapse of a star past its Schwarzschild radius (S) and into a general relativistic singularity of infinite density.

general program [COMPUT SCI] A computer program designed to solve a specific type of problem when values of appropriate parameters are supplied.

general-purpose automatic test system [ELECTR] Modular, computer-type, automatic electronic checkout system capable of finding faults in electronic equipment at the system, subsystem, line replaceable unit, module, and piece part levels.

general-purpose bomb [ORD] An item designed to be dropped from an aircraft to destroy or reduce the utility of a target by explosive effect.

general-purpose computer [COMPUT SCI] A device that manipulates data without detailed, step-by step control by human hand and is designed to be used for many different types of problems.

general-purpose function generator [COMPUT SCI] A function generator which can be adjusted to generate many different functions, rather than being designed for a particular function. Also known as arbitrary function generator.

general-purpose vehicle [ORD] Motor vehicle designated to be used interchangeably for movement of personnel, supplies, ammunition, or equipment and for towing artillery carriages, trailers, or semitrailers; used without modification to body or chassis to satisfy general automotive transport needs.

general register *See* local register.

general relativistic collapse [RELAT] Process in which a star undergoing gravitational collapse cannot release its kinetic energy to the outside universe, but continues to collapse into a general relativistic singularity of infinite density.

general relativity [RELAT] The theory of Einstein which generalizes special relativity to noninertial frames of reference and incorporates gravitation, and in which events take place in a curved space.

general research [SCI TECH] Pure or applied research which is not directly concerned with an applied research program.

general reserve artillery [ORD] Consists of all artillery units not integral to divisions and corps; a pool of reserve artillery available to the field forces commander for assignment or attachment to subordinate commands as required by combat conditions.

general routine [COMPUT SCI] In computers, a routine, or program, applicable to a class of problems; it provides instructions for solving a specific problem when appropriate parameters are supplied.

general supplies [ORD] Intraservice classification applied to ordnance, quartermaster, and transportation supplies; ordnance general supplies include all ordnance supplies, with the exception of ammunition, required for the maintenance of an organization.

general-support artillery [ORD] Artillery which executes the fire directed by the commandeer of the unit to which it organically belongs or is attached; it fires in support of a specific subordinate unit.

general term [MATH] The general term of a sequence or series is an expression subscripted by an integer which determines any desired entry.

generate [COMPUT SCI] To create a particular program by selecting parts of a general-program skeleton (or outline) and specializing these parts into a cohesive entity.

generate and test [COMPUT SCI] A computer problem-solving method in which a sequence of candidate solutions is generated, and each is tested to determine if it is an appropriate solution.

generated address [COMPUT SCI] An address calculated or determined by instructions contained in a computer program for subsequent use by that program. Also known as calculated address; synthetic address.

generating area *See* fetch.

generating flow [FL MECH] For a liquid allowed to flow smoothly into a duct, the flow while the boundary layer, which starts at the entrance and grows until it fills the duct, is growing.

generating function [MATH] A function $g(x,y)$ corresponding to a family of orthogonal polynomials $f_0(x), f_1(x), \ldots$, where a Taylor series expansion of $g(x,y)$ in powers of y will have the polynomial $f_n(x)$ as the coefficient for the term y^n.

generating magnetometer [ENG] A magnetometer in which a coil is rotated in the magnetic field to be measured with the resulting generated voltage being proportional to the strength of the magnetic field.

generating plant *See* generating station.

generating routine *See* generator.

generating station [MECH ENG] A stationary plant containing apparatus for large-scale conversion of some form of energy (such as hydraulic, steam, chemical, or nuclear energy) into electrical energy. Also known as generating plant; power station.

generation [BIOL] A group of organisms having a common parent or parents and comprising a single level in line of descent. [COMPUT SCI] **1.** Any one of three groups used to historically classify computers according to their electronic hardware components, logical organization and software, or programming techniques; computers are thus known as first-, second-, or third-generation; a particular computer may possess characteristics of all generations simultaneously. **2.** One of a family of data sets, related to one another in that each is a modification of the next most recent data set.

generation number [COMPUT SCI] A number contained in the file label of a reel of magnetic tape that indicates the generation of the data set of the tape.

generation rate [ELECTR] In a semiconductor, the time rate of creation of electron-hole pairs.

generation time [MICROBIO] The time interval required for a bacterial cell to divide or for the population to double. [NUCLEO] The mean time required for a neutron arising from a fission to produce a new fission.

generative grammar [COMPUT SCI] A set of rules that describes the valid expressions in a formal language on the basis of a set of the parts of speech (formally called the set of metavariables or phrase names) and the alphabet or character set of the language.

generator [COMPUT SCI] A program that produces specific programs as directed by input parameters. Also known as generating routine. [ELEC] A machine that converts mechanical energy into electrical energy; in its commonest form, a large number of conductors are mounted on an armature that is rotated in a magnetic field produced by field coils. Also known as dynamo; electric generator. [ELECTR] **1.** A vacuum-tube oscillator or any other nonrotating device that generates an alternating voltage at a desired frequency when energized with direct-current power or low-frequency alternating-current power. **2.** A circuit that generates a desired repetitive or nonrepetitive waveform, such as a pulse generator. [MATH] **1.** One of the set of elements of an algebraic system such as a group, ring, or module which determine all other elements when all admissible operations are performed upon them. **2.** *See* generatrix.

generator field control [ELEC] Method of regulating the output voltage of a generator by controlling the voltage which excites the field of the generator.

generator reactor [ELECT] A small inductor connected between power-plant generators and the rest of an electric power system in order to limit and localize the effects of voltage transients.

generator resistance [ELEC] The resistance of the current source in a network; usually much smaller than the load but taken into account in some network calculations.

generator set [ENG] The aggregate of one or more generators together with the equipment and plant for producing the energy that drives them.

generatrix [MATH] The straight line generating a ruled surface. Also known as generator.

gene redundancy [GEN] The presence of many copies of one gene within a cell.

generic [BIOL] Pertaining to or having the rank of a biological genus. [SCI TECH] **1.** A term applied to or descriptive of an entire group or a class. **2.** In general use, that which is nonproprietary.

genesis rocks [GEOL] Rocks that have retained their character from nearly 4.6×10^9 years ago, when planets were still occulting out of the cloud of dust and gas referred to as the solar nebula; examples are meteorites and asteroids.

gene suppression [GEN] The development of a normal phenotype in a mutant individual or cell due to a second mutation either in the same gene or in a different gene.

genet [VERT ZOO] The common name for nine species of small, tree-dwelling African carnivores in the family Viverridae.

genetic code [MOL BIO] The genetic information in the nucleotide sequences in deoxyribonucleic acid represented by a four-letter alphabet that makes up a vocabulary of 64 three-nucleotide sequences, or codons; a sequence of such codons (averaging about 100 codons) constructs a message for a polypeptide chain.

genetic drift [GEN] The random fluctuation of gene frequencies from generation to generation that occurs in small populations.

genetic engineering [GEN] The intentional production of new genes and alteration of genomes by the substitution or addition of new genetic material.

genetic facies [GEOL] An ancient deposit of rocks which have been formed by similar sedimentary processes.

genetic fingerprinting [MOL BIO] Identification of chemical entities in animal tissues as indicative of the presence of specific genes.

genetic homeostasis [GEN] The tendency of Mendelian populations to maintain a constant genetic composition.

genetic load [GEN] The abnormalities, deformities, and deaths produced in every generation by defective genetic material carried in the gene pool of the human race.

genetic map [GEN] A graphic presentation of the linear arrangement of genes on a chromosome; gene positions are determined by percentages of recombination in linkage experiments. Also known as chromosome map.

genetic material [GEN] The ultramicroscopic particles or genes, first defined by H. J. Muller, the influences of which permeate the cell and play a fundamental role in determining the nature of all cell substances, cell structures, and cell effects; the genes have properties of self-propagation and variation.

genetics [BIOL] The science that is concerned with the study of biological inheritance.

Geneva stop [HOROL] A device that transmits power only from the middle portion of a watch mainspring to provide an even force.

Geneva system [ORG CHEM] An international system of nomenclature for organic compounds based on hydrocarbon derivatives; names correspond to the longest straight carbon chain in the molecule.

genial *See* mental.

genic hybrid sterility [GEN] Sterility resulting from the interaction of genes in a hybrid to cause disturbances of sex-cell formation or meiosis.

genicide [ORG CHEM] $C_{13}H_8O_2$ A compound with needlelike crystals and a melting point of 174°C; insoluble in water; used as an insecticide, miticide, and ovicide. Also known as oxoxanthone; 9-xanthenone; xanthone.

geniculate [SCI TECH] Bent abruptly at an angle, as a bent knee.

geniculate body [ANAT] Any of the four oval, flattened prominences on the posterior inferior aspect of the thalamus; functions as the synaptic center for fibers leading to the cerebral cortex.

geniculate ganglion [ANAT] A mass of sensory and sympathetic nerve cells located along the facial nerve.

geniculum [ANAT] **1.** A small, kneelike, anatomical structure. **2.** A sharp bend in any small organ.

genioglossus [ANAT] An extrinsic muscle of the tongue, arising from the superior mental spine of the mandible.

Geniohyidae [PALEON] A family of extinct ungulate mammals in the order Hyracoidea; all members were medium to large-sized animals with long snouts.

genistin [ORG CHEM] $C_{21}H_{20}O_{10}$ A pale-yellow glucoside derived from soybean meal, crystallizes from 80% methanol solution, melting point 256°C, soluble in hot 80% ethanol, hot 80% methanol, and hot acetone. Also known as 7-D-glucoside.

genital atrium [ZOO] A common chamber receiving openings of male, female, and accessory organs.

genital coelom [INV ZOO] In mollusks, the lumina of the gonads.

genital cord [EMBRYO] A mesenchymal shelf bridging the coeloms in mammalian embryos, produced by fusion of the caudal part of the urogenital folds; fuses with the urinary bladder in the male, and is the primordium of the broad ligament and the uterine walls in the female. [INV ZOO] Strands of cells located in the genital canal which are primordial sex cells in crinoids. Also known as genital rachis.

genitalia [ANAT] The organs of reproduction, especially those which are external.

genital orifice *See* genital pore.

genital pore [INV ZOO] A small opening on the side of the

GENET

Spotted genet *(Genetta genetta)*, which is distinguished from the civet by its longer tail.

head in some gastropods through which the penis is protruded. Also known as genital orifice.

genital rachis *See* genital cord.

genital recess [INV ZOO] A depression between the calyx surface and anal cone in entoprocts which serves as a brood chamber.

genital ridge [EMBRYO] A medial ridge or fold on the ventromedial surface of the mesonephros in the embryo, produced by growth of the peritoneum; the primordium of the gonads and their ligaments.

genital scale [INV ZOO] Any of the small calcareous plates in ophiuroids associated with the buccal shields.

genital segment *See* gonosomite.

genital shield [INV ZOO] In ophiuroids, a support of a bursal slit in the arms located near the arm base.

genital stolon [INV ZOO] Part of the axial complex in ophiuroids.

genital sucker [INV ZOO] In some trematodes, a suckerlike structure surrounding the gonopore.

genital tract [ANAT] The ducts of the reproductive system.

genital tube [INV ZOO] A blood lacuna in crinoids, connected with the subtegminal plexus and suspended in the genital canal.

genitourinary system *See* urogenital system.

Genoa cyclone [METEOROL] A cyclone, or low, which appears to have formed or developed in the vicinity of the Gulf of Genoa. Also known as Genoa low.

Genoa low *See* Genoa cyclone.

genome [GEN] **1.** The genetic endowment of a species. **2.** The haploid set of chromosomes.

genophobia [PSYCH] An abnormal fear of sex.

genotype [GEN] The genetic constitution of an organism, usually in respect to one gene or a few genes relevant in a particular context. [SYST] The type species of a genus.

gentamicin [MICROBIOL] A broad-spectrum antibiotic produced by a species of *Micromonospora*.

Gentianaceae [BOT] A family of dicotyledonous herbaceous plants in the order Gentianales distinguished by lacking stipules and having parietal placentation.

Gentianales [BOT] A family of dicotyledonous plants in the subclass Asteridae having well-developed internal phloem and opposite, simple, mostly entire leaves.

gentianic acid *See* gentisic acid.

gentian violet *See* methyl violet.

gentisic acid [ORG CHEM] $C_7H_6O_4$ A crystalline compound that forms monoclinic prisms from a water solution, sublimes at 200°C, melts at 250°C, and is soluble in water, alcohol, ether, sodium, and salt; used in medicine. Also known as gentianic acid; hydroquinone carboxylic acid; 5-hydroxysalicylic acid.

gentle breeze [METEOROL] In the Beaufort wind scale, a wind whose speed is from 7 to 10 knots (13–19 kilometers per hour).

gentnerite [MINERAL] $Cu_8Fe_3Cr_{11}S_{18}$ A sulfide mineral known only in meteorites.

genu *See* knee.

genus [MATH] An integer associated to a surface which measures the number of holes in the surface. [SYST] A taxonomic category that includes groups of closely related species; the principal subdivision of a family.

genu valgum [MED] Inward or medial curving of the knee; knock-knee.

geo [GEOGR] A narrow coastal inlet bordered by steep cliffs. Also spelled gio.

geoacoustics [ACOUS] Study of the acoustic properties of rock, mainly to study possible use of the rock system as a carrier of seismic signals in a communications system.

geobotanical prospecting [GEOL] The use of the distribution, appearance, and growth anomalies of plants in locating ore deposits.

geobotany [BOT] The study of plants as related to their geologic environment.

geocentric [ASTRON] Relative to the earth as a center; that is measured from the center of the earth.

geocentric coordinates [ASTRON] Coordinates that define the position of a point with respect to the center of the earth; can be either cartesian (x, y, and z) or spherical (latitude, longitude, and radial distance). Also known as geocentric coordinate system; geocentric position.

geocentric coordinate system *See* geocentric coordinates.

geocentric latitude [ASTRON] The latitude of a celestial body from the center of the earth. [GEOD] Of a position on the earth's surface, the angle between a line to the center of the earth and the plane of the equator.

geocentric longitude [ASTRON] The celestial longitude of the position of a body projected on the celestial sphere when the body is viewed from the center of the earth. [GEOD] At a position on the earth's surface, the angle between the plane of the reference meridian and a plane through the polar axis and a line from the position in question to the center of mass of the earth.

geocentric parallax [ASTRON] The difference in the apparent direction or position of a celestial body, measured in seconds of arc, as determined from the center of the earth and from a point on its surface; this varies with the body's altitude and distance from the earth. Also known as diurnal parallax.

geocentric position *See* geocentric coordinates.

geocentric vertical [GEOD] The direction of the radius vector drawn from the center of the earth through the location of the observer. Also known as geometric vertical.

geocentric zenith [ASTRON] The point where a line from the center of the earth through a point on its surface meets the celestial sphere.

geocerite [MINERAL] A white, waxy mineral composed of carbon, oxygen, and hydrogen, occurring in brown coal.

geochemical anomaly [GEOCHEM] Above-average concentration of a chemical element in a sample of rock, soil, vegetation, stream, or sediment; indicative of nearby mineral deposit.

geochemical balance [GEOCHEM] The proportional distribution, and the migration rate, in the global fractionation of elements, minerals, or compounds; for example, the distribution of quartz in igneous rocks, its liberation by weathering, and its redistribution into sediments and, in solution, into lakes, rivers, and oceans.

geochemical cycle [GEOCHEM] During geologic changes, the sequence of stages in the migration of elements between the lithosphere, hydrosphere, and atmosphere.

geochemical evolution [GEOCHEM] **1.** A change in any constituent of a rock beyond that amount present in the parent rock. **2.** A change in chemical composition of a major segment of the earth during geologic time, as the oceans.

geochemical prospecting [ENG] The use of geochemical and biogeochemical principles and data in the search for economic deposits of minerals, petroleum, and natural gases.

geochemical well logging [ENG] Well logging dependent on geochemical analysis of the data.

geochemistry [GEOL] The study of the chemical composition of the various phases of the earth and the physical and chemical processes which have produced the observed distribution of the elements and nuclides in these phases.

geochronology [GEOL] **1.** The dating of the events in the earth's history. **2.** A system of dating developed for the purposes of study of the earth's history.

geochronometry [GEOL] The study of the absolute age of the rocks of the earth based on the radioactive decay of isotopes, such as U^{238}, U^{235}, Th^{232}, Rb^{87}, K^{40}, and C^{14}, present in minerals and rocks.

Geocorisae [INV ZOO] A subdivision of hemipteran insects containing those land bugs with conspicuous antennae and an ejaculatory bulb in the male.

geocosmogony [GEOL] The study of the origin of the earth.

geocronite [MINERAL] $Pb_5(Sb,As)_2S_3$ A mineral composed of lead-gray lead antimony arsenic sulfide.

geode [GEOL] A roughly spheroidal, hollow body lined inside with inward-projecting, small crystals; found frequently in limestone beds but may occur in shale.

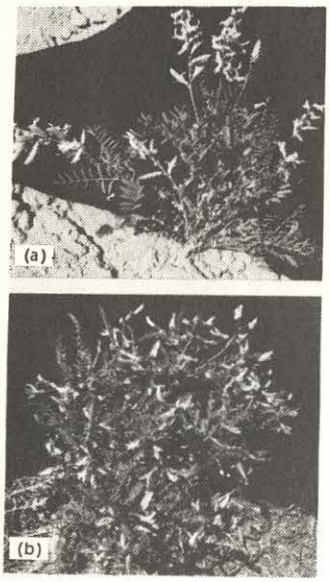
Geodermatophilus [MICROBIO] A genus of bacteria in the family Dermatophilaceae; the mycelium is rudimentary and a muriform thallus is produced; motile spores are elliptical to lanceolate.

geodesic [MATH] A curve joining two points in a Riemannian manifold which has minimum length.

geodesic coordinates [RELAT] Coordinates in the neighborhood of a point P such that the gradient of the metric tensor is zero at P.

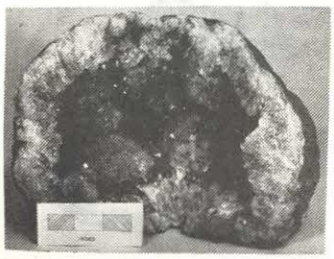
geodesic dome [ARCH] A dome constructed of many light, straight structural elements in tension, arranged in a framework of triangles to reduce stress and weight.

GEOBOTANICAL PROSPECTING



Selenium indicators used in prospecting for uranium. *(a) Astragalus pattersoni. (b) A. preussi.*

GEODE



Geode, lined with quartz crystals, Keokuk, Iowa. *(Brooks Museum, University of Virginia)*

geodesic line [MATH] The shortest line between two points on a mathematically derived surface.
geodesic motion [RELAT] Motion of a particle along a geodesic path in the four dimensional space-time continuum; according to general relativity, this is the motion which occurs in the absence of nongravitational forces.
geodesy [GEOPHYS] A subdivision of geophysics which includes determination of the size and shape of the earth, the earth's gravitational field, and the location of points fixed to the earth's crust in an earth-referred coordinate system.
geodetic astronomy [GEOD] The branch of geodesy which utilizes astronomic observations to extract geodetic information.
geodetic coordinates [GEOD] The quantities latitude, longitude, and elevation which define the position of a point on the surface of the earth with respect to the reference spheroid.
geodetic datum [GEOD] A datum consisting of five quantities: the latitude and longitude of an initial point, the azimuth of a line from this point, and two constants necessary to define the terrestrial spheroid.
geodetic-distance meter *See* Geodimeter.
geodetic equator [GEOD] The great circle midway between the poles of revolution of the earth, connecting points of 0° geodetic latitude.
geodetic gravimetry [GEOD] Worldwide relative measurements of gravitational acceleration used in geodetic studies of the earth.
geodetic latitude [GEOD] Angular distance between the plane of the equator and a normal to the spheroid; a geodetic latitude differs from the corresponding astronomical latitude by the amount of the meridional component of station error. Also known as geographic latitude; topographical latitude.
geodetic line [GEOD] The shortest line between any two points on the surface of the spheroid.
geodetic longitude [GEOD] The angle between the plane of the reference meridian and the plane through the polar axis and the normal to the spheroid; a geodetic longitude differs from the corresponding astronomical longitude by the amount of the prime-vertical component of station error divided by the cosine of the latitude. Also known as geographic longitude.
geodetic meridian [GEOD] A line on a spheroid connecting points of equal geodetic longitude. Also known as geographic meridian.
geodetic parallel [GEOD] A line connecting points of equal geodetic latitude. Also known as geographic parallel.
geodetic position [GEOD] **1.** A point on the earth, the coordinates of which have been determined by triangulation from an initial station, whose location has been established as a result of astronomical observations, the coordinates depending upon the reference spheroid used. **2.** A point on the earth, defined in terms of geodetic latitude and longitude.
geodetic precession [RELAT] The precession of a gyroscope in orbit about the earth due to the curvature of space of the Schwarzschild metric.
geodetic satellite [AERO ENG] An artificial earth satellite used to obtain data for geodetic triangulation calculations.
geodetic survey [ENG] A survey in which the figure and size of the earth are considered; it is applicable for large areas and long lines and is used for the precise location of basic points suitable for controlling other surveys.
geodynamic height *See* dynamic height.
geodynamics [GEO PHYS] That science which is concerned with the forces and processes of the earth's interior.
geoeconomy [GEOGR] The study of economic conditions that are influenced by geographic factors.
geoelectricity *See* terrestrial electricity.
geoflex *See* orocline.
geognosy [GEOL] The science dealing with the solid body of the earth as a whole, occurrences of minerals and rocks, and the origin of these and their relations.
geographical botany *See* plant geography.
geographical coordinates [GEOGR] Spherical coordinates, designating both astronomical and geodetic coordinates, defining a point on the surface of the earth, usually latitude and longitude. Also known as terrestrial coordinates.
geographical cycle *See* geomorphic cycle.
geographical mile [MECH] The length of 1 minute of arc of the Equator, or 6087.08 feet (1855.34 meters), which approximates the length of the nautical mile.
geographical plot [NAV] A plot of the movements of one or more craft relative to the surface of the earth.
geographical position [ASTRON] That point on the earth at which a given celestial body is in the zenith at a specified time. [GEOGR] Any position on the earth defined by means of its geographical coordinates, either astronomical or geodetic.
geographic latitude *See* geodetic latitude.
geographic longitude *See* geodetic longitude.
geographic meridian *See* geodetic meridian.
geographic number [NAV] The number assigned to an aid to navigation for identification purposes in accordance with the lateral system of numbering.
geographic parallel *See* geodetic parallel.
geographic position [GEOGR] The position of a point on the surface of the earth expressed in terms of geographical coordinates either geodetic or astronomical.
geographic range [GEOD] The extreme distance at which an object or light can be seen when limited only by the curvature of the earth and the heights of the object and the observer.
geographic search [NAV] An orderly arrangement of course lines in an area in which the area is defined in relation to one or more geographical points on the earth.
geographic sector search [NAV] An orderly arrangement of course lines consisting of three legs, the turning points being at equal distances along radial lines from a fixed point, the first leg being along the first radial, the second leg along the straight line connecting the equidistant points on the two radials, and the third leg along the course line intersecting a fixed or moving base at the time of return.
geographic speciation [EVOL] Evolution of two or more species from a single species following geographic isolation.
geographic square search [NAV] An orderly arrangement of course lines (a search) consisting of a series of lines of increasing length, each change of course being 90° in the same direction (right or left), so that the pattern of the search is an expanding square relative to a geographic point. Also known as fixed square search.
geographic vertical [GEOD] A line perpendicular to the surface of the geoid; it is the direction in which the force of gravity acts. [MAP] The direction of a line normal to the surface of the geoid. Also known as map vertical.
geography [SCI TECH] The study of all aspects of the earth's surface, comprising its natural and political divisions, the differentiation of areas, and, sometimes people in relationship to the environment.
geohydrology [HYD] The science dealing with underground water, often referred to as hydrogeology.
geoid [GEOD] The figure of the earth considered as a sea-level surface extended continuously over the entire earth's surface.
geoidal horizon [ASTRON] That circle of the celestial sphere formed by the intersection of the celestial sphere and a plane tangent to the sea-level surface of the earth at the zenith-nadir line.
geoisotherm [GEOPHYS] The locus of points of equal temperature in the interior of the earth; a line in two dimensions or a surface in three dimensions. Also known as geotherm; isogeotherm.
geolith *See* rock-stratigraphic unit.
geologic age [GEOL] **1.** Any great time period in the earth's history marked by special phases of physical conditions or organic development. **2.** A formal geologic unit of time that corresponds to a stage. **3.** An informal geologic time unit that corresponds to any stratigraphic unit.
geological oceanography [GEOL] The study of the floors and margins of the oceans, including descriptions of topography, composition of bottom materials, interaction of sediments and rocks with air and sea water, the effects of movements in the mantle on the sea floor, and action of wave energy in the submarine crust of the earth. Also known as marine geology; submarine geology.
geological survey [GEOL] **1.** An organization making geological surveys and studies. **2.** A systematic geologic mapping of a terrain.
geological transportation [GEOL] Shifting of material by the action of moving water, ice, or air.
geologic climate *See* paleoclimate.
geologic column [GEOL] **1.** The vertical sequence of strata of various ages found in an area or region. **2.** The geologic time scale as represented by rocks.

geologic erosion *See* normal erosion.

geologic log [GEOL] A graphic presentation of the lithologic or stratigraphic units or both traversed by a borehole; used in petroleum and mining engineering as well as geological surveys.

geologic map [GEOL] A representation of the geologic surface or subsurface features by means of signs and symbols and with an indicated means of orientation; includes nature and distribution of rock units, and the occurrence of structural features, mineral deposits, and fossil localities.

geologic noise [GEOPHYS] Disturbances in observed data caused by random inhomogeneities in surface and near-surface material.

geologic province [GEOL] An area in which geologic history has been the same.

geologic section [GEOL] Any succession of rock units found at the surface or below ground in an area. Also known as section.

geologic structure [GEOL] The total structural features in an area.

geologic thermometer *See* geothermometer.

geologic thermometry *See* geothermometry.

geologic time [GEOL] The period of time covered by historical geology, from the end of the formation of the earth as a separate planet to the beginning of written history.

geologic time scale [GEOL] The relative age of various geologic periods and the absolute time intervals.

geologist [GEOL] An individual who specializes in the geological sciences.

geolograph [ENG] A device that records the penetration rate of a bit during the drilling of a well.

geology [SCI TECH] The study or science of the earth, its history, and its life as recorded in the rocks; includes the study of geologic features of an area, such as the geometry of rock formations, weathering and erosion, and sedimentation.

geomagnetic coordinates [GEOPHYS] A system of spherical coordinates based on the best fit of a centered dipole to the actual magnetic field of the earth.

geomagnetic cutoff [GEOPHYS] The minimum energy of a cosmic-ray particle able to reach the top of the atmosphere at a particular geomagnetic latitude.

geomagnetic dipole [GEOPHYS] The magnetic dipole caused by the earth's magnetic field.

geomagnetic electrokinetograph [ENG] An instrument that can be suspended from the side of a ship to measure the direction and speed of ocean currents while the ship is under way by measuring the voltage induced in the moving conductive seawater by the magnetic field of the earth.

geomagnetic equator [GEOPHYS] That terrestrial great circle which is 90° from the geomagnetic poles.

geomagnetic field [GEOPHYS] The earth's magnetic field.

geomagnetic field reversal [GEOPHYS] Reversed magnetization in sedimentary and igneous rock, that is, polarized opposite to the mean geomagnetic field.

geomagnetic latitude [GEOPHYS] The magnetic latitude that a location would have if the field of the earth were to be replaced by a dipole field closely approximating it.

geomagnetic longitude [GEOPHYS] Longitude that is determined around the geomagnetic axis instead of around the rotation axis of the earth.

geomagnetic meridian [GEOPHYS] A semicircle connecting the geomagnetic poles.

geomagnetic noise [COMMUN] Interference in radio communications arising from terrestrial magnetism. [GEOPHYS] Unwanted frequencies caused by fluctuations in the geomagnetic field of the earth.

geomagnetic pole [GEOPHYS] Either of two antipodal points marking the intersection of the earth's surface with the extended axis of a powerful bar magnet assumed to be located at the center of the earth and having a field approximating the actual magnetic field of the earth.

geomagnetic reversal [GEOPHYS] Reversed magnetization of the earth's magnetic dipole.

geomagnetic secular variation *See* secular variation.

geomagnetic storm [GEOPHYS] A large disturbance of the earth's magnetic field.

geomagnetic variation [GEOPHYS] Temporal changes in the geomagnetic field, both long-term (secular) and short-term (transient).

geomagnetism [GEOPHYS] **1.** The magnetism of the earth. Also known as terrestrial magnetism. **2.** The branch of science that deals with the earth's magnetism.

geometrical acoustics *See* ray acoustics.

geometrical dip [GEOD] The vertical angle, at the eye of an observer, between the horizontal and a straight line tangent to the surface of the earth.

geometrical factor [NAV] In loran and similar navigation systems, the ratio of the linear distance between a point on a loran line of position (hyperbola) and the nearest point on an adjacent line of the same family of lines to the interval between the corresponding time difference.

geometrical horizon [GEOD] The intersection of the celestial sphere and an infinite number of straight lines radiating from the eye of the observer and tangent to the earth's surface.

geometric inertial navigation [NAV] Inertial navigation in which computations are based on the outputs of accelerometers that are maintained in alignment with predetermined geographic directions, such as local vertical and geographic north.

geometrical isomerism [PHYS CHEM] The phenomenon in which isomers contain atoms attached to each other in the same order and with the same bonds but with different spatial, or geometrical, relationships; the explicit geometry imposed upon a molecule by, say, a double bond between carbon atoms makes possible the existence of these isomers.

geometrical optics [OPTICS] The geometry of paths of light rays and their imagery through optical systems.

geometrical pitch [AERO ENG] The distance a component of an airplane propeller would move forward in one complete turn of the propeller if the path it was moving along was a helix that had an angle equal to an angle between a plane perpendicular to the axis of the propeller and the chord of the component.

geometrical similarity [FL MECH] Property of two fluid flows for which a simple alteration of scales of length and velocity transforms one into the other.

geometric average *See* geometric mean.

geometric construction [ENG] Construction that employs only straightedge and compasses or is carried out by drawing only straight lines and circles.

geometric distribution [STAT] A discrete probability distribution whose probability function is given by the equation $p(x) = p\,(1-p)^{x-1}$ for x any positive integer, $p(x) = 0$ otherwise, when $0 \leq p \leq 1$; the mean is $1/p$.

geometric inertial navigation [NAV] Inertial navigation in which computations are based on the outputs of accelerometers that are maintained in alignment with predetermined geographic directions, such as local vertical and geographic north.

geometric latitude *See* reduced latitude.

geometric mean [MATH] The geometric mean of n given quantities is the nth root of their product. Also known as geometric average.

geometric number theory [MATH] The branch of number theory studying relationships among numbers by examining the geometric properties of ordered pair sets of such numbers.

geometric programming [SYS ENG] A nonlinear programming technique in which the relative contribution of each of the component costs is first determined; only then are the variables in the component costs determined.

geometric progression [MATH] A sequence which has the form $a, ar, ar^2, ar^3, \ldots$.

geometric series [MATH] An infinite series of the form $a + ar + ar^2 + ar^3 + \ldots$.

geometric shadow [PHYS] That region which a given type of radiation would not reach, because of the presence of an object, if the effects of diffraction and interference could be neglected.

geometric vertical *See* geocentric vertical.

Geometridae [INV ZOO] A large family of lepidopteran insects in the superfamily Geometroidea that have slender bodies and relatively broad wings; includes measuring worms, loopers, and cankerworms.

geometrodynamics [RELAT] A theory involving only geometry which attempts to combine gravitational and electromagnetic theory; characterized by a multiply connected space-time manifold containing structures, descriptively called wormholes, associated with electric charge.

Geometroidea [INV ZOO] A superfamily of lepidopteran insects in the suborder Heteroneura comprising small to large moths with reduced maxillary palpi and tympanal organs at the base of the abdomen.

geometry [MATH] The qualitative study of shape and size.

geomorphic cycle [GEOL] The cycle of change in the surface configuration of the earth. Also known as cycle of erosion; geographical cycle.

geomorphology [GEOL] The study of the origin of secondary topographic features which are carved by erosion in the primary elements and built up of the erosional debris.

Geomyidae [VERT ZOO] The pocket gophers, a family of rodents characterized by fur-lined cheek pouches which open outward, a stout body with short legs, and a broad, blunt head.

geonavigation [NAV] Plotting a course by computation based on information obtained by reference to other places on earth.

geopetal [PETR] Pertaining to the top-to-bottom relations in rocks at the time of formation.

geopetal fabric [PETR] The internal structure of a rock indicating the original orientation of the top-to-bottom strata.

geophagous [ZOO] Feeding on soil, as certain worms.

Geophilomorpha [INV ZOO] An order of centipedes in the class Chilopoda including specialized forms that are blind, epimorphic, and dorsoventrally flattened.

geophilous [ECOL] Living or growing in or on the ground.

geophone [ELECTR] A transducer, used in seismic work, that responds to motion of the ground at a location on or below the surface of the earth.

geophysical engineering [ENG] A branch of engineering that applies scientific methods for locating mineral deposits.

geophysical prospecting [ENG] Application of quantitative concepts and principles of physics and mathematics in geologic explorations to discover the character of and mineral resources in underground rocks in the upper portions of the earth's crust.

geophysicist [GEOPHYS] An individual who specializes in geophysics.

geophysics [GEOL] The physics of the earth and its environment, that is, earth, air, and (by extension) space.

geophyte [ECOL] A perennial plant that is deeply embedded in the soil substrata.

geopotential [PHYS] The potential energy of a unit mass relative to sea level, numerically equal to the work that would be done in lifting the unit mass from sea level to the height at which the mass is located, against the force of gravity.

geopotential height [GEOPHYS] The height of a given point in the atmosphere in units proportional to the potential energy of unit mass (geopotential) at this height, relative to sea level.

geopotential number [GEOPHYS] The numerical value C that is assigned to a given geopotential surface when expressed in geopotential units (1 gpu = 1 meter × 1 kilogal).

geopotential surface [GEOPHYS] A surface of constant geopotential, that is, a surface along which a parcel of air could move without undergoing any changes in its potential energy. Also known as equigeopotential surface; level surface.

geopotential thickness [GEOPHYS] The difference in the geopotential height of two constant-pressure surfaces in the atmosphere, proportional to the appropriately defined mean air temperature between the two surfaces.

geopotential topography [GEOPHYS] The topography of any surface as represented by lines of equal geopotential; these lines are the contours of intersection between the actual surface and the level surfaces (which everywhere are normal to the direction of the force of gravity), and are spaced at equal intervals of dynamic height. Also known as absolute geopotential topography.

geopotential unit [GEOPHYS] A unit of gravitational potential used in describing the earth's gravitational field; it is equal to the difference in gravitational potential of two points separated by a distance of 1 meter when the gravitational field has a strength of 10 meters per second squared and is directed along the line joining the points. Abbreviated gpu.

geopressurized geothermal system [GEOL] A geothermal system dominated by the presence of hot fluids under high pressure (brine plus methane) and having higher-than-normal temperatures because of their low thermal conductivity, the presence of interbedded shale layers, or the existence of local, exothermic chemical reactions.

georef *See* world geographic reference system.

georef grid [MAP] The grid system used on U.S. Air Force aeronautical charts for identifying the location of any point or area in the world.

Georges Banks [GEOL] An elevation beneath the sea east of Cape Cod, Mass.

georgette [TEXT] Heavy sheer crepe made of yarn twisted both ways in the weave; the same yarn is usually used in warp and filling.

georgiadesite [MINERAL] $Pb_3(AsO_4)Cl_3$ A white or brownish-yellow mineral composed of lead chloroarsenate, occurring in orthorhombic crystals.

georgiaite [GEOL] Any of a group of North American tektites, 134 million years of age, found in Georgia.

Georyssidae [INV ZOO] The minute mud-loving beetles, a family of coleopteran insects belonging to the Polyphaga.

geosere [GEOL] A series of ecological climax communities following each other in geologic time and changing in response to changing climate and physical conditions.

Geosiridaceae [BOT] A monotypic family of monocotyledonous plants in the order Orchidales characterized by regular flowers with three stamens that are opposite the sepals.

geosphere [GEOL] **1.** The solid mass of earth, as distinct from the atmosphere and hydrosphere. **2.** The lithosphere, hydrosphere, and atmosphere combined.

Geospizinae [VERT ZOO] Darwin finches, a subfamily of perching birds in the family Fringillidae.

geostatic pressure *See* ground pressure.

geostationary satellite [AERO ENG] A satellite that orbits the earth from west to east at such a speed as to remain fixed over a given place on the earth's equator at approximately 35,900 kilometers altitude; makes one revolution in 24 hours, synchronous with the earth's rotation. Also known as synchronous satellite.

geostrophic [GEOPHYS] Pertaining to deflecting force resulting from the earth's rotation.

geostrophic approximation [GEOPHYS] The assumption that the geostrophic current can represent the actual horizontal current. Also known as geostrophic assumption.

geostrophic assumption *See* geostrophic approximation.

geostrophic current [GEOPHYS] A current defined by assuming the existence of an exact balance between the horizontal pressure gradient force and the Coriolis force.

geostrophic departure [METEOROL] A vector representing the difference between the real wind and the geostrophic wind. Also known as ageostrophic wind; geostrophic deviation.

geostrophic deviation *See* geostrophic departure.

geostrophic distance [METEOROL] The distance (in degrees latitude) along a constant-pressure surface over which the change in height (in feet) is equal to the geostrophic wind speed (in knots).

geostrophic equation [GEOPHYS] An equation, used to compute geostrophic current speed, which represents a balance between the horizontal pressure gradient force and the Coriolis force.

geostrophic equilibrium [GEOPHYS] A state of motion of a nonviscous fluid in which the horizontal Coriolis force exactly balances the horizontal pressure force at all points of the field so described.

geostrophic flow [GEOPHYS] A form of gradient flow where the Coriolis force exactly balances the horizontal pressure force.

geostrophic flux [METEOROL] The transport of an atmospheric property by means of the geostrophic wind.

geostrophic vorticity [METEOROL] The vorticity of the geostrophic wind.

geostrophic wind [METEOROL] That horizontal wind velocity for which the Coriolis acceleration exactly balances the horizontal pressure force.

geostrophic-wind level [METEOROL] The lowest level at which the wind becomes geostrophic in the theory of the Ekman spiral. Also known as gradient-wind level.

geostrophic-wind scale [METEOROL] A graphical device used for the determination of the speed of the geostrophic wind from the isobar or contour-line spacing on a synoptic chart; it is a nomogram representing solutions of the geostrophic-wind equation.

geosynclinal couple *See* orthogeosyncline.

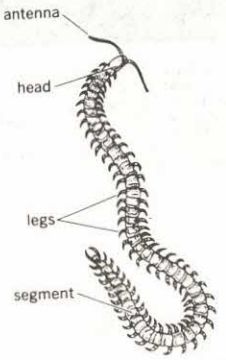
geosynclinal cycle *See* tectonic cycle.

geosynclinal facies [GEOL] A sedimentary facies marked by great thickness, a generally argillaceous character, and few carbonate rocks.

geosyncline [GEOL] A part of the crust of the earth that sank deeply through time.

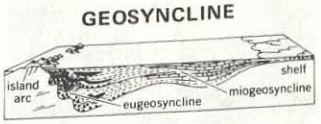
geotaxis [PHYSIO] Movement of a free-living organism in response to the stimulus of gravity.

GEOPHILOMORPHA



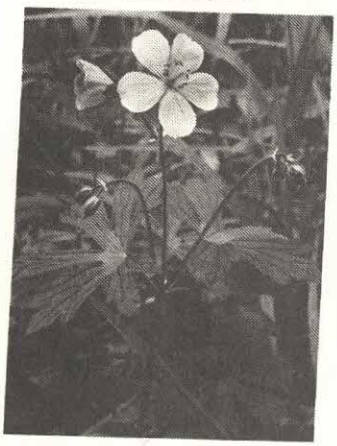
An epimorphic chilopod, an unidentified species 40 millimeters long. *(From R. E. Snodgrass, A Textbook of Arthropod Anatomy, copyright 1952 by Cornell University Press; used by permission)*

GEOSYNCLINE



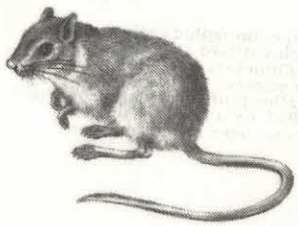
Diagrammatic section of Cordilleran geosyncline in southeastern Alaska and British Columbia at the close of the Permian. Volcanic deposits are indicated in black. *(After A. J. Eardley, J. Geol., 55:319–342, 1947)*

GERANIALES



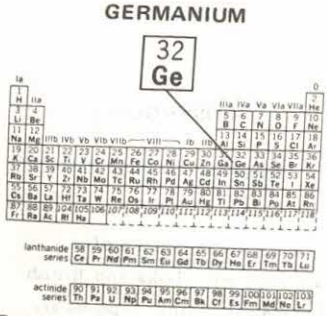
A common eastern United States species of geranium *(Geranium maculatum)*, which is characteristic of the order Geraniales. *(Courtesy of A. W. Ambler, from National Audubon Society)*

GERBIL



A gerbil, with long tail for balance when it hops.

GERMANIUM



Periodic table of the chemical elements showing the position of germanium.

geotechnics [CIV ENG] The application of scientific methods and engineering principles to civil engineering problems through acquiring, interpreting, and using knowledge of materials of the crust of the earth.

geotechnology [ENG] Application of the methods of engineering and science to exploitation of natural resources.

geotectogene *See* tectogene.

geotectonic cycle *See* orogenic cycle.

geotectonics *See* tectonics.

geotextile [MATER] A woven or nonwoven fabric manufactured from synthetic fibers or yarns that is designed to serve as a continuous membrane between soil and aggregate in a variety of earth structures.

geotherm *See* geoisotherm.

geothermal [GEOPHYS] Pertaining to heat within the earth.

geothermal gradient [GEOPHYS] The change in temperature with depth of the earth.

geothermal prospecting [ENG] Exploration for sources of geothermal energy.

geothermal system [GEOL] Any regionally localized geological setting where naturally occurring portions of the earth's internal heat flow are transported close enough to the earth's surface by circulating steam or hot water to be readily harnessed for use; examples are the Geysers Region of northern California and the hot brine fields in the Imperial Valley of southern California.

geothermal well logging [ENG] Measurement of the change in temperature of the earth by means of well logging.

geothermometer [ENG] A thermometer constructed to measure temperatures in boreholes or deep-sea deposits. [GEOL] A mineral that yields information about the temperature range within which it was formed. Also known as geologic thermometer.

geothermometry [GEOL] Measurement of the temperatures at which geologic processes occur or occurred. Also known as geologic thermometry.

geotropism [BOT] Response of a plant to the force of gravity.

Gephyrea [INV ZOO] A class of burrowing worms in the phylum Annelida.

gephyrocercal [VERT ZOO] Having the dorsal and anal fins coming together smoothly at the aborted end of the vertebral column of a fish's tail.

Geraniaceae [BOT] A family of dicotyledonous plants in the order Geraniales in which the fruit is beaked, styles are usually united, and the leaves have stipules.

geranial *See* citral.

geranialdehyde *See* citral.

Geraniales [BOT] An order of dicotyledonous plants in the subclass Rosidae comprising herbs or soft shrubs with a superior ovary and with compound or deeply cleft leaves.

geraniol [ORG CHEM] $(CH_3)_2CCH(CH_2)_2C(CH_3)CH\text{-}CH_2OH$ A colorless to pale-yellow liquid, an alcohol and a terpene, boiling point 230°C; soluble in alcohol and ether, insoluble in water; used in perfumery and flavoring.

Geranium [BOT] A genus of plants in the family Geraniaceae characterized by regular flowers, and glands alternating with the petals.

geranium oil [MATER] A pale-yellow or green liquid distilled from the herb of several Pelargonium species; chief known constituents are citronellol and geraniol, both used in perfumery and as flavoring agents.

geranyl [ORG CHEM] $C_{10}H_{17}$ The radical from geraniol, $(CH_3)_2{:}CHCH_2CH_2{\cdot}CHCH_3{:}CH{\cdot}CH_2OH$.

Gerardiidae [INV ZOO] A family of anthozoans in the order Zoanthidea.

Gerard reagent [CHEM] The quaternary ammonium compounds, acethydrazide-pyridinium chloride and trimethylacethydrazide ammonium chloride; used to separate aldehydes and ketones from oily or fatty natural materials and to extract sex hormones from urine.

gerber beam [CIV ENG] A long, straight beam that functions essentially as a cantilevered beam by the insertion of two hinges in alternate spans.

Gerber test [FOOD ENG] A volumetric measurement of the quantity of fat in a sample of milk; the European counterpart of the Babcock test.

gerbil [VERT ZOO] The common name for about 100 species of African and Asian rodents composing the subfamily Gerbillinae.

Gerbillinae [VERT ZOO] The gerbils, a subfamily of rodents in the family Muridae characterized by hindlegs that are longer than the front ones, and a long, slightly haired, usually tufted tail.

gerhardtite [MINERAL] $Cu_2(NO_3)(OH)_3$ An emerald-green mineral composed of basic copper nitrate.

Gerhardt's test [PATH] A test for acetoacetic acid in urine.

geriatrics [MED] The study of the biological and physical changes and the diseases of old age.

germ [BIOL] A primary source, especially one from which growth and development are expected. [MICROBIO] General designation for a microorganism.

German cupellation [MET] A refining method using a large reverberatory furnace with a fixed bed and a movable roof; the bullion to be cupelled is all charged at once, and the silver is not refined in the same furnace where the cupellation is carried on.

germane [INORG CHEM] **1.** A hydride of germanium whose general formula is Ge_nH_{2n+2}. **2.** The compound GeH_4, a hydride of germanium, a colorless gas that is combustible in air and burns with a blue flame.

germanide [INORG CHEM] A compound of an alkaline earth or alkali metal with germanium; an example is magnesium germanide, Mg_2Ge; the germanides are reactive with water.

germanite [MINERAL] $Cu_3(Ge,Ga,Fe)(S,As)_4$ Reddish-gray mineral occurring in massive form; an important source of germanium.

germanium [CHEM] A brittle, water-insoluble, silvery-gray metallic element in the carbon family, symbol Ge, atomic number 32, atomic weight 72.59, melting at 959°C. [MET] A rare metal used in semiconductors, alloys, and glass.

germanium diode [ELECTR] A semiconductor diode that uses a germanium crystal pellet as the rectifying element. Also known as germanium rectifier.

germanium halide [INORG CHEM] A dihalide or tetrahalide of fluorine, chlorine, bromine, or iodine with germanium.

germanium oxide [INORG CHEM] The monoxide GeO or dioxide GeO_2; a study of GeO indicates it exists in polymeric form; GeO_2 is a white powder, soluble in alkalies; used in special glass and in medicine.

germanium rectifier *See* germanium diode.

germanium transistor [ELECTR] A transistor in which the semiconductor material is germanium, to which electric contacts are made.

German measles *See* rubella.

German R unit [NUCLEO] A unit of radiation dose rate due to x-rays, equal to approximately 2.5 Solomon R units, or approximately 1.5 roentgens per second. Also known as R unit.

German silver *See* nickel silver.

German tubbing [MIN ENG] A form of tubbing, with internal flanges and bolts, for lining circular shafts sunk through heavily watered strata.

germarium [INV ZOO] The egg-producing portion of an ovary and the sperm-producing portion of a testis in Platyhelminthes and Rotifera.

germ ball [INV ZOO] A group of cells in digenetic trematode miracidial larvae which are embryos.

germ cell [BIOL] An egg or sperm or one of their antecedent cells.

germfree animal [MICROBIO] An animal having no demonstrable, viable microorganisms living in intimate association with it.

germfree isolator [MICROBIO] An apparatus that provides a mechanical barrier surrounding the area in which germfree vertebrates and accessory equipment are housed.

germicide [MATER] An agent that destroys germs.

germinal epithelium [EMBRYO] The region of the dorsal coelomic epithelium lying between the dorsal mesentery and the mesonephros.

germinal vesicle [CYTOL] The enlarged nucleus of the primary oocyte before reduction divisions are complete.

germination [BOT] The beginning or the process of development of a spore or seed. [PETR] *See* grain growth.

germ layer [EMBRYO] One of the primitive cell layers which appear in the early animal embryo and from which the embryo body is constructed.

germ-layer theory [EMBRYO] The theory that three primary

germ layers, ectoderm, mesoderm, and endoderm, are established in the early embryo and all organs and structures are derived from a specific germ layer.

germovitellarium [INV ZOO] A sex gland which differentiates into a yolk-producing or egg-producing region.

germ theory [MED] The theory that contagious and infectious diseases are caused by microorganisms.

geroderma [MED] The skin of old age, showing atrophy, loss of fat, and loss of elasticity.

gerontology [PHYSIO] The scientific study of aging processes in biological systems, particularly in humans.

Gerrhosauridae [VERT ZOO] A small family of lizards in the suborder Sauria confined to Africa and Madagascar.

Gerridae [INV ZOO] The water striders, a family of hemipteran insects in the subdivision Amphibicorisae having long middle and hind legs and a median scent gland opening on the metasternum.

Gerroidea [INV ZOO] The single superfamily of the hemipteran subdivision Amphibicorisae; all members have conspicuous antennae and hydrofuge hairs covering the body.

gersdorffite [MINERAL] NiAsS A silver-white to steel-gray mineral, crystallizing in the isometric system; resembles cobaltite and may contain some iron and cobalt. Also known as nickel glance.

Gerstner wave [FL MECH] A rotational gravity wave of finite amplitude.

Gesneriaceae [BOT] A family of dicotyledonous plants in the order Scrophulariales characterized by parietal placentation, mostly opposite or whorled leaves, and a well-developed embryo.

gesso [MATER] A material made from chalk and gelatin or casein glue; painted on panels to furnish a surface for tempera work or for polymer-based paints.

gestalt [METEOROL] A complex of weather elements occurring in a familiar form, and though not necessarily referring to basic hydrodynamical or thermodynamical quantities, may persist for an appreciable length of time and is often considered to be an entity in itself.

Gestalt psychology [PSYCH] A school of psychology that views and examines the person as a whole.

gestate [EMBRYO] To carry the young in the uterus from conception to delivery.

gestation period [EMBRYO] The period in mammals from fertilization to birth.

get [IND ENG] A combination of two or more of the elemental motions of search, select, grasp, transport empty, and transport loaded; applied to time-motion studies.

getter [PHYS CHEM] **1.** A substance, such as thallium, that binds gases on its surface and is used to maintain a high vacuum in a vacuum tube. **2.** A special metal alloy that is placed in a vacuum tube during manufacture and vaporized after the tube has been evacuated; when the vaporized metal condenses, it absorbs residual gases. Also known as degasser.

getter-ion pump [ENG] A high-vacuum pump that employs chemically active metal layers which are continuously or intermittently deposited on the wall of the pump, and which chemisorb active gases while inert gases are "cleaned up" by ionizing them in an electric discharge and drawing the positive ions to the wall, where the neutralized ions are buried by fresh deposits of metal. Also known as sputter-ion pump.

getter sputtering [ELECTR] The deposition of high-purity thin films at ordinary vacuum levels by using a getter to remove contaminants remaining in the vacuum.

GeV *See* giga electron volt.

gewel hinge [DES ENG] A hinge consisting of a hook inserted in a loop.

geyser [HYD] A natural spring or fountain which discharges a column of water or steam into the air at more or less regular intervals.

geyserite *See* siliceous sinter.

gf *See* gram-force.

g factor *See* Landé g factor.

G factor *See* G value.

g force [PHYS] A force such that a body subjected to it would have the acceleration of gravity at sea level; used as a unit of measurement for bodies undergoing the stress of acceleration.

GH *See* growth hormone.

GHA *See* Greenwich hour angle.

gharbi [METEOROL] A fresh westerly wind of oceanic origin in Morocco.

gharra [METEOROL] Hard squalls from the northeast in Libya and Africa that are sudden and frequent, and are accompanied by heavy rain and thunder.

ghatti gum [MATER] A water-soluble gum from the tree *Anogeissus latifolia*, forming a viscous glue in water; used as an emulsifier.

ghedda wax [MATER] A beeswax that is obtained from African and Indian bees.

ghibli [METEOROL] A hot, dust-bearing, desert wind in North Africa, similar to the foehn. Also known as chibli; gebli; gibleh; gibli; kibli.

Ghon complex [MED] The combination of a focus of subpleural tuberculosis with associated hilar and mediastinal lymph node tuberculosis.

ghost [ORD] In passive detection, one of the intersection points of lines of position which do not represent actual targets but are only crossover points of multiple plotted lines of position from two or more detection stations. [PETR] The discernible outline of the shape of a former crystal or of another rock structure that has been partly obliterated and has as its boundaries inclusions, bubbles, or other foreign matter. Also known as phantom.

ghost algebraic manipulation language [COMPUT SCI] An algebraic manipulation language which externally gives the appearance of manipulating quite general mathematical expressions, although internally it is functioning with canonically represented data, much like the simpler seminumerical languages.

ghost crystal *See* phantom crystal.

ghost image [ELECTR] **1.** An undesired duplicate image at the right of the desired image on a television receiver; due to multipath effect, wherein a reflected signal traveling over a longer path arrives slightly later than the desired signal. **2.** *See* ghost pulse.

ghost lines *See* ferrite banding.

ghost mode [ELECTROMAG] Waveguide mode having a trapped field associated with an imperfection in the wall of the waveguide; a ghost mode can cause trouble in a waveguide operating close to the cutoff frequency of a propagation mode.

ghost pulse [ELECTR] An unwanted signal appearing on the screen of a radar indicator and caused by echoes which have a basic repetition frequency differing from that of the desired signals. Also known as ghost image; ghost signal.

ghost signal [ELECTR] **1.** The reflection-path signal that produces a ghost image on a television receiver. Also known as echo. **2.** *See* ghost pulse.

ghost spot [PL PATH] A disease of tomato characterized by small white rings on the fruit.

ghost structure *See* ferrite banding.

GHz *See* gigahertz.

Giacobinids [ASTRON] A meteor shower that reaches maximum about October 10, associated with Comet P/Giacobini-Zinner.

giant *See* hydraulic monitor.

giant cell arteritis [MED] Inflammation of the arteries, particularly the carotid branches, characterized by the appearance of multinucleate giant cells in the exudate. Also known as temporal arteritis.

giant-cell leukemia *See* megakaryocytic leukemia.

giant granite *See* pegmatite.

giant planets [ASTRON] The planets Jupiter, Saturn, Uranus, and Neptune.

giant powder [MATER] A blasting powder made of nitroglycerin, sodium nitrate, sulfur, and rosin, sometimes with kieselguhr.

giant pulse laser *See* Q-switched laser.

giant's cauldron *See* giant's kettle.

giant's kettle [GEOL] A cylindrical hole bored in bedrock beneath a glacier by water falling through a deep moulin or by boulders rotating in the bed of a meltwater stream. Also known as giant's cauldron; moulin pothole; potash kettle.

giant star [ASTRON] One of a class of stars that is 20 or 30 or more times larger than the sun and over 100 times more luminous.

Giaque-Debye method *See* adiabatic demagnetization.

Giaque's temperature scale [THERMO] The internationally accepted scale of absolute temperature, in which the triple point of water is defined to have a temperature of 273.16 K.

Giardia [INV ZOO] A genus of zooflagellates that inhabit the

GEYSER

Old Faithful, Yellowstone Park, Wyoming. *(National Park Service, U.S. Department of the Interior)*

intestine of numerous vertebrates, and may cause diarrhea in humans.

giardiasis [MED] Presence of the protozoon *Giardia lamblia* in the human small intestine.

gib [ENG] A removable plate designed to hold other parts in place or act as a bearing or wear surface. [MIN ENG] **1.** A temporary support at the face to prevent coal from falling before the cut is complete, either by hand or by machine. **2.** A prop put in the holing of a seam while being undercut. **3.** A piece of metal often used in the same hole with a wedge-shaped key for holding pieces together.

gibberellic acid [BIOCHEM] $C_{18}H_{22}O_6$ A crystalline acid occurring in plants that is similar to the gibberellins in its growth-promoting effects.

gibberellin [BIOCHEM] Any member of a family of naturally derived compounds which have a gibbane skeleton and a broad spectrum of biological activity but are noted as plant growth regulators.

gibberish *See* hash.

gibbon [VERT ZOO] The common name for seven species of large, tailless primates belonging to the genus *Hylobates*; the face and ears are hairless, and the arms are longer than the legs.

gibbous [MATH] Bounded by convex curves.

gibbous moon [ASTRON] The shape of the moon's visible surface when the sun is illuminating more than half of the side facing the earth.

gibbs [PHYS] A unit of amount of adsorption, equal to a surface concentration of 10^{-6} mole per square meter.

Gibbs adsorption equation [PHYS CHEM] A formula for a system involving a solvent and a solute, according to which there is an excess surface concentration of solute if the solute decreases the surface tension, and a deficient surface concentration of solute if the solute increases the surface tension.

Gibbs adsorption isotherm [PHYS CHEM] An equation for the surface pressure of surface monolayers,

$$\phi = RT \int_0^p \Gamma d(\ln p)$$

where ϕ is surface pressure, T is absolute temperature, R is the gas constant, Γ is the number of molecules adsorbed per gram per unit surface area, and p is the pressure of the gas.

Gibbs apparatus [ENG] A compressed-oxygen breathing apparatus used by miners in the United States.

Gibbs diaphragm cell [CHEM ENG] A type of electrolytic diaphragm cell for chlorine production, with graphite electrodes and a cylindrical shape.

Gibbs-Donnan equilibrium *See* Donnan equilibrium.

Gibbs-Duhem equation [PHYS CHEM] A relation that imposes a condition on the composition variation of the set of chemical potentials of a system of two or more components,

$$SdT - VdP + \sum_{i=1}^{r} n_i d\mu_i = 0$$

where S is entropy, T absolute temperature, P pressure, n_i the number of moles of the ith component, and μ_i is the chemical potential of the ith component. Also known as Duhem's equation.

Gibbs elasticity [PHYS] The elasticity of a film of liquid, equal to twice the product of the surface area and the derivative of the surface tension with respect to surface area.

Gibbs free energy [THERMO] The thermodynamic function $G = H - TS$, where H is enthalpy, T absolute temperature, and S entropy; Also known as free energy; free enthalpy; Gibbs function.

Gibbs function *See* Gibbs free energy.

Gibbs-Helmholtz equation [PHYS CHEM] An expression for the influence of temperature upon the equilibrium constant of a chemical reaction, $(d \ln K^0/dT)_p = \Delta H^0/RT^2$, where K^0 is the equilibrium constant, ΔH^0 the standard heat of the reaction at the absolute temperature T, and R the gas constant. [THERMO] **1.** Either of two thermodynamic relations that are useful in calculating the internal energy U or enthalpy H of a system; they may be written $U = F - T(\partial F/\partial T)_V$ and $H = G - T(\partial G/\partial T)_p$, where F is the free energy, G is the Gibbs free energy, T is the absolute temperature, V is the volume, and P is the pressure. **2.** Any of the similar equations for changes in thermodynamic potentials during an isothermal process.

gibbsite [MINERAL] $Al(OH)_3$ A white or tinted mineral, crystallizing in the monoclinic system; a principal constituent of bauxite. Also known as hydrargillite.

Gibbs paradox [STAT MECH] The paradox in which there is an increase in entropy when two separate volumes of gases of the same kind, at the same temperature and pressure, are mixed.

Gibbs phase rule [PHYS CHEM] A relation describing the nature of a heterogeneous chemical system at equilibrium, $F = C + 2 - P$, where F is the degrees of freedom, P the number of phases, and C the number of components. Also known as Gibbs rule.

Gibbs' phenomenon [MATH] A convergence phenomenon occurring when a function with a discontinuity is approximated by a finite number of terms from a Fourier series.

Gibbs-Poynting equation [PHYS CHEM] An expression relating the effect of the total applied pressure P upon the vapor pressure p of a liquid, $(dp/dP)_T = V_l/V_g$, where V_l and V_g are molar volumes of the liquid and vapor.

Gibbs rule *See* Gibbs phase rule.

Gibbs system [STAT MECH] **1.** A hypothetical replica of a physical system. **2.** A set of such replicas forming an ensemble.

gibleh *See* ghibli.

gibli *See* ghibli.

giboulee *See* galerne.

Gibraltar stone *See* onyx marble.

gid [VET MED] A chronic brain disease of sheep, less frequently of cattle, characterized by forced movements of circling or rolling, caused by the larval form of the tapeworm *Multiceps multiceps*.

Giegy-Hardisty process [CHEM ENG] The production of sebacic acid from castor oil or its acids by reaction of the acid at a high temperature with caustic alkali.

Giemsa stain [CHEM] A stain for hemopoietic tissue and hemoprotozoa consisting of a stock glycerol methanol solution of eosinates of Azure B and methylene blue with some excess of the basic dyes.

Giesler coal test [ENG] A plastometric method for estimating the coking properties of coals.

gifblaar poison *See* fluoroacetic acid.

giga- [SCI TECH] A prefix representing 10^9, which is 1,000,000,000, or a billion. Abbreviated G. Also known as kilomega- (deprecated usage).

gigabit [COMMUN] One billion bits, or 1,000,000,000 bits. Also known as billibit (deprecated usage).

gigacycle *See* gigahertz.

gigaelectronvolt [PHYS] A unit of energy, used primarily in high-energy physics, equal to 10^9 electron volts or $(1.60210 \pm 0.00007) \times 10^{-10}$ joule. Abbreviated GeV.

gigahertz [COMMUN] Unit of frequency equal to 10^9 hertz. Abbreviated GHz. Also known as gigacycle (gc); kilomegacycle; kilomegahertz.

gigantism [MED] Abnormal largeness of the body due to hypersecretion of growth hormone.

Giganturoidei [VERT ZOO] A suborder of small, mesopelagic actinopterygian fishes in the order Cetomimiformes having large mouths and strong teeth.

gigawatt [ELEC] One billion watts, or 10^9 watts. Abbreviated GW.

gigging [TEXT] Passing a fabric across rollers equipped with teasels to produce a nap on the surface.

gig mill [TEXT] A textile mill employing rotary wire cylinders for napping.

GIGO *See* garbage in, garbage out.

gigohm [ELEC] One thousand megohms, or 10^9 ohms.

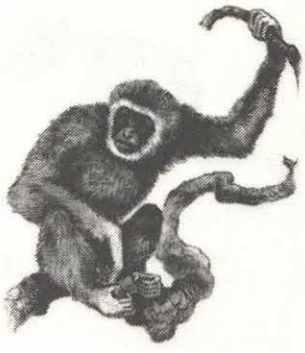
Gila monster [VERT ZOO] The common name for two species of reptiles in the genus *Heloderma* (Helodermatidae) distinguished by a rounded body that is covered with multicolored beaded tubercles, and a bifid protrusible tongue.

gilbert [ELECTROMAG] The unit of magnetomotive force in the electromagnetic system, equal to the magnetomotive force of a closed loop of one turn in which there is a current of $1/4\pi$ abamp.

Gilbert circuit [ELECTR] A circuit that compensates for nonlinearities and instabilities in a monolithic variable-transconductance circuit by using the logarithmic properties of diodes and transistors.

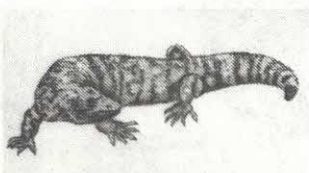
Gilbreth's micromotion study [IND ENG] A time and motion study based on the concept that all work is performed by using a relatively few basic operations in varying combinations

GIBBON



Hylobates lar, which is a typical gibbon with extremely long arms and opposable thumb and big toe, and is found in Sumatra and southern Asia.

GILA MONSTER



Gila monster (*Heloderma suspectum*), about 20 inches (50 centimeters) long.

and sequence; basic elements (therbligs) include grasp, search, move, reach, and hold.

gilding [GRAPHICS] Overlaying material with a thin layer of gold.

gilding metal [MET] A copper alloy (about 90% copper, 10% zinc) used to jacket small-arms bullets, to form detonator or primer cups, and to form rotating bands for artillery projectiles; it can be readily engraved by the lands as the projectile moves down the bore.

gill [MECH] **1.** A unit of volume used in the United States for the measurement of liquid substances, equal to 1/4 U.S. liquid pint, or to $1.1829411825 \times 10^{-4}$ cubic meter. **2.** A unit of volume used in the United Kingdom for the measurement of liquid substances, and occasionally of solid substances, equal to 1/4 U.K. pint, or to approximately 1.42065×10^{-4} cubic meter. [VERT ZOO] The respiratory organ of water-breathing animals. Also known as branchia.

gill cover [VERT ZOO] The fold of skin providing external protection for the gill apparatus of most fishes; it may be stiffened by bony plates and covered with scales.

Gillespie equilibrium still [ANALY CHEM] A recirculating equilibrium distillation apparatus used to establish azeotropic properties of liquid mixtures.

gillespite [MINERAL] $BaFeSi_4O_{10}$ A micalike mineral composed of barium and iron silicate.

Gilliland correlation [CHEM ENG] Approximation method for distillation-column calculations; correlates reflux ratio and number of plates for the column as functions of minimum reflux and minimum plates.

gill net [ENG] A net that entangles the gill covers of fish.

gill raker [VERT ZOO] One of the bony processes on the inside of the branchial arches of fishes which prevents the passage of solid substances through the branchial clefts.

Gilmour heat-exchange method [ENG] Thermal design method for heat exchangers by solution of five unique equations containing a minimum number of variables and involving tube-side, shell-side, tube-wall, and dirt resistance.

gilsonite [MINERAL] A variety of asphalt; it has black color, brilliant luster, brown streaks, and conchoidal fracture.

gimbal [ENG] **1.** A device with two mutually perpendicular and intersecting axes of rotation, thus giving free angular movement in two directions, on which an engine or other object may be mounted. **2.** In a gyro, a support which provides the spin axis with a degree of freedom. **3.** To move a reaction engine about on a gimbal so as to obtain pitching and yawing correction moments. **4.** To mount something on a gimbal.

gimbaled inertial system [NAV] An inertial guidance system that makes use of a three-gimbal mounting whose inner gimbal is a stable platform on which three gyroscopes and accelerometers are mounted; the gyroscopes sense any rotation of the vehicle and drive the gimbals in the opposite direction, so that the inner platform remains fixed in inertial space.

gimbaled nozzle [MECH ENG] A nozzle supported on a gimbal.

gimbal freedom [ENG] Of a gyro, the maximum angular displacement about the output axis of a gimbal.

gimbaling error [NAV] That error introduced in a gyro compass by the tilting of its gimbal mounting system due to horizontal acceleration caused by motion of the vessel, such as rolling.

gimballess inertial navigation equipment *See* strapped-down inertial navigation equipment.

gimbal lock [ENG] A condition of a two-degree-of-freedom gyro wherein the alignment of the spin axis with an axis of freedom deprives the gyro of a degree-of-freedom and therefore its useful properties.

gimlet [DES ENG] A small tool consisting of a threaded tip, grooved shank, and a cross handle; used for boring holes in wood.

gimlet bit [DES ENG] A bit with a threaded point and spiral flute; used for drilling small holes in wood.

gimmick [ELEC] Length of twisted two-conductor cable, used as a variable capacitive load, in which the capacitance is varied by untwisting and separating the individual conductors.

gimp [TEXT] **1.** Ornamental cord made of various materials, often with a wire, and sometimes with a coarse cord, running through it. **2.** Cord used to outline the design in lace. **3.** A braid or tape used to hide upholstery tacks in places where the covering fabric is attached to exposed woodwork.

gin [AGR] **1.** A machine used to separate cotton fiber from the seed and waste. **2.** To thus separate cotton fiber. [FOOD ENG] An alcoholic beverage made from distilled spirits flavored with an extract of the juniperberry or other flavoring botanicals. [MECH ENG] A hoisting machine in the form of a tripod with a windlass, pulleys, and ropes.

gin block [NAV ARCH] A block with a metal frame and a single large-diameter sheave, used to facilitate overhauling, and to hoist numerous packages, such as in cargo hoisting.

G indicator *See* G scope.

gingelly oil *See* sesame oil.

ginger [BOT] *Zingiber officinale*. An erect perennial herb of the family Zingiberaceae having thick, scaly branched rhizomes; a spice oleoresin is made by an organic solvent extraction of the ground dried rhizome.

ginger-grass oil [MATER] A type of citronella oil derived from sofia grass that contains about 50% geraniol; used in perfumery.

ginger oil [MATER] A thick, yellowish essential oil, soluble in most organic solvents and insoluble in water; distilled from dried ginger; main components are citral, borneol, and phellandrene; used as flavoring in liqueurs and soft drinks.

gingham [TEXT] Plain-weave cotton, or cotton-polyester blends, in checked or striped patterns or plain colors.

ginging [MIN ENG] **1.** Lining a shaft with masonry or brick. **2.** The brick or masonry of a shaft lining.

gingiva [ANAT] The mucous membrane surrounding the teeth sockets.

gingival crevice [ANAT] The space between the free margin of the gingiva and the surface of a tooth. Also known as gingival sulcus.

gingival sulcus *See* gingival crevice.

gingivectomy [MED] Excision of a portion of the gingiva.

gingivitis [MED] Inflammation of the gingiva.

gingivostomatitis [MED] An inflammation of the gingiva and oral mucosa.

ginglymoarthrodia [ANAT] A composite joint consisting of one hinged and one gliding element.

Ginglymodi [VERT ZOO] An equivalent name for Semionotiformes.

ginglymus [ANAT] A type of diarthrosis permitting motion only in one plane. Also known as hinge joint.

Ginkgoales [BOT] An order of gymnosperms composing the class Ginkgoopsida with one living species, the dioecious maidenhair tree (*Ginkgo biloba*).

Ginkgoatae *See* Ginkgoopsida.

Ginkgoopsida [BOT] A class of the subdivision Pinicae containing the single, monotypic order Ginkgoales.

Ginkgophyta [BOT] The equivalent name for Ginkgoopsida.

ginorite [MINERAL] $Ca_2B_{14}O_{23} \cdot 8H_2O$ A white monoclinic mineral composed of hydrous borate of calcium.

gin pit [MIN ENG] A shallow mine, the hoisting from which is done by a gin.

gin pole [MECH ENG] A hand-operated derrick which has a nearly vertical pole supported by guy ropes; the load is raised on a rope that passes through a pulley at the top and over a winch at the foot. Also known as guyed-mast derrick; pole derrick; standing derrick.

ginseng [BOT] The common name for plants of the genus *Panax*, a group of perennial herbs in the family Araliaceae; the aromatic root of the plant has been used medicinally in China.

gin tackle [MECH ENG] A tackle made for use with a gin.

Ginzburg-Landau theory [CRYO] A phenomenological theory of superconductivity which accounts for the coherence length; the ordered state of a superconductor is described by a complex order parameter which is similar to a Schrödinger wave function, but describes all the condensed superelectrons, rather than a single charged particle. Also known as Landau-Ginzburg theory.

Ginzburg-London superconductivity theory [SOLID STATE] A modification of the London superconductivity theory to take into account the boundary energy.

gio *See* geo.

giobertite *See* magnesite.

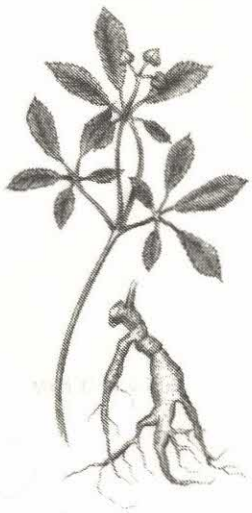
Giorgi system *See* meter-kilogram-second-ampere system.

gipsy head *See* gypsy head.

gipsy winch [MIN ENG] A small winch that may be attached to a post and operated by a rotary motion or the reciprocating action of a handle having a pair of pawls and a ratchet.

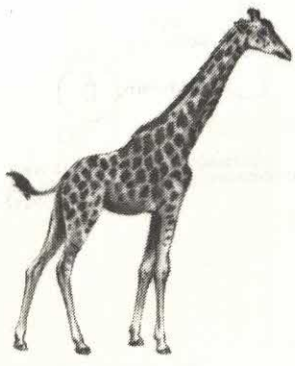
giraffe [VERT ZOO] *Giraffa camelopardalis*. An artiodactyl mammal in the family Giraffidae characterized by extreme

GINSENG



Panax quinquefolius, a ginseng, showing shoot and root.

GIRAFFE



The giraffe of Africa, with greater height in the forepart of the body because of the heavy muscular development at the base of the neck.

elongation of the neck vertebrae, and two prominent horns on the head.

Giraffe *See* Camelopardalis.

Giraffidae [VERT ZOO] A family of pecoran ruminants in the superfamily Bovoidea including giraffe, okapi, and relatives.

Girbotal process [CHEM ENG] A regenerative absorption process to remove carbon dioxide, hydrogen sulfide, and other acid impurities from natural gas, using mono-, di-, or triethanolamine as the reagent.

girder [CIV ENG] A large beam made of metal or concrete, and sometimes of wood.

girdle [ANAT] Either of the ringlike groups of bones supporting the forelimbs (arms) and hindlimbs (legs) in vertebrates. [INV ZOO] **1.** Either of the hooplike bands constituting the sides of the two valves of a diatom. **2.** The peripheral portion of the mantle in chitons. [LAP] The periphery of a cut gemstone that is usually grasped by the setting or mounting. [PETR] With reference to a fabric diagram or equal-area projection net, a belt showing concentration of points which is approximately coincident with a great circle of the net and which represents orientation of the fabric elements.

girt [CIV ENG] **1.** A timber in the second-floor corner posts of a house to serve as a footing for roof rafters. **2.** A horizontal member to stiffen the framework of a building frame or trestle. [ENG] A brace member running horizontally between the legs of a drill tripod or derrick. [MIN ENG] In square-set timbering, a horizontal brace running parallel to the drift.

girth [NAV ARCH] The distance measured along a frame line from a waterline on one side around the hull to the corresponding point on the opposite side.

gismondite [MINERAL] $CaAl_2Si_2O_8 \cdot 4H_2O$ A light-colored mineral composed of hydrous calcium aluminum silicate, occurring in pyramidal crystals.

gitogenin [PHARM] $C_{27}H_{44}O_4$ A crystalline compound obtained from gitonin by heating with dilute hydrochloric acid, forms leaflets from benzene solutions, soluble in organic solvents such as chloroform, hot alcohol, and ether; used in medicine for treating coronary disease.

gitonin [ORG CHEM] The gitogenin tetraglycoside in *Digitalis purpurea* seed; resembles digitonin.

gitoxigenin [PHARM] $C_{23}H_{34}O_5$ Platelike crystals, used as a cardiotonic drug.

gitoxin [PHARM] $C_{41}H_{64}O_{14}$ A secondary glycoside derived from *Digitalis purpurea*, crystallizes in stout prisms from chloroform methanol solution, soluble in a mixture of chloroform and alcohol; used in medicine for coronary disease.

gitter cell [PATH] A compound granule cell that is characteristic of certain brain lesions.

gizzard [VERT ZOO] The muscular portion of the stomach of most birds where food is ground with the aid of ingested pebbles.

glabella [ANAT] The bony prominence on the frontal bone joining the supraorbital ridges.

glabello-occipital length [ANTHRO] The distance between the glabella and the opisthocranion.

glabrous [BIOL] Having a smooth surface; specifically, having the epidermis devoid of hair or down.

glacial [GEOL] Pertaining to an interval of geologic time which was marked by an equatorward advance of ice during an ice age; the opposite of interglacial; these intervals are variously called glacial periods, glacial epochs, glacial stages, and so on. [HYD] Pertaining to ice, especially in great masses such as sheets of land ice or glaciers.

glacial abrasion [GEOL] Alteration of portions of the earth's surface as a result of glacial flow.

glacial accretion [GEOL] Deposition of material as a result of glacial flow.

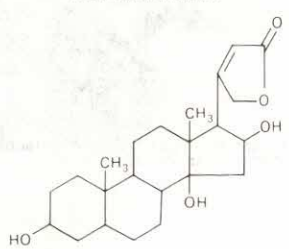
glacial acetic acid [ORG CHEM] CH_3COOH Pure acetic acid (containing less than 1% water); a clear, colorless, caustic hygroscopic liquid, boiling at 118°C, soluble in water, alcohol, and ether, and crystallizing readily; used as a solvent for oils and resins.

glacial advance [GEOL] **1.** Increase in the thickness and area of a glacier. **2.** A time period equal to that increase.

glacial anticyclone [METEOROL] A type of semipermanent anticyclone which overlies the ice caps of Greenland and Antarctica. Also known as glacial high.

glacial boulder [GEOL] A boulder moved to a point distant from its original site by a glacier.

GITOXIGENIN



Structural formula.

glacial deposit [GEOL] Material carried to a point beyond its original location by a glacier.

glacial drift [GEOL] All rock material in transport by glacial ice, and all deposits predominantly of glacial origin made in the sea or in bodies of glacial meltwater, including rocks rafted by icebergs.

glacial epoch [GEOL] **1.** Any of the geologic epochs characterized by an ice age; thus, the Pleistocene epoch may be termed a glacial epoch. **2.** Generally, an interval of geologic time which was marked by a major equatorward advance of ice; the term has been applied to an entire ice age or (rarely) to the individual glacial stages which make up an ice age.

glacial erosion [GEOL] Movement of soil or rock from one point to another by the action of the moving ice of a glacier. Also known as ice erosion.

glacial flour *See* rock flour.

glacial flow *See* glacier flow.

glacial geology [GEOL] The study of land features resulting from glaciation.

glacial high *See* glacial anticyclone.

glacial ice [HYD] Ice that is flowing or that exhibits evidence of having flowed.

glacial lake [GEOL] A lake that exists because of the effects of the glacial period.

glacial lobe [HYD] A tonguelike projection from a continental glacier's main mass.

glacial maximum [GEOL] The time or position of the greatest extent of any glaciation; most frequently applied to the greatest equatorward advance of Pleistocene glaciation.

glacial mill *See* moulin.

glacial outwash *See* outwash.

glacial period [GEOL] **1.** Any of the geologic periods which embraced an ice age; for example, the Quaternary period may be called a glacial period. **2.** Generally, an interval of geologic time which was marked by a major equatorward advance of ice.

glacial plucking *See* plucking.

glacial retreat [GEOL] A condition occurring when backward melting at the front of a glacier takes place at a rate exceeding forward motion.

glacial scour [GEOL] Erosion resulting from glacial action, whereby the surface material is removed and the rock fragments carried by the glacier abrade, scratch, and polish the bedrock. Also known as scouring.

glacial striae [GEOL] Scratches, commonly parallel, on smooth rock surfaces due to glacial abrasion.

glacial till *See* till.

glacial varve *See* varve.

glaciated terrain [GEOL] A region that once bore great masses of glacial ice; a distinguishing feature is marks of glaciation.

glaciation [GEOL] Alteration of any part of the earth's surface by passage of a glacier, chiefly by glacial erosion or deposition. [METEOROL] The transformation of cloud particles from waterdrops to ice crystals, as in the upper portion of a cumulonimbus cloud.

glaciation limit [GEOPHYS] For a given locality, the lowest altitude at which glaciers can develop.

glacier [HYD] A mass of land ice, formed by the further recrystallization of firn, flowing slowly (at present or in the past) from an accumulation area to an area of ablation.

glacieret *See* snowdrift ice.

glacier flow [HYD] The motion that exists within a glacier's body. Also known as glacial flow.

glacier front [HYD] The leading edge of a glacier.

glacier ice [HYD] Any ice that is or was once a part of a glacier, consolidated from firn by further melting and refreezing and by static pressure; for example, an iceberg.

glacier mill *See* moulin.

glacier pothole *See* moulin.

glacier table [GEOL] A stone block supported by an ice pedestal above the surface of a glacier.

glacier well *See* moulin.

glacier wind [METEOROL] A shallow gravity wind along the icy surface of a glacier, caused by the temperature difference between the air in contact with the glacier and free air at the same altitude.

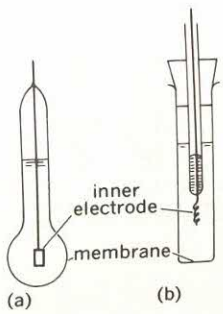
glaciofluvial [GEOL] Pertaining to streams fed by melting glaciers, or to the deposits and landforms produced by such streams.

glaciolacustrine [GEOL] Pertaining to lakes fed by melting glaciers, or to the deposits forming therein.
glaciology [GEOL] The study of existing or modern glaciers in their entirety.
glaçon [OCEANOGR] A piece of sea ice which is smaller than a medium-sized floe.
gladiate [BOT] Sword-shaped.
gladiolus *See* mesosternum.
Gladiolus [BOT] A genus of chiefly African plants in the family Iridaceae having erect, sword-shaped leaves and spikes of brightly colored irregular flowers.
gladite [MINERAL] $PbCuBi_5S_9$ A lead gray mineral consisting of lead and copper bismuth sulfide; occurs as prismatic crystals.
Gladstone-Dale law [OPTICS] A law for the variation of the index of refraction n of a substance, according to which $n + 1$ is proportional to its density.
glair [MATER] A sizing liquid made of egg white beaten with vinegar; used to prepare a surface of a book binding for gilding.
glance pitch [GEOL] A variety of asphaltite having brilliant conchoidal fracture, and resembling gilsonite but having higher specific gravity and percentage of fixed carbon.
glancing angle [PHYS] The angle between a surface and a beam of particles or radiation incident upon it; it is the complement of the angle of incidence.
gland [ANAT] A structure which produces a substance essential and vital to the existence of the organism. [ENG] **1.** A device for preventing leakage at a machine joint, as where a shaft emerges from a vessel containing a pressurized fluid. **2.** A movable part used in a stuffing box to compress the packing.
glanders [VET MED] A bacterial disease of equines caused by *Actinobacillus mallei*; involves the respiratory system, skin, and lymphatics. Also known as farcy.
glands of Brunner *See* Brunner's glands.
glands of Leydig [VERT ZOO] Unicellular, epidermal structures of urodele larvae and the adult *Necturus* that secrete a substance which digests the egg capsule and permits hatching.
glandular fever *See* infectious mononucleosis.
glandulomuscular [ANAT] Of or pertaining to glands and muscles.
glans [ANAT] The conical body forming the distal end of the clitoris or penis.
glare [OPTICS] **1.** Discomfort produced in an observer by one or more visible sources of light. Also known as discomfort glare. **2.** Visual disability caused by visible sources or areas of luminance which are in an observer's field of view but do not assist in viewing. Also known as disability glare. **3.** Dazzling brightness of the atmosphere, caused by excessive reflection and scattering of light by particles in the line of sight.
glare ice [HYD] Ice with a smooth, shiny surface.
Glareolidae [VERT ZOO] A family of birds in the order Charadriiformes including the ploverlike coursers and the swallowlike pratincoles.
glareous [ECOL] Growing in gravelly soil; refers specifically to plants.
glaserite *See* arcanite.
glass [MATER] A hard, amorphous, inorganic, usually transparent, brittle substance made by fusing silicates, sometimes borates and phosphates, with certain basic oxides and then rapidly cooling to prevent crystallization. [METEOROL] In nautical terminology, a contraction for "weather glass" (a mercury barometer).
glass armor [ORD] Any of several special-purpose protective barrier materials composed of glass or containing glass.
glassblowing [ENG] Shaping a mass of viscid glass by inflating it with air introduced through a tube.
glass-bonded mica [MATER] An insulating material made by compressing a mixture of powdered glass and powdered natural or synthetic mica at high temperatures.
glass brick [MATER] A hollow block of translucent glass with patterns molded on the faces; used in partitions.
glass capacitor [ELEC] A capacitor whose dielectric material is glass.
glass cutter [ENG] A tool equipped with a steel wheel or a diamond point used to cut glass.
glass dosimeter [NUCLEO] A dosimeter using as its radiation-sensing element a fluorod of special glass that fluoresces under ultraviolet light following gamma irradiation.
glassed steel [CHEM ENG] Process piping or vessels lined with glass; a glass-steel composite has structural strength of steel and corrosion resistance of glass.
glass electrode [PHYS CHEM] An electrode or half cell in which potential measurements are made through a glass membrane, which acts as a cation-exchange membrane; thus, the potential arises from phase-boundary and diffusion potentials which, depending on the composition of the glass, are logarithmic functions of the activity of the cations such as H^+, Na^+, or K^+ of the solutions in which the electrode is immersed.
Glasser's disease [VET MED] A generalized bacterial infection of swine caused by *Mycoplasma hyorhinis*.
glass fiber [MATER] A glass thread less than a thousandth of an inch (25 micrometers) thick, used loosely or in woven form as an acoustic, electrical, or thermal insulating material and as a reinforcing material in laminated plastics.
glass film plates [GRAPHICS] Film plates made of glass sheets coated with a sensitized emulsion; they have been largely replaced by sheet film, but are still used in some critical work because of their dimensional stability.
glass fission detector [NUCLEO] A piece of glass in which fission fragments, flying apart with high energy, can create narrow but continuous, submicroscopic trails of altered material, which can be seen in an ordinary microscope after the altered material has been dissolved by a chemical reagent.
glass furnace [ENG] A large, covered furnace or tank for melting large batches of glass, in which heat is supplied by a flame playing over the glass surface, and regenerative heating of combustion air and gas is usually employed. Also known as glass tank.
glass guide [GRAPHICS] In microfilm photography, a transparent bar of optical glass employed to guide documents through the photographic field.
glass heat exchanger [ENG] Any heat exchanger in which glass replaces metal, such as shell-and-tube, cascade, double-pipe, bayonet, and coil exchangers.
glassine [MATER] A thin, dense, transparent, supercalendered paper from highly refined sulfite pulp, used for envelope windows, for sanitary wrapping, and as an insulating paper between layers of iron-core transformer windings.
glass insulator [MATER] An insulator for a power transmission line made of annealed or toughened (tempered) glass.
glassivation [ELECTR] Method of transistor passivation by a pyrolytic glass-deposition technique, whereby silicon semiconductor devices, complete with metal contact systems, are fully encapsulated in glass.
glass laser [OPTICS] A solid laser in which glass serves as the host for laser ions of such materials as erbium, holmium, neodymium, and ytterbium. Also known as amorphous laser.
glassmakers' soap [MATER] A substance such as manganese dioxide added to glass to remove the green color created by iron salts.
glass paper [MATER] **1.** Paper with a layer of pulverized glass; used as an abrasive. **2.** Paper made of glass fibers.
glass-plate capacitor [ELEC] High-voltage capacitor in which the metal plates are separated by sheets of glass serving as the dielectric, with the complete assembly generally immersed in oil.
glass porphyry *See* virtophyre.
glass pot [ENG] A crucible used for making small amounts of glass.
glass resistor [ELEC] A glass tube with a helical carbon resistance element painted on it.
glass sand [MATER] High-quartz sand used in glassmaking; contains small amounts of aluminum oxide, iron oxide, calcium oxide, and magnesium oxide.
glass schorl *See* axinite.
glass screen *See* crossline screen.
glass seal [ENG] An airtight seal made by molten glass.
glass sponge [INV ZOO] A siliceous sponge belonging to the class Hyalospongiae.
glass switch [ELECTR] An amorphous solid-state device used to control the flow of electric current. Also known as ovonic device.
glass tank *See* glass furnace.
glass textile [TEXT] Fabric woven from glass fibers; used for electrical insulation, as filter cloth, and in plastic laminates.
glass-to-metal seal [ELECTR] An airtight seal between glass and metal parts of an electron tube, made by fusing together a special glass and special metal alloy having nearly the same temperature coefficients of expansion.

GLADIOLUS

A specimen of the genus *Gladiolus* showing the erect sword-shaped leaves and spikes of flowers.

GLASS ELECTRODE



Two types of glass electrode: *(a)* bulb type; *(b)* flat-membrane type.

glass transition [PHYS CHEM] The change in an amorphous region of a partially crystalline polymer from a viscous or rubbery condition to a hard and relatively brittle one; usually brought about by changing the temperature. Also known as gamma transition; glassy transition.

glass-tube manometer [ENG] A manometer for simple indication of difference of pressure, in contrast to the metallic-housed mercury manometer, used to record or control difference of pressure or fluid flow.

glassware [MATER] Articles, especially tableware, made of glass.

glass wool [MATER] A mass of glass fibers resembling wool and used as insulation, packing, and air filters.

glassy alloy [MET] An alloy having an amorphous or glassy structure. Also known as metallic glass.

glassy feldspar *See* sanidine.

glassy state *See* vitreous state.

glassy transition *See* glass transition.

glauberite [MINERAL] $Na_2Ca(SO_4)_2$ A brittle, gray-yellow monoclinic mineral having vitreous luster and saline taste.

Glauber's salt [INORG CHEM] $Na_2SO_4 \cdot 10H_2O$ Crystalline hydrated sodium sulfate; loses water when exposed to air; water soluble, alcohol insoluble; used in textile dyeing and medicine.

glaucocerinite [MINERAL] A mineral composed of a hydrous basic sulfate of copper, zinc, and aluminum.

glaucochroite [MINERAL] $CaMnSiO_4$ A bluish-green mineral that is related to monticellite, is composed of calcium manganese silicate, and occurs in prismatic crystals.

glaucodot [MINERAL] (Co,Fe)AsS A grayish-white, metallic-looking mineral composed of cobalt iron sulfarsenide, occurring in orthorhombic crystals.

glaucoma [MED] A disease of the eye characterized by increased fluid pressure within the eyeball.

glauconite [MINERAL] $K_{15}(Fe,Mg,Al)_{4\text{-}6}(Si,Al)_8O_{20}(OH)_4$ A type of clay mineral; it is dioctohedral and occurs in flakes and as pigmentary material.

glauconitic sandstone [PETR] A quartz sandstone or an arkosic sandstone that has many glauconite grains.

glaucophane [MINERAL] $Na_2Mg_3Al_2Si_8$ A blue to black monoclinic sodium amphibole; blue to black coloration with marked pleochroism.

glaucophane schist [PETR] Metamorphic schist that contains glaucophane.

glaucous [BOT] Having a white or grayish powdery coating that gives a frosty appearance and rubs off easily.

glave *See* glaves.

glaves [METEOROL] A foehnlike wind of the Faroe Islands. Also known as glave; glavis.

glavis *See* glaves.

glaze [ENG] A glossy coating. Also known as enamel. [HYD] A coating of ice, generally clear and smooth but usually containing some air pockets, formed on exposed objects by the freezing of a film of supercooled water deposited by rain, drizzle, or fog, or possibly condensed from supercooled water vapor. Also known as glaze ice; glazed frost; verglas.

glazed [TEXT] Referring to a polished surface finish given to cotton fabric by treating it with starch, glue, paraffin, or shellac and then running it throught a hot friction roller.

glazed frost *See* glaze.

glaze ice *See* glaze.

glaze stain [INORG CHEM] Colorant for ceramic glazes; made of a finely ground calcined oxide, such as of cobalt, copper, manganese, or iron.

glazier's point [ENG] A small piece of sheet metal, usually shaped like a triangle, used to hold a pane of glass in place.

glazing [ENG] **1.** Cutting and fitting panes of glass into frames. **2.** Smoothing the lead of a wiped pipe joint by passing a hot iron over it.

glazing compound [MATER] A caulking compound used to seal and support a glass pane in place.

glb *See* greatest lower bound.

GLC *See* gas-liquid chromatography.

Gleason bevel gear system [DES ENG] The standard for bevel gear designs in the United States; employs a basic pressure angle of 20° with long and short addenda for ratios other than 1:1 to avoid undercut pinions and to increase strength.

gleba [MYCOL] The central, sporogenous tissue of the sporophore in certain basidiomycetous fungi.

gleet [MED] The chronic stage of gonorrheal urethritis, characterized by a slight mucopurulent discharge.

glenoid [ANAT] A smooth, shallow, socketlike depression, particularly of the skeleton.

glenoid cavity [ANAT] The articular surface on the scapula for articulation with the head of the humerus.

glessite [GEOL] Fossil resin similar to amber.

gley [GEOL] A sticky subsurface layer of clay in some waterlogged soils.

glide [AERO ENG] Descent of an aircraft at a normal angle of attack, with little or no thrust. [CRYSTAL] *See* slip.

glide angle *See* gliding angle.

glide bomb [ORD] A bomb fitted with airfoils to provide lift, released in the direction of a target by an airplane.

glide fold *See* shear fold.

glide path [AERO ENG] **1.** The flight path of an aeronautical vehicle in a glide, seen from the side. Also known as glide trajectory. **2.** The path used by an aircraft or spacecraft in a landing approach procedure.

glide path indicator [NAV] A system which provides signals for indicating vertical guidance of an aircraft along an inclined surface.

glide plane [CRYSTAL] A lattice plane in a crystal on which translation or twin gliding occurs. Also known as slip plane. [NAV] *See* glide slope.

glider [AERO ENG] A fixed-wing aircraft designed to glide, and sometimes to soar; usually does not have a power plant.

glide slope [AERO ENG] *See* gliding angle. [NAV] An inclined electromagnetic surface which is generated by instrument-landing approach facilities and which includes a glide path supplying guidance in the vertical plane. Also known as glide plane.

glide slope facility [NAV] An instrument approach landing facility furnishing vertical guidance information to aircraft from its altitude down to the runway.

glide slope sector [NAV] A vertical sector containing that portion of the glide slope within which the cooperating aircraft equipment provides a quantitative measurement of deviations above or below the glide slope.

glide trajectory *See* glide path.

gliding angle [AERO ENG] The angle between the horizontal and the glide path of an aircraft. Also known as glide angle; glide slope.

gliding bacteria [MICROBIO] The descriptive term for members of the orders Beggiatoales and Myxobacterales; they are motile by means of creeping movements.

gliding joint *See* arthrodia.

gliding motility [MICROBIO] A means of bacterial self-propulsion by slow gliding or creeping movements on the surface of a substrate.

glime [HYD] An ice coating with a consistency intermediate between glaze and rime.

glimmer ice [HYD] Ice newly formed within the cracks or holes of old ice, or on the puddles on old ice.

G line [ELECTROMAG] A single dielectric-coated, round wire used for transmitting microwave energy.

glint [ELECTR] **1.** Pulse-to-pulse variation in amplitude of a reflected radar signal, owing to the reflection of the radar from a body that is rapidly changing its reflecting surface, for example, a spinning airplane propeller. **2.** The use of this effect to degrade tracking or seeking functions of an enemy weapons system. [OPTICS] A small region designed to strongly reflect light from a target.

glioma [MED] A malignant tumor derived from the supporting tissue of the central nervous system.

gliosis [MED] Proliferation of neuroglia in the brain or spinal cord, either as a replacement process or in response to a low-grade inflammation.

gliotoxin [MICROBIO] $C_{13}H_{14}O_4N_2S_2$ A heat-labile, bacteriostatic antibiotic produced by species of *Trichoderma* and *Cliocladium* and by *Aspergillus fumigatus*.

Gliridae [VERT ZOO] The dormice, a family of mammals in the order Rodentia.

glissile dislocation *See* Shockley partial dislocation.

Glisson's capsule [ANAT] The membranous sheet of collagenous and elastic fibers covering the liver.

glitch [ASTRON] A sudden change in the period of a pulsar, believed to result from a phenomenon analogous to an earthquake that changes the pulsar's moment of inertia. [ELECTR] **1.** An undesired transient voltage spike occurring on a signal being processed. **2.** A minor technical problem arising in electronic equipment.

glitter [MATER] A group of decorative materials consisting of flakes large enough so that each flake produces a plainly visible sparkle or reflection; incorporated into plastic during compounding. [OPTICS] The spots of light reflected from a point source by the surface of the sea or wave facets, that is, specular reflection.

Glivenko-Cantelli lemma [MATH] The empirical distribution functions of a random variable converge uniformly in probability to the distribution function of the random variable.

g load [PHYS] The numerical ratio of any applied force to the gravitational force at the earth's surface.

global radiation [GEOPHYS] The total of direct solar radiation and diffuse sky radiation received by a horizontal surface of unit area.

global sea [OCEANOGR] All the seawater of the earth considered as a single ocean constantly intermixing.

global search and replace [COMPUT SCI] A text-editing function of a word-processing system in which text is scanned for a given combination of characters, and each such combination is repalced by another set of characters.

global variable [COMPUT SCI] A variable which can be accessed (used or changed) throughout a computer program and is not confined to a single block.

Globar lamp [ELEC] A lamp whose illuminating element is a silicon carbide rod which gives off blackbody radiation when heated.

globe [MAP] A sphere on the surface of which is a map of the world.

globe lightning *See* ball lightning.

globe valve [ENG] A device for regulating flow in a pipeline, consisting of a movable disk-type element and a stationary ring seat in a generally spherical body.

Globigerinacea [INV ZOO] A superfamily of foraminiferan protozoans in the suborder Rotaliina characterized by a radial calcite test with bilamellar septa and a large aperture.

globigerina ooze [GEOL] A pelagic sediment consisting of than 30% calcium carbonate in the form of foraminiferal tests of which *Globigerina* is the dominant genus.

globin [BIOCHEM] Any of a class of soluble histone proteins obtained from animal hemoglobins.

globin zinc insulin [PHARM] A preparation of insulin modified by the addition of globin (derived from the hemoglobin of beef blood) and zinc chloride; it has intermediate duration of action.

globoside [BIOCHEM] A glycoside of ceramide containing several sugar residues, but not neuraminic acid; obtained from human, sheep, and hog erythrocytes.

globular *See* spherulitic.

globular deoxyribonucleic acid [MOL BIO] A compact arrangement of double-stranded deoxyribonucleic acid formed by additional twisting of the fiber into a helical double helix.

globular projection [MAP] A projection, in perspective, of a hemisphere upon a plane parallel to the base of the hemisphere.

globular protein [BIOCHEM] Any protein that is readily soluble in aqueous solvents.

globular star cluster [ASTRON] A group of many thousands of stars that are much closer to each other than the stars around the group and that are traveling through space together; a globular cluster has a slightly flattened spheroidal shape.

globular transfer [MET] In electric arc welding, the transfer of weld metal across the arc in large drops.

globule [ASTRON] A black volume of cosmic dust viewed against the brighter background of bright nebulae.

globulin [BIOCHEM] A heat-labile serum protein precipitated by 50% saturated ammonium sulfate and soluble in dilute salt solutions.

globulite [GEOL] A small, isotropic, globular of spherulelike crystallite; usually dark in color and found in glassy extrusive rocks.

globulomaxillary cyst [MED] A cyst in the alveolar process between the upper lateral incisor and canine teeth.

glochid *See* glochidium.

glochidium [BOT] A barbed hair. Also known as glochid. [INV ZOO] The larva of fresh-water mussels in the family Unionidae.

glockerite [MINERAL] A brown, ocher yellow, black, or dull green mineral consisting of a hydrated basic sulfate of ferric iron; occurs in stalactitic, encrusting, or earthy forms.

gloea [INV ZOO] An adhesive mucoid substance secreted by certain protozoans and other lower organisms.

glomerulonephritis [MED] Inflammation of the kidney, primarily involving the glomeruli.

glomerulosclerosis [MED] Fibrosis of the renal glomeruli.

glomerulus [ANAT] A tuft of capillary loops projecting into the lumen of a renal corpuscle.

glomus [ANAT] **1.** A fold of the mesothelium arising near the base of the mesentery in the pronephros and containing a ball of blood vessels. **2.** A prominent portion of the choroid plexus of the lateral ventricle of the brain.

glomus aorticum *See* paraaortic body.

glomus caroticum *See* carotid body.

gloom [METEOROL] The condition existing when daylight is very much reduced by dense cloud or smoke accumulation above the surface, the surface visibility not being materially reduced.

glory [OPTICS] A set of concentric, colored rings of light around the shadow cast by an observer or his head onto a cloud or fog bank.

glory hole [CIV ENG] A funnel-shaped, fixed-crest spillway. [ENG] A furnace for resoftening or fire polishing glass during working, or an entrance in such a furnace. [MIN ENG] An opening formed by the removal of soft or broken ore through an underground passage. [NUCLEO] *See* beam hole.

glory hole system *See* chute system.

gloss [OPTICS] The ratio of the light specularly reflected from a surface to the total light reflected.

glossa [INV ZOO] A tongue or tonguelike structure in insects, especially the median projection of the labium.

glossalgia [MED] Pain in the tongue.

glossate [INV ZOO] Having a glossa or tonguelike structure.

glossimeter [ENG] An instrument, often photoelectric, for measuring the ratio of the light reflected from a surface in a definite direction to the total light reflected in all directions. Also known as glossmeter.

Glossinidae [INV ZOO] The tsetse flies, a family of cyclorrhaphous dipteran insects in the section Pupipara.

Glossiphoniidae [INV ZOO] A family of small leeches with flattened bodies in the order Rhynchobdellae.

glossitis [MED] Inflammation of the tongue.

glossmeter *See* glossimeter.

gloss oil [MATER] Low-grade varnish composed of rosin dissolved in solvent naphtha.

glossopalatine nerve [ANAT] The intermediate branch of the facial nerve.

glossopharyngeal nerve [ANAT] The ninth cranial nerve in vertebrates; a paired mixed nerve that supplies autonomic innervation to the parotid gland and contains sensory fibers from the posterior one-third of the tongue and the anterior pharynx.

glossopterid flora [PALEOBOT] Permian and Triassic fossil ferns of the genus *Glossopteris*.

glossopyrosis [MED] Burning sensation of the tongue.

glossy [OPTICS] Property of a surface from which much more light is specularly reflected than is diffusely reflected.

glossy print [GRAPHICS] A photograph dried on a ferrotype plate or drum; the surface has a glazed appearance and is not easily scratched or soiled in handling.

glost firing [CHEM ENG] The process of glazing and firing ceramic ware which has previously been fired at a higher temperature.

glottis [ANAT] The opening between the margins of the vocal folds.

gloup [GEOL] An opening in the roof of a sea cave.

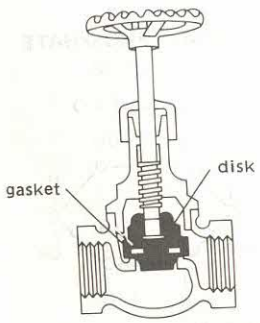
glove-and-stocking anesthesia [MED] Loss or diminution of sensation in the hands and feet, corresponding to the areas covered by gloves and stockings.

glove anesthesia [MED] Loss or diminution of sensation in the hands, corresponding to the area covered by gloves.

glove box [ENG] A sealed box with gloves attached and passing through openings into the box, so that workers can handle materials in the box; used to handle certain radioactive and biologically dangerous materials and to prevent contamination of materials and objects such as germfree rats or lunar rocks.

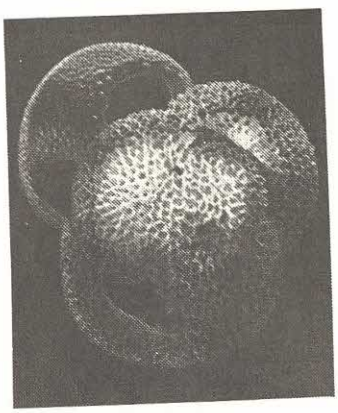
Glover tower [CHEM ENG] A tower in the lead chamber process for manufacturing sulfuric acid; in this tower the nitrogen oxide, sulfur dioxide, and air mixture is passed upward and sprayed with a sulfuric acid–nitrosyl sulfuric acid mixture.

GLOBE VALVE



A globe valve with the gasket in the disk.

GLOBIGERINACEA

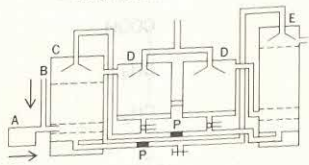


Scanning electron micrograph of *Globigerinoides* from the Holocene of the Caribbean Sea. (*R. B. MacAdam, Chevron Oil Field Research Co.*)

GLOSSIPHONIIDAE

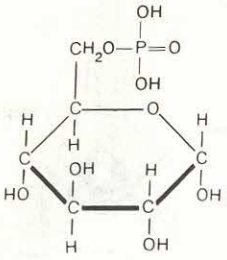
Glossiphonia complanata, a small leech that sucks blood of aquatic invertebrates, especially snails.

GLOVER TOWER



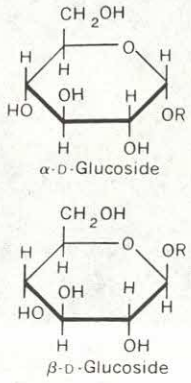
The lead chamber process. A, sulfur or pyrite burners; B, inlet for nitrogen oxides; C, Glover tower; D, lead chambers; E, Gay-Lussac tower; P, pumps.

GLUCOSE-6-PHOSPHATE



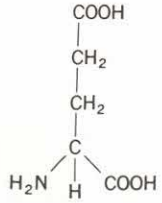
Structural formula for glucose-6-phosphate.

GLUCOSIDE



Structural formulas of two forms of glucoside.

GLUTAMIC ACID



Structural formula of glutamic acid.

glow discharge [ELECTR] A discharge of electricity through gas at relatively low pressure in an electron tube, characterized by several regions of diffuse, luminous glow and a voltage drop in the vicinity of the cathode that is much higher than the ionization voltage of the gas. Also known as cold-cathode discharge.

glow-discharge cold-cathode tube *See* glow-discharge tube.

glow-discharge microphone [ENG ACOUS] Microphone in which the action of sound waves on the current forming a glow discharge between two electrodes causes corresponding variations in the current.

glow-discharge tube [ELECTR] A gas tube that depends for its operation on the properties of a glow discharge. Also known as glow-discharge cold-cathode tube; glow tube.

glow-discharge voltage regulator [ELECTR] Gas tube that varies in resistance, depending on the value of the applied voltage; used for voltage regulation.

glowing avalanche *See* ash flow.

glowing cloud *See* nuée ardente.

glow lamp [ELECTR] A two-electrode electron tube containing a small quantity of an inert gas, in which light is produced by a negative glow close to the negative electrode when voltage is applied between the electrodes.

glow plug [MECH ENG] A small electric heater, located inside a cylinder of a diesel engine, that preheats the air and aids the engine in starting.

glow potential [ELECTR] The potential across a glow discharge, which is greater than the ionization potential and less than the sparking potential, and is relatively constant as the current is varied across an appreciable range.

glow tube *See* glow-discharge tube.

glow-tube oscillator [ELECTR] A circuit using a glow-discharge tube which functions as a simple relaxation oscillator, generating a fixed-amplitude periodic sawtooth waveform.

glucagon [BIOCHEM] The protein hormone secreted by α-cells of the pancreas which plays a role in carbohydrate metabolism. Also known as hyperglycemic factor; hyperglycemic glycogenolytic factor.

glucamine [BIOCHEM] $C_6H_{15}O_4N$ An amine formed by reduction of glucosylamine or of glucose oxime.

glucan [BIOCHEM] A polysaccharide composed of the hexose sugar D-glucose.

glucinium [CHEM] The former name for the element beryllium, coined because the salts of beryllium are sweet-tasting.

glucocerebroside [BIOCHEM] A glycoside of ceramide that contains glucose.

glucochloral *See* chloralose.

glucochloralose *See* chloralose.

α-D-glucochloralose *See* chloralose.

glucocorticoid [BIOCHEM] A corticoid that affects glucose metabolism; secreted principally by the adrenal cortex.

glucogenesis [BIOCHEM] Formation of glucose within the animal body from products of glycolysis.

glucokinase [BIOCHEM] An enzyme that catalyzes the phosphorylation of D-glucose to glucose-6-phosphate.

glucolipid [BIOCHEM] A glycolipid that yields glucose on hydrolysis.

glucomannan [BIOCHEM] A polysaccharide composed of D-glucose and D-mannose; a prominent component of coniferous trees.

gluconate [ORG CHEM] A salt of gluconic acid.

gluconeogenesis [BIOCHEM] Formation of glucose within the animal body from substances other than carbohydrates, particularly proteins and fats.

gluconic acid [ORG CHEM] $C_6H_{12}O_7$ A crystalline acid obtained from glucose by oxidation; used in cleaning metals.

gluconic acid sodium salt *See* sodium gluconate.

Gluconobacter [MICROBIO] A genus of bacteria in the family Pseudomonadaceae; ellipsoidal to rod-shaped cells having three to eight polar flagella and occurring singly, in pairs, or in chains.

D-glucopyranose *See* glucose.

glucopyranoside [BIOCHEM] Any glucoside that contains a six-membered ring.

glucosamine [BIOCHEM] $C_6H_{13}O_5$ An amino sugar; the most abundant in nature, occurring in glycoproteins and chitin.

glucose [BIOCHEM] $C_6H_{12}O_6$ A monosaccharide; occurs free or combined and is the most common sugar. Also known as cerelose; D-glucopyranose.

glucose-6-phosphatase [BIOCHEM] An enzyme found in liver which catalyzes the hydrolysis of glucose-6-phosphate to free glucose and inorganic phosphate.

glucose phosphate [BIOCHEM] A phosphoric derivative of glucose, as glucose-1-phosphate.

glucose-1-phosphate [BIOCHEM] $C_6H_{13}O_9P$ An ester of glucopyranose in which a phosphate group is attached to carbon atom 1; there are two types: α-D- and β-D-glucose-1-phosphates. Also known as Cori ester.

glucose-6-phosphate [BIOCHEM] $C_6H_{13}O_9P$ An ester of glucose with phosphate attached to carbon atom 6. Also known as Robisonester.

glucose-6-phosphate dehydrogenase [BIOCHEM] The mammalian enzyme that catalyzes the oxidation of glucose-6-phosphate by TPN^+ (triphosphopyridine nucleotide).

glucose tolerance test [PATH] A test to measure the ability of the liver to convert glucose to glycogen.

glucosidase [BIOCHEM] An enzyme that hydrolyzes glucosides.

glucoside [BIOCHEM] One of a group of compounds containing the cyclic forms of glucose, in which the hydrogen of the hemiacetal hydroxyl has been replaced by an alkyl or aryl group.

7-D-glucoside *See* genistin.

glucosulfone sodium *See* sodium glucosulfone.

glucosyltransferase [BIOCHEM] An enzyme that catalyzes the glucosylation of hydroxymethyl cytosine; a constituent of bacteriophage deoxyribonucleic acid.

glucuronic acid [BIOCHEM] $C_6H_{10}O_7$ An acid resulting from oxidation of the CH_2OH radical of D-glucose to COOH; a component of many polysaccharides and certain vegetable gums. Also known as glycuronic acid.

glucuronidase [BIOCHEM] An enzyme that catalyzes hydrolysis of glucuronides. Also known as glycuronidase.

glucuronide [BIOCHEM] A compound resulting from the interaction of glucuronic acid with a phenol, an alcohol, or an acid containing a carboxyl group. Also known as glycuronide.

D-glucuronolactone [BIOCHEM] $C_6H_8O_6$ A water-soluble crystalline compound found in plant gums in polymers with other carbohydrates, and an important structural component of almost all fibrous and connective tissues in animals; used in medicine as an antiarthritic.

glue [MATER] A crude, impure, amber-colored form of commercial gelatin of unknown detailed composition produced by the hydrolysis of animal collagen; gelatinizes in aqueous solutions and dries to form a strong, adhesive layer.

glueball [PARTIC PHYS] A hadron consisting entirely of gluons, without any quarks. Also known as bound glue state; gluonia.

glue block *See* angle block.

glue cell *See* adhesive cell.

glued-laminated wood [MATER] A wooden member formed by assembling a set of boards or planks with glue so that the grain of all laminations is essentially parallel to the length of the member. Also known as glulam.

glue-joint ripsaw [MECH ENG] A heavy-gage ripsaw used on straight-line or self-feed rip machines; the cut is smooth enough to permit gluing of joints from the saw.

glue-line heating [ENG] Dielectric heating in which the electrodes are designed to give preferential heating to a thin film of glue or other relatively high-loss material located between layers of relatively low-loss material such as wood.

glug [MECH] A unit of mass, equal to the mass which is accelerated by 1 centimeter per second per second by a force of 1 gram-force, or to 980.665 grams.

glulam *See* glued-laminated wood.

glume [BOT] One of two bracts at the base of a spikelet of grass.

glumiferous [BOT] Bearing glumes.

Glumiflorae [BOT] An equivalent name for Cyperales.

gluon [PARTIC PHYS] One of eight hypothetical massless particles with spin quantum number and negative parity that mediate strong interactions between quarks.

gluonia *See* glueball.

gluside *See* saccharin.

glutamate [BIOCHEM] A salt or ester of glutamic acid.

glutamic acid [BIOCHEM] $C_5H_9O_4N$ A dicarboxylic amino acid of the α-ketoglutaric acid family occurring widely in proteins.

glutaminase [BIOCHEM] The enzyme which catalyzes the conversion of glutamine to glutamic acid and ammonia.

glutamine [BIOCHEM] $C_5H_{10}O_3N_2$ An amino acid; the

monamide of glutamic acid; found in the juice of many plants and essential to the development of certain bacteria.

glutamine synthetase [BIOCHEM] An enzyme which catalyzes the formation of glutamine from glutamic acid and ammonia, using adenosinetriphosphate as a source of energy.

glutaraldehyde [ORG CHEM] $OHC(CH_2)_3CHO$ A liquid with a boiling point of 188°C; soluble in water and alcohol; used as a biological solution (50%) and for leather tanning.

glutarate [BIOCHEM] The salt or ester of glutaric acid.

glutaric acid [BIOCHEM] $C_5H_5O_4$ A water-soluble, crystalline acid that occurs in green sugarbeets and in water extracts of crude wool.

glutathione [BIOCHEM] $C_{10}H_{17}O_6N_3S$ A widely distributed tripeptide that is important in plant and animal tissue oxidation reactions.

glutelin [BIOCHEM] A class of simple, heat-labile proteins occurring in seeds of cereals; soluble in dilute acids and alkalies.

gluten [BIOCHEM] **1.** A mixture of proteins found in the seeds of cereals; gives dough elasticity and cohesiveness. **2.** An albuminous element of animal tissue.

glutenin [BIOCHEM] A glutelin of wheat.

glutethimide [PHARM] $C_{13}H_{15}NO_2$ A minor or sedative antianxiety tranquilizer that acts as a central nervous system depressant.

gluteus maximus [ANAT] The largest and most superficial muscle of the buttocks.

gluteus medius [ANAT] The muscle of the buttocks lying between the gluteus maximus and gluteus minimus.

gluteus minimus [ANAT] The smallest and deepest muscle of the buttocks.

glutinant nematocyst [INV ZOO] A nematocyst characterized by an open, sticky tube used for anchoring the coelenterate when walking on its tentacles.

glutinous [BOT] Having a sticky surface.

glycemia [PHYSIO] The presence of glucose in the blood.

glyceraldehyde [BIOCHEM] $CH_2OHCOHCHO$ A colorless solid, isomeric with dehydroxyacetone; soluble in water and insoluble in organic solvents; an important intermediate in carbohydrate metabolism; used as a chemical intermediate in biochemical research and nutrition. Also known as 2,3-dihydroxypropanal; glyceric aldehyde.

glycerate [BIOCHEM] A salt or ester of glyceric acid.

glyceric acid [BIOCHEM] $C_3H_6O_4$ A hydroxy acid obtained by oxidation of glycerin.

glyceric aldehyde *See* glyceraldehyde.

Glyceridae [INV ZOO] A family of polychaete annelids belonging to the Errantia and characterized by an enormous eversible proboscis.

glyceride [BIOCHEM] An ester of glycerin and an organic acid radical; fats are glycerides of certain long-chain fatty acids.

glycerin *See* glycerol.

glycerinated vaccine virus *See* smallpox vaccine.

glycerokinase [BIOCHEM] An enzyme that catalyzes the phosphorylation of glycerol to glycerophosphate during microbial fermentation of propionic acid.

glycerol [ORG CHEM] $CH_2OHCHOHCH_2OH$ The simplest trihedric alcohol; when pure, it is a colorless, odorless, viscous liquid with a sweet taste; it is completely soluble in water and alcohol but only partially soluble in common solvents such as ether and ethyl acetate; used in manufacture of alkyd resins, explosives, antifreezes, medicines, inks, perfumes, cosmetics, soaps, and finishes. Also known as glycerin; glycyl alcohol.

glycerol dichlorohydrin *See* α-dichlorohydrin.

***sym*-glycerol dichlorohydrin** *See* 1,3-dichloro-2-propanol.

glycerol dimethyl ketal *See* 2,2-dimethyl-1,3-dioxolane-4-methanol.

glycerol α-monochlorohydrin *See* 3-chloro-1,2-propanediol.

glycerophosphate [BIOCHEM] Any salt of glycerophosphoric acid.

glycerophosphoric acid [BIOCHEM] $C_3H_5(OH)_2OPO_3H_2$ Either of two pale-yellow, water-soluble, isomeric dibasic acids occurring in nature in combined form as cephalin and lecithin.

glyceryl [ORG CHEM] $OCH_2OCHOCH_2\equiv$ The radical group from glycerol, $(CH_2OH)_2CHOH$.

glyceryl diacetate *See* diacetin.

glyceryl monoacetate *See* acetin.

glyceryl triacetate *See* triacetin.

glyceryl tripalmitate *See* tripalmitin.

glyceryl tristearate *See* stearin.

glycide *See* glycidol.

glycidic acid [ORG CHEM] $C_2H_3O{\cdot}CO_2H$ A volatile liquid. Also known as epoxy-propionic acid.

glycidol [ORG CHEM] $C_3H_6O_2$ A colorless, liquid epoxide that boils at 162°C and is miscible with water; used in organic synthesis. Also known as epihydrin alcohol; 2,3-epoxy-1-propanol; glycide.

glycin [ORG CHEM] $C_8H_9NO_3$ A crystalline compound that forms shiny leaflets from water solution, melts at 245–247°C, and is soluble in alkalies and mineral acids; used as a photographic developer and in the analytical determination of iron, phosphorus, and silicon. Also known as *para*-hydroxyanilinoacetic acid; *para*-hydroxyphenylaminoacetic acid; photoglycine.

glycine [BIOCHEM] $C_2H_5O_2N$ A white, crystalline amino acid found as a constituent of many proteins. Also known as aminoacetic acid.

glyco- [ORG CHEM] Chemical prefix indicating sweetness, or relating to sugar or glycine.

glycocalyx [CYTOL] The outer component of a cell surface, outside the plasmalemma; usually contains strongly acidic sugars, hence it carries a negative electric charge.

glycocholic acid [BIOCHEM] $C_{26}H_{43}NO_6$ A bile obtained by the conjugation of cholic acid with glycine.

glycocoll-*para*-phenetidine hydrochloride *See* phenocoll hydrochloride.

glycocyamine [BIOCHEM] $C_3H_7N_3O_2$ A product of interaction of aminocetic acid and arginine, which on transmethylation with methionine is converted to creatine. Also known as guanidine-acetic acid.

glycogen [BIOCHEM] A nonreducing, white, amorphous polysaccharide found as a reserve carbohydrate stored in muscle and liver cells of all higher animals, as well as in cells of lower animals.

glycogenesis [BIOCHEM] The metabolic formation of glycogen from glucose.

glycogenolysis [BIOCHEM] The metabolic breakdown of glycogen.

glycogenosis [MED] One of several inborn errors in the metabolism of glycogen, classified on the basis of the enzyme deficiency and clinical findings as von Gierke's disease, Pompe's disease, limit dextrinosis, amylopectinosis, McArdle's disease, or Hers' disease.

glycogen storage disease *See* von Gierke's disease.

glycogen synthetase [BIOCHEM] An enzyme that catalyzes the synthesis of the amylose chain of glycogen.

glycol [ORG CHEM] **1.** $C_nH_{2n}(OH)_2$ An organic chemical with two hydroxyl groups on an essentially aliphatic carbon chain. Also known as dihydroxy alcohol. **2.** $HOCH_2CH_2OH$ A colorless dihydroxy alcohol used as an antifreeze, in hydraulic fluids, and in the manufacture of dynamites and resins. Also known as ethlene glycol.

glycol diacetate *See* ethylene glycol diacetate.

glycoldinitrate *See* ethylene nitrate.

glycol ester [ORG CHEM] Chemical compound composed of the reaction products of a glycol, $C_nH_{2n}(OH)_2$, and an organic acid; an example is ethylene glycol diacetate, the product of ethylene glycol and acetic acid.

glycol ether [ORG CHEM] A colorless liquid used as a solvent, in detergents, and as a diluent; a typical example is ethylene glycol diethyl ether, $C_2H_5OCH_2CH_2OC_2H_5$.

glycol ethylene ether *See* 1,4-dioxane.

glycolic acid [ORG CHEM] $CH_2OHCOOH$ Colorless, deliquescent leaflets, decomposing about 78°C; soluble in water, alcohol, and ether; used as a chemical intermediate in fabric dyeing. Also known as glycollic acid; hydroxyacetic acid.

glycolipid [BIOCHEM] Any of a class of complex lipids which contain carbohydrate residues.

glycollic acid *See* glycolic acid.

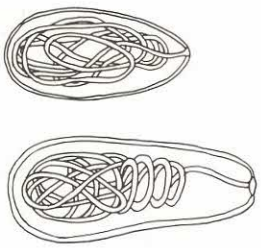
glycolysis [BIOCHEM] The enzymatic breakdown of glucose or other carbohydrate, with the formation of lactic acid or pyruvic acid and the release of energy in the form of adenosinetriphosphate.

glycolythiourea *See* 2-thiohydantoin.

glycolytic pathway [BIOCHEM] The principal series of phosphorylative reactions involved in pyruvic acid production in phosphorylative fermentations. Also known as Embden-Meyerhof pathway; hexose diphosphate pathway.

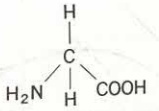
glycolyurea *See* hydantoin.

GLUTINANT NEMATOCYST



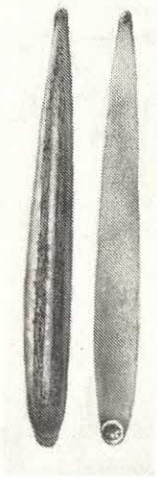
The glutinant nematocyst of *Hydra.* (*After Schulze, from T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957*)

GLYCINE



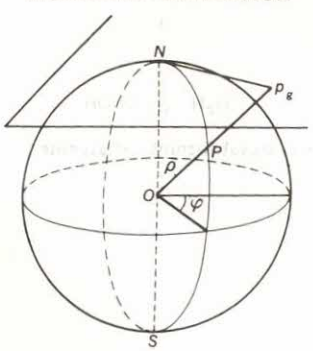
Structural formula of glycine.

GNATHOBDELLAE



Haemopis grandis, dorsal and ventral view showing the conspicuous posterior sucker.

GNOMONIC PROJECTION



Gnomonic projection of *P*. Line *OP* cuts planes tangent to the sphere at *N* at point p_g. Coordinates φ and ρ define pole *P*.

glyconeogenesis [BIOCHEM] The metabolic process of glycogen formation from noncarbohydrate precursors.

glycopeptide *See* glycoprotein.

glycophyte [BOT] A plant requiring more than 0.5% sodium chloride solution in the substratum.

glycoprotein [BIOCHEM] Any of a class of conjugated proteins containing both carbohydrate and protein units. Also known as glycopeptide.

glycosidase [BIOCHEM] An enzyme that hydrolyzes a glycoside.

glycoside [BIOCHEM] A compound that yields on hydrolysis a sugar (glucose, galactose) and an aglycon; many of the glycosides are therapeutically valuable.

glycosuria [MED] Presence of sugar in the urine.

glycotropic [BIOCHEM] Acting to antagonize the action of insulin.

glycuresis [PHYSIO] Excretion of sugar seen normally in urine.

glycuronic acid *See* glucuronic acid.

glycuronidase *See* glucuronidase.

glycuronide *See* glucuronide.

glycyl [ORG CHEM] $NH_2CH_2COO—$ or $NHCH_2COO=$ The radical from glycine, NH_2CH_2COOH; found in peptides.

glycyl alcohol *See* glycerol.

glyoxal [ORG CHEM] $(CHO)_2$ Colorless, deliquescent powder or liquid with mild odor, melting point 15°C, boiling point 51°C; used to insolubilize starches, cellulosic materials, and proteins, in embalming fluids, for leather tanning, and for rayon shrinkproofing.

glyoxalase [BIOCHEM] An enzyme present in various body tissues which catalyzes the conversion of methylglyoxal into lactic acid.

glyoxalic acid [ORG CHEM] CHOCOOH Colorless crystals that are soluble in water, forming glyoxylic acid. Also known as ethanol acid; oxaldehydic acid; oxoethanoic acid.

glyoxaline *See* imidazole.

glyoxylate cycle [BIOCHEM] A sequence of biochemical reactions related to respiration in germinating fatty seeds by which acetyl coenzyme A is converted to succinic acid and then to hexose.

glyoxylic acid [BIOCHEM] $CH(OH)_2COOH$ An aldehyde acid found in many plant and animal tissues, especially unripe fruit.

Glyphocyphidae [PALEON] A family of extinct echinoderms in the order Temnopleuroida comprising small forms with a sculptured test, perforate crenulate tubercles, and diademoid ambulacral plates.

glyphosate [ORG CHEM] $C_3H_8NO_5P$ A white solid with a melting point of 200°C; slight solubility in water; used as an herbicide in postharvest treatment of crops. Also known as *N*-(phosphonomethyl)glycine.

glyphosine [ORG CHEM] $C_4H_{11}NO_8P_2$ A white solid with a melting point of 203°C; quite soluble in water; used as a growth regulator in sugarcane. Also known as *N,N*-bis(phosphonomethyl)glycine.

glyptal resin [ORG CHEM] A phthalic anhydride glycerol made from an emulsion of an alkyd resin; used in lacquers and insulation.

Glyptocrinina [PALEON] A suborder of extinct crinoids in the order Monobathrida.

glyptolith *See* ventifact.

gm *See* gram.

GM counter *See* Geiger-Müller counter.

gmelinite [MINERAL] $(Na_2Ca)Al_2Si_4O_{12}·6H_2O$ Zeolite mineral that is colorless or lightly colored and crystallizes in the hexagonal system.

Gmelin's test [PATH] A qualitative test for the pigments in bile; test solution is mixed with nitric acid containing nitrous acid; reaction is positive if color appears at the acid-solution junction.

GMT *See* Greenwich mean time.

gnat [INV ZOO] The common name for a large variety of biting insects in the order Diptera.

gnathic index [ANTHRO] The ratio of the distance from the nasion to the basion to that from the basion to the alveolar point multiplied by 100.

Gnathiidea [INV ZOO] A suborder of isopod crustaceans characterized by a much reduced second thoracomere, short antennules and antennae, and a straight pleon.

gnathion [ANTHRO] The midpoint of the lower margin of the mandible in humans. [VERT ZOO] The most anterior point of the premaxillae on or near the middle line in certain lower mammals.

gnathite [INV ZOO] A mouth appendage in arthropods.

Gnathobdellae [INV ZOO] A suborder of leeches in the order Arhynchobdellae having jaws and a conspicuous posterior sucker; contains most of the important blood-sucking leeches of humans and other warm-blooded animals.

Gnathobelodontinae [PALEON] A subfamily of extinct elephantoid proboscideans containing the shovel-jawed forms of the family Gomphotheriidae.

gnathocephalon [INV ZOO] The part of the insect head lying behind the protocephalon; bears the maxillae and mandibles.

gnathochilarium [INV ZOO] The lower lip of certain arthropods; thought to be fused maxillae.

Gnathodontidae [PALEON] A family of extinct conodonts having platforms with large, cup-shaped attachment scars.

gnathopod [INV ZOO] Any of the crustacean paired thoracic appendages modified for manipulation of food but sometimes functioning in copulatory amplexion.

gnathopodite [INV ZOO] A segmental, modified appendage which serves as a jaw in arthropods.

gnathos [INV ZOO] A mid-ventral plate on the ninth tergum in lepidopterans.

gnathostegite [INV ZOO] One of a pair of broad plates formed from the outer maxillipeds of some crustaceans, which function to cover other mouthparts.

Gnathostomata [INV ZOO] A suborder of echinoderms in the order Echinoidea characterized by a rigid, exocyclic test and a lantern or jaw apparatus. [VERT ZOO] A group of the subphylum Vertebrata which possess jaws and usually have paired appendages.

Gnathostomidae [INV ZOO] A family of parasitic nematodes in the superfamily Spiruroidea; sometimes placed in the superfamily Physalopteroidea.

Gnathostomulida [INV ZOO] Microscopic marine worms of uncertain systematic relationship, mainly characterized by cuticular structures in the pharynx and a monociliated skin epithelium.

gnathothorax [INV ZOO] The thorax and part of the head bearing feeding organs in arthropods, regarded as a primary region of the body.

gnd *See* ground.

gneiss [PETR] A variety of rocks with a banded or coarsely foliated structure formed by regional metamorphism.

gneissic granodiorites [PETR] Granodiorite rocks with gneissic characteristics.

Gnetales [BOT] A monogeneric order of the subdivision Gneticae; most species are lianas with opposite, oval, entire-margined leaves.

Gnetatae *See* Gnetopsida.

Gneticae [BOT] A subdivision of the division Pinophyta characterized by vessels in the secondary wood, ovules with two integuments, opposite leaves, and an embryo with two cotyledons.

Gnetophyta [BOT] The equivalent name for Gnetopsida.

Gnetopsida [BOT] A class of gymnosperms comprising the subdivision Gneticae.

gnomic [ASTRON] Pertaining to the gnomon of a sundial.

gnomon [ENG] On a sundial, the inclined plate or pin that casts a shadow. Also known as style. [MATH] A geometric figure formed by removing from a parallelogram a similar parallelogram that contains one of its corners.

gnomonic chart [MAP] A chart on the gnomonic projection where great circles project as straight lines. Also known as great-circle chart.

gnomonic projection [CRYSTAL] A projection for displaying the poles of a crystal in which the poles are projected radially from the center of a reference sphere onto a plane tangent to the sphere. [MAP] A projection on a plane tangent to the surface of a sphere having the point of projection at the center of the sphere.

Gnostidae [INV ZOO] An equivalent name for Ptinidae.

gnotobiology [BIOL] That branch of biology dealing with known living forms; the study of higher organisms in the absence of all demonstrable, viable microorganisms except those known to be present.

gnotobiote [MICROBIO] An individual (host) living in inti-

mate association with another known species (microorganism). **2.** The known microorganism living on a host.

gnu [VERT ZOO] Any of several large African antelopes of the genera *Connochaetes* and *Gorgon* having a large oxlike head with horns that characteristically curve downward and outward and then up, with the bases forming a frontal shield in older individuals.

goaf [MIN ENG] **1.** That part of a mine from which the coal has been worked away and the space more or less filled up. **2.** The refuse or waste left in the mine. Also known as gob.

goal coordination method [CONT SYS] A method for coordinating the subproblem solutions in plant decomposition, in which Lagrange multipliers enter into the subsystem cost functions as shadow prices, and these are adjusted by the second-level controller in an iterative procedure which culminates (if the method is applicable) in the satisfaction of the subsystem coupling relationships. Also known as interaction balance method; nonfeasible method.

goat [VERT ZOO] The common name for a number of artiodactyl mammals in the genus *Capra*; closely related to sheep but differing in having a lighter build and hollow, swept-back, sometimes spiral or twisted horns.

gob *See* goaf.

gobi [GEOL] Sedimentary deposits in a synclinal basin.

Gobiatheriinae [PALEON] A subfamily of extinct herbivorous mammals in the family Uintatheriidae known from one late Eocene genus; characterized by extreme reduction of anterior dentition and by lack of horns.

Gobiesocidae [VERT ZOO] The single family of the order Gobiesociformes.

Gobiesociformes [VERT ZOO] The clingfishes, a monofamilial order of scaleless bony fishes equipped with a thoracic sucking disk which serves for attachment.

Gobiidae [VERT ZOO] A family of perciform fishes in the suborder Gobioidei characterized by pelvic fins united to form a sucking disk on the breast.

Gobioidei [VERT ZOO] The gobies, a suborder of morphologically diverse actinopterygian fishes in the order Perciformes; all lack a lateral line.

goblet cell [HISTOL] A unicellular, mucus-secreting intraepithelial gland that is distended on the free surface. Also known as chalice cell. [INV ZOO] Any of the unicellular choanocytes of the genus *Monosiga*.

gobo [ENG] A panel used to shield a television camera lens from direct light. [ENG ACOUS] A sound-absorbing shield used with a microphone to block unwanted sounds.

gob stink [MIN ENG] **1.** The odor from the burning coal given off by an underground fire. **2.** The odor given off by the spontaneous heating of coal, not necessarily in the gob. Also known as stink.

Godel numbering *See* arithmetization.

Godel's proof [MATH] Any formal arithmetical system is incomplete in the sense that, given any consistent set of arithmetical axioms, there are true statements in the resulting arithmetical sytem that cannot be derived from these axioms.

godet [TEXT] A roller used in stretching synthetic fiber filaments.

go-devil [ENG] **1.** A device inserted in a pipe or hole for purposes such as cleaning or for detonating an explosive. **2.** A sled for moving logs or cultivating. **3.** A large rake for gathering hay. **4.** A small railroad car used for transporting workers and materials.

Goertler parameter [FL MECH] A dimensionless number used in studying boundary-layer flow on curved surfaces, equal to the Reynolds number, where the characteristic length is the boundary-layer momentum thickness, times the square root of this thickness, divided by the square root of the surface's radius of curvature.

goethite [MINERAL] FeO(OH) A yellow, red, or dark-brown mineral crystallizing in the orthorhombic system, although it is usually found in radiating fibrous aggregates; a common constituent of natural rust or limonite. Also known as xanthosiderite.

go gage [DES ENG] A test device that just fits a part if it has the proper dimensions (often used in pairs with a "no go" gage to establish maximum and minimum dimensions).

goggles [ENG] Spectaclelike eye protectors having shields at the sides and short, projecting eye tubes.

going [CIV ENG] On a staircase, the distance between the faces of two successive risers.

going barrel [HOROL] A mainspring barrel with a toothed edge for driving the train; it is mounted on an arbor that is stationary except while the timepiece is being wound.

going train [HOROL] Gears that drive the hands in a striking timepiece.

goiter [MED] An enlargement of all or part of the thyroid gland; may be accompanied by a hormonal dysfunction.

Golay cell [ENG] A radiometer in which radiation absorbed in a gas chamber heats the gas, causing it to expand and deflect a diaphragm in accordance with the amount of radiation.

gold [CHEM] A chemical element, symbol Au, atomic number 79, atomic weight 196.967; soluble in aqua regia; melts at 1065°C. [MET] The native metallic element; a deep-yellow, very dense, soft, isometric metal, usually found alloyed with silver or copper; used in jewelry, dentistry, gilding, anodes, alloys, and solders.

gold-198 [NUC PHYS] The radioisotope of gold, atomic mass number 198 and half-life 2.7 days; used in medical treatment of tumors by injecting it in colloidal form directly into tumor tissue.

gold alloy [MET] Any alloy containing gold.

Goldbach conjecture [MATH] The unestablished conjecture that every even number save the number 2 is the sum of two primes.

goldbeater's skin [MATER] The treated outside membrane of the large intestine of cattle; used between leaves of metal in goldbeating, and sometimes in hygrometers.

goldbeater's-skin hygrometer [ENG] A hygrometer using goldbeater's skin as the sensitive element; variations in the physical dimensions of the skin caused by its hygroscopic character indicate relative atmospheric humidity.

goldbeating [MET] The process of producing gold leaf.

Goldberg-Mohn friction [FL MECH] A force proportional to the velocity of a current and the density of the medium; used as a first approximation in estimating frictional effects in the atmosphere and the ocean.

gold beryl *See* chrysoberyl.

Goldblatt unit [BIOL] A unit for the standardization of angiotonin.

gold bronze [MET] A powdered alloy of copper used to simulate gold, or an alloy of copper containing 3–5% aluminum.

gold chloride [INORG CHEM] $AuCl_3$ A red, soluble compound made by reaction of gold and chlorine or by reaction of $HAuCl_4$ with chlorine; decomposes by heat; soluble in water, alcohol, and ether; used in photography, plating, inks, medicine, and ceramics.

gold doping [ELECTR] A technique for controlling the lifetime of minority carriers in a transistor; gold is diffused into the base and collector regions to reduce storage time in transistor circuits.

golden algae [BOT] The common name for members of the class Chrysophyceae.

golden antimony sulfide *See* antimony pentasulfide.

golden-brown algae [BOT] The common name for members of the division Chrysophyta.

goldenrod paper [GRAPHICS] A specially coated masking paper used in lithography for assembling and positioning negatives for exposure onto plates.

golden section [MATH] The division of a line so that the ratio of the whole line to the larger interval equals the ratio of the larger interval to the smaller. Also known as extreme and mean ratio.

golden section search [COMPUT SCI] A dichotomizing search in which, in each step, the remaining items are divided as closely as possible according to the golden section.

gold-filled [MET] Covered by a layer of gold alloy.

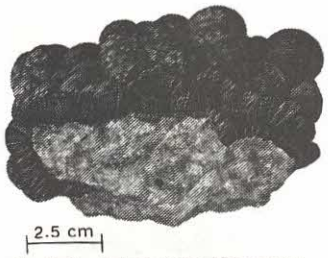
goldfish [VERT ZOO] *Crassius auratus*. An orange cyprinid form fish of the family Cyprinidae that can grow to over 18 inches (46 centimeters); closely related to the carps.

gold foil [MET] A thin sheet of gold, thicker than gold leaf, formed by rolling or hammering.

Goldhaber triangle [PARTIC PHYS] A plot describing a high-energy reaction leading to four or more particles; its coordinates are the invariant masses of two intermediate-state quasi-particle composites, and its kinematical limits form a right-angled isosceles triangle; resonances in the quasi-particle composites appear as horizontal and vertical bands.

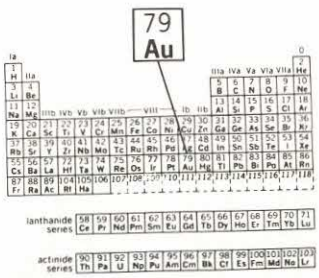
gold hydroxide [INORG CHEM] $Au(OH)_3$ A yellow-brown, light-sensitive, water-insoluble powder; dissolves in

GOETHITE



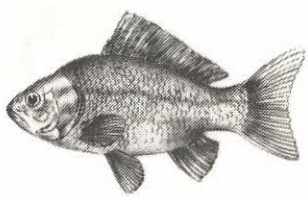
Goethite, taken from Negaunee, Michigan. *(Specimen from Department of Geology, Bryn Mawr College)*

GOLD



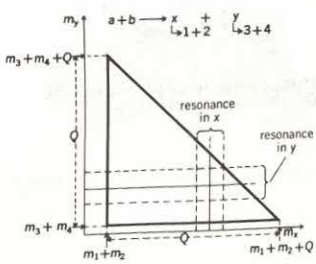
Periodic table of the chemical elements showing the position of gold.

GOLDFISH



Goldfish *(Crassius auratus)*, a common aquarium fish, may grow over 18 inches (46 centimeters) long.

GOLDHABER TRIANGLE



Goldhaber triangle for reaction between two particles, a and b, yielding four particles, 1, 2, 3, and 4, with masses m_1, m_2, m_3, and m_4. Coordinates are invariant masses m_x and m_y of intermediate-state quasi-particle composites x and y which decay into two particles each as indicated at top of figure. Q is total center of mass energy of a and b minus sum of m_1, m_2, m_3, and m_4.

most acids; easily reduced to metallic gold; used in medicine, porcelain, gold plating, and daguerreotypes.

gold leaf [MET] Gold beaten or rolled into extremely thin sheets or leaves (10^{-6} inch or 25 nanometers thick); leaves are stored in books (a book consists of 25 leaves), the paper of which is rubbed with chalk to keep the leaves from sticking.

gold-leaf electroscope [ELEC] An electroscope in which two narrow strips of gold foil or leaf suspended in a glass jar spread apart when charged; the angle between the strips is related to the charge.

gold metallurgy [MET] The science and technology of gold recovery and refining.

gold number [ANALY CHEM] A measure of the amount of protective colloid which must be added to a standard red gold sol mixed with sodium chloride solution to prevent the solution from causing the sol to coagulate, as manifested by a change in color from red to blue.

gold oxide [INORG CHEM] Au_2O_3 Water-insoluble, heat-decomposable, brownish-black powder; soluble in hydrochloric acid; used to gild, in medicine and porcelain, and for daguerreotypes. Also known as auric oxide; gold trioxide.

gold plate [MET] Gold which has been electroplated on a material in a thin layer of controlled thickness; used on electric contacts for corrosion resistance and solderability and on jewelry and oraments.

gold point [THERMO] The temperature of the freezing point of gold at a pressure of 1 standard atmosphere (101,325 newtons per square meter); used to define the International Practical Temperature Scale of 1968, on which it is assigned a value of 1337.58 K or 1064.43°C.

gold potassium chloride *See* potassium gold chloride.

gold potassium cyanide *See* potassium gold cyanide.

gold salt *See* sodium gold chloride.

goldschmidtine *See* stephanite.

goldschmidtite *See* sylvanite.

Goldschmidt process [MET] **1.** The thermite process of welding. **2.** A process by which dry chlorine is employed to remove tin from scrap tinplate.

Goldschmidt's law [SOLID STATE] The law that crystal structure is determined by the ratios of the numbers of the constituents, the ratios of their sizes, and their polarization properties.

Goldschmidt's mineralogical phase rule [GEOL] The rule that the probability of finding a system with degrees of freedom less than two is small under natural rock-forming conditions.

gold size [CHEM] A solution of white and red lead and yellow ocher in linseed oil; used to seal permanently microscopical preparations. [MATER] An adhesive used to fix gold leaf to a surface.
